The TWC has been the most creative and important strategy in purging the mob from the carting industry. Staffed by former law enforcement personnel, it functions like a quasi law enforcement agency. It uses its investigative powers and resources to bar firms tainted by organized crime from the industry. As long as the TWC is run by competent and aggressive officials, Cosa Nostra's comeback in the carting industry is unlikely. The true test of the regulatory strategy will come when Giuliani leaves office. Then we will see if the TWC remains vigorous or deteriorates into a moribund regulator.

Cleansing the Construction Industry

> We must break the back of corruption in the City's massive construction industry. Price fixing, job extortion, kickbacks and organized crime infiltration and control of legitimate business cannot and will not be tolerated in the greatest City of the greatest State in America.[1]
>
> —Governor Mario M. Cuomo, 1985

THE ITALIAN AMERICAN organized-crime families have been prominent in the New York City construction industry since the 1930s. In the mid-1980s, their influence and power was certainly at or near its pinnacle. Their most important power base was the construction union locals affiliated with the Teamsters, Carpenters, Masons, Laborers, and Plasterers unions. Control of the unions enabled the Cosa Nostra families to solicit bribes, extort contractors, and place members, associates, and relatives in bona fide and no-show jobs with contractors and suppliers; to take ownership interests in contracting and supply firms; and to set up and police cartels in a number of construction niches like drywall, concrete, and window replacement.

Over the years there have been periodic exposés of corruption and racketeering in the construction industry. In the mid-1980s, amid yet a new scandal, Governor Mario M. Cuomo asked the New York State Organized Crime Task Force (OCTF, an independent state agency) for a comprehensive examination of the problem. The OCTF launched the most thorough investigation and analysis of construction-industry corruption in history. Nevertheless, its many recommendations have gone largely unheeded.

Other than OCTF's investigations there has not been an organized-crime control program specifically aimed at the massive construction industry. But there have been a number of important initiatives, especially trusteeships imposed on corrupt labor-union locals and district

0814

councils, and efforts by government agencies like the School Construction Authority to police their construction contracts and contractors. In the spring of 1998, the Giuliani administration proposed a regulatory attack on construction-industry racketeering, which, if implemented, would be the most ambitious and comprehensive organized-crime control program specifically aimed at the city's construction industry.

THE OCTF INITIATIVE

In April 1985, in the wake of allegations by the media and conclusions by the New York State Investigation Commission of rampant corruption and racketeering in the New York City construction industry, Mayor Edward I. Koch urged Governor Cuomo to appoint a special prosecutor. Cuomo agreed that the problem was serious, but rather than appoint a special prosecutor, he requested the OCTF (1) to undertake an "intensive and comprehensive investigation into allegations of corruption and racketeering in the New York City construction industry"; (2) to determine "the appropriate prosecutorial and other responses to alleged organized crime activity within the multibillion dollar construction industry"; and (3) to report its conclusions to him and the state attorney general.

Although he had rejected Koch's proposal for a special prosecutor, Cuomo recognized the need to enhance and focus the law enforcement effort. Thus, in December 1987 he created the Construction Industry Strike Force (CISF), composed of prosecutors, investigators, accountants, and support staff from both the OCTF and the Manhattan District Attorney's Office.

The OCTF responded to the governor's request by initiating criminal investigations, designing and utilizing a computer database on construction-industry corruption and racketeering, undertaking an analytical study of the nature and causes of construction-related corruption and racketeering, and embarking upon a broad search for strategies to attack the problem. The CISF produced a number of important investigations and prosecutions involving mobsters, employers, unions, and union officials involved in the drywall, concrete, painters, and plumbers cartels.

OCTF's 1998 Interim Report and 1990 Final Report comprise a comprehensive multidisciplinary analysis of corruption and racketeering in

0815

the construction industry, especially the structural, processual, legal, and regulatory variables that make the industry so vulnerable to systemic criminality. Some of the OCTF's primary recommendations were:

- Establish an Office of Construction Corruption Prevention (OCCP)
  As envisioned in the report, the primary purpose of the office would have been to utilize intelligence, information, and industry knowledge (much of which was to be collected by OCTF's research and analysis unit) to design and implement regulations and procedures that bolster deterrence, further incapacitation, block opportunities, and reduce racketeering susceptibility and potential. The office would have combined the Department of Investigation's investigative authority and expertise with the New York City Office of Construction's regulatory authority and expertise. The possibility of creating an OCCP has never been seriously considered.
- Certified Investigative Auditing Firm (CIAF) Program
  The report proposed that the principal contractor on public works projects in excess of $5 million would be required to hire a private-sector monitor and dedicate at least 2 percent of the project budget to the CIAF. The CIAFs would, in effect, function as private inspectors general to insure compliance with relevant laws and regulations and to deter, prevent, uncover, and expose unethical or illegal conduct. This proposal has never been implemented, but CIAFs (often called IPSIGs—Independent Private Sector Inspector Generals) have been utilized on a case-by-case basis by the School Construction Authority, the Trade Waste Commission, and, more recently, by a number of city agencies.
- Office of Union Members Advocacy (OUMA)
  The report saw union democracy as an important bulwark against labor racketeering and hence urged the creation of a new agency to act as ombudsman in advancing the rights of construction-union members. "If rank-and-file union members can make their elected officers responsive to the membership's actual needs and best interests, racketeers will no longer be able to sell out the rights of union members by soliciting bribes and extorting money from contractors."[2] This proposal was never seriously debated, but many of the court-appointed union trustees focused on promoting union democracy.

0816

- State and City Tax Enforcement
  The report urged that state and local tax agencies make construction-industry tax fraud an enforcement priority. "The tax agencies' efforts to audit construction companies, to increase tax compliance, and to recover money from tax evaders would also provide investigative leads for the law enforcement agencies, since most corporate racketeering is accomplished by falsification of corporate books and tax fraud." This recommendation was not implemented.

THE ELIMINATION OF CARTELS

The major organized crime–sponsored cartels, described in chapter 7, each of which lasted for a decade or more, seemed to have been broken up by a combination of criminal prosecutions and civil RICO suits resulting in court-appointed trusteeships over corrupt labor unions.

The Concrete Cartel

Throughout the 1980s, state and federal prosecutions targeted members and associates of Cosa Nostra who controlled the concrete subindustries. In 1982, John Cody, Gambino associate and president of Teamsters Local 282, which controlled the drivers of concrete-mixing trucks, was indicted and convicted on charges of labor bribery and racketeering.[3] Four years later, in the Colombo family RICO prosecution, Ralph Scopo and other prominent Colombo family members were convicted. An important part of that case focused on the lower tier of Cosa Nostra's concrete cartel—the extortion of 1–2 percent fees on all concrete contracts under $2 million.[4] Also in 1986, in "the commission case," federal prosecutors proved the creation and supervision of the concrete cartel's $2–$5 million club. The defendants, senior members of four of New York City's five Cosa Nostra families, including Ralph Scopo,[5] were sentenced to hundred-year prison terms. In 1988, the government obtained a RICO conviction against the Genovese family and its ostensible boss, Anthony "Fat Tony" Salerno (law enforcement agents later came to believe that Vincent Gigante was the boss and Salerno the underboss). S&A Concrete's monopoly of concrete jobs of more than $5 million, the top tier of Cosa Nostra's

0817

cartel, figured prominently in that case;[6] half of S&A's assets were forfeited to the federal government. The concrete-producing companies that Cosa Nostra controlled through Biff Halloran were also forfeited.[7]

The federal prosecutors' civil RICO suits resulted in court-appointed monitorships placed over Local 6A and the District Council of Cement and Concrete Workers in 1987, and over Teamsters Local 282 in 1995. The former trusteeship ended in 1993 with reports of no significant change; the latter trusteeship was still in place at the end of 1998.[8]

The prosecutorial efforts were complemented by at least one important mayoral initiative.[9] In 1986, the Koch administration moved against the mob-controlled monopoly on concrete *production* by setting up a city-subsidized batching plant from which all city building projects would have to purchase their concrete.[10] The goal was to break the mob's monopoly by establishing a competitor that would sell concrete at a fair market price, thereby undercutting the cartel. It didn't work out that way. Perhaps not surprisingly, the city had great difficulty finding a reputable business person who wanted to go into head-to-head competition with the mob-controlled concrete companies. Mustapha Ally, a Maryland resident with little concrete production experience, was the only viable respondent to the city's solicitation.[11] His fledgling company, the West 57th Street Concrete Company (West 57th), was plagued by lawsuits from companies alleging unfair competition.[12] Ultimately the city canceled its contract in August 1987, because Ally's company had failed to produce a significant amount of concrete.[13]

F.E.D. Concrete Company bought the contract rights from Ally, and had the West 57th plant producing at full capacity by 1988.[14] However, by then the market price of concrete had fallen dramatically and the city found itself paying more for concrete than private developers. Nevertheless, in 1991 the city renewed F.E.D.'s contract for five more years. Two years into its renewed contract the West 57th plant was bankrupt; F.E.D. subcontracted its New York City contracts to a company that some law enforcement agents suspected of mob-affiliations.[15] This strategy failed to keep F.E.D. afloat, and West 57th collapsed in bankruptcy in 1995.[16] At the end of 1998 the city reverted to purchasing ready-mix concrete in the private sector.

After the Genovese family trial in 1988, in which Certified Concrete and Transit Mix, the two Halloran-owned companies that monopolized production during the cartel's reign, were forfeited to the court and

0818

placed under court trustee David Brodsky. By 1990, Certified Concrete was bankrupt. The U.S. attorney began investigating whether Certified Concrete's business had been turned over to Valente Industries, which State Attorney General Robert Abrams feared was well on its way to creating a new monopoly over concrete production.[17] That same year, the court sold Certified Concrete and Transit Mix Concrete to John Quadrozzi with the requirement that there be a seven-year court monitor. Two years later, Quadrozzi was indicted on charges of making illegal payoffs to union leaders and the mob.[18] Although concrete-production and -contracting cartels have been broken up, it remains to be seen whether the Mafia will be purged from the city's subindustry.

Drywall

In the late 1970s, the FBI's Long Island Labor Racketeering and Extortion (LILREX) investigation[19] revealed a club of drywall contractors supervised by Vincent DiNapoli, a Genovese soldier, aided by Teddy Maritas, the Carpenters District Council president.[20] This investigation lead to a 1981 RICO suit by the Brooklyn Organized Crime Strike Force against DiNapoli, Maritas, and several others.[21] The trial ended in a hung jury and Maritas disappeared just before the retrial. Vincent Cafaro, a Genovese member cooperating with the government, testified that Maritas was murdered to prevent his possible cooperation with the government. In April 1982, the other defendants pled guilty. DiNapoli received a five-year sentence; other members of the Genovese family took over his rackets.

Continued federal investigations into the drywall cartel led to the successful prosecution of Standard Drywall Corporation and Prince Carpentry on charges of mail fraud and tax evasion involving schemes to avoid making required union benefit-fund contributions and assisting employees to obtain illegal unemployment benefits.[22] The club of mob-controlled companies was broken up, but Cosa Nostra's presence in the subindustry continued. DiNapoli even remained a significant shareholder in Inner City Drywall, a major contractor, until he sold his shares following his 1988 conviction in the Genovese family RICO case.[23]

In 1987, law enforcement officials began a series of prosecutions and civil suits aimed at purging Cosa Nostra from the drywall industry.[24] Officials of Carpenters Local 608 were successfully prosecuted for

0819

extorting payoffs and soliciting bribes from contractors.[25] The most significant government initiative was a civil RICO suit that resulted in a consent decree in which the Carpenters District Council promised to cleanse itself and its constituent locals of Cosa Nostra's influence.[26] Former Department of Investigations commissioner and former federal judge Kenneth Conboy was appointed to monitor the consent decree, and he expelled several corrupt officials and stewards. Moreover, he convinced the international organization to impose a trusteeship that promises significant hiring-hall reform, reorganization of union leadership, and further efforts to purge the union of organized crime.[27]

Window Replacement

In 1990, officials of Local 580 of the Architectural and Ornamental Ironworkers Union (Local 580) and senior members of four of New York City's five Cosa Nostra families were indicted on RICO charges. Among the predicate offenses were extortion, labor payoffs, and bid rigging on contracts with the New York City Housing Authority.[28] The prosecution's key witness was Peter Savino, a Genovese associate, who, as a government cooperator from 1988 to 1989, surreptitiously recorded many hours of conversations regarding the windows cartel.[29] The trial, which played out like a movie, was mired with murder, fugitive defendants, jury tampering, and turncoats.[30]

Vincent "the Chin" Gigante, reputed boss of the Genovese family, was found mentally unfit to stand trial.[31] Vittorio Amuso and Anthony "Gaspipe" Casso, boss and underboss of the Lucchese family, went into hiding. The organizers of the cartel, Venero Mangano and Benedetto Aloi (underbosses of the Genovese and Colombo families, respectively),[32] received significant sentences for conspiring to murder witnesses after discovering Savino's cooperation with the FBI.[33] Peter Chiodo, a Lucchese capo who entered into a cooperation agreement, testified that, on orders from the defendants, he murdered codefendant John Morrissey, a Local 580 business agent and Lucchese associate.[34]

Of the fifteen original defendants, eight went to trial; there were just three convictions.[35] Those convicted were Mangano and Aloi, two of the main organizers of the cartel, and Dennis DeLucia, a Colombo soldier. Follow-up prosecutions succeeded in convicting Thomas McGowan, the Manhattan business agent of Local 580, for receipt of illegal labor payments from a private contractor.[36] Vittorio Amuso was convicted on

0820

a superseding indictment of a number of crimes including participation in the windows cartel.[37] Vincent "the Chin" Gigante was convicted in 1997 of RICO and extortion, labor payoffs, and murder conspiracies.[38] Finally, Anthony "Gaspipe" Casso was arrested in 1993 after a two-and-a-half year manhunt, pled guilty in 1994 to racketeering and murder charges, became a government witness, was discredited and removed from the Witness Security Program, and finally sentenced to life imprisonment without parole.[39]

Painting

In the summer of 1990, one month after the windows indictments, the Manhattan District Attorney's office obtained indictments against union officials, contractors, and Cosa Nostra members for operating a cartel in the painting industry.[40] Specifically, prosecutors accused members of the Lucchese crime family with controlling union officials in Painters District Council 9 and its locals and with conspiring with painting contractors in a twelve-year bid-rigging scheme tainting all major public and private painting contracts in the city.[41] By 1991, Anthony Casso was on the run from the windows case, another defendant became a government witness, and others had pled guilty. This was the first successful use of New York State's Organized Crime Control Act against labor officials.[42] Two years later, combined Manhattan District Attorney, FBI, and IRS investigations led to successful charges focusing on the Lucchese family's domination of steel-painting contracts during the same time period.[43] The cartel seems to have been broken up.

Racketeering in the Plumbing Industry

In 1993, a four-year investigation culminated in a series of Manhattan District Attorney's Office prosecutions against Genovese associate Louis Moscatiello Jr., Plumbers Local Union No. 2 (Local 2) officials, plumbing contractors, a major accounting firm, and plumbing inspectors, in an attempt to break up a plumbing cartel of ten years' duration.[44] Louis Moscatiello Jr. was acquitted.[45] Prosecutions against ten union officials led to seven convictions and three acquittals.[46] The district attorney's effort to have Local 2 placed under trusteeship was preempted when the Plumbers Union's national headquarters imposed its own trusteeship over the local.[47] However, progress in eliminating

0821

organized crime from Local 2 was undermined in 1997, when Local 2 was merged with the reputedly corrupt Local 1.[48] The prosecution of contractors continues.

LABOR RACKETEERING AND UNION TRUSTEESHIPS

Many of the key mobbed-up construction unions identified in the 1990 OCTF Report have been placed under federal court–appointed trusteeships or monitorships or under receiverships imposed by the parent international union. It would be a stretch to see these trusteeships as part of a single strategic move to clean up the construction industry, but many of the lawsuits that produced these trusteeships were spawned by the construction-industry investigation launched in the mid-1980s by Governor Cuomo and Mayor Koch.

Carpenters District Council

One of the most successful union trusteeships is the one imposed on the Carpenters District Council.[49] Even before the 1994 settlement of the civil RICO suit, the lawsuit itself had prompted anticorruption efforts within some of the District Council's constituent locals. An interim investigation into elections and misconduct charges helped rank-and-file members to oust long-time incumbents in elections at Locals 17 (Bronx) and 20 (Staten Island). The Association for Union Democracy noted that "the combination of government action and rank and file involvement stimulates union democracy against corruption."[50]

As the District Council's IRO, Kenneth Conboy charged several local union officials and members with being associated with Cosa Nostra; most of these cases resulted in permanent bars from union office, retirements, and expulsions from the union.[51] Ousting corrupt officials was only the beginning. Conboy also persuaded the international organization to impose a trusteeship over the union.[52] The need for the parent body's aid was made apparent when Frederick Devine, a Cosa Nostra associate and incumbent president of the District Council, won a landslide victory as incumbent president of the council in 1995.[53] As Conboy wrote in a 1996 report, "[T]he influence of organized crime on the District Council and its locals is pervasive and long-standing. . . .

[162.10.217.184] Project MUSE (2026-06-15 01:41 GMT) University of Queensland

The only realistic hope of returning the District Council to its membership require[s] the intervention of the International."[54]

In June of 1996, Douglas McCarron, president of the Carpenters International union, imposed an emergency trusteeship over the District Council, ousting Devine from office.[55] McCarron, in cooperation with Conboy, also implemented a controversial restructuring plan for the District Council and its locals.[56] One significant reform is a computerized central dispatch to "conclusively end the tyranny of business agents in dispensing jobs and controlling the livelihoods of rank and file carpenters."[57] Other measures include the implementation of a district-wide out-of-work list for the appointment of job stewards, as well as the use of a labor-management fund to employ liaisons with law enforcement agencies who would act to enforce collective bargaining agreements.[58] While allegations of harassment and job referral violations continue, Conboy believes that "the union is carefully but steadily progressing towards . . . effective self-governance."[59] Locals' elections are planned for the summer of 1999, and District Council elections for 2000.[60]

Teamsters Local 282

IBT Local 282, the mob-controlled union that enforced the concrete-pouring cartel, was placed under international trusteeship in 1992, shortly after Robert Sasso quit as a result of an investigation by the IBT's investigations officer, Charles Carberry.[61] Ron Carey initially appointed Johnnie Brown as trustee. Two years later, after guilty pleas by five former and current Local 282 officials, including Sasso,[62] federal prosecutors brought a civil RICO suit against the local. That suit led to a 1995 agreement whereby a full-time court-appointed "corruption officer" would ferret out corruption and a court-approved trustee from the International would run the union.[63] The court appointed former chief investigator to the Mollen Commission and former police Lieutenant Robert Machado as the corruption officer.[64] Machado is empowered to remove officials and stewards from their positions without a hearing (their cases would then be referred to an IBT review board); within months of his appointment he had removed sixteen officials identified by the U.S. Labor Department as organized-crime associates.[65]

The settlement further required the International to replace Jimmy Brown with Peter Mastrandrea, and later with Gary LaBarbera.[66] Union

0823

reformer Larry Kudla praised LaBarbera's appointment as a positive step.[67] But some knowledgeable observers are not yet willing to label the Local 282 reform effort a success story.[68]

Local 6A and the District Council of Cement and Concrete Workers

Local 6A and the District Council of Cement and Concrete Workers, which played a key role in assuring the mob's control over the concrete industry, signed a consent decree that resulted in the resignation of sixteen union officers, including Ralph Scopo Jr., who was president of Local 6A, and his brother, who was vice-president; both men were permanently enjoined from the union's affairs.[69] The union was placed under a court-appointed trusteeship from 1987 to 1993.[70]

In March 1987, Judge Vincent Broderick appointed former federal prosecutor Eugene R. Anderson to monitor Local 6A and the District Council,[71] both of which were reportedly "captive labor organizations"under the Colombo family's control.[72] At the end of his six-year tenure, Anderson concluded that his trusteeship had not made significant headway toward rooting out corruption. He blamed his limited powers, inadequately funding, and insufficient support from the FBI and the U.S. Labor Department.[73]

Mason Tenders District Council

In 1994, a civil RICO and ERISA (Employee Retirement Income Security Act) suit brought by federal prosecutors established a monitorship over the Mason Tenders District Council, which represents twelve locals whose members perform jobs including general labor, bricklaying, masonry, and asbestos removal throughout the metropolitan area.[74] The court appointed former federal prosecutor Lawrence B. Pedowitz and former New Jersey U.S. Attorney Michael Chertoff to act as monitor and investigations officer (IO), respectively. The monitor and IO expelled several members from the union, including a convicted Long Island racketeer, Peter "Jocko" Vario, a Lucchese member.[75] Chertoff also worked with the FBI and Department of Labor to bar corrupt candidates from 1997 elections for local officials.[76] The District Council has also mandated FBI clearances for shop-steward positions.[77]

0824

Just prior to the 1994 consent decree, the Laborers International Union of North America (LIUNA) imposed its own trusteeship over the District Council, naming David Elboar trustee. Elboar signed the consent decree establishing the court monitorship. Steven Hammond, who replaced Elboar in 1995, felt that removal procedures against corrupt officials were delaying efforts to clean up the union. He therefore proposed a restructuring plan to consolidate the District Council's twelve locals into four, eliminating most of the corrupt officials' positions. This plan was implemented in 1996.[78]

Under threat of a civil RICO suit seeking a court-ordered trusteeship, the International union itself agreed to combat corruption to the Justice Department's satisfaction.[79] The International committed itself to job-referral and hiring-hall reforms. Although the Justice Department has been satisfied with LIUNA's efforts thus far, some union members complain that LIUNA is exaggerating its anticorruption efforts to placate the government until the oversight agreement ends.[80] As of the summer of 1998, no significant effects of this agreement have reached New York City's laborers locals.[81]

In May of 1998, LIUNA's general counsel testified to the success of the Mason Tenders District Council's trusteeship, claiming that "all vestiges of corruption and organized crime influence" have been eradicated.[82] However, prominent union-democracy activist Herman Benson believes that further efforts are necessary to eradicate and prevent Cosa Nostra's long-standing influence in the District Council.[83]

Painters

In 1991, in the wake of state racketeering charges against Local 1486 (Long Island) and District Council 9 (New York) alleging a conspiracy with Cosa Nostra to maintain a painting cartel,[84] William Duvall, the International Painters Union president, placed District Council 9 under the trusteeship of John Alfarone.[85] Alfarone, a longtime union official who had opposed mob corruption in a local dry-wall union, was hampered by limited powers and internal conflicts within the International's executive body. Even though state charges led to several convictions and prison terms, some officials who had been appointed by the corrupt regime kept their union positions and their control over job assignments. In 1992 elections, "picked representatives of the old guard took over—took back—all offices, all without opposition except for

0825

one." Frank Schonfeld, a veteran Painters Union reformer, noted in the *Union Democracy Review* that without a government presence behind the trusteeship, and without strong backing by the International union, "the overhanging climate of fear and apathy was never lifted."[86] In his view, the union local remains under the Lucchese family's influence.[87]

Ironworkers Local 580

There has been no action taken to place Ironworkers Local 580, the "corrupt engine" behind the Cosa Nostra's window-replacement cartel, under court supervision. Individuals like Thomas McGowan, the union's Manhattan business agent who participated in the cartel, were convicted, but there is no evidence that the union has been purged of corruption. Local 580 continues to have a reputation for organized crime ties.[88]

Plumbers

In 1993, the Manhattan District Attorney's Office launched a major prosecution against officials in Local 2 (Manhattan and the Bronx) of the Plumbers Union.[89] The International union imposed its own trusteeship in 1994, thereby heading off the DA's effort to obtain a court-appointed trustee.[90] The trustee instituted a hiring hall, a positive step because the union had had no job-assignment rules prior to that time. In 1996, the reform effort suffered a setback when an indicted candidate was elected as business agent.[91] Although the trusteeship seemed to be on the road toward reform, its efforts were rendered moot in 1997 when the International organization merged Local 2 with the reputedly corrupt[92] Local 1 (Brooklyn and Queens).[93]

SCHOOL CONSTRUCTION AUTHORITY'S AND OTHER AGENCIES' INITIATIVES

Although no action was taken on its major recommendations, the 1990 OCTF report attracted a great deal of attention. The School Construction Authority (SCA) took the ideas of the report farther than any other public agency. In part, the SCA was created in 1989 because of the corruption associated with the New York City Board of Education's con-

0826

struction operations.[94] The founders of the SCA were determined to keep the new authority squeaky clean. This led them to appoint Thomas D. Thacher II (former CISF director) as the first inspector general. Thacher took the job only after the SCA met his condition that the IG office would have a staff of sixty. Thus, from the outset the SCA made a heavy investment in the control of corruption and organized crime.

The SCA's boldest move was to require the prequalification of contractors who wished to bid on SCA contracts. Contractors had to submit to a thirty-page prequalification questionnaire that included questions such as "In the past ten years has the applicant firm or any of its current or past key personnel or affiliate firms 1) taken the Fifth Amendment in testimony regarding a business related crime?; 2) given or offered money to a labor official or public servant with intent to influence that labor official or public official with respect to any of his or her official acts, duties or decisions as a labor official?; 3) agreed with another to bid below the market rate?" An applicant can be blacklisted as well as prosecuted for a false answer.

The SCA investigators scrutinized the forms and did their own independent investigation. In August 1991, the SCA announced that it was blacklisting for up to five years more than fifty construction companies.[95] More than half the disqualifications were based on purported mob ties or criminality. By 1995, the SCA reported that it had conducted upwards of 3500 background evaluations and debarred 200 firms, "many of whom had ties to organized crime or were the alter ego of firms with prior legal or debarment problems."[96] For example, the SCA debarred the concrete company owned by Nick Auletta's (Genovese crime family) son and the DeCon Plumbing company, which was largely owned by Gerald Fiorino, a Genovese soldier.[97]

Some "problem" contractors were not disqualified if they agreed to hire a private investigating firm (CIAF) (1) to design a code of ethics for the contractor; (2) to implement a corruption prevention program; and (3) to audit and report to the SCA on the contractor's compliance with the code and the program.[98]

The new New York City Charter contained many anticorruption provisions that were meant to respond to charges that the public-construction process was vulnerable to corruption.[99] Under new contract-procurement rules, each agency's contracting officer and chief administrator had to determine whether a contractor or vendor was financially, operationally, and *morally* responsible.

0827

The city also started the VENDEX system, a computer database of government contractors.[100] VENDEX aimed to collect information about contractors' organized-crime ties or other wrongdoing. Would-be contractors and their principals had to fill out an extensive VENDEX questionnaire (twenty-seven pages for business entities; thirteen for principals) about the business, its principals, its tax returns, and its history of government contracting.[101] *Before* awarding a construction contract, a city agency is required to check whether the VENDEX system contains any negative information about that contractor. If so, the agency would be well advised to withdraw the contract or to place some restrictions or conditions on the contractor.

In practice, VENDEX did not work as well as its originators had imagined. For one thing, construction companies disappear and then reappear with new names and owners of records. For another, law enforcement agencies, including the New York City Department of Investigation, were unwilling to share information because information released prematurely could compromise an investigation. Thus, if an executive agency (e.g., Corrections or Environmental Protection) found an indication in VENDEX that allegations had been made against a particular contractor or that the contractor was being investigated, it often could not get any further information. Of course, a risk-averse agency (which most were and are) might wish to stay clear of any contractor whose subsequent indictment might later cause embarrassment.

The VENDEX system and the city's new zeal in keeping itself at arm's length from organized crime did have impact. In one high-visibility case, Comptroller Elizabeth Holtzman persuaded the city to rescind a contract held by a company run by Carmine Agnello, John Gotti's son-in-law, to remove abandoned cars from Brooklyn streets. According to Holtzman, the C & M Agnello Company and its owner had been implicated in a "chop-shop" (stripping down cars) operation in Queens, and Agnello was under investigation for possible jury tampering in a Brooklyn organized-crime trial involving Gotti's brother, Gene.[102] The comptroller also succeeded in blocking a jail-construction project that had gone to a firm whose president owned a majority interest in a concrete company that was operated by a son-in-law of former Gambino family boss Paul Castellano.[103]

0828

THE CITY'S REGULATORY PROPOSAL

In May 1998, the Giuliani administration announced that it was preparing a proposal for attacking corruption and racketeering, as well as safety hazards, in the construction industry that would build on the Trade Waste Commission model. The legislation would require that all general contractors be licensed by a new New York City Construction Commission. The commission would be able to deny licenses to applicants lacking "good character, honesty and integrity," and to prohibit licensees from subcontracting with or employing persons deemed similarly lacking. Certain categories of subcontractors would also require licenses. Alternatively, the commission could require the general contractor or subcontractor to hire a preapproved independent monitor (IPSIG) based on the OCTF's CIAF model.

Critics immediately pointed out several perceived flaws. One, the bill gives sweeping discretionary authority to the Commission to put people out of business. Arguing that the city has not even been able to coherently define who is a "responsible" bidder under the city charter, construction-industry insiders complain that Giuliani's proposal leaves too much room for arbitrary and unfair determinations. Two, the bill is too ambitious. It demands more of the commission than the commission will be able to deliver. Even the Trade Waste Commission has found it difficult to process license requests expeditiously. What will happen to general contractors if the commission's licensing reviews get bogged down? The general contractors will be left in limbo and financially ruined. Three, the bill unfairly burdens general contractors with the duty to investigate and make judgments about the integrity of subcontractors. Such investigations will mean extra costs and delays at the expense of job performance. Four, the bill focuses too heavily on organized crime, overlooking significant issues of technical competence that plague public construction projects. And five, the bill is overinclusive, extending the city's regulatory reach to in-house construction-management divisions of major owners that have never exhibited any problems with corruption, such as New York University and Columbia University.

There are tens of thousands of city contractors, each owned by and employing various numbers of individuals. Is it feasible for the city government to take on the responsibility of investigating and vouching for the moral integrity of even a fraction of these firms? An

0829

entire system of norms, rules, and procedures, and a large bureaucracy might ultimately be necessary to implement a fair and comprehensive system to judge the moral eligibility of government contractors. Isn't that the kind of exaggerated ambition that will ultimately come back to haunt government agencies as journalists, other observers, and critics confront government officials with contracts that have been let to all sorts of morally questionable individuals who inevitably will slip through the net?

CONCLUSION

The late 1980s and early 1990s were marked by long-term investigations and the effective use of RICO and OCCA against cartels that dominated the city's concrete, drywall, window-replacement, and painting subindustries. However, even though the government successfully broke up these organized cartels, widespread corruption persists, especially where unions remain under Cosa Nostra's influence.

The Carpenters, Teamsters, and Mason Tenders cases show that coordination between union forces and the government can successfully work toward purging Cosa Nostra. Yet in many of the city's construction trade unions, such as plumbing, painting, and concrete, mobsters continue to suppress union democracy. The case studies demonstrate that trusteeships without a strong government presence fail to inspire the courage and leadership among rank-and-file members required to bring about reform.

Even without the presence of mobsters, widespread and sometimes highly organized corruption exists in the construction industry. In 1998, a Manhattan District Attorney's Office prosecution exposed a cartel of interior construction companies that monopolized the multibillion-dollar office-renovation and -relocation subindustry. The cartel's bid rigging increased the cost of interior office construction by 20 percent.[104] Five of the companies entered plea agreements.[105] Further investigations and prosecutions of participants in New York City's construction industry continue.[106]

0830

15

Conclusion to Part II

> With instability at all levels and with continuing sociological change inevitable, if current law enforcement efforts are maintained in the next five to ten years, the mob is likely to be rendered totally unrecognizable from what it has been for the last sixty years.[1]
>
> —Ronald Goldstock, director, New York State Organized Crime Task Force, 1990

THE SUCCESSFUL PURGING of Cosa Nostra groups from New York City's core economy was not accomplished simply by applying "more of the same" law enforcement medicine that had been administered in previous decades. Success depended upon major innovations and "institution building" in organized-crime control. The introduction to Part 2 briefly sketched the evolution of the federal organized-crime control program. In this chapter we highlight and assess the organized-crime control innovations that have had the greatest impact on industrial racketeering.

CIVIL RICO AND COURT-APPOINTED TRUSTEESHIPS

Traditionally, the only approach to organized-crime control was criminal prosecutions that aimed to send mobsters to prison for lengthy terms. Unfortunately, although a prison term (if lengthy) is a major blow to a particular crime boss, it has little impact on the operations of a powerful, diversified, and entrenched criminal syndicate that can promote replacements from its ranks. Putting mobsters in prison did nothing to eliminate racketeering in unions or companies, or to eliminate cartels. Thus, the defeat of organized crime awaited a different remedy, one that aimed at syndicates and systemic criminality.

0831

Civil RICO provided the means. Most of the key federal organized-crime control initiatives discussed in Part II were brought as civil RICO suits. These suits sought restraining orders, injunctions, and trusteeships to prevent racketeering and to purge Cosa Nostra members and associates from the defendant organization. Civil RICO is particularly well suited to combating racketeering in labor unions and companies, that is, formal organizations that can be monitored. If the individual defendants have previously been convicted of crimes that constituted racketeering acts (so-called RICO predicates), there is no need to relitigate them. The suit therefore turns merely on proof that the racketeering acts were linked to an enterprise (e.g., union or company). Even without previous convictions, it is easier for prosecutors to prove civil RICO liability than criminal liability. Civil RICO suits are governed by civil, not criminal, procedure. Therefore, the government is entitled to extensive pretrial discovery (depositions and documents), which can provide a wealth of information from corrupted companies and unions. The government bears a lesser burden of proof in a civil trial, preponderance of the evidence as compared with beyond a reasonable doubt. There is no requirement of jury unanimity in a civil trial, and, unlike criminal procedure, the government can appeal a verdict in favor of the defendant.

The most important innovation brought about by the extensive use of civil RICO has been the appointment of monitors or trustees to carry out the terms of the court orders or negotiated settlements. In effect, the courts transplanted the techniques and strategies of organizational reform, developed in the school desegregation and unconstitutional prison conditions cases, to the organized-crime domain. Like the special masters appointed to oversee school desegregation or the remediation of deplorable prison conditions, the court-appointed trustees carry out the judge's mandate to transform an organization, for example, purging a union local of corruption and racketeering and restoring union democracy to the rank and file.

Not all of the trustees discussed in Part 2 of this book owed their appointment to a civil RICO suit. Nevertheless, the RICO trusteeships have been the model for other trusteeships, however authorized. For example, in the imaginative plea agreement that resolved the Manhattan district attorney's criminal prosecution of Thomas and Joseph Gambino, the parties agreed to the appointment of former New York City Police Commissioner Robert McGuire as special mas-

0832

ter to oversee the Gambinos' sale of their Garment Center trucking interests.

The trustee is usually appointed for a lengthy or indefinite term, thus announcing to the mobbed-up union or company, and, more important, to rank-and-file members, clients, customers, and business associates, that the government will not disappear and that the situation will not revert to the status quo ante. A trusteeship signals a remedial *process,* not a one-shot punch. The trustee's specific mandate and powers are shaped by the judge, if there was a trial, or by the parties in the event of a negotiated agreement. The defendants are ordered (or voluntarily agree) to cease racketeering activities and contact with Cosa Nostra members. The trustee's mandate includes the goal of eradicating organized crime (and racketeering, payoffs, kickbacks, bribes) from the tainted organization. The judge maintains continuing jurisdiction and can issue supplemental orders if necessary; recalcitrance and interference can be punished as contempt.

Most of the trustees have been appointed in labor-racketeering cases. Some judges have given a single trustee authority to run the union, as well as a mandate to purge corruption. Other judges have limited the trustee's role to investigations and discipline relating to racketeering.

To assure that racketeering has ceased in corrupted organizations, judges have typically vested the RICO trustees with wide-ranging investigative powers, including authority to subpoena books and records and to compel testimony under oath. Some union trustees have had authority to discipline union officers and members; others could bring disciplinary charges against union officials and members before an independent hearing board or the judge. In either case, union members found to be associated with organized-crime figures could be purged from the union. This is a powerful and effective tool.

The proliferation of RICO (and other) trusteeships has created a new career path for former prosecutors and law enforcement agents. Many of the trustees who have played crucial roles in the liberation of the New York City economy from mob influence had previously served in law enforcement capacities. Such individuals come to the job with a wealth of information about organized crime and significant investigative expertise. They also have close ties to federal, state, and local law enforcement agencies. Of course, although it makes good sense that a trustee whose purpose is to purge organized crime should be drawn

0833

Table 15.1
Court-Appointed Monitors/Trustees

Union/Industry	Monitor/Trustee	Other Positions Held
Fulton Fish Market Local 359	Frank Wohl	Assistant U.S. Attorney
IBT Local 295 at JFK	Thomas Puccio	Brooklyn OCSF
Garment Industry; Special Master over selected defendants	Robert McGuire	New York City Police Commissioner
Long Island Carting	Michael Cherkasky	Division Chief, Manhattan District Attorney's office
IBT Local 851 at JFK	Ron DePetris	Chief Assistant U.S. Attorney
IBT	Charles Carberry Frederick Lacey	Assistant U.S. Attorney Federal Judge and U.S. Attorney
Carpenters District Council	Kenneth Conboy (IRO)	DOI Commissioner; Federal Judge
Teamsters Local 282	Robert Machado (Corruption Officer)	Chief Investigator for the Mollen Commission; Police Lieutenant
Local 6A and District Council of Cement and Concrete Workers	Eugene R. Anderson	Assistant U.S. Attorney
Mason Tenders	Lawrence B. Pedowitz	Assistant U.S. Attorney
District Council	Michael Chertoff	Assistant U.S. Attorney; New Jersey U.S. Attorney; Special Counsel for the Whitewater Investigation

from the ranks of former law enforcement personnel, it is less obvious that a trustee who stands in the shoes of the local's president should be a former prosecutor. Certainly, there is nothing in the prosecutor's training or experience that qualifies him or her to negotiate collective bargaining agreements or handle grievances and enforce contract provisions.

The funding of court-appointed trusteeships is a crucially important matter. The most common funding source in the union cases has been the very union local that was exploited by racketeers in the years leading up to the trusteeship; in some cases this has bankrupted the local union. In a few cases, the international union has paid the bill for the trustee and his staff. The judge can fix the trustee's compensation.

0834

Usually, trustees are compensated at a rate comparable to lawyers in private practice. Ironically, this may be more compensation than was paid to the corrupt union officer whom the trustee replaced. Because RICO trusteeships should not be seen as sinecures that judges hand out to friends and former colleagues, it is imperative that regularized method(s) and mechanisms for choosing and compensating trustees be established.[2]

Even though RICO trusteeships are one of the most important law enforcement innovations of this generation, they have not always been successful. Sometimes the trustees have become bogged down in the details of union administration. Sometimes they have not found the right techniques or not had enough backing from the court. The trustees whose only responsibilities are investigative and disciplinary probably have been more successful than those who have also had to shoulder responsibility for running the union.

RICO trusteeships raise a number of legal and philosophical questions that need to be examined. Trustees have voided elections, replaced union officers, redesigned hiring halls, and expelled union members for associating with organized-crime figures. One might legitimately ask whether such power is fully consistent with a free labor movement based on union members' sovereignty over their unions. Also, one might ask when the trusteeship should end: When new elections have been held? When all traces of organized crime have been eliminated? Not until union democracy is thriving? As in other institutional litigation, there is a tendency for RICO trusteeships to take on a life of their own, accumulating more goals as time passes and all sorts of problems come to the trustee's attention.

Private-Sector Monitors

Drawing on the public sector's experience with inspectors general, the New York State Organized Crime Task Force's *Final Report on Corruption and Racketeering in the New York City Construction Industry*[3] first raised the idea of requiring government contractors to hire a certified investigative auditing firm (CIAF) to assure that the private contractor was not tied to organized crime, covering up criminality, or being victimized by racketeers or public officials.

Ronald Goldstock, director of the New York State Organized Crime Task Force, 1981–1994, in several plea bargains required companies to

0835

hire IPSIGs and encouraged regulatory agencies to do the same, in effect, forcing questionable contractors to police themselves. The inspector general's office of the School Construction Authority was the first agency to utilize IPSIGs to monitor contractors, assist them in establishing corruption controls, and to report to the SCA on the firms' conduct.[4] The Trade Waste Commission took monitoring to the next stage by making hiring an IPSIG a condition of licensing for certain firms. The New York City Department of Investigation has recommended IPSIGs to a number of city departments that do business with questionable contractors.

The IPSIG is one of the great contemporary innovations in organized-crime control. It has spawned the formation and growth of private-sector investigation firms run and staffed by former prosecutors, forensic accountants, analysts, and detectives. These firms provide monitoring services for companies that wish to assure clients and government regulators that they are complying with all laws and regulations. Further, under the U.S. Sentencing Commission's Corporate sentencing guidelines, a corporation that can show that it exercised due diligence in designing an internal corruption-control system significantly limits its exposure (i.e., fines) in the event that a crime is uncovered. The monitor, in effect, investigates the company at the company's own expense and reports to the company's top management and to the government on any problems that it finds. The monitor invariably has power to audit the company's books and records, interview employees, and interview subcontractors. If the monitor finds something suspicious, like excessive fees to a questionable "consultant," he informs the government agency, which can demand an explanation from the company. Likewise, if one of the company's subcontractors is known to be mobbed-up or if an employee is a known mob associate, the monitor demands that the company explain why the subcontract should not be terminated and the employee fired.

"Monitoring" is an art, not a science. Success depends upon the skills, persistence, energy, and intelligence of the monitor. In addition, the government agency that has imposed the monitor has to manage the monitor to make sure that the monitor is aggressive enough (but not too aggressive) and must evaluate the accuracy of the monitor's reports. The independent private-sector monitors work best when they are focused on a specific problem, like payoffs to organized crime or de-

0836

frauding union workers. Likewise, they also are most effective when the company's management is committed to solving the problem and maintaining its reputation and good relationship with the government agency.

Rudolph Giuliani

It is dangerous to personalize history, yet it is difficult to escape the conclusion that Rudolph Giuliani has played an extremely important role in the struggle to defeat New York City's Cosa Nostra crime families. Giuliani's first major contribution to organized-crime control came when he served as associate U.S. attorney general (1981–1983). (He had previously served as an assistant U.S. attorney in New York City.)[5] According to President Reagan, Giuliani helped to convince him and other top officials in the administration that they should commit themselves to a full-scale organized-crime control effort.[6]

In 1983, Giuliani opted to return to New York City as U.S. attorney for the Southern District of New York (1983–1989). During his tenure, he compiled a record as the most active and successful organized crime prosecutor since Thomas Dewey. Giuliani's office brought many of the lawsuits that are featured in Part 2. His office indicted the Cosa Nostra commission for running a racketeering enterprise and, in one blow, brought down a number of the nation's top crime bosses.[7] That case and some associated lawsuits against Biff Halloran brought an end to the concrete cartel.[8] Giuliani's office brought four of the five so-called family RICO prosecutions against key members of all five New York City Cosa Nostra crime families. The theory of each prosecution was that the defendants, in violation of RICO, participated in the affairs of an enterprise (i.e., their crime family) through a pattern of racketeering activity (i.e., their individual and joint crimes).[9] Giuliani's office brought the civil RICO suit against the Romanos and Local 359 at the Fulton Fish Market.[10] As we have seen, it resulted in consent and default judgments and the appointment of a market administrator. Another of Giuliani's most important cases was the unprecedented civil RICO labor-racketeering suit against the General Executive Board of the Teamsters International Union.[11] The suit resulted in a trusteeship that, in various guises, has lasted ten years; made possible the first free elections in generations; and purged hundreds of corrupt national, regional, and local officials from the union.

0837

Regulatory Strategies

Although it builds upon the experiences of the Nevada Gaming Commission, the New Jersey Gambling Commission, and the New York/New Jersey Waterfront Commission, the mobilization of local regulatory authority to attack organized crime is a New York City–specific innovation. Until recently, mayors viewed organized-crime control as the responsibility of law enforcement agencies. The Giuliani administration accepted responsibility for cleaning up racketeer-ridden industries, arguing that they impeded the city's growth and prosperity. The city's regulatory initiatives have significantly expanded the repertoire of organized-crime control strategies.

When Giuliani became mayor of New York City (1994), he immediately set out to complete the work he had started as U.S. attorney. His first organized-crime control initiative built on his previous effort to purge the mob from the Fulton Fish Market. He established a licensing scheme (the jurisdiction of which was eventually extended to all of the city's food markets), which included background checks for many market participants. The city began aggressively managing the market; it threw out the mob-connected unloading companies, signed a contract with an independent firm to provide unloading services, and appointed a market manager to provide day-to-day supervision.

The Giuliani administration's next major organized-crime control initiative sought to eliminate the Cosa Nostra–run waste-hauling cartel by means of the New York City Trade Waste Commission. Giuliani appointed a former assistant U.S. attorney to head that agency. The TWC used its authority to deny business licenses to carters with ties to organized crime. Some companies were allowed to continue participating in the industry only by agreeing to hire an IPSIG to guarantee that the company was operating lawfully and without organized crime contacts.

The Trade Waste Commission is a model that may well be followed around the country and around the world. The TWC has used its licensing authority to purge the carting industry of mob-connected firms. Quite simply, the agency denies a business license to any firm that is connected to organized crime. And it has the expertise and investigative resources to ferret out such information. Furthermore, it has used its rule-making and (maximum) price-setting authority to break down

0838

the customer property-rights system and to stimulate competition. The TWC's investigators constantly look for signs of organized crime and act swiftly if any sprouts are sighted.

In his second mayoral term, Giuliani prepared his most ambitious initiative, a regulatory attack on corruption and racketeering in the construction industry. The proposal called for a five-person commission to license the five hundred largest construction contractors in the city. Licenses would be granted on the condition that these contractor-licensees police their subcontractors. As this book goes to press, the proposal is still pending.[12]

The TWC has had great initial success, yet we must sound a note of caution. The history of government licensing agencies is a checkered one. At different points in time in various U.S. states and cities licensing authorities, like the state liquor authorities, have fallen into the hands of political cronies and have been associated with a great deal of corruption. The TWC is currently being run by organized-crime fighters of the highest personal integrity, but who is to say that later mayors will not use the commission to reward political allies and that the TWC won't someday end up being captured by the industry, or worse?

Although the strategy used at the Javits Center was less dramatic, it demonstrated that a little political will goes a long way, especially in conjunction with persistent and ongoing law enforcement efforts. Quite simply, Governor Pataki committed himself to cleaning up the center, changed its governing board and hired a new CEO, who forced the center's entire workforce to resign and apply for positions. Employees with criminal records and/or organized-crime ties were not rehired. Labor relations were revamped. Good management was instituted. Success followed.

IS THE BATTLE WON?

Admittedly, it is not possible to prove definitively that Cosa Nostra is no longer a force, or at least a substantial force, in New York City's core economy. We necessarily have to make inferences from a number of facts and rely on the assessment of observers close to the scene.

0839

What is the evidence that Cosa Nostra's demise is at hand? First, there is the remarkable list of leaders who are in jail for lengthy or life terms. With the 1997 sentencing of Vincent "the Chin" Gigante (boss of the Genovese crime family), there is no longer a single renowned New York City Cosa Nostra leader on the streets.[13] Certainly, there is no John Gotti walking around thumbing his nose at law enforcement, publicly holding court, and collecting homage. Current Cosa Nostra members are maintaining very low profiles. The New York City Cosa Nostra "commission" reputedly has ceased to function.[14]

The mob seems to be eliminated from the Javits Center and the Fulton Fish Market and is nearly gone from the New York City and Long Island carting industries, at least that is the assessment of law enforcement personnel, city officials, and people who do business in these industries. One key indicator is the dramatic decrease in prices in the carting industry and fish market. The Javits Center is also enjoying booming business, reversing a downward trend. The air-cargo industry at JFK Airport has reported a steep decrease in the amount of cargo thefts.

In the construction industry, the cartels in concrete and drywall have completely disappeared. A great deal of progress has been made toward purging organized crime from the Teamsters union. The IBT's General Executive Board no longer contains any known mob members. The national election process is much freer.[15] Union democracy now has a chance. The efforts of the national union to remove the stain of racketeering from its locals has had impact. The Carpenters union has been substantially reformed, and labor racketeering is certainly on the wane in a number of the other previously mobbed-up unions' locals. It is premature to say that there is no organized-crime presence, but there is little doubt that that presence is far less significant than it was in the 1980s.

It takes courage or perhaps foolhardiness to pronounce the death of Cosa Nostra, a crime syndicate that has wielded enormous power in the underworld and upperworld for more than half a century. How can we be sure that new Cosa Nostra leaders will not arise and that Cosa Nostra will not find its way into new industries? The short answer is that we cannot. If law enforcement is not vigilant, if the next New York City mayoral administration turns a blind eye toward organized crime, Cosa Nostra might indeed make a comeback. Administrations come and go. Priorities change. Strong leaders emerge and

0840

disappear. It is not in the nature of our governmental system to stay focused on one set of problems and to build upon programmatic and administrative experience, even successes. However, as of this writing, there seems to be a good chance that Cosa Nostra's role as a key player in the New York City economy and power structure will not survive into the twenty-first century.

66. See *Jerry Kubecka, Inc. v. Avellino,* 898 F. Supp. 963, 966 (E.D.N.Y. 1995). The Kubecka and Barstow families brought a civil-racketeering and wrongful-death suit against Avellino, Lucchese crime family member Anthony Casso, and two carting companies that Avellino owned. The families next brought suit

0858

against the state of New York, alleging that the New York State Organized Crime Task Force, with which Kubecka and Barstow had been cooperating, failed to protect the two men from being murdered. See *Kubecka v. State,* 1996 WL 766553, *1 (N.Y.Ct.Cl. December 20, 1996). The New York Court of Claims ruled for the plaintiffs, finding that the OCTF failed in its duty to provide reasonable protection to the decedents. In June 1998, New York State was ordered to pay $10.8 million to the families of Kubecka and Barstow. John T. McQuiston, "Families of Slain Informers Awarded $10.8 Million," *New York Times,* July 22, 1998, B7.

NOTES TO CHAPTER 8

1. See John Landesco, *Organized Crime in Chicago* (Chicago: University of Chicago Press, 1968; originally published in 1929).

2. Cf. Peter Maas, *Underboss: Sammy "The Bull" Gravano's Story of Life in the Mafia* (New York: HarperCollins, 1997), 43, 65–66.

3. There is some dispute as to whether a national "commission," ostensibly made up of the most powerful representatives of the major Italian crime families, ever existed. Compare Maas, *Underboss,* 33–34, with James B. Jacobs, Christopher Panarella, and Jay Worthington, *Busting the Mob: United States v. Cosa Nostra* (New York: New York University Press, 1994), 79–91.

0864

4. Other reports hold that by the early 1980s, the Bonanno family had dropped out of the "commission" because of internal warfare. The leaders of the Bonanno family were indicted in a separate RICO prosecution for conducting a criminal enterprise (the crime family) through a pattern of racketeering activity (supplied by information gathered from Operation GENUS). See Jacobs, Panarella, and Worthington, *Busting the Mob,* 81.

5. See Peter Reuter, *Racketeering in Legitimate Industries: A Study in the Economics of Intimidation* (Santa Monica: Rand 1987).

6. Peter Reuter, "Regulating Rackets," *American Enterprise Institute Journal on Government and Society,* September/December 1984, 34.

7. Maas, *Underboss,* 61–63, 105, 135–36, 167.

8. Ibid., 232–33, 277.

9. Ibid., 283.

10. Many newly made Cosa Nostra members married into the family, or had blood ties to the mob. See generally, ibid.

11. John H. Davis, *Mafia Dynasty: The Rise and Fall of the Gambino Crime Family* (New York: HarperCollins, 1993), 114.

12. There is no definitive study of the history of organized-crime's involvement in the American labor movement. But see Philip Taft, *Corruption and Racketeering in the Labor Movement,* 2d ed. (Ithaca: New York State School of Industrial and Labor Relations Press, 1970); John Hutchinson, *The Imperfect Union* (New York: Dutton, 1970; Stephen Fox, *Blood and Power: Organized Crime in the Twentieth Century* (New York: Morrow, 1989).

13. Notably, union reformer Frank Schonfeld won control of Painters District Council 9 in 1967, but without government assistance in rooting out corruption, his six-year term failed to liberate the union from organized-crime's influence. See Association for Union Democracy, "Painters, Roofers, Fish Market," *Union Democracy Review* 90 (October 1992): 6.

14. Jacobs, Panarella, and Worthington, *Busting the Mob.*

15. Maas, *Underboss,* 279.

16. Perhaps rank-and-file indifference to the possibility of reform can be explained by the fact that union democracy is not important to most union members. See James Coleman, Seymour Martin Lipset, and Martin A. Trow, *Union Democracy, The Internal Politics of the International Typographical Union* (Glenco, Ill.: Free Press, 1956).

17. Landesco, *Organized Crime in Chicago,* 152.

18. Robert W. Snyder, "Organized Crime," in *Encyclopedia of New York City,* ed. Kenneth Jackson (New Haven: Yale University Press, 1995), 866–68.

19. *United States v. Corallo,* 413 F2d 1306 (2d Cir. 1969).

20. See ibid., 1312.

21. See ibid., 1315; 1319.

22. See ibid., 1318.

0865

23. See ibid., 1306–7.

24. See George Walsh, *Public Enemies: The Mayor, the Mob and the Crime That Was* (New York: Norton, 1980).

25. Earlier in the twentieth century, other ethnic organized-crime groups did engage in industrial racketeering. For example, notorious Jewish ganglord Lepke Buchalter, aided by his violent sidekick Gurrah Shapiro, ran rackets in the garment industry in the 1930s, until the state convicted and executed him for murder. See chapter 2; Jonathan Kwitny, *Vicious Circles: The Mafia in the Marketplace* (New York: Norton, 1979) 65, 236, 267.

27. Ronald Sullivan, "2 Gambinos Go on Trial, Very Quietly," *New York Times,* February 23, 1992, A1.

28. Specifically, the Gambinos pled guilty to violating New York's General Business Law 340, 341, as did John DiSalvo, Clothing Carriers Corp., Consolidated Carriers Corp., Greenberg's Express, Inc., and GRG Delivery Corp. Jonathan M. Moses and Milo Geyelin, "Legal Beat," *Wall Street Journal,* February 27, 1992, B8.

29. Michael Vuolo, AAA Garment Delivery, Inc., J. R. Garment Delivery, Inc., IMC Carriers, Ltd., FM & J Delivery Service, Inc., Lucky Apparel Carriers, Inc., and Lucky Garment Transportation Co., Inc. pled guilty to violating the same state business laws as the Gambinos. Both David Stuart and Raymond Buccafusco pled guilty to violating New York State Penal Law sec. 100.05 (criminal solicitation). The charges against Mark Stuart were dropped. *People v. Gambino,* Indictments 11859-90 and 11858-90, Plea Agreement, 2–3 (1992).

30. DiSalvo and Buccafusco also were forced out of the garment industry. *People v. Gambino,* Indictments 11859-90 and 11858-90, Plea Agreement, 4 (1992). Voulo and David Stuart, along with the other companies mentioned in the second indictment, agreed to cease anticompetitive practices. *People v. Gambino,* Indictments 11859-90 and 11858-90, Plea Agreement, 3 (1992).

0882

7. Ibid., 1149. Judge Glasser's ruling was based on the Second Circuit's interpretation of the language of 28 U.S.C. 1964(c), under which a RICO plaintiff seeking monetary damages must have suffered injury to his business or property. See *United States v.* Bonanno LCN Family, 683 F. Supp. at 1456 (E.D.N.Y. 1987) aff'd. 879 F.2d at 27 (2d Cir. 1989). In Glasser's opinion the government had not demonstrated such injury.

8. *United States v. Private Sanitation Indus. Assoc. of Nassau/Suffolk, Inc.,* 811 F. Supp. 808, 810 (E.D.N.Y. 1992)

9. Ibid., 815. Judge Glasser referred to Avellino's 1992 guilty pleas in *People v. Salem Sanitary Carting Corp.*, CV-85-0208 (E.D.N.Y. 1985), where he agreed to pay $231,000 and to refrain from conspiring to restrain trade. In 1986, he pleaded guilty to coercion in the first degree and to conspiracy to commit bribery.

10. Ibid., 818.

11. *United States v. Private Sanitation Indus. Assoc. of Nassau/Suffolk, Inc.,* 899 F. Supp. 974 (E.D.N.Y. 1994). Glasser relied on Ferrante's guilty pleas to coercion and bribery.

Glossary of Names

Robert Abrams New York State attorney general, 1979–1993.

Bernard Adelstein Founder and secretary-treasurer (top position) of Teamsters Local 813 from 1951 to 1992. Linked with the Gambino and Lucchese crime families.

Benedetto Aloi Underboss of the Colombo crime family. Organized the window-replacement cartel with Venero Mangano. He was convicted in 1991 for his participation in the cartel.

Mustapha Ally Maryland resident who in 1986 won the contract to start a concrete-batching plant that would supply concrete for all New York City public construction projects. Because his West 57th Street Concrete Corporation was unable to produce significant amounts of concrete, the contract was terminated.

Herbert Altman New York State justice who upheld the constitutionality of Organized Crime Control Act (OCCA), the state racketeering statute.

Vittorio Amuso Boss of the Lucchese family who fled to avoid prosecution in the windows case. Ultimately, he was apprehended and convicted of murder and racketeering.

Eugene R. Anderson Former federal prosecutor who served from 1987 to 1993 as the court-appointed trustee for Local 6A and the District Council of Cement and Concrete Workers. He concluded that the trusteeship was largely unsuccessful due to inadequate legal powers and insufficient funding.

William Aronwald Head of the U.S. Department of Justice's Joint Strike Force Against Organized Crime in Manhattan in the 1970s. He coordinated Project Cleveland, a large-scale sting operation in the garment center from March 1973 to August 1974.

0897

Salvatore Avellino Lucchese family capo who dominated waste hauling on Long Island through the Private Sanitation Industry Association of Nassau/Suffolk from the 1960s to the 1980s. Owned Salem Sanitary Carting Corporation. He was convicted of murder conspiracy and racketeering in 1994.

Liborio "Barney" Bellomo Genovese family capo and reputedly the family's acting boss in the mid-1990s. In February 1997, he pled guilty to extortion related to the carting and construction industries and received a ten-year prison term.

G. Robert Blakey Principal draftsman of RICO statute, criminal law professor, and key advisor to the FBI in the 1980s.

Robert Boyle Appointed by Governor George Pataki as Javits Center president and CEO in 1995 with a mandate to purge organized crime. He implemented major reforms in the administration of the center. He resigned in 1997 to become executive director of the Port Authority of New York and New Jersey, and chairman of the Javits Center Board.

William Bratton New York City police commissioner, 1994–1996.

Raymond Buccafusco Codefendant with the Gambino brothers in the 1992 Garment Center racketeering case. He entered into a plea agreement.

Louis "Lepke" Buchalter In 1928, with Jacob "Gurrah" Shapiro, he took over Arnold Rothstein's labor rackets in the garment industry. He owned design firms and controlled trade associations and the truckers' union. He was convicted of murder and executed in 1944.

Vincent "the Fish" Cafaro Genovese family soldier who played a key role at the Javits Center and in the Carpenters' union. He became a cooperating witness and testified in several prosecutions and in the civil RICO suit against the Carpenters District Council.

Anthony Calagna Picked by Lucchese crime family in 1990 to run International Brotherhood of Teamsters Local 295 after Frank Calise was convicted of labor racketeering. He pled guilty in 1991 to extorting payoffs from a trucking company at JFK Airport.

Frank Calise Picked by Lucchese crime family to run International Brotherhood of Teamsters Local 295 when the Davidoffs were driven

0898

from power. In 1990, along with Harry Davidoff, Calise was convicted of labor racketeering involving payoffs from freight-forwarding companies at JFK Airport. He was sentenced to a nine-year prison term.

Charles Carberry Former federal prosecutor who was appointed investigations officer pursuant to the 1989 consent decree that established a three-person monitorship over the general executive board of the International Brotherhood of Teamsters. His investigations led to disciplinary charges against hundreds of Teamsters officials and members. Most charges resulted in expulsions and resignations from the union.

Ronald Carey Teamsters union reformer who campaigned against corruption and organized crime and was elected president of the International Brotherhood of Teamsters in 1991. He imposed trusteeships on several corrupt locals and stripped several local officers of their positions. He was charged with campaign finance fraud in the 1996 Teamsters election, was removed from office, and was expelled from the union.

U.S. Attorney Zachary Carter U.S. attorney for the Eastern District of New York, 1993 to present.

Anthony "Gaspipe" Casso Lucchese underboss who went into hiding in 1991 after being indicted in the windows case. While on the lam, he was also charged with involvement in the painters cartel. Apprehended in 1993, he pled guilty and served as a government witness. However, his untruthful testimony led to his removal from the Witness Security Program and ultimately to several life sentences for murders and other crimes.

Paul Castellano Carlo Gambino's successor as boss of the Gambino crime family. He was heavily involved in construction-industry racketeering, including the concrete cartel. He was assassinated in 1985 by a Gambino crew headed by capo John Gotti, who then became his successor as boss.

Michael Cherkasky Chief of Manhattan D.A. Office's investigations division who led the investigation of the Gambinos garment-industry racketeering. Later, as an executive of a private-sector security firm, he assisted Special Master Robert McGuire in the remedial phase of the Garment Center case. In 1994, he was appointed monitor for the Long Island waste-hauling industry. In 1997, he was appointed to monitor the 1998 International Brotherhood of Teamsters election.

0899

John Cody Gambino associate and president of International Brotherhood of Teamsters Local 282 from 1976 to 1982. One of the most powerful labor figures in New York City, he was convicted of racketeering in 1982 and sentenced to five years in prison.

Kenneth Conboy Former New York City commissioner of investigation and federal judge who was appointed to be the investigations and review officer over the Carpenters District Council in 1994. His efforts led Carpenters International president Douglas McCarron to place the District Council under trusteeship in 1996. Conboy also serves (as of January 1999) as the court-appointed election officer in the International Brotherhood of Teamsters case.

Paul Coscia Chief shop steward and later vice-president of the Exhibition Employees Union Local 829, which represented workers at the Javits Center. Reputed to be an associate of the Genovese crime family.

Mario Cuomo Governor of New York State from 1983 to 1995.

Alphonse "Little Al" D'Arco Acting boss of the Lucchese crime family who exerted influence on the Carpenters union and received payoffs from businesses that employed members of the union, ghost payrolled family members, and defrauded employee pension funds. Became a government witness.

Harry Davidoff Lucchese family associate whom Jimmy Hoffa appointed president of International Brotherhood of Teamsters Local 295 in 1956. He dominated Local 295 until 1989, when he was convicted on racketeering, extortion, and conspiracy charges. He was sentenced to twelve years in prison and banned from participating in the affairs of Local 295 and Local 851. In 1991, he and Frank Calise were convicted of collecting payoffs from freight-forwarding companies at JFK Airport. He was fined nearly $1 million.

Mark Davidoff Harry Davidoff's son, secretary-treasurer of International Brotherhood of Teamsters (IBT) Local 851. He resigned in 1990 when the IBT Review Board began investigating racketeering in New York City Teamsters locals.

Steven "Beansy" Dellacava Chief shop steward, with Paul Coscia, for the Exhibition Employees Union at the Javits Center until mid-1995. Reputed to be an associate of the Genovese crime family. After leaving the

0900

Javits Center, he controlled job distribution for exhibition and trade shows in other New York facilities.

Ron DePetris Former chief assistant U.S. attorney, Eastern District of New York, who, pursuant to a 1994 consent decree, was appointed independent supervisor of International Brotherhood of Teamsters Local 851, which represented workers in the JFK air-cargo industry. He hired David Krasula as his chief investigator.

Frederick Devine President of the Carpenters District Council from 1991 to 1996. Mob turncoats, including Vincent Cafaro and Sammy Gravano, testified that he was associated with several Cosa Nostra families. He was ousted from his position in 1996 by the International union president. In 1998, he was convicted of embezzling union funds and sentenced to fifteen months in prison.

Thomas E. Dewey Assistant U.S. attorney for the Southern District of New York from 1931 to 1933. Special prosecutor for the State of New York from 1935 to 1937. Manhattan district attorney from 1938 to 1942. He prosecuted several organized-crime figures, including garment-industry racketeers Louis "Lepke" Buchalter, Jacob "Gurrah" Shapiro, and John "Johnny Dio" Dioguardi. He was New York State governor from 1943 to 1952.

Vincent DiNapoli Genovese family capo who organized the drywall cartel. He controlled Cambridge Drywall and Inner City Drywall. He was also responsible for creating Plasterers Local 530, which was run by Louis Moscatiello. In 1980, he was convicted of racketeering and sentenced to a five-year prison term. In 1988, he was convicted in the Genovese family RICO case and sentenced to a long prison term.

John "Johnny Dio" Dioguardi Capo in the Lucchese crime family who was associated with Thomas Lucchese in the Garment Center. He was convicted on racketeering charges in the 1930s but served only a brief sentence. He worked as a trucking "consultant" for the Metropolitan Import Truckmen's Association (MITA), later known as the National Association for Air-Freight, Inc. (NAFA). He assisted Jimmy Hoffa in taking control of Teamsters Joint Council 16, which includes Local 295 and many other locals. He was convicted in 1958 for conspiracy and extortion in connection with labor racketeering at JFK Airport. He went to prison in 1973 on a stock-fraud conviction and died there in 1979.

0901

John DiSalvo Owner of trucking interests in the Garment Center who was named as a codefendant with the Gambino brothers. He entered a plea agreement in 1992.

Natale "Joe Diamond" Evola Longtime member and nominal boss of the Bonanno crime family in the early 1970s. He owned several Garment Center trucking companies and was a major racketeer in the Garment Center. He died of natural causes in 1973 while under federal investigation.

James "Jimmy Brown" Failla Managed Association of Trade Waste Removers of Greater New York for more than thirty years. Exerted influence over International Brotherhood of Teamsters Local 813. Capo in the Gambino family. In 1994, he pled guilty to charges of conspiracy to commit murder and received a seven-year prison term.

William A. Ferchak Longtime officer of International Brotherhood of Teamsters (IBT) Local 732 whom Frederick Lacey appointed temporary trustee of IBT Local 295 in 1991.

Edward T. Ferguson III Former federal prosecutor who, in 1997, was appointed executive director of New York City Trade Waste Commission.

Anthony Fiorino Genovese crime-family associate and Liborio Bellomo's brother-in-law. In 1982 he became a member of Carpenters Local 257 and was named shop steward in 1985. He was assigned to the Javits Center in 1988 and four weeks later appointed to the supervisory position of "timekeeper." He was soon promoted to be the chief of carpenters at the center. Frederick Devine appointed him to succeed Ralph Coppola as District Council representative in 1994. He was the first union member to face disciplinary charges under the consent decree. He was expelled from the union for life for knowingly associating with members of the Genovese crime family and for enforcing a corrupt "pool-list" referral system.

Dominic Froncillo International Brotherhood of Teamsters Local 807 member and Javits Center employee whom the Independent Review Board charged with knowingly associating with a member of organized crime. He testified to a fifteen-year friendship with Alphonse Malangone, reputed Genovese family capo. In 1996, he was permanently barred from the union.

0902

Thomas Galligan New York State justice who presided over *People v. Gambino et al.* (1992). He appointed Robert McGuire as special master of the Gambinos' trucking interests in the Garment Center.

Joseph N. Gallo Gambino family consigliere who controlled the Greater Blouse, Skirt and Undergarment Association. He was convicted of bribery in 1987 and sentenced to a long prison term.

Carlo Gambino Boss of Gambino Cosa Nostra crime family. Father of Thomas and Joseph Gambino. He selected Paul Castellano as his successor. He died in 1976.

Joseph Gambino Carlo Gambino's son and Thomas Gambino's brother. The Gambino brothers were the dominant figures in Garment Center trucking until in a 1992 plea bargain they agreed to withdraw from the industry and pay a $12 million fine.

Thomas Gambino Carlo Gambino's son and Joseph Gambino's brother. The Gambino brothers were the dominant Cosa Nostra figures in the New York City garment industry until their 1992 plea bargain, in which they agreed to withdraw from the industry and pay a $12 million fine. Thomas's wealth was estimated as $100 million. He was convicted in 1993 on unrelated racketeering charges in Connecticut and was sentenced to a five-year prison term.

William F. Genoese Officer of International Brotherhood of Teamsters (IBT) Local 732. He was nominated by IBT president Ron Carey in 1992 to replace William Ferchak as temporary trustee of Local 295. After an investigation uncovered ties to the Lucchese crime family and inaction in the face of corruption at JFK Airport, his nomination was vetoed by IBT Independent Administrator Frederick Lacey. President Carey ultimately stripped him of his Local 732 position.

Vincent "the Chin" Gigante Boss of the Genovese family who was known to walk the streets in his bathrobe while mumbling to himself. Government prosecutors argued that he was faking mental illness. Sammy Gravano testified that Gigante was in full control of his wits and the Genovese family. Gigante avoided trial in the windows RICO case when found mentally unfit to stand trial. In 1997, he was convicted of RICO and sentenced to twelve years in prison.

0903

Rudolph Giuliani Associate attorney general of the United States, 1981–1983. U.S. attorney for the Southern District of New York, 1983–1989. His office prosecuted the Gambino, Bonanno, and Genovese family RICO cases and *United States v. Salerno,* the "commission" case. He also brought civil RICO suits against the general executive board of the International Brotherhood of Teamsters, and against Local 359 and the Genovese family at the Fulton Fish Market. As mayor (1994–present), he established a licensing system to free the Fulton Fish Market of mob control and a Trade Waste Commission to break up the waste-hauling cartel.

Leo I. Glasser United States district judge, Eastern District of New York, who presided over several organized-crime cases, including *United States v. Private Sanitation Industry Assoc. of Nassau/Suffolk, Inc.,* and *United States v. Gotti.*

John Gleeson Assistant U.S. attorney, Eastern District of New York, and chief of that office's organized crime section, 1990–1993. Federal court judge, 1994 to present.

Ronald Goldstock Director of New York State's Organized Crime Task Force, 1981–1994, who directed the comprehensive investigation of corruption and racketeering in the New York City construction industry. He first advocated use of private monitors as an organized-crime control strategy. He played a key role in investigating the Long Island carting cartel. In 1996, he was appointed to the Board of Directors of the New York Convention Center Operating Corporation, which operates the Javits Center.

John Gotti Boss of the Gambino crime family in the 1980s after the assassination of Paul Castellano. In the 1960s, he spent three years in prison for hijacking trucks from JFK Airport. He was convicted in 1992 of RICO violations and various predicate offenses, including the murder of Paul Castellano. He was sentenced to life in prison.

Victor Grande Pled guilty in 1982 to failure to pay taxes on money received from a vehicle-protection racket at the Fulton Fish Market.

Sammy "the Bull" Gravano Gambino underboss who cooperated with the government and testified against John Gotti in 1992 and against several other important mob figures.

0904

Mark Green Commissioner of Department of Consumer Affairs from 1990 to 1992. With Deputy Commissioner Richard Schreder, he undertook a number of initiatives to purge organized crime from the carting industry. In 1993, he was elected public advocate.

Thomas Griesa U.S. district judge for the Southern District of New York who presided over a number of cases involving the Fulton Fish Market, including *United States v. Local 359.*

Charles Haight Federal judge who presided over the civil RICO suit against the Carpenters District Council. He appointed Kenneth Conboy investigations and review officer.

Edward "Biff" Halloran Genovese associate who monopolized all ready-mix concrete suppliers in the 1980s. He was convicted in the Genovese family RICO case in 1988, and the companies he owned were forfeited to the government.

Henry Hill Lucchese associate turned government witness. He claims to have masterminded the 1978 Lufthansa heist with Jimmy Burke and Paul Vario. He testified against various Lucchese members and associates and entered the Witness Security Program. The story of his life, written with Peter Maas, was published as *Wiseguy* and later adapted into the movie *Goodfellas*.

James R. Hoffa Turned over several New York City–area International Brotherhood of Teamsters (IBT) locals to Cosa Nostra in exchange for the mob's support in his 1956 campaign for the IBT presidency. President of IBT from 1956 to 1958, and from 1961 until his conviction in 1964 for pension fraud and jury tampering. Disappeared in 1975, presumed the victim of a mob assassination, while campaigning to regain control of the IBT on a platform of freeing the union from mob domination.

Samuel H. Hofstadter New York State justice who, in the 1950s, upheld New York City's denial of a license to James Plumeri's garment-industry trucking company because of Plumeri's ties to organized crime.

Michael Holland Labor lawyer appointed elections officer pursuant to 1989 consent decree that established a three-person trusteeship over the International Brotherhood of Teamsters.

Matthew "Matty the Horse" Ianniello Longtime capo in the Genovese crime family. He was involved in several rackets, including working as

0905

Frank Wolf's assistant in the Master Truckmen of America and as a business agent for International Ladies Garment Workers Union Local 102. In 1976, he was acquitted of conspiracy to commit extortion in Garment Center. Convicted in 1986 on unrelated racketeering charges and sentenced to a long prison term.

Paul Kamen President of Painters District Council 9 until 1991, when he pled guilty to Organized Crime Control Act (OCCA) enterprise corruption related to the painters cartel. His plea confirmed prosecutors' suspicions that he was associated with the Lucchese crime family.

Gerald Kelty Member of Carpenters Local 257 who alleged that Anthony Fiorino had ordered him set on fire and had metal studs dropped on him because he had complained about union-contract violations.

Edward I. Koch Mayor of New York City, 1978–1989. He joined with Governor Cuomo in calling for an investigation of corruption and racketeering in the construction industry.

James Kossler Coordinating supervisor, organized crime branch, New York City FBI office, late 1970s to late 1980s. One of the key figures in designing and implementing the FBI's organized-crime control program.

David Krasula Longtime investigator with the U.S. Postal Inspection Service and U.S. Department of Labor. He was hired by Ron DePetris as chief investigator of International Brotherhood of Teamsters Local 851, pursuant to the October 1994 consent decree in a case involving racketeering in the air-cargo industry at JFK Airport.

Frederick B. Lacey Former federal judge who, pursuant to 1989 Teamsters consent decree, served as independent administrator in the trusteeship over the International Brotherhood of Teamsters. Later he served as a member of the Independent Review Board in that same case.

Joseph "Socks" Lanza Genovese crime family capo who controlled Fulton Fish Market and exerted much influence on the entire New York City waterfront from the 1920s to the 1950s. In 1923, he organized Local 359 of the United Seafood Workers representing workers in the Fulton

[162.10.217.184] Project MUSE (2026-06-15 01:41 GMT) University of Queensland

Fish Market. Despite criminal convictions and prison terms, he remained on the local's payroll and served as its business agent until his death in 1968.

Nunzio "Harry" Lanza Capo in the Genovese crime family and brother of Joseph Lanza. He served as a Local 359 official throughout the 1960s.

Franz Leichter New York State senator who, in 1981, issued a comprehensive report on Cosa Nostra's involvement in the New York City garment industry.

Thomas "Three-Finger Brown" Lucchese Successor to Jacob Shapiro and Louis Buchalter. As boss of the Lucchese crime family, he had several ownership interests in and was involved in managing rackets in the garment industry. His garment-industry interests were passed on to his son-in-law Thomas Gambino and to Joseph Gambino.

Andrew J. Maloney U.S attorney for Eastern District of New York from 1986 to 1992.

Venero Mangano Genovese underboss in the late 1980s who organized the window-replacement cartel with Benedetto Aloi and conspired to murder potential witnesses. He was convicted in 1991 and received a 188-month sentence.

Theodore "Teddy" Maritas President of the Carpenters District Council from 1977 to 1981. He allegedly helped Vincent DiNapoli organize and enforce the drywall cartel. The prosecution against him and DiNapoli for drywall racketeering ended in a hung jury. He disappeared in 1992, presumed murdered to prevent cooperation with the government against his codefendants.

Paul Martello Business agent of Plumbers Local 2 who was reelected in 1996 despite pending charges of enterprise corruption and other crimes related to the painters cartel. He was acquitted of those charges.

Randy Mastro Assistant U.S. attorney in the Southern District of New York under Rudolph Giuliani. Lead attorney on the civil RICO suit against the International Brotherhood of Teamsters general executive board and Cosa Nostra members. Chief of staff and deputy mayor of the City of New York, 1994–1998. First (temporary) director of the Trade Waste Commission, 1996–1997.

0907

H. Carl McCall New York State comptroller whose 1995 audit criticized the Javits Center's management and financial controls.

Edward McDonald Director of Brooklyn Organized Crime Strike Force from 1982 to 1989.

Thomas McGowan President of Local 580 of the Architectural and Ornamental Ironworkers Union. He was acquitted in the windows prosecution. He was convicted in 1994 for crimes, related to the windows cartel, involving payoffs from a private contractor.

Robert McGuire New York City police commissioner who was appointed special master over the Gambino brothers' Garment Center trucking interests from 1992 to 1997. He instituted several reforms to break up the trucking cartel's "marriage system" and established a $3 million victims' compensation fund from the Gambinos' $12 million fine.

Gerald McQueen Former investigator in the Manhattan district attorney's organized crime and labor racketeering unit. In 1995, Governor Pataki appointed him inspector general of Javits Center. In 1997, the governor appointed him chief executive officer of the center. He carried forward the organized-crime-control and administrative-reform program of Robert Boyle.

John Mitchell U.S. attorney general, 1969–1972. He brought antitrust suits in 1971 against several New York City trucking companies and the National Association for Air-Freight, Inc. (NAFA), leading to the 1974 dissolution of the corrupt trade association.

Robert Morgenthau U.S. attorney for Southern District of New York, 1961–1970. Manhattan district attorney 1975 to present.

Michael Moroney Former official in the U.S. Department of Labor's Office of Labor Racketeering who in April 1992 was hired by Thomas Puccio as deputy trustee of International Brotherhood of Teamsters Local 295.

Louis Moscatiello President of Plasterers Local 530, which was created by Vincent DiNapoli. He was convicted in 1991 for his role as a bribe broker in the drywall industry and sent to prison.

0908

Eugene H. Nickerson Federal judge who presided over cases dealing with JFK Airport racketeering.

Curt Ostrander Appointed trustee of Local 851 in 1994 by International Brotherhood of Teamsters President Ron Carey. He was replaced by Eileen Sullivan in November 1996.

Fabian Palomino Javits Center's president and CEO, 1991–1995. The state comptroller charged that he mismanaged the center and tolerated corruption.

George Pataki Governor of New York State, 1994 to present. He committed his administration to an all out attack on organized crime at the Javits Center. He appointed Robert Boyle as CEO of the Javits Center and Gerald McQueen as the center's inspector general.

Sebastian Pipitone Javits Center inspector general, 1994–1995, under CEO Fabian Palomino.

James Plumeri Lucchese crime-family member who held ownership interests in the Garment Center, including, Ell-Gee Carriers Corp. and Barton Trucking Company. He unsuccessfully challenged the New York City commissioner of licenses for denying a business license to Barton Trucking in the 1950s. He was murdered in 1971.

Angelo Ponte Member of the carting cartel. Owner of CV Ponte & Sons, one of the largest waste-hauling firms in the city, and allegedly a business partner of the Genovese crime family. Pled guilty to attempted enterprise corruption and was sentenced to two to six years in prison, fined $7.5 million, and permanently barred from the waste-hauling industry.

Michael Porta Jr. International Brotherhood of Teamsters member employed at the Javits Center. In 1995, he was charged with knowingly associating with members of organized-crime families and permanently barred from the union.

Anthony "Tony Pro" Provenzano Longtime president of International Brotherhood of Teamsters Local 560 and capo in the Genovese crime family. In 1978, as a result of the Project Cleveland investigation, he was convicted of illegally obtaining a loan from a union pension fund. In 1978, he was convicted of murder and later died in prison.

0909

Thomas Puccio Former assistant U.S. attorney and former chief of the Brooklyn Organized Crime Strike Force. As a private lawyer, he was appointed trustee of IBT Local 295 in April 1992.

Michael Rabbitt Son of Robert Rabbitt Sr. In 1994, he headed Teamsters' contract-negotiating team with the decorator companies. The contract redefined the general foreman as a management position. He left the union and assumed the new general foreman position. He was indicted for conspiracy to extort money from the president of a company doing business at the Javits Center, receiving bribes, grand larceny through extortion, criminal possession of stolen property, and falsification of business records with the intent to defraud. All the charges were dropped after Rabbitt Sr. pled guilty. He subsequently relinquished the general foreman position to Rabbitt Sr. upon the latter's release from prison.

Robert Rabbitt Sr. With sons Michael and Robert Jr., led International Brotherhood of Teamsters Local 807 for almost three decades. Business agent of Teamsters Local 807 charged with bringing reproach upon the union by taking money from an exhibitor at the Javits Center. Upon settlement, he resigned from the union for five years. He was indicted for conspiracy to extort money from the president of a company doing business at the Javits Center, receiving bribes, grand larceny through extortion, criminal possession of stolen property, and falsification of business records with the intent to defraud. He pled guilty to falsification of business records, and all the other charges were dropped. He was convicted of second-degree manslaughter in 1985 and banned from the union for five years. The general foreman position was held open until he was released from prison in 1988. In 1992, he pled guilty to falsifying business records and, after serving one year in prison, returned to the position of general foreman. Under threat of bribery charges, he accepted a five-year suspension from the union, and his son Michael took over his position.

Robert Rabbitt Jr. Son of Robert Rabbitt Sr. who succeeded his father as International Brotherhood of Teamsters (IBT) Local 807 business agent. He was removed from this position in 1985 by IBT President Ron Carey.

Anthony Razza Secretary-treasurer (the top position) of International Brotherhood of Teamsters Local 851, which represented employees in

0910

the JFK air-cargo industry. In 1994, he was convicted of labor racketeering and tax fraud and sentenced to twenty-one months in prison. He was barred from the IBT for life.

Armando Rea Teamster member employed at the Javits Center who in 1994 was charged with violating the International Brotherhood of Teamsters oath by being a member of an organized-crime family and associating with organized-crime figures. The Independent Review Board permanently barred him from the union.

Salvatore Reale Associate of the Gambino crime family who served as director of security for a trucking company at JFK Airport. He was John Gotti's "on-stage guy" at JFK Airport. Named Man of the Year by the Patrolmen's Benevolent Association in 1978. In 1987, he pled guilty to extortion and was sentenced to a fifteen-year suspended prison term.

Ronald Rivera New York State Police officer who ran Chrystie Fashions during yearlong undercover sting operation in the Garment Center. He testified for the prosecution against the Gambino brothers.

Carmine Romano "Socks" Lanza's successor as the Genovese family's boss at the Fulton Fish Market. He served as secretary-treasurer of United Seafood Workers, Smoked Fish and Cannery Union Local 359 from 1974 to 1980, when he received a twelve-year prison sentence for violating RICO and the Taft-Hartley Act.

Peter Romano Brother of Carmine Romano. He was appointed business agent of Local 359 in 1974 when Carmine became secretary-treasurer. In 1981, he was convicted of obstruction of justice and perjury and sent to prison for eighteen months.

Vincent Romano Brother of Carmine and Peter and member of the Genovese crime family. He assumed control of the Fulton Fish Market in 1981 following his brothers' convictions. He took over as secretary-treasurer of United Seafood Workers, Smoked Fish and Cannery Union Local 359 in 1980. A 1988 consent judgment permanently barred him from working in the market.

Arnold Rothstein First major organized-crime figure involved in New York City's garment industry. He employed thugs for and against designers in their battles with unions. He was murdered in 1928.

0911

William Ruckelhaus Chief executive officer of Browning, Ferris, Inc. (BFI), who led BFI into the New York waste-hauling market in 1991, and cooperated with District Attorney Morgenthau.

Anthony "Fat Tony" Salerno Genovese family's ostensible boss. FBI later considered him to be Vincent Gigante's subordinate. He was convicted in the 1986 "commission" case, among other things, of rigging Javits Center bids, inflating the center's concrete bids, and inflating the center's construction costs by approximately $12 million. He died later in prison while under indictment in the Genovese family RICO case.

Robert Sasso President of International Brotherhood of Teamsters Local 282. He resigned as a result of an investigation by the International union's court-appointed investigations officer, Charles Carberry, into allegations that Sasso was influenced by the Gambino crime family. He pled guilty to racketeering involving an extortion conspiracy with organized crime in 1994.

Peter Savino Genovese associate implicated in the windows cartel. He started Arista Windows with Lucchese drug money and used Cosa Nostra's domination of the window-replacement industry to advance the company. He became a government informant, and surreptitiously recorded several hours of conversations regarding the windows cartel.

Irwin Schiff Owner of electrical contracting company that did business at the Javits Center. He was murdered in a Manhattan restaurant after informing the FBI of an alleged contract killing at the center and of a money-laundering scheme.

Ralph Scopo Colombo soldier who enforced the concrete cartel through his position as the president of the District Council of Cement and Concrete Workers. He was convicted in both the "commission" and Colombo family RICO cases and sentenced to one hundred years in prison.

Jacob "Gurrah" Shapiro Along with Louis "Lepke" Buchalter, took over Arnold Rothstein's labor rackets in the New York City garment industry. He expanded into ownership of design firms, controlled the trade associations and the International Ladies Garment Workers Union's local. Shapiro was convicted of extortion in 1938.

0912

Gerald Shargel Prominent criminal defense lawyer who represented John Gotti in his 1990 state case and the Gambino brothers in their 1992 case. He negotiated a plea agreement with the Manhattan District Attorney's Office in which the Gambino brothers agreed to withdraw from the industry and to pay a $12 million fine.

Elliot Spitzer Assistant district attorney (New York County) who served as lead prosecutor in the Garment Center racketeering case in 1992 against Thomas and Joseph Gambino. Elected New York State attorney general in 1998

Marcello Svedese Carpenter's union official who, as a cooperating witness, testified in several cases, including the civil RICO suit against the Carpenters District Council.

Brian Taylor FBI agent who played an important part in both the fish market and carting investigations. He succeeded James Kossler as coordinating supervisor, organized-crime branch, New York City FBI office.

Thomas D. Thacher II Director of the Construction Industry Strike Force in the late 1980s and first inspector general of the School Construction Authority in 1989.

Paul Vario Capo in the Lucchese crime family who, according to Henry Hill, directed the Lufthansa heist. He was convicted and sentenced to four years in prison for conspiring to secure the early release of a Lufthansa employee who had been convicted for involvement in that heist. He was convicted in 1986 of extorting from trucking companies operating at JFK Airport, and was sent to prison. He died in prison in 1988.

Peter "Butch" Vario Nephew of Paul Vario, cousin to Peter "Jocko" Vario, and an associate of the Lucchese crime family. Business manager of Mason Tenders Local 46 from 1984 to 1989. In 1988, he was convicted of RICO conspiracy involving labor payoffs in Queens. He was sentenced to three and a half to ten and a half years in prison in 1989.

Peter "Jocko" Vario Nephew of Paul Vario. Cousin to Peter "Butch" Vario. Lucchese soldier. Vice-president of Laborer's International Union of North America Local 66, which policed the Long Island concrete cartel. He was convicted in 1990 for RICO conspiracy involving

0913

labor payoffs in Queens and was sentenced to a forty-six-month prison term.

Mary Jo White Former acting U.S. attorney, Eastern District of New York. U.S. attorney for Southern District of New York from 1993 to present.

Frank Wohl Former federal prosecutor appointed administrator of the Fulton Fish Market by Judge Griesa following the 1988 *United States v. Local 359* consent and default judgments. He issued fourteen reports from 1988 to 1992, including a 1990 midterm report calling on New York City to pass comprehensive regulatory reforms. He hired Brian Carroll as assistant administrator.

Frank Wolf President of the Master Truckmen of America (MTA) representing trucking companies in the garment center. As a result of the Project Cleveland sting operation, he was indicted for extortion. His acquittal in 1976 was a major blow to the Project Cleveland effort.

John C. Zancocchio Member of International Brotherhood of Teamsters (IBT) Union who worked at Javits Center. He was charged with violating the IBT oath by knowingly associating with members of organized crime. In 1994, IBT's Independent Review Board found him to be a member of the Bonanno crime family and barred him from the IBT.

About the Authors

JAMES B. JACOBS is Professor of Law and Director of the Center for Research in Crime and Justice at New York University. He is also co-author of *Busting the Mob: United States v. Cosa Nostra* and, most recently, *Hate Crimes: Criminal Law and Identity Politics.*

COLEEN FRIEL and ROBERT RADICK, former Glass Fellows in Crime & Justice at NYU School of Law, are currently in private law practice in Washington, D.C. and New York City.

0937

morphine derivatives. As Park carefully illustrates, these illnesses were important determinants of Hitler's political behavior.

One of the rewarding strengths of Park's analyses is his sensitivity to the behavioral correlates of disease and medications. This, combined with his skillful analysis of decision-making processes, nicely integrates the multiple dimensions of political behavior within a single individual. Moreover, so effective is this work, that it speaks strongly to reorienting much of what we call *political decision making* to the individual level of analysis.

I do have some problems with the book. For a volume packed with a considerable amount of scientific detail, it would have been helpful to the reader to have the text broken up into subsections for ease of reference and for pulling out comparative data. Beyond the chapter titles, no subsections exist.

I found the concluding chapter disappointing, not for what it said but for what it did not say. This chapter deals essentially with the provisions of the 25th Amendment to the U.S. Constitution. However, since only two of the eight cases in the volume were U.S. citizens, the applicability to other political systems is limited indeed. A cross-national focus on disability would have been useful.

Park is strongly critical of the physicians who treated the leaders under study here. A considerable amount of professional incompetence and deceptive behavior is documented. An extended reflection on this would have been helpful. Why did heads of state not recruit the best medical talent of the day as their private physicians? How should physicians for heads of state be chosen? How should they be removed when found incompetent? Why did the political entourage around each head of state tolerate medical incompetence and deception? The author provides the beginnings of responses to some of these questions throughout the book, but the answers never come together in a coherent way in the concluding chapter.

But these criticisms are minor. Park has produced a volume that is destined to become a classic interdisciplinary study of individual-level political decision making. It deserves serious attention.

THOMAS C. WIEGELE

Northern Illinois University

Political Authority in a Sicilian Village. By Filippo Sabetti (New Brunswick, NJ: Rutgers University Press, 1984. xi, 293p. $35.00).

Over the past decade-and-a-half a number of books have taken on the problem of the Mafia in Sicily, confronting the apparent paradox of an outlaw regime coexisting with a modern western state. From Anton Blok's *The Mafia of a Sicilian Village* (1974) and Jane and Peter Schneider's *Culture and Political Economy in Western Sicily* (1976) to Pino Arlacchi's *La mafia imprenditrice* (1983), they have asked whether there is any special cultural basis for the Mafia and how the Mafia has been produced by national and international political economic forces.

Sabetti, reconstructing the political history of a western Sicilian village over the past two centuries, tackles these same problems and is at pains to show that the Mafia arose not due to any Sicilian defects of culture or personality nor to any aversion to taking collective political action but is instead attributable to an administrative structure and national policies that robbed the people of their local autonomy. In this view, the Mafia was created as a means through which peasants could defend themselves from the caprices of extralocal powers, especially as these developed in the wake of Italian Unification in the 1860s.

One of the book's merits is the meticulous reconstruction of the relationship between the development of a Mafia system of power in this village and the development of Church-inspired and socialist social movements around the turn of the century. According to Sabetti, the Mafia grew up as a system of local consensus, sanctified by the local clergy. Hence, Sabetti argues against his predecessors' view that the Mafia developed as the exploitative arm of estate managers to maintain rural order and put down peasant attempts to assert greater power.

Sabetti also discusses the transformation of the local government in the post-World War II years "into a sort of trading company" of the Mafia (p. 168). Government patronage was dispensed to supporters and hurdles were erected to prevent opponents from availing themselves of the public benefits to which they were legally entitled. Yet according to Sabetti the Mafia collapsed shortly after this, in the

0939

https://doi.org/10.2307/1958122 Published online by Cambridge University Press

1950s, following its transformation from a system that represented the interests of the peasants to one that was wholly parasitical. It was this loss of moral authority together with the increased strength of the national party organizations at the local level that brought about its demise.

Here we have a strikingly positive view of the development and functioning of the Mafia at the local level in Sicily. The Mafia is seen as a continuation of a local self-help tradition that lasted as long as it benefitted the villagers and then disappeared when it had outlived its usefulness to them. Rather than reflecting amoral familism, the political history of the village shows, according to Sabetti, a value system prizing "universalistic values of liberal democracy" (p. 235).

This is a surprising book, taking a thesis dear to Sicilian apologists—that all Sicily's problems derive from the national bureaucracy—and arguing that until the nineteenth century institutional arrangements in baronial Sicily were more conducive to local self-government than in more recent times. While provocative, it is unlikely to convince many scholars to overturn their less rosy view of the development and role of the outlaw regime, both because of questions of evidence regarding the relationship between the landowners and the Mafia at certain crucial points, and because, assuming Sabetti's portrait is accurate, the evidence from other parts of western Sicily make his village appear unusual. Blaming "general social disintegration" (p. 234) in Sicily on "institutional arrangements" and especially on centralization of power and lack of local autonomy, can be convincing only if it is shown that these institutional arrangements are different in Sicily than in northern Italy, which has a very different political culture. This Sabetti does not do, at least for the postwar years. Finally, it would also be helpful if more consideration were given to the movement of the Mafia from the countryside to the big cities and the change in the nature of the Mafia from an agrarian phenomenon to one principally involved in state parasitism in the form of living off development and construction contracts and the like, as well as the new-found wealth available through the drug trade. The decline of the Mafia in a small rural village of Sicily signals not the end of the Mafia but merely its moving on to greater opportunities elsewhere, a statement with which Sabetti would likely agree.

DAVID I. KERTZER

Bowdoin College

Crisis in the French Labour Movement: A Grassroots Perspective. By W. Rand Smith (New York: St. Martin's, 1987. xiii, 272p. $29.95).

W. Rand Smith asserts that most literature on French trade unions focuses on the pronouncements of the peak confederations rather than on the actions of union locals at the shop-floor and plant levels. He addresses the problem by studying union locals of two major trade union confederations, the Confederation Générale du Travail (CGT) and the Confederation Française Démocratique du Travail (CFDT), in four metalworking plants in Grenoble.

The introductory section describes the theoretical and historical setting of the study. Smith seeks to determine whether the crisis of French trade unions derives from economic factors, such as shifts in the occupational structure from manual to technical positions; from political factors, particularly splits within the French Left; or from institutional changes, especially unions' greater legal rights, which paradoxically may weaken them by separating leaders from rank-and-file workers. (Smith later emphasizes the importance of management and local union strategy.)

Part 2 describes the four plants that served as research sites, with particular attention to the CGT and CFDT locals, and reports findings from Smith's interviews with union militants. The background and motivation of rival union militants are remarkably similar. In particular, and contrary to expectation, CFDT militants are only slightly more religiously observant than their CGT counterparts. The most interesting finding is that militants report that their greatest problem—mentioned more than twice as often as their relations with management—is the distrust in which militants are held by rank-and-file workers! Unfortunately, Smith barely explores the possible basis for this distrust, which would seem central in explaining union difficulties.

Acknowledgments

This book stands on the shoulders of four hard working and dedicated assistants. I was extremely fortunate to employ Paolo Campana on a grant to code and analyze the data on the Russians in Rome. Paolo has worked well beyond the call of duty and the expiry of the grant, helping me to collect data on Bardonecchia as well, and accompanying me on research trips to Piedmont and Rome. He has also read the entire manuscript and made innumerable suggestions. I hope that readers will appreciate the range of Chinese-language sources I have been able to use. This is the work of a researcher based in China who was employed full time for a year on this project. I have at times bombarded him with requests for further data and information, and he complied fully and with the best possible attitude. For reasons that should be obvious, he prefers not to have his name revealed in print. Professor Carina Frid guided me through the history of the city of Rosario. She pointed me in the right direction many times, answered numerous questions, and read a version of chapter 5, offering most helpful suggestions, and showing a deep knowledge of the economic and social history of the city. Carina also collected data on construction permits on my behalf. We plan to collaborate further. Finally, Borbála Garai translated some press reports on the Russian mafia in Budapest and helped compile the data set on migration to Hungary in the 1990s. Although none of the valiant individuals mentioned above are responsible for the remaining omissions and errors, they have made this work more credible and offered me much intellectual pleasure.

The Leverhulme Fund proved to be a model funding institution. It generously supported some data collection in Italy and imposed the minimum

0949

amount of bureaucracy at all stages. Carlo Morselli acted as my referee and offered useful comments on the project. I have also been the recipient of a grant from the European Union Seventh Framework Programme (Theme 10, "Security") as part of A New Agenda for European Security Economics consortium. Professor Tilman Brück at the German Institute of Economic Research acted as the intellectual leader of the project, and navigated the rather complex application and auditing process. John Holmes, also at the German Institute of Economic Research, showed great patience and competence in dealing with my part of the work. The Oxford University John Fell Fund and the Law Faculty Research Support Fund funded aspects of my research as well. Sarah Parkin at the Centre for Criminology managed these grants on my behalf. She was most effective, and displayed great stamina in dealing with several jurisdictions, banking systems, and funding bodies' regulations. Ray Morris at the Law Faculty Office and Matthew Smart in the Division Office gave advice that facilitated my work in many ways.

Gaining access to data is notoriously difficult in my field of study. I was lucky to find officials who made my research possible. The mayor and the staff at the Comune of Bardonecchia opened the town archive to us, making it possible to collect the data presented in chapter 3. Prosecutors, judges, and archivists at the Turin, Rome, and Bologna courts cooperated to secure my access to criminal cases. I would like to thank in particular Luigi De Ficchy, Paolo Giovagnoli, Aurelio Galasso, Guido Papalia, Morena Plazzi, and the late Maurizio Laudi for sharing their views with me on cases in which they were involved.

Several people read the entire manuscript at some point of its evolution. Timothy Frye and Susan Rose-Ackerman acted on behalf of Princeton University Press. Their encouragement and critical comments greatly helped my work. It is a pleasure to finally thank them in public. Liz David-Barrett served two roles, as editor of the text and sharp critic of the arguments I try to make. Her comments went well beyond the call of duty. Cindy Milstein copyedited the text for the publisher superbly. Edoardo Gallo also read the entire text. I am particularly grateful for his suggestions regarding the summary tables that run through the book. As always generous and incisive, Diego Gambetta showed an interest in the project from the start and commented in depth on several chapters, especially chapters 5 and 6. At the 11th hour, Iris Geens spotted innumerable typos and errors in the proofs. Her suggestions extended to several aspects of my argument and presentation.

0950

A number of scholars have taken time away from their busy working lives to read sections of the book. Jane Duckett read an early version of chapter 6. Ko-lin Chin, Tiantian Zheng, and Yiu Kong Chu read a much-reworked version of that same chapter. They steered me away from errors, and the text improved as a result. David Nelken commented extensively on the whole project while I was his guest in Macerata. David Critchley, the author of a groundbreaking volume on the early history of the Italian American mafia, answered numerous questions of fact and engaged in a long series of email exchanges on a subject he knows so much about. Vittorio Bufacchi, an old friend, read the introduction more than once, and it magically got better every time. Anna Zimdars also gave me much valued comments. Gavin Slade, a doctoral student at Oxford, pointed me in the direction of relevant material on Georgia, while at an early stage of this research Valeria Pizzini-Gambetta alerted me to the story of the Rosario mafia. Luca Ricolfi and Ray Yep helped me in practical ways in Turin and Hong Kong, respectively. The author Mimmo Gangemi was a most gracious host and guide in Rosarno, Calabria. Osvaldo Aguirre kindly supplied me with photos of two of the people he wrote about in his study of the mafia in Argentina, while Norma Lanciotti shared some information on the construction industry in Rosario. A conversation with Jon Fahlander made me change my mind on the title of this book. I am grateful to my Oxford colleagues Julian Roberts and Laurence Whitehead for their support and suggestions. The untimely death of my friend and colleague Richard V. Ericson affected me and many others deeply.

Misha Glenny and Roberto Saviano have encouraged me at crucial moments as well as shared their expertise with me. A fortunate coincidence put me back in touch with David and Jane Cornwell as I was working on this book. While discussing David's latest work, I benefited from his and Jane's advice and hospitality in London and Cornwall. I could not have been more fortunate with my editor at Princeton University Press, Ian Malcolm. He was patient and supportive, and steered the production process brilliantly. Leslie Grundfest, also at Princeton, did a superb job in getting the text ready for publication. In Italy, my agents Marco Vigevani and Alberto Saibene believed in this work from the beginning.

As with my previous book, I benefited from my association with Nuffield College. The college not only provided me with a place to work but also with a most stimulating intellectual environment. I am grateful to the warden and the bursar for their hospitality. The Centre for Criminology

0951

and the University of Oxford granted me a sabbatical term to finish the manuscript. I am particularly indebted to Ian Loader, the director of the Centre for Criminology, for fostering a friendly and productive working environment.

I presented chapters from this book at several universities, where the audiences were most receptive. These venues include Nuffield College, All Souls College, Columbia University, the Centre of Criminology at the University of Toronto, the University of Macerata, the University of Hannover, and the City University of Hong Kong.

Last but not least, I am most grateful to all the people who agreed to be interviewed. Some of the names of individuals and locations have been changed. This is indicated by italicization of the name the first time it is mentioned.

Once again, my parents have been a constant source of support and inspiration. My wife read the entire manuscript and assisted me in several ways. Although he had no input in this book and will never read it, our special son deserves credit for enriching my life in ways that I never thought were possible.

I published a shorter version of chapter 3 as "How Mafias Migrate" in *Law and Society Review* 40, no. 2 (2006): 411–44. I am grateful to the editor and the publisher for allowing me to reproduce some parts here.

Sections of this work are based on judicial evidence. Such evidence is used simply for analytical reasons, and there is no intention to imply any criminal responsibility of the individuals mentioned in this work.

I am grateful to Misha Glenny, Markus Jochimsen, and Rebecca Wong for their comments on the published version of the book.

0952

Mafias on the Move

0953

Introduction

On September 11, 1996, *Boris Sergeev*, the director of an import-export company based in Rome and father of two, a stocky man in his late forties, arrived in Moscow to finalize a valuable contract for the importation of frozen meat. The Russian partners were Agroprom, a giant Soviet agricultural concern that was now in private hands, and two prominent banks, the Nuovo Banco Ambrosiano and Promstroybank. The former had a somewhat bumpy history—its CEO Roberto Calvi was found hanging from beneath Blackfriars Bridge in London in 1982—but was now under new management and aggressively trying to enter the Russian market. Promstroybank of Saint Petersburg was a safe bet—formerly the largest state bank in the Soviet Union and now a joint-stock company. Even Vladimir Putin once sat on its board. Some twenty million U.S. dollars were at stake. Sergeev had several meetings with top officials at both banks and the Ministry of Agriculture. His most valued contact in the political world was a Soviet-era politician who had taken part in the coup that tried to oust Mikhail Gorbachev in August 1991 and was now a lobbyist for agro-industrial interests.

By the end of the week, Boris had secured the funding and felt confident. Despite fears voiced by his family before the trip, nothing bad had happened. He could relax and spend the last few nights in his native city in style. He took a suite at an upscale hotel located on the central Tverskaya Ulitsa, the street a few yards from Red Square that runs northwest from the Manege toward Saint Petersburg. On the night of September 23, he was sipping predinner drinks at the bar on the fourth floor when two men entered

0955

the hotel looking for him. Even with the closed-circuit television system and heavily armed guards that patrolled the hotel's granite lobby, entry was not difficult. The pair showed a bogus hotel pass and boarded the elevator to the fourth floor. Sex for sale was on display at the bar. Yet they moved on, past the gaggle of women flaunting their heavy makeup and cheap jewelry. They stopped in front of Boris's table and extracted two TT pistols with a silencer. Their victim was hit in the head by four bullets (some reports say five). The killers, who were seen on the closed-circuit television camera, calmly took the elevator back to the lobby, walked on to the busy Tverskaya, and climbed into an old Zhiguli that was waiting for them. They were in the hotel for no more than six minutes, between 6:55 and 7:01 p.m.

In the meantime, some fifteen hundred miles away, a special unit of the Italian police was picking up a lot of chatter on the several telephone lines that it was tapping. More details on the murder emerged. Boris's brother, *Sasha*, who lived in Vienna, had joined him and was sitting on the same sofa when Boris was shot. At 7:51 p.m. Moscow time, Sasha, still in shock, called Boris's wife, *Nadia*, in Rome from the police station where he was being interrogated. At first she thought he was joking, but then she asked if it was a "Georgian" who had shot Boris. Sasha replied: "It happened very fast, but the man was dark skinned." The next day they spoke again. Boris's distraught wife could not comprehend how the murder could have happened in one of the best hotels of the city, in front of so many people, with no reaction whatsoever from the hotel "security." "The police say," replied Sasha, "that the murder had the hallmarks of a professionally planned operation, with the intention of sending a clear message to others as well. Nadia, believe me, there is no chance the culprits will ever be found."

The victim in question was no ordinary businessman. Born in Russia in 1948, he had used at least four aliases in the previous ten years. He moved to Rome in 1993 to set up an import-export company. By then, he had already been prosecuted in Italy, Austria, and France on several charges related to the possession of weapons, forgery, polygamy, and fraud. He was rumored to own a large villa in Vienna and hold bank accounts worth at least thirty million U.S. dollars. Official papers state that his company, *Global Trading*, dealt in the import and export of frozen meat and other food products along with oil, alcohol, timber, and coal. The company also conducted, so the papers claim, "market research." Intent on covering his tracks, Boris had taken a rather roundabout way to reach Moscow:

0956

he flew from Rome to Milan, then crossed the Swiss border in a rented car, and finally took a plane from Zurich to the Russian capital. While in Moscow, he carried a gun at all times. The Italian authorities were certain that Global Trading was a front for the Solntsevskaya, the most important crime group to emerge from the collapse of the Soviet Union. The Russian mafia had created an outpost in a faraway territory and was expanding fast. It was high time that someone took notice. When I was shown the files for this investigation, almost ten years ago, I decided to devote my research to the study of mafias' ability to transplant in new and distant territories. This book is the result.

One reading of the Tverskaya hotel murder would support the conventional wisdom on globalization and "transnational organized crime" that has emerged in recent years, especially thanks to authors such as Claire Sterling (*Crime without Frontiers*), Manuel Castells (*The Rise of the Network Society*), Moises Naim (*Illicit*), Louise Shelley (*Global Crime Inc.*), and Phil Williams, and is influential among policymakers: organized crime migrates easily, due to the spread of globalization and population migration, and criminal multinational corporations are increasingly unattached to a specific territory. "International organized crime," writes Shelley, the director of the Transnational Crime Institute in Washington, DC, "has globalized its activities for the same reasons as legitimate multinational corporations." She maintains that "just as multinational corporations establish branches around the world to take advantage of attractive labour or raw material markets, so do illicit businesses."[1] For Williams, organized crime now "can migrate easily."[2] Castells, who also describes this phenomenon, lists a number of localities where (he thinks) well-known mafias have opened outposts, such as Germany for the Sicilian mafia, Galicia for Colombian cartels, and the Netherlands for the "Chinese triads."[3] These and other authors go further by arguing that the notions of territorial entrenchment and control are becoming obsolete for a "Global Crime Inc." that "transcends the sovereignty that organizes the modern state system."[4] Factors often cited to explain the globalization of criminal activities and the geographical expansion of criminal firms include technological innovation in communications and transportation along with disappearing language barriers.[5] This position reflects the broader debate on the nature and consequences of globalization, and is consistent with the view advanced by authors who emphasize the de-territorialization of economic power.[6]

0957

The "transnational organized crime consensus" is influential among policymakers. Mafias have now become "liquid," as argued in a recent report by the Italian Anti-Mafia Parliamentary Commission (CPA). Liquidity in this context does not refer to the availability of cash but instead to a version of modernity where control of a territory has been superseded by a rather unspecified fluidity. Politicians from both ends of the political spectrum find ammunition in the assertions promoted by the consensus: sections of the Right peddle unqualified fears of migrants, while some on the Left are only too happy to blame globalization and "neoliberal policies" for local state failures.

The world of international crime is more complicated than these authors wish to admit. Chapter 4 and chapter 7 will expand on the context of the Tverskaya hotel murder and unpack its mechanics. Here I wish to direct the reader's attention to the fact that most authors interpret globalization as a process that facilitates movement and eventually transplantation. In order to evaluate the effect of globalization on organized crime generally and mafias more specifically, one needs to spell out the motivations for a group to open a branch abroad and the effects that different motivations have on how those outposts are created as well as explore whether globalization might have the opposite effect—namely, that of enabling a mafia to acquire resources produced in other countries simply by buying them on the open market rather than by setting up foreign branches. Furthermore, not all attempts at transplantation are successful. To outsiders, a mafia group might seem like a giant and unbeatable octopus about to take over the world from its headquarters in an unreachable Eastern European city. Looked at from the ground up, transplantation is fraught with difficulties.

Does it follow that mafias can never be found in faraway territories? Both Peter Reuter and Diego Gambetta, arguably the foremost scholars in the field of mafia studies, have emphasized that these organizations are hard to export and tend to be local in scope. An illegal organization opening a branch abroad would find it difficult to monitor its agents in distant localities. Outside their home region, mafiosi would struggle to corrupt the police and collect reliable information. Finally, it might be taxing to make victims believe that the person standing in front of them belongs to a menacing, foreign mafia. A reputation for violence depends on long-term relations, cemented within independent networks of kinship, friendship, and ethnicity. It is next to impossible to reproduce them in a new land.[7]

0958

And yet under particular conditions, mafia groups have been able to open branches in distant territories. In the 1950s, members of the Calabrese `Ndrangheta migrated to the northern Italian region of Piedmont, managed to penetrate the construction sector of some towns outside Turin, and soon became entrenched. In 1995, the president of Italy disbanded the city council of Bardonecchia, which hosted the 2006 Winter Olympics, as a result of the `Ndrangheta's enduring influence. This was an unprecedented decision for a town in the north of Italy. An attempt by the `Ndrangheta to set up a branch in the Veneto region at around the same time, however, failed.

Similar dyads, although neglected in the literature on organized crime, are not that rare. Most strikingly, the migration to the United States of Italians, some with mafia skills, at the turn of the nineteenth century gave rise to a set of powerful mafia groups known as the "five families" in New York City. Italian migration to another seaport, the city of Rosario in Argentina, failed to generate long-lasting criminal groups of Italian descent. After a relatively brief spell, the "Rosario Mafia" disappeared and is now a forgotten episode of local history. Why? The central question of this book is why in some cases mafia transplantation succeeded while in others it failed. In order to answer this question, I have used a wide range of data and traveled to several parts of the world during the past ten years.

Below I consider cases of both successful and unsuccessful attempts by mafias to open branches outside their territory of origin. Chapter 3 is a matched comparison between Bardonecchia and Verona, while chapter 4 is a study of efforts by the Solntsevskaya to create subsidiaries in Rome and Budapest. Chapter 5 takes us back to the turn of the twentieth century with a matched comparison between New York City and Rosario. The final chapter of this book explores the movement of Hong Kong and Taiwanese triads to mainland China. In chapter 7, I outline a general perspective of mafia emergence and transplantation, and offer some considerations on the relation between democracy and mafias.

Before I proceed further and anticipate the conclusions I reach, I should say a few words on the unit of analysis (mafia), the phenomenon (transplantation), and the structure of the argument. I focus below on a specific type of criminal organization, defined as a group that supplies protection in the territory of origin. The `Ndrangheta, the Sicilian Cosa Nostra, the

0959

Italian American mafia, the Hong Kong and Taiwanese triads, the Solntsevskaya and other Russian *gruppirovki*, and the Japanese yakuza are essentially providers of extralegal governance, and can be collectively referred to as mafias.[8] These groups engage in extortion—the forced extraction of resources in exchange for services that are *not* provided.[9] But such behavior is not their defining feature.[10] Rather, they are groups that aspire to govern others by providing criminal protection to both the underworld and the "upper world."[11] They can supply genuine services like protection against extortion; protection against theft and police harassment; protection for thieves; protection in relation to informally obtained credit and the retrieval of loans; the elimination of competitors; the intimidation of customers, workers, and trade unionists for the benefit of employers; the intimidation of lawful right holders; and the settlement of a variety of disputes. For example, in his classic study of Chicago organized crime published in 1929, the U.S. ethnographer John Landesco highlighted the enforcement of cartel agreements as a service provided by mafia groups. Producers have an incentive to enter into cartel agreements but also to undercut fellow conspirators, placing themselves in a classic Prisoner's Dilemma. The mafia offers to enforce the cartel agreement among producers, thereby deterring conspirators from cheating on the deal.[12]

I take the word "transplantation" to mean the ability of a mafia group to operate an outpost over a sustained period outside its region of origin and routine operation.[13] Although in principle the new territory could be contiguous or faraway, I will focus mostly on territories that are not contiguous (a better word for transplantation in contiguous territories might be expansion). The actors involved are "made" members of the organization of origin; in other words, they are bona fide mafiosi who have gone through an initiation ritual in the territory of origin. If transplantation succeeds, such rituals may come to be performed in the new environment and recognized by the group of origin. Mafiosi might find themselves in the new territory by an accident of history, such as migration, or because they have been forced to reside there by a court order. In such cases, their presence is due to exogenous factors rather than an explicit *ex ante* plan to set up shop in a new region. Alternatively, or in addition, the mafia of origin might consciously decide to open a branch in a new land. In both scenarios the "foreign" mafiosi actively work at creating a new group, relying on the skills acquired beforehand. The new entity or "family" is either

0960

affiliated to or a branch of an established existing mafia family. The outpost might become financially autonomous and able to generate its own profit, or continue to rely on transfers from the center. A rather crude indicator of the phenomenon is whether the mafiosi in question reside in the new territory, although they might be seen occasionally to travel back "home." Over time, the branch organization might drift away from the original "firm" and become fully autonomous as well as financially independent, or retain a degree of dependency with the homeland.

The above definition helps distinguish transplantation proper from several phenomena that are often lumped together in the category of transnational organized crime. Criminals crossing a border (physically or virtually, as in the case of Internet frauds) with an illicit good or a person do not automatically qualify as either mafia or transplantation but rather as a form of illegal *trade*, and need to be placed in a conceptual box that differs from attempts to control markets or territories abroad. Similarly, members of mafia groups traveling abroad do not constitute transplantation of the group, nor do conspiracies between mafiosi and foreign criminals to smuggle workers, drugs, weapons, and other illegal commodities either into or out of their country.

In this work, I try to identify distinctive factors in the narratives that I present. One is the generalized migration of the population from territories where mafias are well established, such as western Sicily and Calabria. It seems plausible that when large groups of individuals migrate from territories where mafias are pervasive, some with criminal skills would also relocate and be more likely to engage in mafia activities in the new territory (I am referring here to resettlement prompted by non-mafia-related reasons). A second possible boost to mafia transplantation might be the migration of people specifically trained in violence and with mafia skills. In the case of Italy, we can evaluate this dynamic thanks to *soggiorno obbligato*, a policy that punished convicted mafiosi by forcing them to relocate outside their area of origin. Third, I consider the extent to which members of mafia groups are pushed to migrate in order to escape mafia wars or prosecution in their areas of origin, or whether they are in search of particular resources or investment opportunities.

In each chapter, I then discuss the conditions under which mafia groups are likely to become entrenched. A key dimension is the presence of a

0961

demand for criminal protection in the new place. The presence of large illegal markets, booms in construction, an export-oriented economy, incentives to create cartel agreements, or the inability of the state to settle legal disputes quickly and effectively usually generate such a demand. I also examine whether lack of trust and low levels of civic engagement would predict a higher likelihood of mafia entrenchment.

Let me anticipate the main conclusions of this study. In all the cases narrated in this book, mafiosi find themselves in the new locale not of their own volition; they have been forced to move there by court orders, to escape justice or mafia infighting and wars. They are not seeking new markets or new products but are instead just making the most of bad luck. I had not anticipated this result, and certainly did not choose the cases in order to conform to this finding. What might appear the product of globalization is in fact the consequence of state repression exporting the problem to other countries (even mafia infighting can to an extent be the product of pressure put on the group by the state). This finding does vindicate an aspect of the perspective suggested by Reuter and Gambetta—namely, that mafias would not normally move out of their territory. An additional issue I explore is that even if they do not move willingly, they can still to an extent choose *where* to move. I find that they move to places where they had a previous contact, a trusted friend or a relative.

Is the presence of mafiosi in a new territory enough for a mafia to emerge? No. A special combination of factors must be present. First, no other mafia group (or state *apparati* offering illegal protection) must be present. It is too much of an uphill struggle for an incoming mafia to set up shop in the presence of a powerful local competitor. Second, a mafia group is most likely to succeed in transplanting when its presence coincides with the sudden emergence of new markets. To the degree that the state is not able to govern new markets, the possibility of mafia emergence or entrenchment from abroad is strong. States might be unable to clearly define and protect property rights, and market operators hence would develop a demand for alternative sources of protection. In addition, states by definition cannot protect dealers of illegal commodities. In both instances, significant opportunities exist for mafias to govern access to valuable markets, offer genuine services of dispute settlement and protection, enforce

0962

cartel agreements, reduce competition, and thus serve the interests of a sector of society. These opportunities can be easily taken up when a supply of people trained in violence, either local or from abroad, is at hand.

The presence of a supply of mafiosi and the inability of the state to govern markets are the key factors that link cases of successful transplantation, such as the `Ndrangheta in Bardonecchia (chapter 3) and the Russian mafia in Hungary (chapter 4). In Bardonecchia, disenfranchised migrant workers from outside the region accepted illegal employment over unemployment, thereby forgoing membership in trade unions and more generally state-sponsored protection. Entrepreneurs not only hired illegal workers but also schemed to restrict competition. The structure of the local labor market and the booming construction industry (in which firms compete locally and there is a strong incentive to form cartels) led to the emergence of a demand for illegal protection. Members of the `Ndrangheta Mazzaferro clan resided in this territory. They offered certain firms privileged access to this market, and were able to settle disputes between workers and employers.

Although Piedmont does not have a new market economy like those of Eastern Europe, a striking parallel exists in the successful transplantation of the Russian mafia's Solnstevo criminal group in Budapest (chapter 4). In that instance the state failed to create a system to adjudicate disputes quickly and effectively, thereby leaving significant sectors of the emerging market economy unprotected by the law, as was the case for immigrant workers in Bardonecchia. When vast numbers of economic agents operate in an unprotected market, they develop a demand for nonstate forms of protection. In both Bardonecchia and Budapest, skilled criminals were available to organize a mafia group and offer a variety of services, such as the settlement of disputes and elimination of competitors in local markets.

A powerful set of mafia groups emerged in the United States around 1910 because of the unintended consequences of police reform and it was able to expand later thanks to Prohibition (chapter 5). Until then, illegal markets were protected by a combination of local politicians and corrupt police officers. When the mayor of New York enacted far-reaching reforms that curbed grand graft, illegal markets such as gambling and prostitution were in search of new protectors. In legal markets, like garment production, poultry, garbage collection, and construction, existing operators were

0963

only too happy to turn to an agency able to ensure the continuation of cartelization. Unemployed immigrant workers, mostly from southern Italy and equipped with some mafia skills, stepped in.

The case of China allows us to spell out in greater depth some crucial mechanisms. The state has been unable to offer swift and efficient avenues of dispute settlement for the new players in the rapidly emerging market economy, and a significant sector of the workforce operates in the informal economy, where state protection is absent. In addition, large illegal markets, such as in prostitution, gambling, and drug trafficking, have developed since the opening of the Chinese economy in the 1980s. On the "supply-side" of the story, "brothers" (triads members) from Hong Kong and Taiwan have moved to the Middle Kingdom. They have failed (so far) to become entrenched and offer generalized protection, however. Why? Chapter 6 shows that in China, a powerful actor is already in place to offer such services—that is, corrupt fragments of the state apparatus, which work as the "protective umbrella" for both legal and illegal businesses. In the cases of successful transplantation, no other mafia (or bent state apparatus) was already on the ground to compete with the outsiders.

Globalization hinders mafia transplantation in a way that has escaped most contributors. In the case of two of the failed attempts to transplant mafias, the local economies relied on exports—Verona on exported furniture, and Rosario on exported agriculture. There is no demand for cartels in the export-oriented sector of the economy since producers export to different parts of the world. In order to stop competition for producer A in, say, northern Europe, the mafia would need to scare away producers in a variety of different countries who all export to northern Europe. Thus, as economies become more export oriented due to globalization, the likelihood that mafias will transplant themselves may diminish.

Migration as such is clearly not a cause of mafia transplantation. Despite roughly similar patterns of migration from the south to the north of Italy, a southern mafia did not transplant itself in either Rome or other towns of Piedmont. Only when migration is coupled with illegal employment and the absence of state protection does a demand for criminal protection emerge that can be met by a mafia. In other words, migration—even from regions with a high mafia density—does not necessarily carry the seed of a new mafia. Rather, it is the state's failure to offer effective legal protection

0964

and the lack of avenues for legitimate employment that set in motion a chain of events that might give rise to a new mafia.

The Italian policy of soggiorno obbligato, flawed as it might have been, cannot be blamed for successful transplantation. In the case of Bardonecchia, the supply of foreign mafiosi went hand in hand with a genuine demand for criminal protection. When it did not, transplantation failed. Moreover, other parts of Piedmont and northern Italy also experienced an influx of skilled mobsters forced to migrate due to the soggiorno policy, but mafias did not develop. Similarly, the Russians in Rome failed to establish a successful group because there was no demand for their services. Even a supply of specialized criminals (as distinct from generalized migration) is not enough to produce successful transplantation.

Contrary to what is suggested by the seminal work of Robert D. Putnam, a high level of generalized trust and "social capital" among the law-abiding population is not enough to prevent transplantation. The study of Bardonecchia suggests that high levels of trust among the general population are not sufficient to prevent transplantation and social capital might remain high while a mafia flourishes. The mafia was able to offer to a large enough section of the local population protection against competition, a workforce cheap enough to reap the opportunities generated by the construction boom, and more generally capital and employment. Those who rejected this state of affairs, recognizing that it was built on violence and disrespect for the law, were soon ostracized and marginalized.

Not only do I show that a mafia can transplant itself in highly civic northern Italy and that some local groups can rally to its defense. I also establish that in Verona the dense network of social trust allowed the drug trade to operate without recourse to third-party enforcers. This network reduced the demand for third-party enforcement by the mafia and thereby inhibited mafia migration. The more general point is that social capital can be used for good or ill depending on the goals of the actors involved.

In all the cases narrated in this book, mafiosi were forced to move, but once in the new territory, started investing in the local economy, as the Russian mafia did in Rome and the triads did in China. Yet investments alone are not sufficient to lead to long-term transplantation. When investments combine with a supply of mafiosi and a specific demand for protection services, a group can become entrenched.

0965

Finally, the incentives to open outposts abroad in order to obtain resources such as labor, intelligence, and specialized equipment are few, and decrease as the mobility of goods and people increases. Globalization will increase the ability of mafia groups to obtain some of the resources that they need without having to move. To put it more generally, globalization will affect the way crime is committed in a given locale. For instance, labor mobility *toward* traditional mafia territory can well increase, allowing mafias to import labor from trusted suppliers. A feature of globalization that we observe in legitimate firms—the ability to outsource work, such as opening call centers in India—will not be an option for mafia groups; workers cannot be located in India to run protection rackets in New York City. To the extent that mafias seek specialized technical equipment, like arms, globalization could increase the number of international locations from which a mafia group obtains its resources, but will reduce the motivation to open outposts abroad.

Can the conclusions on transplantation form the basis of a general perspective of mafia emergence and transplantation? A relatively recent body of research has shown that mafias emerge in societies that are undergoing a sudden and late transition to the market economy, lack a legal structure that reliably protects property rights or settles business disputes, and have a supply of people trained in violence who became unemployed at this specific juncture. This perspective—I call it the "property-right theory of mafia emergence"—has been applied to cases such as Sicily, Japan and post–Soviet Russia, to explain how mafias might emerge in times of rapid but flawed transitions to the market economy. I suggest that this perspective is a special case of a broader phenomenon. Mafias emerge and transplant when certain key structural conditions are present in the economy. The critical factor is proximity to a sudden market expansion that is not properly regulated by the state and the presence of people who can step in to regulate such markets. In a nutshell, opportunities in the market economy bring about mafias. Effective states can ensure the orderly development of markets, and hence neutralize a mafia's transplantation or emergence. In chapter 7, I address the unintended consequences of some state policies along with the complex relationship between democracy and mafias. I also return to Boris's murder at the Tverskaya hotel and offer a clue to identify the culprit.

0966

Mafia Transplantation

Does transplantation ever take place? It is often difficult to gauge what the police, judicial authorities, or press reports mean when they claim, for example, that the Russian mafia is active in at least twenty-six foreign countries, or that the Calabrese `Ndrangheta is present in more than twenty countries.[1] From the few academic studies that mention the phenomenon, we know that mafias are rather stationary. Peter Reuter, while discussing U.S. "illegal enterprises" (of which mafias are a subset), notes that they tend to be "local in scope."[2] In *The Sicilian Mafia*, Diego Gambetta writes that "not only did the [Sicilian] mafia grow mainly in Western Sicily, but, with the exception of Catania, it has remained there to this very day." More generally, the mafia, he adds, "is a difficult industry to export. Not unlike mining, it is heavily dependent on the local environment."[3] Similarly, Yiu Kong Chu argues that "Hong Kong Triads are localized and they are not international illegal entrepreneurs whose wealth and connections may enable them to emigrate to Western countries." Although Hong Kong triads might be involved in international crime, observes Chu, they "are not likely to be the key organisers."[4] Peter Hill, the author of *The Japanese Mafia*, dates the beginning of the foreign activities of yakuza from the 1970s, when the Ishii Susumu branch of the Tokyo-based Inagawa-kai started to organize gambling trips for wealthy Japanese. A few years later, corporate racketeers began to target Japanese companies abroad. Yet "more usually foreign travel has been recreational or to invest either in real estate (usually very unsuccessfully) or weaponry. At no time however, have the yakuza managed to extend their core protective role beyond a native

0967

Japanese market."[5] Moreover, the opposite claim—that a Chinese mafia is invading traditional yakuza turf—is, according to Hill, for the moment incorrect and politically motivated.[6]

Reuter and Gambetta offer several theoretical insights into why mafias find it difficult to become entrenched in foreign countries.

Ability to monitor agents. Distance makes it harder to monitor an employee, and ensure that the agent works efficiently and honestly. The agent can misappropriate capital (both tangible and organizational) from the enterprise by embezzling it and engage in activities that are not sanctioned by the principal, thereby attracting police attention and endangering the entire organization. In order to get off, the agent might even inform on the bosses back home.[7]

Information collection and communication. The collection of reliable facts on what people do is a vital part of a mafioso's job, but they are likely to find it hard to come by this information in an unfamiliar region, where they cannot rely on an extensive network of friends and accomplices. Furthermore, agents and bosses need to be in touch frequently, thus increasing the need for communication traffic between the two territories. Since face-to-face meetings would be the exception rather than the rule, the likelihood that the police might intercept such communication increases with distance.

Reputation. Reputation is a crucial asset for mafiosi to carry out their jobs. The greater one's reputation for the ability to wield violence, the lesser one's need to resort to violence, since victims comply more readily. Reuter writes that investments in violence, which yield a reputation for being able to deliver threats, have a higher return when the criminal has contacts, through a continuous chain of other persons, with at least one witness to the violent act. It is more likely that such a chain is broken with distance. Along similar lines, Gambetta maintains that a reputation for effective violence depends on long-term relations, cemented within independent networks of kinship, friendship, and ethnicity. It is next to impossible to reproduce such networks in a new setting.[8]

Still, transplantation does take place. In his memoirs, Catania mafia boss Antonio Calderone reminisces that during his time, there were two

[162.10.217.184] Project MUSE (2026-06-15 01:44 GMT) University of Queensland

recognized branches of Sicilian mafia families in central and northern Italy. Another family operated for a while in Tunis, its existence having been recorded since at least the 1930s. "At the time," writes Calderone, "Tunis was a haven for many mafiosi fleeing Fascism. . . . [There] they had formed a regular family with a representative."[9] In his study of southern Italian mafias' expansion and entrenchment in nontraditional territories within Italy, Rocco Sciarrone shows how a concatenation of mechanisms accounts for the expansion of the Neapolitan Camorra in the neighboring region of Apulia in the late 1970s and early 1980s. First, a number of Camorristi had been incarcerated or forced to resettle in Apulia. By the 1980s a new smuggling route from Yugoslavia had opened, and Apulia had become a crucial node. As the former Yugoslavia descended into war in the early 1990s, Apulia offered even greater criminal opportunities for smuggling drugs and people from the ruins of the former Communist bloc. Finally, the leader of the Neapolitan Camorra, Raffaele Cutolo, decided to expand into Apulia, putting into action a long-term plan that included establishing relations with corrupt officials. Yet the final outcome was not as Cutolo had planned: soon the local criminals tried to free themselves from their masters and founded the Sacra Corona Unita, a new mafia invoking the regional Pugliese identity against the intrusion of the foreign Neapolitans.[10]

Moving beyond Europe, we encounter other instances. The charismatic leader of Taiwan Bamboo United, a major triad group, has been living in Cambodia for several years, where he appears to broker deals between visiting businesspeople and the local elite. At least thirty other Taiwanese gangsters live and operate in Phnom Penh.[11] According to reports, the reign of Evgenii Petrovich Vasin, a Russian mafia boss of the Far East, has been succeeded by that of a triad boss, Lao Da, now "the main organized crime figure in Vladivostok."[12] Xiangu Du, a Chinese national, led a gang in the Russian city of Khabarovsk for four years (1997–2001).[13] But at the same time Russian groups moved westward. Two subsidiaries of the Moscow-based crime group Solntsevskaya operated in both Rome and Budapest, as I will show in chapter 4. As for the Japanese case, although Hill downplays the presence of the yakuza abroad, he suggests that "the presence of non-Japanese criminals in Japan is likely to become more significant in the future."[14] Thus, transplantation seems to be a real phenomenon in need of an explanation.

0969

Factors Conducive to Transplantation

Why do mafias succeed in setting up branches in a new territory? I have organized the factors into two broad categories: supply, and local conditions relevant to demand.

SUPPLY

Migration is the explanation for mafia transplantation most often cited by the press, academics, and prosecutors.[15] Although never properly unpacked, a straightforward quantitative logic lies at the root of this theory: assuming that a given proportion of a population consists of criminals, the greater the migration of individuals from that population, the larger the number of criminals that will reach a new territory. Moreover, migration from territories of origin where there is a high proportion of mafiosi appears to carry the greatest threat of mafia transplantation.[16] Thus, the large migration from southern Italy to the United States at the end of the nineteenth century included many individuals with "the necessary skills for organizing a protection market."[17] The view that links migration to mafia transplantation can take simplistic and crude forms. Within Italy itself, the Northern League labels all southerners as a potential crime threat and has called for controls over south-north migration in order to prevent the spread of organized crime. The notion that Italian migration alone is responsible for the creation of the Italian American mafia in the United States is part and parcel of the now-discredited "alien conspiracy theory" of organized crime.[18] The presence of migrants from mafia territories, although clearly a contributing factor, is not sufficient for the establishment of new mafias, otherwise we would find mafias in every country to which southern Italians have migrated in the past.

A specific push factor for mafia transplantation in the case of Italy was the perverse policy of forcing convicted mafiosi to reside outside their area of origin as a form of punishment.[19] Based on a naive view of the mafia as a product of backward societies, forced resettlement (soggiorno obbligato) started in 1956, and was predicated on the assumption that away from their home base and immersed in the civic, law-abiding culture of the North, mafiosi from the South would abandon their old ways. Since the mid-1950s this policy has brought hard-nosed lawbreakers to the northern regions of Italy, including Lombardy, Piedmont, and Emilia-Romagna.

0970

The mafioso-turned-state-witness Gaspare Mutolo commented that the policy of forced resettlement "has been a good thing, since it allowed us to contact other people, to discover new places, new cities."[20] The soggiorno obbligato selected for forced migration individuals with specific mafia skills, and unintentionally allowed them to expand their networks and knowledge of the world (see chapter 3).

Criminals, including members of mafia groups, are also pushed to migrate in order to escape mafia wars or police repression in their areas of origin. Such cases abound in the history of mafias. For instance, Antonio Deodati escaped from Sicily to New York City in the 1860s to save himself from a "death" sentence passed on him by fellow mafiosi (he was nonetheless murdered in Brooklyn in 1865; see chapter 5).[21] *Ivan Yakovlev*, the Russian boss in Rome, was eager to move from Moscow to Italy because he was afraid of being killed by the Solntsevskaya ruling elite (see chapter 4). Vyacheslav Kirillovich Ivan'kov, often described as the Solntsevskaya envoy to the United States tasked with creating the Russian mafia in that country, in fact left Russia in 1992 because "it became too dangerous for him there."[22] Many yakuza active in the Philippines are actually ex-members who have been expelled from their groups.[23] Georgian *vory-v-zakone* (a type of mafia boss in the Soviet Union) "migrated" to Russia whenever there was a change at the top of the Georgian Soviet Republic's political elite, since every new first secretary would try to impress Moscow by conducting purges as well as cracking down on corruption and crime.[24] Following the Rose Revolution of 2003–5, the new Georgian president launched a harsh repression of what was left of the Georgian *vory*, referred to now by their Georgian-language equivalent of *kanonieri kurdebi*. A direct consequence of the repression was the escape of several leaders to Moscow (again), Spain, and other countries.[25] Similarly, Taiwan's campaigns against organized crime in 1984, 1990, and 1996 facilitated the relocation of triad bosses to China. As crime expert Ko-lin Chin aptly put it, "Even though initially they [Taiwanese triad members] had no intention of staying away from Taiwan for long, they ended up living abroad for months, or even years. . . . As many fugitives started new lives abroad, they not only became entangled in the affairs of the overseas Chinese community, but also established connections with local crime groups in the host societies" (see chapter 6).[26] Fascism's repression of the Sicilian mafia led to families emerging outside the island, such

0971

as Tunis, and some leaders arriving on the shores of the American continent, both in New York City and Rosario (see chapter 5). A systematic study of a Camorra clan shows that out of fifty-one members, only four individuals resided abroad, in Aberdeen and Holland. All four were escaping from the Italian police.[27] Thus, a neglected aspect of globalization is at work here: repression in one corner of the world has an unintended effect on another.

The factors that I have reviewed so far are unintentional (migration, forced resettlement, and fear of punishment). Yet mafia bosses are also capable of deliberate and strategic thinking. Below I explore whether mafias sometimes act like legitimate firms and rationally decide to expand to new territories in order to exploit special business opportunities, unprompted by police repression or mafia infighting. At least in theory, mafias might be after specific resources or investment opportunities, or wish to invade a new market.[28]

Resources. For a legitimate firm, the decision to open a branch abroad may be motivated by the desire to acquire a specific resource, such as a mineral or labor, at a lower cost. Resources also include intangible goods like knowledge, innovation capabilities, and management or organizational skills.[29] The motivation to open a branch abroad is predicated on the fact that the resources desired by the firm cannot be simply bought on the open market or accessed remotely.

For a mafia, resource-seeking motivations might include looking for labor, a key input factor. Is it plausible that a mafia would open a branch abroad to recruit "workers" for its operations back home? Broadly speaking, mafias hire two kinds of workers: casual and permanent. Casual workers include specialists in explosives, chemists, translators, people familiar with certain premises, and government officials. It is possible that some occasional helpers are hired from faraway lands, but it is unlikely that a mafia would open an outpost in order to do so. Such hiring is unusual. Permanent employees normally undergo an initiation ritual and work under the direct orders of the head of a group.[30] One indispensable quality for full-time workers is dependability; another is the proven ability to use violence. It follows that recruitment normally occurs within the area in which the group operates. Only by having known the recruit for many years can

0972

a boss be confident that the newcomer is not an undercover agent.[31] The boss will also know the family relations of the aspiring member, making it easier to threaten him in the event that he decides to turn state witness. Still, at least one significant case of labor mobility exists in the history of the Italian American mafia. In the 1970s, a capo in the Bonanno New York mafia family recruited cold-blooded Sicilian killers in order to help him distribute drugs on the East Coast of the United States. At first this strategy proved highly successful and he was able to corner a significant segment of the market; but eventually the killers betrayed him and the capo was himself assassinated.[32] In this case the Bonanno family imported workers rather than employ them in a subsidiary abroad, and the source of recruitment was closely allied to the Bonanno family.

Other resources of interest to mafias include technical equipment (such as arms, hideaways, and spying technology), passports, and bank accounts. Mafias are more likely to access resources on the open market when their quality can be clearly defined, as with technical equipment, weapons, and surveillance tools. Mafia members might want to acquire foreign passports in case they need to escape quickly, open bank accounts to deposit their money, or hire the services of lawyers in a foreign country, but the group as such would not need to relocate abroad. Like ordinary firms, it is possible that mafias could hire a workforce from another territory, and then that workforce would relocate to the mafia's territory of origin. As the mobility of people and goods grows, there will be even fewer incentives for mafia groups to establish outposts in distant territories in order to acquire specific input resources.

Investments. A legitimate firm might wish to reinvest the proceeds of its core activity in other businesses. Such decisions might be motivated by tax and performance incentives provided by governments, or by the desire to operate in more efficient financial systems. This type of investment-seeking location decision will be affected by new technologies, as greater integration between different markets makes it easier to invest in other countries' assets without the need to physically open a branch in the new territory.

It is harder for a mafia group than for legitimate firms to monitor remote investments. Like other firms, mafias seek to reinvest their proceeds in profitable enterprises. Mafia investments, though, are informal and often involve cash, and no recourse to the legal system exists in the event

0973

of a dispute. Moreover, money laundering and investments in the legal economy can involve several hundred one-shot transactions between business associates of the criminal group and legitimate firms in foreign and inhospitable countries. Those tasked with undertaking these decisions enjoy a significant amount of discretion and are hard to monitor. Investments can go wrong, and the bosses back home cannot easily verify claims and reports. This situation generates specific incentives for bosses to go abroad to monitor transactions with legitimate entrepreneurs directly. For instance, the Sicilian mafia opened such an office in Rome at the beginning of the 1970s by sending Pippo Calò, the boss of the Porta Nuova family. Passing himself off as an antiques dealer, Calò invested large amounts of money, mainly in real estate, for several mafia families. In connection with his activities in Rome, he was accused of the murder of Roberto Calvi, the chair of Banco Ambrosiano. Calvi was killed in 1982 in London, allegedly because he lost funds entrusted to him by the mafia when his bank collapsed.[33] Similarly, after the Chicago outfit decided to invest some of its money into casinos in Las Vegas following the Second World War, it regularly sent an envoy to ensure that profits were "skimmed" and channeled back home to families in Chicago, Kansas City, Saint Louis, and Milwaukee. The partly fictionalized movie *Casino* (1995) recounts the exploits of one such enforcer, Anthony Spilotro.

Markets. A legitimate firm might open a subsidiary in a different country in order to carry out its main activity in a new market. For mafias, the core business of the firm is control of a territory or market. Would a mafia, unprompted by police repression or mafia infighting, rationally decide to colonize a virgin territory? It is unlikely that a mafia group would undertake to invade a foreign territory already dominated by another criminal group, or that if it decided to do so, it would be successful. Thus one local factor—namely, the presence or absence of an existing group—must be one consideration in calculating the pros and cons of any colonization strategy. It is still possible that a mafia rationally decides to expand when it perceives that there are no local competitors and the opportunities are great enough to offset the considerable start-up costs of such a venture. In the course of presenting the case studies in subsequent chapters, I will evaluate whether mafias ever think in this way, or whether mafia transplantation is more likely an outcome that is not fully intended, at least at first.

0974

In conclusion, the incentives to open outposts abroad in order to obtain resources such as labor, intelligence, and specialized equipment are few, and are set to further decrease as globalization spreads. Globalization increases labor mobility generally, and therefore a mafia probably does not need to open an outpost abroad to attract workers to its traditional area of operation. Moreover, mafias hire people they trust locally, rather than open a branch abroad to recruit workers for their home turf. To the extent that mafias seek specialized technical equipment, such as arms, globalization could increase the number of international locations from which a mafia group obtains its resources, and thus there would be no need to open a branch abroad. They can simply buy the goods on the open market. Some mafia investments might require close scrutiny and give rise to incentives to open outposts abroad to monitor investments in distant territories. Such was the reason for the mob presence in Rome and Las Vegas. Market-seeking ventures of mafia groups are unlikely to involve the takeover of territories already occupied by existing local groups, unless the local groups are particularly weak and the incentives to move there are overwhelming. More generally, I do not expect a rational decision to open a branch in order to conquer a territory in a faraway land. Transplantation is more likely the outcome of unintended consequences.

Conditions in the New Territory and the "Demand" for Mafias

Once mafiosi find themselves in the new territory, under what conditions do they succeed in becoming entrenched?

The level of generalized trust (trust in others whom we do not know) in the new land is, for some authors, an important variable that could explain the entrenchment of mafias. James Coleman has pointed out that a low level of trust reduces actors' ability to cooperate and communicate, inhibiting collective action.[34] The less that trust exists among law abiders, the less likely it is that civil society will organize to oppose the entrenchment of a mafia group. One can further predict that the lower the trust among lawbreakers, the greater their demand for protection services will be; a mafia facilitates exchanges among criminals who distrust each other by offering the enforcement of deals and promises. This line of reasoning implies that mafias are more likely to transplant successfully to regions

0975

with little trust among law abiders and lawbreakers (each condition is independent of the other).

How is trust created? Robert Putnam's classic studies *Making Democracy Work* (1993) and *Bowling Alone: The Collapse and Revival of American Community* (2000) posit that local voluntary (nonpolitical) groups that bring people together provide private benefits to participants. In addition, he suggests that such groups can generate "social capital" that is *transferable* to society as a whole, thereby increasing the stock of generalized trust and promoting democratic values. Putnam shows that southern Italy is trapped in a long-term vicious circle of a lack of trust and civic virtue, whereas such virtue is robust in the North. Regions such as Sicily, Campania, Calabria, and Basilicata consistently score the lowest in terms of social capital, while Piedmont, Emilia, Veneto, and Lombardy score the highest. As Putnam explains, "In the most civic regions . . . citizens are actively involved in all sorts of local associations—literary guilds, local bands, hunting clubs, cooperatives and so on. They follow civic affairs avidly in the press, and they engage in politics out of programmatic conviction." By contrast, in the less civic regions such as Calabria, citizens take part in the political process because they are motivated by particularist short-term individual benefits rather than an interest in general issues. "An absence of civic associations and a paucity of local media in these latter regions mean that citizens there are rarely drawn into community affairs." Putnam traces levels of "civicness" in Italy back to medieval times and finds a remarkable stability over the centuries for which comparable data are available.[35]

Since levels of trust and civic culture are highly stable across the centuries, and organized crime is correlated with low levels of trust and social capital, Putnam's work implies that mafia transplantation to an area that traditionally experiences high levels of social capital is ceteris paribus harder to achieve. Thus, areas in northern Italy that historically have had high levels of trust and social capital along with no mafia should be more resistant to mafia attempts to immigrate and establish themselves. This view implies that high levels of trust and criminal protection are inversely related: when one is high, the other is low or absent.

Putnam's work has been criticized—most eloquently by Susan Rose-Ackerman—for failing to show a link between participation in civic associations, and the production of generalized trust and democratic values.[36] My critique is different. Moderately high levels of social capital

0976

and civic engagement can coexist with the presence of mafia protection. Such a "service" may be welcomed by sectors of the population because it provides an advantage in a given market. Alternatively, or in addition, a demand for mafia protection emerges among those dealing in illegal commodities. This perspective suggests that civic engagement and the demand for private protection are independent of each other. If we think of private protection in a broader sense to include the enforcement of cartel agreements, the reduction of competition, and the organization of illegal markets that supply goods in high demand among a population (such as prostitution or alcohol), it is evident that criminal organizations may supply a solution welcomed by significant sectors of a society. Indeed, protectionism, though an enemy of global competition, is promoted by legal as well as illegal means—as, for example, when local governments impose restrictions on nonnative business groups and workers in order to protect entrenched local interests. Therefore, a high level of civic engagement does not in itself prevent mafia transplantation; the private protection supplied by mafias is orthogonal to social capital and civicness as defined by Putnam. In order to substantiate these suggestions, I consider territories in nontraditional mafia areas where trust and social capital are reportedly high (see chapter 3).

A key argument of this book is that the presence of a genuine demand for criminal protection, the core activity of mafias, leads to long-term transplantation. A demand for criminal protection is a critical factor that prompts both the birth of homegrown mafias and the migration of established ones. Such a demand interacts with a number of local conditions. In legal markets, the more incapable a state is of protecting its citizens and settling disputes among actors in the economy, the greater the demand for alternative sources of protection. Such demand arises because of the state's lack of competence to act as a credible third-party enforcer of agreements.

A second type of demand for protection emerges when entrepreneurs seek to sell legal commodities illegally. This might take the form of trying to wipe out competition or organize cartel agreements with mafia support. A sector of the economy that typically generates high incentives to create cartels is construction: firms compete on a local market, and the barriers to entry are relatively low. Construction cartels often emerge without the need for mafia enforcement. A small number of firms simply corner the

0977

market. Yet a sudden explosion in the construction market would open up the market to new entrants. Incumbents might then develop a demand for protection against outsiders. Given this, construction sector booms might lead to a demand for criminal protection. Below I explore in depth two such cases, in Bardonecchia and Rosario.

On the other hand, economies that are export oriented will generate less demand for mafia protection: the mafia cannot help exporters to penetrate distant markets by harassing another entrepreneur who lives in the same place but exports to a different part of the world. For the mafia to be effective, producers must compete in the same market. On the other hand, several exporters of the same product to the same market would benefit from mafia protection. In the area north of Naples, for instance, the Nuvoletta family ensured that only certain food products, including Parmalat milk and Bauli Panettone, were carried in shops and supermarkets. The large producers from the North, such as Parmalat and Cirio, were willing to enter into direct contact with the Camorra in return for a near monopoly. Only after the police uncovered the scheme did these multinationals claim that they had been the victims of "racketeers."[37]

The demand for property rights protection in illegal markets is rife. Not only is state protection absent by definition, but state action is aimed at arresting actors in such markets and confiscating their "property" ("That's what the FBI can never understand," says Henry Hill in the book *Wiseguy*, "that what Paulie [mafia member Paul Vario] and the organization offer is protection for the kinds of guys who can't go to the cops").[38] As a consequence, illegal assets are highly vulnerable to lawful seizure and theft, and property rights are disputed to a much greater degree than in legal markets. Moreover, information about the quality of goods as well as the identities and whereabouts of the actors is particularly poor in illegal markets; entrepreneurs in these markets cannot freely advertise their good reputation, creditors disappear, informants consort with the police, and undercover agents try to pass themselves off as bona fide fellow criminals. As documented by several studies, mafias offer protection to criminals in the underworld and, in so doing, make illegal markets run more smoothly. It is thus plausible that the larger the illegal markets are, the greater the demand for protection will be. When there is a time lag between the emergence of a demand for protection and the provision of suitable local supply, the opportunity to supply mafia services may be seized by transplanted groups.

0978

As such, the state's lack of competence in legal spheres and unwillingness to protect illegal activities leads actors to look for alternatives, and so increases the demand for mafia services. In the presence of a suitable supply, foreign groups might become entrenched in a new territory.

Other features of the new territory are related to transplantation, such as size and the presence of local protectors. For instance, ceteris paribus, the smaller the new territory or the market, the easier it is to penetrate it. As mentioned above, the construction market is vulnerable to mafia penetration. It is easier to control a construction sector populated by thirty players than one populated by three hundred, however. If a mafia tries to penetrate politics through the control of votes, it is easier to control politics if the district is small. It takes more voters to influence the election of the mayor of a large city than of a smaller one. Where local protectors, such as a mafia or fragments of the state apparatus, are present and effective, it might be next to impossible for incoming mafiosi to dislodge them. When Taiwanese triad bosses and foot soldiers were forced to flee their home country and landed in places like Thailand and Vietnam, they soon discovered that the locals controlled all the criminal markets and they had little chance of replacing them. One brother in Vietnam said that "there are also Vietnamese gangs here, but we will never get into any conflicts with them because, the bottom line is, it is their territory. It is impossible for us to be in command here."[39]

Large constituencies or markets and export-oriented economies are negatively related to a demand for mafia protection and thus transplantation, while construction booms and large illegal markets are positively related to such a demand.

Reputation, Information, and Monitoring

Let's return to the challenges to transplantation raised by Reuter and Gambetta—that is, advertising one's reputation, the collection of information, and the difficulties of monitoring agents in a distant territory. Clearly, the incoming mafiosi must be able to persuade the local population that they truly belong to a menacing established mafia (cases of individuals faking such membership have been recorded).[40] Although a difficult task, it is not impossible. Reuter himself, in a classic article on the decline of the Italian mafia in the United States, notes that Colombian drug dealers in the 1980s

0979

managed to develop their own reputation for ruthless violence—a reputation that has become more menacing than that of the U.S. Cosa Nostra.[41] "Advertisement" in this domain might well rely on indirect strategies: newspaper investigations, popular culture, and the media unintentionally promote the name of a mafia when depicting it in movies or reporting on its activities. Gangsters indeed welcome movies about them. One producer told Italian film critic Tullio Kezich that "organized crime does not mind movies about the mafia; on the contrary it considers them with a dose of pride, as something that can shed an appealing light [on them], especially if a boss is played by a popular actor."[42] In this specific domain, aspects of globalization might be coming to the aid of the incoming mafia. One would expect that the increase in communication and the spread of media news would make it easier for a new group to signal to a wider audience its arrival in town along with its connections to a menacing homeland. Yet the mafiosi abroad still requires their audience to link them as individuals with the worldwide reputation of their groups. They therefore should be working hard at reinforcing markers such as ethnicity that associate them with the mafias of their origin. Paradoxically, mafiosi might exploit prejudices against immigrants to their own advantage.

A key resource for a mafia group is the ability to collect reliable information. Both Reuter and Gambetta suggest that a mafia working in a new territory would find it impossible to carry out this task. A tangible and long-term presence in the new territory is fundamental. But how long is "long"? It is plausible that a number of years would suffice to create a network of informants. In addition, the information to be collected need not be about complex transactions or numerous locales. It might well be about a local market in the new territory, as in the case of the construction industry in Bardonecchia (see chapter 3). To the extent that a mafia can count on migration networks in the new locale, some information will be easier to come by. Significant economic investments in the new territory by associates of the incoming mafia can also be a conduit for data gathering for a criminal group. In sum, the collection of information in the new place is not an insurmountable obstacle to transplantation, only a challenge.

A final point of skepticism about the ability of mafias to transplant indicates that agents abroad are harder to monitor. They might take risks while away, thereby increasing their chances of being arrested and the danger for the boss back home. The case of Anthony Spilotro supports this

0980

viewpoint. While in Vegas, he started to run a burglary ring, endangering the mafia investment due to renewed police attention. The bosses back home ultimately punished him with a gruesome death. Yet the Chicago outfit did not plan to exercise territorial control in Las Vegas but simply wanted to ensure that its investments were safe. In the framework of this book, they were motivated to open a branch abroad to monitor investments. Any illegal investment raises the danger that the agent might cheat, since the principal cannot undertake it directly but instead needs to go through fronts, lawyers, bankers, and the like.

More generally, the "hard-to-monitor" argument hinges on the assumption that a mafia group, like a standard company, rationally decides to open a branch in a distant territory that is directly dependent on the homeland. A more plausible mechanism of mafia diffusion is through the unintended consequences of state action or mafia wars, as I will show below. A mafioso finds himself in the new territory because he escapes from his homeland. Once there, he will have the chance to explore local opportunities and negotiate arrangements that reduce the need for complex ways to monitor his actions by the homeland. It is unlikely that he will receive a salary from the boss back home. Rather, he will have to earn his own money by entering the local market. The group of origin may do no more than bestow a seal of approval on the existence of the outpost, which has a great deal of autonomy. The outpost abroad is not a branch of a corporation but rather a semiautonomous unit allied to the homeland. If seen in this light, the objections raised by these authors vanish.

The Key Factors in Summary

Table 2.1 presents a summary version of the factors discussed above. "Supply" refers to unintentional and intentional factors that account for the presence of the mafiosi in the new territory. They could also be thought of as "push" factors. The table includes a line for generalized population migration and another for mafiosi migration. Such latter migration can be willing or unwilling. "Willing" aims to describe whether the mafioso migration is due to intentionally seeking resources, investments, or markets. "Unwilling" refers to the soggiorno obbligato policy, mafia wars, and the attempt to escape prosecution. Among the "local conditions," I include the level of trust in the new locale (as measured by Putnam), the presence

0981

TABLE 2.1
Factors Facilitating Mafia Transplantation

	Factors facilitating mafia transplantation
	Generalized migration Mafiosi migration (willing/unwilling)
Supply of mafiosi	
Local conditions	Level of trust/civic engagement Presence of local illegal protectors Size of locale New and/or booming markets*
Demand for mafia services	
Transplantation	

* The markets considered are construction (Bardonecchia and Rosario), drugs (Verona and China), property rights (Budapest and China), oil (Budapest), alcohol (New York City), gambling (New York City and China), and prostitution (China).

or absence of local protectors, such as an existing mafia or corrupt officials and police, and the size of the locale. By "new and booming markets," I refer to whether the economy has undergone some sudden change. For instance, a construction boom would qualify as one. Also a wholesale transition to the market economy or the sudden outlawing of alcohol consumption would create new and booming markets. I suggested above that some such factors are causally linked to others: a construction boom, the sudden outlawing of alcohol, or low levels of trust could give rise to a demand for criminal protection. Such a connection, however, is not mechanical; if actors in a given market are able to regulate the sudden changes in the market and cope, they would not develop such a demand. If the state is efficient at defining and protecting rights in a new market economy, a de-

0982

mand for criminal protection would not arise. If the operators in the drug market are able to settle disputes without recourse to a third-party criminal enforcer, such a demand again would not emerge.

In the remainder of the book, I evaluate empirically whether the factors listed in table 2.1 have generated such a demand, and whether a foreign mafia was able to intercept such a demand and become entrenched in a faraway territory (transplantation).

Case Selection

A final word on how I selected the cases. Researching criminal organizations is a hazardous enterprise, and often chance encounters with data direct the scholar toward a particular case study. The main criterion that I have followed, however, is the "possibility principle." The said principle prescribes the inclusion of cases where the outcome of interest—in this instance, transplantation—is possible. In some of the cases included transplantation did not occur; nevertheless, it was tried. A related criterion for inclusion is variation in the "dependent" variable (transplantation). Only by presenting cases in which mafias failed to transplant as well as ones where they succeed can one hope to identify the factors that are most likely to cause transplantation. The negative cases of this study are the failed attempts of the Mazzaferro family to create an outpost in the city of Verona, in the Veneto region, in the 1980s; the Moscow-based Solntsevskaya to open a branch in Rome in the mid-1990s; and a mafia to emerge in Rosario, circa 1910–40. Foreign triads have also so far failed to establish themselves in China. In all instances these organizations tried to transplant. The two criteria combined—the possibility principle and variation in the dependent variable—led me to exclude "irrelevant" cases—namely, cases where there was no transplantation and also no indication that it was ever attempted.[43]

I have used three further criteria for selection. First, among the territories of destination, I discuss both advanced market economies and newly created ones. Variation on this dimension allows me to establish whether similar (or different) reasons account for transplantation to newly created and advanced market economies, and make it easier to generalize from my findings. Second, I include regions, among the territories of destination, where the level of interpersonal trust and civic engagement was high along

0983

with those where it was low before the arrival of the mafia. In particular, Piedmont and Veneto are high-trust regions in Italy, while Rome, Budapest, and China have low levels of interpersonal trust. Since the level of trust in the territory of destination is a factor that I suspect might affect the ability of mafias to entrench themselves, variation in this independent variable was crucial.

Ultimately, this is a study with many variables and few cases. In order to control as much as possible for intervening variables, I have tried to match cases. For instance, the movement to Bardonecchia (Piedmont) is matched by the failed attempt of the same mafia group to move within the same part of the same country (the city of Verona in northern Italy). Although not a perfect control, we can assume that many intervening variables, such as the level of corruption and policing, are similar. At any rate, the conclusions that I reach must be considered tentative, and this work calls for more instances to be studied and compared with the ones that I cover in this book. In this field of study there is no substitute for detailed narratives and in-depth discussions of specific cases.

0984

The `Ndrangheta in Piedmont and Veneto

The `Ndrangheta

"The `Ndrangheta is as invisible as the other side of the moon" remarked a prosecutor in Florida in the 1980s.[1] Indeed, the organization managed for a long time to remain under the radar of many police forces around the world, in part thanks to the small number of turncoats. In the same period, Tommasso Buscetta, the highest-profile Sicilian mafioso turned state witness, even suggested impishly that it might not exist as an autonomous entity.[2] Notwithstanding Buscetta, historians have documented the existence of the `Ndrangheta since the late nineteenth century, although at that time it did not yet have a name of its own. Official sources refer to Calabrian criminals as *Camorristi* and occasionally also as mafiosi. Other terms used were *Picciotteria* and, oddly, *Famiglia Montalbano*, also the title of a novel. The very word *`Ndrangheta* was first recorded only in 1909. The etymological origin is the Greek *andragathos*, meaning a brave and daring man.[3]

Another word of Greek origin, *`ndrina* ("a man who does not bend"), refers to the basic unit of the organization, and is the equivalent of the Sicilian mafia's family or *cosca*. According to the Italian Anti-Mafia Parliamentary Commission (CPA), each *`ndrina* is "autonomous on its territory and no formal authority stands above the `ndrina boss."[4] The `ndrina is usually in control of a small town or neighborhood. If more than one `ndrina operate in the same town, they form a locale. In some cases, *sotto `ndrine* have been established. A rather elaborate internal structure is

0985

shared by most `*ndrine*, and includes the boss and six lower ranks. Each rank could be further differentiated into further internal ranks.[5]

The village of San Luca on the Aspromonte Mountains in the province of Reggio Calabria is the core `Ndrangheta territory. The Sanctuary of Our Lady of Polsi (located in the San Luca district) has long been the meeting place of affiliates, and the `ndrina based in this village is granted special authority. Every new group must obtain the authorization of the San Luca family in order to operate. Former members report that "every *locale* deposits a small percentage of their illicit proceeds to the principal of San Luca in recognition of the latter's ancient supremacy."[6]

From at least the 1950s the chiefs of the `Ndrangheta have held annual meetings, fittingly called *crimini*, at the Sanctuary of Polsi between September and October (the exact date is constantly changing). Cesare Polifroni, a former member, testified that at these meetings every boss "must give an account of all the activities carried out during the year and of all the most important events taking place in his territory such as kidnappings, homicides, etc."[7] The *capo crimine*, who is elected every year, is in charge of convening the meeting, but far from being "the boss of the bosses," actually he has little authority to interfere in family feuds or control the level of interfamily violence. The `Ndrangheta equivalent of the Apalachin meeting took place in October 1969, when the police raided the gathering and captured more than seventy `*Ndranghetisti*—although many more managed to escape. Allegedly, the purpose of the meeting was to suggest a unified command structure of the `Ndrangheta and support a right-wing conspiracy to take over the Italian state. Both plans failed.[8]

Bosses from outside Calabria, from as far away as Canada and Australia, regularly attend the fall meetings at the Sanctuary of Polsi—an indication that the `ndrine around the world perceive themselves as being part of the same collective entity.[9] Nonetheless, and as in the case of other mafias, separate units have often been at war with one another. For instance, in Siderno, a town on the Ionic coast, the theft of some guns belonging to one of the family chiefs led to 34 people being killed in a "war" that lasted from 1987 to 1991. One conflict between two `ndrine in Reggio Calabria claimed hundreds of lives. Mafia killings in Calabria took the lives of 680 people during 1986–91 alone—a figure that approximates the number of deaths in civil wars.[10] From 1991, attempts have been made to create a Sicilian mafia-style regional commission but they have not yet succeeded,

0986

although loose mechanisms of communication, coordination, and dispute settlement have existed since the end of the nineteenth century.[11]

The `Ndrangheta is ultimately a loose confederation of mafia families, most of which (eighty-six) operate in the province of Reggio Calabria in southern Calabria.[12] This mafia has systematically forced local entrepreneurs to pay protection money, corrupted officials, and penetrated politics.[13] Politicians have been threatened, wounded, and killed, while bosses have successfully stood in local elections. In the 1990s, the Italian government disbanded eighteen city councils due to the `Ndrangheta's ability to pervert local electoral processes.[14] In 2007 killers from San Luca, this mafia's stronghold, murdered six people outside an Italian restaurant in Duisburg, in northwestern Germany, bringing the ruthless nature and international reach of the organization home to the European public.[15]

The key difference between the `Ndrangheta and mafias from Sicily, the United States, Russia, Hong Kong, and Taiwan is the role of kin. While other mafias try to minimize the number of blood relatives accepted into each family, within the `Ndrangheta blood family and membership of the crime family overlap. By and large, the `ndrine consist of men belonging to the same family lineage. An antimafia prosecutor in Reggio Calabria, Salvatore Boemi, maintains that "one becomes a member by the simple fact of being born into a mafia family," although other reasons might attract a young man to seek membership, and nonkin can also be admitted.[16] A former member, Pasquale Barreca, confirms that "in most cases one becomes `ndranghetista through family links."[17] Marriages help to cement relations within each `ndrina and expand membership. As a result, a few blood families constitute each group, and for this reason "a high number of people with the same last name often end up being prosecuted for membership of a given `ndrina."[18] Indeed, since there is no limit to the membership of a single unit, bosses try to maximize the number of descendants.[19]

The kinship link has meant that the `Ndrangheta has experienced significantly fewer defections (*pentiti*) than the Sicilian mafia, as shown in table 3.1, since turning oneself in to the police or informing on partners in crime amounts to informing on one's own extended family.[20] The same applies to the Neapolitan Camorra, which has an organizational structure akin to the `Ndrangheta.[21]

The coincidence of blood and mafia family also seems to have helped the `Ndrangheta expand beyond its traditional territory—a dynamic suggested

0987

TABLE 3.1
Membership of Mafia Groups, Number of Pentiti (Mafiosi Who Have Turned State's Witness) per Group, and Pentiti as Percentage of Membership

	*Membership**	*Pentiti (1995 data)*	*Pentiti 1995 as percentage of membership*
Cosa Nostra	5,487 (1995)	381	6.9
`Ndrangheta	5,000 (1994)	133	2.6
Camorra	6,700 (1993)	192	2.8
Total	17,187	706	4.1

* Date of estimate in parentheses.

by the authors of one of Italy's parliamentary reports on this mafia: "The familial bond has not only worked as a shield to protect secrets and enhance security, but also helped to maintain identity in the territory of origin and reproduce it in territories where the family has migrated."[22] The `Ndrangheta has clearly demonstrated a remarkable ability to establish branches abroad. `Ndrine are reported to be operating in northern Italy, Germany, Belgium, Holland, France, Eastern Europe, the United States, Canada, and Australia.[23] According to the Anti-Mafia Parliamentary Commission, the dependency of the subsidiary groups is significant: a subsidiary "is an outpost of the original cosca and depends on it to function."[24] Still, the activities of these subsidiaries vary, and more research is necessary to detail the relations between groups. In 2000, prosecutors pointed out that Germany, Eastern Europe, and Australia were areas where the `Ndrangheta invested the proceeds of its illegal activities heavily rather than aspiring to establish control over territory.[25] Yet there have been no in-depth studies of the `Ndrangheta's transplantation into new territories. I now turn to such a case, in the town of Bardonecchia in northern Italy.

The `Ndrangheta in the Val Susa Valley, Piedmont

One has to travel more than fourteen hundred kilometers from Calabria to reach the valleys outside Turin at the center of the story of the `Ndrangheta taking root in Piedmont. The town of Bardonecchia (three

0988

FIGURE 3.1 Map of Italy

thousand inhabitants) lies in the Val Susa Valley, the most western part of Italy, bordering France. Bardonecchia has throughout its history been a transit zone, with many armies, traders, and smugglers passing through the tortuous mountain crossings of the Cottian Alps (Alpes Cottiennes). In the mid-nineteenth century, the Piedmontese government gave the order to start work on a railway line to connect Turin to the (now-French) city

0989

of Modane, running under the Frejus tunnel and through Bardonecchia. The Frejus railway line, completed in 1871, gave a massive impetus at the end of the nineteenth century to the town's tourist industry, and members of the aristocracy and upper classes from Turin and Genoa began building pleasant summer villas in the art nouveau style. By the beginning of the twentieth century winter sports had developed, and in 1908 a skiing club was founded in Bardonecchia. Local histories also recall the exploits of the two Norwegian brothers, Harald and Trigwe Smith, who in 1911 broke the world record for trampoline jumping with a forty-four-meters-long jump. The trampoline had been constructed in an area that was to be named after the Smith brothers, Campo Smith. The land was given to the city by one of those wealthy families that had patronized Bardonecchia at the turn of the twentieth century, with the explicit provision that it should be made into a public park and remain so in perpetuity. Eighty-five years later, the same area had acquired immense real estate value, and was at the center of a major scandal involving local officials, construction companies, and the Mazzaferro clan of the `Ndrangheta. The scandal led to the mayor being arrested, and the city council was disbanded for "mafia penetration"—the first instance of this kind in a city outside the south of Italy (the mayor was eventually acquitted).[26] The data I present below suggest that the `Ndrangheta was best placed to exploit the lucrative opportunities in the construction business in the Val Susa Valley and in particular Bardonecchia in the 1960s.

According to established theories of social capital, Piedmont—one of the most industrialized areas of the country and home to the Fiat car manufacturing company—is a most unlikely territory for a mafia to take root. In contrast to the vicious circle of low interpersonal trust and unresponsive local institutions that is typical of southern regions, Piedmont scores among the most "civic" regions in the country, with a high level of interpersonal trust and highly effective local institutions, as measured by Robert Putnam's Civic Community Index. Putnam's historical index of "civic traditions" for the period 1860–1920 has Piedmont scoring even more favorably—second only to Emilia Romagna—as the most civic region of Italy.[27]

Let us now turn to immigration from high mafia regions of the country. Could this be the factor that explains mafia transplantation in the Val Susa Valley? To be sure, since the 1950s Piedmont has experienced significant

0990

flows of immigrants, which in turn have changed its ethnic composition dramatically. Between 1951 and 1961, 440,040 immigrants moved to Turin (the largest city in the region), increasing its population by 42 percent. The share of the population born outside the region more than doubled from 1951 to 1971. It should be noted, however, that other cities, such as Rome and Milan, also experienced dramatic increases in population, yet did not succumb to mafia entrenchment. The data in table 3.2 show that Rome had higher immigration from "mafia regions" than Turin in the 1950s and 1960s, and a similar level of immigrants in the 1970s and 1980s. And yet no mafia became entrenched in Rome.[28] (A potentially revealing parallel with Bardonecchia is the small town of Buccinasco, outside Milan, where the `Ndrangheta appears to be entrenched and to control the construction sector).[29] Migration is not the whole story.

In chapter 2, I drew a distinction between generalized patterns of migration and the migration of specific individuals who belonged to a mafia group. The presence of even a small number of the latter can be highly significant because these are specialized criminals, well equipped to set up criminal groups.

Because of the policy of soggiorno obbligato, we know how many people had been forced by court orders to reside in the region. In the period 1961–72, fifty-four individuals were ordered by the courts to resettle in Turin Province. Compared with other regions, however, Piedmont experienced only an average number of such forced migrations of specialized criminals. For instance, 15 percent of the criminals who were sentenced under the soggiorno obbligato policy relocated to Lombardy, 10 percent to Emilia Romagna, 9 percent to Tuscany, and 11 percent to Piedmont. Furthermore, Piedmont's provinces of Cuneo, Asti, and Alessandria likewise experienced an influx of hardened criminals in the period 1961–72 (respectively, sixty-three, thirty-six, and fifty-four individuals), but mafias did not become entrenched there.[30] Thus, no direct link exists between soggiorno obbligato and mafia formation.

I now turn to a discussion of the local conditions that existed in this part of Piedmont, starting with a look at the construction sector. Between 1950 and 1959, this sector of the economy was virtually monopolized by three local companies that had roughly 50 percent of the market between them, as measured by the number of licenses that they obtained to build new homes in the town (table 3.3).

0992

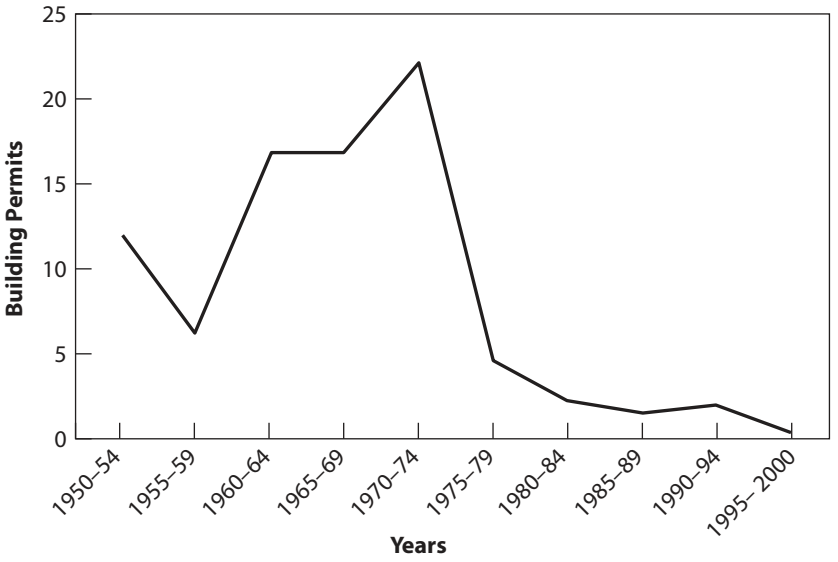

FIGURE 3.2 Number of licenses to build new dwellings, city of Bardonecchia, 1950–2000

As a consequence of the expansion of tourism in the early 1960s, a strong demand for housing developed. During a period of fifteen months in 1967 and 1968, some eighty thousand new dwellings were built in the Val Susa Valley.[31] Figure 3.2 gives a quantitative, albeit partial, picture of this trend. Like table 3.3, figure 3.2 is based on data about legally obtained licenses to build new residential dwellings issued in the period 1950–2000. These data were collected in the archives of the city of Bardonecchia and had never been examined previously. Typically, each license refers to a major construction project, since it was common for a single application to be made for the construction of one building (or sometimes two) containing a minimum of eight flats and a maximum of fifty.

The market peaked between 1960 and 1974. (In the same period, a new highway and the Frejus tunnel to France worth some 170 billion lira—the equivalent of approximately US$275,000,000 in 1971 dollars—were under construction.)[32] In the period 1985–94, a further 1,300 dwellings were built—a total of 282,000 cubic meters of construction worth 500 billion lira, or approximately US$310,000,000 in 1994 dollars.[33]

The arrival of new actors in the market is partially captured by the data on building licenses that I collected in Bardonecchia. Table 3.3 gives the

percentage of the market share for the four biggest companies operating in Bardonecchia between 1950 and 1979. In the 1960s a new firm, Patané and Raiteri, energetically entered the market and obtained 8 percent of all the licenses granted in the period 1960–64. Zedda Aldo and Iginio, one of the original firms that had been operating in Bardonecchia since at least the 1950s, saw its share of licenses fall in the period 1965–69; by 1970 it was out of the market. Overall, the market expanded, and the top four companies accounted for only 22.3 percent of the sector between 1965 and 1969, and even less in the next two periods. Rather mysterious *immobiliari* (literally "real estate companies") appeared and disappeared frequently from the 1960s onward, but when present, they were involved in major works such as Immobiliare Patrizia, which gained 5 percent of the market in 1970–74. Another new company gained almost 9 percent in the same period. Both disappeared in the next period.

The sudden expansion of the construction market had two key consequences: local construction companies did not have a large enough workforce to meet the new demand, and new firms entered the market. Some construction firms in the Val Susa and nearby Canavese valleys therefore turned to "fixers" who supplied immigrant workers, typically with little education and unable to find employment in large companies like Fiat. Many of the new immigrants lived in appalling conditions in Turin. These poorly qualified and nonunionized workers accepted short-term, temporary employment and low salaries, and worked without accident insurance coverage. Several firms welcomed the possibility of hiring cheap labor

[162.10.217.184] Project MUSE (2026-06-15 01:44 GMT) University of Queensland

in order to save on mandatory health contributions and safety costs, and more generally to bypass trade union controls. Moreover, by hiring the workforce indirectly, the firms avoided having to pay transfer, catering, and accommodation costs.[34] New construction companies also entered the market at the suggestion of the Calabresi who had been residing in the valley under the soggiorno obbligato policy. These new firms, too, employed an illegal workforce and turned for protection to the Calabrese mafia. Many residents were able to sell their plots of lands at considerably high prices to the constructors.[35]

Mario Corino, the mayor of Bardonecchia in the 1970s and a fierce antimafia campaigner, summarizes the situation in the town as follows:

> I have been active in politics for 40 years as a member of the Christian Democracy Party. I was the elected mayor of Bardonecchia from December 1972 until 1978. Since 1990, I have been the Leader of the Opposition in the City Council. As early as the 1960s I realised that, for the good of the city, we first had to study the mafia phenomenon, and then to make it clear that we did not condone it. Once my position became known, I found myself the object of night-time displays of aggression and was in a constant state of fear for my life. . . . During my term as mayor of Bardonecchia, my position became even more delicate. The mafia were a long-term fixture (it was pointless trying to deny it) and I would have to choose one side or the other. I therefore made the decision that it was my duty to fight this phenomenon, which I considered to be unacceptable. In particular, those years saw the emergence of labor racketeering. When I became mayor, I discovered that more than 72 construction sites had been opened in Bardonecchia, in which a number of workers who had come from the south, and especially from the Gioiosa Ionica area [Calabria], lived, literally "camped out" in extremely unhygienic conditions. Many of them had criminal records and weren't legally allowed to work.
>
> The managers of these construction sites gave me no guarantees as to either public order or the working and living conditions of those who worked on them. Independently of any investigations I was making, the Work Inspector also decided to carry out checks on the sites to ascertain the position of these people. However, they

0995

> were usually forewarned of the Inspector's arrival, and nowhere to be found. It was all extremely and uncomfortably illegal. Faced with this problem, I tried to confront it by involving the Trade Unions Associations as well, and together we obtained an audience with the Anti-Mafia Commission. Following our audience, a delegation presided over by MP La Torre [later murdered by the Sicilian mafia in Palermo in April 1982] began various investigations into, and checks on, these sites to verify what we had said. This was, however, just one part of a wider situation which was endangering the safety of the city.[36]

The current mayor of Bardonecchia has a rather more positive outlook on the same events:

> My view is that these individuals [originating in Calabria] entered the construction sector using the carrot rather more than the stick. One must recall that there was a significant expansion in the market in the 1970s, especially an increase in second homes and homes for tourists. Local entrepreneurs often were short of labor, and these people delivered it. Thus, they performed a service for the local economy. They brought to Bardonecchia some unqualified, as well as qualified, workers, and found them employment.[37]

Some firms and workers that had not been hired through the racket were intimidated, and eventually forced to exit the market.[38] As the racket expanded, more local firms started to hire illegal workers. The final outcome was that a number of firms—some local, and some newly arrived from Calabria—came to rely on workers supplied by the Calabresi and employed them illegally. In all, the racket was beneficial to both nonunionized immigrant workers and construction companies (a phone intercept testifies to workers' support for the main fixer: "The Calabresi respect him because he finds them work").[39] Such an equilibrium, however, meant that workers could not turn to trade unions in the event of disputes with employers, and employers could not turn to legitimate sources of protection in the event of disputes with this vast contingent of workers. A demand thus emerged for an alternative, nonstate source of protection. Entry into this market was policed by the mafia, which also oversaw

0996

Mario Corino (1929–2010), the primary school teacher who became the mayor of Bardonecchia in 1973 and took on the `Ndrangheta at great personal costs. He is now a largely forgotten figure in the valleys that he loved so much and an unsung hero of the fight against organized crime in Italy. Photo credit: *La Luna Nuova.*

employer-employee relations and used violence to achieve control of the construction industry.

A spate of cases of intimidation led to an investigation by the Anti-Mafia Parliamentary Commission, which first visited the area in 1974, as recalled by Mayor Corino above. The investigation recorded "widespread intimidation, improper allocation of workloads, exploitation, improper salary reductions, and racketeering," and estimated that 70 to 80 percent of the labor force in Bardonecchia was hired through this racket.[40] In one instance, a group of mafia-backed Calabresi workers showed up fully armed at a construction site, and forced the bricklayers to quit their jobs then and there. The firm that had (legally) hired the bricklayers was forced out of

0997

Bardonecchia.[41] It was not uncommon for construction sites to be set on fire.[42] In 1970, a worker at a building site was killed with a *lupara* (sawed-off shotgun), and his body was found in a nearby town.[43] In 1975, Mario Ceretto, a Cuorgnè developer, was kidnapped and murdered. A former `ndranghetista testified that the man had been targeted because he was a competitor in the construction business.[44] When in 1976 two thieves were caught trying to steal from a construction site, they were tortured for several hours and one of them became paralyzed in both legs as a result.[45]

The main organizers of labor racketeering in Bardonecchia were two Calabresi who had moved there as a consequence of the soggiorno obbligato policy: Rocco Lo Presti and his cousin Francesco (Ciccio) Mazzaferro. Both came from the town of Gioiosa Ionica and were members of the Mazzaferro clan.[46] Lo Presti, a stocky young man with a sharp look and pitch-dark hair, had moved to Bardonecchia from Calabria in 1952. By the time of the construction boom in the 1960s, Lo Presti had become the main illicit supplier of cheap labor to the area and had called in construction companies from Calabria. He also established several firms of his own and obtained unlawful subcontracts, especially in the area of plastering and framing. A Turin-based construction entrepreneur testified to the following:

> Everybody knew that one could work in the construction business in Bardonecchia only after having obtained Lo Presti's approval. One could obtain such approval only if introduced by somebody from Calabria, and by paying up. I recall what happened to me in 1979: at the time, I wanted to obtain the contract to build sewerage in Bardonecchia, but I was told that I needed Lo Presti's approval. Thus I obtained an introductory note for Lo Presti. Eventually, I did not bid for the contract, because I was told that another company was supposed to win.[47]

By the early 1970s, Lo Presti had been convicted three times by the court of Turin for a variety of crimes, including "violation of the law on hiring workers and workers' protection." He was charged with—and acquitted of—murder (1982), fencing (1987), and extortion and mafia activities (1995 and 1999). It was not until 2002 that he was found guilty of engaging in mafia activities and sentenced to six and a half years in prison. Recently, he

0998

was serving his sentence in a private clinic. On January 22, 2009, he was confined to bed, hardly able to talk and fighting a degenerative form of diabetes, when he was ordered to move from the clinic to the convicts' wing of the Turin Molinette hospital. After the officers read the removal order to Lo Presti forcing him to serve his remaining sentence in prison, he shook their hands and whispered, "I follow you." He died the next day.[48]

Lo Presti's associate Mazzaferro was found guilty in Calabria in the early 1970s of heading a mafia organization that exercised a monopoly over transportation in the area of Gioiosa Ionica. As a consequence of this verdict, the court ordered him to reside outside his region of origin, and he moved to Bardonecchia in 1972. There he started a transport company servicing construction sites and obtained several contracts related to the construction of the Frejus tunnel. The then mayor of Bardonecchia recalls the arrival of Mazzaferro in town in 1972:

> It was around this time that a number of people who were linked to mafia families such as the Mazzaferros were sent to the Bardonecchia area. When they arrived in Bardonecchia, the Mazzaferro family member would come into my office and say, "You have received instructions from the Locri Tribunal to find me a job and somewhere to live. But don't worry about it: I will find them on my own." And indeed, it was not long before an excavation company (with a never-ending supply of trucks) sprang up that effectively monopolized the market in that area.[49]

In fact, a Turin court found that Mazzaferro had acquired these contracts "through the use of force and intimidation."[50] Throughout the 1980s he was charged with a variety of offenses in three regions—Piedmont, Calabria, and Sicily. In 1987, he was found guilty of being the boss of a "mafia group" based in Piedmont that was involved in several crimes, including drug trafficking and illegal money lending.[51]

The pattern described above is virtually identical to that in the neighboring Canavese Valley, where two individuals of Calabrese origin, who had migrated to Cuorgnè in 1972 and 1963, undertook activities in the construction industry similar to those of Lo Presti and Mazzaferro. The Turin court accused them of having created a mafia group.[52] By the mid-

0999

1970s, entry into the construction industry in the two valleys (Val Susa and Canavese) was thus completely controlled by the `Ndrangheta.[53]

The mafia's control of labor and the overall construction industry soon evolved into a wider protection system. A city council employee is known to have handed over Lo Presti's business card to people applying for business licenses in the area. In one case he was heard saying, "You should get in touch with Lo Presti in order to avoid problems." Inspectors sent by the prefect of Turin noted that "in Bardonecchia, everybody assumes that it is necessary to obtain Lo Presti's endorsement in order to engage in any commercial activity."[54] Another telling instance is narrated by a member-to-be of the `Ndrangheta (who then turned state witness). In 1987, this man had started a fight at a disco because the bouncer would not allow a friend of his to enter. Shortly after the incident, "Lo Presti got in touch with me, and asked for an explanation of what had happened, because the disco was *under his protection*. At that time, I was not yet a member of the Belfiore family. I explained myself and he agreed with my reasons and let me alone."[55]

Violence now extended beyond the construction industry. Lo Presti was charged by the police with ordering the assault of and inflicting grievous bodily harm on a local politician (and future mayor) in 1963.[56] The first "mafia murder" in Bardonecchia took place in 1969, when Lo Presti's brother-in-law killed a man.[57] In Cuorgnè, a Calabrese who had been forced to relocate to the town came into conflict with Lo Presti and Mazzaferro, and was murdered in 1972.[58] Between 1970 and 1983, twenty-four people originally from Calabria were killed in Turin Province (which includes Bardonecchia and Cuorgnè), while Turin's Procurator Office recorded forty-four mafia murders.[59] The most high-profile murder was that of Bruno Caccia, the chief public prosecutor of Turin, who was gunned down by members of the `Ndrangheta, among them Mimmo Belfiore, the brother of a developer from Calabria operating in Bardonecchia and an associate of Lo Presti.[60] According to a police investigation, Lo Presti received a phone call on the day of Caccia's murder allegedly saying, "Here is your birthday present" (Caccia had investigated Lo Presti several times; no one suggested that Lo Presti was directly involved in this murder).[61] Violence continued steadily throughout the 1980s and 1990s.[62]

The judicial system and the police also felt the full weight of mafia pressure, and ominous mafia messages were sent to local officials. In 1990

1000

Lo Presti threatened a police officer, proving that he was aware of the secret investigations directed at him. In 1991, another officer was suddenly transferred to high-density mafia territory in Calabria after having written an investigative report on Lo Presti. In 2000, the carabinieri station chief was charged with favoring criminal suspects but was later acquitted. The ruling acknowledged that he was conducting "friendly and improper relations" with Lo Presti. Several officers were also removed.[63] A woman who had testified against Lo Presti in the pretrial phase in 1999 later refused to confirm her statement at the trial, explaining in tears that she felt threatened and scared.[64] A solicitor who was a member of the town committee that dealt with building applications suggested an increase in the environmental fee (*onere di urbanizzazione*) to be paid by a construction company. When he returned home, he found a large knife stuck in his video-recorder. He immediately resigned, citing "health reasons."[65] Another "unreasonable" solicitor hired by the city council had the door of his house burned.[66]

To what extent did the high level of interpersonal trust and the potential for collective action function as a barrier to mafia entrenchment, as hypothesized in chapter 2? At first local politicians and trade unions resisted the mafia. Corino, the mayor of Bardonecchia between 1972 and 1978, and later an opposition politician, openly denounced the presence of the mafia in the town and rejected its offer of electoral support (he had been physically assaulted in 1963).[67]

The Turin section of the Construction Workers' Union alerted the authorities at its annual conference in Bardonecchia in 1972. In only one of sixty building sites were workers able to elect delegates to the conference, and only twenty people attended an antimafia trade union rally in Bardonecchia. Trade union officials were directly intimidated by phone in advance of their tour of the building sites in Bardonecchia and, once there, found that workers did not want to speak to them.[68]

The reaction of civil society was not sufficient to prevent the mafia from becoming entrenched. The `Ndrangheta was able to forge a vast social constituency among both migrant workers, who generally remained grateful for even illegal employment, and employers. The mafiosi extended their protection to other spheres of the social life of immigrant workers, who were often ostracized by the native population. Shrewdly, the mafiosi also offered protection to Piedmontese residents by punishing those Calabresi

1001

residents who misbehaved. For instance, they punished Calabresi who offended local women outside bars and nightclubs.[69] Their territorial control allowed the group to branch out and protect other criminal businesses, including arms trafficking, drug dealing, and money laundering. For example, a laboratory producing ecstasy tablets was found in Val Susa in 1994.[70] Ominous signs of the expansion of this mafia group were also highlighted by an investigation in the late 1990s into racketeering by construction companies in nearby towns.[71]

The step from a successful protection racket to the penetration of local politics was a short one. The mayor of Bardonecchia discovered that, by the time of the 1971 census, some three hundred people all originating from the area around Lo Presti's birthplace in Calabria had recently registered as residents in Bardonecchia. This number amounted to almost the entire increase in population since the previous census. As the voters numbered some fifteen to sixteen hundred adults, the newly registered residents could have accounted for up to 19 percent of the electorate (it is not known whether all the new residents were of voting age, although the mayor seemed to think so).[72] Lo Presti boasted in a phone call of controlling five hundred votes and influencing elections to the point where the majority of the city councillors were in his pocket.[73] He tells a candidate in another phone conversation: "We have never lost [an election]."[74] To a local paper he declares: "No administration [in Bardonecchia] is elected without the support of the southerners [*meridionali*]. I can tell you that I do not need to tell my friends how they should vote. They know my ideas and, if they love me, they know for whom they should vote."[75]

In 1975, the Turin court noted that a power struggle was under way between the incumbent mayor (Corino) and the Calabrese clan of Lo Presti. In 1979, a new administration was elected that was more favorable toward the Calabresi. Lo Presti himself declared, "Some days ago, [the new mayor] asked for help, and I helped."[76] In effect, the political coalition that won the elections in 1979 has been reelected ever since. A report produced for the prefect of Turin notes that in 1988, the mayor was voted for unanimously by both the winning coalition and the opposition councillors (mayors were at the time elected by the city council).

In 1994, Bardonecchia hit the national headlines. The mayor and other councillors were arrested for their involvement in the illicit allocation of construction permits (*speculazione edilizia*), unjustified variations to plan-

ning decisions, and undercharging for and underselling valuable land (it should be stressed that they were later acquitted at the appellate stage and had been compensated by the Italian state for the judicial error). The father of the mayor appears in the license records above. The land in question is Campo Smith, where the Smith brothers established the world record for trampoline jumping in 1911. In essence, the case involved underselling a valuable green area to a developer controlled by Lo Presti and then granting him permission to develop it. The land, estimated to be worth 1.6 billion liras in 1995, was sold for 17 million liras. The overall value of the development was later estimated to be 90 billion liras by the authorities investigating the case. The developers and contractors entrusted with the work included individuals sentenced for violent crimes and drug trafficking rather than bona fide professionals.[77]

This situation resulted in an unprecedented move for a town in northern or central Italy: in 1995 the president of Italy suspended the democratic process and disbanded the city council because of "mafia penetration."[78] Nonetheless, in the 1996 election the ticket that had supported the disgraced mayor campaigned for "continuity" and obtained almost 70 percent of the votes. Both the left-wing Partito Democratico della Sinistra and the right-wing parties supported this ticket, while the leader of the opposition reported pressure on one of their candidates during the electoral campaign. The 1996 administration included four individuals (among them the new mayor) who had served in the disbanded 1995 administration and had been under investigation. The 2001 administration was also a political heir of the disbanded 1995 local government; it included two individuals who had served in the 1995 administration and seven who had served in the 1996 administration. Despite presidential intervention, there was clear political continuity between these administrations.[79]

As in other mafia territories, Bardonecchia saw the emergence of a code of silence (*omertà*). Police officers and investigators "found among the population a very low propensity to help the authorities in their investigation."[80] In 1994, when the elected officer with the tourism portfolio was asked about his plans to keep the mafia out of local politics, he answered, "Our job is to manage local affairs; police officers (and there are plenty of them in town) should worry about the mafia."[81] Similarly the mayor, charged with being involved with the mafia, and son of the owner of the construction company, declared that "unlike my colleagues,

I don't play the policeman," and "we should be grateful to the soggiorno obbligato policy, which brought to our town people like Lo Presti and Mazzaferro."[82] After the 1996 elections the newly elected mayor stated, "We are cooperating with law enforcement to clarify what went on in the past, but, believe me, in town nothing ever went on, there were no connections between local politics and the mafia (assuming that the latter ever existed)."[83] As late as 2001, the mayor was still demanding a "public apology" from the state for disbanding the city council in 1995.[84] The mayor elected in 2001, in contrast, established links between his office and antimafia campaigners based in Turin and was supportive of the present study, although he belonged to the same political faction as the mayor who was under investigation, and considered the 1995 suspension of the city council futile and wrong.[85] The passing away of Mario Corino, the antimafia mayor of Bardonecchia, on February 2, 2010, went virtually unnoticed. Contrary to the extensive press received by Lo Presti for his death (including a full page in the national paper *La Stampa*), Corino's death elicited only two short articles in news bulletins with a local circulation in the Val Susa Valley. One such piece did not mention his efforts against crime and described him as a difficult man who, "for good or for bad," had an impact on his community. His courage went unsung.[86]

Collective action was now working in the opposite direction to virtuous social engagement, with people being mobilized in order to support mafia-tainted politicians. The parish priest of Bardonecchia organized a four-hundred-person march in support of the disgraced mayor, with the endorsement of the bishop, who himself went on record as saying, "I would deny the presence of the mafia in this area."[87] Both clergymen were later interviewed by the investigating magistrates about their roles in the march and claimed that they were simply supporting a group of parishioners who had "spontaneously" organized the rally themselves.[88] A march against mafia penetration into the North, organized by the Northern League in the town on May 27, 1995, failed to attract any support whatsoever, according to a police report from June ("indeed, the population even avoided being seen anywhere near the site of the march").[89] No other political party organized rallies of this kind. After the dismissal in 1995 of the local administration, *La Stampa* interviewed a number of casually selected residents and long-time vacationers; the former expressed their

support for the mayor, while the latter favored the presidential measure, indicating some local support for the criminal state of affairs.[90]

Was social capital depleted as a consequence of the mafia penetration, as predicted by Putnam's work? If one measures social capital as voting in referenda and the European elections—where the constituency covers the whole of northern Italy and thus the link with a specific candidate is rather loose—the answer is negative. For instance, in 1979, 85.13 percent of the electorate voted in the European elections, virtually identical to the turn out in Turin Province (87.09 percent) and the northwest electoral constituency (88.75 percent). Similarly, in the last referendum (2009), although the turnout in Bardonecchia (25.52 percent) was lower than in Turin Province (36.87 percent), it was higher than in other Piedmontese provinces, such as Asti (17.78 percent), Cuneo (23.92 percent), and Verbano-Cusio-Ossola (15.46 percent).[91] Mafia presence does not seem to have led to a drop in civic engagement as measured by electoral turnout.

Connections exist between the homeland and the groups operating in Piedmont. In order to gain entry into the Bardonecchia `ndrina, a would-be member had to travel back to Calabria to undergo the initiation ritual.[92] This suggests that the mafia of Bardonecchia is a branch of the Mazzaferro family rather than an independent entity. Other evidence of connections exists. Piedmontese clans are expected to assist fugitives from Calabria, support other members imprisoned in the region, distribute drugs, and more generally invest capital from Calabria in the legal economy.[93] Construction companies in the two valleys—Val Susa and Canavese—have been found guilty of laundering drug money from Calabria, with the help of local professionals.[94] ("It is easier to launder money through a construction project," maintains a police investigator who has worked on Bardonecchia extensively, "than to invest it in immovable property, as there are many expenses, many of which can be settled informally, without issuing official invoices.")[95] Giuseppe Ursino, the cousin of the Ursini-Scali family boss based in Gioiosa Ionica and Lo Presti's nephew, was arrested in Bardonecchia in 1993, along with another fifteen Calabresi who had settled in the Turin area.[96]

Other mafias have also made an appearance in Bardonecchia. In the 1970s, some members of the Sicilian and U.S. mafias tried to enter the construction industry—in particular members of the Gambino and

Spatola families—but they were eventually dissuaded by the `Ndrangheta and left town, according to confidential police reports. A summit involving Calabrese, Italian American, and Sicilian mafiosi was to take place in the town in 1975, but it was canceled at the last minute, possibly because it was known that the police would have raided it. Still, contacts with the U.S. Gambino family and the local `Ndrangheta continued, and relationships remained friendly. In the 1990s, Sicilian fugitives passed through town and a boss, Salvatore Inzerillo, resided there for a few months. An as-yet-unpublished piece of evidence alleges that Totò Riina, the so-called boss of bosses of the Sicilian mafia, visited Bardonecchia as he was interested in investing money in construction. He disappeared before he could be arrested and remained a fugitive for several more years.[97]

To conclude, the story of the `Ndrangheta in the Val Susa Valley is closely linked to the expansion of construction in the 1960s, which brought significant profits to a vast part of the population. Local firms could not meet the demand for new homes and started to hire illegally, through Calabresi fixers, unemployed immigrants who had moved to Turin. New firms from Calabria also entered the market at the suggestion of Calabresi who had found themselves in Bardonecchia due to the soggiorno obbligato policy or had simply started to work in the construction sector. Neither this large workforce nor its employers could turn to the state to settle any disputes that might have emerged. Moreover, the Calabresi involved in the labor racket began to offer criminal protection to both workers and employers as well as enforce a cartel of market incumbents. Violence was used to force some firms out of the booming construction sector. Over time, individuals who were favorable toward the mafia penetrated politics. Initial high levels of trust did not prevent transplantation. It is hard to tell whether trust was depleted as a consequence of the arrival of the mafia, but surely civic engagement (as measured by voting in referenda and the European elections) remained high. Portions of civil society even mobilized in support of mafia activities.

To fully understand why the `Ndrangheta succeeded in becoming entrenched in Bardonecchia, one needs to compare this case to another instance where the `Ndrangheta tried but failed. To find a comparable city is a challenge. First, the city in question must be in a part of the country

1006

that is as similar as possible to Bardonecchia in as many ways as possible (so that we can discount them) while at the same time having been subject to such an attempt. An added complication is that, typically, information on failed cases is harder to come by.

The `Ndrangheta in Verona

The journey from Reggio Calabria to Verona is almost as long as the one to Bardonecchia, and the Northern city could not be more different from the one in Calabria. Instead, Verona and the Veneto region share many features with Turin and Piedmont. Putnam's Civic Community Index puts Veneto—like Piedmont—among the most civic regions of Italy. Verona sports an array of positive indicators, such as the highest gross domestic product and highest disposable income in Veneto, virtually full employment, high levels of cultural consumption, and one of the lowest crime rates in Italy.[98] It is world famous for the opera season at L'Arena running every year from June to August, and for the setting of the doomed love story *Romeo and Juliet*. In a street just off the main square, Piazza delle Erbe, stands a house falsely claiming to be Juliet's home. A short passageway covered with slips of paper containing love pledges leads to a narrow and always-crowded courtyard. Above one's head towers Juliet's balcony, while a bronze statue of William Shakespeare's heroine occupies the center of the paved *cortile*, one breast shining indecently as a result of the thousands of hands that have touched it for luck.

And yet Verona is a city that does not live in the past. The economic structure of the district changed after the Second World War from being mostly agricultural and based on sharecropping to being export-led, competing successfully in international markets for goods that require a high level of craft and skill, such as wooden furniture, footwear, engineering, wine, confectionery, and graphic design.[99] Pino Arlacchi and Roger Lewis, the authors of a study on drug consumption in Verona, describe the city as a tight-knit community where informal social control is exercised by "the bar owner, the newsagent, the teacher, the priest, the doorman, parents, and women talking on their door steps."[100]

Verona's population grew dramatically in the period 1951–81 as a result of immigration. Between 1951 and 1961 the net population increased from

185,482 to 215,733, with immigrants making up 34 percent of the total population by 1961.[101] Overall, in the period 1951–71, the population of the city grew by 29.2 percent (slightly more than the figure for northeastern Italy, which was 27.2 percent in the same period). Despite the rise in population, however, the demographic makeup of Verona did not change as it did in Turin. As shown in table 3.2, more than 93 percent of the 1951 population was born in the city or the Veneto region, 13 percentage points more than the equivalent figure for Turin. Still, the divergence between Verona and the other cities discussed above is even more striking in the succeeding decades. In the 1961 census, Turin, Milan, and Rome had between 26 and 33 percent of people born outside the region, while Verona had just 7.6 percent. By the 1981 census, Verona had almost 90 percent of residents born in the same region, roughly 20 percentage points more than in Milan and Rome, and 30 percentage points more than in Turin. Throughout the period covered in table 3.2, the number of residents originating from Calabria, Sicily, and Campania was negligible.

Where did the new residents of Verona come from? In contrast to the pattern experienced in Turin, Milan, and Rome, the new residents of Verona came from the surrounding region and mainly consisted of agricultural workers seeking better employment in the local factories. These immigrants managed to find employment in local industries. At this time there was a net increase in the supply of jobs relative to demand, and the rate of unemployment remained low and also considerably lower than the Italian average.[102]

As in the case of Piedmont, several members of `Ndrangheta families had been forced to resettle in Verona during the 1960s and 1970s through the same soggiorno obbligato policy described above.[103] In the period 1965–74, some one hundred people moved to the province for this reason. Not all of them had been found guilty of mafia crimes. For instance, in February 1974, out of sixteen such felons residing in Verona, only four had been found guilty of mafia-related crimes in the South.[104] Another source of people trained in the use of violence and specific to Verona was the vast contingent of neofascists, who over the years had been involved in, and charged with, several violent crimes. In particular, the neofascist Ordine Nuovo was founded in Verona, while most members of the Rosa dei Venti and the Nuclei Armati Rivoluzionari, two other extreme right-wing groups, lived in Verona. Veronese neofascists were questioned and

1008

investigated in connection with the bomb placed in Brescia in May 1974 that killed eight people and injured more than a hundred.[105]

The only significant illegal market in Verona in this period was that for drug consumption and trafficking. Some 10 percent of young people used drugs regularly. According to police estimates, roughly eight thousand people were habitual consumers in the late 1970s.[106] Consumption and trading were rather open, involving local youths influenced by the revolution in personal behavior of the late 1960s. In 1974, police raided an apartment where teenagers openly smoked and traded hashish (it was reoccupied shortly afterward). Most business occurred in Piazza dei Signori and Piazza delle Erbe, both central city squares not far from Juliet's balcony.[107] Arlacchi and Lewis estimate that up to 60 percent of those involved in heroin use and trafficking in Verona at that time were educated, self-employed proprietors, or managers of small businesses, and came from relatively well-off families. In other words, operators in the market belonged to the same social milieu that had given rise to a flourishing economy, and adopted the same norms of fair dealing and commercial practices that characterized the legal sectors of the economy. Transactions in the illicit drug market took place according to shared rules of fair bargaining, and punishment took the form of exclusion from future exchanges as well as refusal to offer credit and discounts. In addition, a significant level of barter and individualized exchange took place, and no third-party mechanism to punish defectors existed. Most of the arrests of both consumers and local traffickers were for direct violations of drug laws rather than violent crimes connected to the drug trade, and most of those arrested were sent to prison only once rather than being repeat offenders.[108]

Operators in the drug market seemed able to satisfy the growing demand. At first, supplies of morphine and heroin arrived in the city with users who had visited Bangladesh and Pakistan in the early 1970s. In a matter of a few years (1974–75), individual consumers, small-time local traffickers, and consumers' cooperatives started to buy heroin that came from southeast Asia via Amsterdam and Munich, and from the Middle East via Yugoslavia. Over the following years the quality of the product increased, as did the sources of supply (between fifty and eighty kilograms were sold monthly in the city, according to police estimates).[109] A Communist Party official at the time and antidrug activist, Dino Facchini, recalls an aspect of the heroin transportation routes into the city:

1009

> A significant element facilitating drug trafficking was the Interporto terminal. The terminal provides infrastructure for freight activity, making available multiple modes of transport. In essence, it means that goods may arrive by different means—say, by rail—and then be loaded onto trucks. The Interporto is located at intersection of the Brenner (north-south) and Serenissima (east-west) turnpikes, and is directly connected to the Verona airport. There is also a customs office. More than four hundred companies have offices there, and it employs some four thousand people. I know this well because I served for several years on the board of the Interporto [board members are political appointees]. Thus, the heroin was arriving from Eastern Europe by truck and by rail, was going through the terminal, and then entered the rest of the Italian market.[110]

Suddenly, Verona found itself at the center of an international drug route, and its heroin, the so-called La Veronese, acquired a national reputation as cheaper and purer than many other variants. Local consumers introduced trusted outsiders—especially consumers based in the surrounding towns—to sellers, and the market gradually spread to the rural areas.[111] As this illegal market was expanding, the number of people under eighteen years of age charged with drug-related offenses actually dropped in the period 1970–87.[112] Prior to the arrival of the Calabresi, violent conflict was virtually absent, as evidenced by the data on murders: the rate in Verona city was lower than the average of the Veneto region, and six times lower than the national average.[113]

A colorful character from this time is a young local lad, thin with pockmarked cheeks, best known by his nickname, "Gengiva" (Gum). He is credited with having introduced considerable quantities of heroin into the city over a twenty-year period. A carpenter by trade, he started his career—after a brief spell as a bank robber—with other like-minded locals, also known by their nicknames, such as "Camay," "Gancio" (Hook), "Bistecca" (Steak), "Gamba" (Leg), "Perry," "Elio il bello," and "Volante d'oro" (Golden Wheel). In his time, Verona came to be known as "the Bangkok of Italy," and the long line of cars visiting the city from all over northern Italy to buy heroin was dubbed "the Ho Chi Minh Trail."[114]

In the 1970s, the Calabresi in town decided to muscle into the legal and illegal markets. As early as 1973, they began trying to extract money

1010

from legal entrepreneurs. For instance, in early January 1974, in the city of Ronco, near Verona, several prominent entrepreneurs and politicians received threats and demands for money.[115] In the eastern and southern parts of the province of Verona, home to successful export-oriented furniture makers, police uncovered extensive extortion. Some one hundred thefts of trucks carrying furniture reportedly took place in 1973 alone. The Calabresi claimed that they could offer protection against such occurrences.[116] Violence and crime increased in this period, with businesspeople in particular experiencing a rise in intimidation, robberies, and homicides.[117] Answering a confidential survey administered to two hundred local entrepreneurs, 38.2 percent of the respondents stated that extortion was "common," 9.3 percent stated that it was "all-embracing," while 45 percent declared it was "limited." Only 4.6 percent answered that the phenomenon did not exist in Verona.[118]

The Calabresi also tried to gain control of the drug market by using violence against existing traders and establishing direct links with suppliers. Six murders connected to disputes in the drug market took place in rapid succession. One of the victims was murdered mafia style (*incapretare*). This involved tying his hands and feet behind his back with a rope that also went around his neck; death came as a result of self-inflicted strangulation.[119] The large drug suppliers whom the Calabresi contacted (Sicilian mafiosi and Turkish heroin suppliers) demanded payment in cash on consignment. Since the Calabresi faced a chronic shortage of funds, they decided to raise capital by kidnapping wealthy Veronesi for ransom, relying on their region of origin for hiding places. Ten Veronesi were kidnapped between 1974 and 1978.[120]

The key organizer of the transplantation attempt was Cosimo Ierinò, a prominent member of the Mazzaferro clan, born in Gioiosa Ionica, the Calabrian hometown of Lo Presti. Like Lo Presti, he was related to the Mazzaferro, having married the sister of Vincenzo and Giuseppe Mazzaferro. In a curious twist, Ierinò disappeared from Verona for a while and surfaced in Bardonecchia. Other prominent individuals involved were two sets of brothers—the Corsaro and Camera brothers.[121] The group recruited local petty criminals and neofascist activists in an attempt to create a protection racket and control the lucrative drug trade. They planned to establish a system of concessions whereby a set of local criminals (thieves, con artists, extortionists, pimps, and smugglers) would be identified and put in charge

of a given territory, encouraged to extract protection payments from local businesspeople, and forced to hand over a portion of their earnings to the Calabresi. The Calabresi, in turn, would offer services such as dispute settlement, refuge and hiding places for people and illegal goods, and the intimidation of political and law officials. As part of this strategy, they started to hand out bribes to local law enforcement and party functionaries.[122]

A clear attempt to penetrate politics is also on record. Several drug dealers and other individuals from Calabria became card-carrying members of the tiny Partito Social Democratico Italiano. Shortly thereafter they were elected to positions of responsibility within the party. Reputedly, the local party leader, also from Calabria, was supporting them. Their acceptance into the party and rapid rise through the ranks generated internal opposition, resignations, emergency meetings, and alarm in the city.[123]

Violence spread beyond the drug market. The highest-profile murder at this time was that of Fabio Maritati, the son of a police officer, possibly a case of mistaken identity (the real target was his father), on December 21, 1979. The murder was related to Maritati's investigations into truck thefts (he was with the transport police). At the trial, it transpired that another police officer had helped the killers.[124]

As in the case of Bardonecchia, civil society was quick to mobilize against outside criminal elements. At the forefront of this grassroots movement were the Catholic church, the local chapter of the Italian Communist Party, and the newly created Association of Concerned Families against Drugs.[125] A large rally against drugs and organized crime took place in December 1980, and some ten thousand people signed a petition to the same effect in 1981.[126] At the instigation of the Communist Party, an even larger and televised march of protest, attended by the speaker of the House of Representatives, was organized for October 1982.[127] All local political leaders (with the exception of the neofascist Movimento Sociale Italiano) denounced drug dealing, and resolutions were passed in the city and provincial councils in support of the fight against organized crime.[128] The local paper, *L'Arena di Verona*, rallied behind the efforts to free the city from these criminals, and ran several features openly opposing the presence of the Calabresi in town, often using bigoted language.[129]

Local campaigners were targeted and violence was used against them. On December 8, 1980, the editor of *L'Arena di Verona* was the victim of an attempt on his life.[130] Members of the Association of Concerned Fami-

lies, a priest, and Communist activists were all threatened, affronted, and physically attacked.[131] In contrast to the outcome in Bardonecchia, however, the concerted pressure of civil society on both the police and judiciary yielded tangible results—namely, the removal of officials and politicians who had accepted bribes from the mafia.[132] The attempted penetration of the Partito Social Democratico Italiano was short-lived. Unable to control a significant share of votes in a city much larger than Bardonecchia, the Calabresi were unable to influence the outcome of elections.

By the mid-1980s, the long-term plan of establishing a protection racket and controlling the drug market in Verona had failed. Ierinò, for instance, resumed his activities in Calabria and was eventually arrested in 1995. In the meantime, the drug market continued to flourish according to the rules of fair bargaining and reciprocity described above, and was being run by entrepreneurs beyond suspicion.[133] For example, in February 1988, the police intercepted eighty-five kilos of pure heroin, with a street value of 150 billion liras (or US$128,000,000). The masterminds of the traffic were a former postal worker, a wine producer, and the owner of a livery stable. An in-depth newspaper investigation concluded in 1988:

> Going over the occupations of those arrested for drug trafficking, one often comes across hairdressers, manicurists, small entrepreneurs, pasta makers, bar owners, door-to-door salesmen, individuals with regular jobs. And entire families, spanning from grandfathers to grandchildren. Reportedly, a couple of years ago local entrepreneurs even formed an investment company to collect funds to invest in the heroin traffic, with a 30 percent guaranteed return.[134]

For his part, Gengiva returned to drug trafficking in Verona. In 1988, the police found some eighty kilos of heroin in one of his villas. In 1994, he realized that his luck had run out—a police officer who had helped him throughout had just been arrested for favoring criminals—and flipped, revealing the ins and outs of the local drug market. Courtesy of a local veteran crime correspondent, I met Gengiva in 2005. Excessive drug and alcohol consumption had taken their toll on his health. He was spending most of his days sitting at a central café, just opposite the Arena, not far from Piazza delle Erbe. Gaunt, with darkened teeth and scant hair, he wore dark glasses and was dressed smartly. He willingly recounted some details

of his previous life, but mainly evoked for me the many places that he had visited in the Far East and the many properties that he had acquired. Gengiva had also grown wiser. In heavy Veronese dialect, he said that it is not worthwhile misbehaving in life, as you will pay for it in the end. Frail and ailing, he died in 2008, at age fifty-three.[135]

A combination of factors accounts for the Calabresi failure at transplantation. First, the new immigrants found official employment in the local industries. In the legal markets, extortion was directed at export-oriented firms that were not in direct competition with each other. In contrast to the case of Bardonecchia, employers would not benefit from the creation of a cartel of a few locally based firms to exploit a local market, since they were mainly exporting their goods to diverse markets in northern Europe and the United States. The service offered by the Calabresi turned out to be purely extortionary. Collective action, fostered by an active civil society, thereby became more effective than in Bardonecchia.

One would expect that the expanding drug market in Verona shared key features with the expanding construction market in Bardonecchia, giving rise in both instances to a demand for mafia-type protection. Furthermore, the drug market was illegal, thus there were no legal competitors who could have stepped in. And yet the Calabresi failed to control the market. There are at least three key differences between the two cases. First, in Verona the dealers had emerged from the same local milieu as the consumers, felt a common connection to the radical behavioral revolution of the 1960s, knew each other well, and relied initially on trust but then, as the number of market actors grew, rules of fair bargaining and cooperation in their exchanges. They did not need a third-party enforcer of deals. The makeup of the market actors is markedly different from the poorly educated and unemployed immigrant workers living in squalor in Turin and needing the Calabrese fixer to find employment.

Second, in Verona—as in other instances—the mafia found it impossible to create bottlenecks to channel the supply of drugs into the city.[136] The Calabresi could not offer local dealers access to particularly attractive new sources of supply, as Turkish and Sicilian mafiosi did not enter into exclusive deals with one distributor. In Bardonecchia, by contrast, construction firms arrived from Calabria to offer employment to the immigrant workers.

Third, dealing in drugs is not an activity tied to a fixed place, as in the case of construction. Construction sites provide a focus for violence, as did bars during Prohibition in the United States.[137] The Veronesi were able to elude mafia attempts at controlling their activity, moving distribution to different areas while continuing to sell to customers with whom they had developed long-term relations of cooperation. Local dealers did not need or demand Calabresi protection in the illegal market.

Conclusions

In light of the different outcomes of the `Ndrangheta attempts at transplantation in the two regions, I can draw some general considerations. Table 3.4 summarizes the key factors that the two cases share and those that distinguish them (it also includes columns that will be filled as I cover the other cases in this book).

Supply. Immigration impacted the two locales differently. Verona experienced significant arrivals, like Turin, Rome, and Milan, but in contrast to the case of Turin, immigrants found employment in the expanding local economy. No pocket of poorly housed immigrants far away from their structures of support existed in Verona at this time. A second difference is that immigrants were from the region of Veneto, rather than from the South.

The comparison between Bardonecchia and Verona reveals that in both cases, mafiosi from Calabria were forced to resettle in these regions, but only in Bardonecchia did they succeed in realizing their long-term criminal goals. Moreover, other parts of Piedmont and northern Italy experienced an influx of a similar or higher number of individuals forced to migrate due to the soggiorno policy, yet mafias did not emerge everywhere. A supply of specialized criminals (as distinct from generalized migration) is not enough to produce successful transplantation. As for ex ante motivations to expand, I found no evidence that the incoming mafiosi arrived in order to obtain special resources, invest in the local economy, or colonize a new market. Mafiosi did invest *after* they had been forced to migrate there, but this was not the reason that they migrated.

Local conditions. A high level of interpersonal trust and civic engagement is present in both cities. It is hard to tell conclusively whether trust was

Table 3.4

Factors Facilitating Mafia Transplantation, Bardonecchia and Verona

Factors facilitating mafia transplantation/cases	*Bardonecchia*	*Verona*	*Budapest*	*Rome*	*New York City (1910–30)*	*Rosario (1910–30)*	*Shenzhen/ Guangzhou*
Generalized migration	Yes	No					
Mafiosi migration (willing/unwilling)	Yes (unwilling)	Yes (unwilling)					
Supply of mafiosi	Yes	Yes					
Local conditions							
Level of trust/civic engagement	High	High					
Presence of local illegal protectors	No	No					
Size of locale	Small	Large					
New and/or booming markets*	Yes	Yes					
Demand for mafia services	Yes	No					
Transplantation	Yes	No					

* The markets considered are construction (Bardonecchia and Rosario), drugs (Verona and China), property rights (Budapest and China), oil (Budapest), alcohol (New York City), gambling (New York City and China), and prostitution (China).

depleted as a consequence of the success of the `Ndrangheta in Bardonecchia. Surely, voting in referenda and the European elections (where the constituency covers the entirety of northern Italy) continued to be high, and mobilization took place in order to defend the mafia rather than oppose it.

One might ask if the effectiveness of law enforcement could account for the diverging outcomes. There is no evidence that the police and judiciary were less efficient in Turin Province than in Verona. In both cases, I found instances of occasional corruption within law enforcement. Indeed, in the case of Verona, a corrupt police officer was behind the murder of a colleague who was investigating cargo thefts. The judiciary in both locales put pressure on the mafia, instructing several trials since the 1970s. (As for the existence of local protectors, no homegrown mafia existed in either Bardonecchia or Verona, unlike cases that I will explore later in this book.)

Verona is a significantly bigger city than Bardonecchia. The penetration of politics is, ceteris paribus, easier the smaller the locale. According to his own estimate, Lo Presti controlled five hundred votes in the Piedmontese town. That portfolio of votes was enough to elect a sizable section of the city council. The same five hundred votes would have had a less dramatic impact in Verona, where the Communist Party alone could count on fifteen thousand card-carrying members. The structure of the economy also differed. Verona was an export-oriented economy, and thus we would expect it to be less susceptible to mafia efforts to offer services of cartelization. The Bardonecchia economy experienced an economic boom in a local market, where mafia services aimed at reducing competition would have benefited market incumbents in significant sectors (see the "new and booming market" condition in table 3.4).

In short, a combination of factors account for the outcome in the Piedmontese town—that is, large-scale migration from outside the region combined with illegal employment in a localized booming market of a small town and the presence of a small supply of `Ndranghetisti forced to reside there. The migrant workers accepted illegal employment, and thereby deprived themselves of trade union and more generally state-sponsored protection. If they had acted differently, they would have remained unemployed. Construction firms benefited from the muscle offered by the `Ndrangheta in pushing out competitors. A demand for criminal protection allowed the `Ndrangheta Mazzaferro clan to offer its services and

entrench itself in a faraway territory. Contrary to what some authors might have predicted, the levels of trust and social capital among the population at large did not in themselves prevent transplantation.

A booming illegal market does not always generate a demand for criminal protection. In Verona a mafia failed to take root in a large illegal market, where by definition traders cannot turn to the state in case of disputes. This reflects a combination of three factors. First, traders and consumers knew each other, and had entered into long-term relations of cooperation. A third-party enforcer of deals was not necessary; a customer who defected simply would not be served the next time around. Second, the Calabresi had no particular connection to drug suppliers and could not force local dealers to use their sources. Third, selling drugs is a more mobile type of economic activity than erecting a high-rise building. To the extent that the Calabresi tried to force dealers operating in a given area to hand over a cut to them, the latter would simply have moved elsewhere.

Let me offer a final word on the relationship between the outpost and homeland in Bardonecchia. There is no evidence that the Calabrese bosses were paying a salary to Lo Presti or other mafiosi in Bardonecchia. However, the outpost was not fully independent, as indicated by the fact that it did not have the power to carry out initiation rituals. New recruits had to travel back to the homeland to join the organization. What accounts for this relatively close relationship? The explanation lies in the pre-eminence of money-laundering: Calabrese firms operating in Bardonecchia were a conduit for investing money obtained by the `Ndrangheta in Calabria. Since capital was coming directly from the cosca in Calabria, the group of origin retained a relatively strong connection with the outpost.

FOUR

The Russian Mafia in Rome and Budapest

The Solntsevskaya

Solntsevo is a rundown, working-class district of Moscow, located in the western and southwestern parts of the city. Lying outside the MKAD, Moscow's equivalent of Washington's Beltway or London's M25, the inhabitants of central Moscow would never venture into this depressed zone of the outer city, and many would not even consider it part of the Russian capital.[1] The intrepid traveler who still wants to visit Solntsevo must spend no less than an hour on the orange metro line that leaves from the center of town and then, once they have reached the end of the line, board a city bus. The area used to host a pleasant spread of dachas until the Soviet authorities decided to construct several impersonal high-rise buildings. Possibly in recognition of the fact that skyscrapers obscure the sun, the district was named after the Russian word for sun (*solntse*) when it was officially established in 1938. As in other instances where the object does not fit the moniker, the English rendering of Solntsevo is Sunnyside.

This district has given its name to arguably the mightiest organized crime group to emerge from the wreckage of the Soviet Union, often referred to as the "Solntsevo fraternity" (*Solntsevskaya bratva*). The founder of the fraternity, allegedly, is Sergei Mikhailov, a respected businessperson and patron of the Orthodox Church. Nowadays, you can see pictures of him wearing a tweed jacket and tie, perfectly shaved and groomed, with serious yet quizzing eyes glaring into the camera. He was born into a modest working-class family in February 1958 and raised in Solntsevo. As a young

man, Mikhailov trained to be a maître d'hôtel at the Sovietskaya Hotel in central Moscow while cultivating his other passion: wrestling. In 1984, he was found guilty of insurance fraud (he stole his own motorbike) and spent several months in custody. After receiving a conditional jail sentence, he returned to Solntsevo, and started setting up sports clubs and organizations to which he recruited the tough, unemployed, and aggressive young men living in the district.[2] He joined forces with a former prison inmate, Victor Averin, to create his own gang, and named it after the district. It was only with the spread of the new post-Soviet market freedom that the Solntsevskaya became a significant player in the Russian underworld. In order to fend off a major challenge from Chechen groups, Mikhailov joined forces in 1989 with Sergei Timofeev. Nicknamed "Sil'vestr" after Sylvester Stallone for his muscular build, Timofeev was the leader of the Orekhovskaya gang comprising mainly young sportsmen and wrestlers. By the mid-1990s, the Solntsevo had grown in strength. A Federal Bureau of Investigation (FBI) report in 1995 described it as the most powerful

Sergei Anatol'evich Mikhailov (b. 1958), the founder, allegedly, of the Solntsevskaya bratva in Moscow. He is now a respected businessperson and patron of the Russian Orthodox Church. Photo credit: News Agency Thompson Reuters.

Eurasian organized crime group in the world in terms of wealth, influence, and financial control.[3] The core of its business was protection, or what in Russian is termed "roof" (*krysha*).[4]

Estimates of the size of the brotherhood (possibly exaggerated) range from five to nine thousand members. The group comprises no fewer than ten semiautonomous brigades (*brigady*), which operate under the umbrella name of Solntsevskaya. The Russian police claim that it controls various banks along with about a hundred small and medium-size enterprises. Although little is known of the inner workings of the group, former members have claimed that the organization is governed by a council of twelve individuals, who meet regularly in different parts of the world, often disguising their meetings as festive occasions. The Solntsevskaya maintains a common fund (*obshchak*), which is reinvested into the legal economy through a number of banks that work for the organization, with members

of the organization's council overseeing the investment decisions. At one point in its history, this mafia set foot on the Italian peninsula.

The Solntsevskaya in Italy

Fano is a sleepy beach resort on the Adriatic Sea, in the Italian region of Marche, a few kilometers from the more prestigious cities of Pesaro and Urbino. Among its few historical claims to fame is having been invaded by Cesare Borgia, the man who tried to create a state of his own in central Italy in the late fifteenth century and was the main subject of Niccolò Machiavelli's *The Prince*. The city was bombed heavily during the Second World War by Allied troops, while the Nazis destroyed its historical towers and bridges (the Gothic Line stopped here). The center of the town still retains its pleasant character, with the spread of cafés and hangers-on one would expect on a warm day in a town in this part of the world. Besides tourism and small-scale fishing, family-run firms producing shoes, hosiery, furniture, and home furnishings abound, frequently supplying their products to big European brands. Professors at the local university contend that a special "Marche model" of economic development characterizes the area.

Fano is also where two mobsters, Monya Elson and Yossiff Roizis, had come to live in the 1980s and 1990s. Their arrest in 1995 started a chain of events that led to several investigations in the United States and Italy, revealing the presence of the Solntsevskaya in Rome. Monya Elson, a native of the Jewish ghetto in Chisinau (Kishinev), the capital of Moldova, had migrated to New York City in 1978, claiming Jewish preferential status. When he arrived in the United States, he continued to exploit his Jewish identity. He would dress up as an Orthodox Jew and, with an accomplice, walk into a jewelry shop, asking to see expensive diamond stones. While his accomplice blathered in Yiddish, distracting the shop owner, Elson, sporting a paste-on beard, side curls, long black coat, and black hat, switched the diamonds with cubic zirconia. He soon graduated to more serious crimes, including extortion and murder. His rise in the Russian underworld brought him into contact and then conflict with a prominent Russian drug dealer, and then with Viacheslav Ivan'kov, nicknamed "Yaponchik," the Solntsevskaya boss who had escaped to New York.[5] In order to avoid being murdered, he fled to Fano, where a Ukrainian with a U.S. passport, Yossif Aronovich Roizis, had been living since the mid-

Pallbearers carrying entrepreneur and *vor-v-zakone* Vyacheslav Ivan'kov aka Yaponchik's casket to his grave in the prestigious Vagankovskoye Cemetery, Moscow, on October 13, 2009. Photo credit: RIA Novosti News Agency.

1980s. Roizis had started an import-export business of furniture between Italy, Brooklyn, and Russia. Allegedly, Roizis and Elson had met in Budapest at a gathering of associates of the Solntsevskaya.

The Italian police were keeping an eye on Roizis, who had previously been charged with drug offenses (but never convicted) and was receiving money from exotic locations, including New York and Russia, into his account at the Banca Popolare dell'Adriatico di Pesaro, not quite a renowned investment establishment. The U.S. institution at the center of the unexplained money transfers to Roizis was the Bank of New York, eventually the subject of an investigation that made headlines around the world in the late 1990s when two Russian émigrés working at the bank—one was a vice president— illegally moved more than US$7 billion via hundreds of wires. Nine people were eventually prosecuted.[6] At the same time, Elson was wanted in New York for murder and, at the prompting of the FBI, the

Sharply dressed mourners entering the church for Ivankov's funeral. Photo credit: RIA Novosti News Agency.

Italian police closed in. In the early hours of March 8, 1995, they stormed through the door of Roizis's apartment and arrested the two men.

Shortly after his arrest, Roizis began to cooperate with the authorities. In a startling development, he informed them that, in a small seaside resort just outside Rome, a prominent member of the governing body of the Solntsevskaya, *Ivan Yakovlev,* had been in residence since October 1994 (some documents relating Yakovlev to Elson were found in Roizis's apartment). A special unit of the Italian police was quickly assembled and started an undercover investigation of this cell of the Solntsevskaya in Rome, lasting three years (1995–97) and resulting in a three-volume report that was to be used during the trial. The document contains hundreds of pages of transcripts of telephone conversations between Italian and Russian criminals, checks on money transfers, international financial operations involving banks in London, Budapest, Vienna, New York, and Rome, property speculations in Italy, and individual files on some forty-five people. For each individual, the file contains information concerning

their various aliases, passport details, residencies, travels, ownership of real estate, and information collected from other police forces. These people include members of parliament in both Italy and Russia, political leaders in Russia such as a governor, lawyers, executives of various banks in Rome, Moscow, and Saint Petersburg, a general of the Italian army, the former deputy head of one of Italy's oil and gas concerns, former KGB officers, a colonel in the North Korean army, the Russian government's undersecretary of state for energy, police officers, and embassy staff in Rome. The companies involved include car and computer manufacturers as well as Russian oil companies. This source paints an elaborate picture of the operations and objectives of the group.

The end point of this investigation was October 1996, a few weeks after the murder narrated in the introduction of this book, when Sergeev, a business associate of Yakovlev, also operating in Rome, was gunned down in Moscow. The Italian police wrapped up the investigation and sent the results to the prosecutor. The main players were subsequently arrested. It transpired at the trial that the police did not have the correct authorization to collect evidence, especially wiretapping evidence. This technicality prevented the prosecutors from using the material that had been collected, and the court case collapsed.[7] The Russian protagonists of this story were nevertheless expelled from Italy and later resurfaced in Moscow. Thus the reader must remember that the people discussed here have not been convicted of any crime in Italy. In order to protect their identity, all names have been changed. Some place names have also been changed.

As for chapter 3, I start by reviewing whether Rome was ever a destination for Russian immigrants. During the 1970s, the Italian capital was a transit zone for Russians of Jewish origin on their way to the United States.[8] At this late juncture in the Cold War the Soviet leader, Leonid Brezhnev, sought to improve links with the West, in particular the United States. In a move bitterly opposed by U.S. president Richard Nixon and U.S. secretary of state Henry Kissinger, the U.S. Democratic senator Henry Jackson succeeded in linking the status of "most-favored nation" to the issue of Jewish immigration. In 1975, U.S. president Gerald Ford signed the Jackson-Vanik Amendment into law. Brezhnev obliged the senator and started to allow a number of Russian Jews to emigrate.[9] In a hideous twist,

the Soviet government made sure that its worst criminals were among the "Jews" allowed out of the country. The route that the migrants took was rather complex. Normally, they would go to Vienna and then be moved to other distribution centers. One such transit camp was located in Ladispoli, a town thirty kilometers from Rome on the Via Aurelia, the highway built originally in Roman times that links the Italian capital to Pisa, now known also as Strada Statale 1. The camp was run by the Lubavitch movement and the American Jewish Joint Distribution Committee. While in Rome, the Russians applied for a visa to the United States.

In the late 1970s and 1980s, there were several thousand Russians in the Ladispoli camp at any one time.[10] Exasperated by the long delays, they organized protests directed at the U.S. embassy. They also ventured out of the camp and engaged in small commerce. Once a week, the camp residents would go to Rome, squeezing on to the local buses and converging on Vittorio Square in the Esquilino neighborhood, not far from the railway station, and on Sundays they would go to Porta Portese. Throughout the 1980s, the famous Porta Portese flea market had a so-called Russian area (*la zona dei Russi*), where refugees would sell objects smuggled out of the Soviet Union. The area has since been taken over by Chinese sellers.

Monya Elson was one of those Russian Jews who transited through Ladispoli in 1978, after a brief spell in Vienna, equipped with a visa for entry into Israel. He was in the town for three months where—in his free time—he pick-pocketed the locals in order to buy designer clothes for his wife and daughters.[11] A newspaper investigation dated 1977 confirms that Italians were exasperated by the petty crime undertaken by some of the refugees and records instances of racist slurs directed at them.[12] Camps such as the one in Ladispoli proved to be excellent recruiting grounds and networking centers, where gangsters on their way to Brighton Beach met gangsters bound for Antwerp, Brussels, or London. Once they arrived at their new destination, they had a ready-made set of friends to whom they could turn for advice as well as an international network.[13] By 1991, the United States stopped awarding the status of refugee to Russian Jews, who could now apply to move to the United States directly from Moscow. This type of migration left virtually no trace in Rome, but the physical proximity of so many criminals had far-reaching consequences, never recognized at the time.[14]

The post–Cold War phase of Russian migration to Rome involved few individuals. Immigrants residing in the city in 1997 numbered no more than 800 in a city of more than 2.5 million people. The following years saw a similarly low number of arrivals to the Eternal City. For instance, in 2005 no more than 1,000 Russians were registered in Rome, fewer than the numbers of some 40 other nationalities, suggesting a rather stable trend. What they had in common with the earlier migration is that they, along with other East European immigrants, chose to live in the small towns off the Via Aurelia, where housing is cheap. In fact, when Yakovlev arrived in Italy he moved to *Margherita Laziale* (population just over 14,000, according to official 1995 data), a town not far from Ladispoli, with few Russian residents.[15] He rented a large villa tucked away on a side street, and lived there with his wife, two sons, and a rottweiler.

Yakovlev was a senior figure in the Solntsevskaya, regularly invited to attend the Supreme Council of the organization, such as the one that took place in November 1993 in Miami with the other eleven bosses. Born in the Russian Far East and a guest of Soviet prisons in the 1970s, Yakovlev was running a crew attached to this crime group in Moscow. Most crucially, he had been a close ally of Timofeev, who was gunned down in September 1994 together with one of his lieutenants (a man called Kruglov).[16] Indeed, one of the most trusted associates of Yakovlev in Rome had worked as Timofeev's driver for several years. A war was clearly under way among the high echelons of the organization. A well-built man with short graying hair and blue sullen eyes glaring at the camera for his passport photo, Yakovlev had a choice: stay in Moscow and fight, or send a strong signal of neutrality toward the winning faction. As is often the case in the criminal world, the decision to move away could be such a signal. Remarkably, Yakovlev and his entire crew surfaced in Rome a little more than a month after the death of Sil'vestr. According to conversations intercepted while already in Italy, Sil'vestr's supporters were afraid to meet the same fate as their old leader. *Fedya Sidelnikov*, speaking from Moscow where he planned to attend the funeral of a man gunned down in the war, tells Yakovlev, "They will kill all Seriozha's people." "For instance, they have just killed [XXX], who had done nothing and nobody knows why he ended up dead. . . . Even the police says that if all the followers of Sil'vestr (the *Silvestrovskie*) die, there will be peace."[17] In a rare display of criminal bonding,

Yakovlev's interlocutor, against the advice of the boss, states that he wants to attend XXX's funeral, even if it might be dangerous: "I have to go, he was a true friend and a cell mate."[18] In a subsequent conversation, the boss discusses a newspaper report claiming that he "had escaped from [the Far East] and was hiding in Italy." He wonders why such a piece of news had appeared: "Is this a message? Do they still want to kill me?" As for his standing in the Moscow underworld, the wife of the boss tells her son: "I think Ivan is worth nothing nowadays in Moscow." Thus, mafia internal squabbles are at the origins of Yakovlev's presence in Rome.[19]

Although Italy did not have a significant Russian population, it did have the largest Communist Party in Europe (though the party was never in government). Some of the party faithful had married Soviet citizens and spoke some Russian. Crucially, one of Yakovlev's future Italian accomplices had worked for several years at the party headquarters in Rome and had a Russian wife.[20] This is a background factor that eventually facilitated Yakovlev's work in Rome. A view that emerges among the group members is that Italy was an easy country to move to. "Here [in Italy] you can do whatever you want, it is not Europe," quips a longtime collaborator of the boss.[21]

Yakovlev already knew at least two Russians in Italy. Boris Sergeev, who was to become central to Yakovlev's operation in Italy, was a businessperson with contacts with the Solntsevskaya who dealt in oil products originating in Chechnya and had been involved in some money-laundering operations while living in Vienna. He moved near to another town on the Lazio seaside in the early 1990s and set up a number of companies located at an address in Rome where Yakovlev's firms would come to be registered. As narrated in the introduction, he was ultimately murdered in Moscow in 1996. Another collaborator of Yakovlev's, *Bogdanovich*, had relocated to Italy before Yakovlev, in 1991, and lived in Ladispoli. A small-time crook, Bogdanovich spoke Italian and would become a trusted gofer of the boss.[22]

Among the Russians who moved to Italy with Yakovlev were *Sidelnikov* and his wife. Yakovlev's closest and most trusted associate, he had been a bodyguard of the Solntsevskaya founder and first leader. His wife, *Raisa Artamova*, was managing the common fund ("the pot") in Italy for the group.[23] Yakovlev's crew, which remained based in Moscow, included *Rostovtsev*, a former KGB officer who was fluent in Italian and had close contacts with the Italian embassy in Moscow as well as with the political elite

in Russia, and had been collaborating with Yakovlev for eight years; he was involved in arranging visas and passports as well as trips to Moscow by Italian contacts of Yakovlev. *Vlasik*, also based in Russia, was a businessperson who had worked for Yakovlev as the "clean face" of the organization and was a financial wizard. Eventually he was killed.[24]

A key local helper was *Giorgio Facchini*, a former low-level official at the Rome headquarters of the Italian Communist Party who was married to a Russian, *Alina Kamenskaya*. At the time of his employment in the Communist Party bureaucracy, Facchini organized trips and cultural exchanges between Italy and the USSR. After being dismissed by the party in the mid-1980s, he continued to be involved in tourism and cultural exchanges throughout the 1990s. Another critical player in Yakovlev's Italian crew was *Giovanni Pepe*, Facchini's assistant. Finally, mention should be made of *Riccardo Brenno*, former manager of a sizeable Italian company. He emerged as the most high-profile Italian involved with the group—a man whose connections extended to the highest echelons of the business and political elite of the country. Table A4.1 in the appendix to this chapter summarizes some characteristics of the main players.[25]

Was there a sudden expansion of either legal or illegal markets at this point in Margherita Laziale or Rome more generally, like in Bardonecchia and Verona? I found no evidence of this. The construction boom had taken place in the 1950s and 1960s in the seaside town, and no new significant construction was under way in the 1990s. As for illegal markets in Rome, prostitution and drug trafficking were dominated by, respectively, Nigerians and Brazilians, and local Italian gangs.[26]

What, then, did Yakovlev do in Margherita Laziale? In order to answer this question, I embarked on a systematic content analysis of all the segments of conversations intercepted by the police (a "segment of conversation" is a fragment of a conversation that has a meaningful beginning and end). After coding each segment, I decided to divide the topics of conversation into four main categories: investments in the legal economy, the acquisition of resources, protection activities, and maintaining internal order. "Investments in the economy" refer to attempts to reinvest the proceeds originating from the Solntsevskaya core activity in Russia in a variety of other businesses. "Resource acquisition" refers to the acquisition of specific input resources to run the group, such as information, equipment,

TABLE 4.1
Distribution of Tasks Discussed in Segments of Conversations

	Tasks by segment of conversations	
Tasks	*Frequency*	*Percent*
Investments in the economy (E)	620	52.2
Resource acquisition (RA)	262	22.1
Maintaining internal order (MIO)	235	19.8
Protection activities (PA)	67	5.6
Total	1,184	99.7
Other	3	0.3
Total	1,187	100.0

or labor. "Protection activities" refer to efforts to control markets and offer criminal protection. Finally, "maintaining internal order" refers to the activities of monitoring, intimidation, and punishment of both local fixers and Russian members.

Table 4.1 presents the data. Slightly over half of the segments of the conversations concern investments in the economy. Resource acquisition and maintaining internal order are the next two most important tasks discussed, while discussions of protection activities come last.

Let's now turn to what appears to be the main task undertaken by the group in Rome: investing money in the legal economy. A significant amount of time, scheming, and traveling was devoted to identifying investment opportunities, mainly in Italy, and exporting goods to Russia. The source of the money to be used in these ventures was clearly Russia. The most basic money laundering technique was to set up a vast network of individuals traveling from Russia to Italy carrying cash. Yakovlev and his associates would take the money, buy the products, and send them back. The Italian police point out that the system may appear rudimentary and of little consequence, but in fact it is used by various Russian criminal organizations, and may involve thousands of people and the transfer of hundreds of millions of dollars.[27] A more sophisticated system to introduce money into the Italian economy was through bank transfers to various companies—all

based at the same address in Rome—that had been set up by Yakovlev's associates in Italy. Money laundering occurred through Russian and, outside Russia, mainly Austrian banks connected with the Solntsevskaya.[28]

The money coming from Russia was invested in a vast array of import-export ventures. The Russian actors in this story, in particular Yakovlev, contacted hundreds of Italian companies and businesspeople, offering to buy their products. The police file records no fewer than a hundred such deals. The deals ranged from purchasing sparkling wine to buying frozen meat, wood, furniture, wheat, steel, pharmaceutical products, Olivetti computers, food products (including fish), Armani suits, works of art, gold, helicopters, and antennas. The Russians had plans to buy a fishery in Tuscany—a scheme that failed. From Italy they also negotiated the establishment of a gambling boat in Korea, another failed venture, and the purchase of goods in Venezuela. The group controlled a small arms shop in Moscow and arranged for several shipments of firearms to be sold there. The Russians seemed to be indiscriminate in their import activities. Normally, they would make an appointment with the firm in question, often pay in cash, and arrange for the delivery of the goods to Russia.

The highest-profile Italian businessperson who worked with Yakovlev was Brenno. The boss said about him:

> Brenno is the former deputy head of [an important Italian company]. He had some problems with the law, but now he is a free man. . . . He was sentenced to four years, but he lives at home, he works, he is all right. Whatever happens, he can fix everything with a phone call in every part of the world. I know him very well, and he has many friends, all Andreotti people.

When he traveled to Moscow to negotiate import-export deals for the group, Brenno was given the royal treatment. The boss ordered a Russian Duma member to be Brenno's chaperone in the Russian capital: "[He] is coming Sunday. Go get him at the airport, take good care of him, take him to the best restaurants, champagne, obviously. Give him an armed escort and a 'cow' for the night. You will see, he is a very serious man. [Prime Minister Viktor S.] Chernomyrdin was keeping his head down when they met."[29]

Some of the transactions were wholly illegal in nature. One significant activity was the illegal export of oil from Russia to various countries, including Italy.[30] The group was also involved in a scam for which the Russians are well known: the attempt to sell radioactive material, especially so-called red mercury, on the international black market. Such a product did not exist, at least in the form described to the prospective buyers. A member of the North Korean army fell for the trick, and several conversations refer to this sale.[31]

The common feature of these ventures was that the money used to pay Italian suppliers came from criminal activities outside Italy, in breach of Italian law. From several conversations it transpires that the money being imported illegally into Italy, and more generally at the disposal of Yakovlev for investment in the legal economy, was the fruit not only of the criminal activities of Yakovlev's crew in Moscow. For instance, in one conversation Yakovlev referred to other Russian criminal groups as having contributed money to the rather significant investment in a fishery. Similarly, it emerged that the money entrusted to a Russian businessperson close to the group, Vlasik, to invest in Korea, belonged to at least three different groups: "In this thing [business venture], there is money invested belonging to people from Magadan to Moscow. We must put Vlasik immediately on trial."[32]

In order to carry out their business deals, the Russians, sometimes with their Italian helpers, traveled extensively through northern and central Italy and stayed in hotels in Lombardy, Veneto, Marche, Piedmont, Tuscany, and Emilia Romagna. They also went to Switzerland several times. Among these trips, some were to Pesaro and the Fano area to negotiate the purchase of furniture using some of the contacts of Elson and Roizis.

While Yakovlev was investing money originating in several groups in Russia, these gangs' representatives traveled regularly to Italy to inspect their investments, to the point that Yakovlev decided to rent a house for his guests. Visitors included members of the Izmailovo and the Kurgan mafia groups along with leaders of other Russian mobs. When they came, Yakovlev made sure they were provided with prostitutes, often Russians. One of his helpers said on the phone, "I am on my way to Venice to bring prostitutes to our guests, because our friends cannot stay without hookers a single day!" Another pastime was attending sporting events, such as the

final of the Champions League between Juventus and Ajax in May 1996, or a Davis Cup match between Russia and Italy, also in 1996. On that occasion, the group was partying with one of the Russian players, allegedly providing him with illegal substances.

Yakovlev devoted almost 50 percent of his conversations to investments in the economy, and Sergeev, Yakovlev's business partner who was later killed, devoted 67 percent of his conversations to this task. In contrast, Sidelnikov, Yakovlev's enforcer, hardly spoke about this item. Sixty-two and 97 percent of the time Pepe, the Italian fixer, and Brenno, respectively, dealt with investments in the economy. Another indicator of whether the activity was directed at Italy or Russia is the country of origin and country of destination of the call. Seventy-five percent of the calls originated in Italy, while Russia was the country of origin for 16 percent of the calls. Italy received 65.5 percent of the calls, and Russia got 23.5 percent. This suggests that most of the talking was done within Italy, with some significant conversations made to and from Russia, since goods were eventually going to reach that country.

These data point to a rudimentary division of labor within the group, with some actors, such as Brenno, almost exclusively dedicated to helping the group fulfill the aim of finding investment opportunities, while others, as we will see below, were more evenly spread across the tasks they discussed. A third subgroup focused exclusively on other tasks.

To what extent were the Russians in Rome to acquire input resources for their operations in Russia? Some authors discussed in chapter 2 suggested that one effect of globalization for legitimate firms is to open outposts abroad in order to acquire resources that are not easily movable, such as minerals, or labor. Intangibles such as knowledge, innovation capabilities, and management or organizational skills are also among the resources being sought. For illegal firms, resource seeking could refer to intelligence and information, labor, and technical equipment like arms, hideaways, and spying technology. Did Yakovlev go to Rome to acquire resources to use for his Russian operations? Once I had read the content of the conversations relating to this task, I discovered that the actors were referring to resources that were instrumental in running the crew *in Italy* rather than input resources for the group back in Russia. The group spent a lot of time

trying to open bank accounts, and to obtain Italian citizenship through fictitious marriages, forged drivers' licenses, and guns. In order to achieve these aims, they engaged in the corruption of local officials.[33]

At least nine fictitious marriages involved key members of the group. The local fixers for the group would find Italians willing to marry Russian nationals for a sum varying between US$15,000 and US$20,000. For instance, both Yakovlev and his wife married Italian citizens, although they continued to live together.[34] The few guns that the group used were smuggled into Italy by some of the female members. These guns were for their own personal use rather than for sale on the Italian market, and came from Russia; they were not a resource acquired in Italy for the Russian operation.

Overall, 22 percent of all conversation segments were devoted to resource acquisition. The Italian fixers of the group and Bogdanovich, the close collaborator of Yakovlev who spoke Italian and had been in Margherita Laziale since 1990, were those mostly involved in conversations about resource acquisitions, well above the overall average (with Bogdanovich at 55 percent, Facchini at 52 percent, Facchini's Russian-speaking wife at 45 percent, and Pepe at 23 percent). The keeper of the common fund spoke mainly about maintaining internal order (62 percent), but her second most important task was resource acquisition (31 percent). The boss was well below the average, with 11.2 percent, while Sergeev was near the average, with 19 percent. Some 80 percent of conversations that had resource acquisition as their main topic were made *within* Italy, and only 16 percent between Italy and Russia.

The key aspect of resource acquisition is that resources were used to ensure the group functioned properly in Italy instead of being invested in operations in Russia. This is contrary to the view that mafias open outposts abroad in order to take advantage of attractive labor or raw material markets. The data show that a rudimentary division of labor emerged, with the Italian fixers and a Russian go-between involved in acquiring resources, while the "enforcers" and "businesspeople" scored quite low or very low on this measure. As one would expect, most of the conversations were within Italy because the resources to be acquired were in Italy.

Since protection racketeering is the Solntsevskaya's core business, we should expect the group to engage in such activity if its motivation for migrating to Italy were to expand its core activity (the market-seeking motivation dis-

1034

cussed in chapter 2, pp. 20–21). To the contrary, none of the recorded conversations referred to protection activities in Italy. They instead offered a fascinating insight into racketeering in Moscow and, to a lesser extent, other cities such as Prague. The calls were frequently prompted by a delay in payments or interference from other racketeers. For instance, the boss threatened the owner of a shop in Moscow who was late with a payment of US$25,000. In another case, a Moscow wholesale dealer of food products—under Yakovlev's protection (to whom he paid US$200,000 a month)—was being harassed by some officials who had requested a million rubles. Clearly his protection was far from tightly sealed, and naturally the boss was worried by this attempt to harass one of his protégés. In a similar situation, in July 1996, the boss received a call from Prague; the caller explained that he had been harassed by certain "gypsies" who were demanding protection money from him. The man in Prague recounted that when asked who his protector (*vor-v-zakone*) was, he named Yakovlev. Tellingly, the Czech gypsies replied that such a protector should be there to look after his associate rather than remaining several thousand kilometers away. (As Machiavelli taught us, the prince has to reside among his people.) The boss at the other end of the telephone line was duly cross.[35]

No conversation referred to any attempt to create a protection racket in Italy. The only information recorded by the police on this dimension was a criminal charge brought against Bogdanovich in 1991, three years before the arrival of Yakovlev in Rome. Bogdanovich was briefly arrested for attempting to extort money from two other individuals from the former Soviet Union. The case collapsed in court, and Bogdanovich was acquitted.

The two actors who were most involved in discussing protection activities were Yakovlev (14 percent) and Sidelnikov (22 percent), well above the 6 percent average for the group. Also, most of the calls were between Italy and Russia (83 percent), and only one call was within Italy, suggesting that the activity in question was located outside Italy, and the Russians in Rome needed to call home to manage this aspect of their criminal activities.

Any crime boss has the task of maintaining internal order, ensuring that his underlings do not disobey or report him to the authorities, and more generally that members of his crew do not cheat. The mere threat of violence should be sufficient to ensure compliance. This was the case with *Marco Ferrari*, a Roman petty criminal, who had "misbehaved" and even

threatened to report Yakovlev to the police unless the boss repaid some money he owed him. The reaction of the Russian criminal and his deputy was swift: they scared him to the point that Ferrari recanted and apologized profusely. Ferrari was then eased out of the organization rather than physically punished, possibly because such punishment would have attracted the attention of the Italian police.[36]

One would imagine that the ability of such a powerful organization as the Solntsevskaya to inspire fear and obtain compliance would be sufficient to ensure obedience from its accomplices. Yet mafia-type criminal organizations might have to use more violence than one would expect. Vlasik, a Russian in his mid-forties with a mild stutter, had been entrusted by Yakovlev with a considerable sum to invest in a deal in Korea. It transpired that the money originated in several Russian groups, not just from Yakovlev's own crew.[37] Although Vlasik must have known the risk that he was taking, he embezzled the funds and tried to disappear. "It is a bloody pain to think that among us only Vlasik is able to carry out financial operations," notes the boss. "And that is why he takes advantage of us—retorts his interlocutor,—but I will show him what a badly beaten up guy looks like and make him understand that he will be next."[38] Vlasik was eventually tracked down in Korea and escorted back to Italy, where he was held in captivity and tortured for some weeks. Later he was put on a plane to Moscow, accompanied by a "jailer." While in Russia, Vlasik managed to escape and gave himself up to the police. The punishment was only delayed; he was later killed.[39]

Twenty percent of the conversations dealt with internal order. The upper echelon of the group had more conversations about this topic than average: Yakovlev had a value of 28 percent, while Yakovlev's two enforcers had values of around 45 percent (with Sidelnikov at 44 percent, and Vladimir Sidorov at 45 percent). Most remarkably, it transpires that women were directly involved in discussing issues related to maintaining internal order. For instance, Yakovlev's wife, Marina (with a value of 53.3 percent), directly threatened Ferrari, whose wife was Russian, for disobeying Yakovlev ("we will chop your head off"). Ferrari's wife calls back, begging for forgiveness, admitting that they had been wrong and one needs to pay respect to the boss, "because he has been in prison for 15 years." Alina Kamenskaya (38 percent), the wife of Italian fixer Facchini, on several occasions advocated appropriate punishments for those who had misbehaved

toward Yakovlev.[40] Artamova, the keeper of the common fund, engaged in many conversations related to maintaining internal order (62 percent). The women around Sergeev, who would be killed in 1996, also spent a considerable amount of time talking about internal order. Kostina, his "official" Italian wife who worked as his interpreter and overall helper in Italy, had a value of 58 percent, while Sergeev's real wife, Nadia, with whom he lived, had a value of 33.3 percent.

On the whole, severe acts of violence were rarely carried out in Italy, and murders were committed only in Russia. This suggests that the group did not want to attract the attention of the police in Italy.

Figure 4.5 presents the tasks discussed in all the conversations over almost a year—from January 1996, when the Italian police started systematic phone intercepts, to October 1996, when Sergeev was killed. The only correlation that is statistically significant is between resource acquisition and investments in the economy ($r = 0.758$, $p = 0.011$, $N = 10$). That is, discussions of investment opportunities in the economy covary with discussions of acquisition of resources, suggesting a relation between the two sets of tasks. This further confirms that discussions on resource acquisition were closely connected to those about money laundering and illegal investments in the Italian economy. In contrast, references to protection racketeering do not seem to be cyclic and are unrelated to other tasks. As mentioned above, racketeering was carried out in Russia by members of the group—a task unrelated to their presence in Italy.

As in other cases discussed in this book, a prominent mafioso reached a faraway land as the product of an unintended consequence; a war in Moscow pushed Yakovlev to Rome. He withdrew from the conflict at the price of losing some control over his racket at home. While in the Italian capital, he maintained contacts with the new leadership and helped them invest some of their money in the West (recall that in the mid-1990s the Russian banking system was under severe strain, the ruble was not a safe currency, and Russia defaulted on international loans in August 1998).[41] Thus, the activities of the Italian outpost were squarely in the realm of investment seeking although one cannot state that this was the motivation to open the outpost.

The organization was not looking for any particular resource to use in running its core business in Russia of protection racketeering or even

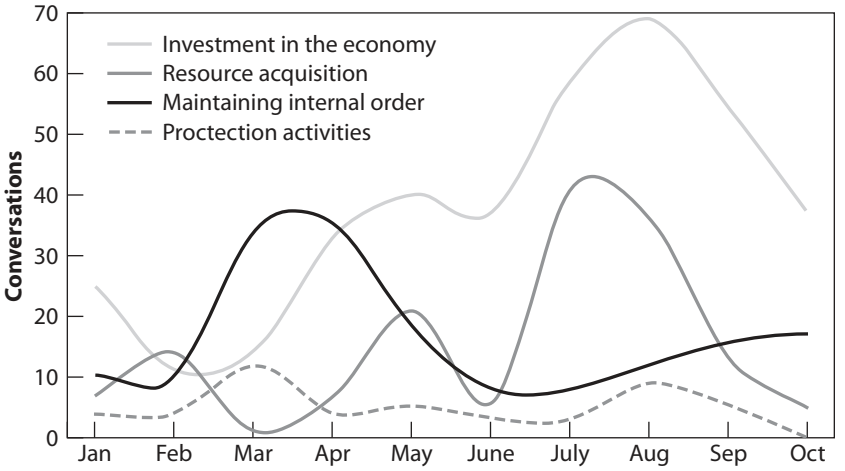

FIGURE 4.1 Tasks discussed in conversations, January to October 1996

related businesses, such as prostitution or drug trafficking. Nor was Italy a place where a firm-owned subsidiary could act as a conduit for valuable local knowledge to be used in Russia. Again, this marks a departure from the behavior of legitimate firms taking advantage of globalization.

The organization was not planning to enter the market of any rival organization. In one of his conversations, the boss made it clear that the Italian capital had been selected because it harbored no major criminal organizations, such as the Sicilian mafia.[42] Indeed, if market expansion had been a motivation, violence would have ensued, while the Italian outpost was careful to avoid drawing any attention to itself. The group had been able to evade the notice of the police in Rome. Only a tip-off from the Russian mobster arrested in Fano alerted the authorities to the existence of such an entity in Rome.[43]

Yakovlev would at the same time invest money originating from several Russian groups in the legal economy while continuing to run his protection rackets in Russia. This explains why a proportion of the conversations of the Russians in Italy involved matters related to the racketeering activities of Yakovlev back in Russia.

Clear signs of the internal division of labor emerge. Besides the boss, the only official role in the group is that of Artamova, who controlled the group's budget. But an informal structure becomes evident from the patterns of the

conversations. Some of the Russian enforcers who had joined Yakovlev in Italy were mainly involved in (talking about) enforcing internal order within the group and protection racketeering back home. Women were highly involved in conversations over internal matters, including punishment. As one would expect, Italians with a local knowledge of Rome mainly helped in acquiring resources for the group to operate in Italy. Italians also were relatively more concerned with investments in the economy, as the group was dealing with Italian entrepreneurs. The boss was heavily involved in most tasks (with the exception of resource acquisition), but especially in overseeing investment decisions and reporting back to Russia. In a separate paper, I explore further issues related to the internal division of labor through the use of correspondence and social network analyses.[44]

How did Yakovlev's Italian adventure end? The entire crew, including guests from Moscow, was celebrating the birthday of the boss in a posh resort in early 1997. They had booked an entire floor of the most expensive hotel in town. The guests had arrived with several thousand U.S. dollars each, as birthday gifts for the boss. The only object of value to be put in the hotel's safe, however, was a precious Russian Orthodox bible. Yakovlev kept his boys (*rebyata*) on a short leash; he made them go to bed at 6:00 p.m. but forced them to get up at 3:00 a.m. to engage in endless discussions, while his crew was half asleep and half drunk. It is possible that Yakovlev was about to perform an initiation ritual for a new member, since a black cloth with verses in old Russian engraved in gold and scrolls containing Russian Orthodox prayers were later found in his rooms.

Several officers disguised as waiters and hotel staff observed the group for a few days. When the order arrived, in the early hours of the morning, they made the arrests. The entire operation took no longer than five minutes, without disrupting the wealthy clientele's sleep. After his arrest, the boss made a point of paying the bill in full, in cash. The next day his photos were all over the papers. Italian readers could see a man with cropped white hair, a tattoo in the hollow of his right hand, waving his fingers at the cameras, his eyes screaming with rage, furious yet nonplussed by the arrest.

The story presented here involves the most powerful mafia group operating in Russia at the time, and implicates a vast section of the Italian political and administrative class. And yet the group failed to take root

in the country where it had chosen to relocate. After the arrest of the key players and their repatriation to Russia, the police and prosecutors told me that the group had left no traces in Rome.[45] Organized crime is not always successfully transplanted in a different territory. In some cases, it is enough to eliminate a few central actors to disband a network. As the group did not offer any particular service to the local criminal markets, no demand for it existed and no other group replaced it. The failure of transplantation does not mean that the crime group is weak in its territory of origin, though. After being rebuffed in Rome, Yakovlev and his crew returned home and continued their activities there. In the home country, this mafia group still extracts protection money and governs a territory.

The Solntsevskaya in Hungary

The story of the Solntsevskaya penetration of Hungarian society revolves around a Ukrainian-born businessman, Semën Yudkovich Mogilevich, who moved to Budapest in 1991 and was arrested in 2008. Mogilevich, who is bald, weighs some three hundred pounds, and is a chain smoker ("Davidov's cigarettes"), holds a degree in economics from Lvov University. He came to international attention when the FBI accused him of involvement in the Bank of New York scandal mentioned previously (p. 70). He had solid connections with the Solntsevskaya's leaders, Mikhailov and Averin, who had both chosen Budapest as the site of one of their residences in Eastern Europe.[46] Were they part of a larger migration of ordinary Russians—and possibly Ukrainians—to Hungary? Between 1990 and 2005, Russian and Ukrainian nationals never reach 1 percent of the total population. Romanians, Serbians, Germans, and Polish nationals are all more numerous, and significantly so (See table A4.2 in the appendix to this chapter).

On the other hand, the police claim that specialized criminals from Russia were in quite good number following the early 1990s. It appears that the initial presence of a 'supply' of Russian criminals in Hungary was due to an accident of history, namely the vast contingent of Red Army soldiers and security officials stationed in the country. Reportedly, more than 1,000 Russians deserted the Red Army just before they were due to return home in 1991, and many of them went on to set up crime groups. In 1998 the police estimated that "200 criminal gangs, mostly Russian controlled, have established themselves in the country, with a couple of

dozen dominating."[47] According to U.S. and Hungarian officials, many of the criminal bosses had a background in the KGB and the Soviet army.[48]

Contrary to the situation in Rome, at the time of the Solntsevskaya attempts to move into Budapest, the country as a whole was undergoing a transition from a state-planned to a market economy. Hungary had begun restructuring state-owned enterprises before the end of the Communist regime, and by 1985 two-thirds of all state enterprises had been granted self-governance through enterprise councils. By the end of the 1990s, between 80 and 85 percent of the gross domestic product (GDP) was privately owned. The emerging market economy could also rely on laws and regulations that had been in place even during the Communist regime. A commercial code, never formally repealed during the Communist period, had existed since before the Second World War, in turn based on a law passed in 1875. Moreover, reforms that began as early as 1968 and continued, with interruptions, up to 1988 had reduced the role of the state in the economy and given greater autonomy to enterprises. The Act on Business Organizations of 1988 consolidated previously fragmented corporate law and was amended throughout the 1990s to reflect the changing commercial environment.[49]

The transition to the market led to a significant expansion of the economy. The value of the GDP at 2006 prices went from 2,498.3 billion Hungarian forints in 1991 to 23,795.3 billion forints in 2006. The real wage index (1990 = 100.0) grew from 93 in 1991 to 121.7 in 2007.[50]

Still, the Hungarian transition has not been entirely free of problems. Hungary underwent what scholars have labeled "spontaneous (or informal) privatization," led by managers who were able to acquire stakes in state companies in the absence of legislation that fully protected shareholders or clearly defined property rights. László Urbán, an economist, writes that "informal privatization ranges on a scale from outright theft of potentially useful physical assets of a SOE [state-owned enterprise] through different forms of simple corruption to more sophisticated appropriation of assets through the creation of new corporations."[51]

Notwithstanding the relatively probusiness atmosphere of Hungary during its socialist period, a fully developed legal framework was not yet in place by the time the transition got under way. Writing in the late 1990s, György Csáki and Gábor Karsai point out that

> there are several legal and institutional problems that hinder the effective operation of Hungarian enterprises. Certain laws and modifications (for example the reform of the real estate law and the contract law) are still lacking. Conceptually, the majority of existing economic regulations is not sufficiently developed and includes a number of internal contradictions as well as contradictions with other laws.[52]

The state apparatus proved slow and ineffective in servicing the new market players. The real estate register was inaccurate and outdated, and the process of company registration was slow. In the early 1990s, the poorly computerized Hungarian real estate registers was inadequate to deal with the demands for the production and modification of information. Throughout the 1990s' boom in company creation, company registration faced the same challenge. Thus, Csáki and Karsai observe, "There is no up-to-date company data with respect to the assets and financial position of market players. The problems caused by overloading, as well as by the widening circle of corruption and other abuses, only make matters worse."[53]

Such inefficiencies decreased public confidence in the legal system, and economic crimes increased. In the 1990s tax avoidance became widespread, and the breaching of contracts, value-added tax fraud, and false bankruptcy petitions were considered minor transgressions.[54] According to a survey conducted in 1998, some 80 percent of the respondents agreed that "in order to get by, it was necessary to break the rules."[55] As crime against property increased significantly during the transition, the criminal justice system proved to be, in the view of Csáki and Karsai, "almost entirely powerless in the face of the spread of economic criminality," and the capacity of the civil law courts was "not satisfactory."[56]

Court proceedings were "lengthy," and delays in the pronouncements of verdicts were "frequent," making the execution of verdicts "often impossible."[57] The introduction in 1994 of an act meant to speed up the execution of court orders did not change matters much; the only major change was the increased costs of and payments to the private executors.[58] Police corruption has also been described as "pervasive."[59] Not surprisingly, the level of the informal economy was vast, at approximately 31 percent of GDP in 1994.[60]

Has the imperfect transition to the market economy generated a demand for criminal protection? Géza Katona, former chief of the Investigation

Department of the National Police, links the initial shortcomings of the Hungarian transition to a market economy to the rise in the demand for mafia-related activities, in a lucid analysis that is worth quoting at length:

> A new arena has been created by organized crime during the 1990s: the so-called violence industry. It is quite normal for a newly established market economy to face serious capital shortages. The financial foundations of the private enterprises are usually very shaky and unstable. In such a situation the role of the state in the enforcement of private law becomes extremely important. The court's rapid, reliable, and effective enforcement of contracts, bankruptcy, and debt collection are crucial for the new economic actors. In this respect, the Hungarian state has miserably failed in the last few years. Civil law cases drag on for years, and the enforcement of judicial decisions is unreliable. The state has failed to establish a well-functioning legal and institutional system, to set up an effective legal framework for the private economy, or to pass an effective law on bankruptcy. . . . [It] has also failed to create and administer a reliable system for registering real property. This negligence has created a paradise for those who make use of others' well-meaning, law-abiding behavior. It is not surprising that businessmen, some law-abiding and others not, try to defend themselves and find other non-legal or semi-legal ways to defend their interests, without legal support from the state. The defects of state law enforcement have opened the field to organized crime, and their "violence" organizations have simply taken control of this area.[61]

Katona concludes by pointing out that organized crime has played a major role in the area of the extrajudicial settlement of disputes; indeed, it has virtually "taken over" this sphere.

Katona identifies a second area of opportunity for criminal organizations to control a market: the oil sector. After 1989, the former state oil trade monopoly ceased to exist while new regulations for the oil sector were still absent. Virtually anyone could establish a firm to sell oil, since the state failed to screen firms seeking official registration; meanwhile, due to the departure of the Soviet troops, vast storage facilities had become available. At the same time, the Hungarian government, in an effort to shield farmers and the poor from the full impact of high inflation and

rising heating bills, introduced a dual-price system for heating and diesel oil. One side effect was the creation of artificial opportunities for money-making operations.[62]

In contrast to the virtual absence of mafia-related violence in Rome, the level of such brutality was high in Hungary. The *Washington Post* reported on December 21, 1998 that

> by 1996, violence began to spill onto the streets here. The Hungarian police have recorded 140 mob-related bombings, grenade attacks and killings since 1991, most in recent years. In November 1996, alleged mob leader Jozsef Prisztas was gunned down and killed on a Budapest street. In August 1997, shots were fired into a disco, wounding one woman. Last February [1998], a business magnate with alleged mob ties was assassinated with an automatic weapon as he sat in his car at a traffic light. A grenade was hurled at a bar the following month. And in June, shots were fired into a shop, injuring one person. Mobsters killing mobsters, however, engendered a certain so-what attitude among the public, officials said.[63]

Between 1991 and 1998, there were more than 100 gangland murders and 170 explosions in Hungary.[64]

An oblique reference to the Solntsevskaya appeared in the *Boston Globe* on November 29, 1998, which reported on a "Russian-speaking gang believed to be the most powerful and dangerous in Hungary." The article continued: "This mob, law enforcement sources said, has a presence in the United States."[65] I now turn more specifically to the activities of this group in Budapest.

Through Mogilevich, the Solntsevskaya created an intricate network of companies and factories in Hungary, laundering and investing a significant amount of money in the legal economy, mainly in arms production and the oil business. In 1995 Mogilevich bought Magnex 2000 (a magnet manufacturer in Budapest), the Army Co-op (a mortar and antiaircraft gun factory), Balchug (a firm that produces and sells office furniture), and Digep General Machine Works (an artillery shell, mortar, and fire equipment manufacturer). Mogilevich had been involved in the oil business since the 1980s, creating Arbat International, a petroleum export-import

company of which he owned 50 percent (the other shareholders were Ivan'kov, Mikhailov, and Averin), and Arigon Ltd., which sold oil products to the Ukrainian railway administration and was allegedly managed by Mikhailov's wife. Most recently he has been connected to Eural Trans Gas, an obscure Hungarian company holding a contract with Gazprom to provide gas from Turkmenistan to Ukraine.[66]

The Solntsevskaya did not limit itself to investment in the legal economy but tried to defraud the Hungarian government and push competitors out of the oil market. In short, the government had passed a law subsidizing some gas consumption for home use, creating opportunities to arbitrage between the subsidized price and the market one. Several loopholes in the law made it easier for criminal elements to enter this market.[67] Some believe that the loophole might have been intentional. According to one view, the Hungarian secret services were also players in this market, exploiting the opportunity generated by this law in order to buy arms to help the Croatians in their war against Serbia during the Yugoslavian conflict in the 1990s. Although I have no way to confirm this interpretation, it is well known that Croatia armed itself in the lead-up to the war and that some weapons came from Hungary. Belgrade amassed evidence that Croatia's defense minister was importing arms from warehouses in Hungary.[68] In any case, the unintended consequences of a well-meaning policy that created easy opportunities to defraud the state and enforce criminal monopolies over supplies of oil constituted a second crucial factor fostering the growth of Russian groups in Hungary. It is widely believed that the warfare within the Hungarian underworld, which took place in the 1990s, and involved both Russian and Hungarian groups, was due to conflict over how to allocate lucrative state oil and gas contracts.[69] According to a BBC documentary on Mogilevich's activities, Zoltán Seres, one of his Hungarian partners, was "the victim of the Russian-Hungarian turf wars which have followed the oil rackets."[70] A businessperson involved in oil fraud, Tamás Boros, said during confessions made to the police in February 1997 and May 1998 that "company owners who had not imported oil through the Russian Mafia boss Semyon Mogilevich were threatened and blackmailed."[71] Boros was killed, together with three other victims, in a car bomb explosion in central Budapest in early July 1998.[72]

The Solntsevskaya has expanded beyond the oil business, runs protection rackets and prostitution rings in Budapest, and has tortured and

murdered local opponents.[73] (Averin is suspected by the Hungarian police of the murder of a man in Budapest, Andrey Mochin. Also, he allegedly acted as an intermediary in the kidnapping of another man, Abner Kandov.) According to police sources cited by *Népszava* in 1998, a Hungarian daily, some eight hundred companies in Hungary have direct links to the underworld.[74] Although it is hard to discern the exact nature of the relationship between these firms and the underworld, mafia groups typically offer criminal protection to firms that cannot turn to the state. Partial evidence of this was revealed at the "bomb factory" trial of former Stasi agent Dietmar Clodo.[75] At the trial, several defendants named Leonid Goldstein Steigura as the second-in-command of Mogilevich's operation in Budapest and the real owner of the bomb-making facility run by Clodo. More importantly, a killer for the group, Nándor Erdélyi, claimed that criminals in Budapest had to pay a 50 percent "fee" to Steigura in order to be allowed to operate.[76] Furthermore, at the same trial it emerged that Steigura had planned Mogilevich's murder, possibly in an attempt to increase the autonomy of the group from the original, Moscow-based mafia.

Additional evidence of the ability of this Russian crime group to impose its protection on traders based in Hungary came to light in November 2003, when four men were arrested by the police with the FBI's help. They were charged with having forced their protection on as many as a thousand small businesspeople and shop owners, for a total income of some US$10 million. Police claim that the leader of the group, a Ukrainian Israeli Greek citizen, was working for Mogilevich.[77] As recently as March 2007, officials in Hungary believed that Russian-speaking groups were well entrenched in the country. The 2006 yearly report of Hungary's National Security Authority states that "it is still the case that Hungarian and Russian-speaking organized crime groups are the dominant forces in Hungary." Among other sectors, Russian organized crime groups are entering Hungary's booming construction material trade, the report says.[78]

Although the evidence is sketchy, it appears that the Solntsevskaya and Russian criminal groups more generally have established themselves in Hungary—contrary to the outcome that we observed in Rome. The Russian mafia is simultaneously trying to exercise a monopoly over certain

[162.10.217.184] Project MUSE (2026-06-15 01:44 GMT) University of Queensland

sectors of the economy, such as the oil business, and offering criminal protection to both businesspeople in the gray economy and criminal entrepreneurs. It has penetrated into the economy and has sustained its activity for a long period of time.

Conclusions

The comparison between Rome and Budapest allows us to identify key factors at work in Mafia transplantation (table 4.2).

A number of elements are shared by both cases, suggesting that they do not explain the divergent outcome. In both cases generalized migration from Russia was negligent. Also, Russian mafosi were in Rome and Budapest due to forced migration (Rome) or accident (past Soviet presence). The crucial difference between Rome and Budapest was the presence in the latter of new and booming markets (legal and illegal) that were not adequately protected by state institutions, thereby generating a demand for nonstate forms of protection. This is the key variable that leads to long-term entrenchment.

The emergence of vast market opportunities unregulated and unprotected by the state offers incentives for mafiosi from different territories to exploit local opportunities by offering criminal protection. Hungary experienced both the inability of the state to clearly define and protect property rights, and the presence of lucrative opportunities to obtain selective access to valuable markets, such as oil and gas, through the use of violence (Bardonecchia experienced only the latter, lucrative opportunities in the construction business). This concatenation of factors increases the likelihood of mafia transplantation. Such a conclusion goes against supply-side explanations of both the origin and diffusion of mafias—that is, against the idea that the presence of a supply of criminally minded people is sufficient for a mafia to develop in a new territory. If mafiosi exist in an area where no significant unprotected market exists, I contend that they will simply be unemployed mafia enforcers.

The Hungarian case indicates that circumstances conducive to mafia transplantation can be the product of state failures to equip a country fast enough with the institutional features of a market economy, such as a well-functioning legal system as well as clearly defined and enforced property

Table 4.2

Factors Facilitating Mafia Transplantation, Bardonecchia, Verona, Budapest, and Rome

Factors facilitating mafia transplantation/cases	*Bardonecchia*	*Verona*	*Budapest*	*Rome*	*New York City (1910–30)*	*Rosario (1910–30)*	*Shenzhen/ Guangzhou*
Generalized migration	Yes	No	No	No			
Mafiosi migration (willing/unwilling)	Yes (unwilling)	Yes (unwilling)	Yes (unwilling)	Yes (unwilling)			
Supply of mafiosi	Yes	Yes	Yes	Yes			
Local conditions							
Level of trust/civic engagement	High	High	Low	Low			
Presence of local illegal protectors	No	No	No	No			
Size of locale	Small	Large	Large	Large			
New and/or booming markets*	Yes	Yes	Yes	No			
Demand for mafia services	Yes	No	Yes	No			
Transplantation	Yes	No	Yes	No			

* The markets considered are construction (Bardonecchia and Rosario), drugs (Verona and China), property rights (Budapest and China), oil (Budapest), alcohol (New York City), gambling (New York City and China), and prostitution (China).

rights. The unintended results of a well-meaning policy that created easy opportunities to defraud the state and enforce criminal monopolies over supplies of oil constituted a second crucial factor fostering the move of Russian groups to Hungary.

Still, the Italian authorities have reason to worry about the ease with which Russians were able to launder money in the country. Italy has rather inflexible instruments to deal with this crime. Whenever financial authorities come across irregularities and suspicious activities, they can only initiate a superficial investigation and then turn the evidence over to a prosecutor's office, where thousands of similar files await the attention of the judiciary.[79] The jurisdiction over financial crimes in Italy belongs almost entirely to the criminal prosecutor, and both financial institutions and prosecutors have to uphold the *segreto istruttorio*: the duty to keep the identities of persons under investigation secret. This provision stops the authorities from exposing businesses that engage in sharp practices or become conduits of money laundering, hence eliminating reputational sanctions. Other jurisdictions (such as the United Kingdom) allow the financial authorities to conduct parallel investigations, which turn out to be faster, and also involve civil sanctions and incentives for collaboration on the part of the businesses involved. As the cases of Bardonecchia and Budapest show, it might well be that criminal markets open up while a foreign mafia is residing in the new territory and engaging in money-laundering activities. At that point, conditions conducive to long-term entrenchment would obtain.

Appendix

wiretap records

The police investigation into the Solntsevskaya crime group started in 1995 and lasted three years, from 1995 to 1997. By January 1996, the police were consistently listening in on twenty-four phone lines (cell phones and terrestrial lines). A total of nineteen people used such lines. The protagonists of this story talk about incriminating matters on the phone, including the use of violence and torture along with the murders that they plot and later carry out. If they had talked strategically on the phone, we would expect them not to reveal so much and to omit information that under any legislation could result in a lengthy sentence. Furthermore,

the police validated the content of some conversations by tailing several individuals and checking their movements within Italy as well as to and from Italy.

For the purpose of this chapter, I have carried out a systematic content analysis of the conversations that were recorded by the police in order to establish the topics discussed and the tasks undertaken by the group in Rome. With the assistance of Paolo Campana, I created a file with all the conversations recorded by the police for the period 1995–96. For each conversation, we coded the topics discussed (each conversation could include several topics). The total number of topics for all conversations comes to sixty-nine. We also identified the task that the actors were discussing. Drawing on the theoretical discussion outlined in chapter 2, we identified four tasks: resource acquisition, investment in the economy, involvement in protection rackets, and maintaining internal order. Taken together, these tasks cover all the conversation segments, save for three (see table 4.1). Most of the conversations (97.5 percent) took place without an interpreter between the two speakers.

We made several decisions regarding these data. The conversations are informal, and jargon is often used. The informal nature of the conversations implies that hidden meanings are transmitted. An automatic form of coding, such as counting words, would not register such meanings. Hence, we decided to read and code each conversation manually. We also coded segments of conversation. A segment of conversation, as noted earlier, is a fragment of a conversation that has a meaningful beginning and end. In order to reduce coder bias, we undertook intercoder reliability tests for the tasks, which resulted in a high and statistically significant correlation coefficient between the two coders. (The two coders read a sample of the conversations [N = 20], identified the tasks and topics, and checked the level of intercoder reliability. The correlation coefficient between the two coders resulted in 0.95, $p = 0.001$.) This degree of concordance enhances our confidence in the reliability of the results.

Third, while studying the files, we decided to use only the conversations from January 1996 to October 1996 (N = 758). This is because the wiretapping started in earnest in January (only two conversations were recorded in 1995). In December 1995, phone lines and cell phone numbers were still being put under surveillance, and the police recorded few

conversations.[80] The end point is late October 1996, a few weeks after Sergeev was killed.

We also coded quantitative information on the group and extracted network data. The police intercepted no fewer than 164 individuals over the period of the investigation. Of the 164 individuals involved in criminal conversations, 115 (more than 70 percent) were men, and the overwhelming majority were either Italian (50 people, or 30 percent) or born in the former Soviet Union (107 people, or 65 percent). Additional nationalities were Polish (2) and Korean (2); the nationality of 3 individuals is unknown. The place of birth, however, may be a poor indication of where the actors actually operated at the time of this investigation. We could reconstruct this type of information for 161 of the 164 actors. These data confirm that most of the individuals operated in either Rome (47.6 percent) or Moscow (20.5 percent). The median year of birth is 1957 (thirty-nine years old in 1996). This suggests that the group was made up of rather experienced individuals—an age profile similar to the Sicilian mafia.[81]

We created three network data sets: a global network of 164 actors; a directed global network where we recorded who initiated the call (as we could not find this information for all calls, this data set contains only 138 actors); and a longitudinal directed network, which includes 138 actors, with the direction of the call split at three points in time (I–III/96, IV–VI/96, and VII–IX/96). Finally, we matched several attributes (gender, language(s) spoken, nationality, and tasks) to the actors by creating an attribute file. In a series of future journal articles, we will present the results of this more sophisticated analysis.

Table A4.2 shows official data from the population censuses on foreign residents in Hungary since 1990 as a percentage of the total population. The data in the first column refer to people whose mother tongue is other than Hungarian.

The data in table A4.2 suggest that many other groups besides Russians and Ukrainians have settled in Hungary, and that their numbers are negligible compared with the total population. In 1991 almost 40,000 people spoke German as their mother tongue, or some 0.3 percent of the total population. Other languages more widely spoken than Russian and Ukrainian were Croatian (17,577 people), Slovakian (12,745), and Roma-

TABLE A4.1
Summary Characteristics of Key Players, Russian Mafia in Rome

Name (changed)	*Nationality*	*Background*	*Function*
Yakovlev, Ivan	Russian	Crime	Boss
Pepe, Giovanni	Italian	Journalism	Local fixer
Sergeev, Boris	Russian	Business/crime	Russian businessperson close to the Solntsevskaya, murdered in 1996
Bogdanovich, Oleg	Russian	Crime	Boss's bodyguard and gofer
Facchini, Giorgio	Italian	Politics	Local fixer
Sergeeva, Nadia	Russian		Sergeev's wife
Kamenskaya, Alina	Russian		Facchini's wife
Brenno, Riccardo	Italian	Business	Business associate of the group
Kamenskii, Vadim	Russian		Facchini's son
Artamova, Raisa	Russian		Sidelnikov's wife, keeper of the common fund
Pepe, Elena	Italian		Pepe's wife
Sidelnikov, Fedya	Russian	Crime	Boss's right-hand man
Yakovleva, Marina	Russian		Boss's wife
Sidorov, Vladimir	Russian	Crime	Boss's right-hand man
Kostina, Sonya	Russian		Sergeev's Italian wife
Sergeev, Denis	Russian		Sergeev's son
Rostovtsev	Russian	KGB	Based in Moscow, keeps contacts with Italian embassy and the political elite in Russia
Vlasik	Russian	Business	Business partner, murdered in 1996
Sergeeva, Ekaterina	Russian		Sergeev's daughter
Manin	Russian	Politics	Russian politician
Yakovlev, Alex	Russian		Boss's son
Ferrari, Marco	Italian	Petty crime	Associate of the group
Rossi, Donatella	Italian		Office secretary

1052

nian (8,730). Polish (3,788) is just below the level of Russian. According to the 1995 data column, Romania, Serbia, Germany, and Poland all have more nationals in Hungary than the Ukraine, and the number of Russians is negligible. In 1995, Ukrainians accounted for 0.034 percent of the entire population. If we add the Russians, the combined percentage amounted to 0.036 percent in 1995.

Lessons from the Past: Sicilian Mafiosi in New York City and Rosario, circa 1880–1940

A tough young man with neither prospects nor any intention of working in the sulfur mines or fields of his hometown, Siculiana, in the Agrigento Province of Italy, Nick Gentile—also known as Zu Cola (1885–unknown) and author of the first insider's account of the American mafia—preferred to try his luck abroad. A well-oiled network allowed him to reach the United States and land in New York City in 1903 at the age of eighteen, with an address in hand, 91 Elizabeth Street, in one of the city's Sicilian colonies. His U.S. contact, who directed immigrants from Siculiana and the nearby villages to their place of employment, sent Gentile to do railroad construction in Kansas City, a six-day train journey from New York. In a few years, Gentile did away with his work clothes, sporting expensive suits and darting scowling eyes in the pictures that survived.[1] A fellow Sicilian, Gaetano Pendino, from Alessandria della Rocca, a small town some forty kilometers from Siculiana, chose instead to migrate to Argentina, where he arrived in 1888 at the age of thirty-five. After working as a bricklayer and builder, he eventually established himself as the boss of the mafia in Rosario. This mafia, however, lasted only a relatively short period of time. Scholars who link the emergence of the mafia in New York City to Italian migration ignore the fact that in the same period many Italians, including those of a criminal bent, migrated to several other destinations. Yet not everywhere Italians went did a stable and long-lasting criminal organization with features similar to the Sicilian Cosa Nostra emerge. After sketching the contours

of the mafia in Sicily in the nineteenth century, this chapter outlines the parallel history of Italian migration and mafia activities in New York City and Rosario, and offers an analytic account of the diverging outcomes.

The Mafia in Sicily

The first clear sign that a Mafia existed in Sicily dates from the 1830s. In 1838, the procurator general of Trapani wrote that "in many villages, there exist fellowships [*unioni*] or fraternities" led by a boss. Each fraternity had a common fund, and the members included ordinary people, landowners, and even priests. One service that they performed was to retrieve stolen property, in particular cattle. The official perceptively dubbed the societies "small governments within the government," suggesting that by this time they were already an established extralegal form of governance, in competition with the state.[2]

After unification (1861), the "Southern Question" became a burning political issue for the new Italy. The government struggled to impose the rule of law on Sicily, where insecurity and "banditism" were rife, and it feared rebellions and secessionist movements inspired by the defeated Bourbons and the Catholic church. Dissatisfied with an official report on the state of affairs in the island, a twenty-nine-year-old Tuscan aristocrat, Leopoldo Franchetti, set out for Sicily in 1876 to undertake independent research on the *Condizioni politiche ed amministrative della Sicilia*. Franchetti's study ranks among the classics of nineteenth-century social science, on par with Alexis de Tocqueville's *Democracy in America*. Among his numerous insights, he wrote that members of the mafia belonged to all classes and occupations, including the middle class, and were autonomous from other social and political entities, such as the state. He also suggested that the mafia's single most important activity was ensuring selective access to key resources, in a context where the state was unable to offer fair and universal rules. More specifically, Franchetti documented the existence of cartels among producers backed by the mafia. In one case, a society of millers (*la società dei Mulini*) was said by Franchetti to be under the protection of "powerful Mafiosi." Members of the society kept the price of flour artificially high, and the capo mafia ensured that everybody followed the agreement and did not free ride on fellow society members by producing more than the agreed-on quota.[3]

FIGURE 5.1 Map of Sicily

By the end of the nineteenth century, some organizational features of this secret fraternity had been identified. A book published in 1886 and based on police documents dating back to 1860 describes in detail the structure of some early *cosche* (individual, autonomous "families"), the division of territory, and the mechanisms of coordination among them. Rather than a single giant organization stretching across the entire island, the mafia was composed of cosche, located in western Sicily, who recognized each others' right to exist, and had devised means to coordinate activities and settle interfamily disputes. A police report compiled in 1898 and 1900, the *Rapporto Sangiorgi*, names eight mafia families operating in Palermo and the nearby villages at the time. It identifies the bosses and the underbosses, and includes personal details on many of the rank-and-file members. The document recounts the initiation ritual, code of behavior, and many markets that the mafiosi had penetrated, and confirms that a coordinating body linked the cosche of Palermo to those operating on the city's outskirts. According to the report, some 218

1057

individuals had joined this society. Scholars often marvel at the striking continuity of the mafia's organizational structure from its origin in the first part of the nineteenth century to the time of the revelations during the Maxi trial in the 1980s.[4]

From the mid-nineteenth century, many Sicilians, including members of the mafia, were on the move. In the remainder of this chapter, I will trace their migration to New York City and Rosario, Argentina. Most crucially, only in the North American city did a mafia that resembled the Sicilian one emerge. Below, I explain why.

The Italian American Mafia in New York City

New York City was a key destination for the first wave of European immigrants— mostly Irish and Germans—who arrived in the 1840s, in the wake of the potato famine in Ireland. Jews from Eastern Europe landed in the 1880s, while most of the Italians reached their new *patria* in the period between 1876 and 1915. The number of Italians in New York City rose from just over 12,000 in 1880 to just over 145,000 in 1900 (see table A5.1). By 1910, immigrants and first-generation Italian Americans accounted for 500,000 New Yorkers—a tenth of the city's population. When the First World War broke out, 370,000 Italians lived in New York City.[5] Between 1876 and 1930, some 80 percent of Italian migrants to the United States had originated from southern Italy (see table 5.3 below). Italians reached New York City within a short time span and arrived relatively late in the city's own development, when other ethnic groups had already established themselves. The majority of them joined the unskilled labor force.[6]

Nested within the flow of Italians to New York City were people who had mafia skills and had been initiated into cosche back home. Many were running from the reach of state organs. For instance, Ignazio Lupo became embroiled in a dispute in his store in Palermo in 1898, which ended with Lupo murdering a man. He went into hiding and, on the advice of his parents, fled Italy, reaching New York, where he joined a gang of counterfeiters headed by Giuseppe Morello (see below). Similarly Joseph Bonanno narrates that his father, a man of honor back in their hometown of Castellammare del Golfo, moved to Brooklyn in 1908 in order to avoid prosecution (later returning to Sicily in 1911). The same applies to Giuseppe Joe Masseria, who apparently fled his hometown to avoid murder charges.[7]

Some mafiosi were running away from other mafiosi. The corpse of Antonio Deodati, a Sicilian counterfeiter, was found in 1865 in the woods near Greenwood Cemetery, Brooklyn, having suffered pistol shots to the head. Italian authorities, in a report cited by the *Times* (London), on June 21, 1875, claimed that Deodati had fled to New York City in order to escape a mafia feud, but was "overtaken by an assassin, especially sent out after him, and horribly murdered."[8]

One political development prompting some mafiosi to run off to the United States was Benito Mussolini's accession to power in 1922. In October 1925, Mussolini appointed Cesare Mori as a special prefect to Palermo, giving him vast police powers and an army of elite agents to eradicate the "honored society." Dubbed the "Iron Prefect," and aided by some landowners and businesspeople, Mori rounded up and imprisoned scores of clan bosses as well as innocent bystanders. Bonanno—the future boss of the Bonanno family in New York City—writes in his autobiography that in 1924,

> a tempest would tatter my sails and toss my ship in unknown waters. Now undisputedly in control of the national government, Mussolini sought to eradicate all dissent and to install a totalitarian regime. . . . Men of my Tradition reviled Mussolini, once he showed his true colors, ... [and] were imprisoned in droves, often on the flimsiest charges. They were tried and sentenced with utter disregard for their civil liberties.[9]

In fact, mafiosi were far less antifascist at first, and even planned to support a fascist party list in the 1924 elections.[10] By late 1925, though, Mori's policies had begun to have some effect and forced many mafia members to escape. Antonio Calderone (b. 1935), the Catania underboss, writes in his memoirs: "There was nearly no mafia left after the war. Sicilian families had been shut down by prefect Mori."[11] Some of Calderone's relatives escaped to Tunis, where by the 1930s a mafia outpost was fully operational.[12] The boss of Tommaso Buscetta's family in Palermo took shelter in France instead. Bonanno explains that "many [men of my tradition] were forced to flee to America" as a consequence of Mori's action in Sicily.[13] David Chandler, in his book *The Criminal Brotherhoods*, suggests that no less than five hundred mafiosi escaped Mussolini's regime

by immigrating to the United States, although such a figure is most likely an exaggeration.[14] In conclusion, a contingent of Sicilian mafiosi was present in North America.

Protective Umbrellas

Did Sicilian mafiosi find in New York City a land rich in criminal opportunities that would allow them to re-create the control of markets and territories they had in their homeland? I now turn to a brief description of New York City, and the opportunities to control markets and enforce protection rackets. In the mid-nineteenth century, the city was already one of the world's greatest metropolises. By 1860, it handled two-thirds of all U.S. imports and one-third of its export trade, and ranked first in the country in all but seven items of exportable goods.[15] In transportation links and banking, New York towered over the rest of the country. By 1890, its population was almost double the 1860 figure. Manhattan dominated the women's and men's clothing trade, and ranked first nationally in the number of factories, their capital valuation, gross domestic product, and number of employees. A great deal of its economic achievements depended on the continuing availability of cheap immigrant and nonunionized labor working in appalling conditions.[16]

The new wave of Italian and Jewish immigrants in the 1880s settled near their compatriots, mainly in the low-rent, run-down areas of the Lower East Side (their arrival encouraged the Irish and German residents to leave). In the Fifth Ward Neapolitans lived mainly on Mulberry Street, while the Genoese and Sicilians settled, respectively, on Baxter and Elizabeth Streets. Northern Italians were to be found in the Eighth or Fifteenth Wards west of Broadway.[17] The Italian neighborhood of Five Points was "at the time perhaps the worst slum in the world."[18] The West Twenties (starting around West Twenty-third Street) was the hub for gambling dens, brothels, and late-night saloons. A police captain labeled this area the "Tenderloin," while a less-endearing name, "Satan's Circle," originated with enraged preachers. In a lengthy article published in 1909, *McClure Magazine* called Satan's Circle "the recognized metropolis of American criminals."[19] Vice also flourished somewhat south of the Tenderloin, in the Battery, Five Points, and Bowery, close to where the Italians lived.[20]

The illegal markets of sex and gambling were sizable. In 1897, New York had some 30,000 public prostitutes. By 1900, there were more than 250 brothels in Satan's Circle, and over a thousand poolrooms and card rooms in Manhattan. These services were illegal, but who was protecting them? The most profitable illegal markets since the mid-nineteenth century in the city were protected by an alliance of corrupt politicians and police officers. This was the time when "political machines" dominated U.S. cities—a system that ensured the distribution of jobs and favors in exchange for votes. The most influential organization in New York City was the Society of Tammany, the Democratic political club on East Fourteenth Street. In each election ward, a "captain" was responsible for making sure that votes would flow toward Tammany's candidates. Often, the captain employed gangs of petty criminals who would vote more than once (they were known as "repeaters"). In exchange, the captain ensured that jobs, contracts, and permits were handed out to the politically well connected, although the ward captain frequently provided genuine help to the newly arrived destitute residents. Yet merit was hardly a concern for appointing somebody to public office: often people with a criminal record were selected to work as court clerks, while judges and prosecutors routinely accepted bribes. Between 1886 and 1902, Tammany was headed by a former street brawler and petty gangster who had been tried for murder.[21]

Police recruitment was in the hands of ward leaders and activists, who would recommend a potential recruit directly to police commissioners, bypassing the uncertain and demanding application to the Civil Service Board, an independent body that appointed officers on merit. During the last decade of the nineteenth century, individuals following the former route had a nine-in-ten chance of being successful, while those applying through the latter had a one-in-eight chance. Not only did recruits have to be connected to local politicians but they also had to pay in the region of $250 to $300 (a full year's pay was $600) to join, and substantially more to be promoted (a captaincy cost somewhere between $12,000 and $15,000).[22]

"Big Tim" Sullivan (1862–1913) was at various points district leader of the wards that comprised the Five Points and Satan's Circle. As historian Mike Dash has vividly shown, the Democratic machine led by Sullivan not only manipulated polls but also enforced a strict protection racket,

collecting money from saloons, brothels, and gambling establishments in exchange for protection from law enforcement. Sullivan used new immigrants, including Italians, as enforcers for his get-the-vote operations, but racketeering was done by the political-police alliance. Police officers on the ground extracted payments and kicked a portion of their take "up" to senior officers and their political allies. In other parts of the city, "clubbers" also helped employers keep peace with labor, and ensured that workers would be intimidated and harassed when going on strike and marching through the city. Arrests were often arbitrary and a source of graft; it was common practice for police on the beat to arrest people and have them locked up at the nearest station house. The charge would then be dropped, and the bail money went into the pocket of the arresting officer, their precinct captain, and the bondsperson (in 1909, 262,000 arrests had been made in New York City, compared to 111,000 in London, despite its larger population). Corruption was so widespread that officers would not bother to investigate robberies unless the victim offered a reward. Thieves were permitted to operate within carefully defined territories on the condition that they handed back the proceeds of certain robberies on demand, so that the police officer could claim to have recovered the stolen merchandise. On the other hand, owners of brothels and gambling dives obtained a degree of safety for their money. Police Commissioner William McAdoo observed: "A corrupt police captain doesn't have to force payments. They will thrust money upon him and those under him. These men and women feel that when they pay their money they are going to be protected."[23]

A damning investigation into the system of graft in the state Senate—the Lexow Committee of 1894–95—set in motion some key reforms. Building on the committee report, the city administration reduced discretion for recruitment into the police force, bringing to an end the practice of paying a fee to join. To a degree, this reform reduced the intimate ties between the police and politicians, but it was not enough to stop the grafting. Freed from their political overlords, the New York police simply began to keep the income from corruption for themselves. According to the *New York Times*' calculations published in 1900, the owners of the city's largest gambling clubs paid as much as $12,000 a year for protection; smaller operators were required to part with nearly $2,000; poolrooms stayed open in exchange for $300 a month and craps games for $150. Millions were handed over to the police every year, in "taxes" that were—according to

the newspaper—as fixed in size and regularity as the "laws of Medes and Persians."[24] Similarly, brothel owners paid heavily for police protection, and, if they failed to do so, found themselves mercilessly raided.[25]

By 1910, a combination of effective reforms and a few driven individuals led to the virtual end of grand graft. The reformist district attorney, William Travers Jerome (a cousin of Winston Churchill who had worked for the Lexow Committee), joined forces with the mayor, Judge William Jay Gaynor, elected in 1910, to enact and see through far-reaching reforms. First, the mayor appointed a like-minded police commissioner, Rhinelander Waldo. He went on to put an end to arbitrary arrests by the police; for trivial matters, police officers now were to issue a simple summon, otherwise every arrest was to be based on legal evidence and the suspect was to be taken before a magistrate on the day of the arrest. The aim was to dry up a major source of bribes for the arresting officer and precinct captain. Gaynor encouraged the prosecution of police officers who raided premises without the proper warrant and advised gamblers that they should resist arrest if the police did not show the correct paperwork. Then, observing that the New York Police Department regularly broke up strikes as well as dispersed meetings organized by socialists and anarchists, he instructed officers to protect pickets and marchers, so long as the protesters obeyed the law. This was at a time when militancy was on the rise. For instance, in 1909, some seventy thousand "shirtwaist" women had gone on a strike led by Clara Lemlich. Gaynor's biographer writes: "During 1910 immigrant workers . . . fought out a long, bitter strike, and Gaynor kept the police, who before notoriously sided with the employers, out of the dispute."[26] These measures worked. By the end of 1910, arrests had fallen by one-third, police behavior had noticeably improved, and some of the force's most unrepentant grafters had been summarily dismissed. In addition, trade union activities were growing.[27]

Mayor Gaynor went further: he centralized policing, so that officers on the beat did not have the power to raid establishments. Police officers made a lot of money by threatening to shut down bars and taverns that violated Sunday closing laws (there were nine thousand saloons and eighteen hundred hotels serving liquor in New York). For a bribe, the officers could be persuaded to look the other way. The mayor's solution was twofold: first, he called the Liquor Dealers' Association and ordered its members to stop paying protection money. He then issued

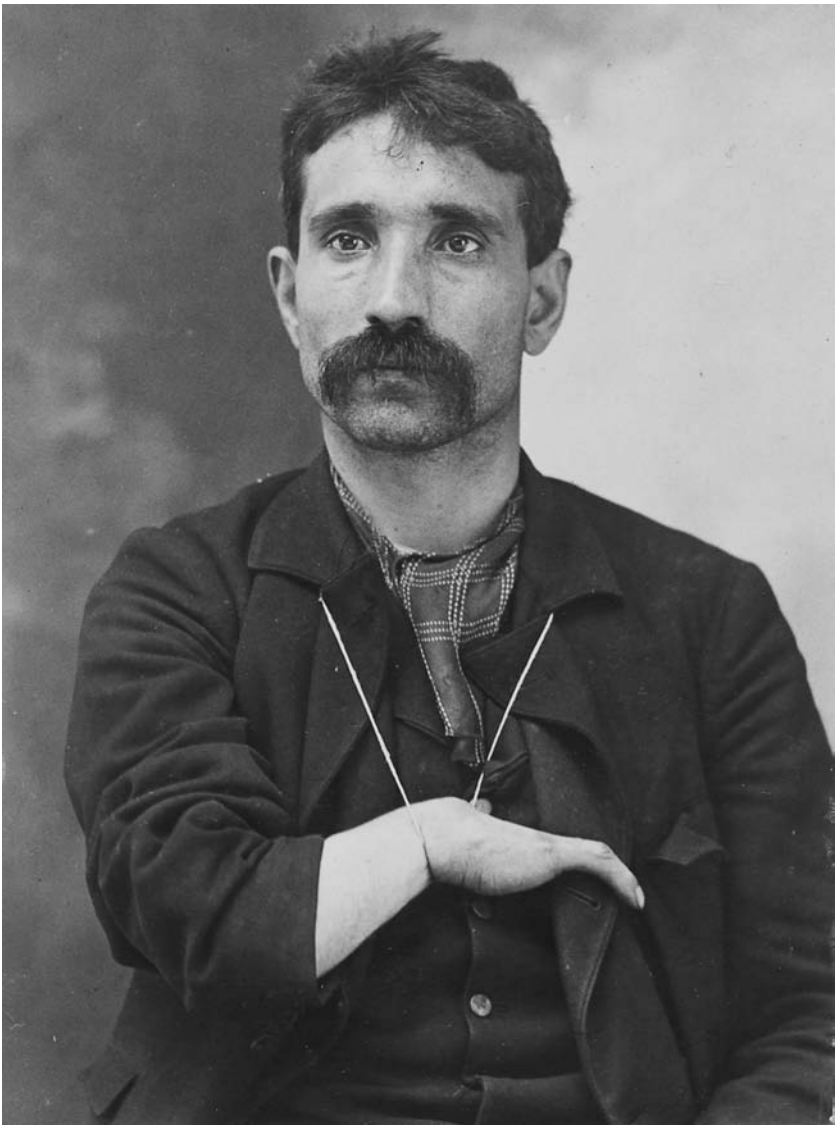
William Jay Gaynor (1848–1913), mayor of New York City (1910–13), hit by a bullet. Source: Frederic Lewis, photographer/Hutton Archive/Getty Images.

instructions ordering police officers to stop entering licensed premises or speaking to their owners. Detectives were forbidden to make on-the-spot arrests or report violations of the law to their captain. Rather, they were to file an affidavit for each violation with the district attorney, where intelligence would be collated and indictments prepared. Remarkably, the

plan worked. Violations of the Sunday closing law fell to a mere handful within two weeks. By the beginning of 1911 saloon graft had been practically wiped out for the first time in living memory. One bartender, who had worked thirty-five years in the New York liquor trade, marveled that he had never known a time "when the laws were so nearly enforced in their intent as they are today. Mayor Gaynor has done away with the collector who used to come around from 'the man higher up.'"[28] The city newspapers were effusive in their praise.[29]

The mayor applied the same logic to the policing of gambling and prostitution. Until then, the suppression of vice had been the responsibility of New York's fifty or so precinct captains, each of whom would gather intelligence and order raids in their own district. The mayor transferred responsibility for policing brothels and gaming clubs to headquarters, forbidding precinct cops from mounting raids and opening up the possibility of gathering intelligence from all five boroughs. Thus, corrupt captains could no longer offer ironclad protection. Gaynor hoped that this would make it easier to curb graft as well as deal with the most influential madams and gamblers, some of whom controlled premises all over the city.[30]

Such innovations were complemented by the creation of special police squads, based at the headquarters and reporting directly to the commissioner. These squads would conduct raids that had hitherto been carried out at the precinct level and—properly led and supplied with detailed information—might well succeed in closing down establishments that had enjoyed police protection. Most of the targets for the raids were selected by the police commissioner or mayor, acting in response to tip-offs received from members of the public who were—it seems more than likely—in many cases rivals of the gamblers on whom they informed. This system made it virtually impossible for unscrupulous officers, bent on continuing to extort gambling dens and brothels, to offer effective protection, as they had no power to stop raids or be informed beforehand that a raid was being set up. Further reforms to reduce waste and improve accounting practices were introduced by Gaynor's successor, elected in 1914.[31]



Early Italian Criminality

At first, Sicilians with a criminal inclination, and even members of Sicilian cosche, did not embark on activities that indicated an ability to control markets or specialize in protection, contrary to what they did in Sicily.

In other words, there might have been mafiosi, but there was as yet no mafia because the police was performing this function. For instance, Italians were involved in counterfeiting from at least the 1860s. One gang of counterfeiters, all originating from Messina, was exposed in 1865 in connection with the Deodati murder. Another significant murder connected to this trade—that of Antonio Flaccomio, who was stabbed to death in 1888 at the corner of St. Marks Place and Third Avenue by a counterfeiter named Carlo Quatertaro—led Chief Inspector Thomas Byrnes to declare that Sicilians "banded together in a secret society known as the Mafia" were the culprits.[32] Morello (1867–1930) and his brother-in-law, Lupo, led one prominent counterfeiting gang based in East Harlem. The forgeries were manufactured in upstate New York. Morello and Lupo then sold them to wholesalers at thirty to forty cents on the dollar for distribution throughout the country. By 1899, Morello was an influential figure in East Harlem, along with his brothers Tony and Vincent and their half-brother Ciro Terranova. Counterfeiting generated great alarm among U.S. authorities, since it was undermining confidence in the currency, and significant resources were devoted to stopping it. These efforts were successful, and by 1910 massive police repression led to the virtual death of this criminal activity. The participants themselves understood that the costs of engaging in this trade were high. As late as 1963, novices taking the mafia ritual oath in New York were still required to promise not to take part in counterfeiting.[33]

Italians were also stealing horses at the turn of the twentieth century in New York City. In 1908, more than a hundred complaints reached police headquarters from people whose horses and wagons had disappeared, causing insurance rates to rise. A year later, a network was discovered, "working on a scale unknown even in the days of 'horse lifting' in the West," the *New York Times* reported in October 1909.[34] The stolen animals were taken to a stable where they were kept before being sold. The police identified 334–337 East 108th Street, in Italian Harlem, as the hub of the ring. And yet there were no territorial disputes between different gangs of horse thieves, and in any case the business died when motorized public transport and automobile usage increased.[35]

At the turn of the century, a crude technique of random extortion known as "Black Hand" came to define the perception of southern Italian immigrants in the mind of the U.S. public. The standard Black Hand

Giuseppe Morello (1867–1930), a prominent counterfeiter in New York City. Photo credit: David Critchley.

crime consisted of sending a letter to businesspeople and shopkeepers in Italian neighborhoods warning them of dire consequences if they failed to pay up. Invariably, the picture of a black hand fringed by a knife and skull was imprinted on each letter. The Black Handers did not attempt to control markets, territory, or even the name Black Hand, although some gangs formed and celebrated rituals. Soon, every crime committed by Italians was credited to the Black Hand, and press excitement encouraged both the real practice and the emergence of fakes. Continued press coverage led to more and more letters being sent. The Black Hand brand proliferated in several U.S. cities, but it did not correspond to any specific organization. Eventually it died out, perhaps for lack of a connection to a specific mob able to prevent other lesser entities from using the same logo (Black Hand); when inefficient groups used the label, victims realized that they could safely avoid paying. [36]

In conclusion, before Gaynor's reforms, Italians were involved in a variety of crimes—counterfeiting, horse theft, and crude extortion—but they had not yet managed to reproduce the control of markets and territories typical of Sicily in New York City.

The Birth of the Mafia

Paradoxically, the end of widespread police corruption instigated by Gaynor's reforms and more generally by the Progressive movement led to the birth of the mafia. Police reform had left a void to be filled by new actors. As policing was being centralized, an organization able to coordinate illegal activities was much needed. For instance, a mafia could prevent rival gamblers from informing on each other and enforce an informal license system. It could put pressure on local police officers on the beat not to pass information to headquarters. Around this time, Italians started to protect brothels and gambling establishments. In a few years, Lucky Luciano would be indicted for controlling no less than eighty brothels in Manhattan. The protection that Gaynor's reforms afforded to trade unions led some employers to turn to mafiosi rather than corrupt police officers. The former leader of the notorious Five Points Gang, the Italian Paul Kelly (Paolo Vaccarelli), moved into labor racketeering at this time. Some workers too turned to extralegal help. In 1913, an Italian gang that had been implicated in crude Black Hand extortion offered its violent ser-

vices to workers (not employers, in this case) in the garment industry. Mafiosi rather quickly started to offer their services to market operators who wanted to keep some competitors out of a given industry or expel troublesome insiders, and enforce cartels among a limited amount of producers, as they did in the case of millers in Sicily I discussed at the beginning of this chapter. Gaetano "Tom" Reina (the future boss of the Lucchese family), Tommaso Gagliano (also a future boss in the same family), and Jack Dragna were implicated in the murder of a poultry dealer in 1914, Barnet Baff. The dealer had volunteered information to the district attorney's office on a cartel of eighty-seven other dealers. Industry insiders who wanted to punish the defector had orchestrated the murder. Italians infiltrated other industries, such as barbershops, the garment industry, and the docks. Over the subsequent decade, they continued to organize cartels, such as the Bronx lathing and plastering industry, the fiefdom of the Lucchese family since at least 1928. Although some Italian criminals could be found operating in illegal markets at the apex of Tammany, they typically were not the protectors, but rather the operators of brothels and shady saloons. It was only after the reforms described above that their role changed.[37]

A major impetus to the expansion of the Italian American mafia was the creation of yet another vast illegal and unprotected market. Legislation intended to prohibit the "manufacture, sale, or transportation of intoxicating liquor" culminated in the approval by the U.S. Congress of the Eighteenth Amendment to the Constitution in January 1919. By the end of 1919, thirty-six states had ratified the amendment. Prohibition and its enforcement machinery, the Volstead Act, came into effect at midnight on January 16, 1920. This "noble experiment" (in the words of President Herbert Hoover) was part of the same Progressive movement that had succeeded in reducing grand graft and police corruption in the first decade of the twentieth century.[38]

An illegal market estimated to be worth some two billion dollars a year was born overnight.[39] The bulk of the alcohol that reached consumers was either produced abroad and smuggled into the country (the so-called high seas or rum-running operations), or produced illegally in the United States and transported on land. As a rule, higher-quality merchandise was produced abroad while domestic producers manufactured the cheaper-grade liquor.[40]

Those who imported liquor from abroad formed international networks of cooperation. The Canadian-U.S. border (some thousand miles long) was one point of entry for land smuggling operations. Thus, several U.S. traffickers teamed up with Canadian distillery conglomerates and liquor distributors. Another method of getting the goods to the East Coast market was by means of ocean vessels anchored offshore in international waters, on "Rum Row," as the stretch of coast on Long Island and northern New Jersey came to be known. The ships would sell their cargo to the owners of high-speed "feeder" boats, who would then bring the merchandise to beaches on Long Island and northern New Jersey.[41]

The alcohol coming in from Rum Row would be loaded onto trucks and sent to depots located in Manhattan. The market was fraught with dangers. Hijackers of vessels were a serious problem for sailors bringing cargo from abroad. Herbert Asbury (the author of *Gangs of New York*) recalls in his 1950 study of Prohibition that "these seagoing hijackers, in fast boats, swarmed along the Row and robbed everybody they could catch and overpower. They prayed principally on the small craft, some of which carried huge sums of money, jumping them if possible on their way out to the Row."[42] Alastair Moray, a Scottish rumrunner with literary aspirations who kept a diary of his years in this business, concurs: "There is a good deal of what is known as 'hi-jacking,' inshore and out here too; in plain English, 'highway robbery.'"[43] Most of the sailors were armed with revolvers, rifles, and the occasional machine guns, and would not dare to go on deck unarmed during the night. Bill McCoy, possibly the best-known captain on Rum Row, aimed machine guns and rifles at any unknown boat that approached his ship, and allowed only one person aboard at a time.[44]

The route from the Long Island beaches to the City was also dangerous. Hijackers would regularly stop the trucks, hold up the drivers, and steal the cases. A man known as Big Eddie led a notorious gang of hijackers. "The New York police," writes Asbury, "said that he and his gang hijacked many truckloads of liquors on the roads of Nassau and Suffolk counties, the principal highways into New York from the lower end of Long Island."[45]

Jewish and Italian gangsters—such as Arnold Rothstein, possibly the most enterprising bootlegger on Rum Row—took it on themselves to offer two services to this market: the protection of truckloads, and a place where

buyers could meet sellers. Luciano and Frank Costello together with Rothstein created squads to protect the procession of vehicles carrying liquor on the way to the warehouses. Each truck had a driver up front and two armed guards in the back, ready to fire if attacked. The recruits for this job were Italian and Jewish youths from the Lower East Side.[46]

Early Italian mafiosi were also responsible for the creation of the equivalent of a Stock Exchange for booze, the so-called curb exchanges (after the name of the New York Stock Exchange, originally called the Curb Exchange), where bootleggers met buyers. The first curb exchange emerged in September 1920 in the area bounded by Canal, Bowery, Prince, and Mulberry Streets, right in the middle of a territory controlled by Joe "the Boss" Masseria (see below) and just a block away from police headquarters. Bootleggers and buyers met almost every night from 9:00 p.m. to 1:00 a.m. to deal cases of rye whiskey, Scotch whiskey imported from England, bourbon, Canadian scotch, Canadian rye, domestic Gordon's gin, Burnett's bonded gin, Italian vermouth, French vermouth, and Dubonnet (the list is courtesy of the local police).[47]

In order to avoid police detection, a slightly different meeting place was selected every night. The curb traders, writes the *New York Times*, met in "yards of tenement houses, usually in the rear of saloons."[48] The products, continues the *New York Times* article, "were sold by purveyors on the 'curb,' either in single cases or by the load. While the sales were effected on the 'market,' . . . the liquor itself was not handled at the 'curb,' but was obtained on orders at various rendezvous in different parts of the city, and in New Jersey, Long Island, and Connecticut points."[49] For instance, on March 20, 1921, the police raided a garage at 144 Mulberry Street. About one hundred people ("recognized by the agents as bootleggers") were gathered there, but only samples of liquor were seized.[50]

Curb trading was more efficient than the system employed previously. In the previous system, all liquor was stored in cellars and tenement apartments, so it was easy for the police to spot the trucks coming and going, and thus arrest the drivers. Now, the liquor was hidden out of the city and directly dispatched to the buyers. "The brokers," officials told the *New York Times*, "do not handle any liquor themselves, nor is any money displayed on the market, . . . so [officers] have difficulties in getting any evidence."[51] Most significantly, these individuals were private protectors independent of bootleggers and restaurateurs. An informant told the *New*

York Times that "a considerable number of them were agents, who received commissions both from the bootleggers and the purchasers." These individuals were tasked not only with providing physical protection but also ensured that promises made on the curb were kept. The strong-arm men were local youths from the Italian neighborhood: "The sudden prosperity of some of these agents has been the source of considerable comment on the part of the police and residents of this bootlegging zone. All are young men whose homes are in nearby tenements."[52] This segment of the market was not run as a cartel of the suppliers (the bootleggers) and consumers (the saloon keepers) but rather the mafia offered a universal service to both the sellers and buyers. It was more profitable for the mafia to be paid a fee by all market participants than to force some out.

Curb exchanges were not limited to lower Manhattan. A "whiskey curb exchange" was reported to be operating in New Jersey already in November 1920. When police started to raid the curb exchange in Little Italy, the market moved uptown, and Prohibition officials admitted that "it is increasing its operations. . . . The new curb is said to be on Fortieth Street, near Broadway, and most of the 'brokers' who did business in the old market, on Mulberry Bend, have shifted their activities."[53]

Masseria, who was to become the head of the most influential New York syndicate in the 1920s, lived above a saloon on Forsyth Street, right in the curb exchange area. His early criminal career included extortion, kidnapping, and burglary. Together with associate Tommy Pennochio, Masseria was the organizer of this portion of the market, independently from both the bootleggers and buyers of liquor. Another significant player in the curb exchange was Salvatore Sabella, who had worked and had been arrested at the curb exchange. The boss of an existing Italian group, Salvatore D'Aquila, wanted a cut from this business. One famed street battle erupted on May 8, 1922, within a block of the police headquarters in the curb exchange territory, between D'Aquila and Masseria men. The struggle between the Masseria and D'Aquila families ended when, on August 11, 1922, D'Aquila's main killer was assassinated by Masseria. At this stage, Masseria gained considerable prestige and started to undermine D'Aquila both in New York and other cities. Eventually D'Aquila himself was gunned down, beside his car, on October 10, 1928, after driving his wife and children from the Bronx to consult a doctor. Following his death, the D'Aquila family would ally with Masseria.[54]

[162.10.217.184] Project MUSE (2026-06-15 01:44 GMT) University of Queensland

Mafia historian David Critchley notes that Masseria's role in the curb exchange market enabled him to expand "from his lower east side territory and secured a lock on an important portion of the Italian-American underworld extending from Brooklyn to the Bronx, operating primarily through Salvatore Lucanio and West Side-based Vito Genovese."[55] Bonanno, an enemy of Masseria, concurs that, at the height of Prohibition, Joe the Boss was the dominant leader.

By 1928, the Coast Guard had grown more effective at intercepting this illegal traffic at sea. A series of treaties with other countries also allowed the Coast Guard to search and seize within one hour's running distance of the U.S. coast, while its fleet was greatly improved by 1928. Rum Row had declined in importance by this time as a source of imported liquor.[56] Local booze producers flourished as a result of such decline. Italians were quick to enter this section of the market as well. Salvatore Maranzano, the mafioso who would fight the Castellammare War against Masseria in 1930 for control of the Italian American mafia, came to prominence by protecting illegal distilleries. Already a mafioso of consequence in Sicily, born in 1886, he arrived in New York most likely in 1925 via Canada. He entered the Schiro family and soon took control of the *borgata* (the word borgata is equivalent to cosca, although it is normally used to refer to U.S. mafia groups only). Maranzano had invested in a number of distilleries in Pennsylvania and upstate New York. The operations were typically run by a local manager and part owner who was not a member of the mafia; Maranzano and his gang provided protection for this network of producers of illegal products. He ensured that supplies arrived as well as that the whiskey was stored in safe houses and then shipped on to the buyers. He dealt with the police and settled disputes that arose among the various players. Bonanno, who worked for Maranzano, recalls that hijacking of delivery trucks was a common occurrence and one of his jobs was to retrieve stolen trucks. In one instance, a violent shootout led to a significant police investigation.[57] Italian mafiosi were now deeply involved in the largest illegal market of the time and a rough distinction between producers (bootleggers, the stills' managers), buyers (saloon owners), and protectors (mafiosi) was emerging. This was a far cry from writing extortion letters or stealing horses. Surely the goods were reaching the consumers: the mayor of Berlin, while visiting the city in the fall of 1929, asked the mayor of New York, "When does the Prohibition law go into effect?"[58]

Prohibition provided an enormous boost to both the personnel and power of Italian organized crime. The risk of punishment was low, the gains to be made were enormous, and there was no social stigma attached to this trade. One by-product of the massive profits was that syndicates could easily bribe the judiciary and politicians in New York City, reversing the attempt at curbing corruption initiated by Mayor Gaynor in 1910.[59]

Organizational Maturity

Italian criminal groups existed in New York City before Prohibition: the Morello gang of counterfeiters in East Harlem; a group led by Nicolò (Cola) Schiro, mainly formed by immigrants from Castellammare del Golfo and based in Brooklyn; and the borgata around D'Aquila, also in Brooklyn. How were these groups related to the Sicilian mafia? Although American mafiosi were not agents of the Sicilian ones, the homeland still exerted some influence on such U.S. outposts. Between 1910 and 1920, there were three different routes into a U.S. family. One was previous membership in a Sicilian cosca. Nick Gentile—who had entered the Porto Empedocle one before migrating to the United States in 1903—was admitted into the Philadelphia family in 1905. He then moved to Pittsburgh, where after a brief and successful campaign against the despised local gang of Neapolitan descent, he murdered the boss and became a capo. Such a route was open as late as 1925, when Maranzano was accepted into the Schiro family right after arriving in New York City "because," writes Bonanno, "of his position in Sicily."[60] It was customary for would-be members to carry a letter from Sicily testifying to their position in the cosca back home. When Morello was captured in 1909, the secret service discovered such "letters of admittance." Gentile confirms in his memoirs that would-be mafiosi from the old country needed a "letter of reference" from Sicilian bosses in order to be admitted into a cosca, and any change of family had to be approved by the boss back home. A second route was birth in a Sicilian town that was known to be under the sway of the mafia, and thus where Sicilian mafiosi could "vouch" for a prospective U.S. member. Third, coming from a well-known mafia family could ease admittance. This appears to be the way Bonanno entered the Schiro mob: his father had been a leader back home. Still, in contrast to Sicily, mafiosi in the United States could move

quite freely from one family to another, as Gentile did, and dual membership (Sicilian and American) was possible.[61]

As a consequence of Prohibition, the New York mafia families consolidated and grew in number (table 5.1). Masseria, who had played a crucial role in the development of the curb exchange, was the boss of a new family firmly located in Brooklyn and the Bronx as well as in Manhattan and, following the murder of D'Aquila, the D'Aquila family had become an ally. Joe the Boss also had contacts with mafia syndicates in Chicago, Detroit, and Cleveland (Capone was his ally in Chicago). Maranzano, who had taken control of the Brooklyn Schiro family, greatly strengthened it to the point that it became Masseria's main competitor in the war that broke out in 1930, the Castellammare War. The Reina (later Lucchese) had absorbed the bulk of the Morello borgata in the 1920s. By the late 1920s, a second new family had emerged, the Profaci, later called Colombo. Thus, the number of established mafia groups in New York City grew to five and also swelled their ranks. The Castellammare War was a conflict between the two main leaders at the time, Masseria (allied to D'Aquila) and Maranzano (allied to Reina; Profaci remained neutral). Although Maranzano won the war, he was soon gunned down, due to the fear that he would want to exert excessive control over the other groupings. As a result of the war, the new leaders created a commission—a forum where key decisions were discussed and enforced. Individual families retained their autonomy, and over the subsequent decades, the commission tended to intervene mainly when an individual family was unable to choose a successor and plunged into internecine violence. Contrary to a widespread conception suggesting that the Five Families were created after the Castellammare War, they were already in place by the late 1920s. What did change after the conflict was the identity of some leaders. For instance, because of the war, Luciano and Bonanno were elevated to the rank of boss. These Five Families exist to this day.[62]

By the late 1920s, U.S. families were growing in importance in the eyes of their Sicilian counterparts. For example, when a significant dispute arose between two Palermo mafia factions in 1928 over how to split a payment from a company that had obtained a public contract thanks to the mafia, a U.S. delegation was sent to put an end to the dispute, as testified to by Dr. Melchiorre Allegra in his 1937 deposition: "I was told that three

special delegations composed of mafiosi residing in the US arrived [in Palermo] with the ultimately unsuccessful aim of finding a solution to the dispute."[63]

The U.S. groups were also becoming autonomous, rescinding any dependency on the Sicilian homeland. By the end of the war that pitted Masseria against Maranzano, and led to the death of both leaders in 1931, dual Sicilian and U.S. mafia membership was forbidden. Furthermore, membership of a Sicilian cosca was no longer a sufficient qualification to join a U.S. family. Buscetta dates the full separation between the two entities at around 1950.[64]

Because of the Castellammare War, the families had turned to new sources for recruitment. In order to increase their ranks to fight the war, families started to look beyond Sicilians and, anathema to a Sicilian mafioso, admitted Neapolitans, the most famous being Joe Valachi, who testified against the mafia in 1963. Over time, typical new recruits came to be youths of Italian descent who had grown up in the inner-city neighborhoods of New York City. The candidates would be observed for a while and then, if deemed worthy, schooled for full membership. This is a sure sign that the U.S. mafia had become an autonomous organization.[65]

Italian American families had not yet acquired a publicly recognized name. Until the 1960s, each borgata was called after the name of the boss at the time or the territory that they inhabited (for example, the Luciano-Genovese faction was known as the West Side to insiders). Thus how did the Gambino, Genovese, Bonanno, Colombo, and Lucchese families come to acquire stable names by the 1960s that have survived to this day? Table 5.2 offers an important clue. In October 1963, Valachi, a soldier in the Masseria-Luciano borgata, gave a televised testimony to the Permanent Subcommittee on Investigations of the U.S. Senate Committee on Government Operations (best known as the McClellan Committee). In October 1963 the bosses happened to be Gambino, Genovese, Bonanno, Colombo, and Lucchese. The testimony transfixed the U.S. public, and the families were from then on assured a place in the U.S. psyche with the names of the bosses at that particular time. As in other instances, an external source conferred a recognizable identity on a phenomenon that already existed but was struggling to consolidate. In order to be recognized, mafiosi themselves started to call their organizations by names that they had not quite chosen.

		Paul "Big Paulie" Castellano, 1976–85			

Notes: The dates refer to the tenure of each boss. The names of bosses at the time of Valachi hearings are set in bold. Tom Gagliano might have died in 1951.

Let me conclude this section on the birth of the Italian American mafia. Mafiosi arrived in New York City before a mafia was present, in a fashion not dissimilar from the arrival of members of the `Ndrangheta in Bardonecchia and Verona in the 1960s. The push factor was the unintended consequence of prosecution in Italy along with the attempt of mafiosi in Sicily to avoid mafia disputes and punishment, as was the case with Yakovlev's move to Rome in the 1990s and those of triad members to China in the 1990s (see chapter 6). Some of course just came as part of the generalized migration to North America, in search of a better life. In the nineteenth century, the most profitable markets were already protected by a combination of corrupt police officers and local politicians. The arrangement is not unlike the "protective umbrellas" operating in China (see chapter 6). Italians in the United States did congregate in crime groups and even performed admission rituals, while the Sicilian homeland had a say on admission and moves among families, and operated as a certification agency on reputations. The Italian Americans involved themselves in ordinary crimes, such as counterfeiting, horse theft, and crude extortion.

In the first decade of the twentieth century, leaders of the Progressive movement to reform city politics were successful in curbing grand corruption. Prostitution, gambling, and late-night drinking as well as labor relations were suddenly left unprotected. A central argument of this chapter is that the unintended consequences of police reform gave the mafiosi a golden opportunity to become entrenched as suppliers of services of dispute resolution and protection.

In addition, the Progressive movement succeeded in banning alcohol consumption and manufacturing in 1920. Thus, another vast unprotected market was created shortly after the reform of the police. Mafiosi stepped in to protect truckloads entering the city from Rum Row and large stills in upstate New York. They were also instrumental in the creation of spaces where suppliers could meet distributors and prices could be set. The Italian mafiosi were independent of either suppliers or distributors, offering their services to both. Contrary to a common perception, Prohibition did not create the Italian American mafia.[66] Rather, mobsters had already penetrated some key markets in the previous decade. During and after Prohibition, the Italians continued their involvement in other illegal markets, such as prostitution and gambling.[67]

The Five Families as we know them today had already been formed by the mid- to late 1920s. They had also already started to assert their independence from the Sicilian homeland, as demonstrated by the fact that dual membership in the two organizations came to be forbidden and the major source of recruitment became, from the late 1920s onward, local youths of Italian descent. The final nail in the organizational edifice of the Italian American mafia was the Valachi testimony in 1963. While it fixed the spotlight on the organization, it also gave each family a stable and recognizable name that persisted after the demise of the particular boss.

Italian Mafia in Rosario

Italians set foot in Argentina earlier than in New York City, arrived at a more even pace, and were the most numerous migrant group. Significant influx to the shores of Río de la Plata had started already in the mid-eighteenth century. By 1855, Italians were the largest migratory group in Buenos Aires and other urban centers in the provinces of Santa Fe and Entre Ríos. Most of them lived in the La Boca neighborhood of Buenos Aires, where they already constituted almost a quarter of the capital city's population. Italians continued to form the bulk of overseas migration to Argentina in the last decade of the nineteenth century and until the First World War. According to the Third National Census of 1914, almost a million of them resided in Argentina, making up 20 percent of the population of the capital.[68] While those going to New York City arrived relatively late in the city's own development, when other ethnic groups had already established themselves and the majority of them joined the unskilled labor force, in Argentina the first wave of Italians was able to enter the professions and more generally join the local elite.

The regional background of Italian immigrants to Argentina was also different from the background of those who emigrated to New York City. In the Latin American country, 41 percent came from northern Italy, 47 percent from southern Italy, and 12 percent from central Italy (see table 5.3), while some 80 percent of the migrants to the United States had originated in southern Italy.[69]

And yet one has to be mindful of the changes over time. Arrivals to Argentina from southern Italy jumped from 28 percent of the total Italian immigration in the 1870s to 55 percent in the first decade of the twentieth

Note: "The regional divisions used here are those in effect before 1919—that is, northern Italy includes Piedmont, Liguria, Lombardia, and Veneto; central Italy includes Emilia, Toscana, Marche, Umbria and Lazio; southern Italy includes the remaining peninsular divisions plus the islands" (Klein 1983, 309).

century. By the end of the nineteenth century, migration from northern Italy declined (especially from Liguria and Lombardy), while arrivals from other central (Le Marche) and southern regions (Abruzzi, Campania, Calabria, Basilicata, and Sicily) increased in relative terms. In the first decade of the twentieth century, many Sicilians, mainly from Caltanissetta, Catania, and Agrigento, moved to urban Argentina. Their professional background also changed: the number of farmers (*agricultores*) declined, while the numbers of day laborers (*giornalieri*) and artisans increased.[70]

After Buenos Aires, Rosario attracted the greatest number of immigrants, mainly from Europe. Italians started arriving in the first half of the nineteenth

century and represented the highest percentage of the city's foreign residents, followed by the Spaniards (who were almost as many as the Italians in 1926), French, Russians, and British.[71] The composition of the Italian contingent in Rosario did not diverge from the national trend. The majority of Italian immigrants recorded in 1870 was from Liguria, Piedmont, and Lombardy, and was made up of mostly shopkeepers and shop assistants, craftspeople, or those employed in the services sector. This first wave was upwardly mobile, in a social setting that did not have an entrenched Argentinean aristocracy. The later influx represented less-qualified workers (agricultural laborers and day laborers), who found jobs in the construction of urban infrastructure and did not achieve the same economic success. According to estimates by economic historian Carina Frid, the Sicilian population reached its peak in Rosario in 1900–1914, when it represented between 15 and 20 percent of Rosario's Italian population for a total ranging from 8,500 to 10,800 of the 54,401 Italians residing in Rosario in 1914.[72] An analysis of marriage records in the Fifth District of Rosario in 1905 (n = 582) shows that 19 percent of the total number of those getting married originated from Sicily, followed by Piedmontese (18 percent). Other regions were less represented.[73]

A number of the Italian residents in Rosario (including the leaders of its mafia) had been born in Agrigento Province in Sicily. According to a conservative estimate, the Agrigentini in Rosario were just below one thousand in the period 1900–1905. At the end of the nineteenth century, this part of Italy experienced substantial departures to both North and South America. Some villages in the northern part of the Magazzolo Valley (Alessandria della Rocca, Cianciana, Bivona, Raffadali, Santo Stefano Quisquina, and Burgio) were almost emptied (see fig. 5.1). The valley was an inhospitable land, where most people worked in the fields or sulfur mines. The inhabitants were mainly bricklayers, shoemakers, and unskilled workers. Some found employment in construction, while others went to reside in—and work in the fields of—the agricultural towns of Arroyo Seco, Serodino, and Villa Gobernador Gálvez outside Rosario (see fig. 5.2).[74]

Was there a "supply" of people with mafia skills in Rosario, as there was in New York City? The Rosario mafiosi were from Sicily, originating from the Magazzolo Valley. José Cuffaro and Esteban Curabà, heading a group of *paesani* involved in kidnapping and blackmailing from the mid-1910s, had been born in Raffadali, near Agrigento. Gaetano Pendino, a Sicilian

Juan Galiffi (1892–1943), the charismatic crime boss of Rosario in the 1930s, known as "Al Capone Argentino." Photo Credit: Osvaldo Aguirre. Historias de la mafia en la Argentina (Buenos Aires: Aguilar, 2000).

from Alessandria della Rocca, chose to migrate to Argentina, where he arrived in 1888 at the age of thirty-five and eventually became the boss of the mafia in Rosario. Santiago Buè and Carlo Cacciatore, members of Francisco Marrone's group (see below), came from the same town in Agrigento Province, and were at once cousins and brothers-in-law. Some Sicilians later involved in crime in Rosario originated from Catania Province, but their role was more limited.[75]

The most charismatic crime leader of the 1930s was Juan Galiffi, dubbed by the press "Al Capone Argentino" and made into Argentinean public enemy number one. Born in Ravanusa (Agrigento) in 1892, he arrived in Argentina in 1910 and first settled in Buenos Aires. Galiffi claimed to be a barber and trader. His career as a businessperson was rather successful. He associated with a Milanese who owned a vineyard in the province of San Juan. Soon after, he forced his Milanese partner out and became the sole proprietor of the firm Vinos Galiffi as well as the owner of a furniture

workshop. His criminal career started in the 1910s as a thief in Santa Fe, Córdoba, La Rioja, and Salta provinces. In the early 1920s he married the daughter of a criminal from the town of Gálvez (240 kilometers from Rosario), where he rented a café (*fonda*). He was accused of robbery and disposing of stolen goods (fencing), though he managed to avoid prison. By the mid-1920s, he had moved to Rosario, where the police suspected him of being a mafia boss as well as involved in several kidnappings and the 1932 murder of a *La Crítica* journalist. Galiffi was also suspected of counterfeiting, extortion, and fixing horse races.[76]

A new generation of mafia leaders arrived in Rosario in the latter part of the 1920s, as a consequence of the fascist repression in Italy. Their arrival upset the local equilibrium and led to violence. The most important newcomer, via France, was Marrone, known as "Don Chico" or "Chicho el Chico" (although he used an exotic name at first—Ali Ben Amar de Sharpe). According to a statement made in 1938, Don Chico arrived in Argentina in 1930 with messages to deliver to Galiffi from Palermo. More specifically, a defendant (who was the first person that Marrone contacted in Argentina) claimed that Marrone "had a mission to accomplish" on behalf of the Sicilian mafia, to ensure that his fellow Palermitani were not taken advantage of by the Sicilians from Agrigento.[77] As soon as he arrived, he tried to muscle his way to the top of the local underworld. He orchestrated the death of three old-timers allied to Galiffi in a villa in San Lorenzo (twenty kilometers from Rosario). The massacre generated great police interest and concern among other Italian criminals, sowing the seeds of further violence. Marrone's epoch was short lived, however. In April 1932, Galiffi convinced him to attend a meeting at his house in Buenos Aires, where Marrone was assassinated.[78]

Local Conditions

I now turn to review the local economic conditions of the city in order to explore whether a demand for protection might have been present in specific markets. Rosario in 1850 was a trading post of no more than three thousand inhabitants in the southeastern Santa Fe Province. It was famed in the late eighteenth century for its locally bred mules as well as the silver, copper, and hides that it received from the interior and forwarded to Buenos Aires. From the late 1830s, its port was banned from foreign trade

by a decree of Juan Manuel de Rosas, the first strongman of independent Argentina. Yet Rosario's marginal economic role was to end in August 1852, when a politically weakened Rosas ended Buenos Aires's legal monopoly on international trade. The port was now allowed to receive ocean-going ships. Another lucky development took place a year later, when the province of Buenos Aires seceded from the rest of the country (it rejoined a decade later) and Rosario became for a brief period the capital-cum-port of the Argentine Confederation. As a consequence, Rosario's trade and population tripled between 1852 and 1858, and received a significant number of Italian immigrants, mainly from Liguria and Piedmont, who would eventually form the economic and social elite. As the city's leading historian Juan Álvarez noted, there were two great epochs in Rosario's history: "that with the river closed, which meant poverty and backwardness, and that with the river open, which meant prosperity and culture."[79]

In the mid-1870s, Rosario as well as the rest of the country went through an economic depression, stopping economic growth and reducing immigration to half of what it had been earlier in the decade. By the 1880s, though, the recession ended, and stable links with international capital and commodity markets led to an impressive burst of direct investment along with the arrival of nine hundred thousand immigrants to Argentina between 1880 and 1890.

The economy of Rosario from this period onward was mainly based on grain production, and land plots tended to be large. Agricultural development was impressive: grain production tripled between 1883 and 1895, and at least 150,000 seasonal laborers worked in the fields. In contrast to western Sicily, where land plots were small, medium-scale rural properties of one to three hundred hectares were common in the province after the 1860s; land tenancy developed in some districts of southern Santa Fe, as large-scale land proprietors (mainly cattle breeders) rented out part of their land for agricultural production. In 1890, an economic crisis ruined many small private producers and agricultural colonies, hastening the trend toward the consolidation of landownership. The price of land increased, making it even harder to buy after 1890. According to economic historian Michael Johns, Rosario lived off the value of its rich hinterland. "Moving commodities, primarily grain, was Rosario's main economic function."[80] The massive expansion of agriculture led also to the creation of factories mainly connected to agriculture production, rail links, and housing.[81]

Unlike in Sicily, where *banditismo* was rife after Italian unification, there was no threat to the transportation of products from the interior to the port. The bands of *Indios* that could have intercepted the goods and robbed the farmers had been exterminated by the vicious campaign conducted by Rosas in 1833 in the province of Buenos Aires. In the second half of the nineteenth century (1858–84), the local provincial government ensured that the rich landowners had nothing to fear from these and other potential bandits. In addition, trade unions were slow to organize in Argentina. Unionization started at the end of the nineteenth century, while the first strikes took place in 1902–3, led mostly by anarchists from northern and central Italy. A wave of strikes hit Argentina in the period 1907–10, but the police ruthlessly repressed them. A leader of the Radical Party in Rosario concluded a speech in 1906 by attacking the government's violent repression with these words: "Here in the City of Rosario . . . the police declared the workers outside the law. Under the pretext of searching for presumed delinquents, they have closed down union headquarters, they have searched homes at all hours of the night, masses have been imprisoned, and what is more despicable, workers declared innocent have been held for 18 hours and beaten up in police stations." There was no Mayor Gaynor to protect protesters.[82] Contrary to New York City, in Rosario there was no demand for an illegal protection agency to supply muscles against employees. The official organs of the state took care of that.

The economic crisis that coincided with the First World War caused numerous small farmers, land tenants, and businesses to default on their credits. Yet no demand for informal dispute settlement in the countryside emerged, mainly thanks to a peculiar system for settling disputes—an informal tribunal known as Paz del Trigo.[83] After 1918, Rosario experienced another brief economic boom that came to an end with the worldwide crash of 1929. The city then relinquished its role as a leading commercial center and has relied on grain exports ever since. Argentinean democracy suffered a blow in 1930, when a military coup took place. Although a civilian government was reinstated in 1931, the Partido Radical and the Communist Party were outlawed, and electoral frauds helped a general win the presidential elections. This period in Argentinean history is known as the Infamous Decade and marks the beginning of the end of Argentinean democracy. By 1943, another coup was staged.

The Construction Sector

There was a point in the history of Rosario when a demand for extralegal protection might have emerged: the construction boom of 1904–11 offered Italian criminals the opportunity to enforce a cartel of firms, excluding competitors in a lucrative market, as the `Ndranghetisti did in Bardonecchia in the 1960s. I now explore this little-known episode. Pendino operated a construction firm from 1895 until around 1913, at a time when the sector was employing between 8 and 12 percent of the entire labor force. Figure 5.6 records the number of building permits granted by the city of Rosario between 1890 and 1910. It shows an increase between 1894 and 1895 and a steady growth from 1904. The boom came to an end by the beginning of the First World War.

The housing boom was driven by the construction of new *conventillos* (tenements) and the transformation of houses into rental units—a profitable investment. Indeed, according to estimates by Johns, rents on houses and labor costs were possibly the highest in Argentina.[84] Labor in the construction industry was organized through merchants who supplied workers (bricklayers, painters, carpenters, and unskilled laborers) to construction firms. The merchants organized workers from the same area of origin in Italy and even offered them accommodation. Italian laborers, bricklayers, and builders had also formed their own association in 1895, the Sociedad Cosmopolita de Obreros Albañiles, which comprised around five hundred members out of a total workforce of seventy-five hundred. Except for the years of economic crisis (1890–95), the demand for bricklayers and construction materials was high, and it increased particularly after 1904. As the industry began to boom, workers mainly originating from central and southern regions, such as Le Marche, Calabria, and Sicily, were hired.[85]

In order to ascertain whether new construction firms owned by southern Italians had entered the market, I collected information on building permits from 1890 to 1910. Table 5.4 shows the share of the market in the preboom and boom periods.[86]

Between 1890 and 1904, four firms had a significant share of the market. Rizzi and Prioni were both run by families from the North (respectively, Liguria and Lombardy). Little is known about Bongiovanni, except that it operated only until 1899. Curti was from Agrigento and a relative of Pendino. Indeed, it is likely that Pendino chose to migrate to Rosario because

1088

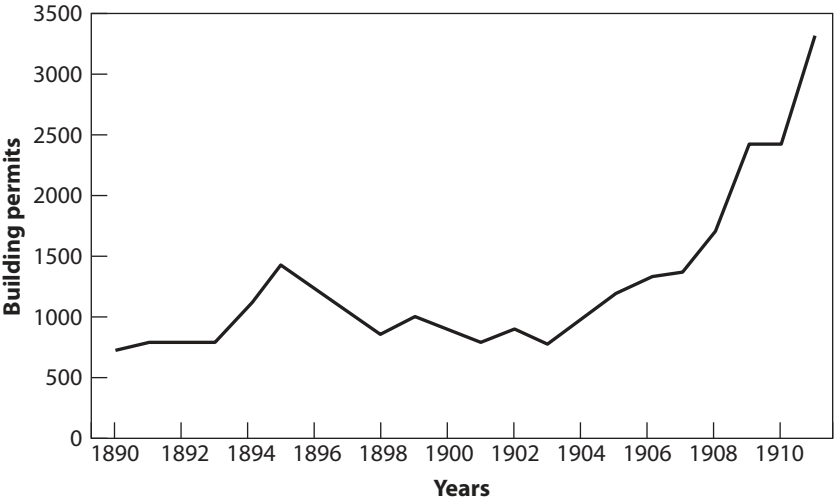

FIGURE 5.6 Building Permits, Rosario,1890–1910
Source: Lanciotti 2004, 229.

he hoped to find a job through his relative. All four firms are documented as operating since at least the early 1890s. I have also listed Micheletti, although it had only 3.2 percent of the market in this period, because it became a significant player later. An established firm, Micheletti was closely connected to the Catholic church in Rosario and remained a prominent constructor even after the First World War. The rest of the market was quite fragmented. Fifty-nine firms (out of eighty-five) had less than 1 percent of the permits. Only ten companies had more than five contracts.

As the market expanded in the next period, the number of firms grew (N = 189) and the established firms lost quotas. Micheletti, Rizzi, Prioni, and Curti were now the top four firms, with 22.8 percent of the total permits. The remaining ones gained little share in new projects. In the 1905–11 period, 157 firms applying for permits had less than a 1 percent market share, out of a total of 189 firms. Pendino's firm had 1.1 percent of the construction permits in this period. Large traditional companies such as Maspoli and Co. won profitable public contracts, including the construction of the Italian Hospital of Rosario, the Opera Theater as well as the North, South, and Central Markets.[87]

Rosario's construction market shares some key similarities with Bardonecchia's. They include a sudden boom, the presence of both workers

TABLE 5.4
Percentage Shares of Licenses Obtained by Five Firms to Build New Dwellings, Rosario, 1890–1907

Firm/year	*1890–1904*	*1905–11*

and entrepreneurs from so-called mafia regions (Calabria and Sicily, respectively), and a clear attempt by individuals linked to the mafia to establish themselves in the market.[88] Masons were organized in a trade union of notable size, making communication and coordination easier. Why, then, did the mafia fail to penetrate this market? Surely the most profitable public projects of this time required contacts within the political elites, and traditional companies secured those contacts. Yet the market boom revolved around the construction of houses for the middle and lower middle class in the suburbs as well as the working-class neighborhoods—a sector of the market that could have been cornered by mafia firms. Also, in such a long period, firms connected to the mafia could have secured public contracts, as they did in both Sicily and New York City, and Rosario gangs had contacts with the political elite of the period, as mentioned below.

Despite some crucial similarities, differences exist that ultimately explain the diverging outcomes. A structural difference is the sheer scale of the market: many more operators were at work in Rosario than in Bardonecchia[89] A mafia finds it extremely difficult, if not impossible, to create cartels when the market actors run into the hundreds. Most crucially, the mafiosi did not have a lock on the labor supply. Recall that in Bardonecchia Lo Presti was the sole supplier of unemployed workers to local companies, which hired their workforce in defiance of existing legislation. Lo Presti ensured services of dispute resolution between workers (hired

1090

illegally) and construction firms (which benefited from such informal arrangements, but could not use the law when disputes arose). In Rosario, firms could bypass a mafia fixer and hire workers through several *padroni* who had no connection to the Agrigentani. Two generous sources of labor were available: the rural folk who moved to the city during the agricultural off-season in search of work in the housing industry, and continued migration from Italy.[90] Since migration from Italy was conducted through "chains"—namely, immigrants arrived because relatives and acquaintances had arrived before them—the supply of labor was diversified. Workers from several parts of Italy, such as Le Marche along with various parts of southern and northern Italy, would arrive in Rosario and be directed to employment through their regional networks. None had complete control over the supply, as Lo Presti had in the case of Calabresi working in Bardonecchia. Since workers in Rosario were hired legally, within a general framework of informality and flexibility, there was no demand for extralegal dispute settlement. To the extent that disputes arose, bosses could turn either to the law or existing informal systems of dispute resolution (it does not follow that workers were better protected in Rosario than in Bardonecchia).

Italian Criminality

The mafia failed to penetrate a booming new market (construction). In addition, trade union activism was repressed by brutal state intervention, thus there was no demand for mafia groups to do so, and no significant illegal market existed in the city. Some of the mafia activities do suggest an attempt to offer services of dispute resolution and protection, however the demand was never enough for the mafia to become a viable and long-term criminal group. Pendino acted as an informal judge within the Sicilian community of Rosario, moderating differences and trying to settle disputes. Along with his associate Curabà, Pendino represented the *mafia limpia*. A member of Marrone's gang (see below), testifying before a judge in 1939, described them as "people who had ascendancy over their countrymen and settled their disputes."[91] A police document dated 1899 contains a description of the new crime of *vendetta*: the use of violence to settle disputes within the Italian community without turning to the authorities. The murder of Francisco Randisi, an unemployed day laborer

1091

from Raffadali who was assassinated in 1909 while leaving a boarding-house used by Sicilians, was considered a vendetta murder, as was the murder of Cayetano Saracco in 1903. In a town fifty kilometers south of Rosario (Arroyo Seco), Maria Ferraris was murdered in 1910. The police discovered that the murder had been ordered by her husband and carried out by people linked to Pendino. Vendetta episodes continued to feed the collective imagination and the police chronicle. In some cases, the authorities concluded that such crimes were the product of an internal mafia feud, as in the case of the homicide of Nicodemo Furforo, which took place in Arroyo Seco in 1911. Furforo was suspected of informing the police about a plot to assassinate a shopkeeper.[92]

Italians also provided muscle and personal protection for politicians or their clients during the elections. The local mafia groups sided with the provincial government, which supported the Unión Cívica Radical Antipersonalista, a faction of the larger Unión Cívica Radical (1891), founded in 1924. They acted as bodyguards, intimidated the political opponents of incumbent government officeholders, and helped secure election victories in small towns and cities in the interior of Santa Fe Province. Mafia boss Galiffi in the mid-1920s carried out several acts of intimidation against the local opponent of the Unión Cívica Radical Antipersonalista in the town of Gálvez (there is no evidence that Galiffi had a political agenda of his own).[93]

The political elite did return favors. The first indirect evidence of such connections emerged in the first decade of the twentieth century, when twenty Sicilians from Agrigento Province requested Argentinean citizenship and were supported by Lisandro de la Torre, a candidate for the Liga del Sur, a reformist party that represented the interests of traders and rural producers south of Santa Fe. Among the Sicilians was Pendino, who was considered at the time the boss of the local mafia. More direct evidence of favors emerged when Carlos Centeno, lieutenant governor of the Unión Cívica Radical Antipersonalista, repaid gangs connected to Galiffi by ensuring the reduction of the prison sentences they received for committing a murder. The Antipersonalisti also approved Galiffi's request for citizenship in 1925 (Galiffi by that time had been operating in the criminal underworld in Santa Fe). Arturo Amato, a Radical Party leader and police adviser, became one of the defenders of Galiffi in the first case against him for robbery and blackmailing, while Claudio Newell, a lawyer and

politician with the Radical Party, defended associates of Galiffi. The Santa Fe political elite favored the election of judges amenable to "listening" to political officials. The criminal activities of these Italians were protected in the 1920s and 1930s by the weakness and impunity generated by the same judicial system of Santa Fe Province.[94]

And yet the Rosario mafia was never able to offer services that were demanded by a large enough sector of the local population. For the most part, it engaged in an Argentine version of the Black Hand (Mano Negra) blackmail practices, train robberies, and kidnapping for ransom. The victims of blackmail and threats were in most cases fellow Italians who worked in small businesses, or were craftspeople, shopkeepers, and commodity traders. José Martiré, a potato trader who resided in the suburbs north of Rosario, refused to yield to frequent blackmail and had an incendiary bomb thrown at his house in 1911. Even a prominent member of the underworld, Pendino, was on the receiving end of an arsonist attack in 1907. Although a Mano Negra group led by three men originating from nearby Catania was arrested in 1912, blackmailing continued throughout the 1920s, in contrast to New York City, where this type of crime died out by 1915.[95]

The Cuffaro gang, the most renowned in the 1910s, is credited with carrying out the first Argentine train robbery. Thanks to a tip from a guard who worked in the Central Railway, the gang attacked train number 20 on its way from Tucumán to Buenos Aires. The exploit made the headlines, while the police were duly criticized for their incompetence. As a direct result of the public outrage, the investigation unit of the Rosario police was reorganized and its leadership removed.[96]

By 1914, criminals of Italian origin had turned to a new crime: kidnappings for ransom. The first well-known case was that of the son of Antonio Bevacqua, a coal merchant. His kidnapper, Nicolás Ballestreri, one of the first capos to engage in ransom kidnappings, demanded an exorbitant sum, but did not receive it and so killed the hostage. Kidnappings for ransom continued in the 1920s and 1930s in Santa Fe Province and Buenos Aires, and generated significant social alarm. The victims were professionals, traders, industrialists, and landowners. One of the most brazen acts on the part of the mafia was the kidnapping and murder in 1932 of Silvio Alzogaray, the Rosario correspondent for *La Crítica* who had covered crime in the city. Several theories were floated in the press as to why such a murder was carried out. One suggests that Alzogaray had tried to extort

money from mafia boss Galiffi in exchange for compromising documents, while another theory purports that the journalist had started to uncover police corruption in Rosario.[97]

The abduction and murder of Abel Ayerza—a medical student and son of a wealthy Catholic doctor whose family was connected to the Agustín P. Justo's government—in October 1932 stirred public opinion in an unprecedented way. The case inspired two plays at the time, *La Maffia* and *Don Chicho*, and two movies, *Bajo las garras de la mafia* (1933) and *Asesinos* (1933), and influenced the Senate debate on the new Criminal Code. Rumors ranged widely, and included suggestions that the incident was a staged kidnapping. The discovery of the young man's body on February 21, 1933, led public opinion to focus on the failure of the police and generated calls for the culprits to be severely punished. At the funeral, one orator blamed unregulated foreign immigration for the rise in violence in the country. The boy's kidnappers, linked to Galiffi's gang and of Italian origins, were apprehended in April of the same year (the boy was held captive by the Di Grado family, which owned a fruit and vegetable store in Rosario).

After the murder of Abel Ayerza in 1933, Galiffi fled to Montevideo. He then decided to return to Argentina in 1934 in order to prove his innocence, but was betrayed by his associates, arrested, and accused of the kidnapping of Marcelo Martin (a professional snatched in 1933). After a brief time behind bars, Galiffi was expelled to Italy in 1935. There he continued his low-level criminal life. Accused of counterfeiting, in 1939 he was imprisoned in Milan, where he died in 1943. Galiffi's arrest and expulsion weakened the Rosario mafia, which was also under renewed pressure from the government and the press because of the Ayerza murder (the mafia was also accused of consorting with anarchists). The majority of the ringleaders received prison sentences, while others were expelled from the country.[98]

Galiffi's shadow, however, still haunted the collective imagination; rumors suggested that he had returned illegally to Argentina and that his followers rallied behind his daughter, Agata Galiffi. Agata's green eyes earned her the nickname of "Gatta" (cat), while her decision to leave her husband and move in with a lover fascinated the local press. Up until her arrest in 1938, she was heavily involved in criminal affairs. She had been present at the murder of Don Chico in her father's house and, after Juan had fled to Italy, she continued to organize currency and stock counterfeiting operations.

Agata Galiffi (1916–67), the olive-skinned and aspiring actress was the daughter of Juan Galiffi, the Rosario mafia boss. Known as "Flor de la Maffia," she followed in the footsteps of her father and masterminded the Banco de Tucumán robbery. Photo Credit: Osvaldo Aguirre. Historias de la mafia en la Argentina (Buenos Aires: Aguilar, 2000).

The police regarded her as a capo in Rosario and a key player in the Argentine underworld. In 1938, she was arrested while discussing a plan to rob a bank in the city of Tucumán; the gang had drilled a tunnel almost a hundred meters long with the aim of switching good banknotes kept in the bank's safe with fakes. Sentenced to prison in 1939, Agata was released in 1948 and went on to work as a nurse in Rosario, Buenos Aires, Villa Constitución, and Caucete (a small town in San Juan Province), where she managed her father's property until her death in 1967. By 1940, the Italian mafia had died out.[99] Galiffi is now one of trendiest clubs in Rosario, "prácticamente un icono de nuestra ciudad," writes one of its five thousand friends on its Facebook page, advertising two dancing halls, karaoke, and a VIP space for its best customers.

In conclusion, Italians migrated to Rosario in two broad phases. The first wave of migrants was from the North, some joined the professions while others became large landowners and entrepreneurs. The profile of the migrants in the second phase is quite similar to those who migrated to New York City and were mainly low skilled, and found employment in agri-

culture as seasonal laborers and in the construction industry. Among the immigrants from Sicily, some had a mafia background, but the local conditions did not offer opportunities for these mafiosi to become established in the long run.

As in Bardonecchia, the construction market boomed and individuals connected to crime tried to penetrate it. The size of the market, much larger than in Bardonecchia, and the presence of a varied source of cheap labor that was not controlled by the mafia led to the ultimate failure of this criminal organization to control a key sector of the economy. As for illegal markets, and in contrast to New York City, in Rosario there was no equivalent of Prohibition. In addition, the police repressed labor militancy, thereby drying up a source of activities in which the mafia in New York was prominent. It is intriguing to note that the Partito Radical seemed to make use of mafiosi—the very party that would be banned after 1931. This suggests that electoral democracy would in some circumstances offer opportunities to mafias—a theme that I will return to in chapter 7. Rosario mafiosi thus engaged from the start in crimes such as theft, counterfeiting, the Mano Negra, and to a degree unknown even in the early years in New York City, kidnapping. A rudimentary organizational structure and the presence of charismatic leaders were not sufficient to entrench this mafia in Rosario. There were some mafiosi, but never a mafia.

Conclusions

Rather than summarizing the reasons for the divergent outcomes of Rosario and New York City, I want to try to take stock of the results that have accumulated across the six case studies (table 5.5). As for "supply," generalized migration from mafia territories is usually present when transplantation succeeds, with the exception of Budapest. Yet migrants from mafia territories do not invariably produce a mafia, as testified to by the case of Rosario discussed in this chapter. Clearly, a supply of mafiosi must be present for transplantation to take place, and thus the long list of "Yes" in the "Mafiosi migration" row in table 5.5. What is rather counterintuitive is that I found no instances where mafiosi rationally decided to move in order to open an outpost abroad. They were usually pushed out by state policies, mafia feuds, or in some cases covered in this chapter, poverty. (In the case of Hungary, the initial supply of foreign individuals inclined

1096

to form criminal groups was composed by Red Army defectors). Yet, when forced to move, mafiosi do not choose their new location at random: unless they are told by the courts where to go, they usually join relatives, trusted friends or previous contacts. Contrary to the view that high levels of trust prevent transplantation, this book's findings indicate that such outcome is possible even in highly civic territories, such Bardonecchia. Table 5.5 also suggests that local protectors must not be present for a mafia to transplant successfully. The case of New York City before 1910 is telling: while the police themselves were enforcing protection rackets, the Sicilians had no hope. Paradoxically, when a movement to reform city politics and the police was successful at curbing corruption, a demand for protection developed.

Transplantation goes hand in hand with a demand for criminal protection. New and booming markets tend to generate such a demand. For a mafia to be successful and exert a role, though, it must be able to solve problems in such markets that have not already been solved autonomously by local actors, as in the case of Verona. For instance, the Italian American mafia supplied a service highly valued by market operators: protection of the truckloads and stills, and a place where buyers and sellers could meet. Construction booms can generate such a demand when a mafia has monopoly access to cheap labor that can be hired illegally. Once firms and workers step outside the frame of legality, a demand for alternative forms of dispute settlement emerges. On the contrary, in Rosario local firms managed the same boom by hiring employees legally and bypassing anybody who could have exclusive control of the workers. Rather than liquid and floating in a virtual world, the markets covered in this book are all localized in a specific territory; there is no instance of a mafia offering protection to computer hackers or traders in sophisticated derivatives. Mafiosi might use the Internet for conducting frauds or invest their money in the Stock Exchange, but they do that as customers, not as protectors. Certainly, some structural factors can make it easier for mafias to become entrenched: the smaller a locality, the easier it is to control it. Yet a mafia can develop in a metropolis when an illegal market is large enough, as in the case of Prohibition. Ultimately, a demand for mafia services emerges out of transformations in the economy that local actors and regulators have not been able to govern. When foreign mafiosi are present and can offer genuine protection to some, transplantation is set to take place.

TABLE 5.5

Factors Facilitating Mafia Transplantation, Bardonecchia, Verona, Budapest, Rome, New York City, and Rosario

Factors facilitating mafia transplantation/cases	*Bardonecchia*	*Verona*	*Budapest*	*Rome*	*New York City (1910–30)*	*Rosario (1910–30)*	*Shenzhen/ Guangzhou*
Generalized migration	Yes	No	No	No	Yes	Yes	
Mafiosi migration (willing/unwilling)	Yes (unwilling)	Yes (unwilling)	Yes (unwilling)	Yes (unwilling)	Yes (unwilling)	Yes (unwilling)	
Supply of mafiosi	Yes	Yes	Yes	Yes	Yes	Yes	
Local conditions							
Level of trust/civic engagement	High	High	Low	Low	Low	Low	
Presence of local illegal protectors	No	No	No	No	No	No	
Size of locale	Small	Large	Large	Large	Large	Large	
New and/or booming markets*	Yes	Yes	Yes	No	Yes	Yes	
Demand for mafia services	Yes	No	Yes	No	Yes	No	
Transplantation	Yes	No	Yes	No	Yes	No	

* The markets considered are construction (Bardonecchia and Rosario), drugs (Verona and China), property rights (Budapest and China), oil (Budapest), alcohol (New York City), gambling (New York City and China), and prostitution (China).

SIX

The Future of the Mafias? Foreign Triads in China

The New China

I crossed into China in September 2009. My companion and I had boarded the East Rail Line in downtown Hong Kong heading toward Lo Wu, the last stop before the People's Republic of China. The trip takes no more than forty-five minutes, and there is hardly any time to enjoy the vista. The train races through the center of Hong Kong, allowing the passenger just a glimpse of Mong Kok, the suburb where most of the brothels and karaoke bars run by the triads are located, and quickly covers the several miles of the agricultural, sparsely built land in the new territories, before reaching the border. After our passports were checked on the former British colony side, we set out on foot to cross a modern overpass, equipped with conveyor belts for speedy arrival to the other side. The bridge stands over the Shenzhen River separating Hong Kong from the Middle Kingdom (the name of China in Mandarin). As we approached the other side, I looked at the riverbank through the thick glass. I was reminded by my companion that not long ago Chinese nationals trying to cross this stretch of water would have been shot at by border guards, just as the East Germans who tried to climb the Berlin wall. Today, the business elites of Hong Kong, Taiwan, and other capitalist economies are undertaking the journey in the opposite direction.[1]

Once we got across, we were in Shenzhen, a metropolis of twelve million with a skyline littered with as many skyscrapers as New York City (as

far as I could judge), hypermalls, and factories. The city lies on the eastern shore of the Pearl River delta. To the north was our next destination, Dongguan, where I was going to conduct several interviews. A fast train service then connects Dongguan to Guangzhou, the capital of the Guangdong region, the third city in which I spent time last winter.

Until 1979, Shenzhen as such did not exist; it was a fishing village named Bao'an, with 310,000 residents. This part of the world was transformed in more than just name when Deng Xiaoping decided to open China to the world economy in 1978. The new policy called for the creation of special economic zones where the government offered tax benefits, relaxed regulation, invested in better infrastructure, and reduced bureaucratic obstacles in order to attract foreign investors. The central government selected several cities in the Guangdong, Fujian, and Hainan provinces as the sites of China's experiment with a market economy—among them Shenzhen and Dongguan.[2]

Deng's reform produced unprecedented economic development and unemployment. China's GDP grew by 8.8 percent between 1978 and 1991 on average every year (Guangdong's GDP grew by 12.8 percent on average in the same period). The economic boom spurred a construction spree and rapid urbanization. Roads and superhighways were built to serve the ever-increasing number of cars, and construction of some ten to twelve million housing units is begun every year (Chinese citizens can now apply for personal loans and mortgages). Capital inflow was mainly coming from Taiwan, Hong Kong, and the United States. After Taiwan lifted the ban on its citizens visiting China in 1987, the first to invest in the mainland were small- and medium-scale manufacturers. By 1991, Taiwan was the second-largest investor in China after Hong Kong. In the meantime, around 170 million peasants were officially classified as surplus labor in 1990. This number swelled to 200 million in 1994 and then approximately 300 million in 2000. The northeast was the most seriously affected area. Starting in the 1980s, the Chinese government also reduced military personnel on a large scale.[3]

The increase of surplus labor in the rural areas led to China's "internal immigration"—millions of people fled to cities to seek employment. Mostly they left the western and central provinces to find employment in the more economically developed eastern provinces, such as Guangdong, Zhejiang, Fujian, Jiangsu, and the cities of Beijing and Shanghai. Some

FIGURE 6.1 Maps of China

Shenzeng construction site. Photo Credit: Federico Varese.

two hundred million people were on the move. At three times the number of people who emigrated from Europe to the United States over a century, this represents the largest migration in human history. One finds them employed in factories, restaurants, cleaning services, babysitting, garbage collection, and the sex industry. (Several reports suggest that they are responsible for increasing crime rates.)[4]

Young, immigrant women service the entertainment and night economy of Shenzhen, as I discovered during the first evening that I was in the city, when we were invited by scions of rich Hong Kong businessmen to join them for a night of partying. Trendy, unattached, and foreign educated, these partygoers travel (with bodyguards) to Shenzhen every weekend and keep apartments next to upscale saunas. My evening's entertainment included a massage, dinner, drinks, and games at the most expensive sauna in town. Rather incongruously, the sauna was decorated with gilded festive ornaments hanging from the ceiling celebrating the sixtieth anniversary of Communist China in a setting that encouraged anything but communist frugality. The night ended at one of the hippest discos, Baby Face,

where we were greeted by the manager and quickly surrounded by hostesses, all immigrant women. Although prostitution was not on display at the disco, other clubs and saunas have such a reputation. And so do entire districts. The phenomenon is so widespread that certain parts of Shenzhen and Dongguan have been dubbed "concubine villages" or "second-wife villages" (*er nai cun*), where for a few hundred pounds a month middle-aged men from Hong Kong and Taiwan keep a young (immigrant) woman as a long-term mistress. One such neighborhood is the New Garden Village in Dongguan, a long row of drab apartment buildings and shopping centers, frequented by heavily made-up female shoppers.[5]

Movements of Triad Members to China: The Supply

Have triads from Hong Kong and Taiwan also followed the swarm of businesspeople, wealthy partygoers, and immigrants from the poorest parts of China, and transplanted to the regions that have opened up to Western capital? The first sign of foreign triad activities on the mainland dates to the early 1980s. In 1982, the Shenzhen police arrested 76 Hong Kong criminals with triad backgrounds. By 1992, 338 triad members were behind bars in Shenzhen. In the next two years, the Guangdong police arrested an additional 11 members of the Hong Kong triads.[6]

A key motivation for the brothers (triads members) to cross into China was to avoid police scrutiny and antigang crackdowns in Hong Kong and Taiwan. For instance, crime expert He Bingsong writes that

> police found that over 30 criminals that were wanted by the Hong Kong and Taiwan police came to hide in Shenzhen and engaged in criminal activities between 1992 and 1994. . . . While sheltering in Shenzhen, they not only continued their criminal operations, but also actively recruited new members and spread their criminal skills. For example, shortly after he escaped to Mainland China following an armed robbery, He Suti, a member of Hong Kong "Victory" Triad group, was involved in three stolen cars cases within three months.[7]

Since police in Hong Kong were making it increasingly difficult for triads to carry out their functions, such as reunions, parties, and funerals, the brothers went to China. The Sun Yee On, a Hong Kong triad, started

to perform ceremonies in Guangdong in 1999. The most significant one discovered by the police took place in April 2000, when three senior members of the Sun Yee On performed the Zhazhi ritual in Shenzhen. During the ritual, six Blue Lantern–level members were promoted to Red Pole, a senior position in the group. Shenzhen was also used as a convenient location to plan crimes far from the interference of Hong Kong antitriads squads. For instance, the kidnapping of the son of one of the richest Hong Kong businessman took place in 1996—a joint plot by a Hong Kong triad and Chinese gangsters in Shenzhen.[8]

Taiwanese mafia leaders and foot soldiers have also been escaping police crackdowns and hiding abroad since at least the 1980s. Indeed, a major effect of antitriads operations in Taiwan was to push gang leaders overseas and internationalize the Taiwanese underworld. The first major operation, named "Clean Sweep," took place in 1984 and lasted several months, leading to the arrest of thousands of criminals. Those who managed to escape fled Taiwan and sought refuge in Thailand, Japan, and the Philippines. Those who were caught were housed in two reform camps in remote areas of the country. After living together for almost three years, they came to know each other well. According to a Taiwanese middle-ranking boss, Clean Sweep did not solve the crime problem; "actually," he maintains, "it allowed *jiaotou* [organized crime] figures from across Taiwan to come together and establish a network. After their release, if one asked for help from another, it was unlikely that it would be refused."[9] Indeed, the Celestial Alliance, which was to become one of the most formidable and resilient mafia groups in Taiwan, was formed in those prison camps. The 1984 crackdown had a second unintended consequence: it disrupted the orderly division of territories among bosses, and allowed for ruthless, inexperienced aspiring criminals to emerge and claim profitable territories and businesses. When the brothers were released from the camps in 1988 and wanted to reassert power over their turfs, the authorities witnessed an escalation of gang violence. As a result, a new antimafia operation—"Operation Thunderbolt"—was launched in 1988. This time the targets were better prepared than in 1984; they were ready to flee, with their main destination being China. As He put it, "Many Triad groups members in Taiwan who were on the run or had escaped from jail came to Mainland China, changed their names, rented houses, got married and settled down."[10] Most of them chose Guangdong and the

Fujian region, which is located opposite Taiwan, some 150 miles across the Taiwan Strait (the dialect spoken in southern Fujian is the same as the one used in Taiwan). Although the first Taiwanese triad arrived in China in 1987, a massive exodus started only after Operation Thunderbolt, when some three hundred organized crime figures left Taiwan for China. Among them were Wu Tungtang of the Celestial Alliance as well as one of the leaders of Bamboo United, White Wolf (Chang Anlo), who moved to Shenzhen in 1988 and to this day lives there. Crime chronicles in both countries recount the stories of many brothers who moved to this part of the world, including one who arrived in Shenzhen via Argentina. Between 1992 and 1994, no less than thirty criminal leaders from Taiwan were hiding in Shenzhen.[11]

In 1996, a third major antitriads operation was launched in Taiwan, set off by the stabbing of one lawmaker, the kidnapping of another, and the outbreak of a major bid-rigging scandal—all involving triad members. As in previous antitriads sweeps, the major organized crime figures fled the country, with most of them heading to China. By 1999, more than a thousand members had settled in China, mainly in Dongguan, Guangzhou, and Shenzhen in Guangdong Province, Xiamen and Fuzhou in Fujian Province as well as in Shanghai and on Hainan Island, and they traveled freely to Singapore, Thailand, and the Philippines. By the beginning of the new century, Bamboo United had a presence in Guangdong and the Pearl River area, the Celestial Alliance in Fuzhou and Xiamen, and the Four Seas in Shanghai and Haikou.[12]

The Chinese authorities generally do not pursue fugitives and former criminals unless they commit crimes. In fact, they view their presence as an opportunity to attract foreign investment. Ultimately, as long as these gangsters bring investments to the mainland, they are welcomed as businesspeople by the Chinese authorities. And investments they did bring. In May 1992 a boss of Hong Kong 14K triad group, Huang Jianming, entered China and started a program of investments of 14K funds into Shenzhen, beginning with a restaurant. By 1998, he had acquired thirty-five properties. Similarly, the Sun Yee On invested in a multiplex to be built in Shenzhen (Nanshan District). Taiwan's Pine Union gang also bought real estate. Chen Nuoquan, a former high-ranking member of the Wo Shing Tong triad society, bought a hotel in Shenzhen (his hometown), where he recruited local youngsters and formed his own gang, the Fly-

ing Eagle. According to an investigation conducted in Shenzhen in 1999, among the fifty-two restaurants and entertainment businesses owned by overseas citizens, thirty-two were associated with outside triads, making up 62 percent of the total. In Fuzhou, Taiwanese triads formed joint stock companies, invested in shares, and hired local agents to open firms and purchase real estate. They established businesses in the service and entertainment sectors. For instance, Wu Tungtang, the leader of Celestial Alliance Sun Branch, owns a luxury hotel in Fuzhou.[13]

A major concern of previous chapters was to identify a supply of people who belong to a mafia group moving into new territories. Even a small number of the latter can be highly significant because such specialized criminals are well equipped to set up criminal groups. Although the numbers of hardened criminals might be relatively small, they have the potential to recruit among the new unemployed or underemployed immigrants. The data above suggest that a supply of members of the Hong Kong and Taiwanese triads was present and tried to create groups in mainland China. They moved due to renewed police pressure in their homeland (this was the historical nemesis of a set of events that took place in 1949, when Chinese underworld leaders had escaped to Hong Kong and Taiwan after the Communist victory in order to avoid execution).[14] Once in China, they found a land rich in commercial opportunities and invested some funds in the new market economy. Has the presence of these individuals led to the entrenchment of foreign mafias in China? Surely, new markets—legal and illegal—have suddenly emerged and expanded: construction, manufacturing, gambling, prostitution, and drug trafficking. Such developments in the economy lead to disputes among market actors, and the emergence of a demand for services of dispute settlement and protection. Who is fulfilling such a demand? My aim is to establish if foreign or local triads or members of the state apparatus offer criminal protection to these market operators.

I draw on twelve in-depth field interviews and a detailed examination of seventy-four mafia cases extracted from four Chinese-language sources.[15] For the most recent period (2008–9), I selected official press reports released by the Ministry of Public Security. All publications adopt the official Chinese definition of an organized crime group: "an organization with an underworld nature." To qualify, a group must show some organizational structure, a clear leadership, and engage in illegal activities. Otherwise,

the definition is rather general.[16] The cases are listed in the appendix to this chapter. The data have no claim to be representative.

Legal Markets

Workers in the new market economy have plenty of reasons to feel exploited and thus enter into disputes with their employers. For one, they might want to sue the companies for the appalling working conditions that they have to accept. In the four factories between Shenzhen and Dongguan that I visited, workers slept on bunks ten to twelve to a room in close proximity to unsanitary lavatories and were fed a basic meal (rice, a meat dish, and some soup), with the day starting at around 7:00 a.m. for a total of ten to twelve hours of work. The rooms were cold and had thick metal bars on the windows. A manager accompanying me explained that the bars were necessary to ensure against workers stealing production material. More generally, the security situation in factories in Dongguan is serious, he added, because workers "steal all the time and misuse factory equipment. For instance, the Nike shoes you can find in markets in Guangzhou are perfect replicas of the authentic shoes, because they are produced at night in the same factory! So they are pretty close to the real thing." According to him, factory management in Dongguan adopts a "ten percent ratio"—namely, it hires ten guards for every one hundred workers.[17]

Metal bars might prevent theft, but they also endanger residents in case of an emergency. Indeed, an instance that shocked China in 1993 was a fire in a Shenzhen factory that subcontracted work for a European toy maker. The flames claimed the lives of eighty workers, and a score of others were seriously burned and injured. (In a factory producing office furniture, I saw employees not wearing any protective equipment. Splinters of wood flew everywhere, and sometimes workers would look into the holes being drilled, putting their eyesight at risk.) Often employers simply failed to pay the promised wages, as in the case of a Mr. Zhang reported on Beijing Television in February 2007. Mr. Zhang had convinced an entire brigade of fellow villagers to accept work at a construction site in 2004, but when the time came to pay them, the management refused to shell out the salaries. The villagers followed procedures and filed a lawsuit to demand payment. The court issued an order in their favor, but when it was time to enforce the court order, the boss and other managers of the

construction project disappeared. This is not an isolated instance; an official survey conducted in 2003 discovered that some 75 percent of migrant workers experience various forms of wage nonpayment.[18]

Prosecutors admit that legal avenues to settle disputes are wanting. Zhai Yunfeng, the deputy attorney general of the Qinhuai District (Nanjing) Procurator's Office, says:

> There are many drawbacks in settling commercial disputes through the courts. Firstly, it is expensive. If the creditor relies on the trial procedure to settle commercial disputes, he or she has to pay the litigation fee, enforcement fee, travel expenses, and counsel fee. In addition, the process is complicated and time-consuming. Secondly, trial procedure takes a long time. The first instance of an ordinary civil case takes about half a year, and the second instance about three months, excluding any postponement in the proceedings. Most creditors lack the patience to go through the whole trial procedure, especially if the value of the matter is not great. Thirdly, the enforcement of court orders is difficult. Even though the creditor wins the case, he or she cannot get the money back with simply a note from the court acknowledging the debt.[19]

The situation is no better in Guangdong. In an interview, Chief Justice Lu Botao of the Guangdong Provincial Higher People's Court acknowledged that the courts' inability to enforce decisions relating to business disputes in a timely fashion had reduced public confidence in the judicial system. Justice Lu stressed that "people are reluctant to go to court to settle disputes" because it is "time consuming and expensive," and it is difficult to "get the compensation back [even if] you win the case."[20]

Empirical studies conducted by Chinese scholars confirm that the civil court system is not well equipped to adjudicate cases competently, quickly, and effectively. Cases submitted to the courts have increased dramatically without an equivalent increase in resources, and are more complicated in nature than in the prereform era, while judges have for the most part a basic legal education. In addition, several structural features make it more difficult to reach decisions in Chinese courts than in other countries. One such feature is that the judge is supposed to not only adjudicate on the merits of the case but also collect evidence directly in appeal cases. Judges

1109

are not entirely independent of political pressure, especially from the local administration (a lawyer admitted that "whenever there is a business dispute and the case is being handled in court, we always try to find a high ranking government official to tell the court how to decide the case").[21] Finally, the enforcement of court decisions is particularly weak, and more so when the respondents are outside the territorial limit of the original court. More than two million court orders and decisions were officially recorded as "pending for enforcement" in 1998. In the 1990s, around 50 percent of the rulings in cases concerning economic disputes were enforced, but the situation was, according to a particular study, worse in lawsuits between banks and companies (banks won 95 percent of the lawsuits, yet only 15 percent of the rulings were enforced). Not surprisingly, people's confidence in the judicial system is low. A full-length study of courts in China by Jiang Qingyun describes the situation as a "judicial crisis."[22]

Often workers do not even sign official contracts and, operating in the informal economy, cannot turn to the courts. Estimates suggest that between two-thirds and three-quarters of all new employment in China is in the burgeoning informal economy that already incorporates eighty million people. The Department of Labor in Suizhou City in Hubei carried out random checks on 134 companies and found that not one had issued a contract. The *Jinan Daily* reported research conducted in the city according to which eight out of ten migrants did not even know what a labor contract was—and of the few who did know, most thought contracts were ineffective. The managers of labor-intensive industries frequently prefer a cheap and easy-to-dismiss workforce, bypassing trade union controls and saving on health provisions, while independent labor unions are still illegal in China. Legions of workers are therefore excluded from state-supplied forms of protection and legitimate avenues of dispute settlement.[23]

Let me take stock of the evidence presented so far: China is undergoing an economic boom; the state is unable to settle disputes swiftly and effectively; generally there is little trust in government or interpersonal trust; a vast sector of the population operates in the shadow economy, where by definition it cannot count on legal venues of dispute settlement; and foreign triads have been operating on the mainland. Does it follow that the latter are intercepting the demand for protection that the state is unable to offer? Rather than foreign mafiosi, members of the state apparatus featured prominently in the interviews that I conducted with businesspeople in the

1110

industrial heartland between Shenzhen and Dongguan. In order to interview the owner of a lightbulb factory, I took a bus that crossed the Dongguan industrial area—the same bus that takes workers to their places of employment and residence (the entire ride takes six hours). Factories tend to cluster around a number of cement constructions where workers can shop and find entertainment. On the way to the meeting, we passed Changping, a suburb outside Dongguan, a particularly poor district with high levels of unemployment, and a hub for drug dealing and cheap sex.

The factory owner is a middle-level businessman from Taiwan. He has been operating in the industrial wasteland of Dongguan since the early 1990s. "Until 2001 it was truly a Wild East," he says. "People were going around with guns for self-protection. I myself saw several bodies just left on the side of the streets. If one shot someone else, nobody would know. The situation has improved significantly these days, but security and protection are still a major concern and we factory owners are very sensitive to this issue." Protection of a higher order is also necessary. In order to operate, he continues, one has to develop a working relationship with a member of the state apparatus who will help in case of need. They will also tell you whom to hire. He had to take on a woman, who was well connected with the local administration and the military. After a few years, he decided to fire the lady. Since she was well connected, she was able to mobilize an army unit on her behalf. The unit surrounded the factory. The owner, however, had also formed his own links with the military. Thus, he could call on the help of another unit, which encircled the first unit. "The factory yard seemed a battle ground, with two armies facing each other and ready to fire," he laughed. Ultimately, both parties lost a lot of money because they had to pay off their respective military friends for this service. He concluded, "It is much better to solve matters in a nonconfrontational way, simply because it is cheaper." He was able to fire the woman, but had to compensate her more than he had wished to.[24]

In a similar case, an investor obtained a license to build a factory producing plastic in Dongguan. According to the terms of his license, he could import raw material without paying import duties, but he was not allowed to sell his products on the Chinese market, only to export them or sell them to foreign-owned companies. He negotiated the terms of the license with a set of local officials in return for upfront bribes and the promise to pay them a fraction of the profit he made by breaking the license agreement. In return,

1111

the officials ensured him protection against inspections. This arrangement gave rise to a typical situation of asymmetrical information, whereby the officials would not know if the businessperson was cheating on the deal. In order to monitor him, they forced him to hire a chief accountant and a manager. At regular intervals, the factory gets "inspected" by the officials. If they are not satisfied with the accounts, they detain either the owner or the accountants for breaking tax regulations (at some point, they suspected that the accountants were colluding with the entrepreneur and pocketing what was due to them).[25] The interlocked system between officials and entrepreneur went beyond a one-off corruption benefit (obtaining a license), and evolved into a long-term partnership.

As documented by several scholars, such arrangements are ubiquitous in the Middle Kingdom and are known as "protective umbrella" (*baohusan*): fragments of the state apparatus agree to protect businesspeople against the authorities and other competitors in exchange for regular payment.[26] These solutions differ from standard corruption, where one corrupter pays a corruptee for a specific service (say, obtaining a passport or license). They are more far reaching and involve a wider menu of protection services. Since any economic activity in China is subject to intrusive inspections and requires several permits, and independent courts are not effective in protecting the victims of officials' harassment, even entrepreneurs producing legal commodities, such as lightbulbs, can benefit from entering into such arrangements. The system of protective umbrellas has a striking parallel in the "roof system" that emerged after the transition to the market economy in the Soviet Union and Russia. Roof providers in Russia include the Federal Security Services, the Ministry of Internal Affairs, and other official organizations as well as criminal gangs.[27] Although the Chinese authorities in Beijing pride themselves on having followed a path into capitalism that is noticeably different from the Soviet Union's lawless collapse, ultimately a similar equilibrium has emerged. One might further speculate that the umbrella system ensures continued control over the economy by officials, albeit one that distorts incentives and produces significant waste, and that is occasionally punished by the center with exemplary show trials.[28] In both countries, a precarious balance between local incentives to develop protective umbrellas and the center's aspiration to remain in overall control is constantly negotiated.

Mobilizing one's umbrella is costly and hence regarded as a strategy of last resort. At times, one can just invoke it in the hope that it will be sufficient. One respondent explained to me that in a dispute he had about badly produced glass products, he made it clear that he could count on the services of a specific military umbrella. The name in itself was enough to have the supplier rework the product. Directly mobilizing the umbrella might also alert the protector to new business that the entrepreneur is keen to keep away from the usually greedy hands of the official. In addition, the same respondent suggested, a small-time businessperson might not be valuable enough for an umbrella to take them under their protection, and thus the entrepreneur might turn to one-off protection services.[29] In this context, purely private and unregistered debt collection and dispute resolution agencies have emerged, in which many of the employees have a criminal record. A conservative estimate puts the number of people employed as debt collectors by unregistered companies in China at more than one hundred thousand. Clients include ordinary people and migrant workers.[30]

The following story from the city of Nanjing is telling. In May 2006, Liu paid more than 150,000 yuan to Wang, the manager of a chemical company. Yet Wang did not deliver any chemical product to Liu, nor did he pay the money back. Liu demanded repayment several times, but in vain. Finally, Liu saw an advertisement for a debt collection company in the local newspaper. He signed a contract with the agency and agreed to pay a fee equivalent to 30 percent of the sum to be recovered. On the night of February 10, 2007, four collectors chased Wang's car and forced him out. Wang ran for his life, but was soon caught by his chasers and received a severe beating. He was forced to leave his car as collateral for the unpaid debt. As soon as he was free, Wang reported the case to the authorities, and the police detained four individuals. The investigation established that the top four debt collection agencies in the city were retrieving millions every year for their clients through the use of violence. A follow-up investigation by the Procurator's Office revealed that most employees of these firms had criminal records.[31]

Rather than regulating the industry, the government has taken steps to outlaw debt collection companies. In 1995, the Ministry of Public Security along with the Administrative Department for Industry and Commerce

A debt collection agency, Nanjing, China. The advertisement on the second floor reads "Professional debt recovery." Photo Credit: Zhejiang online.

issued a notification that forbade the establishment of debt-collecting companies by any institution or person. The notification ordered organs of the Administrative Department for Industry and Commerce to close down existing debt-collecting companies, and notify them to apply for a cancellation or change-of-business license. Any company that failed to abide by the notification would have its business license withdrawn by the department organs. This provision was confirmed by further legislation.[32] "Obviously, all debt-collecting companies have been made illegal by the government," concludes Lei Hanshan, the chief partner of Yihe Law Firm of Nanjing.[33] Professor Yuan Jiuhong of the Southeast University of China has perceptively suggested that this legislation increases immensely "the possibility that such companies will collude with mafia groups or develop into mafias."[34]

Have local criminal groups emerged as suppliers of services of dispute settlement and debt collection for legal entrepreneurs? Among the seventy-four cases I reviewed in depth, the majority of the gangs involved in dispute settlement and debt collection were also running casinos and/or prostitution rings.[35] For example, two former inmates running a gang for nine years (1991–2002) in Zunyi, Guizhou Province, were eventually found guilty of "running a sauna fitness club as a stronghold for gambling, prostitution and debt-collection, armed robbery, extortion, illegal detention of others, and bribing several police inspectors."[36] When a group is effective at collecting gambling debts, it has the resources to collect other debts as well. Two cases refer to companies that appear to have been legal firms gone underground

Mafia debt collection agency cartoon, China. The cartoon by Yao Wen depicts a debt-collecting company recruiting its staff. Big Brother asks the applicants, "Have you ever killed someone?" The advertisement on the wall reads "People who ever killed someone, who once were prisoners, and who are bold and aggressive enough would be desirable." Image Credit: Wen Yao.

(one was called "solving your problem"). In conclusion, these findings suggest that some legitimate debt collection firms have gone underground, and that the groups involved in gambling and prostitution are also branching out in offering services of debt collection.

I now return to the core preoccupation of this book—whether foreign triads have been able to supply services of dispute settlement and protection to entrepreneurs dealing in legal commodities in mainland China. I have not come across any such case during my field trip. Taiwanese triads are present on the mainland, as I have established above, but to the extent that they are involved in solving problems, they can go only as far as settling disputes among Taiwanese businesspeople. Ko-Lin Chin interviewed some Taiwanese gangsters in 2000 in Changan, a town near Shenzhen. These individuals were only helping Taiwanese investors settle disputes among themselves. One Bamboo brother based in Changan told Chin: "There are many disputes among Taiwanese businessmen and whenever they have conflicts, they like to seek help from us because they don't have

much confidence in the Chinese legal system."[37] There is no indication that they have gone beyond the Taiwanese economic community and established themselves as independent suppliers of protection services. Clearly, as the number of Taiwanese businesspeople grows in China, it is possible that crime groups from that country will grow in importance.

Gambling

The booming gambling sector has generated a vast set of opportunities for loan sharks, and a demand for debt recovery and dispute settlement services. Since the beginning of Deng's policy to open the country to the market economy, more and more people have been traveling from several parts of China to gamble in Macau—from 1999 a special region of the People's Republic of China—and Guangdong. In 2005, Macau drew 10.5 million mainland Chinese visitors—a 147 percent increase on three years earlier. In a move aimed at undercutting competition, the Chinese government forced the Burmese to shut down more than eighty casinos along the border with southwestern China in 2005. Although the average table in Macau earns three times more than a comparable one in Las Vegas, the global financial crisis of 2008 did not spare the former Portuguese colony, bringing to a halt construction on nine multibillion-dollar casinos and hotels. When I visited in late 2009, steel and concrete skeletons covered swaths of the Cotai Strip, the new development to the south of the main Macau peninsula. Beijing also tightened visa regulations on mainland visitors in 2008. Yet since August 2009, the Chinese government has quietly relaxed the curbs, and gamblers from the mainland have increased significantly since 2008. Underground gambling dens also exist on the mainland. In May 2006, China Central Television, the major broadcasting television network in the country, reported that the number of underground casinos exceeded one hundred in the small county of Lianping in northern Guangdong Province. Gamblers from all over Guangdong and several adjacent provinces converged on the Lianping casinos to gamble day and night. In 2003 alone, the Guangdong police raided more than eighteen hundred underground lottery outlets and casinos in Guangdong.[38]

Gambling gives rise to loan sharking. According to official data, loan sharking accounts for the second-highest number of arrests after drug-related

crimes in Macau. Kidnappings for the purpose of repayment of gambling debts increased from twenty-four cases in 2005 to forty-eight in 2006. Diamantino Santos, the coordinator of the Macau Security Bureau, explains that "95 percent of these cases in Macau are usually related to gambling-linked crimes, like loan sharking."[39] The 2006 figures also show a rise in illegal activities closely tied to the gaming industry, such as fraud, robbery, or abuse of confidence.[40]

The inducement of Chinese high rollers to VIP rooms in Macau and the loans they are given generates specific opportunities for strong-arm people to act as enforcers of gambling debts in China. I now turn to a detailed exposition of this system, with the aim of linking it to an as yet underexplored push factor for the transplantation of triads from Macau and Hong Kong to mainland China. VIP rooms are sections within a casino where high rollers stake their bets. They exist in all major gambling venues. For instance, in Las Vegas high rollers are known as "whales" and are actively pursued by casino promoters, who offer them inducements to patronize their casino (and only theirs). The VIP system in Macau, however, is somewhat peculiar.

A visit to the former Portuguese colony with the appropriate guide can help make sense of this system. I visited the Grand Lisboa, a giant, Fabergé egg-shaped casino sitting underneath a fifty-two-story hotel tower shaped as a soaring lotus flower that opened to the public in 2007 and caters mostly to mainland Chinese. The Grand Lisboa stands next to Casino Lisboa, built in the 1970s. The famed Macau multibillionaire Stanley Ho, who held the monopoly on gambling on the island from 1962 to 2002, owns both casinos. My guide and I quickly walked across the main hall where regular players spend their time (and money) at the "mass gaming tables," and entered a VIP room. Two heavily built bouncers dressed in tuxedos were standing in front of the door, ushering us through an additional metal detector, but there was no need to hand over eyeglass cases, bags, or keys. The decor was garish, with fake gilded columns, richly decorated canapés, and statuettes of ancient warriors. Plenty of waiters were on call to answer requests for drinks and food. We also saw a cage dispensing chips and, at one of the three tables, a croupier servicing a loud party of mainland Chinese who, to my guide, looked like the family of a wealthy official. The gambler was playing baccarat, the card game favored by James Bond (in *Casino Royale*, Bond and le Chiffre play a variant of baccarat

called *chemin-de-fer*). To me, it was striking how superstitious he seemed to be, praying and hissing as the cards were dealt and uncovered. The women and the younger members of the party gathered around the older man, groaning and gasping at every deal. Hovering around was a peculiar majordomo, who made sure that the gambler had his drink and enough room to move. He also seemed busy substituting the chips that the player was winning with what to me looked like similar chips, of the same value but differently shaped.[41]

I was to receive an education on how the VIP rooms work in Macau from a hulking Chinese man based in Hong Kong. Mr. *Xin* is a "junket operator," offering free trips to mainland Chinese high rollers to Macau VIP rooms. Xin is attached to a room run by a "promoter," who rents it from the casino and puts down collateral to gain access to chips. Traditionally, junket operators were jobless individuals who would scout for gamblers from the cities in the vicinity of Macau and get paid a small fee by the casino. Macau's gambling world underwent a sea change when the island lost its status as a Portuguese territory in 1999. When the Chinese took over, they revoked Ho's concession, thereby opening the market to Western operators. Mainland residents soon became the main players. At this point, junket dealers went from being lowlifes trying to entice local players to a table to marketing agents of the casino on the mainland.[42] This was the case of the majordomo I had observed.

Xin had made deals with travel agencies in three different cities in Guangdong, offering free trips to Macau to high rollers. Ultimately, his business is to entice wealthy Chinese players to a VIP room similar to the one I had visited at the Grand Lisboa and to act as their lackey (by 2008, some 80 percent of the VIP players came from mainland China).[43] Once the players land in Macau, Xin accompanies them to the VIP room, where he lends them chips to play—in the region of five hundred thousand Hong Kong dollars (almost sixty thousand U.S. dollars). The high rollers thus do not need to carry a lot of cash and can bypass the laws regulating the export of money out of China. Moreover, the players can avoid declaring the source of their money (most likely they would be highly embarrassed if they had to). The chips that the junket operator lends—called "dead," "junket," or "clay" chips—cannot be redeemed by the players for cash in the main casino and have a market value that is slightly lower than the nominal value (in the region of 0.7–0.8, I was told). As the players

receive chips from their wins, the junket operator replaces the redeemable chips with unredeemable ones, making a profit (notably, the junket operator profits from the game lasting a long time, rather than from either the gambler or the house winning). The junket operator also offers advice and possibly other services, such as introductions to a good sauna, massage, and prostitutes. When the game is finished, in theory the gambler might have won, thereby simply paying the debt back and offering a tip to their "friend." Most likely, the gambler loses, and thus the operator has to collect his debt. I was told that in most cases, the VIP players pay up. Occasionally they do not. If the junket operators cannot recover the debt, they face losing a considerable sum. Loans offered in the VIP rooms exist in limbo and cannot be legally enforced in mainland China.[44]

The VIP room system remains profitable for casinos, which can count on a wide-ranging network of marketing agents without running any risk. The revenues generated by VIP rooms are enormous. The average VIP room share of total gaming revenues for the period 2000–2007 is almost 70 percent, although the mass-market sector is becoming larger.[45] The casino management is a few steps removed from any violence related to eventual disputes. Junket operators face far greater risks, but can reap significant earnings. The system, however, opens up scope for extralegal services of debt collection. Such a situation creates a demand for muscle, and potentially a link between Macau-based triads and the mainland. Some debtors are allowed to return home to gather the money; others are imprisoned in Macau, from where they instruct relatives to pay.

Collecting gambling debts is a significant business for crime groups in mainland China. This particular activity also leads local groups to team up—while remaining separate—with foreign mafias in an effort to chase Chinese gamblers who fail to pay their dues while gambling in Macau. I have come across five such cases. For instance, the Foshan Water Room gang based in the city of Foshan, Guangdong, had teamed up with the Macau Sui Fong (Water Room) triad, the main Macau mafia group. The leader had copied the structure of the Water Room gang, appointing three underlings to manage three different aspects of the gang's activities. Most importantly, they assisted the Macau-based triad in tracking down the families of mainland gamblers who had failed to pay up for their losses in the Las Vegas of the East. They also expanded into loan sharking and betting for sports events. Eventually, they were brought to justice in 2000,

after operating for five years (the Water Room triad has also forged ties with a group in Fujian for similar purposes).[46] Another Macau triad, the Great Ring Gang, had set up relations with a gang operating for six years in Guangzhou. As reported in an indictment, the gang "established action teams in the mainland to collect gambling debts."[47] An official at the Guangdong Department of Justice confirmed to me that Hong Kong triads have great influence in Guangzhou.[48]

A high official at Zhuhai Bureau of Justice, a city a few kilometers north of Macau in Guangdong Province, told me that

> there are four main [triads] groups in Macau, 14K, Water Gang, Great Ring Gang, and Wo Shing Yee. All the four main groups were discovered in Zhuhai. Their main businesses included collecting debts for Macau casinos, organizing prostitution, smuggling, kidnapping, manufacturing and selling counterfeit money and collecting protection fees. . . . [I]t was common that Macau mafias came to Zhuhai and other cities in Guangdong to recruit local members, or forge alliances with local gangs to commit crimes. This was a strategy to extend their territory of influence. For example, Wo Shing Yee of Macau established a gang in Jiangmen city [a city some one hundred kilometers northwest of Zhuhai] and provided financial support for the gang to conduct business in the mainland. But the gangsters were local thugs.[49]

The 14K triad (based in both Macau and Hong Kong) also wanted to ensure that it had an outpost on the mainland to track down gamblers who failed to honor their debts. As is often the case, prison provides valuable contacts for gangsters. Two members of the 14K, "Four-Eyed Xiong" Chen and his brother "Big Jie," had shared a cell with two Guangzhou criminals— Jiang Jinxin and Zeng Jijun. The latter eventually became the 14K contacts in the city. Jiang and Zeng would track down gamblers who had not paid their debts and had slipped back to the mainland. After the funds were recovered, they would be transferred by the Guangzhou outpost to the brothers in Hong Kong and Macau using a network of underground banks and legitimate businesses. For instance, on the afternoon of November 18, 1996, Big Jie, Jiang, and Zeng went to the China Grand Hotel in Guangzhou to demand the repayment of HK$2.6 million from

a gambler who had borrowed money in a VIP room in Macau and failed to pay it back. Violence ensued, and one person was severely wounded. In another case, in November 1998, the general manager of the Yushun Company of Shanghai borrowed HK$300,000 from the 14K while at the gambling table of the New Century Casino in Macau. The Chen brothers demanded the repayment of this debt several times, but the manager did not return the money. In March 1999 they dispatched their team to Shanghai, where they ultimately killed the gambler's girlfriend.[50]

When Zeng was sentenced to death in 2001, the Chen brothers joined forces with another heavy, Mai Guoqing, who in turn worked with a local gang leader, Li Deliang. As the group grew in strength, it moved beyond collecting gambling debts and formed a debt collection agency, which recovered debts for local customers. Within a short period, the group made at least 7 million yuan in profit. An indictment against the group lists several cases of the violent recovery of ordinary business debts. For example, in February 2001 a customer offered to pay Mai and Li to recover 250,000 yuan from a man called Wu, who lived in the Liwan District in Guangzhou. The gang went to Wu's residence and took the man to the Jiahua Restaurant, in another part of town. They then moved the hostage several times to a variety of locations, mainly around the city airport. He was beaten and tortured. Once the gang was tipped off that the police were after them, they moved their hostage to a farm and were later arrested. Wu escaped alive. In a similar situation in December 2001, two Hong Kong businesspeople asked the gang to recover HK$6 million from a debtor, Kuang, from Guangzhou—offering a fee of 30 percent of the money to be recovered. Kuang, who was kidnapped and tortured at a secret location, finally agreed to pay 3.6 million yuan. Mai demanded the immediate payment of 1.5 million to a designated bank account as a condition for freeing the debtor. Mai stressed that the rest had to be paid within one month. Kuang and his brother eventually paid back the money, and Mai and Li got 900,000 yuan for their services. According to a twenty-four-page indictment issued by Guangzhou Procurator's Office, thirty people were tried in 2003 for twenty-four crimes.[51]

Taiwanese gang leaders interviewed by Ko-Lin Chin in Changan (an industrial town north of Shenzhen) confirm the picture that emerged above: that they settle gambling disputes among Taiwanese

1122

businesspeople only, for debts incurred in Taiwan. A Taiwanese brother who owns a restaurant in Changan had this to say:

> I helped [Mr. Hsieh, a businessman from Taiwan] take care of gambling debt of ten million yuan he owed another Taiwanese businessman. A group of brothers from Taiwan were coming over to Changan to settle it, possibly by taking over Mr. Hsieh's factory. Mr. Hsieh asked me for help, and I had the whole thing settled by having Mr. Hsieh pay the businessman NT$700,000. Mr. Hsieh initially said that he could come up with only NT$500,000, but the businessman and his people said no. So I asked Mr. Hsieh to come up with more, and he increased the amount to NT$700,000. That was a pretty good deal for him.[52]

The collection of gambling debts provides a link between Macau and Hong Kong triads and mainland Chinese gangs. The former team up with the latter in order to track down gamblers and their families who failed to pay their debts. It is still too early to say whether foreign triads will become entrenched on the mainland. This criminal activity remains in any case an important source of contacts, and has the potential to allow Hong Kong and Macau mafias to spread on the mainland. As for Taiwanese triads, they appear to be, at most, dealing with debts incurred by gamblers in Taiwan itself.

Prostitution

The junket operator who educated me about his business was keen to let me know that he could provide overall care for any customer, including me if I wished. In particular, he would take me to "the best sauna in Macau." Without the need to insist much, he let me into his secret: the best place in town for prostitutes was the sauna at the Golden Dragon Hotel called "18," a place that I had read about before traveling to Macau, where it was rumored that Uzbek women are trafficked (no evidence was proved in court).[53] Located just off the main street that connects the Hong Kong ferry pier to the center of town, "18" is on the third floor of a glittering

four-star hotel and can be reached via an elevator. A plastic-coated price list is placed on a freestanding lectern at the entrance. Ethnicity is a price discriminator: Taiwanese are the most expensive, and Uzbeks are the cheapest. One can also opt to have a sauna only or a standard Chinese massage. Payment is at the end. After perusing the "menu," the customer is whisked to a changing room to undress. He is then led to a large hall with a mammoth bathtub in the middle, and steam rooms and showers to the left. Half-naked girls appear on a balcony and start to dance, eventually undressing fully. Then a parade of some seventy women marches into the main hall, each with a number and a colored pin attached to their bathing costume. They slowly do the room, stopping in front of men draped in their bathrobes for a minute or two, and then move forward. A customer does not need to follow the parade. When he makes up his mind, the john informs the majordomo of his choice and is accompanied to a room, where he and his companion have sex. Men whose bodies are covered in elaborate tattoos are easily found at "18."[54]

While prostitution is legal in Macau, it is not in China. Following the Communist takeover in 1949, local governments were given the task of eliminating counter-revolutionary decadence. The first crackdown against brothels took place in the capital in 1949. Several others followed. During Mao's reign, prostitutes faced severe penalties and could be sent to labor camps for education. In 1958, the Chinese Communist Party announced that prostitution had been eradicated. Even the twenty-nine venereal disease research institutes were closed.[55]

Since the beginning of China's transition to the market economy in 1978, all forms of sex for cash have reemerged. Initially, the phenomenon was limited to the eastern, coastal cities, but since the 1990s it has spread across the country. Arrests of prostitutes, clients, and pimps have increased every year since 1982. Some suggest that the business employs ten million people, with an annual turnover of one trillion yuan. The bulk of the sex trade takes place in karaoke bars, hotels, saunas, beauty salons, and teahouses. A common euphemism for hostesses working in karaoke bars is "ladies of the three accompaniments." In theory, they accompany men by chatting, drinking, and dancing. In reality, they allow clients to fondle them and are willing to engage in sexual intercourse. "Dingdong ladies" are women who phone hotel guests offering sex, while "street girls" try their luck at the lowest level of this profession.[56]

[162.10.217.184] Project MUSE (2026-06-15 01:44 GMT) University of Queensland

Contrary to common misperceptions, Chinese law does not depart significantly from Western countries' provision in this sphere. The law distinguishes those who organize and induce others into prostitution from those who engage in the act by paying or receiving money (the clients and the workers). Statutes passed since 1991 have made the involvement of a third party, such as a pimp, a criminal offense, even punishable with death. Bar, sauna, and massage parlor owners all face the risk of long prison sentences if found guilty. Sex workers and their clients are mainly dealt with through administrative law, although they face arrest and heavy fines. Hostesses are the most vulnerable, since local authorities have several means at their disposal to harass and humiliate them. The Communist Party has issued specific disciplinary measures to expel members caught red-handed.[57] How do actors in this market, especially the owners of brothels, negotiate protection against police arrest? To whom do they turn to fend off rowdy customers and violent thugs?

After an interview in a factory outside Guangzhou, the owner showed us an upscale karaoke bar in a nearby town that he patronizes regularly. I asked if he knew whether the establishment has entered into a protective umbrella with anyone. According to the factory owner, the hotel was under the wing of police officers to whom it could turn if there was a serious dispute and who protect it against random police raids, while the hotel security guards fend off local thugs and unruly customers. He added that low-level establishments are at much greater risk from local thugs and other bar owners—who harass competitors and try to steal their workers—because they are located in red-light districts and dangerous neighborhoods. The police protectors would not offer help in these fights and would indeed expect them to be handled with discretion, so that attention is not drawn to the bar. Many officials justify their actions by arguing that karaoke bars promote the local economy as well as help businesspeople forge stronger bonds and strike deals.[58]

A Chinese scholar who worked in a karaoke bar for twenty months in Dalian between 1999 and 2002 confirms that officials—especially police officers—are regularly paid for protecting these establishments. One Public Security Bureau officer remarked to her: "Karaoke bars and hostesses are our source of livelihood. We basically cannot live without them."[59] As in the case of legitimate businesspeople who are forced to hire individuals suggested by their umbrella, police officers have devised a system to keep

informed on the activities of the brothels: they maintain a group of "spy hostesses" who report on the club conditions as well as act as these officials' personal harem.[60]

The case of Chen Kai from Fujian has brought to the fore the reach of protective umbrellas. Chen Kai was sentenced to death in 2005 for organizing prostitution in Fuzhou. Before being arrested, he was the head of a conglomerate that included a hotel, a nightclub, three restaurants, a real estate development firm, and three saunas. Chen Kai had started as a street seller and then entered the electronic gambling industry. As his business interests grew and expanded into entertainment, he struck a deal with the city chief of police, who was known as the "Godfather of Fuzhou," and named the chief's son the vice president of his company. Whenever an investigation was initiated, the chief of police would block it. No less than fifty officials were eventually found guilty at the Chen Kai trial in 2003. They were, as the *China Daily* noted, the protective umbrella for Chen Kai operations.[61] People familiar with the case suggest that Chen was nothing but a brothel owner, and the violence used by him was limited to maintaining order within his premises and occasionally forcing waiters into providing sexual services for officials who took a fancy to them.[62] Protection was coming from his umbrella.

Among the seventy-four cases that I reviewed in depth, nine groups were found guilty of running brothels. None is on record as trying to monopolize the business. These cases seem to refer to instances of involvement in managing a brothel, rather than wide-ranging attempts to control the market. There is no evidence that foreign triads played a role in this business. In sum, it appears that fragments of the state, and in particular the very people who are supposed to fight prostitution, act as the industry's protectors and there is yet more evidence that these arrangements are localized in nature.

Drug Trafficking

Chinese drug traffickers benefit from proximity to a 150,000-square-mile patch of land in the Wa area of the northern Shan state of Burma, known to the world as the golden triangle. Burma is the second-largest opium-producing country in the world after Afghanistan. The methamphetamine production plants blamed for the "speed" epidemic in Thailand in the

1990s are also located here. After the country gained independence in 1948, the Communist Party of Burma controlled most of the area. In the same year as the Berlin wall collapsed and Eastern Europe was freed from Soviet influence, the leaders of the Wa ethnic group dissociated themselves from the Communist Party of Burma and signed a peace treaty with the government. Under the conditions of the treaty, the Wa army was allowed to remain in control of the territory and retain its arsenal, while the Burmese leadership could direct its attention to crushing the indigenous democratic movement. The Wa army—defined by the U.S. Department of Justice as "one of the largest heroin-producing and trafficking groups in the world"—continued its long-standing involvement in the cultivation, production, and distribution of drugs.[63] Here opium cultivation is legal and is a major source of tax revenue for the Wa leadership. Local farmers pay a compulsory tax in opium regardless of whether they grow the plant or not, thereby forcing them to either start cultivation or buy opium to pay the tax. Heroin and methamphetamine factories are illegal, although they operate under the informal protection of army officers.[64]

In the early 1990s, legitimate and illegitimate cross-border trade between Burma and China began to flourish. Many entrepreneurs from China shuttled between the Wa region and the newly established special economic zones in search of opportunities. With the arrival of the Chinese, heroin production grew. The presence of a developed chemical industry in China makes it relatively easy to obtain and import the precursor chemicals needed for narcotics production from China into Burma, and export the finished product from Burma back to China and then onward internationally. Methamphetamine production took off when the Thai authorities decided to crack down on this drug in their own country in the mid-1990s. Chinese entrepreneurs operating in China, Burma, and Thailand took advantage of the situation, and began to mass-produce methamphetamine in the Wa area to meet the enormous demand in Thailand.[65]

The heroin produced in the Wa region travels into China through the province of Yunnan, onward through Guangdong, Shenzhen, and Hong Kong, and finally reaches North America. As the cross-border trade of legal commodities between China and Burma started to swell in the 1980s, and continued to expand rapidly in the 1990s, drug trafficking along the border area also flourished. Significant seizures of heroin in Yunnan Province are on record since at least 1986. In the 1990s, there was a noticeable

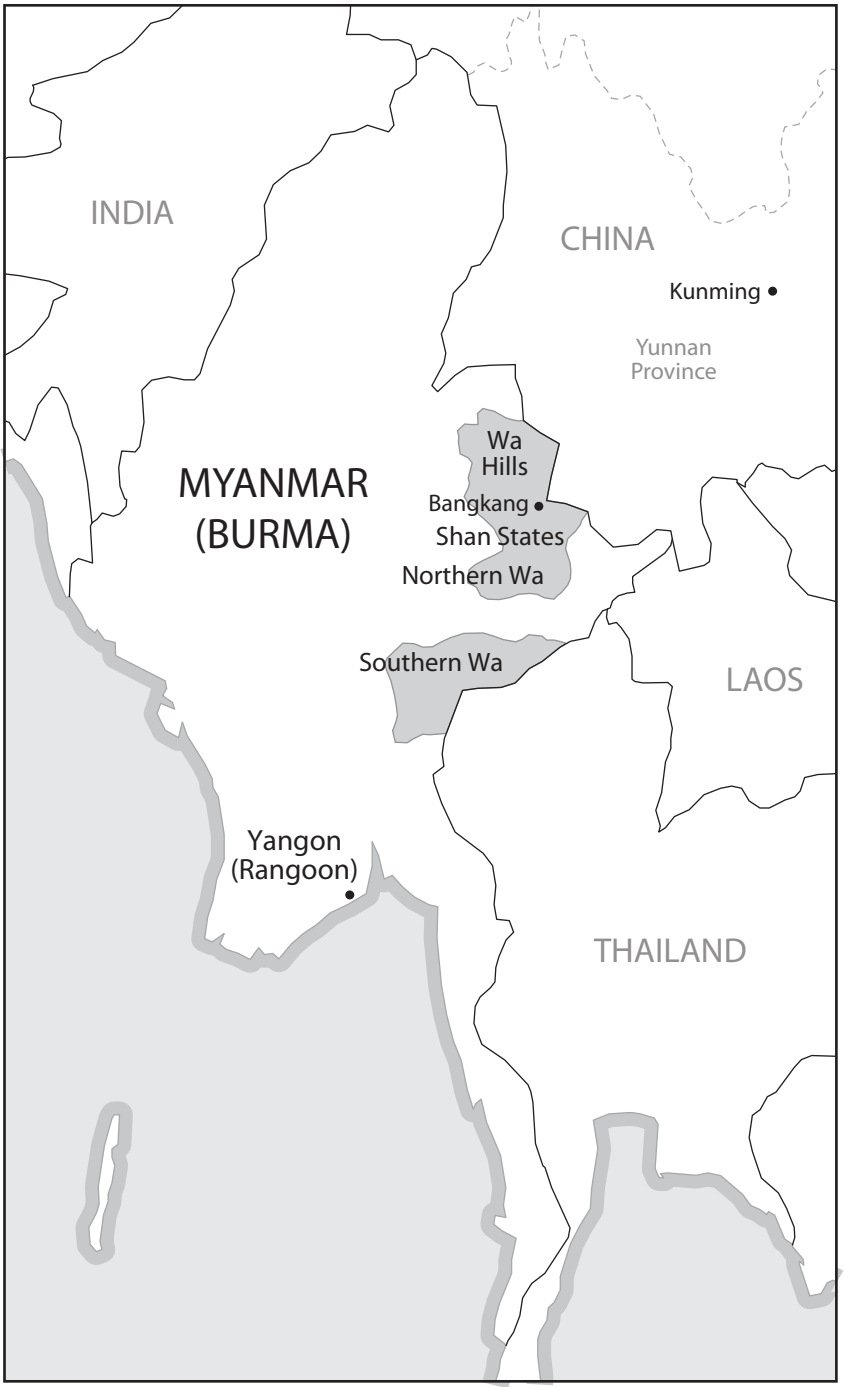

Figure 6.2 Map of the Wa area

increase in the number of detected cross-border drug trafficking cases. As reported by the U.S. Drug Enforcement Administration in 2002, "China's Yunnan province has become the primary transit point for Burmese heroin."[66] The drug then reaches Guangdong Province, the primary distribution point for both the domestic and international market. In 2002 only, the Guangdong police seized 1,618.72 kilograms of drugs and cracked down on 5,745 drug-related criminal activities. In describing the situation, an officer in charge of narcotics control stressed that "Guangdong has become the major channel and distributing center for drug smuggling activities."[67]

Once in Guangdong, the drug reaches the United States via Shenzhen and Hong Kong. In the late 1980s, a change in the export methods employed by the Chinese was detected. Instead of using drug couriers traveling to U.S. airports from Hong Kong and Bangkok, Chinese traffickers began to send large quantities of heroin (from fifty to one hundred pounds or more) to the seaports of Newark and Elizabeth, New Jersey, and Chicago, hidden in cargo containers shipped from Asian ports, such as Shenzhen and Hong Kong. The drugs were carefully stuffed into products such as furniture and frozen seafood. In one instance, drug traffickers stuffed heroin into five boxes of goldfish that were to be shipped to an aquarium in San Francisco. The trick was discovered, and led to the exposure of the activities of a drug-trafficking ring between mainland China, Hong Kong, and the United States.[68]

For such complex transshipping operations to be successful, several actors must be involved at various points of the trade and protection must be arranged. Are foreign triads the main suppliers of such service? There is no evidence that triads are directly involved in smuggling drugs or that they offer protection to the trade (the distinction is crucial). The traders responsible for the bulk of heroin imported from Burma through China into the United States are international businesspeople of Chinese origin who take advantage of their connections and legitimate commercial operations to carry out the transportation of drugs from the source countries. The major traffickers are entrepreneurs who have links with the communities to which the drug is exported.[69] Since the adoption of the open-door policy, Chinese investors—especially from the provinces of Yunnan and Sichuan—have visited the Wa area of Burma. Their presence has helped

the Wa leaders to develop the manufacturing of drugs. They also organize the trafficking of the product back to China, independently of any connection with Hong Kong and Taiwanese triads. They use legitimate transportation networks to reach Shenzhen and Hong Kong. Once there, one would expect that Hong Kong triads might control the harbors. The reality is, however, different. Hong Kong triads control low-level drug dealing in the city for local consumption, but they have never become the dominant players in the international trade. At every stage, successful traffickers rely on officials to turn a blind eye, as several observers have suggested.[70]

Two members of the security branch of a Western multinational operating in Asia whom I interviewed in Hong Kong dismissed the idea that triads are prominent in any smuggling activities, of either humans or drugs. In their extensive investigations of the matter (which include running informants and intercepting communications), they have come across only one reference to a Taiwanese triad member who seemed somewhat connected, although in a personal capacity rather than as a member of his mafia group. In their opinion, the smuggling of illegal products out of China is overseen by corrupt officials. "We know that during the recent Olympic Games, officials in Beijing phoned their opposite numbers in the provinces ordering them to suspend shipments of illegal commodities. The order was meant to last until the end of the Paralympics!"[71] They added that illegal trafficking is greatly facilitated by the Container Security Initiative.

The Container Security Initiative allows U.S. Customs and Border Protection officials to inspect containers in foreign seaports before they are loaded on board vessels destined for the United States. The inspections take place with the support of local customs officials. In China, the ports of Hong Kong, Shenzhen, and Shanghai are part of the initiative. Indeed, Hong Kong and Shanghai are the largest ports in the world shipping goods to the United States. In the immediate wake of the World Trade Center attack in 2001, U.S. customs developed this initiative to address "the threat to border security and global trade posed by the potential for terrorist use of a maritime container to deliver a weapon," as its Web site recites. The containers deemed to pose a threat are examined at the port of origin using "sophisticated technology" aimed at detecting nuclear and radiological material. Once they have passed the check, they can enter the United States without further scrutiny.[72]

In effect, "local custom officials tell U.S. agents where to look and where not to look," one of my informants told me. They added, "It is like having the crooks telling the police what to do."[73] To put it differently, this source claims that local bureaucrats, who speak the language and know the American operative procedures, have worked out what kinds of goods would not be picked up by the U.S. technology. The surest way to ensure that cigarettes or drugs are smuggled into the United States is to have the containers inspected for nuclear and radiological material. Since the technology does not detect other commodities, the container is then given a clean bill of health and allowed to enter the United States without any further check.[74]

Conclusions

So far, China counts as another negative case in the general argument of this book. Members and bosses of foreign triads are present on the mainland, but have not yet emerged as a viable mafia supplying private protection. As in the case of Bardonecchia and Rome, mafiosi did not decide to migrate out of their own free will. Their presence in the new territory is the unintended consequence of police action in their country of origin. Once they found themselves on the mainland, they quickly realized that the new China offered many opportunities to invest some of their gangs' funds, but they have so far failed to establish themselves as viable protectors for legal entrepreneurs. Some conditions for their success were present: a language and ancestry in common with the locals (Taiwanese is similar to the dialect of southern Fujian; some Hong Kong triads members originated from Guangdong region); the presence of many new immigrants from other parts of China who were underemployed or out of work; and the presence of new and booming markets, including illegal markets such as gambling and prostitution (table 6.1). Such a situation should have generated a demand for criminal protection and offered opportunities for mafiosi, local or foreign. In reality, though, the outcome was different because a powerful protector was already on the ground: corrupt fragments of the state apparatus.

Remarkably, the jargon word for the activities of the latter is protective umbrella—a clear indication that what officials offer goes beyond simple,

one-off corruption services and encompasses long-term arrangements to take care of (and profit from) private entrepreneurs. In the Russian case, some criminal gangs became powerful roofs for businesspeople, although official roofs played the biggest role in the market for informal, illegal private protection. The case of China indicates that few criminal groups have managed to take on the role of protective umbrellas. Instead, corrupt elements of the state apparatus, such as the military, police, and the local administration, act as the protectors of legitimate businesspeople (table 6.1), like the producer of lightbulbs that I encountered in Dongguan. As suggested in chapter 2, it would be an uphill struggle for an incoming mafia to dislodge an existing local criminal protector, especially one with the organs of state power at its disposal.

Since the opening of the economy, illegal markets have also boomed in China: gambling, prostitution, human smuggling (an issue that I have touched on only tangentially in this chapter), and drug trafficking. For the most part, it seems that even in illegal markets, fragments of the state apparatus offer protection. This is especially evident in the protection of prostitution. Gambling gives rise to loan sharking and a demand to recoup debts incurred at the tables in Macau by mainland Chinese. In such cases, Macau triads may team up with gangs on the mainland to trace the gamblers—or their families—and some of these gangs have then expanded their business into the collection of ordinary, business debts. If allowed to expand further, these gangs could develop into fully fledged mafia groups offering generalized protection services to whomever can pay. Since they enforce promises on behalf of foreign triads, in my view this represents a potential mechanism for long-distance cooperation and the transplantation of foreign triads to China. Yet there is no strong evidence that such transplantation has taken place. Quite to the contrary, it appears that local authorities have been quick to outlaw debt collection agencies and have arrested those tied to triads.

Have foreign triads been able to penetrate the lucrative drug trade? The short answer is, again, no. The heroin that leaves the Wa area of Burma is transported into China by low-level couriers organized by respectable businesspeople. When the drug reaches the ports of Shenzhen and Hong Kong, crucially placed custom officials exploit the system to sign off cargo bound for U.S. ports. The Container Security Initiative might have prevented the shipment of nuclear and bacteriologic weapons to U.S. soil,

Table 6.1

Factors Facilitating Mafia Transplantation, Bardonecchia, Verona, Budapest, Rome, New York City, Rosario, and Southern China

Factors facilitating mafia transplantation/cases	*Bardonecchia*	*Verona*	*Budapest*	*Rome*	*New York City (1910–30)*	*Rosario (1910–30)*	*Shenzhen/ Guangzhou*
Generalized migration	Yes	No	No	No	Yes	Yes	Yes
Mafiosi migration (willing/unwilling)	Yes (unwilling)	Yes (unwilling)	Yes (unwilling)	Yes (unwilling)	Yes (unwilling)	Yes (unwilling)	Yes (unwilling)
Supply of mafiosi	Yes	Yes	Yes	Yes	Yes	Yes	Yes
Local conditions							
Level of trust/civic engagement	High	High	Low	Low	Low	Low	Low
Presence of local illegal protectors	No	No	No	No	No	No	Yes
Size of locale	Small	Large	Large	Large	Large	Large	Large
New and/or booming markets*	Yes	Yes	Yes	No	Yes	Yes	Yes
Demand for mafia services	Yes	No	Yes	No	Yes	No	No
Transplantation	Yes	No	Yes	No	Yes	No	No

* The markets considered are construction (Bardonecchia and Rosario), drugs (Verona and China), property rights (Budapest and China), oil (Budapest), alcohol (New York City), gambling (New York City and China), and prostitution (China).

but has also ensured that cargoes checked in China enter directly into the United States without further inspection. It might prove a devil's pact.

This chapter has raised some questions that cannot be fully answered at this stage and would require a separate study. It is nevertheless worth spelling them out. Who is allowed to acquire a protective umbrella? On the basis of the respondents' suggestions, it appears that the protection industry is stratified. Small entrepreneurs are not large and profitable enough to be of interest, and therefore may be more likely to enlist the services of independent debt collection agencies when they enter into a dispute. Since the government has moved to outlaw legitimate debt collection agencies, it could in effect have pushed low-level businesspeople into the hands of now-criminalized and unregistered agencies.

A second issue that I have touched on is the relationship between the center and periphery. To what extent can Beijing dictate to the provinces what to do in terms of illegal activities? There are several instances in which it appears that the center retains a degree of control. When the latter decides to arrest gang leaders protected by officials, it bypasses the local police and simply descends on the city to round up the suspects. In order to avoid embarrassment during high-profile events such as the Olympic Games or the sixtieth-anniversary celebrations for the People's Republic of China, Beijing appears to have been able to tell the periphery to stop smuggling operations, and enforce more strictly antiprostitution and drug consumption rules, as I learned in the disco in Shenzhen in late September 2009. And yet the periphery can also "bribe" the center. In order to obtain the go-ahead and funding for major public works, local cadres can entice national-level officials. Once the project is approved, local officials have plenty of opportunities to handpick the construction company and extract bribes, as documented by Xueliang Ding.[75] This system produces what the Chinese call "doufu-zha structures"—deeply flawed constructions that put lives at risk.

As Timothy Garton Ash has remarked recently, China might well be the defining geopolitical story of our time.[76] Yet observers routinely fail to connect the macropicture with microlevel processes. A recent report from the McKinsey Global Institute points out that China underconsumes and overinvests, mostly in building projects. The stimulus plan that China enacted in 2009 focused almost entirely on building infrastructure and public works, while other countries have also passed tax breaks and improved social safety nets.[77] Only by recognizing the massive opportunities

for kickbacks that construction projects open up for officials in both the center and periphery, can one make full sense of macroeconomic decisions. The equilibrium between central government and cadres in the provinces appears precarious, and deserves a full study of its own. To the extent that criminal gangs in the periphery overpower local power holders, they could become the interlocutor of the center, and China might well develop pockets where mafias are entrenched, like in southern Italy, certain parts of Latin America, and the former Soviet Union.

Appendix

Table A6.1

Summary Information on Seventy-four "Organizations with an Underworld Nature," China, 1992–2009

Name of gang	*Length of activity in years*	*Start date*	*Location (region)*	*Size*	*Background leadership**	*Main charges*
1. Anda LU Brothers	16	1992	Heilongjiang	54	3	Kidnapping, loan-sharking, raping, gambling, prostitution, corruption, frauds
2. Black Leopard	1	1995	Sichuan	N/A	N/A	Robbery, protection racket, contract killing
3. Blue Clothes squad	7	2000	Liaoning	N/A	3	Debt collection and dispute settlement in real estate
4. Bo TIAN's gang	6	1995	Jilin	N/A	1	Kidnapping, extortion, monopolization of coal sector
5. Broadsword	1	N/A	Shanghai	N/A	N/A	Robbery, debt collection, extortion, monopolization of entertainment sector, drug trafficking
6. Caiping XIE's gang	5	2004	Chongqing	18	1	Loan-sharking, gambling, dispute settlement
7. Central China overlord	1	1994	Henan	N/A	1	Raping, hooliganism, attempts to control transport sector
8. Changli He's gang	1	N/A	Henan	N/A	1	Corruption

TABLE A6.1 (*cont.*)

Name of gang	*Length of activity in years*	*Start date*	*Location (region)*	*Size*	*Background leadership**	*Main charges*
9. Chongqing Mingliang CHEN's gang	8	2001	Chongqing	47	N/A	Kidnapping, extortion, prostitution, drug trafficking
10. Deliang LI and Guoqing MAI's gang	6	1996	Guangdong	N/A	4	Kidnapping, robbery, collection of gambling debts, extortion, protection rackets, blackmailing
11. Deping JIANG's gang	5	1997	Jiangsu	20	3	Monopolization of excavation sector
12. Fang Guangcheng's gang	9	1996	Beijing	36	1	Extortion, monopolization of construction
13. Foshan Water Gang	5	1995	Guangdong	N/A	3	Collection of gambling debts, arms dealing, loan-sharking, gambling
14. Great Ring (or Big Circle Boys)	4	1994	Macao	N/A	2	Kidnapping, robbery
15. Guanglong ZHOU's gang	6	1995	Guangdong	N/A	1	Protection racket, monopolization of transportation and taxi industry
16. Guizhen MA's gang	14	1995	Jilin	10	N/A	Loan-sharking, extortion, gambling, corruption
17. Guojian LI's gang	1	2007	Hubei	7	4	Monopolization of fruit and vegetable market
18. Handan Lifa LIN's gang	5	2003	Hebei	24	N/A	Extortion in construction
19. Hong YANG's gang	3	2004	Hubei	N/A	3	Debt collection, collection of gambling debts, extortion, gambling
20. Hongyong ZHANG's gang	4	2005	Hebei	90	2	Tax evasion, theft of raw materials
21. HU Brothers	9	1996	Beijing	34	N/A	Kidnapping, arms dealing, illegal sand excavation, illegal detention, corruption

Note: The cases listed in table A6.1 come under the Chinese definition of mafia group ("organizations with an underworld nature"), but do not all display the features of a mafia group as defined in this book. Clearly, this list does not claim to be representative. The cases were deemed important by the sources listed above.

Mafia Origins, Transplantation, and the Paradoxes of Democracy

Boris Sergeev, the Solntsevskaya associate operating in Rome, was a flitter, laying his eggs in many nests. Born in Moscow, he lived in Vienna and Paris. His police file lists several aliases. He was a polygamist and forger. Unconfirmed sources claim that he had worked for the KGB in the 1980s. When negotiating with Islamist fighters to smuggle Chechen oil to countries under the UN embargo, he grew a beard. For reasons as yet unknown, he surfaced in Rome in the early 1990s. When the Solntsevskaya boss arrived in the Italian capital a year or two later, Sergeev offered to help: he registered some of Yakovlev's companies at his address, arranged invitations to Austria for the boss's lieutenant (a fugitive from justice), supplied false German passports, and allowed the crew to use his bank accounts for the transit of vast sums of money. Around April 1996, however, the two grew apart. Yakovlev suspected Sergeev of embezzling money entrusted to him.

Sergeev had been accused of embezzlement before. A few years earlier, he had taken funds from a Russian businessman, *Nikita Morozov*, but never invested or returned them. As one might expect, Morozov was no ordinary businessman. When he died in 1994, he was a partner in two Russian companies based in Vienna and controlled by Ivan'kov, who had escaped to the United States in 1992. Together with two other Russians connected to the Solntsevskaya, Morozov came to the attention of the U.S. authorities when he threatened a drug trafficker based in Antwerp who had started cooperating with U.S. intelligence. The three Russians were

trying to obtain a share in the trafficker's legitimate shipping company. Sergeev had a talent for upsetting powerful people.

When Morozov's son, *Akim*, and his wife, *Ekaterina*, showed up in Rome in June 1996 asking for the money, Sergeev and his wife welcomed them with open arms. After a lavish lunch at their house, they pulled a gun on the couple. According to Ekaterina, a young and attractive blond, they first beat them and then Sergeev tried to rape her. In the ensuing bedlam, Sergeev's wife was holding the pistol. The couple managed to escape after a struggle by climbing over the garden fence. The railing was not high; to this day Sergeev's abode is the same two-story, white, detached house with a small pool in the garden, an estate agent told me. Ekaterina and Akim stopped a police car on the busy main street of the tourist town on the Lazio coast and reported Sergeev. The attack on the Morozovs had momentous consequences. Sergeev was arrested for assault, and the house was searched for over three days by local and special units. On the first day, the police found twenty-two caliber-nine cartridges, several Russian and Polish passports, a gun holster, and a piece of paper listing all Russian criminal groups, including the name of the person in charge and the banks they used. On the second day, they retrieved a gun from the water tank behind the toilet—a rather rudimentary way to hide a weapon. On the third day, Italian authorities found more documents, mainly related to arms sales.

During the summer of 1996 Sergeev was hard at work on his last scam: the sale of cheap Bulgarian meat in Russia. Through political contacts within the European Union, he obtained a certificate stating that his product was from high-quality Italian livestock and intended for humanitarian aid to Russia. The certification allowed him to avoid paying duties in Europe. Once in Russia, the meat would have been sold at market price. To pull off this scam worth twenty million U.S. dollars, he needed capital and official support on the Russian side too. He thought that he had secured the backing of a Moscow brigada. This was the reason for his last trip to his native city in 1996 described in the introduction of this book. Although there is no final word on who ordered and carried out Sergeev's murder at the Tverskaya hotel in September, it is plausible that the Solntsevskaya had grown tired of him and decided to end his career. Some ventured the theory that the hit was carried out with the blessing of officials involved in illegal oil deals in Chechnya. Yakovlev, the boss in Rome, received a call informing him of Sergeev's death at 17.52 Italian time, just one minute

after Sergeev's wife got the news. He remarked, "What, did they kill him? I am not surprised; he has stolen money from half of Russia."[1]

Seen from a distance, international organized crime appears as a monolithic and self-assured Global Corp. Inc. The Solntsevskaya sends a boss to Rome, where he sets up an outpost, and quickly penetrates the upper echelons of national and international finance. Waiting for him is an infrastructure that includes local fixers and a fellow Russian with international contacts that range, according to newspaper reports, from top Moscow apparatchiki to Swiss financiers linked to the Democratic Party in the United States.

Such a picture is not entirely inaccurate, but the complications of the story have been erased. The Solntsevskaya is not a single organization but rather an alliance of independent brigades. The "envoy" to Rome was running for his life after his mentor had been murdered in Moscow. The local help consisted of two people operating a travel agency. The Russian fixer was not a full-time member of the organization but instead a freelance con artist with apparently constrained intellectual capacity and certainly limited credibility, whose plans often floundered and backfired.

The first step for observers of international organized crime is to draw some basic distinctions. Sergeev was part of the "service industry" of organized crime. Although some might be tempted to portray him as a global criminal mastermind floating in hyperspace, a present-day Moriarty, he and other unsavory characters that fill popular accounts of this phenomenon are not independent variables; they are hired to carry out work for states, secret services, legitimate corporations, or mafia groups. When they lose the trust of their paymasters, they are removed and leave no trace.

Mafias do not flit. Rather than being liquid entities, they are firmly entrenched in the territory that they govern. One surprising finding of this study is that most mafiosi do not migrate away from their territory of their own volition (the surprise is of course directly proportional to the belief that mafias migrate easily). They are not the CEOs of a global corporation exploring rationally the best mix of tax breaks, law enforcement, and climatic conditions. In the cases covered here, mafiosi move to new territories in order to escape state prosecution, mafia wars, and internal disputes, or because they are ordered by the state to move away. The recent transplantation of gangs from Southern California to El Salvador and Guatemala is another case of less-than-willing migration. The first wave of migration

of Central American youths to Southern California was due to civil wars and military conflict in Central America in the 1980s. Once in the United States, some individuals joined Latino gangs. In the early 1990s, the U.S. government forced more than 150,000 Central Americans to return to their home countries in a three-year period. Some of them brought their criminal expertise with them, taking over and transforming local bands. By the mid-1990s, one could find "clones" of Los Angeles gangs—such as Mara Salvatrucha and the 18th gang in San Salvador, and the White Fence and Latin Kings in Guatemala. Contrary to what was suggested by the media and some scholars, though, the members of Latino gangs in California had not sought to expand their franchise and drug distribution network through relocation to Central America. They had been forced there by state policies.[2]

Mafiosi are stationary because the service they provide is inherently local. They ensure selective access to resources in a given territory. In order to do so, they build long-term relationships with the place in which they operate as well as with the people, officeholders, and police. Rather than with a CEO, a more apt comparison is with a politician—say, a British Member of Parliament or U.S. Senator. Candidates who have built their power base in a given constituency do not simply pack up and try their luck in the French or Italian political system, even if the salaries and allowances are larger. They would not have enough local knowledge and therefore cannot hope to get things done because they do not have connections to local power holders. As a rule, political (and criminal) reputations are local and are the product of costly investments. To start afresh somewhere else is expensive. As Tocqueville wrote in *Democracy in America*, "The happy and the powerful do not go into exile." Rather, "poverty and misfortune" make them move.

Only under a special set of circumstances do mafias reproduce themselves in new areas. This book has tried to untangle the factors that account for mafia migration and successful transplantation. In so doing, it has challenged some widespread conceptions regarding migration. Generalized population migration on its own cannot explain the mob's successful and long-term transplantation in a new territory. The migration of individuals with specific mafia skills surely increases the risk of mafias becoming entrenched, yet this "variable" is not sufficient for a mafia to become deep-rooted in a new territory.

The findings of this book also qualify the effect of globalization on organized crime. I found no instances in which mafiosi opened outposts abroad in order to obtain resources such as labor and specialized equipment, or where mafiosi rationally decided to start a protection racket in a faraway land—what I called market-seeking motivations. To the extent that globalization has increased labor mobility, mafias have even less reason to open branches abroad to look for recruits. If mafias seek specialized technical equipment, such as arms, globalization could increase the number of international locations from which they obtain these resources, but it also reduces the motivation to own resources abroad. In the mid-1990s, for instance, Russian bosses occasionally traveled to Germany to buy arms. Rather than establishing an outpost in that country, they simply bought arms on the open market. Thus, globalization affects how crime is committed in a given country, instead of making mobsters want to migrate abroad.

Mafias do reinvest the proceeds of their crimes in different markets. A specific function that a mafioso can carry out abroad is to monitor investments for their group back home. The case of Yakovlev partly fits this picture. Although he ended up in Rome because he was fleeing death threats in Moscow, while abroad he kept himself busy investing the funds of his own brigada in the Italian economy. He also had won the trust of other Russian criminal groups and was managing some of their funds as well. Other cases are on record. Anthony Spilotro oversaw the Chicago outfit's investments in Las Vegas in the 1970s, although he did not do a particularly good job. Pippo Calò, the boss of the Porta Nuova Sicilian mafia family, moved to Rome at the start of the 1970s to monitor its investments in real estate and banking. The presence of the Neapolitan Camorra in the Scottish city of Aberdeen also reflected mafia attempts to launder money and invest in the local legal economy.[3] In these cases, the initial motivation for the mafias' presence was not to establish control over a specific sector of the economy.

Why would a mafia send an envoy abroad rather than just monitor its investments from a distance? Mafia investments are informal and often in cash; no recourse to the legal system exists in the event of a dispute. Moreover, money laundering and investments in the legal economy can involve several hundred one-shot transactions between business associ-

ates of the criminal group and legitimate firms in foreign and inhospitable countries. Those tasked with undertaking these decisions enjoy a significant amount of discretion and are difficult to monitor. Investments can go wrong, and the bosses back home cannot easily verify claims and reports. This situation generates specific incentives for mafiosi to go abroad so as to monitor directly transactions with legitimate entrepreneurs. The boss might well be tempted to go himself, since he cannot trust agents fully. On the other hand, if he leaves his territory for a long time, he weakens his position back home. Bosses thus face a dilemma to which there is no optimal solution. While one should not underestimate the danger of criminal groups making such inroads into the legitimate economy, this strategy and its impact differ from territorial penetration. For the latter to succeed, several local conditions must also be in place—most notably a demand for private protection.

Origins and Transplantations

Can our conclusions on transplantation form the basis of a broader theory of mafia emergence and transplantation? Scholars have already explored in considerable depth the reasons why mafias emerged in their territories of origin. Contrary to the view prominent until the early 1990s that these organizations were the product of social and economic backwardness and chaos, recent studies have shown that mafias emerge in societies that are undergoing a sudden and late transition to the market economy, lack a legal structure that reliably protects property rights or settles business disputes, and have a supply of people trained in violence who become unemployed at this specific juncture.[4]

For instance, the origin of the Sicilian mafia is best explained as a perverse response to a late and rapid transition to the market economy in the early nineteenth century, in the presence of a state that failed to clearly define and protect the newly granted property rights, and a supply of individuals trained in the use of violence who became suddenly unemployed. The armed guards (*campieri*) formerly at the service of the feudal lords were now out of work. In addition, the Bourbon army had disbanded after the unification of Italy and its soldiers were in search of a purpose. At this point in history, some members of the violent classes turned to banditry,

while others started to offer their services to more than one aristocratic family. The lethal combination of a demand for the protection of property and property rights, the presence of a threat from banditry and disputes with other owners, and a supply of disbanded soldiers and unemployed field guards ready to offer private protection gave rise to the Sicilian mafia in the early to mid-nineteenth century.[5]

This perspective—what could be called the "property rights theory of mafia emergence"—can be applied to other cases, such as Japan and post–Soviet Russia, to explain how mafias might emerge in times of rapid but flawed transitions to the market economy. Japan made a rapid transition from an agrarian, feudal society to a modern, industrialized economy in the Meiji period, which is traditionally dated from 1868 to 1911. During the Meiji period, the country saw the end of feudalism, the spread of property ownership (mainly in land), the enactment of legal reforms—including land reform (1873–76), a written constitution (1889), and a French-style civil code (1898)—and a process of centralization of government. As a consequence of the spread of property ownership, disputes increased, both between individuals and the state (mainly over the levels of taxation) and between individual owners. The state, however, failed to provide mechanisms for dispute resolution that were quick and efficient. At the same time, the transition to the market produced a crisis for the large and economically useless warrior class. A supply of people trained in violence started to offer services of dispute resolution and protection outside the scope of the state, giving rise to the modern yakuza.[6]

As I have argued elsewhere, Russia underwent a similar process. From 1986 onward, the country witnessed a rapid spread of property rights that was not matched by the establishment of adequate formal enforcement mechanisms by the state. This generated a demand for nonstate sources of protection. Such a demand coincided with the presence of individuals who had acquired violent skills and found themselves unemployed. In the Russian case, these individuals were former Red Army soldiers, Afghan veterans, unemployed sportsmen, and ex-prisoners. The Russian mafia emerged at this historical juncture, and many groups adopted similar norms and rituals.[7]

The property rights theory of mafia emergence remains the most convincing perspective on the origins of mafias. Yet it has also proved to be a special case. Not all mafias have developed during times of transition to

the market as in Sicily and Japan in the nineteenth century and Russia at the end of the twentieth. Mafias may well emerge within functioning market economies, and for reasons other than to ensure the protection of property rights. A sudden boom in a local market that is not governed by the state can lead to a demand for criminal protection, even in countries where property rights are clearly defined, trust is high, and courts work relatively well at settling legitimate disputes among market actors. The presence of a supply of people trained in violence and capable of offering such protection might lead to the emergence of a mafia or the transplantation of a foreign group. Endogenous mafia emergence or transplantation, however, are not a mechanical product of sudden changes in the economy. Authorities or market operators can take actions to govern the transformation, thereby preventing the rise of a demand for mafia protection.

Democratic Paradoxes

A key insight of the perspective outlined above is that the Sicilian, Japanese, and Russian mafias all emerged at times when the market and the political process were both undergoing a process of democratization. Can democracy also provide the means to fight mafias effectively? Chinese authorities battle organized crime and corruption by routinely arresting criminals, and then meting out harsh sentences. As I was writing these lines in early January 2010, seven corrupt officials and criminals were executed in Hebei Province for a variety of crimes. But the structural conditions that give rise to opportunities for graft have not been tackled. Random and personalized "justice" is dispensed from the center, and businesspeople are vulnerable to the changes in fortune of their official protectors. The stability much valued by Beijing rulers in fact betrays uncertainty and deep insecurity for market players.[8]

One might then conclude that the solution is to transit to a fully democratic system of government as quickly as possible. Democracies can fight mafias effectively, yet they also generate their own paradoxes. First, the development of democratic institutions offers a major opportunity for organized crime by creating a market for a commodity that is not meant to be traded: votes. Mafias can help politicians ensure that a section of the electorate is rewarded for selling their votes to the highest bidder. Politicians can return the favor in the way they dispense the resources under their

control, such as public contracts, tips on police investigations, passports, and travel documents, to name a few. The defiant antimafia campaigner and mayor of Bardonecchia, Mario Corino, could not defeat his political opponents when they commanded the support of the few hundred voters controlled by the Calabrese boss Rocco Lo Presti. When constituencies are small, it is easier for an organized minority to control a significant amount of voters and thereby dominate the democratic process. As constituencies grow in size, it becomes ceteris paribus more difficult to control and organize a sufficient number of voters to suppress widespread discontent.[9] Indeed, when Lo Presti tried to get an associate elected to the Piedmont Regional Assembly, he failed. He did not muster enough votes.

William Jay Gaynor, now a relatively forgotten figure of U.S. politics, is also the product of democracy—more specifically, of a reform that enlarged the constituency that elected the mayor of New York and an electorate disgusted by pervasive graft. In 1897, some forty municipal entities were "consolidated" under the single mantle of Greater New York, so that several thousand votes were needed to win the election.[10] Public opinion aided by preachers and the independent media mobilized in support of a change in government. Mayor Gaynor was thus able to reform the city administration, enforce key measures to protect trade unions, and bring an end to the official corruption that protected brothels and gambling dens ("protective umbrella"). As a consequence of his reforms, many city employees were fired, and one was so outraged that he shot the mayor in the throat early in his first term. Gaynor would eventually die because of this wound.

The political legacy of Mayor Gaynor is paradoxical, however. By dismantling the system of protective umbrellas, he opened the way for the Italian American mafia to evolve from petty criminals to a fully formed structure of governance. After his reforms, individuals trained in violence replaced the protective umbrellas. Mobsters now organized the saloons, brothels, and gambling establishments. A well-meaning reform thus had a crucial unintended effect. Likewise, I would expect that a sudden transition to democracy in China might well create a bonanza for mafias.

The media in a democracy can be a powerful tool to fight organized crime. Public opinion leaders at the time of Mayor Gaynor included the Reverend Charles H. Parkhurst of the Madison Square Presbyterian Church. His powerful sermons and personal forays in the vice district of New York City—Satan's Circle—helped galvanize the anticorruption movement. The

[162.10.217.184] Project MUSE (2026-06-15 01:44 GMT) University of Queensland

press was mostly supportive as well. Joseph Pulitzer's *New York World* and its fierce competitor, William Randolph Hearst's *New York Morning Journal*, both campaigned against corruption, in conjunction with two other influential local papers, the *Herald* and the *New York Times*. Quite crucially, Hearst commissioned Stephen Crane (the author in 1895 of the Civil War novel *The Red Badge of Courage*) to write a series of pieces on police corruption and brutality in Satan's Circle. Yet both the *World* and the *Journal* also had a possibly pernicious influence. In order to fight its war against the *Journal*, the *World*, through its reporter Herbert B. Swope, led a relentless campaign against a New York Police Department captain, Charles Backer, who was ultimately unjustly accused of murdering the operator of a gambling den and sentenced to die in the electric chair.[11] The fact that prosecutors in the case were also running for office further highlights the paradoxes of democracy. For his part, Hearst—the inspiration for the lead character in Orson Welles's film *Citizen Kane*—used his paper to campaign ferociously against Gaynor—possibly because he stood against him in the election of 1909 and lost. Although the relationship between the media and the fight against the mafia is a complex one, and cannot be explored here, the former follows a logic of its own, which does not always coincide with the latter.

Gaynor's reforms led indirectly to the entrenchment of the Italian American mafia in some key illegal markets, such as prostitution and gambling. The very same Progressive movement that was behind the clean up of City Hall and the New York Police Department was also responsible for passing, a few years later, the Volsted Act and the policy that has come to be known as Prohibition (Hearst was a major supporter of the war against marijuana that led to its prohibition in 1937 in the United States). The New York families were now best placed to reap the benefits of the largest illegal market at the time. As a result of Prohibition, they became a force in New York City and arguably U.S. history.

One might then simply suggest that authorities should pursue the mafia in illegal markets as well, as vigorously as possible. But another paradox presents itself. In markets for illegal commodities, mafias restrict competition, and ensure a degree of order and predictability. In this instance, the public (at least notionally) should welcome inefficient firms organized in cartels, and not want the cheap and efficient delivery of, say, drugs, prostitution, and the like. The fight against the mafias in illegal markets might

then have the effect of making available more products that people generally do not want on the streets. The ability of Cosa Nostra to control the docks of New York City, for example, gave it the possibility to organize the traffic of heroin into the United States. The mafia became the primary supplier of the product across the country for a period. Still, the fact that heroin was going through the New York docks also limited the amount of heroin entering the country. The organization had an incentive to restrict the supply and increase the price, with the end result being a lower quantity available. When Cosa Nostra failed to maintain control of the New York heroin market in the 1970s, by contrast, the city was flooded. The crack epidemic of the 1980s is a postmafia phenomenon.

A further consequence of the fight against the mafia is the displacement effect that I have highlighted in the chapters above. Effective repression of the mafia in one country can simply displace the problem. To use the language of this book, police repression is a most important factor in pushing the supply to other countries. While such measures might go some way to reducing the problem at home, they show a perverse effect of policing. As no country can afford to ignore the entrenchment of the mafia in another land, displacing the problem might just serve to postpone facing up to it.

Subsidies and administrative regulations can foster mafia involvement in frauds and racketeering. A case in point are the subsidies from the Organization for Economic Cooperation and Development and the European Union for the production of crops. Such subsidies have been hijacked by organized crime in many parts of southern Italy. Instead of protecting hard-hit farmers and the countryside, they have generated further exploitation and crime. In order to save on labor costs and rather than work the land themselves, landowners in Calabria employ cheap illegal workers from the Maghreb and sub-Saharan Africa. Workers come in the winter to harvest oranges and clementines for a pittance (the going daily wage is twenty-five euros). The living conditions are dreadful, and immigrants are routinely harassed. When I visited this part of Italy in March 2010, I was taken to a disused factory lacking any sanitation or toilets where immigrants camp out. Racketeers extract five euros from each worker a day. When vast sectors of the population exist beyond the reach of state institutions, as is the case with large communities of illegal migrants, a demand for extralegal services of dispute settlement and governance can emerge among the mi-

grants as well as the entrepreneurs who exploit them. Legitimate structures should prevent the emergence of such pockets of poverty and lawlessness. By ensuring this, they also help prevent mafia emergence.

In recent years, the European Union has curbed some such subsidies, forcing Italian farmers to compete against Spanish and Latin American producers of oranges and orange juice. While previously the `Ndrangheta had helped landowners control and exploit illegal immigrant workers, it could not protect farmers against global competition—in this case, competition against Brazilian and Spanish products. As I have shown in this book, mafias are able to protect local markets, but they find it next to impossible to protect export markets. Thus, a clear policy implication is that more global competition would weaken this criminal organization. Yet deregulation and global competition must be introduced with a grain of salt. In January 2010, riots between immigrants and locals broke out in the town of Rosarno, the epicenter of the labor racket and a `Ndrangheta stronghold. The root cause of the violence was the lack of work. Farmers, who could not squeeze the workers' salaries any further and had failed to modernize, decided to leave the fruit to rot in the fields and just rely on the lump-sum subsidy that the European Union still pays to owners of a field. In a heated social climate, a minor scuffle between a black immigrant and the owner of a car led to large-scale riots. Social tension was the unexpected outcome of a measure intended—among other things—to curb the role of organized crime.

How can we make sense of the paradox that reforms aimed at introducing democracy, reducing corruption, and opening up markets can give rise to a demand for mafia services? Or that riots break out when the mafia is weakened? Observers and policymakers routinely fail to recognize that mafias can serve powerful and entrenched interests in a democracy. In markets for legal commodities, mafias offer, in a nutshell, a form of protectionism against cutthroat competition. Market insiders might prefer this protection to competition that would force them to make painful changes. Elected politicians sometimes find it easier to enlist the services of thugs than to compete fairly with their opponents. Those who pay the price are ordinary people who have to cope with inflated prices and lousy representatives.[12] In illegal markets, mafias bring some order to the trade and can reduce uncertainty. It is not surprising, then, that police forces and some politi-

cians are tempted to come to terms with organized crime in illegal markets; it makes their work easier (the occasional bribe surely helps).

This book is not a list of specific recipes to fight the mafia. It simply suggests that a demand for mafia services originates in the economy, and that state action can foster or hinder such a demand. The best way to fight the presence of a mafia is to drain the demand for its services. It is not enough to reform the public administration or liberalize markets, or let booms go unchecked. Liberalization should be accompanied by effective measures aimed at preventing the formation of cartels in local markets and easing the effect of liberalization on the local workforce to avoid social tension. Liberalization requires more, not less, state intervention in the economy. Opening markets to competition requires state structures strong enough to ensure that market actors are free to sell in a territory. The prohibition and criminalization of certain substances, such as alcohol and drugs, should not be undertaken lightly, as they will generate a demand for forms of governance in illegal markets.

The political climate at the end of the twentieth century and in this decade has promoted the erosion of state monopolies over policing and security, and citizens are encouraged by governments to become "responsible" for the provision of their own protection. Rather than civic associations devoted to the defense of rights, mafias and mafia-like groups are well placed to exploit such a protection deficit. Already in many developing countries—whose local economies revolve around agricultural goods sold at markets, where the demand for the protection of property, goods, trading spots, and transportation routes is high—communities rely on alternatives to state security, such as informal organized security groups, religious police, and ethnic militias, some of which are effective. Although it might be early to speak of full-fledged mafias, groups such as the Bakassi Boys in Nigeria—youths armed with machetes, guns, and charms who engage in anticrime vigilante activities in the Igbo area, and often are accused of illegal activities and human rights abuses—have the potential to turn into mafias.[13]

Once the demand for mafia services has been sapped, it is also necessary to neutralize the threat posed by the supply. The utmost determination on the part of authorities is a central ingredient of any fight against the mafia. Effective policing makes life difficult for bosses, increases mistrust among

the rank and file, and helps to dislodge deeply entrenched criminal groups. And ultimately any fight against criminal organizations set on using violence on the population cannot get started without the actions of a few dedicated campaigners who risk their lives to bring about a better world. This book is dedicated to them.

9. For instance, the pure extortion of film crews has been recorded in Palermo, Hong Kong, and Moscow (see, respectively, Gambetta 2009, 255–56; Chu 2000, 71; *Independent*, November 2, 1995). The shooting of movies is particularly susceptible to extortion because crews work on tight schedules and cannot afford even the smallest delay in production; as they also tend to be from outside, they have no long-term connection with local men of honor (see Gambetta 2009, 256). In some cases, film crews have entered into partnerships with "location agents" who have ensured a safe production schedule, presumably because they enjoy long-term connections with the local mafiosi.

10. Extortion is often confused with other phenomena, such as the imposition of a tribute and overcharging for a service. Failing to appreciate that protection is subject to economies of scale generates the first confusion. If a group has the resources to protect client X and scare that person's enemies away, the same group must have all the qualities it takes to protect other people as well. This leads protectors to impose their protection on others. Just as states impose their protection on their subjects, so do mafias, although it does not follow that the service provided is bogus. Failing to appreciate that protection is also a natural monopoly leads to the second confusion. Since protectors are monopolists, they will charge a monopoly price and obtain a monopoly profit. Just as states charge more for their protection services than it costs to produce them, so do mafias. For a broader discussion of the economics of protection, see Lane 1958.

11. For parallels between state action and mafia behavior, see Tilly 1985.

12. For instances of services supplied by the mafia, see Bell [1953] 1988, 131; Block 1983, 43; Chu 2000, 43–76, 153–54; Gambetta 1993, 93–94, 171–79, 190–92, 197; Sabetti 1984, 90–91; Varese 2001, 69–72, 110–13, 115–17, 119; *New York Times*, August 29, 1999. For discussions of cartel agreement enforcement, see Landesco [1929] 1968; Reuter 1987; Gambetta 1993, 195–225; Gambetta and Reuter 1995. Nonetheless, extortion and protection are closely related in practice. What constitutes extortion and the consequent possible financial ruin for one victim of the mafia may be genuine protection for another. This is exemplified by a story narrated by Catania-boss-turned-state-witness Tonino Calderone. In the mid-1950s he placed a bomb in the chimney of the offices of the Rendo construction company, the main competitors of the Costanzos, who were then protected by his family. "The goal," he writes, "was to do the Costanzo brothers a favour." After the bomb was placed, "the usual phone call asking for money was made," although Calderone had no intention of supplying any genuine service (Arlacchi 1993, 53). What were extortionary demands on the Rendo amounted to protection against competition for the Costanzos. Joe Bonanno (with Lalli 1983, 79) put it best: "What is seen as extortion from the outsider is viewed as self-protection by the insider." From a dynamic perspective, external factors might turn protection into extortion. For instance, the shorter the group's time horizon, the more likely it will harass customers with purely extortionary demands. The view that extortion is the defining feature of the mafia might be a consequence of selection bias in the evidence that filters out from the underworld: extortion is more likely to require the use of violence. In turn, violent conflicts leave behind more evidence and are more easily reported (Gambetta 1993). For a discussion of these themes, see Gambetta 1993 and Varese 2010.

13. A word often used in Italian is colonization (see Massari 2001, 15). Mark Galeotti (2000, 38) calls it "hard" penetration.

33. CAF 1989; Paoli 1995. In 2007, Calò was acquitted of this murder (*BBC News*, June 6, 2007).

34. Coleman 1990, 302.

35. Putnam 1993, 97, 149. The reason that he offers invokes the distant medieval past, and in particular the republican tradition of the city-states in the North and the Norman centralized, autocratic rule in the South: "Social patterns plainly traceable from early medieval Italy to today turn out to be decisive in explaining why, on the verge of the twenty-first century, some communities are better able than others to manage collective life and sustain effective institutions" (Putnam 1993, 121). An alternative view is that trust can be depleted by intentional strategies and is rather fragile, even in territories where it has flourished for centuries. See Pagden 1987; Doria [1709–10] 1973.

36. Rose-Ackerman 1998, 2001a, 2001b. See also Portes 1998; Farrell 2009.

37. Saviano 2007, 51; Varese 2009, 263.

38. Quoted in Pileggi 1987, 60–61.

39. Quoted in Chin 2003, 197.

40. See Sciarrone 1998, 252, 287.

41. Reuter 1995, 92.

42. Quoted in *Il Corriere della Sera*, July 1, 1998. Similarly, Japanese director Fukasaku Kinji said: "They [the yakuza] liked those movies because it made them look good. It was good for their image" (quoted in Desjardinis 2005, 25). For relevant discussions, see Gambetta 1993, 127–55; Varese 2006b; Gambetta 2009, 251–74.

43. On the possibility principle, see Mahoney and Goertz 2004. On the logic of the comparative method more generally, see the restatement in King, Keohane, and Verba 1994. As a substantive example of such research strategy, see the groundbreaking study by Stathis Kalyvas (2006), in particular his focus on two cases that are similar as far as many variables are concerned, except for one crucial outcome: the level of violence during the civil war in Greece in the 1940s. Papers with a similar design include Posner 2004; Miguel 2004; Varese 2006a.

Chapter 3: The `Ndrangheta in Piedmont and Veneto

1. Quoted in Veltri and Laudati 2009, 148; Sergi 1991, 61.

2. Falcone with Padovani 1993, 109.

3. Ciconte 1992, 5–20; Paoli 2003, 37; Montalto [1940] 1973; *Il Corriere della Sera* February 10, 1978. Court sentences and police reports point to the existence of the `Ndrangheta since the 1870s.

4. CPA 2000, 94; see also CPA 1993b, 700; 2000, 92, 97.

5. Sciarrone 2008, 77. Among the many references on `ndrina, see Ciconte 1992, 20; 1996, 17. Cosca or family are also used. For the origins of the word, see Martino 1988.

6. PRC 1998, quoted in CPA 2000, 95. According to former member Francesco Fonti, "Almost all male inhabitants belong to the `Ndrangheta" in San Luca (quoted in Paoli 2003, 29). On Fonti, see Ciconte 1998, 45–48, 202–28); TT 1996. For evidence of the continuing relevence of the Sanctuary of Our Lady of Polsi, see the investigation reported in *Repubblica* July 14, 2010.

7. Quoted in Paoli 2003, 59.

8. CPA 2000, 94–95. Some evidence on the ability of the crimine to rein in local `ndrine does exist. In one case, the annual meeting deprived the locale of Sant'Eufemia d'Aspromonte of its mafia status because it proved unable to prevent the mourning of a police officer killed in the line of duty, and some `ndranghesti even attended the funeral (CPA 2000, 94). The Apalachin meeting of the Italian American mafia took place on November 14, 1957, in Apalachin, New York.

Some one hundred crime bosses attended. On the many sources for this event, see, for example, Raab 2005.

9. CPA 2000, 96. Letizia Paoli (2003, 32) writes that "though enjoying a high degree of operational independence, these units are considered by their own members and their Calabrian correspondents as belonging for all intents and purposes to the `Ndrangheta."

10. CPA 2000, 98. In the northern Irish conflict 3,700 people were killed between 1969 and 1998, which amounts to 128 deaths per year. The average death in the 1986–91 period in Calabria was 136. Since 1991, violence between different groups has declined considerably (DIA 2002, 85).

11. See CPA 1993b, 704–5; 2000, 98; Paoli 2003, 59. For the earliest evidence, see Ciconte 1992, 118–27.

12. CPA 1993b, 705. The `Ndrangheta is also present in the Calabrian provinces Catanzaro and Cosenza. Paoli (2003, 30) reports that there are eighty-six groups in the same province.

13. CPA 2000, 24, 37; 1993, 702. The prefect of Catanzaro, Francesco Stranges, notes that the sum of money regularly demanded from entrepreneurs by the `Ndrangheta is often small. "The mafiosi, since they are not very greedy, practice extortion at an acceptable level, hence it is difficult to find individuals willing to testify in these cases" (quoted in ibid., 37). Mafiosi themselves have expressed concern with high rates of extortion. In one instance, the head of the mafia family of San Luca, which is considered the repository of "certified" values and rules of this mafia, expressed concern at the excessive demands that the head of the Locri family was imposing on the latter's victims. He was overheard saying: "Do you know why I came here [to meet you]? Totò, be careful—when the human race, the people go against you, you will lose what you have achieved in thirty years! You just lose it! When you destroy the shop of one guy, burn the car of another, the people will rebel!" (quoted in ibid., 38). On the resurgence of severe violence in Reggio Calabria, see *Il Sole 24 Ore*, August 26, 2001.

14. CPA 1993b, 702, 709; 2000, 25–27, 35; Mangano 2010, 33–44.

15. *Deutsche Welle*, August 17, 2007; CPA 2008; Forgione 2009.

16. Quoted in CPA 2000, 92.

17. Paoli 2003, 31. Similarly, Antonio Zagari, also a former member, states that "from their birth . . . the sons of Calabrian men of honour are, by right, considered *giovani d'onore*" (quoted in Paoli 2003, 232).

18. Quoted in CPA 1993b, 700.

19. Ibid., 700–701; Falcone with Padovani 1993, 109; Arlacchi 1983, 137. Usually, members of a ruling blood family rise to the post of boss, although political or military merit plays a role in upward mobility within each unit. Also, the *locali* have developed a complex system of ranks that does not always coincide with kin relationships. See Paoli 2003, 50.

20. CPA 1993b, 700–701; 2000, 13, 101–2.

21. See Allum 2001, 332–33; 2006. Unlike the `Ndrangheta, Camorra groups have no notion of being part of the same entity, although some of them are grouped in cartels (for example, the Alleanza di Secondigliano and the Clan dei Casalesi). Recently, the number of Camorra members who have turned state's witness (pentiti) has risen significantly, when bosses started to turn state witnesses. Such a move has prompted many other family members to turn, surely a strategic and collective decision. For the relevant, more recent data, see CPA 2008, 24. I am grateful to Paolo Campana for a discussion on this point.

22. CPA 2000, 102; see also 1993a, 701.

23. See Ciconte 1996, 160–98; 1998; CPA 2000, 13, 15, 17; Paoli 2003, 32; Veltri and Laudati 2009, 150; Forgione 2009. For Canada and Australia, see Minuti and Nicaso 1994.

24. Quoted in CPA 1993b, 703; see also Massari 2001, 15.

25. For instance, a member tried to buy a bank in Saint Petersburg (CPA 2000, 112). The push to export criminal proceeding is partly due to the fact that Italian authorities are quite successful at confiscating properties and businesses bought by the mafia *in loco* (ibid., 59–60).

26. Information on the town comes from Molino 1996; http://www.bardonecchiasci.it/; TT 1996, 59. The resident populations of Bardonecchia and Cuorgnè were—in 1961 and 1971, respectively—2,667 and 3,081 (Bardonecchia) and 8,211 and 9,334 (Cuorgnè). See ISTAT 1971.

27. The Civic Community Index is based on four indicators: preference voting, referendum turnout, newspaper readership, and the scarcity of sports and cultural associations. Data were collected in the 1970s and 1980s (Putnam 1993, 96–97). The variables that form the historical index are the strength of mass parties, the incidence of cooperatives, membership in mutual aid societies, electoral turnout, and local associations founded before 1860 (ibid., 149–50).

28. CRP 1983, 70–71; ASC-CT 2001, table 1. Overall, in the 1950s and 1960s some four million people migrated from southern to northern Italy. See Bonaguidi 1985; Sonnino 1995.

29. See Gratteri and Nicaso 2006, 185–88; Veltri and Laudati 2009, 206–30; Carlucci and Caruso 2009.

30. CPA 1976, 279–80, 289; Sciarrone 1998, 255–56; Massari 2001, 13. Of the forty-eight individuals who resettled in Turin Province during the period 1970–82 due to soggiorno obbligato, Public Prosecutor Sebastiano Sorbello points out that "none appears to be a significant mafia boss" (quoted in CRP 1983, 55). This judgment possibly indicates that although these criminals were not prominent bosses when they arrived, they became prominent under new conditions, so transplantation could be seen as a ladder for upward mobility.

31. The data are from CRP 1983, 26, and refer to legally obtained construction licenses.

32. CRP 1983, 26.

33. In 1994 alone, the city council collected five billion lira in residential dwelling taxes. Similar increases occurred in the nearby Canavese Valley (Sciarrone 1998, 264; *La Luna Nuova*, November 7, 1995).

34. Sciarrone 1998, 257.

35. B5.

36. Quoted in TT 2002, 19–20.

37. B1.

38. CPA 1976, 279; B2; B3.

39. Quoted in TT 1996, 30.

40. CRP 1983, 24. See also CPA 1976, 280; Sciarrone 1998, 257; Massari 2001, 7.

41. CRP 1983, 25.

42. Sciarrone 1998, 273.

43. CRP 1983, 27, 48; *La Stampa*, November 14, 1995.

44. TT 2002, 21. The witness is Francesco Fonti, a high-profile state witness. Bardonecchia's chief inspector (B2) told me that he had no evidence of any motive other than extortion.

45. The murder of another Calabrese took place in Cuorgnè in August 1978 (CRP 1983, 27).

46. One of the most important state witnesses, Francesco Fonti, testified to this effect (see TT 1996, 8).

47. Quoted in ibid., 9. For other instances, reaching well into the 1990s, see ibid., 32; 2002, 27. Lo Presti himself stated in a phone call that "we are at the source of everything here, do you understand?" (quoted in ibid., 32).

48. PT 1995, 15–17; TT 1996, 15–17; *La Stampa*, October 5, 1994; October 26, 1995; November 14, 1995; November 23, 1998; September 19, 2002; October 31, 2002; Caselli 2003a, 2, 4; *La Stampa*, January 24, 2009; *Cronaca Qui*, January 27, 2009; http://www.sosimpresa.it/news.php?id=7922; Ciccarello 2009. See also Saccomanno 2005, 120–55. Interestingly, the name of Lo Presti has been pirated by lesser criminals banking on the reputation of the "real thing." A *Lucio* Lo Presti, also from southern Italy (although Messina, not Reggio Calabria) tried to collect a million lira from a shopkeeper (*La Stampa*, November 9, 2001).

49. Quoted in TT 2002, 19–20; see also ibid., 24.

50. Sciarrone 1998, 260. Stefano Caselli (2003a) gives a different date (1971) for Mazzaferro's move to Bardonecchia. See also Ciconte 1992, 302.

51. Caselli 2003a. Mazzaferro belongs to the reputed Mazzaferro crime family and acted as the representative of the `Ndrangheta to the provincial commission

of the Sicilian mafia. He was arrested again in 1993 and found guilty of drug trafficking.

52. Sciarrone 1998, 271.

53. PT 1995, 3. An investigation established that Lo Presti directly chose the subcontractors in the Campo Smith development (TT 1996, 28–29). For several instances, see *La Stampa*, November 14, 1995.

54. Quoted in PT 1995, 14.

55. Quoted in TT 1996, 10; 2002, 23 (emphasis added).

56. PT 1995, 15. Lo Presti was never convicted, due to an amnesty. See also CPA 1976, 10.

57. CRP 1983, 26; *La Stampa*, November 14, 1995.

58. CRP 1983, 27, 48.

59. Ibid., 51, 61.

60. *La Stampa*, October 24, 1995.

61. Ibid., October 15, 1995; B2.

62. For instance, Mario Mezzani Mezzacuva, who was running a construction company with offices in Calabria and Cuorgnè, and was a reputed member of the `Ndrangheta, was killed in Calabria in 1985. He had been present at the annual gathering in 1969 at the Sanctuary of Our Lady of Polsi that was raided by police. Two individuals were first wounded and then burned alive in 1996 (*La Stampa*, July 16, 1996). The same article includes a list of unsolved murders in the period 1991–96. On July 14, 1998, two construction workers from Calabria who had previous convictions were murdered in Santa Lucia di Cuorgnè (see CRP 1983, 27; *Il Corriere della Sera*, July 15, 1998).

63. TT 1996, 18–19; *La Luna Nuova*, September 12, 1995; *La Stampa*, November 15, 1995; February 6, 1996; January 17, 2001; October 31, 2002; Caselli 2003a, 3.

64. Caselli 2003a, 4; see also TT 1996, 24. The sentence in 2002 against Lo Presti stresses that the "trial has proved the presence of *omertà* and submission in Bardonecchia and Val Susa" (quoted in Caselli 2003a, 4).

65. PT 1995, 8; TT 1996, 26; *La Stampa*, October 5, 1994; Caselli 2003a, 4.

66. *La Stampa*, October 6, 1996.

67. See ibid., April 29, 1995; September 7, 1995.

68. CRP 1983, 25; *La Stampa*, November 14, 1995. The same level of fear among construction workers was observed in the 1990s by trade unionists interviewed in *La Stampa* (May 3, 1995), and episodes of intimidation continue to be recorded (see, for example, ibid., November 16, 1995).

69. Sciarrone 1998, 257.

70. Direzione Centrale per i Servizi Antidroga, available at http://www.vivoscuola.it/us/geometri-pozzo-trento/droghe/2F/ecstasy/ECSTASY.PDF; http://www.exodus.it/sostanze/ ecstasy/belpaese.htm. For more instances of drugs dealing, see TT 1996, 9–10; 2002, 25. Arms sold illegally in Val Susa were found

in the possession of members of the `Ndrangheta in Calabria (see *La Stampa*, June 7, 1996; June 8, 1996; *La Luna Nuova*, May 1, 1998).

71. *La Luna Nuova*, April 17, 1998.

72. TT 2002, 142–43; B2. There were 414 new residents from 1961 to 1971.

73. PT 1995, 8, 18–19; *La Stampa*, April 30, 1995; November 14, 1995; December 8, 1995.

74. Quoted in TT 1996, 40. See also *La Stampa*, November 15, 1995.

75. Quoted in *La Repubblica* (Turin), October 6, 1994; see also TT 1996, 41; TT 2002, 43; *La Stampa*, April 29, 1995.

76. *La Luna Nuova*, October 7, 1994, quoted in Sciarrone 1998, 268; see also TT 1996, 41.

77. PT 1995; PR 1995; MI 1995; TT 1996, 28; Caselli 2003b; Laudi 2003. Additional information is in *La Stampa*, October 6, 1994; October 25, 1995; November 17, 1995; October 5, 1996.

78. PT 1995, 5; TT 1996, 61–62; see also press reports in *Il Corriere della Sera*, March 16, 1995; April 29, 1995; June 5, 1995; *La Stampa*, April 29, 1995; June 27, 1995; Caselli 2003a, 2. For discussions of law 221/91 utilized to disband city councils due to mafia influence, see Gullotti 2003; Maresco and Serpone 2005; Mete 2007. It should be noted that this legislation has come under criticism since it does not apply to administrative post holders. It only revokes the elected officials and calls for new elections within a relatively short period of time. Up to 1995, this procedure had been used for city councils in Calabria (fourteen), Campania (thirty-six), Sicilia (twenty-four), Apulia (seven), and Basilicata (one).

79. Data on the composition of the local administration are taken from *La Stampa*, November 19, 1996; November 20, 1996; October 20, 1996; December 4, 1996; May 15, 2001; June 6, 2001; *La Luna Nuova*, May 15, 2001. For earlier instances of intimidation against elected opposition officials opposed to development projects, see TT 1996, 27. Within Cuorgnè, Giovanni Iaria has a position similar to that of Lo Presti in Bardonecchia. One significant difference is the distinguished political career that he managed to achieve, rising rapidly through the ranks of the Italian Socialist Party to become the deputy leader of Turin Province in 1988 and being elected to a number of offices in the city council. See *La Stampa*, November 15, 1994; Sciarrone 1998, 264, 255, 276–77.

80. TT 2002, 29; see also ibid., 33.

81. Quoted in *La Stampa*, October 5, 1994; see also *La Luna Nuova*, October 7, 1994.

82. Quoted in *La Stampa*, April 29, 1995; February 4, 1994.

83. *La Repubblica* (Turin), quoted in Sciarrone 1998, 271.

84. *La Stampa*, January 19, 2001.

85. B1.

86. *La Luna Nuova*, February 5, 2010.

87. Quoted in *La Stampa*, April 30, 1995.

88. On the march, see ibid., October 5, 1994; October 9, 1994; April 30, 1995. In 1982, a priest accepted thirty million liras from Lo Presti, promising him that he would influence the outcome of a trial, although he failed to deliver. Ibid., December 30, 1994; July 12, 1996.

89. PSB 1995. Naturally, the reason for such lack of enthusiasm for the Lega's rally might be due to the local population's aversion to this political party. Yet in the European elections of June 12, 1994, the Lega obtained 11.13 percent of the valid votes and was the second party after Forza Italia (47.17 percent). Data available at http://elezionistorico.interno.it/index.php.

90. *La Stampa*, April 30, 1995.

91. Data from http://elezionistorico.interno.it/index.php.

92. See TT 1996, 10, 12; 1997, 13. One Aldo Bertolotto testifies that he traveled back to Palmi to undergo the "formal entry ritual" (TT 1996, 10).

93. Data contained in a 1995 report by the Direzione Investigativa Antimafia (DIA, Antimafia Directorate). See an extensive summary of the 1995 DIA report in *La Stampa*, August 6, 1995.

94. B3; *La Stampa*, November 16, 1995; November 21, 1995; December 2, 1995; Caselli 2003a, 4.

95. B4.

96. *La Stampa*, April 29, 1993; April 4, 1995.

97. B2; TT 2002, 33.

98. Putnam 1993, 97. In fact, both regions obtain the same high score on the Civic Community Index. Veneto achieves the same (high) score in the historical index on civic traditions, 1860–1920 (ibid., 150). The indicators mentioned in the text refer to the period 1980–85. See *Il Mondo*, August 29, 1983; Arlacchi and Lewis 1990, 22–23; Ruggiero and Vass 1992, 282.

99. Brugoli 1985; Gaburro 1985.

100. Arlacchi and Lewis 1990, 33.

101. CV 2001.

102. In 1971, the Veneto region's agriculture sector employed 30 percent of the number it employed at the time of the 1951 census (Anastasia and Tattara 2003; Gaburro 1985, 74). As shown by Anna Maria Birindelli (2004, 240), positive and significant "medium range inter-provincial mobility" affected Verona as well as Vicenza, Treviso, and Padua in the 1960s and 1970s, while other provinces in the Veneto region, most notably Venice and Rovigo, lost population. The unemployment rate was between 4 and 6 percent from the early 1960s to the late 1970s (Anastasia and Tattara 2003).

103. FPCI 1981, 13.

104. *L'Arena di Verona*, February 23, 1974.

105. Generally, on the Veronese neofascists in this period, see FPCI 1981, 30–32. On the Rosa dei Venti investigation, see the several articles that appeared in *L'Arena di Verona* in 1974, especially January 3, 1974 and March 28, 1974. For the investigation into Veronesi linked to the Brescia bombing, see, for example, ibid., June 7, 1974; June 11, 1974; June 20, 1974.

106. FPCI 1981, 11. This number is around ten thousand, according to AFV 1983.

Chapter 4: The Russian Mafia in Rome and Budapest

1. Glenny 2008, 79.

2. "He was arrested twice again—once for racketeering, another time for the murder of a casino owner—but was not convicted" (*New York Times*, January 10, 1999). Glenny (2008, 78–79) puts his arrest at 1986.

3. *Moscow Times*, February 22, 2000. On the Solntsevskaya, see also Modestov 1996; Maksimov 1997; Finckenauer and Waring 1998, 110–14; Galeotti 2000; Varese 2001; Karyshev 2001; Glenny 2008, 78–82, 86–89.

4. *Komsomol'skaya Pravda*, December 4, 1998, cited in Varese 2001, 173–74.

6. See Kochan 2005, 21–36. The Italian investigation into these bank transfers did not lead to any conviction (PRB 2008).

7. Although hard to believe, such an occurrence is not that rare. In 1969 Lefty Rosenthal, the central character of Martin Scorsese's film *Casino*, was able to throw out an indictment because the attorney general had failed to personally sign the wiretap orders (Pileggi 1996, 13).

8. In short, refugees were not allowed to apply for a visa to the United States in Moscow, so they would leave the USSR with an Israeli visa and then stop in Rome, where they applied for refugee status to enter the United States.

9. During the 1970s some 370,000 people, mostly Soviet Jews, were allowed to leave the USSR (Mynz 1995) .

10. In 1989, more than seven thousand Russians were in Ladispoli and Rome awaiting visas to the United States. Overall, seventy-one thousand Russian Jews applied for refugee status to enter the United States that year. A vivid memoir of this migration to the United States is contained in a book evoking everyday life in Rome in 1989 by Anatoly Rozenblat, *Hello America!*

11. Friedman 2000, 15.

12. *Paese Sera*, February 24, 1977.

14. R7; American Jewish Year Book 1991, 128–29; Skolnik 2006, 2:62; Rozenblat 2006.

15. The population in Rome (city) was 2,775,250 in 1991 and 2,663,182 in 2001. In 1995, twenty individuals were recorded as having been born in a former Soviet republic, constituting 0.13 percent of the total population and 5.08 percent of the foreign population of the town. These percentages rose to 0.25 and 8.39, respectively, in 1997, when the group was arrested.

Mogilevich bought 95 percent of the Army Co-op through Arigon Ltd. A rare but significant confirmation of the fact that Mogilevich used Solntsevskaya funds for his investments comes from a phone conversation intercepted by the Austrian police and reported in the Italian file on Yakovlev. The conversation, between Averin and Mogilevich, took place in April 1994. The former reminds the latter that he has to return money that he obtained from the group's common fund. The money involved was US$5 million (SCO 1997a, 79). Most notoriously, Mogilevich injected US$30 million from Arigon Ltd. into YBM Magnex International, which merged with Magnex 2000 (Friedman 2000, 249–51).

67. *Moscow Times*, February 22, 2000.

68. Silber and Little 1996, 102–3; Glenny 1996, 103. In any case and for the purpose of this discussion, it is still a well-meaning policy (intended to help an ally at war) that led to the unintended consequence described above.

81. Gambetta 1993, 104.

Chapter 5: Lessons from the Past

1. Gentile [1963] 1993. There is some dispute on the exact year of Gentile's birth. The year 1884 is claimed somewhere, but 1885 is the year that Gentile himself gave, and it is backed by his Federal Narcotics Bureau file and naturalization records (Critchley, personal communication, January 26, 2009 and December 19, 2009).

2. Extracts from the report are in Farrell 1997, 29–30. See also Hess [1973] 1998, 151; Gambetta 1988, 161; 1993, 97.

3. Franchetti [1876] 1993; Gambetta and Reuter 1995, 121–22. The English press favorably reviewed Franchetti's book at the time. See, for example, *Pall Mall Gazette*, February 26, 1877; March 12, 1877; *Birmingham Daily Post*, February 15, 1894; *Times* (London), April 8, 1891. On the official, inconclusive inquiry that preceded Franchetti's trip, see the discussion in *Pall Mall Gazette*, February 26, 1877. Newspaper reports on the existence of such a "vast organization of the dangerous classes" (*New York Times*, September 24, 1874) had been published in London, Manchester, and New York as early as 1874. See, for example, *Times* (London), September 22, 1874; October 7, 1874; October 15, 1874; October 24, 1874; June 9, 1875; June 21, 1875. Consistent with Franchetti's findings is a piece titled "The Sicilian Maffia" published in the *New York Times* on September 24, 1874: the mafia "comprehends noblemen, judges, lawyers, merchants, agriculturists, every grade of life in short." The author perceptively links the mafia's origin to a lack of trust in the government and absentee landlords who rely on daily laborers and live in cities, feeling no connection to the land or their employees.

4. The 1886 book is Alongi [1886] 1977; see also Lupo 1996, 33. On the *Sangiorgi* report, see Lupo 1988, 466–67; 1996, 117; Paoli 2003, 35; Dickie 2007, 100. Defendants for whose trial the report had been written got light sentences and walked free.

5. Baily 1999, 25; see also Eckerson 1966; Goldin 1994, 238; compare to Raab 2005, 24. Immigration into the United States came to a virtual halt in 1929, when the United States introduced stricter immigration quotas.

6. Klein 1983, 311; Baily 1983, 296; 1999, 61; Lankevich 2002, 119, 122. Data on Italian migration to the United States and Argentina are in Baily 1999, 26, 47. For a discussion of why most Italians preferred the United States over Argentina, see Baily 1999, 56.

7. On Lupo, see Critchley 2009, 47. See also the cases of Giovanni Pecoraro and Joseph Palermo, who were both wanted for murder in Palermo (Critchley 2009, 67, 69). On Masseria's arrival, see Nash 1993, 278; Repetto 2004, 105; Cohen 1998, 58. David Critchley (2009) disputes that he was facing a murder charge. The report of the Immigration Commission discusses three Italian police certificates stating that the individuals are considered "mafiosi" by all in their villages of origin (IC 1911, 282). Oddly, Albini (1971, 168), who discusses these data, does not take them to suggest that mafiosi had arrived in the United States.

8. The *Brooklyn Eagle* reported on March 16, 1875 that a letter sent to the Brooklyn police in 1866 alleged that the Deodati executioners were indeed hired in Sicily, and intended to go to Mexico or Canada immediately after committing the deed. The "murder in the woods" was widely reported at the time. See, for example, *Brooklyn Eagle*, June 3, 1865; June 9, 1865; June 10, 1865; June 13, 1865; June 14, 1865; June 16, 1865; June 17, 1865; November 1, 1865; see also Critchley 2009, 38–39. For additional instances, see, for example, Hess [1973] 1998, 163–64; Lupo 1996, 144. Of course, cases of mafiosi running in the other direction are also on record—namely, persons condemned by the U.S. mafia escaping back to Sicily. See Gentile [1963] 1993, 70–71; Arlacchi 1993, 26.

9. Bonanno with Lalli 1983, 52. See also Lupo 1996, 180. For instance, Mori arrested 450 people from the town of Gangi, 300 of whom were accused of harboring mafiosi. A U.S. anthropologist who was doing fieldwork in Milocca, a town of some 2,500 inhabitants, recounts how the people were rounded up and forced to walk, together with their animals, to the village of Mussomeli, where more than 100 were eventually jailed (Gower Chapman 1971, 7–8). Mori was also instrumental in the reduction of licenses to carry guns in Palermo Province—from 25,459 in 1922 to 11,570 in 1923 and 6,224 in 1928 (according data in Mori 1933, 224). Murders dropped from 268 in 1925 to 77 in 1926; see also Hess [1973] 1998, 182–83. This suggests that Mori's campaign was having an effect. Yet other evidence indicates that the mafia was still able to determine who was to undertake construction work in Palermo (MA 1937); see also Mori's reflections (1933, 151–229).

10. Melchiorre Allegra (b. 1881), a doctor practicing in Palermo who had joined the mafia in 1916, declared that in the 1924 elections, mafiosi had planned to support both the democratic and fascist party lists. In the end, they simply sold their votes to the highest bidder. Allegra himself stood for election, with the support of Salvatore Maranzano, who at the time was still in Italy (MA 1937). See also Lupo 1996, 171; Lupo 2008, 44; Critchley 2009, 144; Gambetta 1993, 293fn20.

11. Arlacchi 1993, 41.

12. When Melchiorre Allegra joined the organization in 1916 in Palermo, he was told by his mentors that the "sect, according to them, had powerful ramifications, not just in Sicily, but also in Tunis, the Americas and in some other centres

of the continent such as, for instance, Marseilles" (MA 1937). Calderone's discussion of the Tunis family is in Arlacchi (1992, 15). Bonanno (with Lalli 1983, 55) had an uncle living in Tunis, although he might not have been in the mafia. For other evidence of Italian criminals passing through Tunis, see IC 1911, 284–85. Tunisia—a French protectorate—was, along with the United States and Argentina, a destination of significant Italian migration, mainly from Sicily and Sardinia, at the end of the nineteenth century. At the beginning of the twentieth century, more than a hundred thousand Italians resided in Tunisia (Alberti Russell 1977, 34–37), mostly living in Tunis. In those years, Sicilians made up 72.5 percent of the community's population (Bonura 1929, 59). Buscetta's reference to his boss's escape to France is in Arlacchi 1996, 99.

13. Bonanno with Lalli 1983, 52. One prominent mafioso that reached the United States in this period was Salvatore Maranzano. He arrived in 1925, at age forty-three, and was soon to become the leader of the Schiro (later Bonanno) family in New York.

14. Chandler 1976, 57–58. Compare to Critchley 2009, 208.

15. Lankevich 2002, 112.

16. I am drawing here on ibid., especially 112, 117, 123.

17. Ibid., 124.

19. Cited in Turner 1909, 120.

20. Lankevich 2002, 127, 130; Dash 2007.

21. Nelli 1976, 115; Dash 2007, 33–34; Turner 1909, 117, 119; Czitrom 1991; Lardner and Reppetto 2000, 96–97; Lankevich 2002, 117–18; see also Nelli 1976, 112. The Tammany Hall leader mentioned in the text is Richard Croker: see Dash 2007, 35–6, 367–8.

22. Thomas 1969, 254; Dash 2007, 40, 49; Lardner and Reppetto 2000, 104; Lankevich 2002, 129; see also Anbinder 2001, 228.

23. Cited in Dash 2007, 47, 49. For the information in this paragraph, see especially Thomas 1969, 256, 260–61; Dash 2007, 39, 47, 58; Turner 1909, 119–34; Lankevich 2002, 140; see also Fogelson 1977, 3; Lardner and Reppetto 2000, 95, 97; Anbinder 2001, 228. Each time a police officer arrived in a post, all the brothels, gambling dens, and dubious saloons that operated in their district were forced to pay an "initiation fee," in the region of $500 each. Similar payments were expected whenever an illegal business changed owner or a gambler or madam expanded into a new building. It cost $500 to reopen a brothel or gaming house after a raid (Dash 2007, 65).

24. *New York Times*, February 9, 1900; Dash 2007, 80.

25. This paragraph is based on Dash 2007, 77–80, 383–84.

26. Quoted in Thomas 1969, 261.

27. This paragraph draws on *New York Times*, May 24, 1911; Thomas 1969, 256–57, 261; Lankevich 2002, 141, 147–49; Dash 2007, 94, 117; see also Thomas 1967; Lardner and Reppetto 2000, 102–7. On the 1910s wave of strikes in New York City, see Lankevich 2002, 149; Drehle 2003. Gaynor also established the rule that vacant positions on the police force should be filled by choosing candidates from the top of the civil service eligible list, in strict numerical order.

28. Quoted in Thomas 1969, 411.

29. Ibid., 261–62, 264; Dash 2007, 119.

30. Dash 2007, 120.

31. Ibid., 335; Critchley 2009, 72. It should be noted that other aspects of the criminal justice system were not reformed. For instance, appointments to magistrate's courts continued to be "rewards for party service and favors in return were expected and received" (Block 1983, 33).

32. Quoted in *New York Times*, October 22, 1888.

33. For evidence on early Italian involvement in counterfeiting, see Critchley 2009, 38–39. The Messina gang exposed in 1865 is mentioned in *New York Times*, June 3, 1865; *Brooklyn Eagle*, June 9, 1865; June 10, 1865; June 13, 1865; June 14, 1865; June 17, 1865. On Morello and Lupo, see Asbury [1928] 1998, 248–49; Nelli 1976, 124; Dash 2009. Lupo was also known as Ignazio Saietta (Asbury 1950, 229). Morello was arrested in 1900 for counterfeiting and eventually slain during the Castellammare War in August 1930. On the mafia oath, see FBI 1963, cited in Critchley 2009, 255n95.

34. *New York Times*, October 31, 1909.

35. See *New York Times*, October 14, 1908; October 31, 1909; Asbury [1928] 1998, 248; Selvaggi 1978, 25; Critchley 2009, 101–3. The Terranova brothers had been linked to horse stealing.

36. Raab 2005, 19; Nelli 1976, 69–100; Pitkin and Cordasco 1977; Critchley 2009, 20–35. A reference to the Black Hand appeared for the first time in the U.S. press in 1903, according to Humbert Nelli (1976, 75–76); see also Pitkin and Cordasco 1977, 15–16. Robert Lombardo (2004) concludes that the Black Hand in Chicago was first reported in 1904 and had disappeared by 1920. By 1915, the Black Hand brand had vanished in New York City (Critchley 2009, 33). For a discussion of criminal brands that are pirated, see Smith and Varese 2001; Gambetta 1993.

37. On the 1910s' wave of strikes in New York City, see Lankevich 2002, 149; Drehle 2003. On early mafia involvement in labor disputes, see, for example, *New York Times*, October 12, 1913; Critchley 2009, 23. On Paul Kelly, see Nelli 1976, 109. Other data come from Critchley 2009, 77, 147–48, 151. More gen-

erally on the role of the mafia in various markets in New York City, see Jacobs, Friel, and Raddick 1999.

38. See Merz 1932; Behr 1997, 82–86; Kerr 1985. Finland enacted similar legislation, leading to the prohibition of alcohol from 1919 to 1928 (Wuorinen 1932). Immigrant communities more likely thought of Prohibition as the product of bigotry and racist sentiments directed against them (Lerner 2007, 3; Bonanno with Lalli 1983, 64). Beer drinking was of course part of life for German American immigrants, "prohibition's first victims" (Behr 1997, 69–71). On enforcement of the legislation, see Wickersham Commission 1931; Sawyer 1932; Asbury 1950, 220; Bonanno with Lalli 1983, 65; Merz 1932, 130–57.

39. On estimates of the market size, see Sinclair 1962, 222; see also Raab 2005, 25.

40. Asbury 1950, 216–64; Carse 1961, 17; Sinclair 1962, 197.

41. *New York Times*, February 4, 1923; Moray 1929, 82–95, 125–30, 179–88; Asbury 1950, 241–64; Carse 1961, 61–81; Sinclair 1962, 198. Liquor was also coming from the West Indies, in particular the Bahamas, Mexico, and Cuba (Asbury 1950, 242; Carse 1961, 17).

42. Asbury 1950, 251.

43. Moray 1929, 211, which adds: "Several raids have been carried out, actually by one of the partners in a rum-runner. One boat about five miles east of us was raided not long ago" (ibid.).

44. Asbury 1950, 250–51; Moray 1929, xiii, 210; Cohen 1998, 53–54; see also Carse 1961, 62.

The "Big Seven" was a short-lived cartel of smugglers active along the Atlantic coast bringing in Canadian liquor. There were originally seven groups (hence the Big Seven), but their number grew to about a dozen. The purpose of the Big Seven was to stabilize the price of imported booze. Established in October 1932, the cartel handled some eight thousand cases of rum monthly. But despite its powerful membership, the cartel broke up in spring 1933 (Prohibition ended on December 5, 1933). *New York Times*, April 1, 1939; April 2, 1939; April 11, 1939; Critchley 2009, 142.

57. Bonanno with Lalli 1983, 70, 75; Critchley 2009, 144, 146; see also MA 1937; Lupo 2008, 84. His warehouses stretched across Dutchess County, New York, where Maranzano bought a house. In March 1929, Rocco Germano, one of Maranzano's associates, fired on a liquor truck traveling on Main Street in Poughkeepsie. The truck's driver and friend abandoned the vehicle, which had been stolen in the Bronx. Detectives concluded that the men in the truck had failed to hand over what they owed to Maranzano. A five-thousand-gallon plant was uncovered as a result of the investigation. In the first decade of the twentieth century, New York was the brewing center of the nation (Lankevich 2002, 146), making it easier to continue the production underground.

58. *New York Times*, September 29, 1929, quoted in Lerner 2007, 1.

59. Landesco 1932; Bonanno with Lalli 1983, 85, 93, 126; Sinclair 1962, 221, 223, 230. This does not imply that the Italian mafia was accepting non-Italians after 1931, nor that a unified structure emerged.

60. Bonanno with Lalli 1983, 76. Buscetta, in his testimony to Italian authorities, recalls that "it used to be possible for a man of honor who migrated to the United States to become immediately, by virtue of his position, a member of the American Cosa Nostra" (quoted in Gambetta 1993, 118; see also Arlacchi 1996, 62).

61. As evidence of such letters of reference, see Flynn 1919, 207; see also Buscetta's testimony in Arlacchi 1996, 62. On Gentile's mafia membership, see Critchley 2009, 93, 269n206; Gentile [1963] 1993.

62. I am grateful to David Critchley for his advice. See also Maas 1997, 46.

63. Quoted in MA 1937.

64. Arlacchi 1996, 62, 52; Gambetta 1993, 117–18. Calderone also makes it clear that the two organizations were independent in the postwar period (Arlacchi 1993, 78; see also Critchley 2009, 196, 187; Cressey 1969, 46). A conversa-

tion recorded in Montreal in 1974 between Paul Violi, most likely a Bonanno man and the head of the Montreal family, and a Sicilian who had plans to set himself up in Canada, demonstrates that the Sicilian and North American mafias were two fully separate and independent entities. Violi makes it clear that if a mafioso were to move to Canada, he would be put on a five-year probation, during which he would be assessed "so that everyone can figure out what he is like" (quoted in OSPA Stajano 1992, 59; see also 60). According to Calderone, Violi was instead a member of the Gambino family operating in Canada (Gambetta 1993, 296n41). Yet the Sicilians were not that accurately informed about the membership of the U.S. families (David Critchley, personal communication, December 19, 2009).

65. Critchley 2009, 91; see also Maas [1968] 2003. Relevant examples are George Barone, Sammy the Bull Gravano, and John Gotti. Still, some mainland Italians like Genovese and Anastasia had been admitted into the New York City mafia during the 1920s, before the Castellammare War. Buscetta claims that even Jews and Irish had been admitted at the height of the Castellammare War—a move that was kept secret for several years (Arlacchi 1996, 164). Generally, criminal groups try to increase their ranks in times of war (see, for example, the case of British street gangs in Yearwood and Hayes 2000, 16; Densley 2009, 6).

66. See, for example, Lupsha 1986, 44; Gambetta 1993, 252.

67. Nelli 1976, 122.

68. Carrasco 1886; Baily 1983, 1999; Gallo 1983; Devoto 1993.

69. Klein 1983, 311; Baily 1983, 296; 1999, 61; Rosoli 1978.

70. Cacopardo and Moreno 1985; Frid de Silberstein 1994.

71. Johns 1991, 491–92; Frid de Silberstein 1993, 133; Gallo 1983; Lanciotti 2004.

72. Carina Frid de Silberstein, personal communication, January 31, 2010.

73. Information presented in this section comes from Frid de Silberstein 1992; 1993, 130, 141–43; 1994; Johns 1994. Chiavari and Lavagna in Liguria were the hub of the first wave of Italian migration to Rosario. The city is famous in Italy for the heartbreaking story of a Genovese child who had gone in search of his mother all the way to Rosario, narrated in De Amicis's *Il Libro Cuore* ([1886] 2001). The city is also the birthplace of Ernesto "Che" Guevara (Anderson 1997, 3–9).

74. Frid de Silberstein 1994, 509, 512; personal communication, January 31, 2010. Frid de Silberstein's estimate is based on the number of Agrigentani that are mentioned in marriage records between 1900 and 1905 in six districts of the city (N = 234 in this period). After applying a coefficient of 4 (a rather conservative one to estimate the average family unit), we get a figure of 936. This figure most likely still underrepresents the total number of Agrigentani who immigrated to Rosario in the first decade of the twentieth century since it is based on civil

marriages only for those five years (ibid., personal communication, January 31, 2010; see also Mormino and Pozzetta 1998).

75. Aguirre 2000, 74, 191; Rossi 2003, 148. Although Rosario was referred to as the Chicago Argentina, the origin of such a name refers to the workers who were killed during a strike in Chicago in 1886. Other historians suggest that the Chicago Argentina refers to the leading position of Rosario as a grain market and grain port (still nowadays, Chicago's Grain Stock Exchange does not close its daily blackboard prices until Rosario's prices are delivered). It was soon used to refer to its criminal reputation (Rossi 2003, 171; Aguirre 2006). Mafia activities were also reported in Andean provinces (San Juan) and to the north of Argentina (La Rioja, Salta, and Santiago del Estero). The Catanesi mentioned in the text were from Regalbuto, Mineo, and San Filippo. Cuffaro is also the last name of a Raffadali mafia boss in the 1970s, Giuseppe Cuffaro.

76. For the press dubbing Galiffi a local Al Capone, see, for example, "Como en Chicago, Contra Al Capone," *Crítica*, October 9, 1932; February 27, 1933. Data on his life are in Caimari 2007, 19; Aguirre 2000, 173–215; Rossi 2003, 149.

77. MHPR 1938a. Samburgo confessed in 1938 before the Comisario de Investigaciones Teodoro Alemán while he was imprisoned at the Penitenciaría Nacional in Buenos Aires.

78. New arrivals pushed out of Sicily by Mussolini included Romeo Capuani, Felipe Campeoni, Santos Gerardo, and Juan D'Angelo. Data on Marrone's life and criminal activities are in MHPR 1938a, folio 122; 1938b, folio 198. The Spanish version of the mafia titles recorded in the judicial documents are "Jefes, sub-jefes, jefes de grupo, consejeros."

79. Alvarez 1943, 14, quoted in Johns 1991, 491. This paragraph draws on Johns 1991, 490–91. See also Gallo 1976, 5–23.

80. Johns 1991, 499.

81. Ibid., 495–46, 498, 507; Gallo 1970; 1983, 166–67. Data on large Italian land properties are also in Frid de Silberstein 1993, 139 (for example, Castagnigno and Pignasco, seventeen thousand hectares). As for manufacturing, the Refinería Argentina, employing eight hundred workers between 1894 and 1920, was the main producer of refined sugar and alcohol in the country (ibid., 152).

82. The words by Ricardo Caballero are quoted in Karush 1999, 597–58. See Gallo 1983; Johns 1991, 494; Thompson 1984; Hasbrouck 1935.

83. Palacio 2004.

84. Johns 1991, 500; Lanciotti 2004. More than a fourth of the population lived in tenements.

85. Lanciotti 2009, 229, 231–32, 189. By 1913, the construction market started to contract.

86. Although I have data for the value of each projects (with some gaps), it should be noted that the owners had an incentive to underreport the cost of the work for tax purposes.

87. Pendino worked in construction between the early 1880s to at least 1910. Frid de Silberstein 1991, 182–90; Aguirre 2000, 47–49.

88. The level of violence was lower in Rosario, although instances are on record. In the local newspaper *El Municipio*, eight reports of robbery of construction machinery and tools are mentioned between August 1909 and July 1910.

89. In Rosario, the number of firms obtaining permits between 1905 and 1909 stood at 172, while in Bardonecchia, in the boom periods 1965–69 and 1970–74, the equivalent figures were 42 and 49, respectively.

90. On the rural folk, see Johns 1991, 501. As documented by Norma Lanciotti (2009, 156–57), a significant number of real estate investors were themselves landowners (22.54 percent in the 1885–95 period and 15.85 percent in the 1896–1914 period of the total investors identified [N = 213]).

91. The defendant was a Carlos Cacciato. MHPR 1939. In another court file, Pendino is described by a defendant as a man "who was respected among his countrymen due to the fact that he always tried to help them" (MHPR 1938b, folio 97).

92. Frid de Silberstein 1991, 182–90; Aguirre 2000, 159. For the 1899 police document, see PR 1899; Revista Órgano Oficial de la Policía del Rosario (Rosario: Imprenta La Minerva, 1924). The shopkeeper mentioned in the text was Vicente Puteti (Aguirre 2000, 86). Puteti was the owner of a small grocery store along the *pampa gringa* (agricultural countryside) that performed a distinctive social function. Such stores provided credit to tenants (*arrendatarios*); they became a key source of information for both tenants and landowners since they usually gathered information on potential work qualifications, knowledge of techniques of agriculture, and capital of the prospective arrendatarios.

93. The victim was Dr. Enzo Bordhabere.

94. Frid 1993; Malamud 1997. The Liga del Sur's political platform included the reform of the electoral system in Argentina. It also supported the extension of citizenship to immigrants. See Gandolfo 1991.

95. Aguirre 2000, 88–89. Other victims of the Mano Negra were Jose Castiglione and Mariano Giangrecco. The Catanese gang was composed of Gaetano Pergola, José Perola, and José Costanzo, all born in Galliano (ibid., 89–91). The gang had attacked, among others, Martiré and Castiglione. Contrary to what Nelli (1969, 379) claims, Argentina did experience the phenomenon of the Black Hand.

96. Aguirre 2000, 122.

97. Aguirre 2000, 296; Caimari 2007, 5. In the 1910s, see the case of a boy, Juan Vicente Parisi, the son of a coal merchant, who was snatched from his parents

in 1915. In 1916, the group led by José Cuffaro successfully organized the kidnapping of Antonio Moressi, a carriage driver (other cases took place throughout 1916). In the 1930s, see the cases of F. Andueza (1931) and the son of the trader Julio Nannini (1932). The kidnapping of a respected Jewish doctor, Jaime Favelukes (1932), and that of another professional, Marcelo Martin (1933), shocked the nation. On the Favelukes's kidnapping, see, for example, *El Mundo*, October 8, 1932; October 13, 1932; *La Nación*, October 7, 1932; *Crítica*, October 7, 1932; October 11, 1932. See also Aguirre 2004.

98. A third movie on the case was produced in 1972, titled *La maffia* (Leopoldo Torre Nilsson) (Caimari 2007, 1, 29; Blanco Pazos and Clemente 2004, 12). The Senate approved the new framework for the Criminal Code in 1933. The death penalty had been abolished in 1922. On rumors regarding the case, see *Crítica*, October 19, 1932; December 14, 1932; December 29, 1932. On the funeral, see *La Nación*, February 24, 1933; Caimari 2007, 6–8. On the kidnappers, see Aguirre 2000, 360; Rossi 2003, 149.

99. *Time Magazine*, May 29, 1944; Zinni 1975, 161–80; Goris 1999; Aguirre 2000, 382–402; Rossi 2003, 147, 150–51. Despite the significant role of Italian crime in Rosario, Italians did not control some of the key criminal markets. For instance, prostitution and the trafficking of women from Eastern Europe was controlled by the Zwi Migdal gang, staffed by Polish criminals of Jewish origin (brothels in Buenos Aires also utilized women trafficked from Eastern Europe and were controlled by "Jewish" criminals). In the aftermath of a trial that decimated the Zwi Migdal in 1931, however, Italians extended their reach to some local brothels. Guy 1991; Rossi 2003, 171.

Chapter 6: The Future of the Mafias?

1. By China, I am referring to mainland China. For the purpose of this chapter, I also use the name "Burma" to refer to the state now officially called the Union of Myanmar. For data on foreign investments in China, see Hsing 1998, 3, 8, 21.

2. Chin 2003, 203; Ngai 2005, 38–39; Goldman 2006, 413.

3. Information in this paragraph comes from Druijven 1993, 151; Hsing 1998, 3, 4, 8, 15, 19–21, 25; Li 1996, 12; Boardman 2005; Bosworth and Collins 2008. The registered economic growth rate for Shenzhen and Zhuhai during 1978–84 averaged 9.5 percent annually. Approximately 75 percent of manufacturing workers had been laid off within less than ten years. In 1985 alone, the armed forces were reduced by over one million individuals. The personnel of the national army went from 4.238 million in 1987 to 3.199 million in 1990. The 1.039 million demobilized soldiers during the first round of disarmament represented 24.5 percent of the army's original strength. The second round of cuts in the strength of

the army started in 1997, when some 700,000 soldiers were made redundant from 1997 to 2003. Most of the redundant soldiers were posted in the northeast (Information Office of the State Council 2005; Zheng 2005; Chan 2002).

4. Tuñón 2006, 5, 6, 8; Hsing 1998, 9; Deshingkar 2006, 8; Zheng 2009, 5; Chang 2008, 12; Jian and Zhang 2005; Wang 2006, 186; see also Wu and Treiman 2004; Mallee 1995. Two hundred million is a 2006 estimate. Internal migration was made possible by the reform of the *hukou* system of internal registration. A clear discussion of definitional problems of the terms "migrant workers" and "agricultural workers" is in Wang 2006. In Beijing and Shanghai, migrants make up a quarter of the population (*Nanfang Daily*, January 11, 2003). Guangdong is one of migrant workers' primary choices, accommodating 35 percent of the total migrant workers in China in 2003. The influx of migrant workers altered the demographic composition of Guangdong. The province officially became the most populous in China in January 2005, with a population totaling 110 million, of which 72 percent were registered permanent residents and 28 percent were migrants from other provinces (*China Daily*, January 29, 2005). Shenzhen has been transformed into "a city of migrants," where 82.1 percent of the total population is composed of people from other provinces (Liu 2004). "In 1995, the number of recorded criminal cases in Guangdong accounted for 10 percent of the national total, whilst the recorded major and serious cases represented 16.7 percent" (Chong and Pu 1997, 252). Official statistics indicated that more than 60 percent of the crimes were committed by nonpermanent local residents, which caused an economic loss of 3.36 billion yuan. The situation was echoed in the statistics revealed by the Ministry of Public Security regarding the crimes in Guangzhou and Shenzhen. In 1994, the crimes committed by the migrant population represented 69.2 percent of the total in Guangzhou; the figure was 97 percent in Shenzhen (Feng 2001, 127). See also People's Government of Guangdong 2006.

5. C10; see also Hershatter 1997, 338; *Telegraph*, August 27, 2000; Ngai 2005, 180; *Sunday Times*, October 22, 2006.

6. He 2002, 353–54.

7. He 2002, 137.

8. Ibid., 136; *Yangcheng Evening Paper*, April 20, 2000; He 2003, 30, 256–57; Liu, Zhao, and Su 2005; Chu 2000, 131. The ransom was for 1.038 billion yuan (US$1.300 million). The Zhazhi ritual is a triad ceremony for the promotion of members. A Blue Lantern is medium-level rank in a triad society, the equivalent of a gang leader, while a Red Pole is the equivalent of an Area Boss (Chu 2000, 28). "The Shenzhen Public Security Bureau arrested over 300 members that were newly recruited by these triads. Liao Tiansong, head of Hong Kong 'Victory' issued a directive to his new members in Shenzhen, stating, 'Stand your ground in Shenzhen, keep growing and wait for the chance to do big things'" (He 2002, 353).

9. Chin 2003, 169.

10. He 2002, 137.

11. Chin 2003, 6–7, 168–72, 202–3, 205, 223; He 2002, 137. As a Taiwanese investor put it, "We speak the same language and enjoy the same food!" (Hsing 1998, 3). Bamboo United was created in 1956 and remains to this day the biggest mafia group in Taiwan (estimates put the membership at ten thousand). In the 1960s, the gang was restructured into five branches. Over the next twenty years the branches grew in number. By 1983, eighteen branches (*tangs*) had been established. As a testament to the international reach of the group, in 1982 an overseas branch (Chao Tang) was formally opened in Hong Kong, the only one outside Taiwan, although some members are said to operate in the United States, the Philippines, and Japan (Chin 2003, 33–34).

12. Chin 2003, 171–72, 202–3; He 2002; Chu 2000, 132; *Washington Post*, December 31, 2000. Some also went to Cambodia.

13. C8; He 2002, 139–40; Chu 2000, 132; Chin 2003, 202, 204; see also Kong 2004. On the 14K triad group, see Morgan 1960, 79–88; Chu 2000.

14. Morgan 1960; Chin and Godson 2006, 7.

15. He 2003; Zhang 2006; Li and Ke 2006; Kang Kang 1998.

16. He 2003, 116–17.

17. C5.

18. Ngai 2005, 1; see also Jiang and Fu 2006; "The Seventh Day," Channel 7, Beijing Television, February 4, 2007 available at at http://www.btv.org/btvweb/sh/2007-02/06/content_153538.htm. For details of the 2003 survey, see *Far Eastern Economic Review* January 22, 2004. Ching Kwan Lee (2007, 110), the author of a groundbreaking ethnography of labor disputes in China's Sunbelt, has concluded that the violation of labor rights and entitlements is "endemic." It is still too early to assess the effects of the introduction of the new Labor Contract Law on January 1, 2008 (available at http://www.bjreview.com.cn/document/txt/2007-10/16/content_80896.htm). On the low quality and unevenness of intellectual property rights enforcement in China, see the important study by Martin Dimitrov (2009).

19. Quoted in *Jiancha Daily*, May 16, 2007.

20. Quoted in Zheng and Xia 2006.

21. Quote from Chin and Godson 2006, 24–25. In a survey of 288 judges published in 1998, none regarded the jurisdiction of courts as completely independent, while 124 of them (43.1 percent) believed that judicial independence had not been achieved in China (Jiang 2004, 5).

22. For data mentioned in this paragraph, see Jiang 2004, 6–7, 9–11, 23–26; 2006, 200. Jiang (2004, 7n32) notes that "the quota [of decisions enforced by courts] could even be lower in reality as some pending cases were considered to be

settled due to long delay." He adds: "In several interviews, lawyers even reported that only around 20% of the judgments can be successfully enforced, and it is believed that the average rate of successful enforcement in all the courts is supposed to be 25–30%" (ibid., 36). In a poll conducted by the China Commercial Press just before the assembly of the People's Congress in December 2002, 91 percent of the respondents said that they were not confident in the judiciary and were pessimistic about "access to justice" (ibid., 1). Another distinctive feature of the court system in China that delays decisions is the presence of a "trial committee" that oversees each judge's decision (ibid., 8).

23. Tuñón 2006, 10–11; *Jinan Daily*, March 10, 2005; *CSR Asia Weekly* 1 (week 11): 10; Druijven 1993, 148; Pan 2008.

24. C10.

25. C7.

26. Chin and Godson 2006; Tian 2001, cited in Chin and Godson 2006, 6; see also Glenny 2008, 364.

27. Varese 2001, 59–72.

28. Forward-looking officials channel bribes to their children living abroad (Glenny 2008).

29. C11.

30. *Jiancha Daily*, May 16, 2007, available at http://www.jcrb.com/200706/ca608419.htm. On the accumulation of bad debts in the banking system, see Shih 2004.

31. Yuan and the other three debt collectors were convicted for using extortion and violence to recover debts (*Jiancha Daily*, May 16, 2007).

32. In 2000, the Ministry of Public Security along with the Administrative Department for Industry and Commerce proscribed by formal decree the operation of debt-collection companies, and forbade the establishment of such companies by any institution or person. In 2002, the Trademark Office of the Administrative Department for Industry and Commerce adjusted the scope of trademark registration. The department lifted restrictions on "detective companies" and "private bodyguards," but still strictly forbade the operation of debt-collection companies (ibid.).

33. Quoted in ibid.

34. Quoted in ibid.

35. Respectively, six out of ten and twelve out of fifteen cases. Seven of the ten cases listed as dispute settlement are also involved in debt collection, so there is significant overlap between the two categories.

36. He 2003, 133–37.

37. Quoted in Chin 2003, 206–7.

38. *New York Times*, March 25, 2007; Bruck 2008, 45; *Xinhua*, March 28, 2005; *Weekly Standard*, May 7–8, 2005; *CCTV Online*, May 12, 2006; *China*

Daily, June 17, 2004. Since Chinese nationals need a special permit to travel to Macau, this increase reflects a deliberate policy on the part of the government as well as an increase in the number of wealthy Chinese (Bruck 2008, 45). The *Standard* (October 2, 2009) reports that Guangdong residents may now apply for a visa every month, rather than every two or three months, as in the past.

39. Quoted in http://a2zmacau.com/macau-casino/combating-crime-in-macau/.

40. See Lo 2005; *South China Morning Post*, December 20, 2000. The official data cited in the text refer to 2004, available at http://www.pj.gov.mo/1024/pj_en/magazine_en.htm. There were 917 illicit activities related to gaming in 2006—only 4 more cases than in 2005. Of these, 164 cases involved loan sharking (4 more than in 2005) and 79 cases involved gambling chips theft (3 more than the previous year).

41. For an insider's account of how high rollers are lured on to the tables in casinos in Las Vegas, see Castleman 2009.

42. C6; SCBC 2003a, 2003b; Wang and Eadington 2008, 241; Siu and Eadington 2009; Godinho 2006; Leong 2002. A recent development is the creation of consortia of VIP room contractors and junket operators with the aim of increasing bargaining powers vis-à-vis the casinos. See https://rp1.tss.db.com/dbdr/publication/PressRel/4602_NOV112007100351PM.pdf; *Business Wire*, January 14, 2009; Wang and Eadington 2008, 251. The western casinos are the Las Vegas Sands, Wynn Resorts, PBL Melco, Galaxy, and MGM.

43. Wang and Eadington 2008, 250.

44. C6. The business of lending money to high rollers is known as the *dupma* business (SCBC 2003a). A case at the center of the Supreme Court of British Columbia involves a Guangzhou resident who failed to repay his debt and was pursued by the creditors. In some cases, lenders have "accounts" at more than one casino (SCBC 2003b). Law 5/2004 allows for operators to collect the debt in Macau courts, although, write Wuyi Wang and William Eadington (2008, 249), these debts are "neither legal nor illegal," and suggest that extralegal efforts to recover the debts are the most common. Jorge Godinho (2006) points out that after the passing of the 2004 law, it is not possible to enforce gaming debts arising in Macau in mainland China.

45. This average is based on data in Wang and Eadington 2008, 256.

46. He 2003, 31–35; Li and Ke 2006, 51.

47. He 2003, 81–85.

48. C2.

49. C1.

50. Ibid.; *China News Website*, April 9, 2003; He 2003, 82–85.

51. C1; *China News Website*, April 9, 2003; He 2003, 82–85. Gambling venues exist also across China, and local crime groups make sure debts are honored. For instance, Mr. Lifeng Tang ran a gang in Ruzhou, Henan Province, whose members had to wear black suits and were paid a monthly wage. This gang controlled the gambling and entertainment sector of the city, collected debts, and even extended its influence over the election of town elders. The members were arrested in 1999, after only one year of operation.

52. Quoted in Chin 2003, 207.

53. See http://mitchmoxley.ca/index.php?option=com_content&view=article&id=9.

54. C6. I also draw upon a video posted on YouTube titled "18 dance and parade."

55. Hershatter 1997, 304; Jeffreys 2004, 96; Zheng 2007, 125.

56. Hershatter 1997, 331, 333–34, table 2; Jeffreys 2004, 97, 168–69; Gil et al. 1994; Zheng 2007, 126; 2009, 3–4, 55, 66; C12. The one trillion yuan estimate refers to 1999. Gail Hershatter (1997) points out that prostitution never completely disappeared.

57. See article 358, Criminal Code of the People's Republic of China, 1998; see also discussion in Jeffreys 2004, 138–49; Zheng 2009, 69; compare to Jeffreys 2004, 151, 157. The lower bound for convicted offenders is five years in prison. Death sentences are usually imposed when some other aggravating factors are present, such as bribery and the use of violence. See, for example, the case of Zhang Fengxiang (*Beijing Fazhi Ribao*, August 26, 2003). Criminal charges would be brought against customers or workers who knowingly transmit sexual diseases or engaged in sex with minors (Jeffreys 2004, 168–69; Zheng 2007, 133).

58. C12.

59. Quoted in Zheng 2007, 132.

60. Ibid., 132; 2009, 70, 71.

61. *China Daily*, January 23, 2005; see also Chin and Godson 2006, 13–17.

62. Chin and Godson 2006, 17.

63. USDJ 2005. It should be noted that other groups in Burma are involved in the drug business in addition to the Wa. They include the Kokang, Mengla, Kachin, and Shan (Beyrer et al. 2000, 77; Chin 2009, 101, 234).

64. Chin 2009, 1, 3, 9, 75; *Bangkok Times*, December 21, 2003; Swanström 2006, 122. This section is greatly indebted to Ko-lin Chin's remarkable ethnography (2009) of the drug trade in the golden triangle. For estimates of heroin production, see Chin 2009, 8, 9, 86. Burmese poppy cultivation accounts for 90 percent of all southeast Asian opium production (USDS 1998). For various estimates of opium-producing countries, see Chin 1990, 147; Chu 2000, 109; Beyrer

et al. 2000, 76; Zhang and Chin 2003, 473. Some authors link the suppression of the popular uprising in 1988 in Burma to the rise of poppy cultivation (Beyrer et al. 2000, 77, 82).

65. Chin 2009, 4, 9, 44, 83, 89; Swanström 2006, 128.

66. USDJ 2002, 5.

67. Quoted in *Xinhua News Agency*, August 3, 2004. Data in this paragraph are in Beyrer et al. 2000, 78–79; Chin 2009, 112, 117; Chu 2000, 187; Swanström 2006, 122; *People's Daily*, June 27, 2002; *China Daily*, June 27, 2002. See also Yunnan Provincial Department of Commerce 2005; the *China Daily* (March 31, 2005) describes a family-run drug smuggling ring operating "in the corridor that runs from Myanmar to Yunnan to Harbin." Hong Kong is the hub for other illegal traffics, such as cigarettes and endangered species. See, for example, Sharma 2003–4, 1–2.

68. Chin 2009, 121; Chu 2000, 187.

69. Chin 2009, 229–30. For similar conclusions, see also Chao Tzang 1993; Milson 2005, both cited in Chin 2009.

70. Chu 2000, 109–14; 2002.

71. C9.

72. See also the discussion of this initiative in Glenny 2008, 389–90.

73. C9.

74. In a recent case, the Italian police proved that the `Ndrangheta had reached an agreement with Chinese smugglers to ensure safe passage through the Gioia Tauro harbor, another port part of the Container Security Initiative (*La Repubblica*, December 22, 2009).

75. Ding 2001; see also *Le Monde*, December 30, 2009.

76. *Times Literary Supplement*, November 27, 2009.

Chapter 7: Mafia Origins, Transplantation, and the Paradoxes of Democracy

1. SCO 1997c, 2.

2. Cruz 2010; Arana 2005. Hard state repression helped further shape and strengthen gangs' identities. A large percentage of gang members who came from different areas of El Salvador were held in detention centers organized according to their gang affiliation. Such a policy helped members to meet and coordinate across the country.

3. RCC 2000, 38. More generally on the Camorra in Aberdeen, see Saviano 2007, 259–81; Campana 2010.

4. On the early 1990s viewpoint, see, for example, Hess [1973] 1998; compare to Ruggiero and Vass 1992. A notable exception is the classic inquiry by Leopoldo Franchetti ([1876] 1993).

5. Gambetta 1993; Bandiera 2003.

6. Milhaupt and West 2000; Varese 2003. On disputes over land in the Meiji period, see Brown 1993.

7. Varese 1994, 2001.

8. I am grateful to C3 and C4, both officials in the Hebei Province, for their insights into cases of official corruption and their punishments.

9. The ceteris paribus condition here is crucial. Obviously, in the presence of widespread violence, vote rigging, and electoral fraud, even large constituencies are not safe from manipulation.

10. I refer here to the so-called consolidation movement. Gaynor obtained 250,678 votes (43 percent of the total cast), while his Republican opponent, Otto Bannard, got 177,662 (30 percent). The third candidate, media tycoon William R. Hearst, received 153,843 votes (27 percent). See Thomas 1969, 192; Cerillo 2000; Lankevich 2002, 134, 148.

11. A fictionalized account of the gambler's murder is described by Meyer Wolfsheim in *The Great Gatsby* by F. Scott Fitzgerald ([1925] 1998). I take Becker's innocence from Cohen 2006 and Dash 2007.

12. A parallel exists with protectionist measures in the developing world. For a discussion of how to lift people out of poverty in the developing world, see Collier 2008.

13. Baker 2004.

The Center of Excellence in Statistical Information on Government, Crime, Victimization and Justice is grateful for the valuable input and support received from the following institutions:

The Mayor's Office of Iztapalapa: General and Executive Offices, as well as Territorial Directorates. Our special thanks go to the staff assigned to the General Office on Government and Citizen Protection, for their efforts and support throughout the implementation of this assessment.

The Mexico City Ministry of Public Security: Office of the Deputy Minister of Prevention and Citizen Participation, personnel of the General Office of Citizen Participation and Auxiliary Police of the Abastos-Reforma, Churubusco, Estrella, Granjas, Oasis, Quetzalcoatl, Santa Cruz, Teotongo and Tezonco sectors, for their support and involvement.

The Mexico City Ministry of Education, Science, Technology and Innovation: General Office of Institutional Liaison and staff, for managing and facilitating exchanges. General Offices of Higher Education Institutes (IEMS, as abbreviated in Spanish), for coordinating activities with the IEMS located in Iztapalapa.

The National Electoral Institute: Executive Director of Electoral Training and Civic Education, Executive Vocal of the Local Board in Mexico City, Vocal of Electoral Training and Civic Education of the Local Board in Mexico City and staff assigned to the Local Executive Boards of Districts 04, 18, 19, 20 and 22, for their valuable supervision and participation.

Transcrime, for their contributions to crime analysis.

Our special thanks to the Directors, Academic Coordinators and staff of the following academic institutions: CONALEP Aztahuacan, CONALEP Iztapalapa 1 and 5, Technological Institute of Iztapalapa I, II and III. IMEP University Campus Santa Martha Acatitla, Elementary School Juan B. Tijerina (morning and afternoon shifts) and Elementary School Lomas de San Lorenzo, for their support in coordinating activities and for their valuable contributions.

To the business sector: Businesspeople Association of Iztapalapa, Mexican Confederation of Employers (COPARMEX, as abbreviated in Spanish) of Iztapalapa, National Chamber of the Restaurant and Spice Industry (CANIRAC, as abbreviated in Spanish) and guild members, for their contributions.

To the organized civil society that allowed us to get to know their work and opinions: Organization Together We Distribute and Transform I.A.P (Private Assistance Institution), Carry on-Street Children Program A.C. (Civil Association), Social Laboratory and the Citizen Council for Security and Justice of Mexico City.

We would like to extend our special thanks to all the people who accompanied us in the different activities that contributed to the participatory social diagnosis during field work: girls, boys, youths, women, men, elders, community leaders, public officials, police, businesspeople and civil society, who allowed us to listen to their needs and opinions and through them learn about the current situation of Iztapalapa.

To all of them, thank you. Your thoughts and expressions have been a fundamental input for the development of this text, which aims to give you a voice, share your concerns and propose actions to improve the quality of life of the people of Iztapalapa through the strengthening of governance in your territory.

Preface

The 2030 Agenda for Sustainable Development acknowledges that "*there cannot be sustainable development without peace, and there is no peace without sustainable development*". Thus, it is imperative to promote sustainability and the development of good governance to address insecurity, violence and corruption. Through the Urban Safety Governance Assessments (USGA), UNODC promotes actions to achieve the goals established in the SDG 3 Good Health and Well-Being, 5 Gender Equality, 11 Sustainable Cities and Communities and 16 Peace, Justice and Strong Institutions, in close coordination with local governments.

Conflicts, insecurity, weak institutions and limited access to justice continue to pose a serious threat to sustainable development[1]. The implementation of an Urban Safety Governance Assessment (USGA) enables the understanding of local risk factors and their interaction with external flows that give rise to security challenges, seeking to re-establish legitimate governance and promote healthy, safe, inclusive and resilient cities.

In the context of the COVID-19 pandemic, new social dynamics adopted to prevent the spread of the virus have caused new challenges to understand crime patterns, which require close collaboration with different sectors from society. This represents an unprecedented challenge for governance at the global, national and local levels, so today more than ever it is necessary to join forces in order to leave no one behind.

Kristian Hölge

[1] UN (2020). Sustainable Development Goals. Available at: https://www.un.org/sustainabledevelopment/es/peace-justice/

Introduction

The Urban Safety Governance Assessment (USGA) is a useful tool for authorities in the implementation of inclusive and participatory decision-making. This participatory approach enables authorities to diagnose social impairments, as well as understanding the dynamics of violence and crime from a holistic perspective, strengthening the interlinkages, communication and shared responsibility with government, other institutions, civil society, academia, businesspeople, and society. The aim is to develop evidence-based policies at the local level that prevent the infiltration of activities linked to transnational organized crime, for example, trafficking in drugs, weapons, or other illicit goods[2].

The Urban Safety Governance Assessment (USGA) is part of a global initiative promoted and funded by the United Nations Department of Economic and Social Affairs (UNDESA) and implemented by the United Nations Office on Drugs and Crime (UNODC). It is conducted simultaneously in four regions around the world[3]:

- St. Michael and Christ Church (Barbados)
- Mathare in Nairobi (Kenya)
- Iztapalapa in Mexico City (Mexico)
- Tashkent (Uzbekistan)

The methodology of the assessment is integrated by four stages (see methodological annex):

1. Planning
2. Data collection and analysis
3. Presentation and validation of the results
4. Strategies and public policies

The period analyzed for this assessment covers statistics from 2015 to 2019 and from 2020 for COVID-19. Quantitative information was complemented with qualitative information collected during the first quarter of 2020. The results were obtained using mixed methods: quantitative (statistical and geographical analysis) and qualitative (focus groups, exploratory marches, interviews and social mapping). For the analysis made on problematic alcohol and drug use, information from the National Survey on Addictions (ECODAT) 2016-2017, was used, as well as information from the National Survey on Urban Public Security (ENSU) to understand these phenomena at the local level and in Mexico City during 2020. Additionally, a risk analysis was

[2] UNODC (2019). Safety Governance Approach for Safe, Inclusive and Resilient Cities: A Practical Guide for conducting Safety Governance Assessments in urban environments. Available at: https://www.unodc.org/pdf/criminal_justice/UrbanSafety/Enfoque_de_Gobernanza_de_le_Seguridad.pdf

[3] The selection of the cities was defined by each country. In the case of Mexico, Iztapalapa was selected because it is the most populated territory in Mexico City, and its inhabitants are predominantly youth. Iztapalapa has a particular economic activity as well as a great sense of identity and belonging among its inhabitants.

conducted to identify the level of risk in 44 neighborhoods in Iztapalapa based on its threats, vulnerabilities, and capacities. Also, a strength, weakness, opportunity and threat (SWOT) analysis was conducted in order to identify the Mayor's Office areas of opportunity regarding good governance.

Due to the COVID-19 pandemic, the methodology was modified in response to the sanitary measures[4] established by the Federal Government. The collection of qualitative information was carried out remotely using digital platforms. *Street view* was also used to identify the capacities of the analyzed neighborhoods.

This document has three sections:

- The first one provides an overview of the borough using information of its geographic, socio-demographic, economic, cultural and political context. It also maps the main actors involved in the decision-making regarding public security and justice in the territory, as well as the actions executed in collaboration with subnational institutions.
- The second section presents Iztapalapa's main challenges. It analyses the manifestations of violence and crime, organized crime, as well as problematic alcohol consumption and drug use. It also describes the main urban-environmental challenges identified in the Mayoralty's territory and presents the results of a risk analysis made from a sample of 44 neighborhoods in Iztapalapa.
- The third section presents a brief analysis of the institutional capacities of the Mayor's Office according to the principles of good governance.

Lastly, conclusions are presented, taking up the main findings and future challenges for strengthening governance in Iztapalapa.

[4] These measures included lockdown, i.e., closure of cultural and social activities, home office, recommended use of mask in public spaces, frequent handwashing, use of antibacterial gel, as well as distance-keeping of 1.5 meters between people in public spaces.

Executive summary

Iztapalapa is characterized by being the most populated borough in Mexico City, as well as the one with the youngest population given that the average age of its inhabitants is 31 years old. There are social impairments that limit Iztapalapa's sustainable development, such as poverty, precarious schooling, and lack or regular access to essential services. Its economic activity is concentrated in trade and services. More than half of the employed population receives an income equivalent to more than two minimum wages (10 USD approximately).

The Mayor's Office has an organizational structure divided into 7 General Offices, 3 Executive Offices and 13 Territorial Directorates responsible for promoting its institutional, social and economic development. It is internal coordination mechanisms, such as the *security cabinets* (public security, academic institutions, business and hospital sectors), which serve as participatory mechanisms to address the population's concerns on different topics. As for public security and justice, the Mayor's Office works with all three levels of government (national level, subnational level and local level) to fight and prevent crime.

Crime dynamics persist in Iztapalapa, limiting its sustainable development (SDG 16). Between 2015 and 2020, reports on domestic violence increased by 47.5%, while reported crimes on sexual assault (141%) and rape (94%) doubled (SDG 5). In the same period of time, reported crimes on robbery in all its modalities decreased by 7%.

Based on this assessment, it was found that the most frequently reported crimes in Iztapalapa registered a decrease between 2015 and 2020, specially robbery to the person in a public location (18%) and robbery of vehicle (19%). In the case of burglary of business property an increased is observed in the number of reported crimes (11%). These three modalities of robbery represent 56% of the total reported crimes. As for organized crime, drugs and arms trafficking represent external threats to Iztapalapa. The main mechanisms of control used by organized criminal groups are fear and coercion.

Iztapalapa presents high levels of alcohol consumption and drug use (SDG 3), mainly affecting young people, which is a risk factor for engaging in criminal activity. The onset of drug use usually occurs between the ages of 12 and 18, with marijuana, inhalants and crack being the main drugs used.

The mayoralty's territory also has acute urban and environmental problems, such as deteriorating and deficient urban structure, poor provision of essential services, and health problems caused by environmental neglect (SDG 11). Only a quarter of the neighborhoods in Iztapalapa have 24-hour water service. There is a problem of garbage concentration and dog feces on public roads; at the same time, the deterioration of urban infrastructure requires immediate attention given the population density.

Regarding the Mayor's Office capacities, there are key aspects to achieve good governance. One of them is the adoption of standard operation procedures and protocols in all programs, mainly those related to crime prevention and security. On the other hand, it is important to establish a methodology for the monitoring and evaluating of all actions. This will ensure accountability and transparency in budget expenditure, activities and results obtained through its implementation.

Risk factors associated with structural inequalities, lack of employment opportunities, early drug use, domestic violence, and violence against women, criminal behaviors, as well as external flows linked to illicit global markets exacerbate the context of insecurity.

In this regard, the adoption of early crime prevention strategies focused on cognitive behavioral therapy, socioemotional skills development and positive parenting, complemented with employment initiatives and projects targeting the youth population would have a positive impact in the human development of individuals. In addition, the adoption of an effective public security strategy that includes the execution and coordination of actions to prevent, investigate, prosecute, punish crime, and promote social reinsertion, is strongly needed.

Urban Safety Governance Assessment Approach

Cities have undergone accelerated urban development largely due to the economic and social growth. By 2050, nearly two-thirds of the world's population are expected to live in urban spaces, challenging governments worldwide[5].

Acknowledging this situation, UNODC generated strategies and actions focused on conflict reduction that promote rule of law, human rights, inclusion, safety and good governance, which are the basis for people's well-being and sustainable development.

The governance approach is closely related to the Doha Declaration approved at the 13th United Nations Congress on Crime Prevention and Criminal Justice, in 2015. It was adopted as a measure to promote crime prevention and public security for cities through the participation of communities at the local level[6].

Governance is understood as all the political structures and processes of the State through which decisions are made and implemented, promoting the understanding of local challenges. It is also the foundation for balancing participatory processes of management and administration that allow shared responsibility between governments, public and private institutions, civil society, and citizens. The purpose of **governance** is to be consensus-oriented, responsible, transparent, responsive, effective, efficient, equitable, inclusive, and respectful of the rule of law[7].

Governance coordination processes generate a horizontal sense of direction of the means and resources needed to achieve the ends set out in matters of collective interest. Transparent and professional governments are needed, with technical skills, equipped with information that gives rise to a plurality of voices and their participation in decision-making[8].

The absence of these characteristics limits the effectiveness of governance and makes it difficult to identify those formal and informal actors involved in both decision-making and its

[8] Ibid.

implementation[9]. **Good governance** is also linked to prevention and fight against corruption. It has eight principles[10]:

Figure 1. Principles of good governance

Source: Own elaboration.

Governance thus strengthens law enforcement institutions and improves coordination between local government policies and practices to effectively tackle the risks and threats posed by multi-causal phenomena such as crime, violence, corruption, consumption of substances harmful to health and illicit financial flows[11].

Urban Safety Governance Assessment

This assessment is a tool that aims to understand the risk factors associated with violence and crime and the interaction they have with external illicit flows that give rise to insecurity challenges. It includes a series of factors related to the prevention, treatment and care of various problems that starts with acknowledging the complex interaction of risk factors at the local, national, and global levels.

Since 2016, UNODC, in-line with the New Urban Agenda (NUA)[12] has applied a theoretical, critical, and methodological route that emphasizes the **Urban Safety Governance Approach** as a strategic vision to achieve good governance and public security. This approach begins with a deep understanding of risk factors and both internal and external threats that condition antisocial behaviors, local crime dynamics and limit resilience[13].

In order to guarantee the **Urban Safety Governance Approach**, priority areas of intervention in terms of public security must be identified, as well as the capabilities that institutions, at the local level, have in order to integrate different social actors in the implementation of public policies and strategies[14]. An urban context encompasses the physical space, as well as educational,

environmental and health development structures necessary for the integration of gender and inclusion issues[15].

The **Urban Safety Governance Assessment** was carried out simultaneously in four regions around the world: St. Michael and Christ Church (Barbados), Mathare in Nairobi (Kenya), Iztapalapa in Mexico City (Mexico), and Tashkent in Uzbekistan[16]. The implementation is carried out in 4 stages[17]:

1. Planning
2. Data collection and analysis
3. Presentation and validation of results
4. Strategies and public policies

An evaluation process under this approach in a defined geographical area allows for a deep understanding of the challenges that exist between government and citizens through a wide range of interactions, allowing the identification of priorities and most appropriate public policies on which the technical assistance and institutional strengthening actions will focus on specific to the problems at the urban level[18].

The 2030 Agenda for Sustainable Development

At the national level, compliance with the Sustainable Development Agenda has been promoted under different strategies and practices that promote awareness actions for sustainability and contribute to achieving and periodically[19] monitoring the Sustainable Development Goals (SDG)[20].

These goals consider actions that contribute to improving people's quality of life. This action plan focuses on 17 interconnected Goals[21] in different areas such as poverty, health, education, environment, gender equality, decent work, reduction of violence, crime, and strengthening of solid institutions and alliances to achieve their goals. Mexico City created a *Council to follow-up*

the 2030 Agenda for Sustainable Development[22] in order to monitor the actions that allow the execution of integral strategies that promote the achievement of the SDG´s at the local level[23].

Five SDG are paramount to the **Urban Safety Governance Assessment (USGA)** in Iztapalapa:

Figure 2. Main SDGs for this Governance Assessment (USGA)

Ensure healthy lives and promote well-being for all at all ages.

Achieve gender equality and empower all women and girls.

Make cities and human settlements inclusive, safe, resilient and sustainable.

Promote peaceful and inclusive societies for sustainable development, provide access to justice for all and build effective, accountable and inclusive institutions at all levels.

Strengthen the means of implementation and revitalize the global partnership for sustainable development

Source: Own elaboration.

SDG 3 aims to strengthen the prevention and treatment of consumption of substances harmful to health, including drug and problematic alcohol consumption (Target 3.5), as well as to reduce by half the number of deaths and injuries caused by road traffic accidents worldwide (Target 3.6), among others.

SDG 5 seeks to eliminate all forms of violence against women and girls in the public and private spheres (Target 5.2) to ensure the full and effective participation of women, equal opportunity and leadership at all levels (Target 5.5), and to adopt and strengthen sound policies and enforceable laws to promote gender equality as well as the empowerment of all women and girls at all levels (Target 5c), among others.

SDG 11 promotes access for all to adequate, safe and affordable housing and basic services, the improvement of slums (Target 11.1), as well as providing universal access to safe, inclusive and accessible green and public spaces, particularly for women and children, the elderly and persons with disabilities (Target 11.7), among others.

[22] Mexico City Government (2018). Council for the monitoring of the Sustainable Development Agenda 2030 in Mexico City. Available at: https://evalua.cdmx.gob.mx/storage/app/media/Archivos/Seminario%202018%20sistema%20bienestar%20social/23/Agenda%202030.pdf

[23] National Council for the Evaluation of Social Policy (EVALUA CDMX) (2019). Available at: https://www.evalua.cdmx.gob.mx/entidad/acerca-de

SDG 16 is also aligned with this assessment as its main goals are to significantly reduce all forms of violence and related mortality rates (Target 16.1), in addition to promoting the rule of law at the national and international levels by ensuring equal access to justice for all (Target 16.3), significantly reduce illicit financial and arms flows, strengthen the recovery and return of stolen assets and combat all forms of organized crime (16.4), significantly reducing corruption and bribery in all its forms (Target 16.5) and building effective and transparent institutions that are accountable (Target 16.6), among others.

Finally, **SDG 17** respect each country's policy space and leadership to establish and implement policies for poverty eradication and sustainable development (Target 17.15). It also, encourages and promotes effective public, public-private and civil society partnerships, building on the experience and resourcing strategies of partnerships (Target 17.17), among others.

These objectives and goals contribute to good governance in cities, and this Urban Safety Governance Assessment takes a **cross-cutting approach to gender and human rights**, as well as an **intersectionality approach** that identifies the multiple barriers generated by exclusion that affect the full enjoyment of rights by the most vulnerable people[24].

1. Urban and institutional context

Highlights

Iztapalapa represents 7.6% of Mexico City's territory.

Iztapalapa is Mexico City's most populated territory, with 1,835,486 inhabitants. This is a fifth of Mexico City's population.

51.6% of Iztapalapa's inhabitants are women and 48.4% are men.

32.2% of inhabitants are between 15 and 34 years old.

35% of inhabitants live in poverty.

22% of inhabitants have higher education.

There are 15,809 inhabitants per km^2 in Iztapalapa. Mexico City´s average is 6,202 inhabitants per km^2.

45% of Iztapalapa's economic activity is focused on trade and services.

0.25% of Iztapalapa's inhabitants do not have access to water in their households.

69% of the inhabitants are unsatisfied with water services.

24% of Iztapalapa's inhabitants do not have access to public health services.

Highlights

Iztapalapa concentrates 11% of the traditional towns and 19% of the indigenous neighbourhoods in Mexico City.

22.9% of Iztapalapa's population identifies as indigenous.

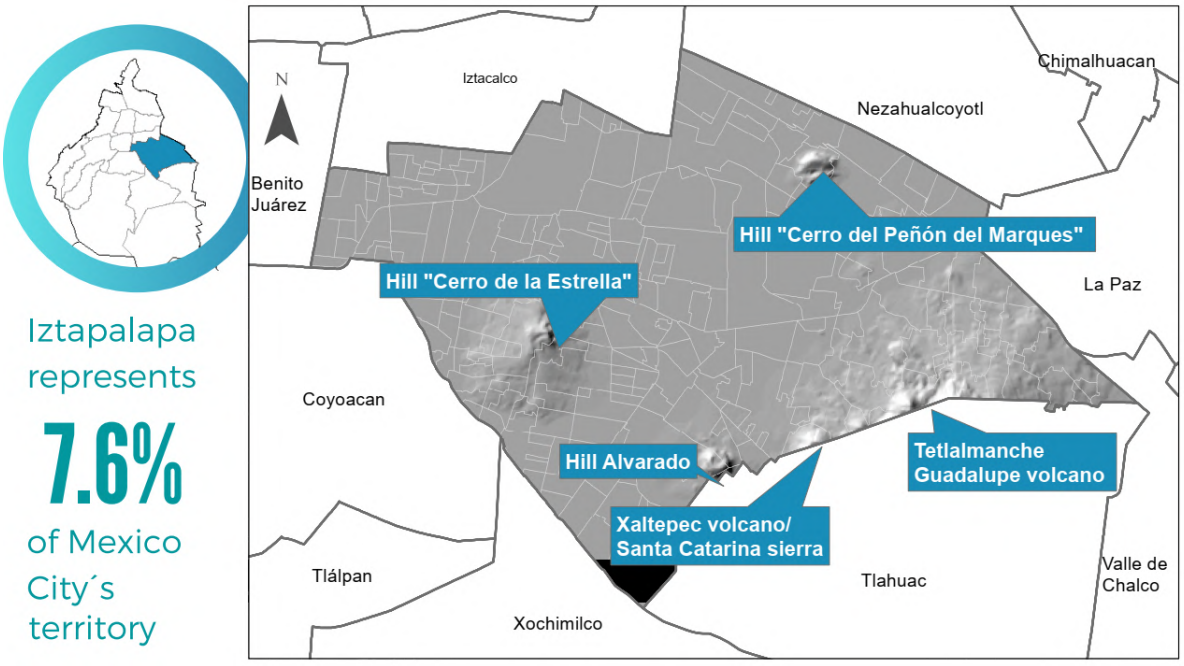
75.4% of Iztapalapa's population is catholic.

The Mayor's Office of Iztapalapa has a staff of 12,178 people, of which 6% are on service contracts and 94% are on fixed-term contracts.

The Mayor's Office of Iztapalapa hired 1,020 elements of the Auxiliary Police.

Between 2016 and 2019, police interventions conducted by the Ministry of Public Security in Iztapalapa decreased by 35%.

Five out of ten prisons in Mexico City are located in Iztapalapa.



The Mayor's Office of Iztapalapa has 5 crime prevention programmes.

Iztapalapa has a Special Unit on Crime Prevention, conformed by police officers who deliver talks and perform plays in order to contribute to crime prevention.

1.1. Geographic context

Iztapalapa is one of the 16 boroughs that comprise Mexico City. It is the fourth largest borough, covering 116 km^2 and divided into 293 neighborhoods. It is located at the east of the city in what was previously the Lake of Texcoco[25], thus it is prone to flooding due to its low altitude. The soil is made up of clay deposits, separated by sandy layers and superficial covers formed by alluvial soils[26].

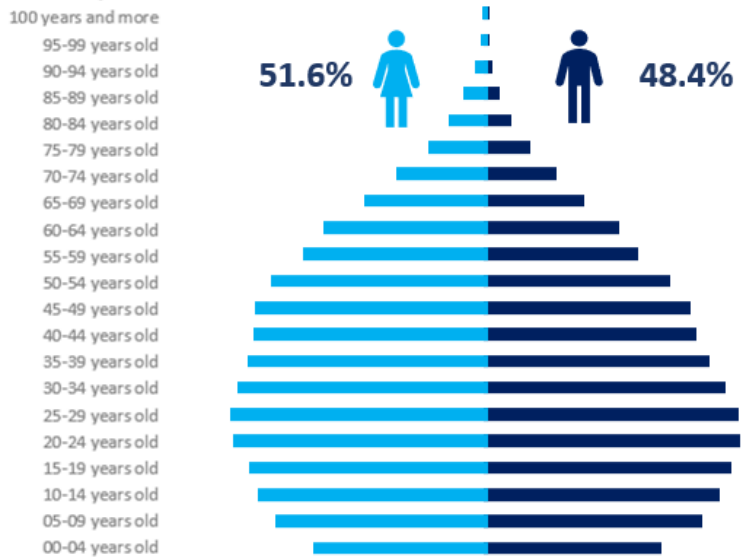
Map 1. Boundaries, main elevations and territorial division of Iztapalapa

Source: Own elaboration.

1.2. Sociodemographic and socioeconomic profile

Iztapalapa is the most populated borough (1,835,486 people[27]), concentrating a fifth of all the city's population. It has a young population with 32% of its residents aged between 15 and 34

[25] Official Gazette of the Federal District (2013). Mayor's Office Development Program of Iztapalapa 2012-2015. Available at: http://www.ordenjuridico.gob.mx/Documentos/Estatal/Distrito%20Federal/wo86647.pdf



[26] Federal District Public Administration (2008). Mayor's Office Program for Urban Development in Iztapalapa. Available at: http://www.paot.org.mx/centro/leyes/df/pdf/GODF/GODF_02_10_2008_%20ANEXO_02.pdf

[27] INEGI, (2020). National Census on Population and Housing 2020. Available at: https://www.inegi.org.mx/programas/ccpv/2020/#Tabulados

years old[28]. However, in 50 years' time this scenario will likely change and 50% of its population will be older adults[29].

32% of Iztapalapa's population is between 15 and 34 years old.

Graphic 1. Population distribution by sex and age in Iztapalapa

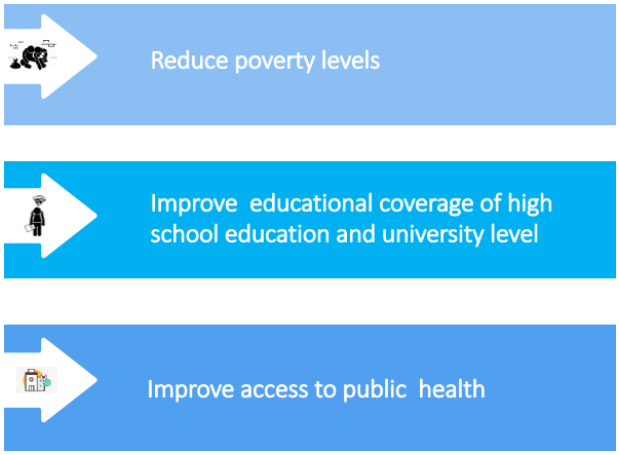
Source: Own elaboration with data obtained from INEGI, National Census on Population and Housing, 2020.

Iztapalapa faces challenges that restrain its sustainable development such as social impairments like the educational gap, lack of access to public health services, poor housing quality and limited access to other essential services[30]. According to the National Council for the Evaluation of Social Development Policy in Mexico (CONEVAL), 35% of Iztapalapa's inhabitants live in poverty[31].

35% of Iztapalapa's population live in poverty.

[28] Ibid. The average age of Iztapalapa's population is 31 years old, two years less than the average age of Mexico City's population,

[29] In 50 years, it is expected that 48% of Iztapalapa's population will have between 60 and 89 years old, of which 25% will be women (44,963). INEGI (2015). Intercensal Survey. Available at: https://www.inegi.org.mx/programmeas/intercensal/2015/



[30] According to CONEVAL (2015), these are the six social deficiencies. Available at: https://www.coneval.org.mx/coordinacion/entidades/DistritoFederal/Paginas/carencias-sociales20102015.aspx

[31] Iztapalapa is the fourth borough in Mexico City with the highest poverty level (35%), only after Milpa Alta (49.2%), Xochimilco (40.5%) and Tlahuac (39.2%). CONEVAL (2015). Poverty levels by boroughs. Available at: https://www.coneval.org.mx/coordinacion/entidades/DistritoFederal/Paginas/pobreza_municipal2015.aspx

As for the educational gap, 10 years is the average number of school years in Iztapalapa[32], with only 22% reaching higher education[33]. Public health affiliation is a challenge, as 24% of Iztapalapa's residents do not have access to this service[34].

22% of Iztapalapa's residents have higher education.

Figure 3. Challenges in terms of poverty, education and public health access

Source: Own elaboration.

Iztapalapa has a high population density, concentrating 15,809 people per km^2 while Mexico City accounts an average of 6,202 people[35] per km^2. In 2020, 503,620 inhabited private households were identified, from which 10,643 were households with 4 or more persons living in one room[36]. In addition to this, Iztapalapa has an important level of social exclusion due to the lack of access

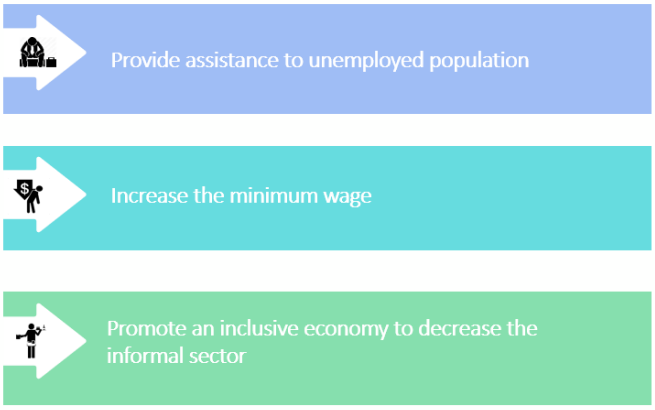
[36] No overcrowding when the average number of occupants per bedroom is less than or equal to 2.5 people per room. INEGI (2020). National Census on Population and Housing. Available at: https://www.inegi.org.mx/programas/ccpv/2020/#Tabulados



to essential services[37]. This situation is especially severe in the 168 irregular human settlements located in urban zones of high risk[38].

15,809 people concentrate per 1 km^2 in Iztapalapa

According to the National Survey on Occupation and Employment (ENOE, 2014), less than half of the inhabitants have a formal job. Of the 1,502,797 economically active people, 5% are unemployed and 95% are working population[39], as for the latter, 56% perceives a monthly income equivalent to more than two minimum wages[40]. Nearly half of the economic activity focuses on trade and services (45%), while one third focuses in activities related to jobs such as government officials, professionals or technicians (35%)[41].

45% of Iztapalapa's economic activity focuses on trade and services

Figure 4. Challenges in terms of economic challenges

Source: Own elaboration.

[37] At the national level, out of more than 2,500 municipalities/boroughs in Mexico, Iztapalapa is ranked at the 2,377 position with respect to social exclusion. Ministry of Social Development (SEDESOL) (2010). Catalogue of microregions SEDESOL. Available at: http://www.microrregiones.gob.mx/catloc/LocdeMun.aspx?tipo=clave&campo=loc&ent=09&mun=007

[38] Federal District Public Administration (2008). Mayor's Office Program for Urban Development in Iztapalapa. Available at: http://www.paot.org.mx/centro/leyes/df/pdf/GODF/GODF_02_10_2008_%20ANEXO_02.pdf

[39] INEGI (2014). National Survey on Occupation and Employment (ENOE). Available at: https://www.inegi.org.mx/programmeas/enoe/15ymas/default.html#Tabulados

[40] Ibid.

[41] This figure includes temporary accommodation services, food and beverages preparation services (10.2%), and other services except government activities (14.7%) from a total of 73,321 economic units registered in Iztapalapa. INEGI (2014). National Survey on Occupation and Employment (ENOE). Available at: https://www.inegi.org.mx/programmeas/enoe/15ymas/default.html#Tabulados

0.25% of Iztapalapa's residents still lack access to tube water and sanitation services[42]. According to the National Survey on Quality and Governmental Impact (ENCIG), Mexico City's east region reports the highest levels of dissatisfaction regarding drinking water (69%) and sanitation, i.e. drainage and sewer services (71%)[43]. The lack of water supply has motivated the extraction of water from wells located in the Mayoralty's territory, causing an overexploitation of the aquifers[44]. During the rainy season, the subsoil is even more compromised by the flows that descend from the upper parts of the hills, dragging mud and garbage.

0.25% of Iztapalapa's residents lack access to drinking water or piped water in their homes[45].

69% expressed dissatisfaction with the water supply service[46].

Additionally, Iztapalapa has a damaged hydraulic and sanitary network. The sewerage system, which covers 1,951 kilometers, is insufficient to contain the amount of waste produced in the Mayoralty's territory, causing flooding, subsidence and rupture of these networks[47]. The improvement of water supply coverage, its regularity, sufficiency and quality are urgently needed. Likewise, the promotion of a sustainable approach towards the aquifer, as well as the expansion of the sanitary networks are issues that demand attention.

1.3. Cultural context of Iztapalapa

Mexico City has a total of 139 traditional towns and 58 indigenous neighborhoods, of which 15 traditional towns and 11 indigenous neighborhoods are located in Iztapalapa. This is the second borough that holds the largest number of indigenous communities after Xochimilco[48]. Iztapalapa has the highest concentration of indigenous language speakers in Mexico City, 22.9%, equivalent

Iztapalapa has a *Commission of Culture, traditional towns and indigenous neighborhoods* within Iztapalapa's Local Council. This Commission seeks to ensure that indigenous communities have access to their cultural rights, as established in the 2019 Mexico City Constitution.

Iztapalapa's cultural activities

The promotion of culture is one of Iztapalapa's priorities. The Communitarian Orchestras program is an example of how, through art and music, the Mayor's Office is seeking to encourage a culture of peace and preventing violence. The program, which targets children, adolescents, and older

Iztapalapa has an important cultural heritage constituted by parish churches, convents representative of Mexico City[52], as well as religious events, museums and prehispanic sites. 75.4% of its population is catholic[53].

Figure 8. Cultural heritage of Iztapalapa

The theatrical representation of Jesus Christ's death and resurrection is the biggest cultural event in Iztapalapa. It takes place annually during Easter Celebrations. The participants must be from Iztapalapa's traditional towns or indigenous neighborhoods.

In 2010, this celebration was declared intangible heritage by the Mayor of Iztapalapa and in 2012 the same distinction was made by the Mexico City Government.

Four museums and monuments, 11 parish churches and two convents. Some of them are:

1. Museum of Cultures, passion for Iztapalapa
2. Museum of the New Fire
3. Museum Cabeza de Juarez
4. Museum Ex-convent of Culhuacan.

Prehispanic sites and heritage:

- National park "Cerro de la Estrella"
- Lighthouse East, which hosts art crafts and fabrics
- Cuitlahuac Park
- Cultural Center Democratic Neighborhood
- Historic arcades
- Airplay library

The *"mayordomías"*[54], fairs and traditions combine several cultural factors such as identity, idiosyncrasy and specific behaviors that differentiate Iztapalapa's inhabitants. The annual theatrical representation of the death of Christ, Easter celebration, among other cultural activities (Tamale fair, Christmas party, etc.) which take place every year, are examples of the traditions preserved by its population.

1.4 Governance in Iztapalapa

Mexico City is one of the 32 federal entities in Mexico and it is divided into 16 territorial areas, which have a political-administrative government denominated Mayor's Office[55]. These are the level of government closest to the citizens. It is run by a mayor with a three-year term of office with re-election possibility, a Local Council, and an administrative structure[56].

Mayor's Offices are entitled with judicial personality and autonomy with respect to its administration and budget execution, except labor contracts of staff and personnel working within the office and Mexico City's government[57].

The Mayor's Office of Iztapalapa is integrated by 7 General Offices, 3 Executive Offices and 13 Territorial Directorates. Currently, it has a staff of 12,178 people, of which 11,408 are on fixed-term and 770 are temporary contracts [58]. The Mayor's Office is structured as follows:

[54] Refers to a set of festivals or festivities celebrated annually by the communities, this could be solemn or patron saint celebrations. These traditions have great importance in the Hispanic culture and are mostly religious activities. These festivities take place in the streets of a town, where dances, open-air games or concerts are held.

[58] Service contract refers to those employees that have a temporal contract with the Mayor's Office. Fixed-term contract are directly hired by Mexico City's Government. In this regard, contractual terms ae no determined by the Mayor's Office of Iztapalapa, nor the number of positions that the Mayor's Office may have. Fix term contract refers to those employees that have an undefined term contract such as public officials.

Figure 9. Organizational structure of the Mayor's Office of Iztapalapa

Source: Own elaboration with data provided by the Mayor's Office of Iztapalapa, 2020.

The Mayor's Office of Iztapalapa has focused its actions in three aspects:

1) Strengthen citizen security.
2) Improve urban infrastructure.
3) Set different actions that seeks to improve people's wellbeing.

Each Mayor's Office has a Local Council that oversees and approves the yearly proposal for the budget expenditure. In the case of the Local Council of Iztapalapa, this collegiate body is constituted by 10 elected members, whose functions are established in the Organic Law of the Mayor's Offices of Mexico City in order to:

- Oversee and evaluate the performance of the Mayor's Office of Iztapalapa.
- Control public spending based on the program objectives.
- Approve the project of budget of every fiscal year according to the applicable norms and regulations.
- Among others.

The local council is integrated by citizens that represent the needs of the Iztapalapa residents. It works by session[59] (ordinary, extraordinary and solemn) and commissions with the aim of discuss and evaluate the progress of the Mayor's Office in different issues. Ordinary commissions are as follows[60]:

[59] The Mayor's Office of Iztapalapa (2019). Internal regulatory framework of the Local Council in Iztapalapa. Available at: http://www.iztapalapa.cdmx.gob.mx/conce/concejales/2%20Instalaci%C3%B3n%20del%20Concejo/ReglamentoConcejo.pdf

- Urban Services Commission
- Social Wellbeing Commission
- Sustainable and Economic Development Commission
- Culture, Traditional Towns and Indigenous neighborhoods Commission
- Public Security Commission

1.4.1 Public security legal framework of the Mayor's Office of Iztapalapa

The legal framework defines the functions of the institutions regarding public safety:

- Art. 21 of the Political Constitution of the United Mexican States[61]
- General Law of the National System of Public Security[62]
- Political Constitution of Mexico City[63]
- Law of the Mexico City System of Public Security[64]
- Administrative Manual of the Mayor's Office of Iztapalapa 2019[65]

The implementation of these legal frameworks for decision-making in matters of public security and justice implies the participation of community members from various sectors at different levels involved in the exercise of governance.

1.4.2. Public Security and Justice Institutions working with the Mayor's Office of Iztapalapa

Crime prevention, public security, and justice in Mexico rest on the three levels of government[66]. In this regard, it is important to differentiate the attributions that Mayor's Offices and municipalities have in terms of public security, as well as those that other orders of government have about this subject.

Differences between Mayor's Office and Municipality

Municipality	Mayor's Office
Municipalities have a decentralized autonomy regarding public security. According to the National Constitution, fraction VII[67]: "Preventive police is under the coordination of the President of the Municipality or Mayor".	Mayor's Offices have a centralized autonomy to the Government of Mexico City regarding public security. According to Mexico City Organic Law, article 53[68]: "c) In subordination to the Government of Mexico City, Mayor's Offices may: V. Execute citizen security policies in its territories, VI. Pursue proximity and vigilance functions, VII.

Law-enforcement officials

The Mayor's Office of Iztapalapa has incremented it number of personnel and vehicles assigned to crime prevention, adding to the efforts pursued by Mexico City government to increase police force in the territory. In 2019, the Mayor's Office police force was integrated by a total of 2,745 officials, from which 1,020 were hired[69] by the Mayor's Office to conduct proximity and surveillance actions, plus other 1,725 police elements from the Mexico City Ministry of Public Security operating in the borough[70]. In the same year, the National Guard added 450 of its officials to patrol 22 neighborhoods in the territory with the highest crime incidence[71].

Figure 11. Law-enforcement officials in Iztapalapa

Source: Own elaboration with information provided by the Mayor's Office of Iztapalapa, 2019.

1.4.3. Public security actions

1.4.3.1 Crime prevention

The Mayor's Office of Iztapalapa —through the General Office of Government and Citizen Protection— executes programs for the prevention of crime; seven are implemented directly by the Mayor's Office authorities and three are executed in coordination with Federal Government agencies and the Mexico City Government. The crime prevention programs implemented directly by the Mayor's Office of Iztapalapa are[72]:

[69] According to the attributions given to Mexico City's Mayor's Offices, each one is able to hire police staff to provide public security in its territory. [71] Information provided by the personnel from The Mayor's Office of Iztapalapa during the interviews conducted for this assessment.

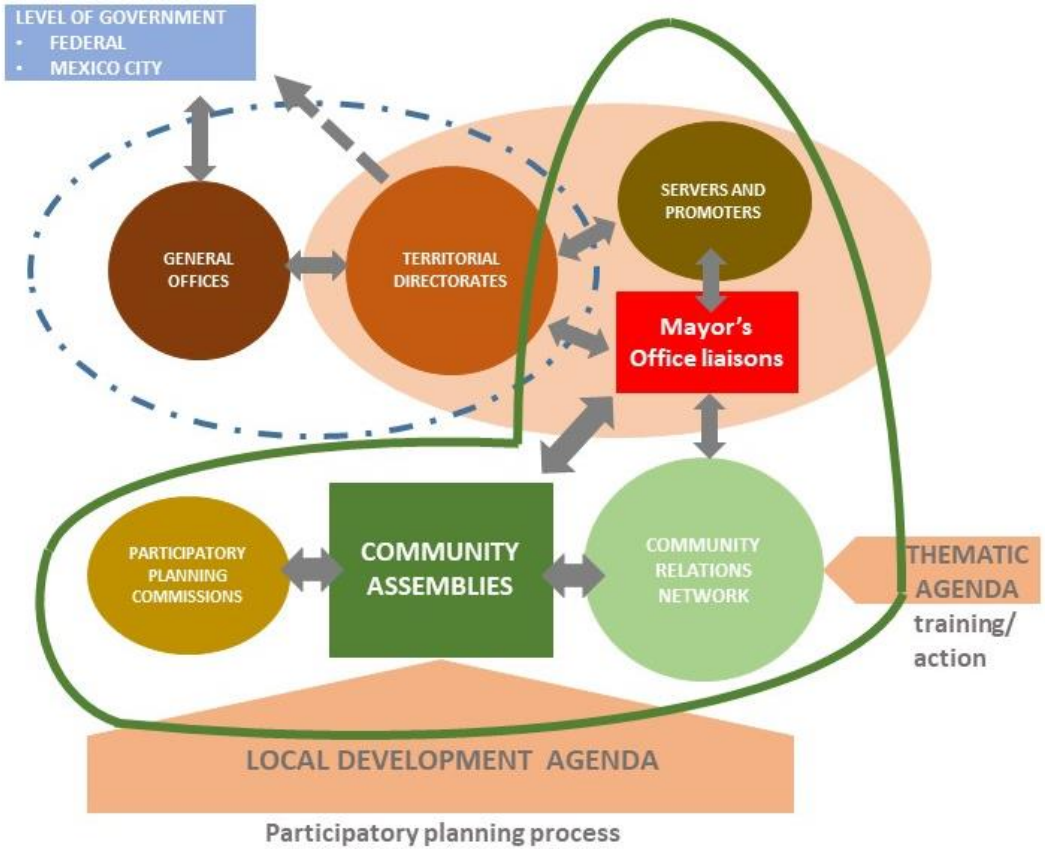
[72] All the information presented in this section regarding crime prevention programs implemented by the Mayor's Office of Iztapalapa was provided by personnel of the General Office of Government and Citizen Protection during interviews conducted for this assessment, 2020.

1. Dialogues to Achieve Peace and Well-Being in Iztapalapa Program

According to the Official Gazette of Mexico City, the program began in 2018 and aims to build social, urban and civic culture conditions for the recovery and strengthening of well-being and peace in Iztapalapa[73].

The program was established as part of the intersectoral, intergovernmental and multidisciplinary approach pursued by the Mayor's Office. The program is executed at the local level to promote people's wellbeing, access to public services, security and bolster good governance.

In 2019, 1,909 neighborhood meetings were held with the participation of 51,861 people. There were 4,473 petitions and reports of insecurity. Territorial security work plans were formulated per neighborhood based on these meetings.



Neighborhood meeting for the Dialogues to Achieve Peace and Well-Being in Iztapalapa Program at the U. H. *Ejercito de Oriente Zona Peñon*, 17 January 2019.

During the second stage of the program, Local Agendas for Development are executed in order to plan, prioritize, generate consensus-oriented proposals and actions that could be arranged between citizens and authorities from the Mayor's Office. The strategies consisted of an integral intervention in the territory, inclusive participatory planning and integrated inter-institutional management, based on an integral intervention model and a methodology of 6 actions related to planning and management:

1. Neighborhood assemblies and communitarian focal points per street and neighborhood.
2. Weekly assemblies to promote communitarian diagnostics and build capacities among communitarian focal points.
3. Design of local agenda for development.
4. Design of actions and projects, as well as working plans for focal points.
5. Integration and socialization of the Local Agenda for Development.
6. Execution of actions and projects.

[73] Mexico City Official Gazette (2019). Rules of Operation of the Program: Dialogues to achieve peace and well-being in Iztapalapa. Available at: http://www.sideso.cdmx.gob.mx/documentos/2019/alcaldias/iztapalapa/114iztapalapa_dialogosporelbienestarylapazeniztapalapa.pdf

Figure 12. Coordination processes and interinstitutional management for the execution of the Program Dialogues to Achieve Peace and Well-Being in Iztapalapa

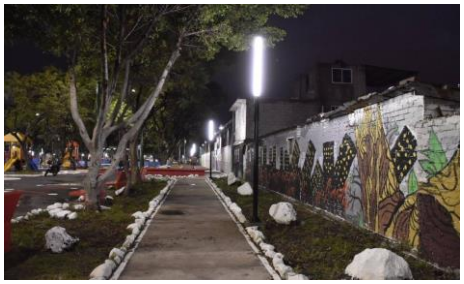
Source: Mayor's Office of Iztapalapa, 2019.

2. School Security Program for Children[74]

This program aims to generate actions for urban improvement and police surveillance in schools and their proximities. It serves a population of 450 thousand students in basic education (kindergarten, elementary and secondary levels).

- In terms of **urban improvement**[75], repair of streetlights in poor conditions has been promoted, as well as the removal of trash and debris in the vicinity of schools.
- As for **police surveillance actions**[76], between 2018 and 2019, security officials were deployed during student entry and exit times at each one of the 498 educational sites and 766 shifts (morning, afternoon and all-day).

[74] Information provided by personnel from the General Office on Government and Citizen Protection at the Mayor's Office of Iztapalapa, during interviews conducted in 2020 for the preparation of this Assessment, 2020.
[75] Ibid.
[76] Ibid.



3. Iztapalapa Transformed Program[77]

This program was designed for the improvement of urban development and focuses on transforming and equipping public spaces. Its main achievements are the following:

- **Free and safety corridors for women[78]**

This project aims to provide safe public spaces, free from violence against women. Through the urban transformation and equipment allocated in public corridors such as lightings, emergency alert bottoms and surveillance camaras, the program seeks to prevent aggressions in public spaces against women and citizens in general. In 2019 and 2020, 130 safe corridors were built reaching approximately 320,000 people.

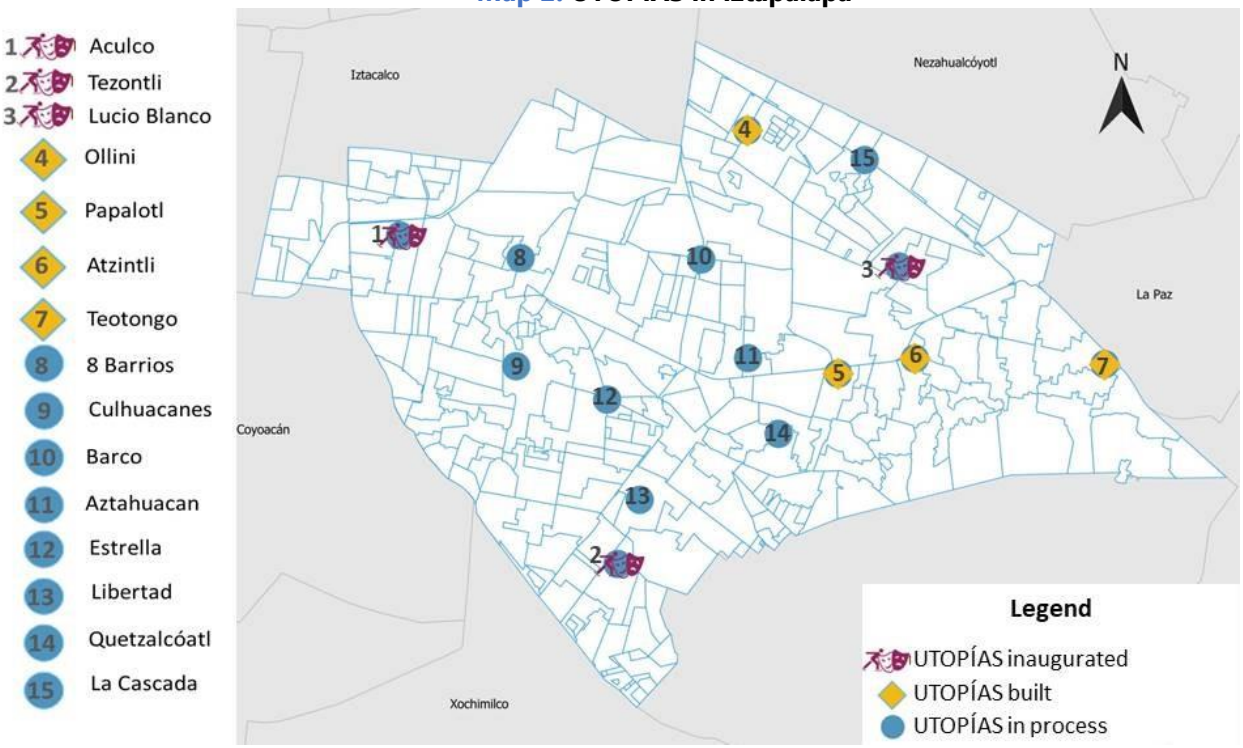
Source: Photo recovered from the social networks of the Mayor's Office of Iztapalapa, 2020: Free and safe women's corridors.

- **Units for Organization, Social Inclusion and Harmony Program (UTOPIAS, as abbreviated in Spanish)[79]**

They are community development centers that aim to provide cultural, educational, artistic and recreational infrastructure to the population at no cost. In addition, these spaces provide attention on different issues to combat inequality and insecurity in the borough. It is expected to prevent antisocial and criminal behavior through the UTOPIAS, as well as the following:

- Recovery of the public space
- Reconstruction of the social fabric
- Community cohesion
- Community participation

UTOPIAs are a cross cutting initiative in which different areas of the Mayor's Office participate. It is expected that at the end of the Mayor's administration, each Territorial Directorate will have a UTOPIA. These centers will provide attention to the inhabitants of the east side of Mexico City, promoting dignified spaces for the communities and ties of solidarity.



[77] Ibid.
[78] Ibid.
[79] Ibid.

Source: Photo of a UTOPIA (left), recovered from the social networks of the Mayor's Office of Iztapalapa, 2020. Photo of a UTOPIA (middle) provided by the Mayor's Office of Iztapalapa, 2020. Photo from a UTOPIA (right) located in San Miguel Teotongo, obtained from the social media accounts of the Mayor's Office of Iztapalapa, 2020.

The total budged of each UTOPIA varies according to its infrastructure requirements and to the approved budget for Iztapalapa, from the Mexico City Congress. A total of 15 spaces are projected to be built. Until March 2021, seven spaces have been built and, due to the mobility restrictions adopted to the prevent the spread of COVID-19, only 3 UTOPIAS had been inaugurated.

Map 2. UTOPIAS in Iztapalapa

Source: Own elaboration with information provided by the Mayor's Office of Iztapalapa, 2021.

UTOPIAS will offer different activities and sports facilities, among them:

- Semi-Olympic pool
- Facilities for sports.

- An auditorium for 400 persons[80]
- A space to provide medical attention to drugs users and persons with drug-use disorders
- Music, theatre, dance and art lessons
- Space for recreation (technology, reading and games)
- Space for persons with disabilities
- A space for the elderly[81]
- Care, legal and psychological services for women and children' victims of domestic violence.

4. Guidelines to improve the attention provided by police officers to youths and adolescents[82]

Within the framework of the Security Cabinet for the construction of peace, guidelines were established to strengthen the practices and forms of attention of police officers who work with adolescents and youths in the Mayoralty's territory. Based on the commitment established, the aim is to achieve a safe, peaceful and respectful coexistence, as well as to change the perception that young people have on security institutions.

5. Command Center (C2) or Cuitlahuac Base

The Command Center (C2) or Cuitlahuac Base, is an emergency center that receives an average of 800 emergency calls per month from inhabitants living near the base. It also receives requests for attention to various problems through social networks. The base is active 24 hours a day, 365 days a year and requests are channeled based on the identified needs.

In 2019, with the help of the Mayor's Office budget for citizen participation, 3,565 neighborhood alarms were installed, as well as 1,215 video cameras in public passenger transport units, which are directly monitored at the Cuitlahuac Base and are interconnected with the Mexico City Central Command Center.

6. Special Unit for the promotion of Women rights and substantive equality

According to Mexico City's Organic Law[83] and the general law on equality between women and men[84], each Mayor's Office in Mexico City must have a special unit that provides advice to the Mayor's Offices in terms of substantive equality and gender perspective. Based on this, in 2019, the special unit in Iztapalapa was created.

---

[80] Iztapalapa only has three auditoriums.
[81] In Iztapalapa there are more than 300 elders' groups that host weekly meetings and organize cultural activities.
[82] information provided by the Mayor's Office of Iztapalapa, 2021.
[83] Mexico City Government. Mexico City Official Gazette (2018). Organic Law of Mexico City's Mayor Offices. Available at: http://www.paot.org.mx/centro/leyes/df/pdf/2018/LEY_ORGANICA_ALCALDIAS_CDMX.pdf
[84] Mexico City Congress (2020). General Law on equality between women and men. Available at: http://www.diputados.gob.mx/LeyesBiblio/pdf/LGIMH_140618.pdf

When the current administration stated activities, the unit conducted a diagnostic on violence against women in Iztapalapa, a cross-cutting issue that is also influenced by the urban conditions, quality of life, mobility, etc.

The special unit oversees that the programs, strategies, or actions executed by the Mayor's Offices has a clear gender perspective. It works closely with the Prosecution Offices located in Iztapalapa with whom they review crime statistics. In some cases, it also provides assistance to the victims by referring them to the Justice Centers for Women.

Among its contributions are the following:

- Legal advice to all administrative offices so they can execute actions with a gender perspective.
- Mechanism of action in case of sexual harassment.
- Capacity building to police officers regarding gender perspective.
- Advice on how to integrate a gender perspective into murals and artistic activities performed in the *Free* and *safety corridors for women*.
- Execution of the program *Always alive*.

In 2020, the unit implemented the **program Always alive**, an initiative that provides capacity building to families in neighborhoods with high crime rates. It aims to strengthen people's capabilities and empowerment. The program is integrated by the following activities:

- **Household visits by a personnel form the Mayor's Office of Iztapalapa**. A qualified team conducts visits house by house and gives talks to families about how to promote a life free from violence.
- **House of the Always alive persons**. Building from a national program called Violet Houses, the unit replicate this practice to the local level and set a model to aid women living violent situations. The Mayor's Office is planning on establishing 9 of these houses inside the UTOPIA and 5 more are planned to be in the Women Aid Modules located in Iztapalapa.
- **Pendants to call authorities in case of emergency.** The Mayor's Office has delivered 700 pendants that are equipped with an emergency button, which can be activated by the victim and send real-time location to the Command Center (C2) or Cuitlahuac Base. Once the alert is sent, the nearest police patrol attends to the event and supports the victim.

All these actions are periodically reported during the Security Cabinets held by the Mayor's Office and respond to the recommendations emitted by the National Commission to Prevent and Suppress Violence against Women (CONAVIM, as abbreviated in Spanish).

7. Special Unit for Crime Prevention (UEPD) of the Mayor's Office of Iztapalapa

The Special Unit for Crime Prevention (UEPD, as abbreviated in Spanish) started operations in October 2010. The Unit has a psychologist, a theatre teacher and four members of the Auxiliary Police, assigned to sector 56 of the Mexico City police force, who in addition to their training as police officers have received training in artistic subjects and theatrical sensitivity.

Their main function is to prevent crime through awareness-raising processes. During 2019, they developed 290 theatre presentations and talks aimed at students of basic, medium and higher levels of education. With these actions, they managed to reach 23,360 people. The topics of their presentations and talks were as follows[85]:

- *Bullying* among teenagers (96 talks)
- Internet risks (37 talks)
- Cyberbullying (35 talks)
- Bullying with puppet theatre (26 works)
- Addictions (21 talks)
- Life project (15 talks)
- Teenage pregnancy (12 talks)
- Dating violence (12 talks)
- Creative parenthood (11 talks)
- Road culture (8 talks)
- Civic culture (6 talks)
- Fables about bullying (5 talks)
- Domestic violence (3 talks)
- Workplace harassment (2 talks)
- Risk prevention in public markets (1 talk

Source: Photos of the members of the UEPD before and after a show, February 2020.

Other crime prevention programs implemented in coordination with other bodies are:

8. Voluntary Arms Surrender Program

Since 2019, the objective of the Voluntary Arms Surrender Program has been to contribute to the reduction of the high rates of violence through the exchange of firearms and ammunition for money. It is being implemented in coordination with the Ministry of National Defense, the Mexico City Ministry of Government and Public Security, parishes and the Mayor's Office of Iztapalapa.

Main achievements: The program was held for 18 days in 2019, in which a total of 972 weapons were collected:

- 642 small firearms
- 309 long firearms
- 21 blank firearms

[85] Information provided by personnel from the Special Unit for Crime Prevention at the Mayor's Office of Iztapalapa, during interviews conducted in 2020 for the preparation of this Assessment.

In addition, 136 grenades were collected: 50 fragmentation grenades, 1 attachment grenade, 5 mortar grenades, 1 howitzer grenade, 79 gas grenades, as well as 1 grenade launcher, 1 rocket launcher, 481,802 cartridges, 6 dynamite cartridges, 7,210 stoppers and 2 magazines.

9. Neighborhood and Community Improvement Program

The program aims to generate urban planning intervention to improve or rescue public spaces through the financing of participatory citizen projects. It is promoted by the Mexico City government covering the 16 boroughs of the capital. In 2019, urban improvement was achieved in locations of the 293 neighborhoods of Iztapalapa through streetlight fixtures and general improvements to the urban environment.

10. My Street Program

The program is carried out by the Mexico City Ministry of Public Security in all 16 boroughs. It consists of the installation of CCTVs. In 2019, 2,402 video cameras were installed in 186 neighborhoods of Iztapalapa.

1.4.3.2 Law-enforcement efforts between the Mayor's Office of Iztapalapa and the Mexico City Ministry of Citizen Security

Since 2019, the Mexico City Government has implemented the **Community Neighborhood Improvement Program,** or **Strategy 333**[86]**,** which aims to reduce violence and improve the quality of life of the residents of the neighborhoods and *barrios* with the greatest vulnerability in each borough, based on the population's requests to develop community projects related to safety and recreation. This program is implemented in 50 neighborhoods in Iztapalapa[87].

In addition, the Mayor's Office of Iztapalapa links the Community Neighborhood Improvement Program or Strategy 333 with the **Dialogues to Achieve Peace and Well-Being in Iztapalapa Program**, which is implemented in 22 neighborhoods with the highest crime incidence[88].

The Quadrants Program[89] is another strategy executed by the Ministry of Citizen Security, that seeks to address crime in all the city's boroughs. In the case of Iztapalapa, for the implementation

[89] Information provided by the personnel from the Mexico City Ministry of Citizen Security during interviews conducted for this assessment in 2020.

of this program, the Mayoralty's territory was divided into 9 sectors and 134 quadrants, with the following objectives:

- Bring the police closer to the population.
- Reduce the response time to 911 emergency calls.
- Optimize the use of resources.
- Evaluate the individual performance of the police, limiting the space of responsibility of the sectors.

According to the Ministry of Citizen Security, between 2016 and 2019, police interventions decreased -35%.

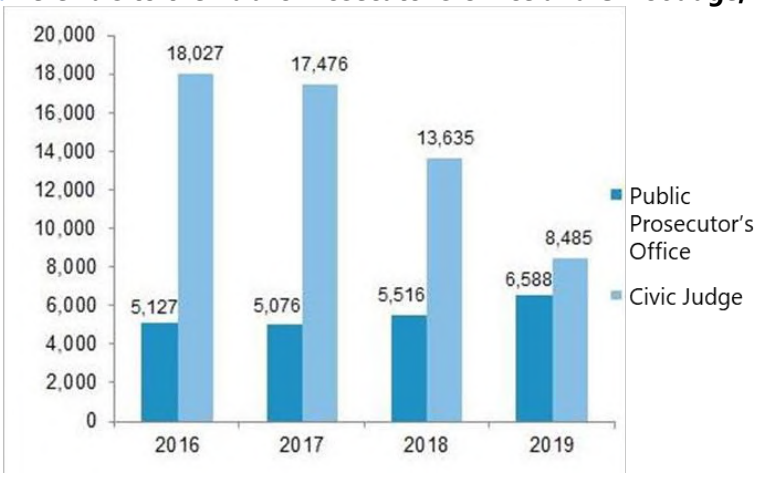
1.4.3.3 Judiciary institutions operating in Iztapalapa

The Mexico City's General Prosecutor's Office (FGJ-CDMX) is in charge of the justice system, i.e. the investigation and prosecution of crimes, and aims to guarantee compliance with the legal framework and respect for rights through the exercise of criminal proceedings. Iztapalapa has ten Territorial Coordinating Bodies for Public Security and Justice Administration in charge of initiating

preliminary investigations and investigating crimes in response to complaints and reports, also in charge of two additional administrative units[90]:

- Specialized Agency on Sexual Crimes
- specialized Prosecutor's Office on Vehicle and Transport Robbery - Agency 56

Map 4. Location of Administrative and Territorial Coordinating Bodies



Source: Own elaboration with data obtained from the Territorial Coordinating Bodies for Public Security and Justice Administration, 2019.

From 2016 to 2019, referrals to the civic judge decreased by 53% and referrals to the Prosecutor's Office increased by 28.5%.

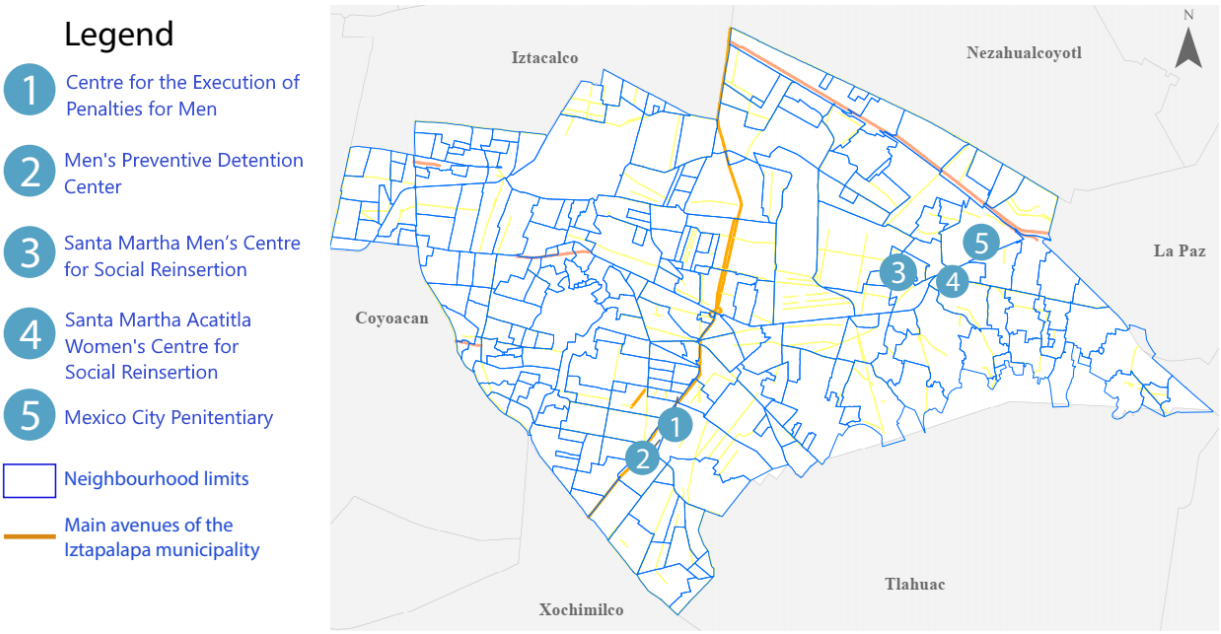
1.4.3.4 Penitentiary System

Five out of ten prisons in Mexico City are in Iztapalapa under the protection of the Mexico City Ministry of Citizen Security[91].



12,150 Men and women deprived of their liberty were living in the prisons located in Iztapalapa in 2020, distributed as follows[92]:

- Men's Preventive Detention Center: 8,247 men
- Mexico City Penitentiary: 1,846 men
- Santa Martha Men's Center for Social Reinsertion: 505 men
- Santa Martha Acatitla Women's Center for Social Reinsertion: 1,379 women
- Center for the Execution of Penalties for Men: 173 men

2. Main challenges in Iztapalapa

This chapter addresses the main challenges faced by the population and authorities of Iztapalapa. Firstly, an analysis on Iztapalapa's criminal dynamics is presented, followed by alcohol and drugs use, and lastly, the deterioration of the urban and environmental surroundings is presented. Also, the results from the risk analysis conducted in 44 neighborhoods[93] in Iztapalapa, is presented.

2.1 Crime overview of Iztapalapa

This section presents statistics on insecurity perception and antisocial behaviors. We also include a description of Iztapalapa's criminal context, as well as an analysis of organized crime.

2.1.1 Perception of insecurity in Iztapalapa

From December 2019 to December 2020, the perception of insecurity decreased 6.2%[94]. Over the first quarter of 2020, **93.1%** of the inhabitants indicated they felt unsafe in their neighborhood, mainly in the places shown in the following figure:

Figure 13. Percentage of people that felt unsafe in the public space

Public transport	ATM in a public location	Streets	Bank	Park	Market
					
93.1%	**86.4%**	**81.7%**	75.8%	63.5%	62.4%
Highway	**Vehicle**	**Job**	**Mall**	**Home**	**School**
					
60.2%	53.5%	51.9%	45.6%	35.8%	33.8%

Source: Own elaboration with data obtained from INEGI, National Survey on Urban Public Security (ENSU), December 2020.

In the last quarter of 2020, the population modified the following routines due to fear of becoming the victim of a crime[95]:

[93] The selection of neighborhoods corresponds to those with the higher criminal reports during 2018.
[94] INEGI (2019, 2020). National Survey on Urban Public Security (ENSU). Available at: https://www.inegi.org.mx/programmeas/ensu/default.html#Tabulados
[95] INEGI (2020). National Survey on Urban Public Security (ENSU), Routine Changes, December 2020. Available at: https://www.inegi.org.mx/programmeas/ensu/default.html#Tabulados

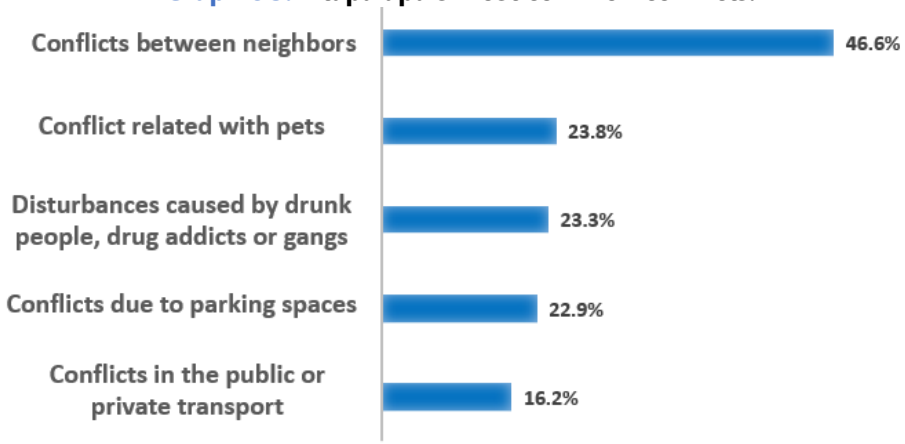

Figure 14. Routines that were modified by Iztapalapa's inhabitants for fear of becoming victim of crime

Source: Own elaboration with data obtained from INEGI, National Survey on Urban Public Security (ENSU), December 2020.

Regarding antisocial behavior, during the last quarter of 2020, conflict between neighbors (46.6%) was the main problem identified by the residents of Iztapalapa. The main causes of these conflicts were noise, parties, garbage disposal, non-payment of fees or poor parental control of children[96].

Graphic 3. Iztapalapa's most common conflicts.

Source: Own elaboration with data obtained from INEGI, ENSU, December 2020.

"There is always a car obstructing the sidewalks. A woman parked her car in the sidewalk and forced me and my son to walk out on the road"

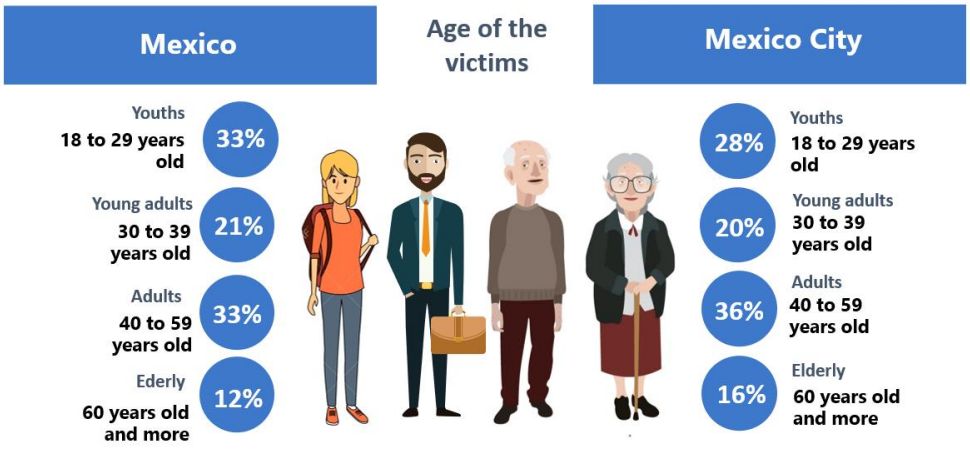
"Public transport drivers have problems with one another"

2.1.2 Witnessing antisocial behavior

Over the course of the last quarter of 2020, the most recurrent criminal and antisocial behaviors witnessed by Iztapalapa's inhabitants were alcohol consumption in the streets, regular occurrence of shootings, robbery or assaults, as well as drug use and drug dealing.

Graphic 4. Percentage of criminal and antisocial behavior that was witnessed by Iztapalapa's inhabitants, 2020



Source: Own elaboration with figures from INEGI, National Survey on Urban Public Security (ENSU), December 2020.

According to the National Survey on Victimization and Perception of Public Security (ENVIPE), 2020 at the national level 51% of the victims of crime were women, while 49% were men. In Mexico City, half were women (50%) and half were men (50%).

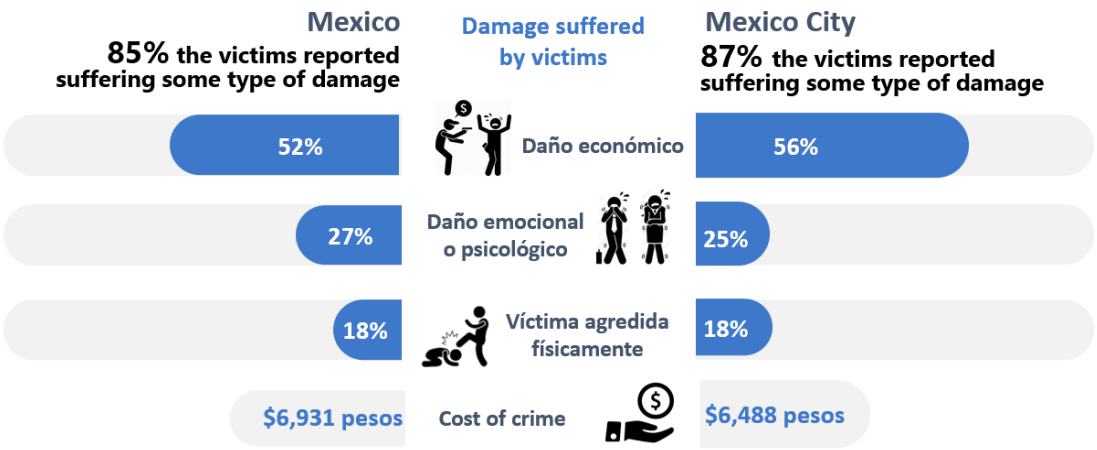
In the same period of analysis, at the national level, two groups accumulated 64% of the victims: youths between 18 and 29 years old (33%) and adults between 40 and 59 years old (33%). In Mexico City, these same groups represent 64% of the victims: 36% adults between 40 and 59 years and 28% youths between 18 and 29 years old.

Figure 15. Percentage of victims distributed by age at the local and national level, 2020

Source: Own elaboration with figures from INEGI, National Survey on Victimization and Perception of Public Security (ENVIPE), 2020.

Both nationally and in Mexico City, most of the crimes (40% at national level and 41% in Mexico City) were committed between 12:01 and 18:00 hours[97].

Figure 16. Time of crime occurrence, in Mexico City and nationally, 2020



Source: Own elaboration with figures from INEGI, National Survey on Victimization and Perception of Public Security (ENVIPE), 2020.

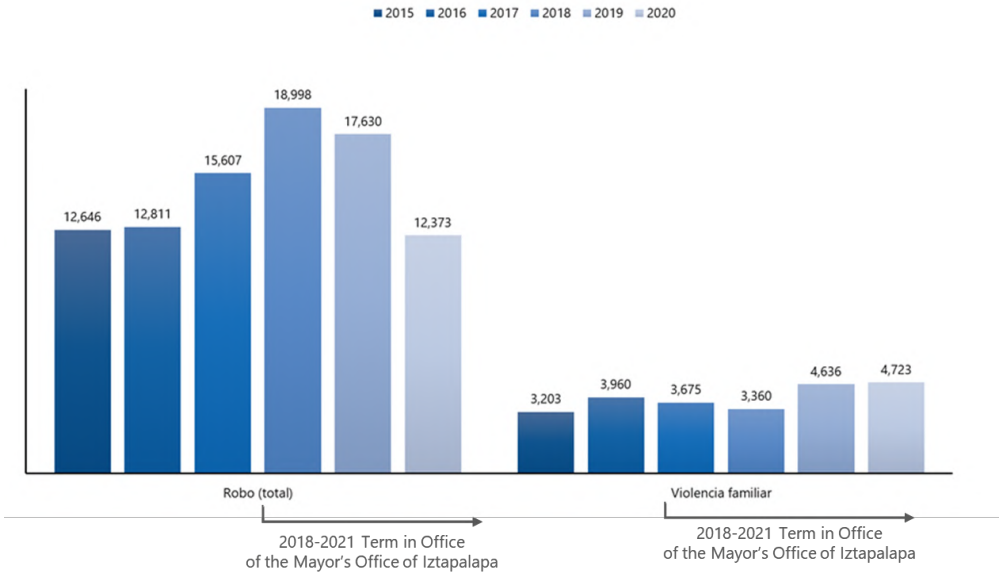
At the national level, as well as in Mexico City, 85% of the victims reported suffering some type of property damage[98]. At the national level, 52% reported economic damage and in Mexico City, 56% reported also this damage. In both cases, the cost exceeds $6,400 Mexican pesos (320 USD, approximately)[99].

[97] Ibid.
[98] INEGI (2020). National Survey on Victimization and Perception of Public Security (ENVIPE). Available at: https://www.inegi.org.mx/programmeas/envipe/2019/
[99] Ibid.

Figure 17. Damage suffered by the victims of a crime, 2020

Source: Own elaboration with figures from INEGI, National Survey on Victimization and Perception of Public Security (ENVIPE), 2020.

According to figures from ENVIPE, both nationally and in Mexico City 86% of offenders were men[100]. Offenders were mostly young men between 26 and 34 years old, which at the national level represented 33% and in Mexico City 32% of the total. Juvenile male offenders, with 25 years old or younger, represented 23% at the national level and 28% in Mexico City[101].



At the national level, 24% of the perpetrators were under the effects of alcohol and drugs at the time of committing the crime. In Mexico City, the percentage of offenders under the effects of alcohol or drugs was 18%. At the national level, in nearly 71% of the cases crimes were committed with firearms, and in Mexico City crimes committed with firearms represent about 75%.

2.1.3 Most reported crimes in Iztapalapa[102]

According to the Executive Secretariat of the National System for Public Security (SESNSP, as abbreviated in Spanish), between 2015 to 2020 robbery in all its modalities and domestic violence were the most reported crimes in Iztapalapa.

[100] Ibid.
[101] Ibid.
[102] The reported crimes presented here derived from the monthly statistics issued by the SESNSP, based on crime reported by the population and consequently filed as an investigative report at the General Prosecutor's Offices. Currently, data from the other part of the population that were victims of a crime and did not report it is estimated by ENVIPE. As such, the analysis in this section focuses only on reported crimes.

Graph 5. Most reported crimes in Iztapalapa, 2015 to 2020

Source: Own elaboration with data obtained from the Executive Secretariat of the National System for Public Security (SESNSP), 2015 to 2020.

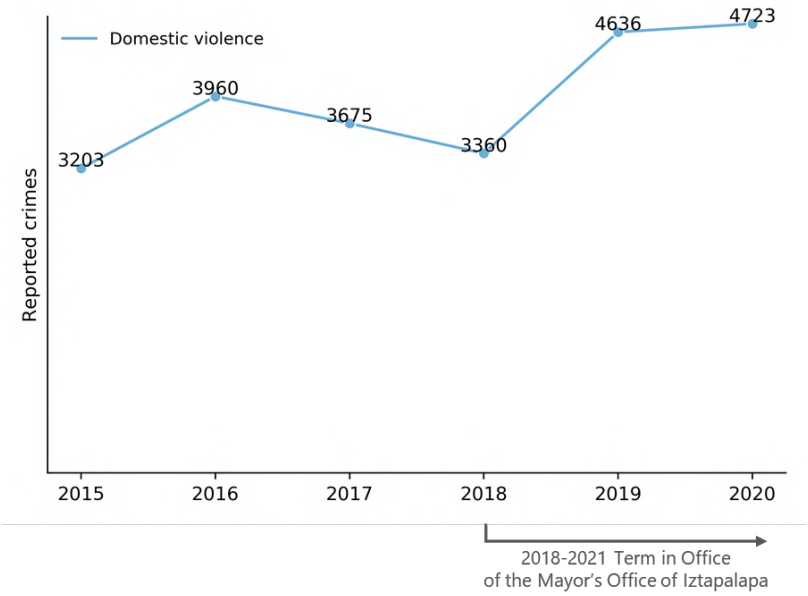
2.1.3.1 Domestic violence and crimes against women

One of the objectives pursued by the Urban Security Governance Assessment in Iztapalapa is to shed light on violence and crimes against women and girls. Through an intersectionality and human rights approach, the assessment seeks to highlight the importance of the 2030 Agenda for Sustainable Development and pay close attention to SDG 5 "Gender Equality", which aims to:

Archive gender equality and empower all women and girls

Considering international instruments such as the Convention on the Elimination of All Forms of Discrimination against Women (CEDAW) [103] also known as the Convention of Belém do Pará, and the United Nations resolutions on the elimination of violence against women and girls[104], this

[103] OHCHR (1979). Inter-American Convention on the Prevention, Punishment, and Eradication of Violence against Women. Available at: https://www.ohchr.org/EN/ProfessionalInterest/Pages/CEDAW.aspx



[104] United Nations General Assembly (2011, 2012). Resolutions: 1) Resolution 54/134: International Day on the elimination of violence against women, 2) Resolution 48/104: Declaration on the elimination of violence against women, 3) Resolution AG 61/143 on the intensification of efforts to eliminate all forms of violence against women. Available at: https://www.un.org/es/ga/66/resolutions.shtml

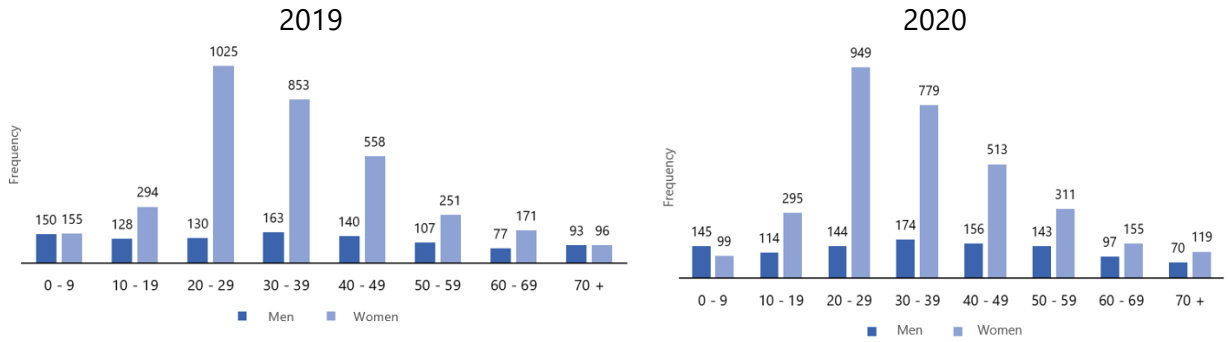
document aims to identify actions that could be adopted to prevent and guarantee women and girls a life without violence as well as ensuring their access to justice and damage compensation[105].

Between 2015 and 2020, reported crimes on domestic violence increased by

47.5%

Graph 6. Domestic Violence reported in Iztapalapa, 2015 – 2020

Source: Own elaboration with figures from the Executive Secretariat of the National System for Public Security (SESNSP), 2015 to 2020.



According to the Mexico City General Prosecutor's Office, in 2019 and 2020, most of the victims that reported domestic violence were women and girls.

In 2019, 77.5% of the victims from reported crimes on domestic violence in Iztapalapa were women and 22.5% were men. The majority of the victims were young women between 20 and 29 years old (23%). 16.5% of the victims were between 0 and 19 years old, both women and men.

In 2020, 75.5% of the victims that reported domestic violence were women, while 24.5% were men. 22% of the victims were young women between 20 and 29 years old. Victims between 0 and 19 years old, both women and men, represented 15%.

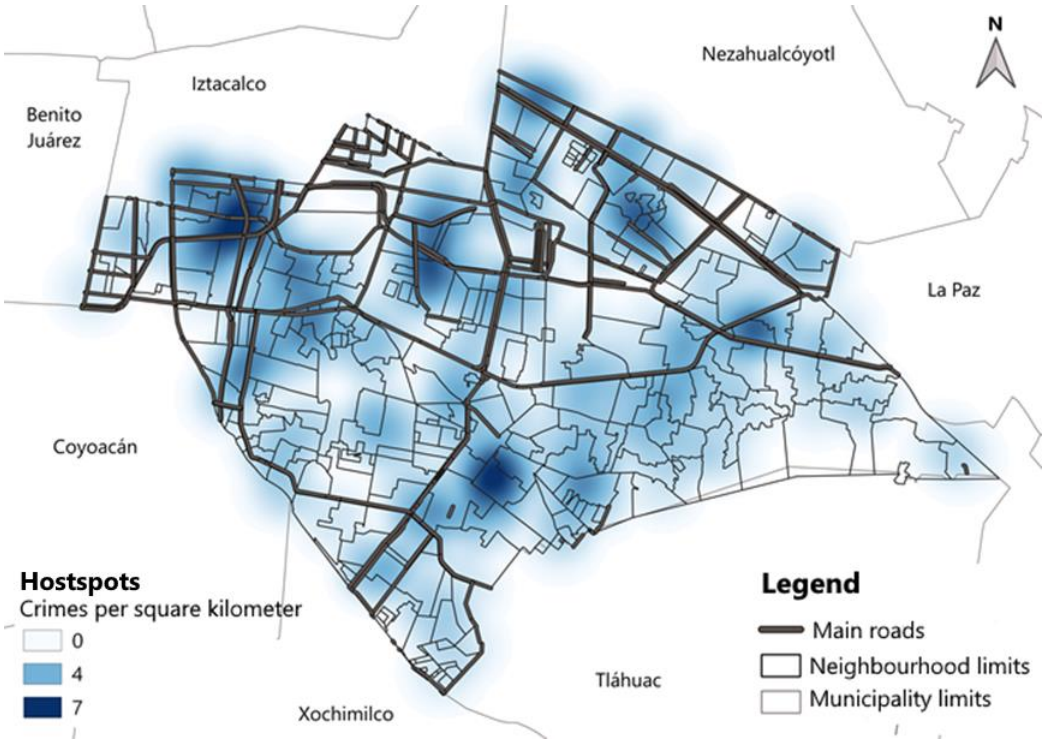
Graph 7. Victims of reported crimes on domestic violence, by sex and age, 2019 and 2020

Source: Own elaboration with figures from the Mexico City General Prosecutor's Office (FGJ), 2019 and 2020.

Although data from the Mexico City General Prosecutor's Office is disaggregated by age and sex, and in order to deepen the analysis, it would be important to highlight those cases in which the victim has been re-victimized. This could provide an early warning to the authorities and foster effective crime prevention actions[106].

Spatial concentration of reported crimes on domestic violence

In 2015 and 2019, the spatial concentration of reported crimes on domestic violence in Iztapalapa were located in the following areas:



- To the north and south of Iztapalapa in 2015
- To the east and south in 2019

According to figures from the Mexico City General Prosecutor's Office, from 2015 to 2019, the highest number of reported crimes on domestic violence were located in the following neighborhoods in Iztapalapa:

1. Desarrollo Urbano Quetzalcoatl
2. Santa Cruz Meyehualco
3. San Miguel Teotongo
4. Leyes de Reforma 3ª Sección
5. Juan Escutia
6. U.H. Vicente Guerrero

[106] Available figures give us the total number of reports on domestic violence, from this, it is unclear which of these reports belong to victims that have been re-victimized. This would be important for the prevention of other crimes committed against women.

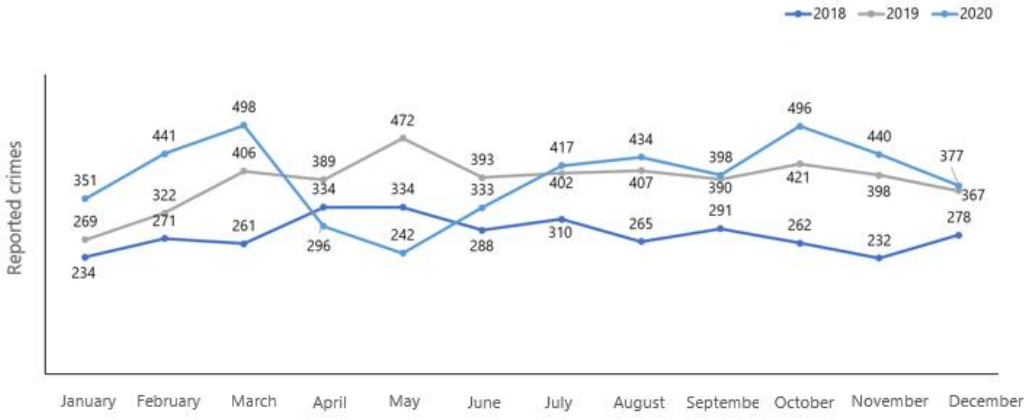
Map 6. Reported crimes on domestic violence in Iztapalapa, 2015 and 2019

2015

2019

Source: Own elaboration with figures from the Mexico City General Prosecutor's Office (FGJ), 2015 and 2019.

Domestic violence during the COVID-19 lockdown



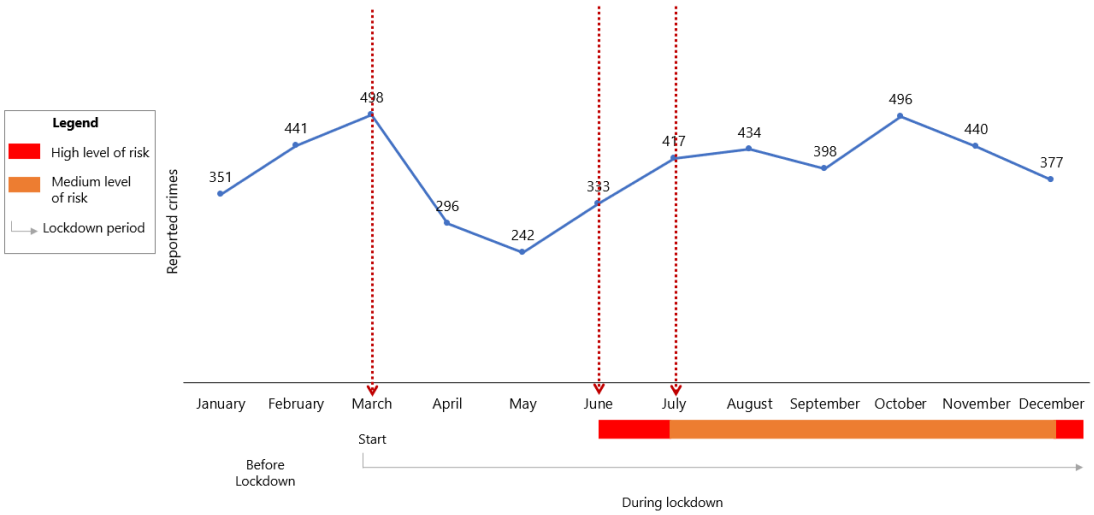
During the first quarter of 2020, domestic violence reports showed an increase, with March being the month with the highest number of reports. On March 23, 2020, the sanitary emergency was issued, and lockdown measures took place in Mexico to prevent COVID-19 contagion[107].

Between March and December 2020, reported crimes on domestic violence reports decreased by

-24%.

A drop on the number of reported crimes on domestic violence could be associated with the lockdown measures imposed to prevent the spread of COVID-19 as victim's were unable to go outside and file a report due to the mobility restrictions adopted in Mexico. Crime reporting may be also affected by the lack of access to digital mechanisms.

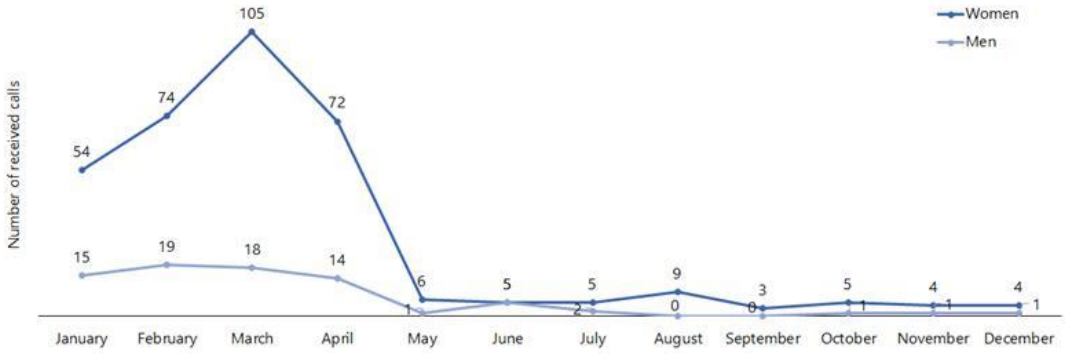
Graph 8. Reported crimes on domestic violence in Iztapalapa, monthly, 2018-2020



Source: Own elaboration with figures from the Executive Secretariat of the National System for Public Security (SESNSP), 2018 to 2020.

According to national figures, when mobility restrictions became less severe, from July to November 2020, the number of reports on domestic violence increased by 5.5%. This may be associated with the adoption of less strict confinement measures, possibly facilitating crime reporting for the victims.

[107] Official Gazette of Mexico City, (2020). Mexico City Government. Agreement on March 23, 2020. First Agreement by which the temporary suspension of activities of educational centres and commerce is established, as well as public and private events with over 50 people, in order to avoid contagion COVID-19 in Mexico City. Available at: http://data.consejeria.cdmx.gob.mx/portal_old/uploads/gacetas/887ed477612cfc31d077d94d4faa212f.pdf



Graph 9. Reports on domestic violence in Iztapalapa during COVID-19 lockdown, 2020

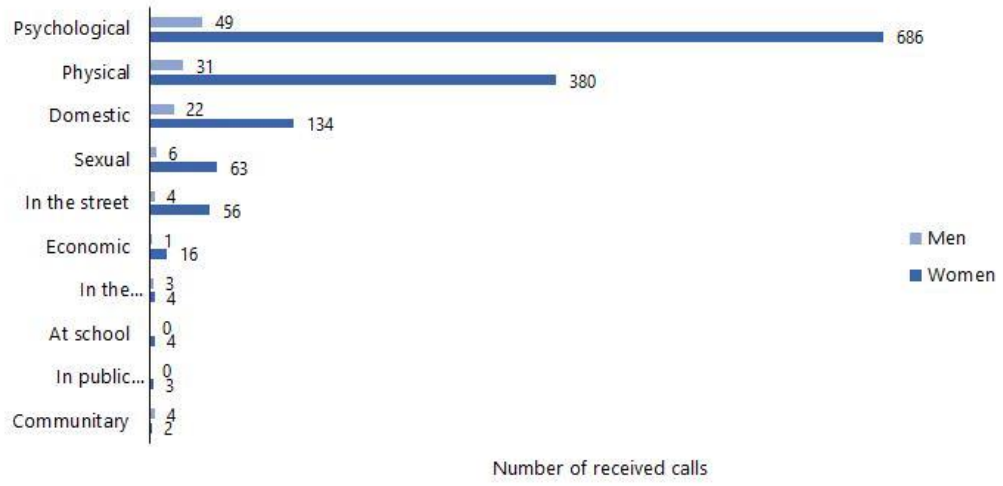
Source: Own elaboration with figures from the Executive Secretariat of the National System for Public Security (SESNSP), 2020.

Based on figures from SESNSP, from January to December 2020 reports on domestic violence decreased by -24%. When analyzing the trend of the phone calls received by Locatel[108], a drop of -96% was identified in calls reporting domestic violence starting from March 2020.

Graph 10. Phone calls received by Locatel reporting domestic violence

Source: Own elaboration with figures from Locatel, 2020

From the total number of calls received by Locatel, in 2020 reporting domestic violence, in all the cases (423) the victim had 18 years old or more.

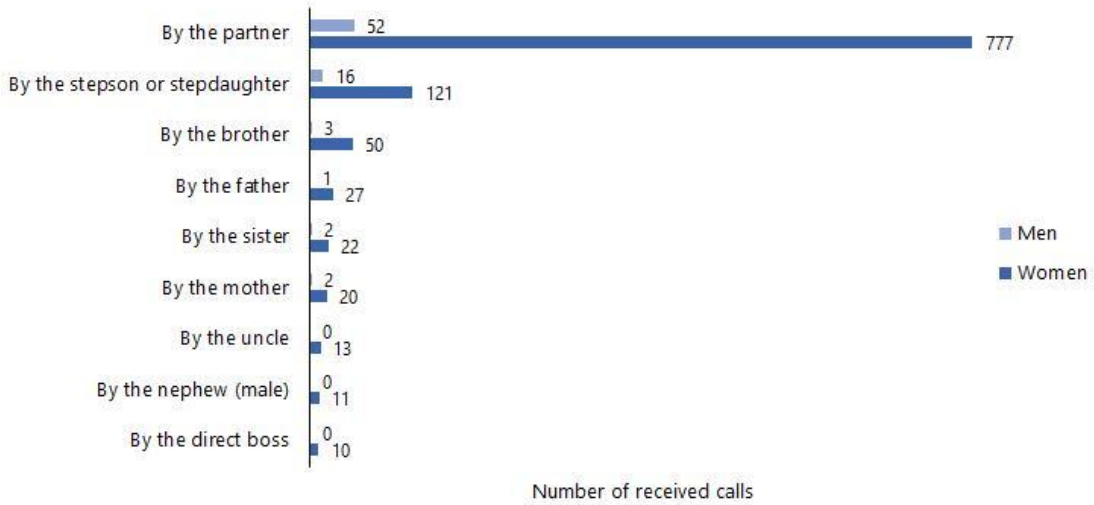


82% of the calls were made by women

18% of the calls were made by men

[108] Locatel is a call centre host in Mexico City that aims to inform and guide citizens about the access to services and administrative procedures of the Mexico City Government. The call centre also provides psychological support, medical and legal attention to the user. Locatel is open 24 hours a day, 365 days a year. Available at: http://locatel.cdmx.gob.mx/

From the total number of calls registered by Locatel, in which the victim was a woman, only 10% corresponded to domestic violence. 51% of the reports referred to psychological violence, 28% to physical violence and in 5% of the case the victim reported sexual violence. In the case of men that were victims of some type of violence, 18% indicated being victim of domestic violence, 40% of psychological violence, 26% of physical violence and 5% of sexual violence.



Graph 11. Most frequent calls registered by Locatel according to the type of violence reported

Source: Own elaboration with figures from Locatel, 2020

From the total calls registered by Locatel, reporting some type of violence suffered by the victim, only in 60% of the cases some characteristic of the aggressor was registered. In 72% of the cases, aggression was perpetrated by the victim's partner. In some cases, the offender was a member of the family, mainly close relatives (stepbrother or brother).

Graph 12. Calls received by Locatel in which some characteristic of the offender was reported

Source: Own elaboration with figures from Locatel, 2020

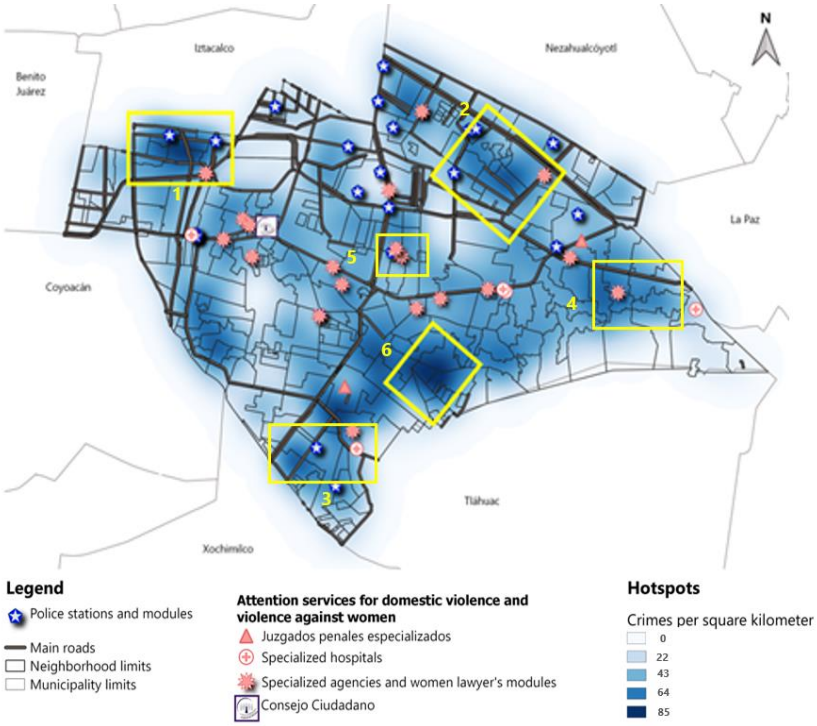
Domestic violence can be identified as a risk factor associated with other antisocial and criminal behaviors, such as early alcohol and drug use. Academic literature has broadly analyzed this subject, especially when referring to childhood risk factors and risk-focused prevention[109]. According to the National Survey of Population Deprived of Liberty (ENPOL), inmates reported they had suffered domestic violence by their parents, and 67% reported having suffered shouting, physical aggressions, insults, and assaults[110].

"Here, women do not open the door if someone goes to their house, even for institutional consultations, because the husband beats the woman due to problems related to their children, and it can be observed that there is domestic violence"

Spatial concentration of reported crimes on domestic violence during 2020

Six areas registered the higher number of crime reports on domestic violence:

- At the north of the demarcation, near to Iztacalco and the Central Market in Iztapalapa.
- Two crime spatial concentrations were identified at the east, one near to Nezahualcoyotl municipality and the other close to Los Reyes La Paz municipality, both from the State of Mexico.
- Two spatial concentrations were detected at the south of Iztapalapa, near to Xochimilco and Tlahuac.



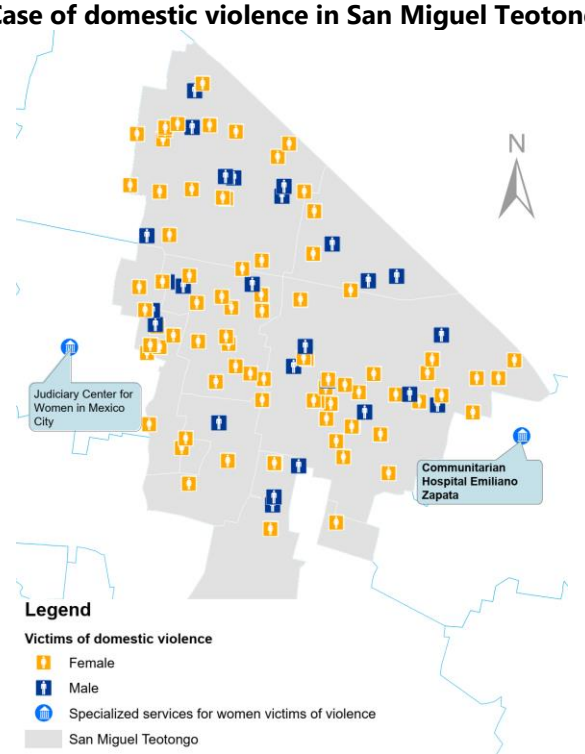
When analyzing the performance of this crime during 2020 the following aspects were identified[111]:

- Due to mobility restrictions adopted to prevent the spread of COVID-19, crime prevention has been harder as the victim may be trap with the aggressor, which suggest that victim's integrity could be at risk. This may explain why reported crimes on domestic violence decreased during lockdown (-24%), as well as the radical drop of the call registered by Locatel about this crime (-96%).
- All spatial crime concentrations identified coincide with a high concentration of population and socially marginalized areas.

[109] Morgan, M., Maguire, M. and Reiner, R. (2007). The Oxford Handbook of Criminology, fourth edition. Oxford University Press, New York.
[110] INEGI (2016). National Survey of Population Deprived of Liberty (ENPOL). Available at: https://www.inegi.org.mx/programmeas/enpol/2016/default.html#Tabulados
[111] According to information provided by personnel of the Coordination of Planning and Crime Combat of the Mayor's Office of Iztapalapa, 2020.

1. The area identified at the north of the demarcation (near to Iztacalco) is highly populated in part, due to the type of housing facilities located in this area such as the multi-dwelling Apatlato and Los Pinos.
2. In the area detected at the east of Iztapalapa, near Nezahualcoyotl municipality, the following multi-dwellings are located: Peñon Viejo, la Joya, as well as multi-dwelling Ejercito de Oriente Zona Peñon and Jose Maria Morelos y Pavon.
3. In the area identified at the south, near Xochimilco, the following multi-dwellings are also located in the zone: Cananea, Nueva Generación, los Molinos, Huixipungo, Jardines de San Lorenzo Tezonco y Uscovi. As well as a high concentration of socially marginalized areas and social vulnerability due to the irregular human settlements located in the area.
4. The concentration perceived at the east, near the municipality Los Reyes La Paz, also has irregular human settlements located in San Miguel Teotongo Hill, the area Campestre de Potrero and Miravalle, zones in which public service provision is limited due to the illegal invasion of these lands.
5. Some factors that may be associated to the high crime concentration in the center of Iztapalapa are high density of population living in the area, such as the case of Vicente Guerrero multi-dwelling, as well as a problematic alcohol consumption.
6. In the spatial crime concentration detected at the south, near Tlahuac, the neighborhood Desarrollo Urbano Quetzalcoatl is located. This neighborhood has lands invaded by groups of people such as Degollado and Maguellera, as well as ahigh level of social marginalization and problematic alcohol consumption.

Map 7. Spatial concentration of reported crimes on domestic violence in Iztapalapa, 2020



Source: Own elaboration with figures from the Mexico City General Prosecutor's Office (FGJ), 2020.

Domestic violence in San Miguel Teotongo neighborhood

San Miguel Teotongo is located at the east of Iztapalapa, close to the municipality Los Reyes La Paz in the State of Mexico. The neighborhood was selected as a case study because it is the third neighborhood with the higher number of reports on domestic violence, just after Desarrollo Urbano Quetzalcoatl and Santa Cruz Meyehualco, which may be associated with a high level of trust on the authorities. During 2019, 121 domestic violence reports were registered in the neighborhood, of which 88 were women victims and 33 were men victims. Of these cases, 80% of the victims continued with the reporting process.

Map 8. Case of domestic violence in San Miguel Teotongo, 2019

Source: Own elaboration with figures from the Mexico City General Prosecutor's Office (FGJ), 2019.

The analysis made to this neighborhood is an example of how desegregated data could help in understanding better domestic violence. This crime affects both women and men, which have been victims and have report this act to the authorities. However, as it is identified in the map, this neighborhood does not have any specialized center to prevent or provide attention to the victims of this crime. The closest victim's attention center is in the Ixtlahuacan neighborhood. San Miguel Teotongo, also lacks specialized infrastructure to provide health services, to refer those victims that may present sever physical damage.

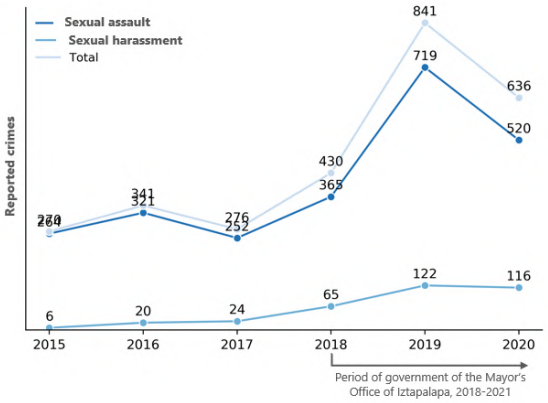
In this regard, having a special facility such as the houses of the *Always alive program*, an initiative pursued by the Mayor's Office of Iztapalapa, will greatly contribute to provide information on how

to prevent domestic violence, as well as build capacities in emotional management, assertive communication, and awareness about the consequences of violence, among others. This space could also enable reporting, legal advice, psychological support and general orientation to break the cycle of violence.

Crimes against women[112]

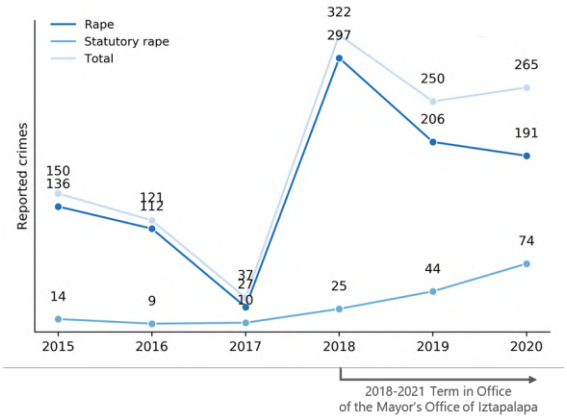
Violence against women can happen both at the familiar and community level. According to figures from the SESNSP, between 2015 and 2020 in Iztapalapa, reported crimes on:

Sexual assault[113] increased by **141%**



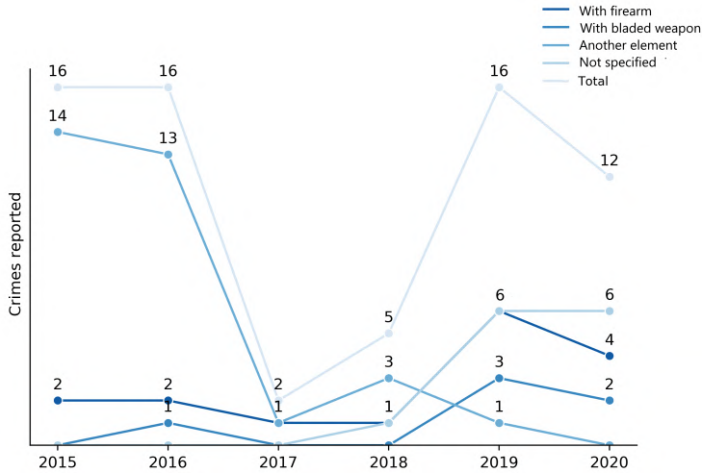
Rapes[114] increased by **94%**

Femicide decreased by **-25%**



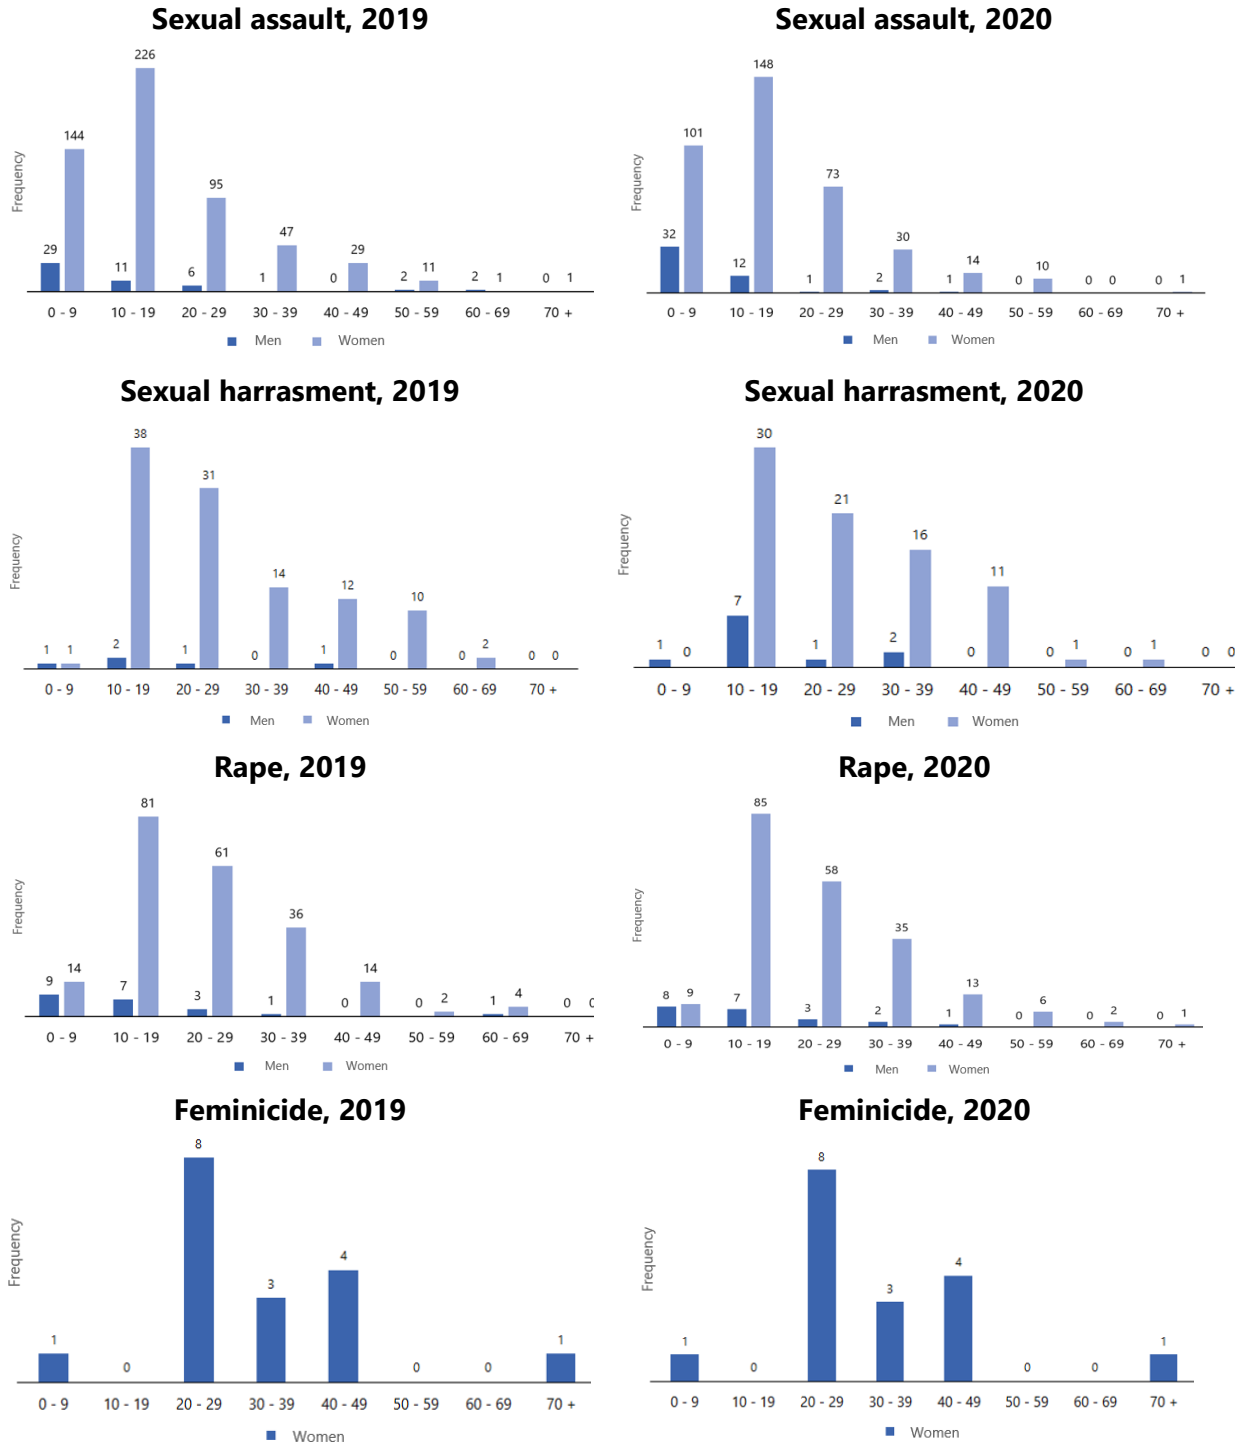
[112] For the purposes of this report, crimes against women refer to rape, sexual assault, sexual harassment and femicide.
[113] Legal definition of sexual assault: Anyone who commits sexual assault without the consent of the person or forces the person to perform sexual acts for themselves or for another person without the purpose of copulation. National Code of Criminal Procedures. Article 260. Available at: https://www.senado.gob.mx/64/gaceta_comision_permanente/documento/47351#:~:text=Art%C3%ADculo%20260.,y%20hasta%20doscientos%20d%C3%ADas%20multa.
[114] Rape legal definition: Rape is committed by anyone who either through physical or moral violence copulates with a person. National Code of Criminal Procedures. Article 266. Statutory rape is understood to be someone who copulates with a person under fifteen years of age without violence; to those who copulate without violence with a person who does not have the ability to understand the meaning of the fact or for any reason cannot resist it. Available at: https://www.gob.mx/cms/uploads/attachment/file/48378/Violaci_n-_2014.pdf

Graph 13. Reported crimes against women in Iztapalapa, 2015-2020



Sexual assault and sexual harassment in Iztapalapa, 2015-2020

Rapes in Iztapalapa, 2015-2020



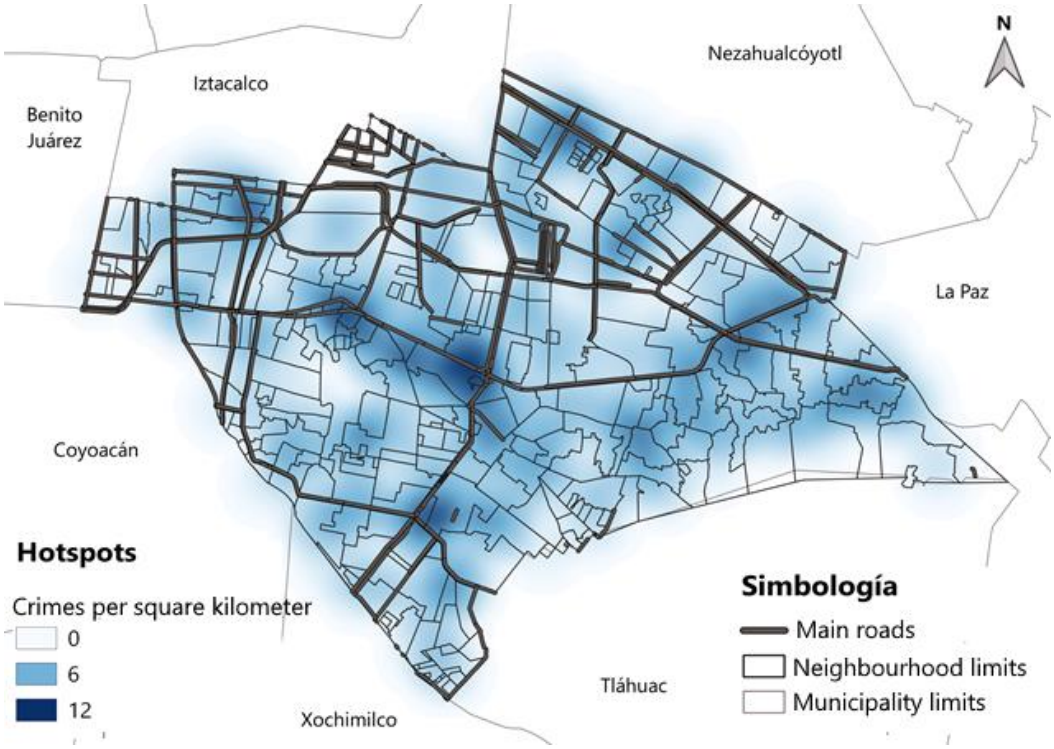
Femicide in Iztapalapa, 2015-2019

Source: Own elaboration with figures from the Executive Secretariat of the National System for Public Security (SESNSP), 2015 to 2020.

According to figures from the Mexico City General Prosecutor's Office, both in 2019 and 2020, most of the victims that reported sexual assault, sexual harassment and rape were women between 10 and 19 years old.

Graph 14. **Victims from reported crimes on sexual assault, sexual harassment, rape and femicide, 2019 and 2020.**

Source: Own elaboration with figures from the Mexico City General Prosecutor's Office (FGJ), 2019 and 2020.



Spatial concentration of reported crimes against women

Between 2016 and 2020, the spatial concentration of reported crimes of rape, femicide, sexual assault and sexual harassment in Iztapalapa were located in the following neighborhoods:

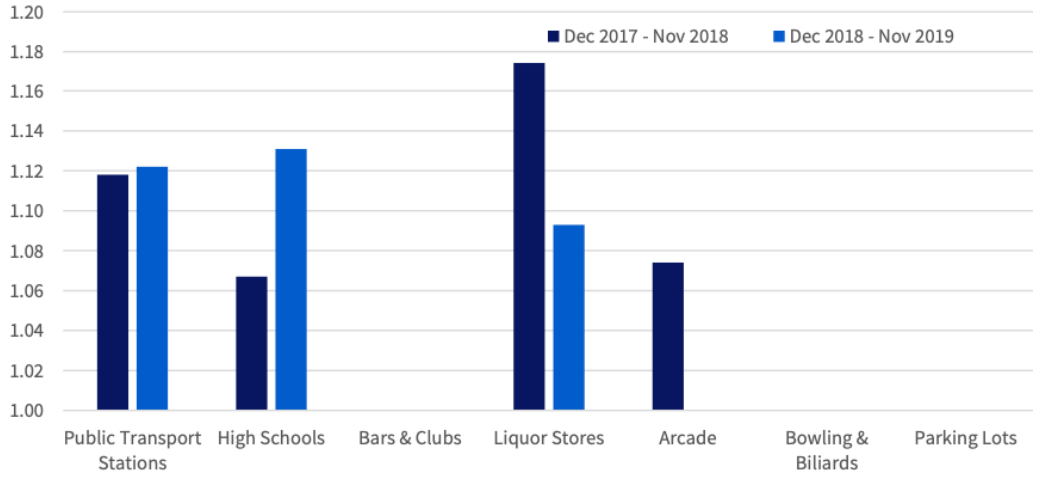
- Central de Abastos
- Lomas de San Lorenzo
- Desarrollo Urbano Quetzalcoatl
- Santa Martha Acatitla
- Santa Cruz Meyehualco

In 2016, these crimes presented a higher spatial concentration at the center and northeast of Iztapalapa, near the Central Market, while in 2019, crime concentration was detected at the south of the territory, near Tlahuac and to the north of Iztapalapa, near the municipality of Nezahualcoytl in the State of Mexico.

Map 9. Spatial concentration of reported crimes against women in Iztapalapa: rape, femicide, and sexual assault and harassment, 2016 and 2019

2016

2019



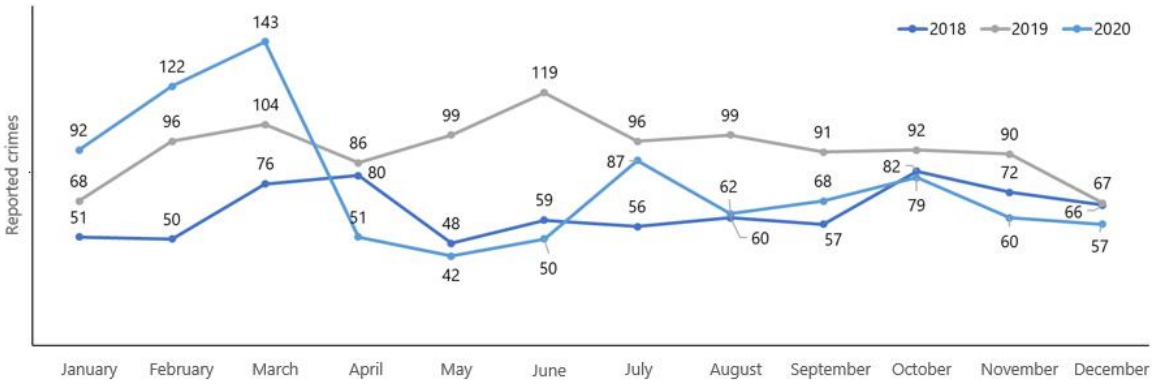
Source: Own elaboration with figures from the Mexico City General Prosecutor's Office (FGJ), 2016 and 2019.

Building from a spatial risk analysis[115], the following could be observed about sexual assaults and rape:

- During 2018, **liquor stores, bars** and **public transport stations** were strongly associated to the occurrence of these crimes.
- Similarly, during 2019, **middle and high schools** were identified as risk places, where the occurrence of these crimes is relevant.

[115] According to the *Spatial risk analysis theory,* crime is associated to urban factors. Places with a higher risk tend to group different environmental, urban, and social risk factors, which may influence crime commission. For this report a *Risk Terrain Modelling* (RTM) was used and allow us to assess spatial vulnerabilities based on a level of risk factors had on crime commission. Kennedy, L. W., y Caplan, J. M. (2012). A theory of risky places. Rutgers Centre on Public Security. Available at: http://www.rutgerscps.org/docs/RiskTheoryBrief_web.pdf

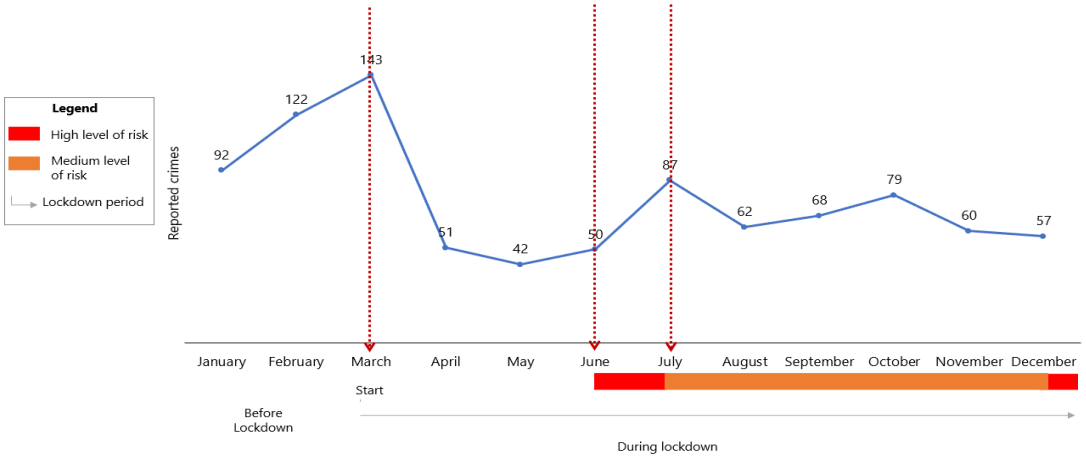
Graph 15. Correlation between environmental factors and the likelihood of sexual assaults.



Source: Own elaboration with figures collected by Transcrime, December 2017 to November and December 2028 and November 2019.

Crimes committed against women during the COVID-19 lockdown

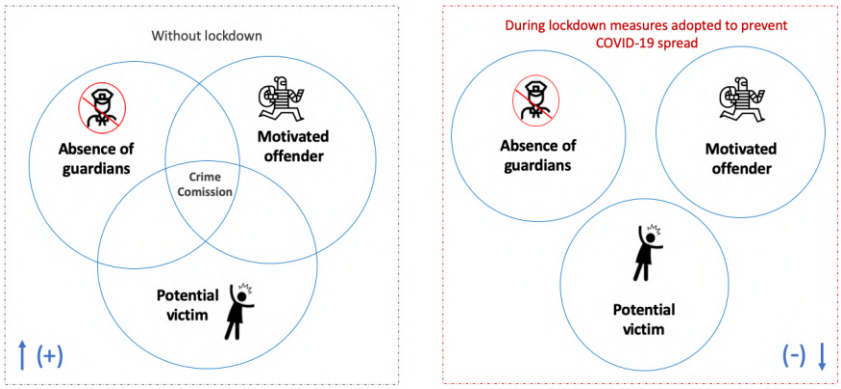
According to SESNSP figures, between March and December 2020, reported crimes against women decreased by 61%. Mobility restrictions adopted to prevent the spread of COVID-19 may have influenced crime reporting.



Graph 16. Reported crimes against women in Iztapalapa: rape, femicide, sexual assault and harassment, monthly, 2018 to 2020

Source: Own elaboration with figures from the Executive Secretariat of the National System for Public Security (SESNSP), 2018 to 2020.

According to national figures, when mobility restrictions were more severe (March to July 2020), reports on crimes committed against women decreased by 39%. When restrictions became less rigorous, from July to November 2020, the number of reports on crimes committed against women decreased by 31%.



Graph 17. Reported crimes committed against women during the lockdown adopted to prevent the spread of COVID-19 in Iztapalapa, 2020

Source: Own elaboration with figures from the Executive Secretariat of the National System for Public Security (SESNSP), 2020.

When applying the *routine activities theory*[116] to analyze changes in reported crimes such as rape, femicide, sexual assault and harassment, variations in criminal records were identified. A drop in reported crimes on rape, femicide, sexual assault and harassment was observed from March to December 2020, which may be associated with people´s modifications in routines due to the lockdown measures adopted to prevent the contagion of COVID-19.

Figure 18. Routine activity theory applied to public spaces during lockdown measures adopted to prevent COVID-19 spread

Source: Own elaboration.

[116] The theory of routine activities indicates that three elements must converge in time and space for a crime to be committed: a motivated offender, a potential or suitable victim, and the absence of appropriate guardians. Changes in routine activities decrease the opportunity factor for the commission of crime. Under this logic, the effective deployment of guardians, the reduction of potential victims in the spaces in which a greater presence of certain crimes is identified, as well as the reduction of motives for the commission of crime could reduce the levels crime rates. Cohen, L. & Felson, M. (1979). Social Change and Crime Rate Trends: A Routine Activity Approach. American Sociological Review, 44 (August).

Building from the same theory, confinement measures adopted to prevent the spread of COVID-19 may have influenced a decrease in the commission of crimes against women in the public space. As lockdown measures have reduced the mobility of potential victims, these have also modified the opportunity factor for the offenders, inhibiting the commission of crime. Confinement measures are temporary; thus, it is necessary to pay special attention on how to address the root causes of these crimes against women in public spaces and to decrease the number of reported crimes against women.

Citizen Council for the Security and Justice in Mexico City

The Citizen Council for the Security and Justice opened a second office in Mexico City, located in Iztapalapa in 2020[117]. Since the first day of operation, the organization provided 1,034 legal advice services, being July the month with the highest number of legal advices given (218) [118]

Of the total legal advice services provided, **34%** were related to the following crimes: domestic violence, physical aggressions and rape (among other relevant crimes such as threats and fraud).

82% of the reports were initiated by women, 17% by men and 1% by couples. All the victims were between 26 and 30 years old and in 17% of the cases they were transferred to the Justice Center for Women with the aim of encourage victims to file a report[119].

The main services provided by the Citizen Council were: psychological support, legal advice, and legal advice through digital denouncing, with the purpose of scaling the issue to a specialized authority, such as the Special Prosecutor's Office on Sexual Crimes, Special Prosecutor Office on Crimes Committed Against Children and Adolescents and the Elderly's Institute. The office of the Citizen Council located in Iztapalapa, provided 557 psychological services between, January and August 2020, being July the month with the highest number of services given (125) [120.]

Since the pandemic started, the most reported issues were domestic violence, anxiety, depression, fear of COVID-19 contagion, loss of a loved one, and suicide prevention.

Regarding domestic violence, from January to August, 221 reports were addressed, where 80% of victims were women and 20% were men. Ages of victims ranged between 21 and 25 years old,

[117] The Citizen Council for the Security and Justice in Mexico City is a non-profit organization that seeks to foster public security throughout the promotion of justice in Mexico City and bordering municipalities. Among the activities they execute are psychosocial support and free legal advice to the victims, as well as special programmes to encourage citizen participation. The organization is member of the Security Cabinet, initiative from the Mayor Office of Iztapalapa.
[118] Figures obtained during interviews held with personnel from the Citizen Council (2020).
[119] Ibid.
[120] Ibid.

also included minors over 12 years old and people over 70 years old[121]. The neighborhoods that concentrated the highest number of reports were:

- Barrio San Pablo
- Barrio San Miguel
- Leyes de Reforma
- San Pedro
- Guadalupe de la Moral
- San Ignacio
- San Lucas
- El Manto
- La Asuncion
- Santa Bárbara

When the Citizen Council identifies aggressions that can put the victim at a higher risk of femicide, victims are transferred to the Justice Center for Women with the aim to obtain further support. In those cases, in which a higher risk of aggression towards children is observed, victims are transferred to the Integral Family Development Institute (DIF) and to the Mexico City General Prosecutor's Office. If needed, they help the victim to make an emergency call to 911.

In March 2020, the organization launched the campaign "You are not alone" jointly with the Mexico City Government. After launching the campaign, the organization identified an increase in domestic violence reports, with July 2020 as the month with the highest number of reports, reaching 59 cases[122]. However, only in 8% of the cases a report was legally filed, the rest of the cases constitute just an informal report and a request of support by the victim. Only in 2% of the cases a complaint is made throughout the digital platform with the support of the Justice Center for Women.

The organization shares its information with the Investigation Police Department, in order to support the authorities with the compliance of case evidence such as time, location and modus operandi.

According to UNODC, households are the main spaces where violence is perpetrated, and this continues to be a frequent problem. The reduction and suppression of violence against women and girls continues to be a huge challenge for the Mayor's Office of Iztapalapa, citizens, civil society and institutions in general.

Domestic violence is a persistent threat, widely distributed across the Iztapalapa. Victims of this crime are mostly women and in the majority of the cases, offenders are men, family members or close relatives. During the fieldwork conducted for the preparation of this Assessment, this issue was one of the most mentioned problems (see section 2.4 Risk analysis in 44 neighborhoods in Iztapalapa).

[121] Ibid.
[122] Ibid. All figures refer to services provided in person.

Even though some official sources, such as the Mexico City General Prosecutor's Office, provide data disaggregated by sex and age, it would be important that also the Executive Secretariat of the National System for Public Security (SESNSP), publish group age ranges with sex disaggregation regarding reported crimes on domestic violence, sexual assault and harassment, rape, femicide, among other crimes. This would help to shed light on vulnerable groups and well as provide information that could be instrumental in the design of strategies better focalized with a gender perspective.

Crimes committed against women and girls **threatens** their dignity and human rights. According to national figures, young women and girls are the most frequent victims of sexual assault and rape.

Recommendations are presented in the following pages, suggesting concrete actions that can be adopted by the Mayor's Office of Iztapalapa and suggesting possible deadlines, allied institutions and the participation required from citizens.

Domestic violence
Data collection and strategies

Topic Short/ Medium/ Long term	Recommendations for the Mayor's Office	Recommendations for the population
Data for action	• Based on available data, provided by the District Prosecutor's Office in Iztapalapa, keep on implementing the prevention and detection of cases of domestic violence and revictimization to prioritize its attention. • Set an annual update of the ***Urban Safety Governance Assessment*** conducted by UNODC, with the purpose of monitoring the effectiveness of the actions adopted to diminish antisocial behaviors and delinquency.	• Issue a complaint in case of being victim of crime. • Get involved in the actions executed as part of the Urban Safety Governance Assessment.
Law enforcement operations and surveillance actions to diminish domestic violence	• Increase the number of police officers trained to support victims of domestic violence in Iztapalapa, according to the guidelines provided by the ***Special Unit for the promotion of Women rights and substantive equality*** with the aim of improving response times in those zones or neighborhoods with the highest concentration of reported domestic violence.	• In case of suffering from or witnessing domestic violence, call 911 to request police assistance.
Preventive programs	• Continue the execution of the ***Program Always alive*** and disseminate the	• Get involved in the programs "***Line Up, Live***

2.1.3.2 Robbery in all its modalities

Between 2015 and 2020, reports on robbery in all its modalities decreased by 7%.

Graph 18. Types of reported robberies and thefts in Iztapalapa, 2015-2020[130]

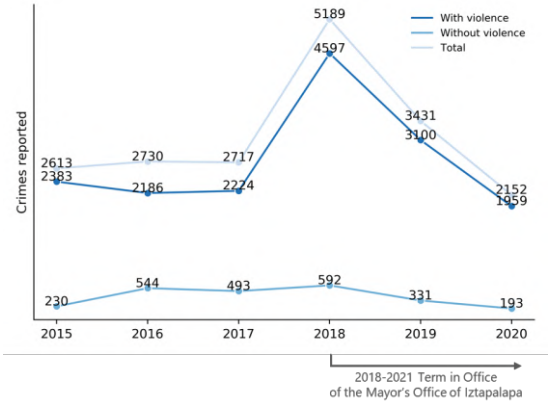
Source: Own elaboration with figures from the Executive Secretariat of the National System for Public Security (SESNSP), 2015 to 2020.

Robbery from the person in a public location, followed by burglary of business property and robbery or theft of a vehicle are the three modalities of robbery with the highest frequencies. These modalities represent 56% of the total robbery crimes occurred from 2015 to 2020.

According to SESNSP, during this period, reported crimes on robbery from the person in a public location decreased by 18%. In the same years of analysis, 87% of this type of crime were committed with violence. Between 2018 and 2020, period that correspond to the current administration of the Mayor's Office of Iztapalapa, reports on this crime dropped by 58.5%

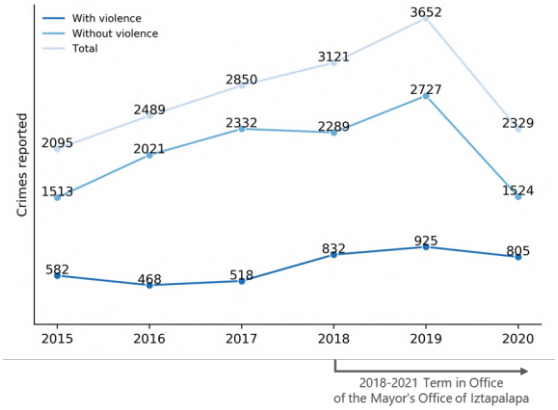
On the other hand, reported crimes on burglary of business property, between 2015 to 2020, increased by 11%, records indicated that a vast majority were committed with violence (75%). Between 2018 and 2020, reported crimes on burglary of business property decreased by 25%.

Regarding reported crimes on robbery or theft of a vehicle increased by 19% from 2015 to 2019, between 2015 and 2020 and they were mainly executed without violence (58%). In the period that goes from 2018 to 2020, registered crimes on robbery of a vehicle decreased by 30%



[130] Other acts of robbery or theft include robbery from delivery boys, theft of plates from a vehicle, robbery of documents, burglary of office and schools' premises.

There is no available information, in the official sources, regarding the type of weapons (firearms, knives, etc.) used in the reported crimes committed with violence. This type of disaggregation would be useful for:



- Elucidating the percentage of cases that had firearms involved, which might be useful in shedding light on local dynamics related to illicit arms trafficking.
- Identifying the level of violence used by the offender as well as the psychological and physical impact on the victim.

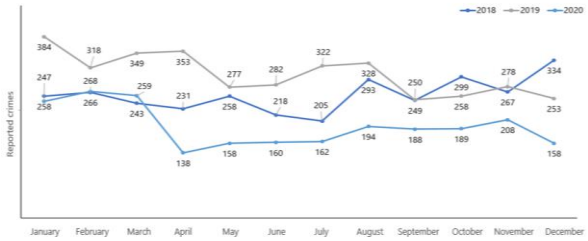
Robbery of vehicle in Iztapalapa, 2015-2020

Source: Own elaboration with figures from the Executive Secretariat of the National System for Public Security (SESNSP), 2015 to 2020.

In these three modalities of robbery, more men than women were victims (55% to 45%). Most of the victims were young people between 20 to 29 years old (15%) and 30 to 39 years old (14%).

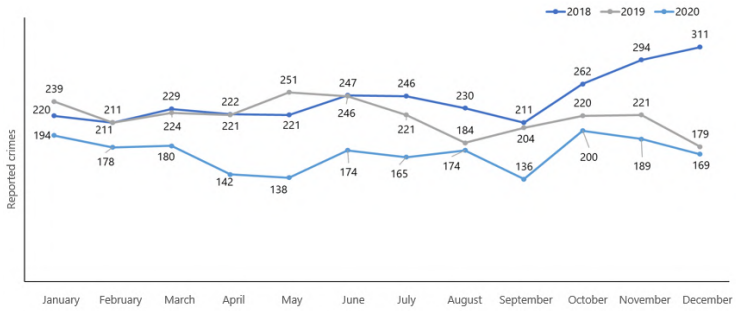
Reported crimes on robbery to the person in a public location, burglary to business property and robbery of vehicle, during the lockdown adopted due to COVID-19

Since March 2020, the month in which the lockdown measures were adopted, reports on robbery to the person in a public location, burglary to business property and robbery of vehicle decreased. Between March and December 2020, the following was identified:



- -14% on the number of robberies from the person in a public location was reported.
- -39% on burglary of business property was reported.
- -6% on robbery of vehicle was reported.

Graph 20. Reported crimes on robbery from the person in a public location, burglary of business property and robbery of vehicle in Iztapalapa, monthly 2018- 2020



Robbery from the person in a public location

Burglary of business property

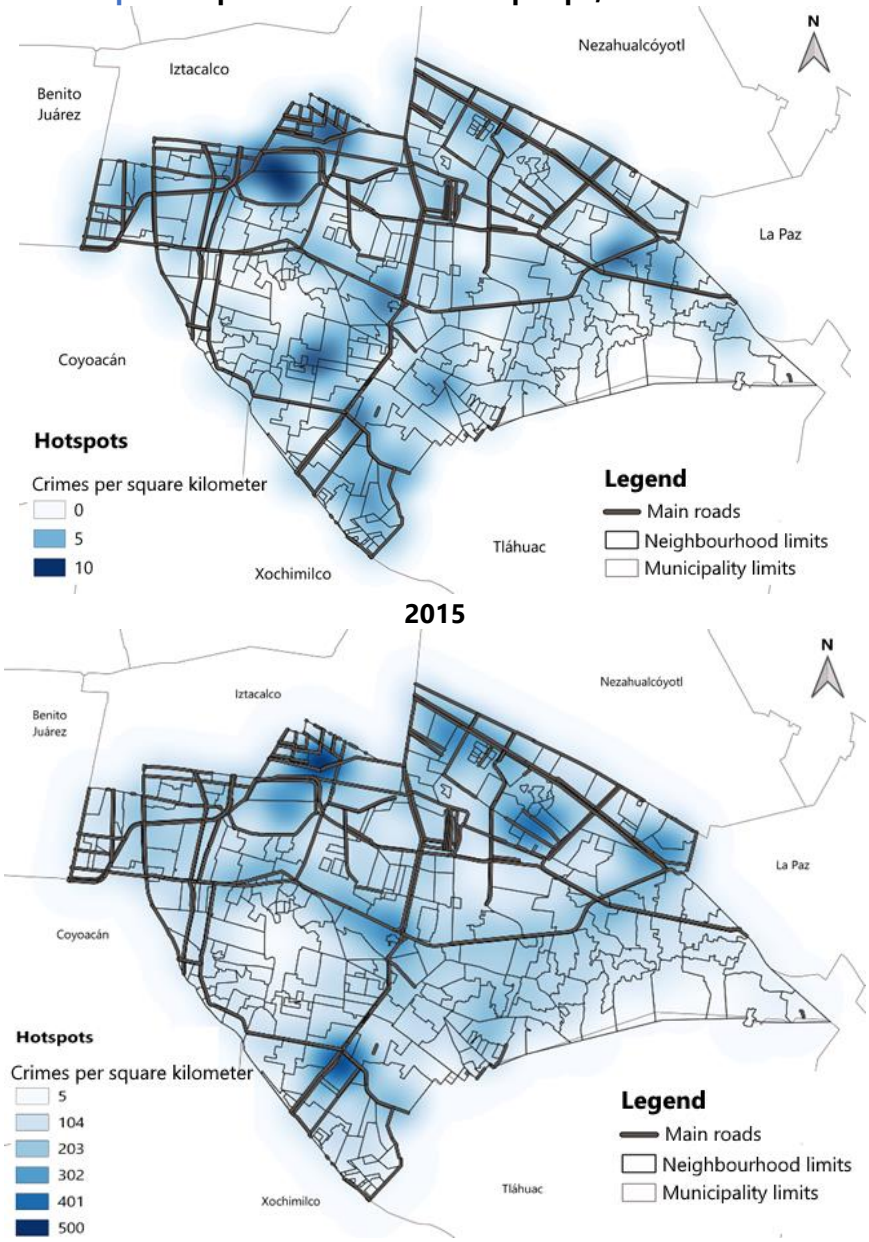
Spatial concentration of reported crimes on robbery in all its modalities



Between 2015 and 2020, the neighborhoods that showed a high crime concentration of reported crimes on robbery in all its modalities were:

- Central de Abastos (neighborhood with the highest crime concentration)
- Desarrollo Urbano Quetzalcoatl
- Juan Escutia
- Santa Cruz Meyehualco

- Chinampac de Juárez
- Santa Martha Acatitla

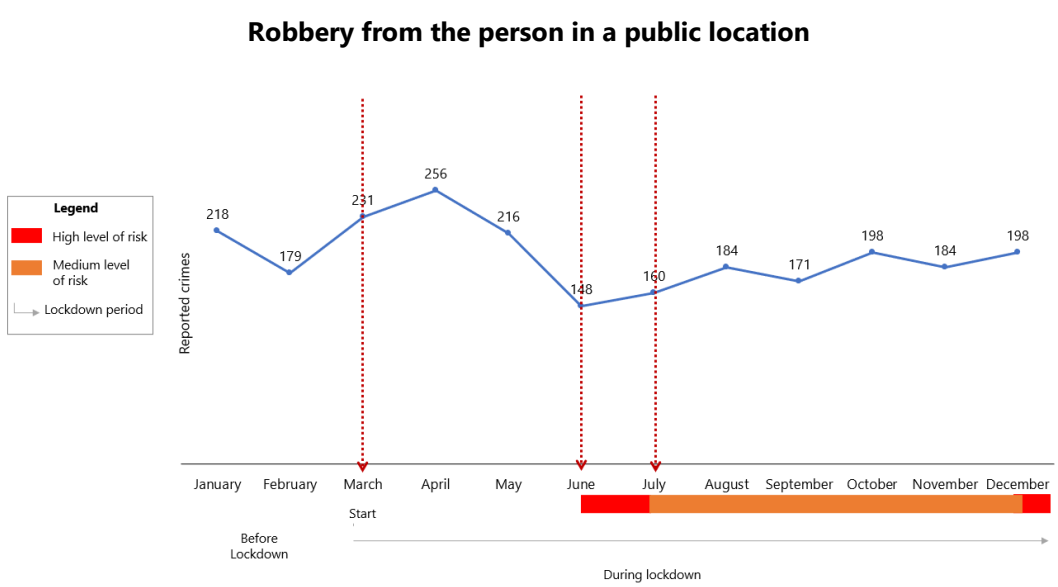
In 2015, one spatial concentration of reported crimes on robberies was identified to the northern part of Iztapalapa, near Iztacalco and the Central Market. While in 2019, a couple of spatial concentrations were detected at the east, near Nezahualcoyotl in the State of Mexico and at the south between Tlahuac avenue and Canal de Garay Avenue, the latest connects with the Ringway in Mexico City. In 2019, these concentrations maintained an average of 300 to 500 crimes committed per km^2.

Map 10. Reported robberies in Iztapalapa, 2015 and 2019

Source: Own elaboration with figures from the Mexico City General Prosecutor's Office (FGJ), 2015 and 2019.

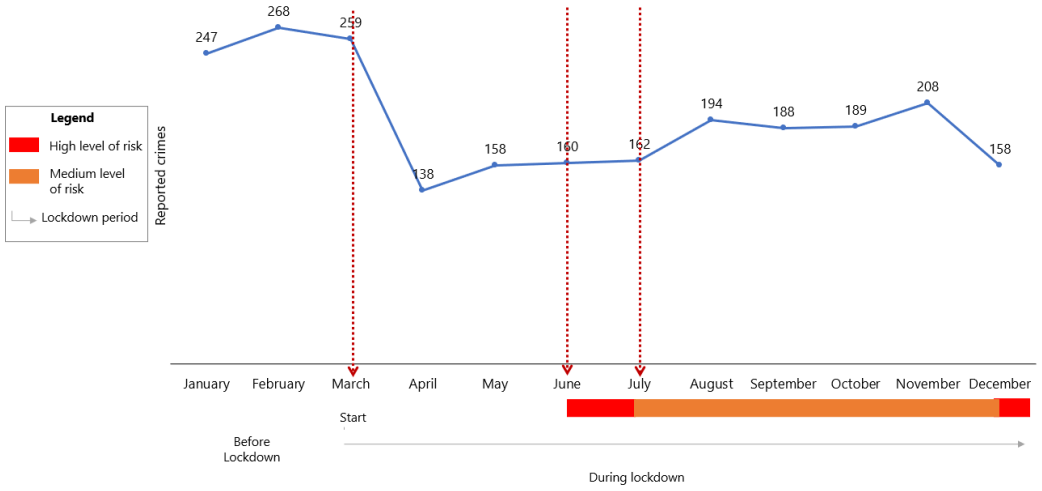
Robbery in all its modalities during COVID-19 in 2020

As shown in the following graphs, reported crimes on robbery from the person in a public location burglary of business property and robbery of vehicles presented a decrease in crime records, starting from March 2020. This trend matches with the adoption of the lockdown measures to prevent the spread of COVID-19.



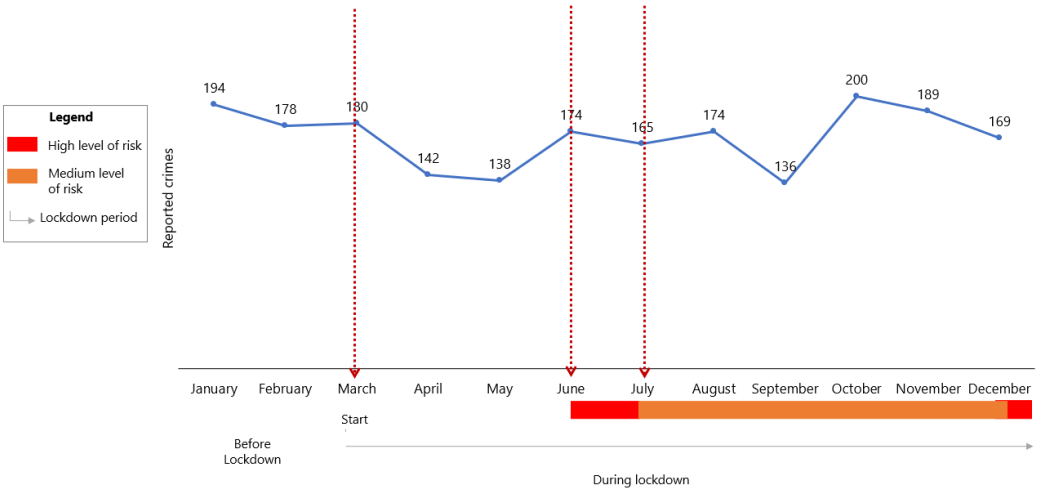
Reported crimes on robbery from the person in a public location decreased by 36% from March to July 2020. However, when mobility restrictions were less rigorous (July to November 2020), reports increased by 15%.

Regarding burglary of business property, from March to July 2020 reported crimes dropped by 37.5%. When restrictions became less severe (July to November 2020), the number of reports on burglary of business increased 28%.



Finally, from March to July 2020 reported crimes on robbery of vehicles decreased by -8%. When mobility restrictions were less rigorous (July to November 2020), reports on robbery of vehicle decreased dropped by 14.5%. This may be associated with the adoption of lockdown measures.

In all the crimes analyzed, variations in crime reporting could be associated to the opportunity factor, as mobility restrictions relaxed, opportunities for crime commission increased as well as crime reporting.



Graph 21. Reported crimes on robbery from the person in a public location, burglary of business property and robbery of vehicle in Iztapalapa during lockdown, reports in 2020

Burglary of business property

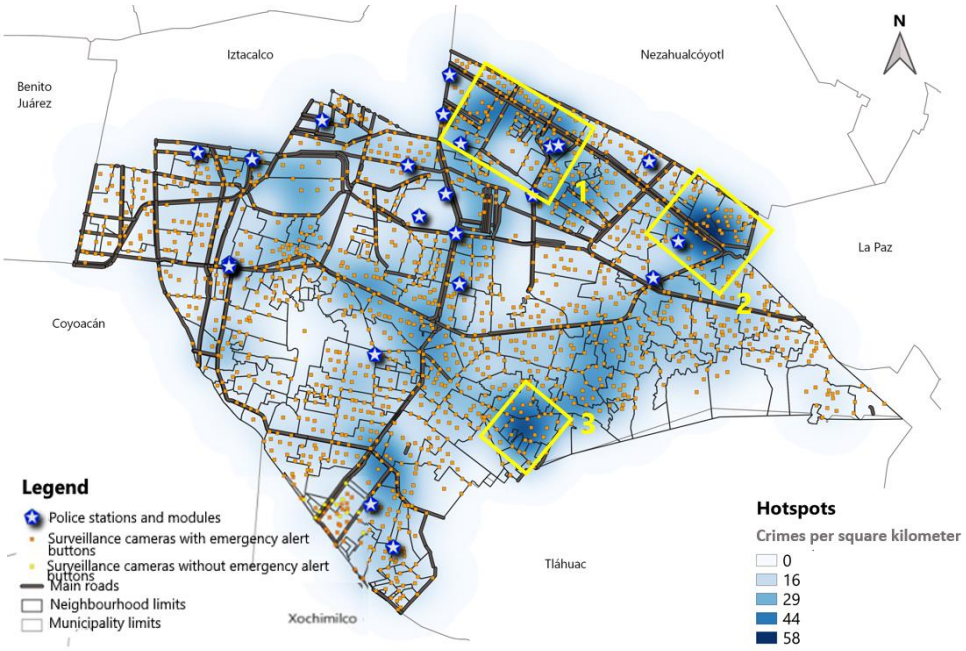
Spatial concentration of reported crimes on robbery to the person in a public location during 2020

During 2020, reported crimes on robbery from the person in a public location concentrated in three areas: tow at the east and one at the south of Iztapalapa. When analyzing these concentrations, the following was identified[131]:



[131] According to information provided by personnel of the Coordination of Planning and Crime Combat from the Mayor's Office of Iztapalapa during interviews conducted for this Assessment, 2020 and 2021.

- The three areas area located in the territorial boundaries with other municipalities in the State of Mexico (Nezahualcóyotl and Los Reyes la Paz), and with other Mayor Offices in Mexico City such as Tláhuac (at the south of Iztapalapa).
- A strong presence of crime inhibitors, such as police stations and surveillance camaras is identified in all the territory[132]. A higher presence is mostly distributed at the northern part of Iztapalapa.
- These three areas of crime spatial concentration could be associated with the dynamic of the territorial borders with other municipalities and Mayor Offices, as offenders may use these frontiers to avoid their persecution or scape from the authorities. Robbery is considered a common crime under the national legislation, which implies that its persecution is limited to the jurisdiction of the Mayor's Office of Iztapalapa.
- Public transport stations and highly transited avenues were identified as facilitators of this type of crime:

1) The crime concentration located at the northeast of the territory, near to the municipality of Nezahualcóyotl, coincides with the location of the Metrobus public station Tepalcates, as well as with the Highway Mexico-Puebla, both concentrate a high number of users.
2) Regarding the hotspot detected at the east, near to Los Reyes La Paz municipality, coincides with the Metrobus public stations Santa Martha and Acatitla, as well as with the Highway Mexico-Puebla and Calzada Ermita Iztapalapa, which cross Iztapalapa from east to west. Also, a penitentiary center (Santa Marta Acatitla) is located in this crime spatial concentration.
3) The hotspot identified at the south of the territory is localized in the neighborhood Desarrollo Urbano Quetzalcoatl, which presents high level of problematic alcohol consumption. In this hotspot some land illegally invaded is also located, such as Degollado, El Molino and Maguellera, which do not have access to public services.

[132] The Mayor's Office of Iztapalapa has installed 2,270 surveillance cameras, 1,605 of them have an emergency button and 495 cameras do not have an emergency button according to information from the Institute of Transparency, access to public information, personal data protection and accountability from Mexico City. Available at: http://www.infocdmx.org.mx/index.php/2-boletines/5567-dcs-089-17.html

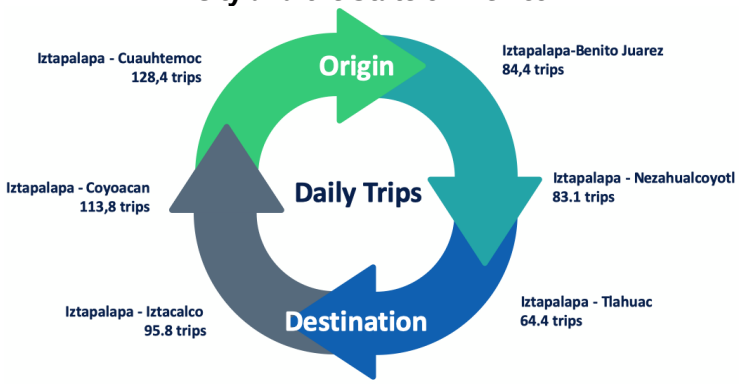
Robbery in public transport during COVID-19

Between January and February 2020, robbery and theft on public transportation remained low, rebounding in early March. From March to December 2020, reported crimes on robbery from the person in the public transport decreased by 26%, in-line with the lockdown measures adopted to prevent the spread of COVID-19.

Graph 24. Reported crimes on robbery from the person in the public transport during lockdown measures adopted to prevent COVID-19, 2020

Source: Own elaboration with figures from the Executive Secretariat of the National System for Public Security (SESNSP), 2020.



According to INEGI, Iztapalapa accounts for 1,938 public transport trips daily, without taking into consideration informal transportation such as illegal taxis and taxi-bikes that operate and contain a high demand in the most complex urban areas of the borough[134].

Figures from the Mexico City Ministry of Mobility (SEMOVI) indicated that insecurity perception is concentrated in the following six routes of public transport in Iztapalapa:

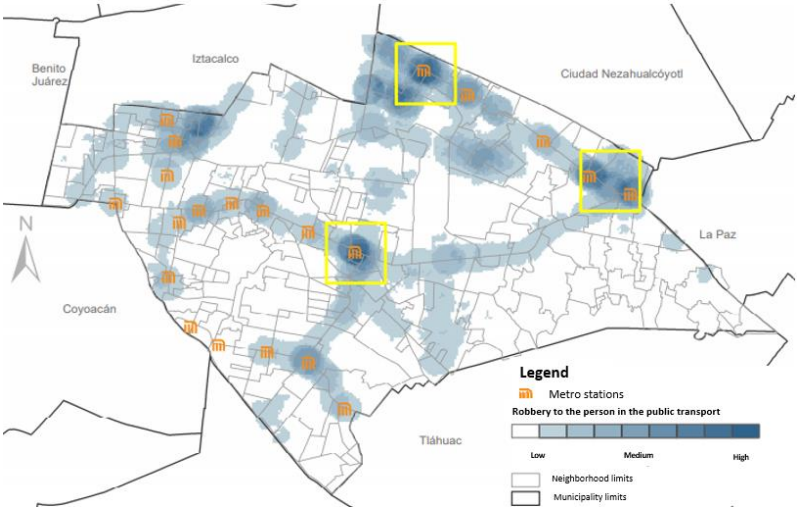
1. Calzada Ermita Iztapalapa
2. Periferico Canal de San Juan
3. Ermita Iztapalapa-Calzada Zaragoza
4. Calzada Zaragoza-Periferico Canal de San Juan
5. Francisco del Paso-Circuito Interior
6. Tepalcates-Ejercito Constitucionalista

Residents of Iztapalapa travel to other boroughs in Mexico City and other municipalities of the State of Mexico, mostly using the following public transport connections:

Figure 19. Daily trips made in the public transport from Iztapalapa to other points in Mexico City and the State of Mexico

Source: Own elaboration with figures from INEGI, Origin Destination Survey in the Metropolitan Area (ENOE), 2017.

Hotspots of robbery from the person in the public transport were identified in three zones:

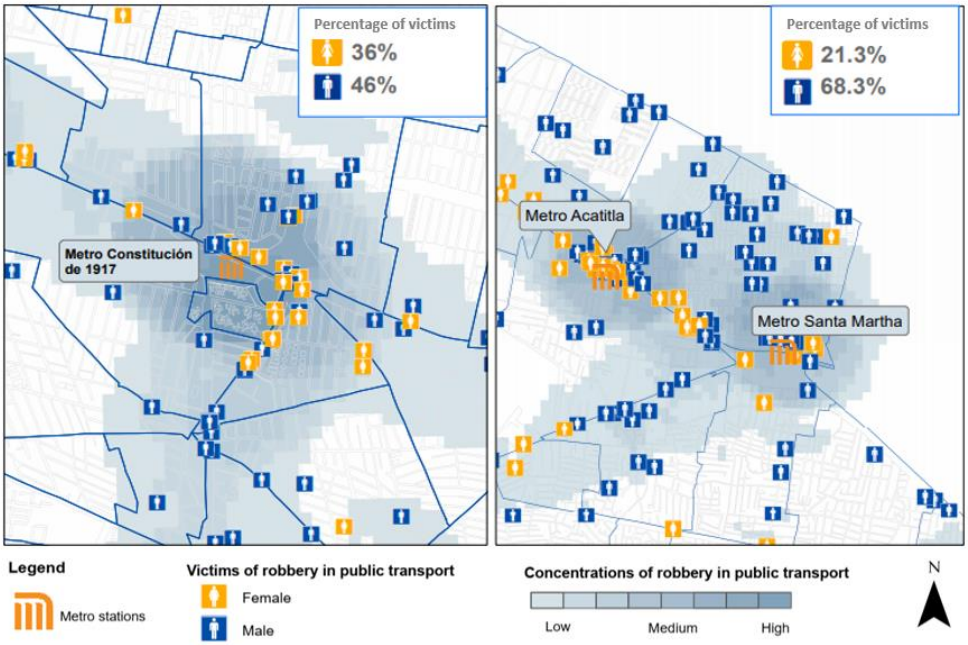


- **Zone 1**. In the center of Iztapalapa, nearby Constitucion de 1917 metro station (line 8), with a user count of 8,332,453 people during the first quarter of 2019[135].
- **Zone 2**. In the north of Iztapalapa nearby metro station Guelatao (line A), with a user count of 2,059,338 people.
- **Zone 3**. In the east of Iztapalapa, nearby Tepalcates metro station (line A), with a user count of 2,035,425 people.

[134] INEGI (2017). Origin Destination Survey in the Metropolitan Area. Available at: https://www.inegi.org.mx/programas/eod/2017/

[135] Mexico City Public Transport System (2019). *User affluence per metro line*. Available at: https://metro.cdmx.gob.mx/afluencia-de-estacion-por-linea-2019

Map 12 illustrates these three zones and, as indicated before, it can be observed that these concentrations concur with those hotspots of robbery from the person in a public location.

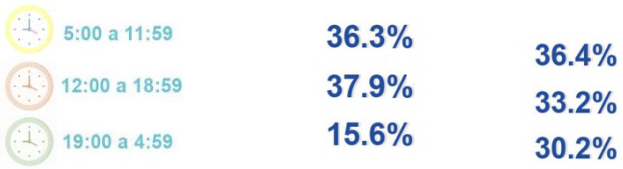


Map 12. Robbery in public transport in Iztapalapa, reports in 2015-2020

Source: Own elaboration with figures from Mexico City Government's open data, 2015 to 2020.

These metro stations also gather other means of public transportation stations, such as buses, taxis, moto-taxis, which can transport people to other points of strategic connection like the avenues Eje 6 and 8, Av. Las Torres, Calzada Ermita Iztapalapa and Anillo Periférico.

Map 13. Victims of robbery nearby metro station Constitucion de 1917 and Tepalcates in Iztapalapa, January to June 2020



Source: Own elaboration with figures from the Mexico City General Prosecutor's Office (FGJ), January to June 2020.

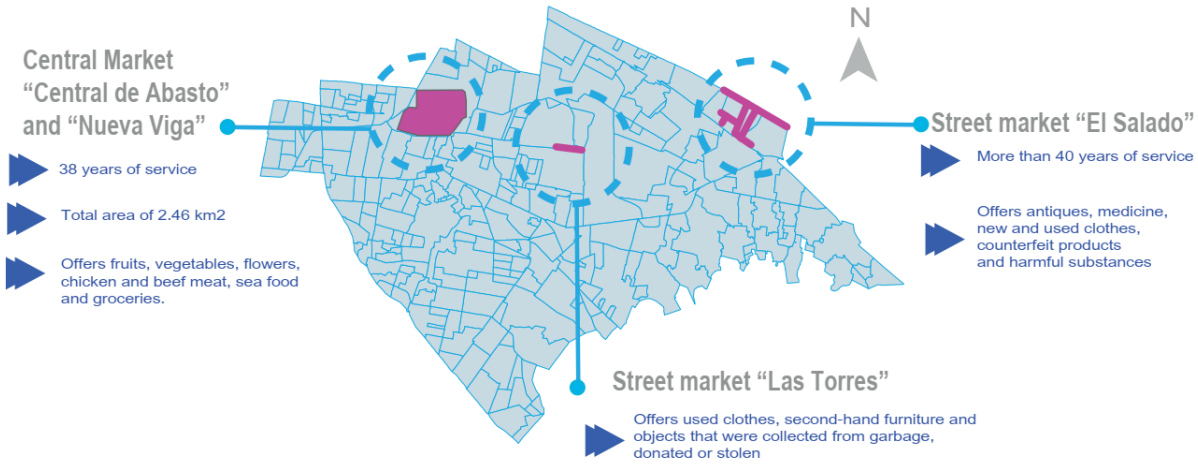
Robbery in public transport represents a threat to the residents of Iztapalapa, as most metro stations have become vulnerable places prone to the commission of robbery and assault. Men are the most targeted victims and this conduct is committed both with and without violence. In the Constitucion de 1917 metro station, 46% of crimes were perpetrated against men, while in metro station Tepalcates, men victims reached 68.3%.

The commission of this crime has a great opportunity factor for offenders due to the large number of potential victims, as well as the lack of guardians. This situation is even more severe for the victims due to their inability to leave the subway car or bus. The persistence of this crime increases the perception of insecurity within the Mayoralty's territory.

Most of the robberies from the person in public transport occur on Monday, Tuesday and Thursday mornings, when people travel to their job locations or academic institutions (05:00 to 11:59 hours). Victims are equally women and men (36.3% and 36.4%, respectively).

Figure 20. Robbery from the person in the public transport in Iztapalapa reported during 2019, by time of crime occurrence

Source: Own elaboration with figures from the Mayor's Office of Iztapalapa, 2019.



Regarding the perpetrator's characteristics, most offenders were young people between 15 and 30 years old that operate in groups of four. Their modus operandi is clear: once they enter the transport (bus or metro wagon), they divide into groups of two to capture both entrances, one guards the entrance, and another takes the exit door. The other two start intimidating the users with firearms (real or fake) and proceed to assault the passengers[136].

Robbery in street markets and markets

The regulation of the central market *Central de Abastos* and *Nueva y Vieja Viga* are under the supervision of the federal government and have private security. However, the area concentrates many crime reports, an aspect that threatens the security of businesspeople and of the population in general.

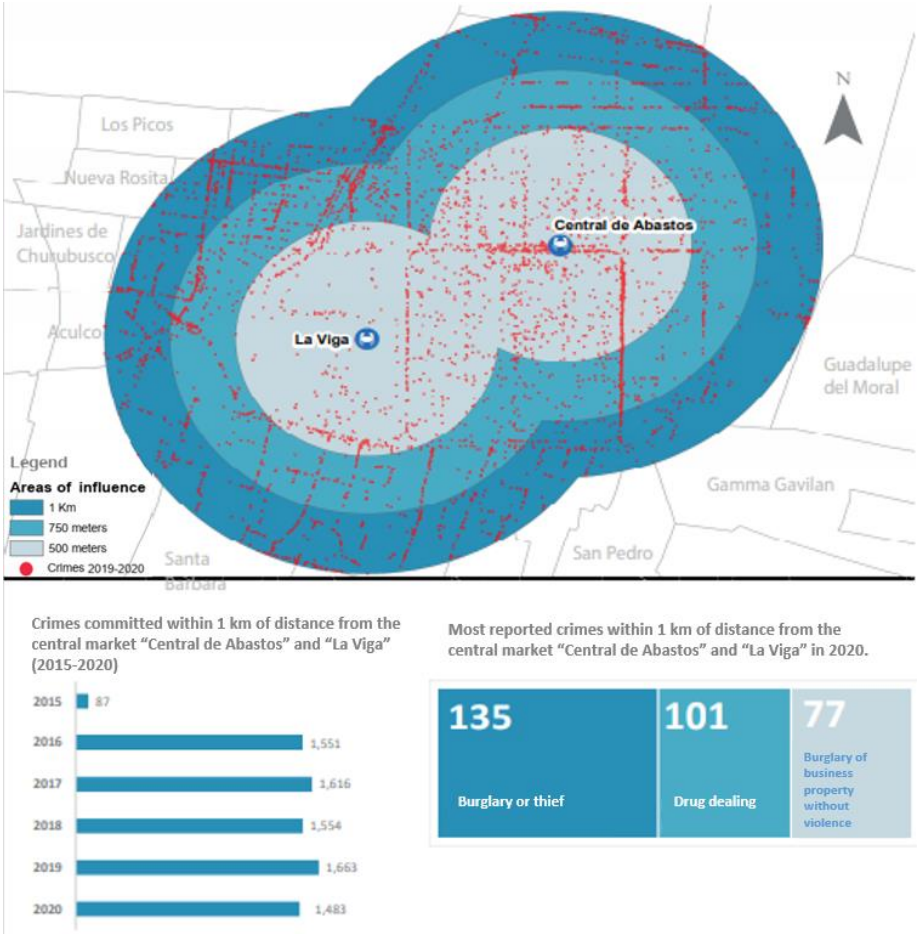
Map 14. Location of street markets and formal markets

Source: Own elaboration with figures from INEGI, Street markets and central markets, 2014.



The Market *Central de Abastos* represents one of the largest economic activities in Iztapalapa. The market gathers 90,000 workers, 13,800 workers that provide cargo services to buyers and an average of 370,000 visitors that carry out different transactions[137]. Its high concentration of economic activity remains as an opportunity factor for the commission of crimes.

Burglary of business property, robbery in the streets and robbery of objects are the most reported crimes committed against the businesspeople of the Central Market and against customers, who are common victims in the surroundings of the market. Apart from robberies and assaults, businesspeople and merchants are also victims of kidnapping and extortion. The last one has shown an increase since 2015 in public complaints by victims of extortion and intimidation. These actions were perpetrated by criminal organizations with the use of violence. Although these incidents are not reflected in official records, different media sources have reported them[138], which also suggests that there is an important number of unrecorded crimes.

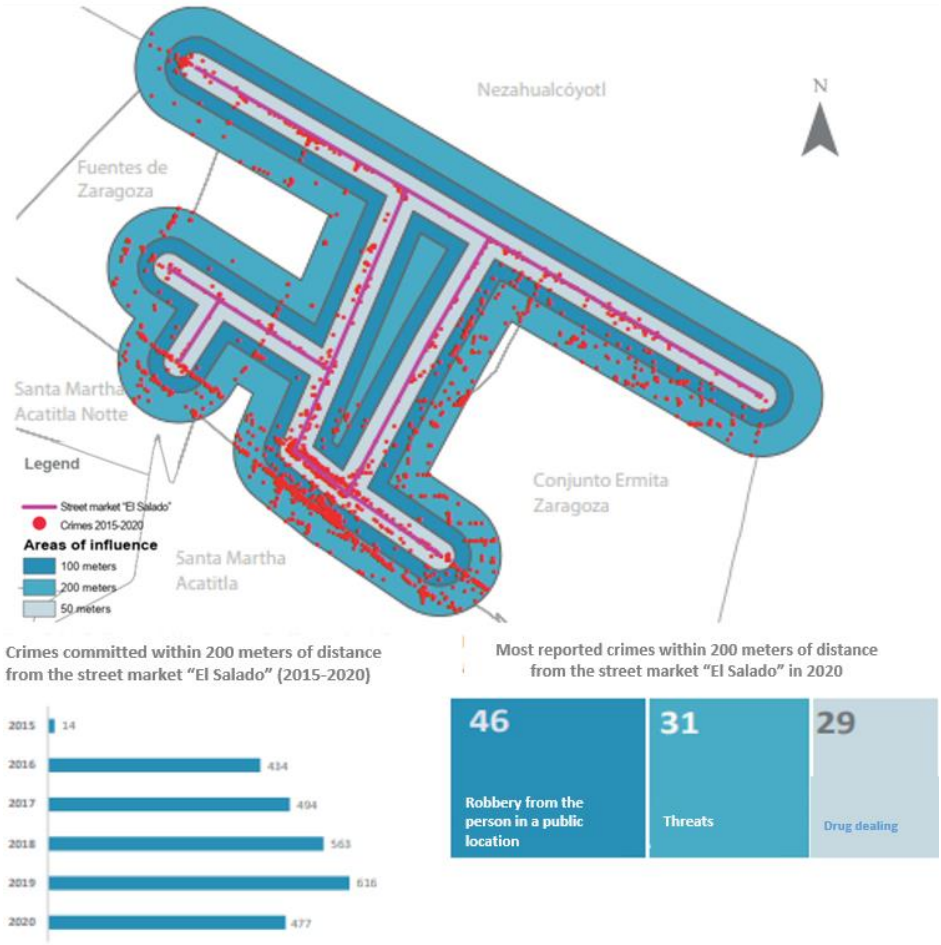
Map 15. Most reported crimes committed in *Central de Abastos* and fishmarket *La Nueva y Vieja Viga*

Source: Own elaboration with figures from the Mexico City General Prosecutor's Office (FGJ), 2015 to 2020.

Street market *El Salado*

This street market offers a diversity of products, such as counterfeit articles and presumably stolen ones such as: auto parts, household items, jewelry, clothes, perfumes, medicines, adulterated products, liquor, shoes, and cell phones.



"Trucks and cars arrive at dawn, full of merchandise wrapped in fabrics, which serve as placeholders for the products for sale. In this market there are dozens of stalls that sell alcohol on public roads".

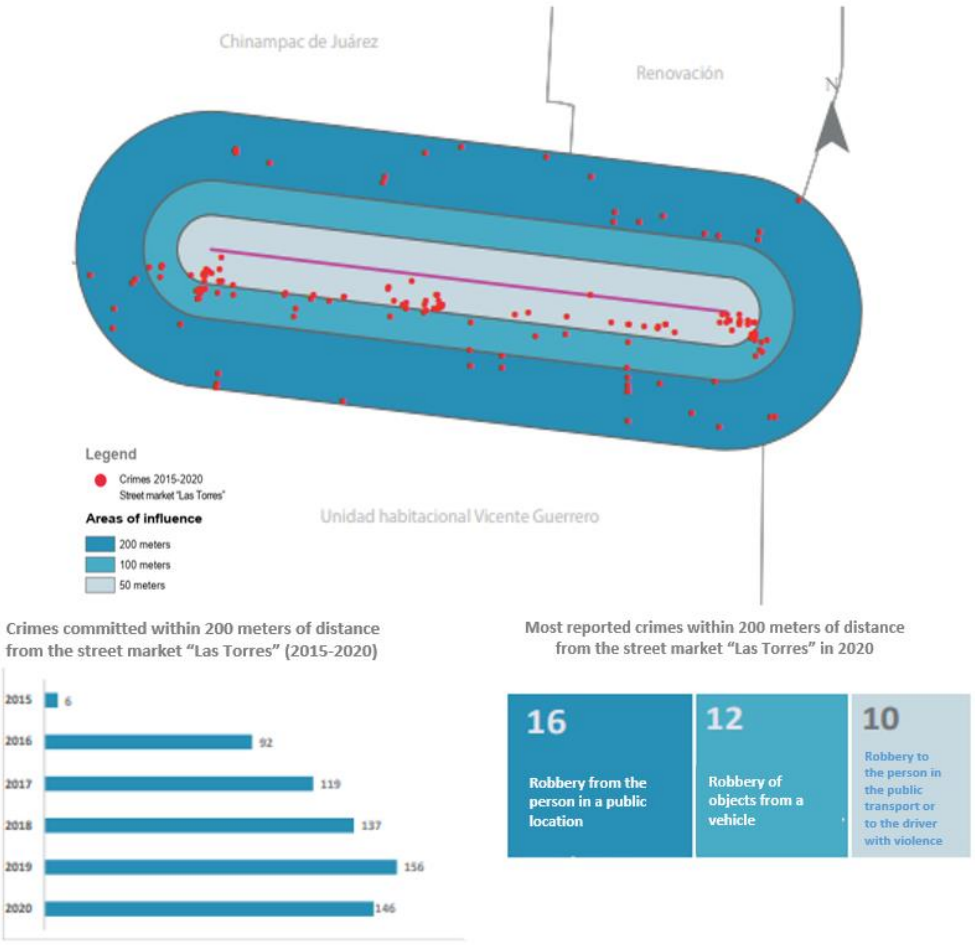
This market is located on the border between Iztapalapa and the municipality of Nezahualcoyotl in the State of Mexico. A zone that, according to some sellers and customers, is prone to crime

incidents and impunity due to the lack of coordination between law enforcement authorities and police officers from the two municipalities, decreasing the likelihood of capture of perpetrators[139].

From 2015 to 2020, the market reported 2,283 robbery crimes committed with firearms. Nearby, burglary of business without violence, robbery from the person in a public location and robbery from the person in public transport were the most frequently reported crimes.

Map 16. Crime reports in the Street market El Salado and its proximities.

Source: Own elaboration with figures from the Mexico City General Prosecutor's Office (FGJ), 2015-2020.



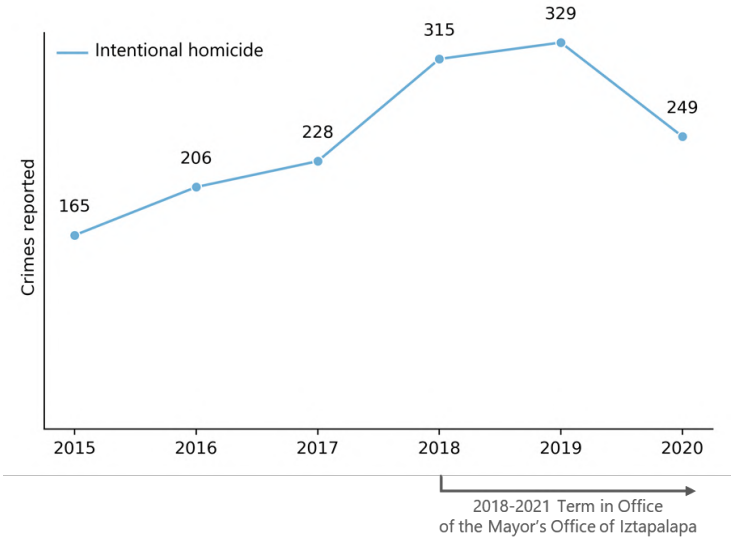
Street market *Las Torres*

The street market in Las Torres is one of the older markets in Iztapalapa, it covers 2 km and sells a range of items mainly collected from the garbage and from solid waste treatment plants. The market has caused different urban issues, such as the temporary closure of roads or avenues, as well as environmental problems related to the enormous amount of garbage that the market

[139] Torres, J., The Diary of Mexico (2017). *Flea market "El Salado" and its impunity*. Available at: https://www.diariodemexico.com/opera-tianguis-de-el-salado-en-la-impunidad-video.

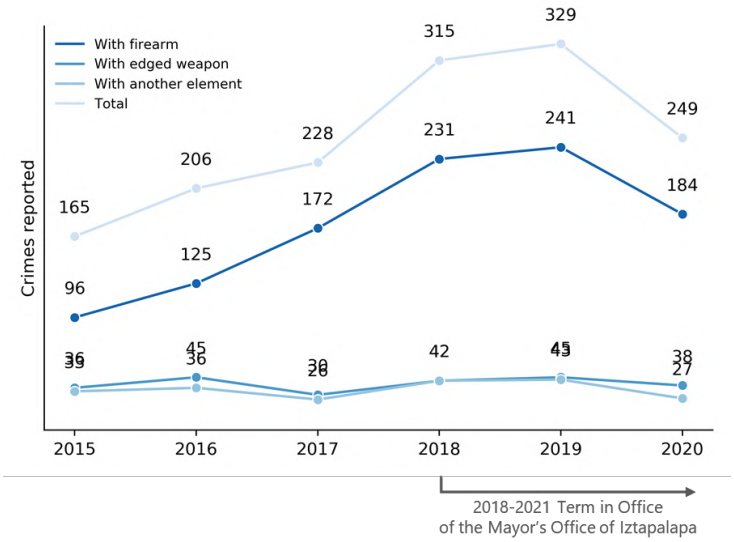
generates every week. Robbery from the person in a public location, as well as, theft of objects from a vehicle are the most reported crimes of the market and its surroundings.

Map 17. Crime reports in the street market Las Torres



Source: Own elaboration with figures from the Mexico City General Prosecutor's Office (FGJ), 2015 to 2020.

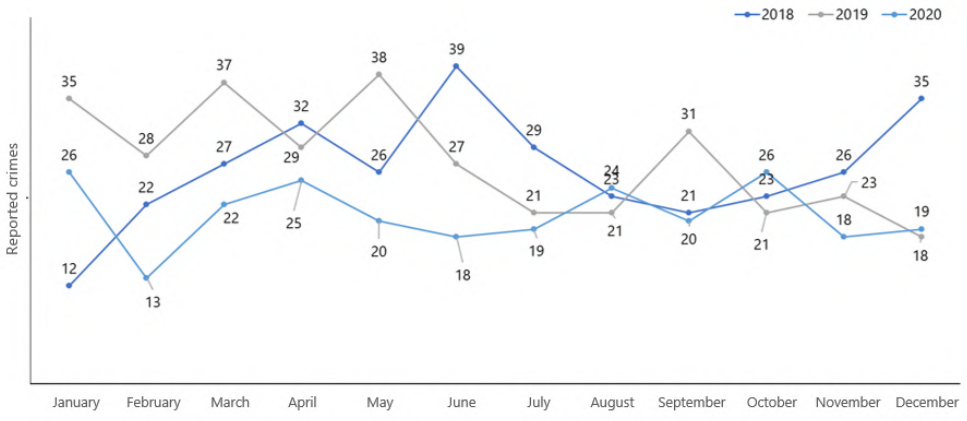
2.1.3.3. Intentional homicides



Between 2015 and 2020, intentional homicide reports increased by 51%. Reports of homicides committed with firearms incremented by 92% in the same period. However, when analyzing this trend between 2018 and 2020, period of the current administration of the Mayor's Office of Iztapalapa, it was identified that reported crimes on intentional homicide decreased by 21%. A similar decrease could be observed on registered homicides committed with firearms.

Graph 25. Reported crimes on intentional homicide in Iztapalapa, 2015-2020

Source: Own elaboration with figures from the Executive Secretariat of the National System for Public Security (SESNSP), 2015 to 2020.



Graph 26. Reported crimes on intentional homicide committed with firearms in Iztapalapa, 2015-2020

Source: Own elaboration with figures from the Executive Secretariat of the National System for Public Security (SESNSP), 2015 to 2020.

When comparing monthly crime records on intentional homicide, it can be observed that the tendency is diverse, although its seriousness relies on the fact that in average over 30 people are kill every month.

Graph 27. Reported crimes on intentional homicide in Iztapalapa, monthly 2018-2020

Source: Own elaboration with figures from the Executive Secretariat of the National System for Public Security (SESNSP), 2018 to 2020.

The SDG 16 seeks to reduce all types of violence, in an aim of promoting peaceful, inclusive and fair communities for all. Based on statistical and geographical information and the one collected during fieldwork, robbery in all its modalities was identified as the most frequent threat for Iztapalapa's inhabitants, affecting their property, livelihoods, businesses, and personal integrity, especially when the crime is committed with violence.

High levels of violence seriously affect social and economic development weakening the rule of law. As figures indicated, apart from economic damage, victims also report emotional and physical damage (see section 2.4. Risk analysis in 44 neighborhoods in Iztapalapa).

In the case of robbery in all its modalities, it is important to notice that there is a lack of disaggregated data regarding the type of weapons used by offenders in reported crimes committed with violence. Having disaggregated data from official statistics on the type of weapons used by offenders would be instrumental in acknowledging the percentage of cases with firearms involved, which might be useful in shedding light on local dynamics related to illicit arms trafficking. This type of information would be useful to understand and address the local dynamics regarding illicit arms trafficking and also to highlight the level of violence adopted by the offender as well as the psychological and physical impact on the victims.

There is also an absence of data disaggregated by sex, gender and age from both the offender and victims. Disaggregated data is fundamental to better understand criminal dynamics and conduct more specific analysis.

In the following pages, some recommendations are listed suggesting concrete actions that can be adopted by the Mayor's Office of Iztapalapa as well as possible deadlines, and potential partner institutions.

Robbery from a person in a public location
Data collection and strategies

Topic Short/ Medium/ Long term	Recommendations for the Mayor's Office	Recommendations for the population
Data collection and analysis	• Improve data collection and disaggregated information obtained from emergency calls registered by the Command and Control Center (C2 or Cuitlahuac Base), based on the International **Classification of Crimes for Statistical Purposes (ICCS)**[140].	• When making an emergency call provide information requested by the authorities. • Report antisocial behaviors and crimes that occur in their neighborhoods.
Data for action	• Based on available data, set an action plan to prevent robbery in those areas with higher crime concentration.	• Issue a report in case of being victim of crime.
Law enforcement operations and surveillance actions to diminish robbery	• Give maintenance to the surveillance equipment installed in the ***Corridors for safe and free women***[141] and their surrounding areas, as well as in the main traffic routes. • Implement emergency alert buttons and surveillance cameras in parks, sidewalks, and areas with high	• Report to the authorities about damages in the equipment located in the ***Corridors for safe and free women***. • Promote safety networks such as WhatsApp groups for communication among neighbors.

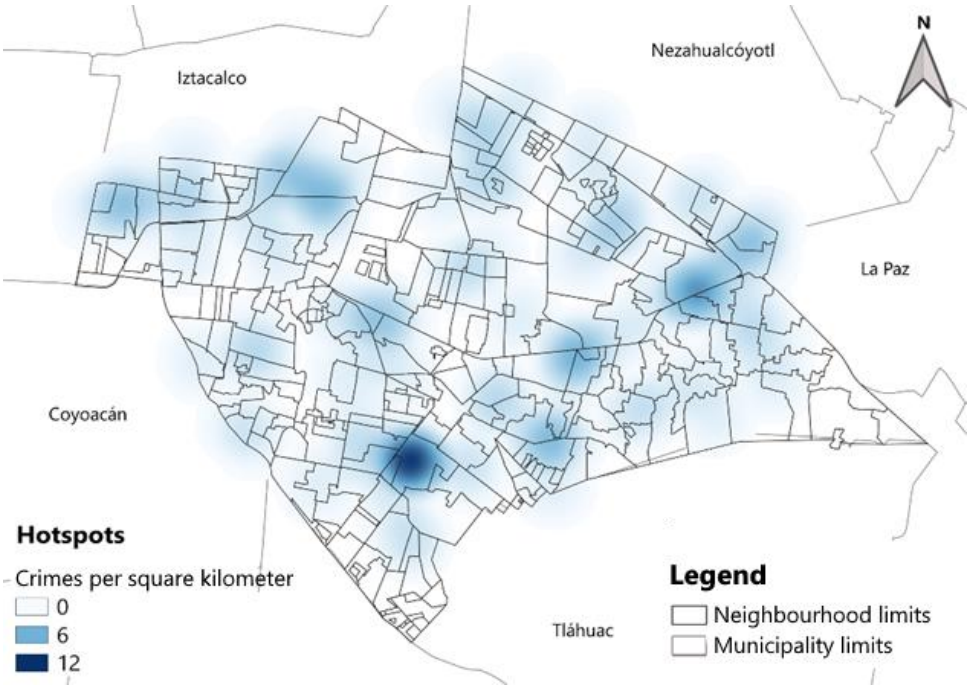
2.1.4 Illicit drug and arms markets in Iztapalapa

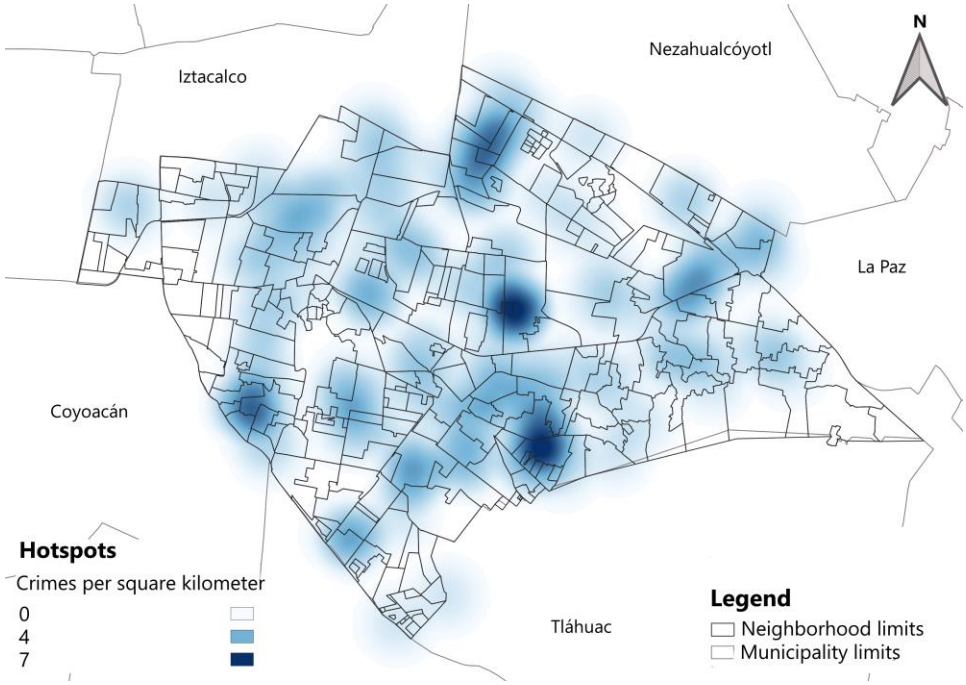
According to figures from SESNSP, between the years 2015 and 2019 the number of reported crimes on drug dealing[150] increased by 273%, while from 2018 to 2020 the reports increased by 9%.

Graph 28. Reported crimes on drug dealing in Iztapalapa, 2015-2020



Source: Own elaboration with figures from the Executive Secretariat of the National System for Public Security (SESNSP), 2015 to 2020.

Regarding the spatial concentration of this crime, and according to figures from the Mexico City General Prosecutor's Office, in 2016 a concentration in the southeast of Iztapalapa was identified, while in 2019, four concentrations of reported crimes on drug dealing were identified:



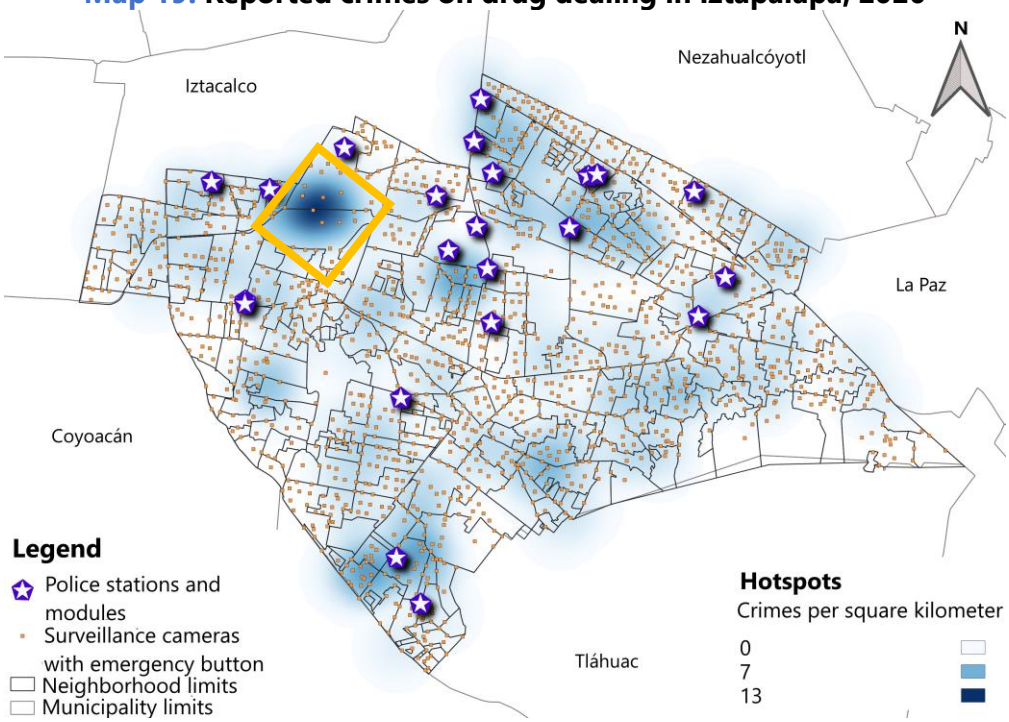
- To the north, near the Mexico-Puebla highway, Iztacalco and the Nezahualcoyotl municipality of the State of Mexico.
- To the center, nearby Recreational Park Santa Cruz Meyehualco.
- To the south, encompassing Desarrollo Urbano Quetzalcoatl and close by Tlahuac.
- To the west, near Coyoacan.

[150] Drug dealing: Subscribed to the General Health Law in the section referring to crimes, which is understood as the trade, sale, purchase, acquisition or alienation, possession or supply of any narcotic drug.

Map 18. Reported drug dealing in Iztapalapa, 2016 and 2019

2016

2019



Source: Own elaboration with figures from the Mexico City General Prosecutor's Office (FGJ), 2016 and 2019.

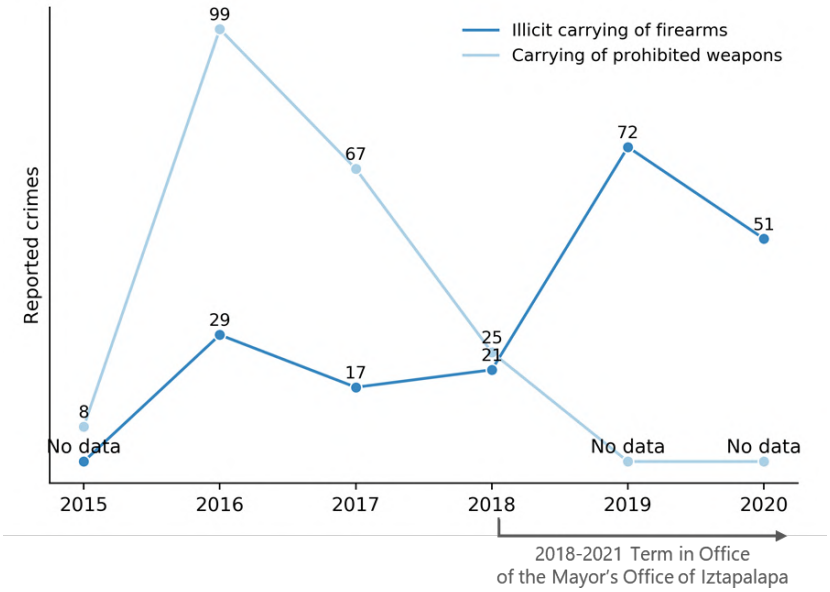
Spatial concentration of reported crimes on drug dealing during 2020

In 2020, the crimes reported for drug dealing were concentrated in the northwest of Iztapalapa, near Iztacalco. By analyzing the behavior of this crime, the following is identified:

1. The concentration was located in the Central Market. According to official information, more than 500 thousand visitors, on average, carry out daily transactions in the Central Market. It is estimated that the value of annual commercial operations is 9 billion dollars, second only to the Mexican Stock Exchange at the national level[151]. Additionally, the area has important road connections such as Mexico City's Anillo Periferico.
2. According to information provided by personnel from the Mayor's Office of Iztapalapa, there are high levels of alcohol and drug consumption in the area.
3. On the other hand, the area has high levels of social marginalization due to the concentration of population living in housing units such as Real del Moral and Tezontle.
4. The crime concentration is adjacent to Iztacalco, which could make it difficult to prosecute crime as it is a different territory from the command of the police elements operating in Iztapalapa.

Map 19. Reported crimes on drug dealing in Iztapalapa, 2020

Source: Own elaboration with figures from the Mexico City General Prosecutor's Office (FGJ), 2020.



[151] Central Market (2021). General information. Available at: https://ficeda.com.mx/index.php?id=ceda

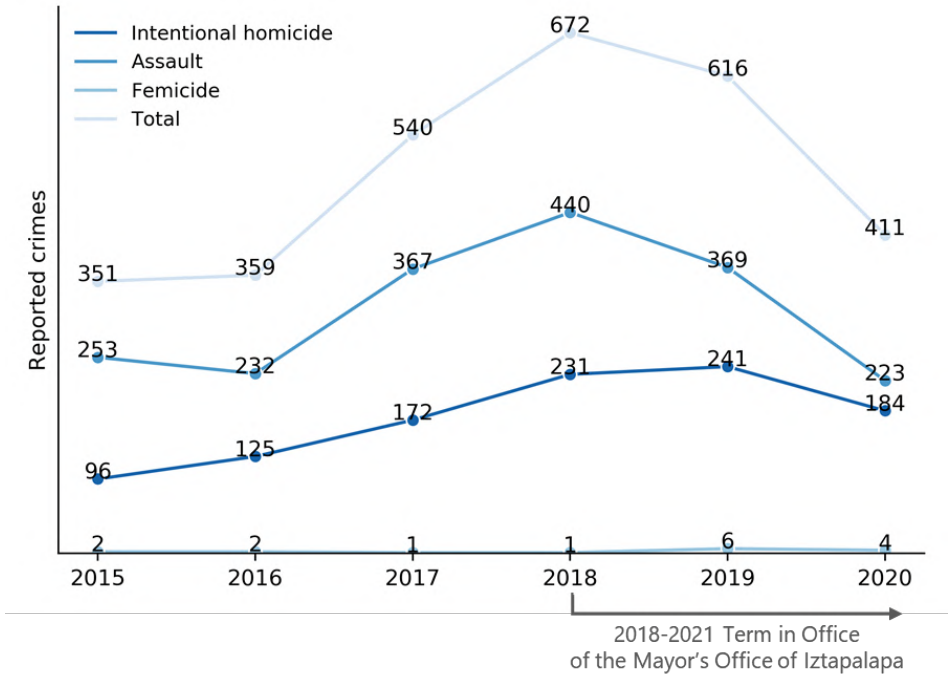
Reported crimes on illicit carrying of firearms

According to figures from SESNSP, between 2016 and 2020, reported crimes on illicit carrying of firearms increased by 76%[152]. Regarding reported crimes on carrying of forbidden weapons, there was a 75% decrease between 2016 and 2018[153].

Available data on these reported crimes does not specify the type of firearms that were seized by the authorities. There is also no statistical information regarding the value chain (origin, trafficking, selling) involved in illicit arms trafficking.

Graph 29. Reported crimes on illicit carrying of firearms and carrying of forbidden weapons, Iztapalapa 2015 to 2020

Source: Own elaboration with figures from the Mexico City General Prosecutor's Office (FGJ), 2015 to 2020.



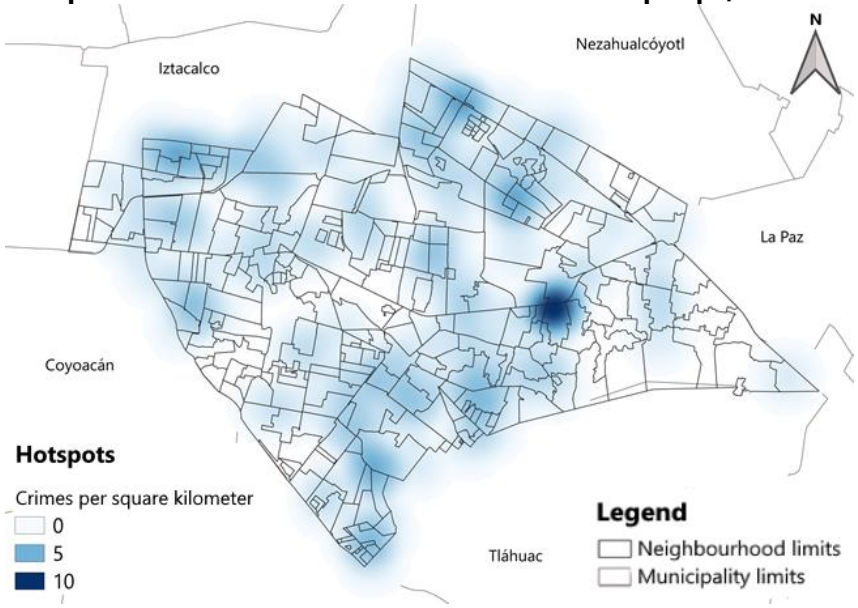
According to figures from SESNP, from 2015 to 2020, reports on crimes committed with firearms behaved in the following way:

- Intentional homicides committed with firearms increased by 92%
- Assaults committed with firearms decreased by 12%
- Femicides committed with firearms duplicated. In 2015, there were only 2 reports on femicide, and by 2020, 4 were reported.

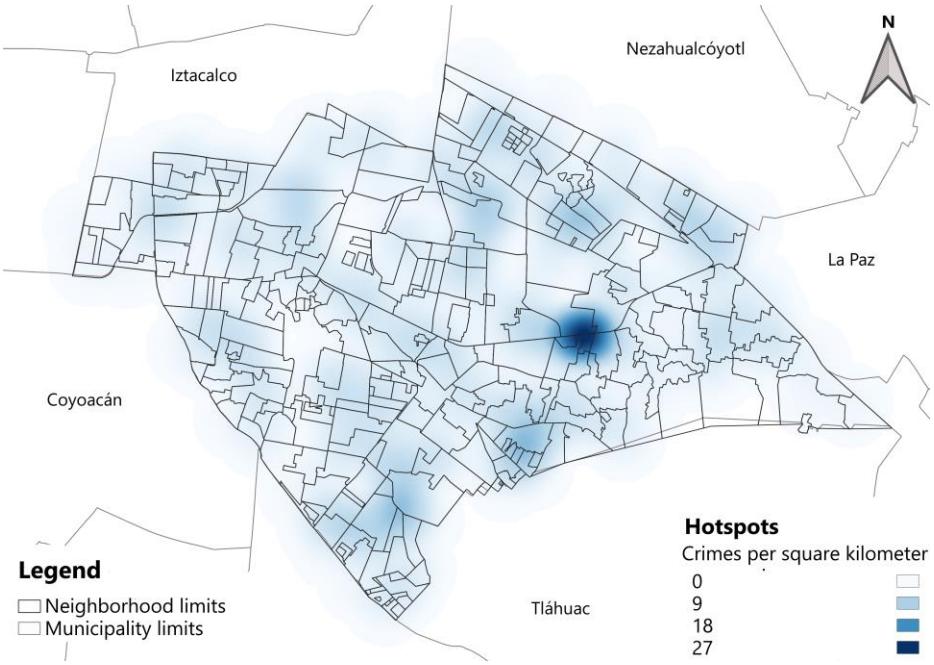
From 2018 to 2020, the term of office corresponding to the current administration of the Mayor's Office of Iztapalapa, a 39% decrease in reports of crimes committed with firearms was identified.

[152] It is important to note that for the analysis of this crime there was no data available for 2015, therefore its analysis begins in 2016.
[153] As for the crime of possession of forbidden weapons, there is no data available for 2015 or after 2018. Therefore, the analysis only considers data from 2016 to 2018.

Graph 30. Reported crimes committed with firearms in Iztapalapa, 2015 to 2020



Source: Own elaboration with figures from the Executive Secretariat of the National System for Public Security (SESNSP), 2015 to 2020.



Spatial concentration of reported crimes committed with firearms

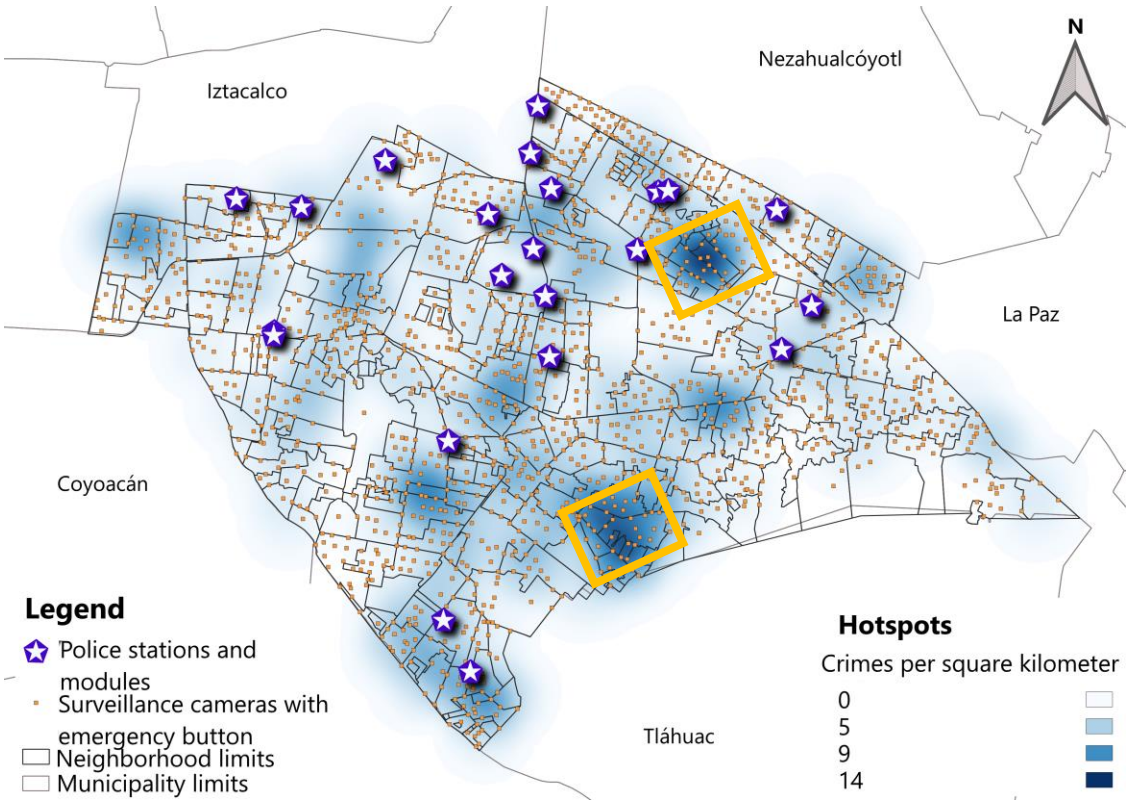
The spatial distribution of crimes committed with firearms was concentrated to the southeast of the borough in both 2016 and 2019.

Map 20. Reported crimes committed with firearms in Iztapalapa, 2016 and 2019.

2016

2019

Source: Own elaboration with figures from the Mexico City General Prosecutor's Office (FGJ), 2016 and 2019.



Spatial concentration of reported crimes committed with firearms that came to the attention of the authorities during 2020

In 2020, two concentrations are identified to the south and east of the demarcation of crimes committed with firearms, of which the following is observed[154]:

1. The area located to the east of Iztapalapa near the municipality of Nezahualcóyotl in the State of Mexico shows nearby police stations and modules. In this zone, a high index of social marginalization and population concentration is identified due to the Housing Units (Peñon Viejo, la Joya, Ejercito de Oriente Zona Peñon and Jose Maria Morelos y Pavon) located in the zone.
2. The area to the south of the Mayoralty's territory is on the border of Tláhuac and there is little presence of police stations. Both factors could have an impact on the inhibition of these crimes:
    - On the one hand, the pursuit of this crime in flagrancy could be made more difficult as it is a different territory from the police elements operating in Iztapalapa. On the other hand, the scarce presence of police stations could make it difficult to react quickly.
    - In this zone, the neighborhood Desarrollo Urbano Quetzalcoatl is located, which according to information provided by personnel of the Mayor's Office of Iztapalapa, presents problematic alcohol consumption by its inhabitants.
    - In this area there are also parcels of land that have been invaded, such as Degollado, El Molino and Maguellera, which lack service coverage.

[154] According to information provided by personnel of the Coordination of Planning and Crime Combat from the Mayor's Office of Iztapalapa during interviews conducted for this Assessment, 2020.

Map 21. Reported crimes committed with firearms in Iztapalapa, 2020

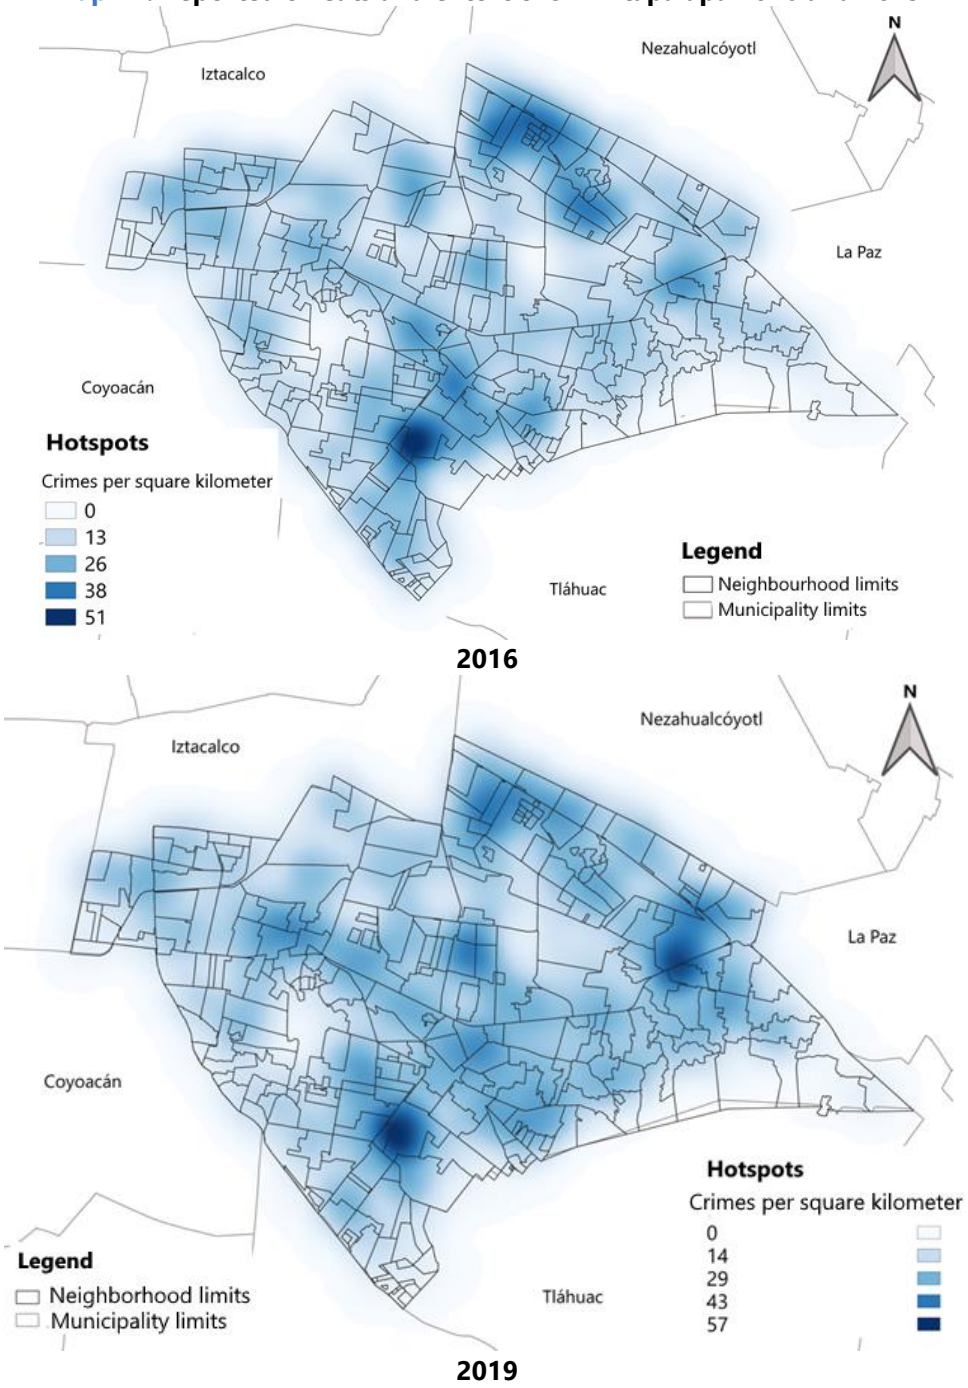
2.1.5 Organized criminal groups in Iztapalapa[155]

There is a presence of organized criminal groups in Iztapalapa that exercise different forms of control in some territories through threats and violence. Although the available statistical information is not conclusive in this regard, the testimonies gathered during the fieldwork indicate their existence.

According to SESNSP from 2015 to 2020 there was an increase in reports of the following crimes:

- 26.5% in threats
- 24% in extortions

Graph 31. Reported crimes on threats and extortions in Iztapalapa, 2015-2020



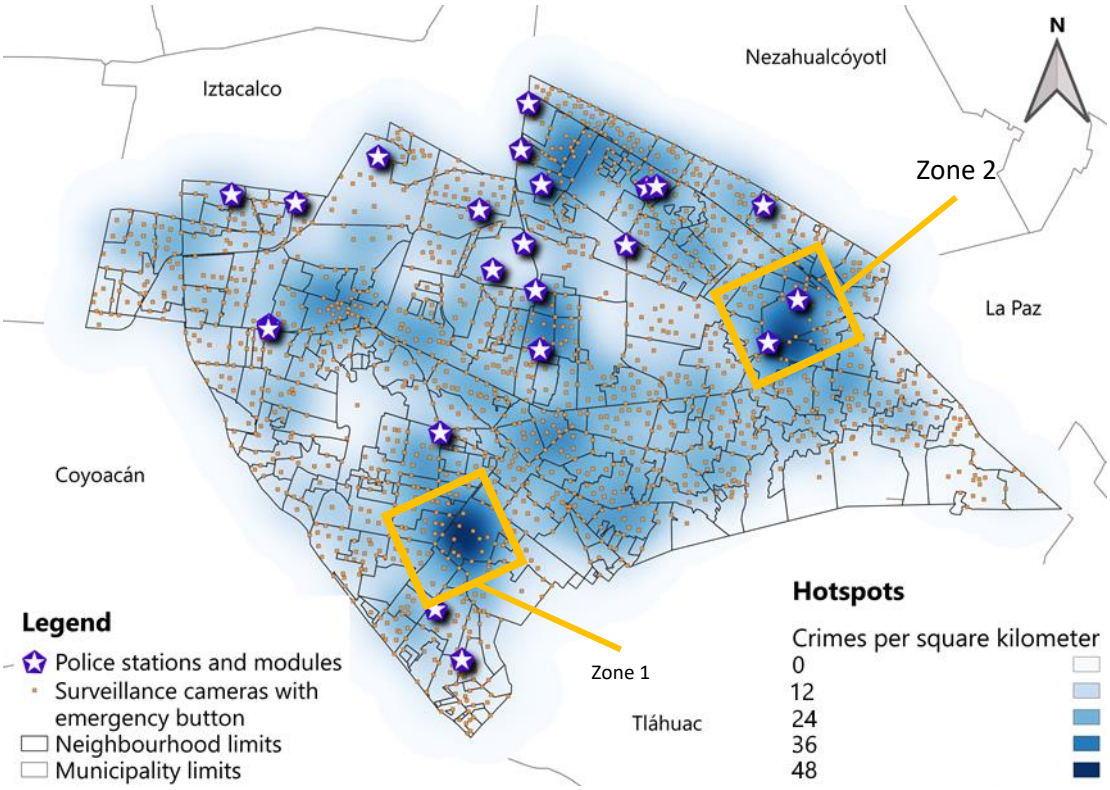
Source: Own elaboration with figures from the Executive Secretariat of the National System for Public Security (SESNSP), 2015 to 2020.

Spatial concentration of reported crimes on threats and extorsions

In 2016, concentrations of threats and extortion were identified in two zones, one to the north and another to the south of Iztapalapa. In 2019, two more were identified, one to the southeast and another to the east of the borough.

[155] The crime data presented here derived from the monthly statistics issued by the SESNSP, based on crime reported by the population and consequently filed as an investigative report at the Prosecutor's General offices. Currently, data estimated from the other part of the population that were victims of a crime and did not report it (dark figure) is calculated by the National Survey on Victimization and Perception of Public Security (ENVIPE). As such, the analysis in this section focuses only on reported crimes.

Map 22. Reported threats and extortions in Iztapalapa 2016 and 2019

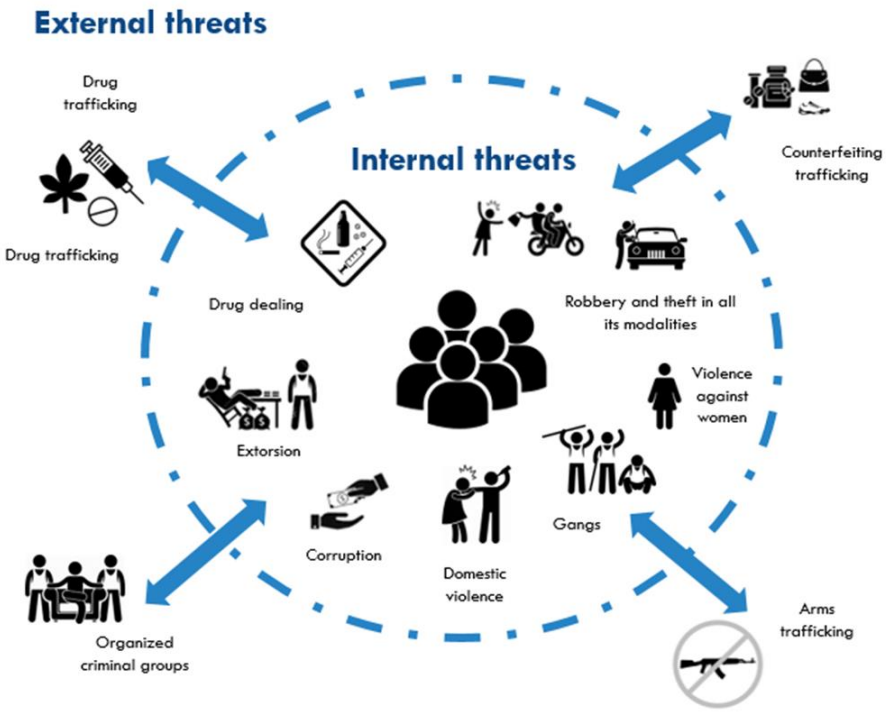


Source: Own elaboration with figures from the Mexico City General Prosecutor's Office (FGJ), 2016 and 2019.

Spatial concentration of reported crimes on threats and extorsions during 2020

In 2020, reported crimes on threats and extorsion were identified in two zones. The first zone to the southwest of the territory is close to the Men's Preventive Detention Center. The second one is located near the Mexico City Penitentiary in Santa Martha Acatitla, bordering the municipality

of Los Reyes La Paz, which implies a mobility connection with the State of Mexico, in addition to the location of the Santa Martha Acatitla bus stop, which allows for a high concentration of people.



Map 23. Reported crimes on threats and extortion in Iztapalapa, 2020

Source: Own elaboration with figures from the Mexico City General Prosecutor's Office (FGJ), 2020.

The presence of illicit markets in Iztapalapa, such as the illegal drug and arms markets, together with drug use, violent gangs and extortions, have become an important threat to the urban safety and good governance in Iztapalapa.

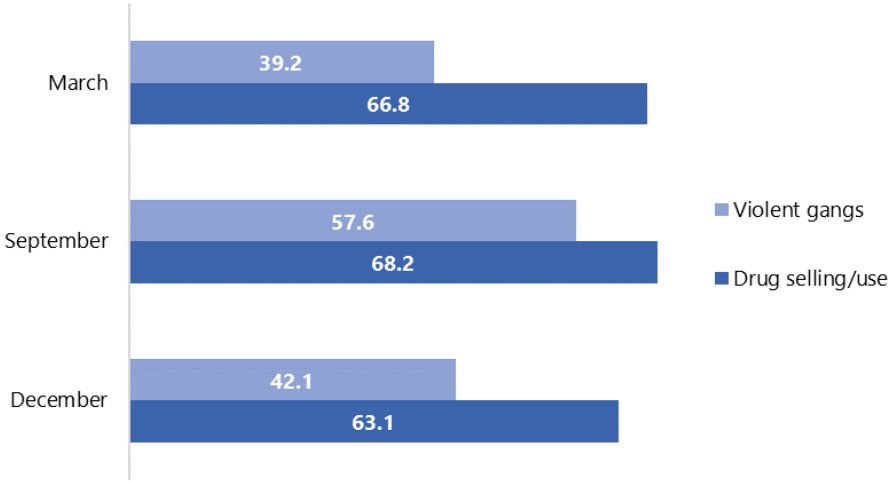


Figure 21. External threats to the Urban Safety Governance in Iztapalapa

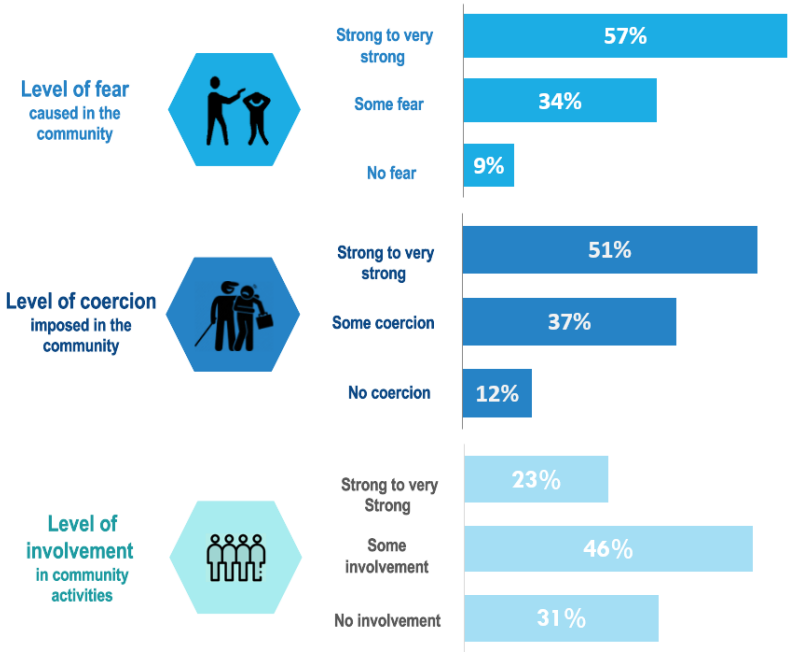
Source: Adaptation from the *Safety Governance Assessment Guide* and the qualitative analysis conducted by the Urban Safety Governance Assessment, 2020.

Finally, in addition to the various crimes already mentioned, the existence of antisocial behavior may increase the risk associated with external threats. The witnessing of antisocial behavior in Iztapalapa is not an isolated manifestation, according to ENSU, during the first quarter of 2020, 7 out of 10 persons had witnessed drug dealing and consumption in the borough, while 4 out of 10 had witnessed violent confrontations between gangs.

Graph 32. Percentage of antisocial behavior witnessing, 2020



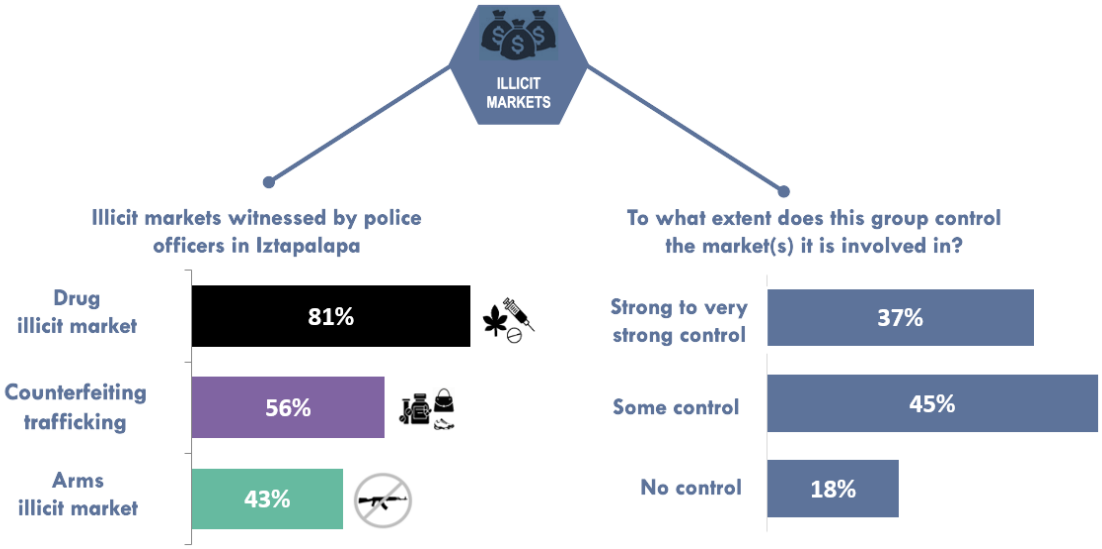
Source: Own elaboration with figures from INEGI, National Survey on Urban Public Security (ENSU), 2020.

Illegal Governance

The analysis of illegal governance is based on Campana and Varese's research on *Illegal Governance of Markets and Communities*[156] to learn on the levels of coercion, fear, and the involvement of criminal groups as reported by the police in Iztapalapa[157].

After surveying 1,261 police officers from the Mexico City Ministry of Public Safety and the Auxiliary Police of the Mayor's Office of Iztapalapa, more than half observed the frequent use of mechanisms such as fear and coercion in the community by criminal groups. Six out of every ten police officers stated that criminal groups exert a great deal of fear in the community, five out of ten considered that these criminal groups exert a strong level of coercion, and five out of ten police officers stated that criminal groups have some involvement in the activities of the community.

Figure 22. Police officers' witnessing of fear, coercion and involvement imposed by organized criminal groups in the community.



Source: Own elaboration with figures from the local survey on Illegal Governance, 2020.

As for illicit markets, the police identified that criminal groups exert the most control within illegal economies in the drug market (mainly marijuana, solvents and crack), followed by counterfeit products and finally the sale and distribution of firearms, in which an accelerated expansion has been observed in last 5 years (see section 2.1.4. Illicit drug and arms markets in Iztapalapa).
Regarding the control these groups have in those markets in which they are involved in, 45% of police officers perceived they have some control, followed by 37% that perceived their control as

[156] Campana, P., y Varese, F. (2018). *Organized Crime in the United Kingdom: Illegal Governance of Markets and Communities.* British Journal of Criminology, 58 (6), 1381-1400. Available at: https://doi.org/10.1093/bjc/azx078
[157] For this assessment, a *Survey on Illegal Governance* was conducted, targeting the police force deployed in Iztapalapa.

strong to very strong, and 18% that perceived that these groups do not have control over the markets in which they are involved.

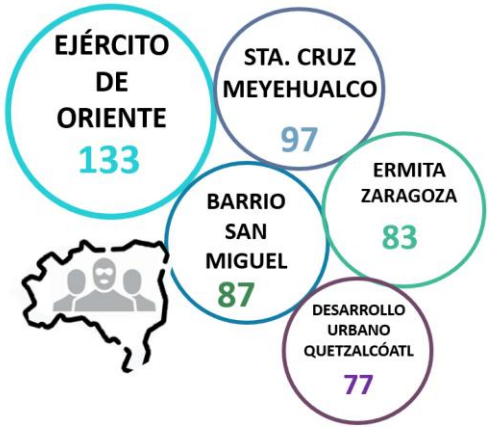


Figure 23. Witnessing of the control criminal groups exercise on different illicit markets in Iztapalapa

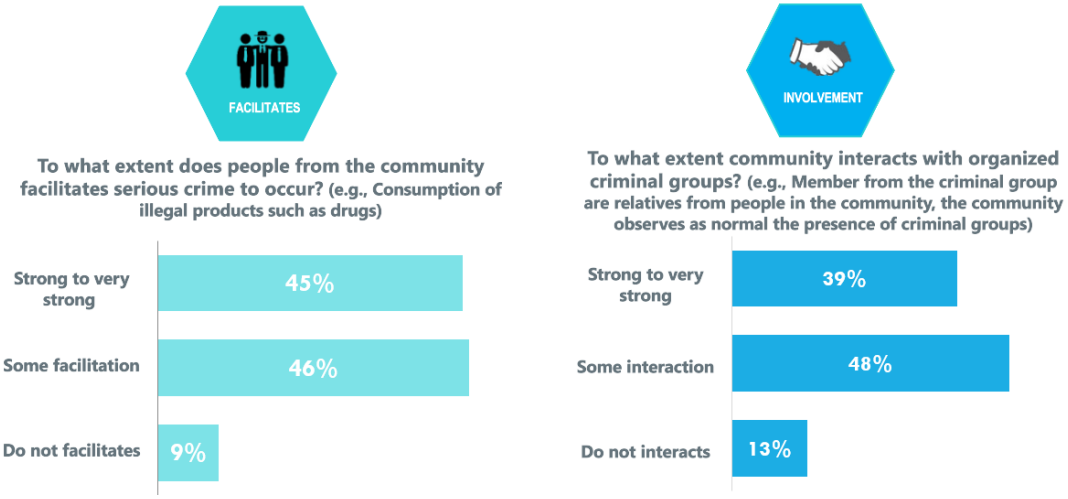
Source: Own elaboration with figures from the local survey on Illegal Governance, 2020.

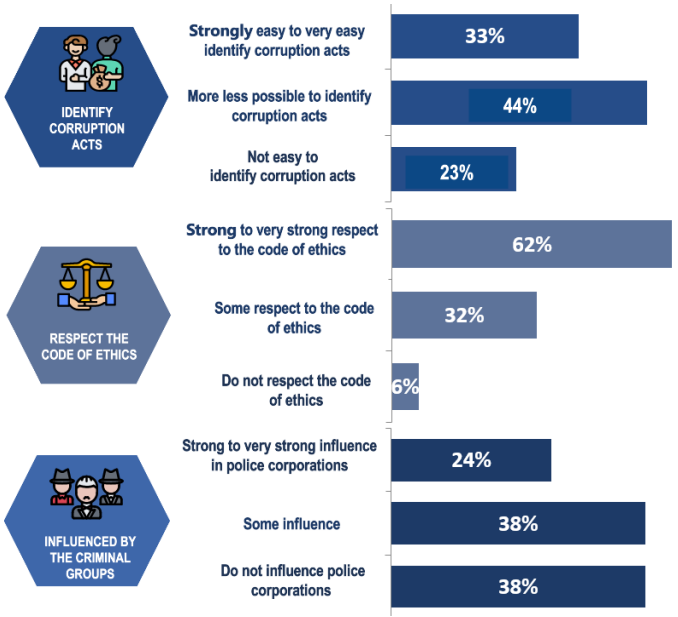
Organized criminal groups are concentrated in five neighborhoods in Iztapalapa, which are characterized by a high level of crime frequency (see section 2.1.3 Most reported crimes in Iztapalapa).

Figure 24. Neighborhood mentions with presence of criminal groups in Iztapalapa



Source: Own elaboration with figures from the local survey on Illegal Governance, 2020.

According to the police officer's perception regarding the role of the community in these illicit activities, 45% indicated that the community strongly facilitates serious crime to occur (such as the consumption of illegal products), while 46% mentioned that people from the community pose some facilitation from these crimes to occur.



Regarding the level of interaction that the community have with organized criminal groups, 48% of police officer's perceived that communities have some interaction with these organizations, followed by 39% that indicated a strong to very strong interaction between communities and criminal groups.

Figure 25. Communities' interaction with criminal groups in Iztapalapa

Source: Own elaboration with figures from the local survey on Illegal Governance, 2020.

Figure 26. Witnessing of illegal acts within the police force

Source: Own elaboration with figures from the local survey on Illegal Governance, 2020.[158]

[158] Not all questions were answered by the respondents. The results presented indicated the total of non-null responses divided by the number of respondents.

The presence of criminal groups and the criminal social dynamics derived from them are present in the Mayoralty's territory. There is a control of illicit markets (drugs, counterfeit products and weapons) by these groups. This should be a priority for the authorities to address, as its increase could result in territorial control based on coercion and extortion of the inhabitants.

Drugs and arms trafficking present a **major threat** to Iztapalapa's sustainable development. SDG 16 seeks to promote peaceful and inclusive societies, provide access to justice for all and build effective, accountable, and inclusive institutions at all levels. In specific, Target 16.4 aims to *significantly reduce illicit financial and arms flows, strengthen the recovery and return of stolen assets and combat all forms of organized crime* recognizes the importance of reducing illicit arms flows.

During field work, the presence of illicit markets and criminal groups were identified as one of the **most recurrent threats** for Iztapalapa's inhabitants. Extortion is one of the most frequent crimes affecting businesspeople and merchants located in street and central markets. (see section 2.4. Risk analysis in 44 neighborhoods in Iztapalapa).

Regarding drug trafficking, it is important to notice that there is a lack of information on drug production and use. As for arms trafficking, there is also a lack of information about the origin, trafficking and selling of firearms. This type of information would be useful to fully understand the value chains and criminal dynamics associated with these illicit markets.

Topic Short/ Medium/ Long term	Recommendations for the Mayor's Office	Recommendations for the population
Data collection and analysis	• Consider the International Classification of Crime for Statistical Purposes (ICCS) for the recording and disaggregation of all crimes committed and reported in Iztapalapa, in order to strengthen the methodology used by the Mexico City Government and the Mexican Government. • Continue establishing liaisons with the authorities in charge of security and law enforcement of the Mexican Government to follow the protocols for data collection and analysis for the fight against organized crime, from the ***program Dialogues to achieve peace and well-being in Iztapalapa program***[159]. • Continue establishing connections with the corresponding instance to know information about the illegal carrying of weapons and the prosecution of crimes related to illegal firearms in order to design	• When making an emergency call, provide the requested information to the authorities. • Report antisocial behaviors and crimes that occur in your neighborhoods. • Get involved in the activities offered by the ***Dialogues to achieve peace and well-being in Iztapalapa program*** and provide truthful information to the authorities. • If witnessed, report the carrying of firearms. • Promote a culture of lawfulness within the community.

[159] Mayor's Office of Iztapalapa (2021). Programs of the Mayor's Office of Iztapalapa. Available at: http://www.iztapalapa.cdmx.gob.mx/2alcaldia/Programas.html

Topic Short/ Medium/ Long term	Recommendations for the Mayor's Office	Recommendations for the population
	specific solutions to this problem. • Continue the inter-institutional coordination and participation in the Expanded Security Cabinet to strengthen activities related to the illicit drug market, such as drug production, trafficking and consumption, including: - Type of drug - Geolocation - Information disaggregated by sex, gender and age. • In addition to the actions carried out by the Ministry of Citizen Security (SSC) to apply analysis instruments and confidence tests to the elements assigned to its corporation and to the Auxiliary Police in order to identify risks associated with organized crime activities, it is suggested to apply UNODC's Local Survey on Illegal Governance at least once a year. • From UNODC's *Handbook on police accountability, oversight and integrity*[160],	

[160] UNODC (2010). Handbook on police accountability oversight and integrity. Available at: https://www.unodc.org/pdf/criminal_justice/Handbook_on_police_Accountability_Oversight_and_Integrity.pdf

Topic Short/ Medium/ Long term	Recommendations for the Mayor's Office	Recommendations for the population
	take up the above strategies for maintaining the institutional and personal integrity of those involved in police work. • Strengthen the anonymous reporting system to improve information related to organized criminal activities in Iztapalapa.	
Data for action	• Based on available data, set an action plan to prevent crimes associated with organized crimes and illegal governance in those areas with higher crime concentration.	• Issue a citizen complaint in case of being the victim of a crime. • Get involved in the strategies adopted by the Mayor's Office with the purpose of improving crime prevention in the territory.
Possible partner institutions	• Mexico City Government: Ministry of Citizen Security, C5-CDMX • Central Market and local markets • Civil Society Organizations: Citizen Council • UNODC	

Organized crime and illegal governance
Strategies

Topic Short/ Medium/ Long term	Recommendations for the Mayor's Office	Recommendations for the population
Inclusive and participatory strategies	• Continue the collaboration with the corresponding body of the Mexican Government in the ***Voluntary arms surrender program***[161].	• Participate in the ***Voluntary arms surrender program*** implemented by the authorities.
Inter-institutional coordination to prevent crime	• Continue the close collaboration with the authorities in charge of security and justice in the State of Mexico, expanding the network of ***Free and Safe Women's Corridors*** along the border shared by Iztapalapa and neighboring municipalities.	• Promote a culture of lawfulness within the community.
Law enforcement operations and surveillance actions	• Continue monitoring crime prevention actions in the 354 street markets of Iztapalapa, which originated from the ***Sectoral Security Cabinets*** and the ***Expanded Security Cabinet***. • Continue implementing the surveillance program inside the 354 street markets located in the borough, basing the actions on the information obtained from the ***Sectorial Security Cabinets*** and the ***Expanded Security Cabinet***.	• Report the presence of organized criminal groups forcing tenants to participate in illegal activities. • Report antisocial behaviors and crimes that occur in your neighborhoods.

	• Strengthen the capacities of the intelligence units and the criminal investigation units.	
Preventive programs	• Adopt the implementation of UNODC's international programs ***Line Up, Live Up*** and ***Strong Families*** that seek to improve socioemotional skills and positive parenting strategies.	• Get involved in the programs ***Line Up, Live Up*** and ***Strong Families***.
Possible partner institutions	• Mexico City Government: Ministry of Citizen Security, C5-CDMX • Central Market and local markets • Civil Society Organizations: Citizen Council • UNODC	

2.2 Problematic use of alcohol and drugs

Highlights

8 out of 10 inhabitants of Iztapalapa have witnessed alcohol consumption near their household	6 out of 10 inhabitants of Iztapalapa have witnessed drug use near their households	The onset of drug use usually occurs between the ages of 12 and 18
The average age of admission at the Iztapalapa Youth Integration Centers (CIJ) is 24 years old	Marijuana, inhalants and crack are the main drugs used by patients at the Iztapalapa Youth Integration Centers	In 2016, 634 deaths related to the use of drugs were registered

According to data from ENCODAT (2016-2017)[162], Mexico City is one of the entities with the highest percentage of alcohol consumption, above the national average with 37% of the population having consumed alcohol during the last year.

Mexico City is the entity with the highest number of drug-dependent patients, of which 74.6% are men and 21.2% are women[163]. Among the drugs most commonly used by drug-dependent patients are alcohol, marijuana and cocaine[164]. In Mexico City, 10.3% of the population between the ages of 12 and 65 have been users of illicit drugs, while 0.7% have been users of medical drugs[165]. Males show a consumption 4 times higher than that of females[166].

[162] National Institute Against Addictions (2017). Report ENCODAT 2016-2017. Available at: https://www.gob.mx/salud%7Cconadic/acciones-y-programas/encuesta-nacional-de-consumo-de-drogas-alcohol-y-tabaco-encodat-2016-2017-136758

[166] Ibid.

Likewise, problematic alcohol and drug consumption are one of the major public health issues affecting people at the local level. According to the National Survey on Urban Public Security (ENSU) [167], in March, September and December of 2020, in Iztapalapa:

8 out of 10 people witnessed alcohol consumption near their households

6 out of 10 people witnessed drug use near their households

Graph 33. Witnessing percentage of alcohol consumption and drug use, 2020

Source: Own elaboration with data obtained from INEGI, National Survey on Urban Public Security (ENSU), 2020.

"They arrive in unknown cars or sell drugs from their bicycles "

In Iztapalapa there is a high consumption of psychoactive substances among its youngest population[168]. Some of the main causes of drug consumption are family and school problems, as well as moods[169]. On average, the first use of illicit drugs is at 16 years old[170] and the main consumed substances are:

- Marijuana 67.7%
- Inhalants 14.2%

- Crack 9.4%[171]

In Iztapalapa, a professional service for drug and alcohol users is offered through three Youth Integration Centers (CIJ, as abbreviated in Spanish): West Iztapalapa CIJ, East Iztapalapa CIJ and the Iztapalapa Hospitalization Unit. Patients seeking care for drug use and alcohol consumption were on average 24 years old on their first admission[172].

These centers implement the preventive model "To live without addictions", which aims to contribute to the reduction of drug demand with the participation of the community through prevention and treatment programs for drug users[173]. In addition, there are six civil society treatment centers, which target population with problems related to alcoholism and drug addiction[174].

Map 24. Witnessing of alcohol consumption and drug use in Iztapalapa, and location of civil society attention centers specialized in the treatment of addictions

National Commission against addictions (2018). Available at: https://www.gob.mx/cms/uploads/attachment/file/377590/Directorio_actualizado_al_23_de_agosto_del_2018.pdf

In 2016, there were 634 deaths related to the consumption of substances harmful to health in Iztapalapa, with a death rate of 3.5 per 10,000 inhabitants[175]. 69% of the total deaths were men and 31% were women. The main cause of death was chronic obstructive pulmonary disease, followed by alcoholic liver disease and alcohol dependence syndrome. Problematic consumption of alcohol and drugs can also be a risk factor for increased violence and crime. According to ENVIPE in 2019, 21% of crimes in Mexico City were committed under the influence of substances harmful to health.

In order to *ensure healthy lives and promote well-being for all at all ages*, as outlined in SDG 3 "Good health and well-being", the following challenges related to data in Iztapalapa were identified:

- The collection of information at the local level on alcohol consumption and drug use
- The need for greater disaggregation of relevant data on alcohol consumption and drug use by age and sex
- Information associated with mortality associates to consumption of substances harmful to health
- Information on crimes committed under the influence of substances harmful to health at the local level

This is relevant to understand the risk of problematic consumption of alcohol and drugs at the local level since both are risk factors associated with violence and crime. During the field work for this Assessment this was one of the issues most identified by the participants from Iztapalapa (see section 2.4 Risk analysis in Iztapalapa).

The following are recommendations aimed at strengthening the public policies of the Mayor's Office of Iztapalapa, suggesting concrete actions, deadlines, ally institutions and the participation required from the population.

[175] Mexico City Ministry of Health (2016). Main mortality causes in Iztapalapa. Available at: http://data.salud.cdmx.gob.mx/portal/media/publicacion_mortalidad_1990_2016/Paginas/Iztapalapa.pdf

Alcohol and drug use

Data collection and strategies

2.3 Urban and environmental challenges in Iztapalapa

Highlights

There are over 168 irregular human settlements in Iztapalapa.

Irregular human settlements lack access to basic urban services.

In 2008, 208 neighborhoods had housing units.

Only 27% of the neighbourhoods have 24-hour water service.

Flooding is a frequent problem in the Mayoralty's territory.

5,832 rainwater harvesting systems (SCALL) have been installed in Iztapalapa.

The neighbourhood with the most SCALLs installed is *Desarrollo Urbano Quetzalcoatl*, with 334 units.

Garbage in the streets is one of the main problems in Iztapalapa.

In 2017, 219 illegal garbage dumps were identified, 78 of which were located within 500 metres of an irregular human settlement.

There is extensive public exposure to accumulated feces that can cause respiratory and gastrointestinal problems.

Public lighting is deficient in some neighborhoods.

Between 2019 and 2020, 130 Free and Safe Women's Corridors were built.

Perimeter blocks, alleys and pavements in poor condition are widespread characteristics of the urban layout found in some neighborhoods.

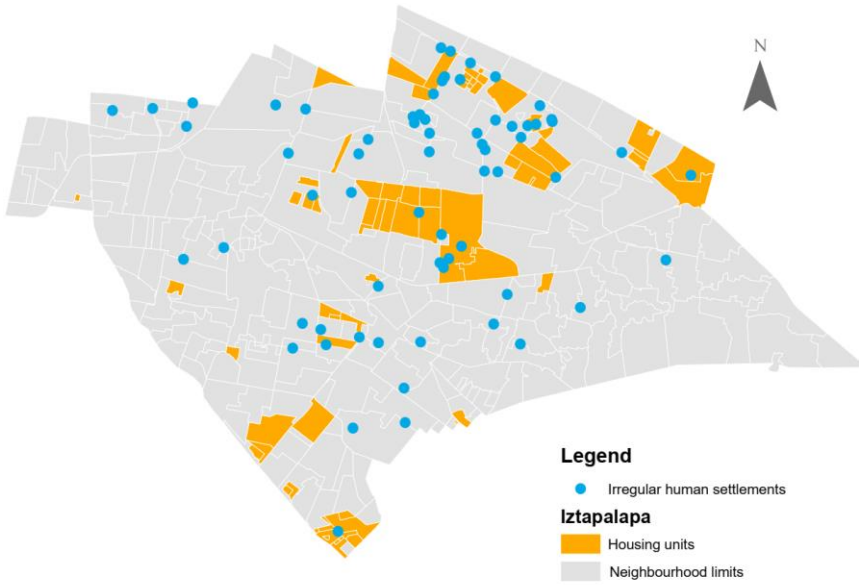
Urban and environmental problems are related to the perception of insecurity and crime incidence. According to the theory of crime patterns[178] and environmental criminology[179], physical characteristics of the environment could influence offender's decision to commit a crime, e.g., in dark or abandoned places there is a greater likelihood of criminal acts occurring due to a lack of law enforcement elements that protect the space in which a criminal act may be committed.

On the other hand, the theory of social disorganization also suggests that physically degraded spaces may influence the commission of crime at the local level due to a lack of social response, such as reporting damaged spaces. Iztapalapa faces the following challenges in terms of urban and environmental development:

- Deterioration and poor quality of housing
- Poor provision of basic urban services
- Health problems due to environmental neglect
- Deficiencies in infrastructure and equipment for urban mobility

2.3.1 Housing deterioration and quality

In Iztapalapa, there exists a rapid population growth and a lack of urban planning. In its territory, there are 168 irregular human settlements on urban and ecological conservation land[180]. These irregular settlements are characterized by precarious constructions made of sheet or cardboard that lack access to essential urban services. The improvisation of these dwellings and their lack of regularization has generated complex dynamics, such as high levels of overcrowding and insecurity.



Another housing challenge is multi-dwelling[181]. Most of these housing units present a problem of physical deterioration, poor access to services and a degraded urban image, due to its age of construction, which ranges from 10 to 20 years[182]. Another recurring problem are the cracks in different neighborhoods, which are classified in four levels of risk[183]:

- Level 1. Very slight cracks.
- Level 2. Cracks that affect the ground.
- Level 3. Cracks that damage the water and drainage network.
- Level 4. Cracks that cause subsidence and cause further damage to the territory.

[180] Official Gazette of Mexico City (2008). Mayor's Office Program of Urban Development in Iztapalapa. Available at: http://www.data.seduvi.cdmx.gob.mx/portal/docs/programmeas/PDDU_Gacetas/2015/PPDU-IZTAPALAPA.pdf
[181] Multi-dwelling units are residential structures that house multiple families.
[182] Ibid.
[183] The Mayor's Office of Iztapalapa, (2019). Bulletins of the Mayor's Office of Iztapalapa. Available at: http://www.iztapalapa.cdmx.gob.mx/boletines/?bol=985

The following map shows the location of the irregular human settlements and multi-dwelling units throughout the borough. As can be observed, there is a concentration of the latter in the central area.

Map 25. Location of irregular human settlements and multi-dwelling units

Source: Own elaboration with data obtained from the Mayor's Office Urban Development Program for Iztapalapa, 2008 and data from the National Electoral Institute (INE), 2019.

"The streets have become irregular settlements, generating closed streets and walkways, in addition to the progression in the invasion of buildings on the hill"

"The houses, they're made of sheet metal, there are guards, you can't go in, they sell drugs"

2.3.2 Essential urban services

The low quality and poor supply of essential urban services is another problem that the inhabitants of Iztapalapa face.

Water

In Iztapalapa, 27% of the neighborhoods receive water 24 hours a day, 23% receive it from pipes and 50% receive it according to a schedule, which means that it is unevenly distributed and scarce[184]. The inhabitants who receive it also deal with the low pressure in which water is sent which makes it difficult to carry out daily personal hygiene and household cleaning activities.

"The water is deficient, it arrives every 8 days and sometimes, when it arrives it is wormy and smelly, tamarind-like or tiger nut colored. When we have water, we use it for cleaning and try to recycle it"

Drainage

Flooding is frequent in the Mayoralty's territory, mainly caused by the deterioration and lack of maintenance of the drainage system, as well as the accumulation of garbage in the sewers. During the rainy season, irregular human settlements are the areas most prone to flooding.

" We have had 40-centimeter floods for more than 20 years now, and there are five blocks in which the water goes into the houses, sometimes rising up to a meter high "

"During rains, flooding occurs because there are holes. We look for ways to pass when it is flooded, we can't see while crossing, the floor is uneven and flooded. When they go to school, cars pass slowly yet splash all the water"

[184] The Mayor's Office of Iztapalapa (2019). Provisional Government Program 2019-2020. Available at: http://www.iztapalapa.cdmx.gob.mx/concejales/pdf/ProgPro19-20.pdf

2.3.3 Health problems due to environmental abandonment

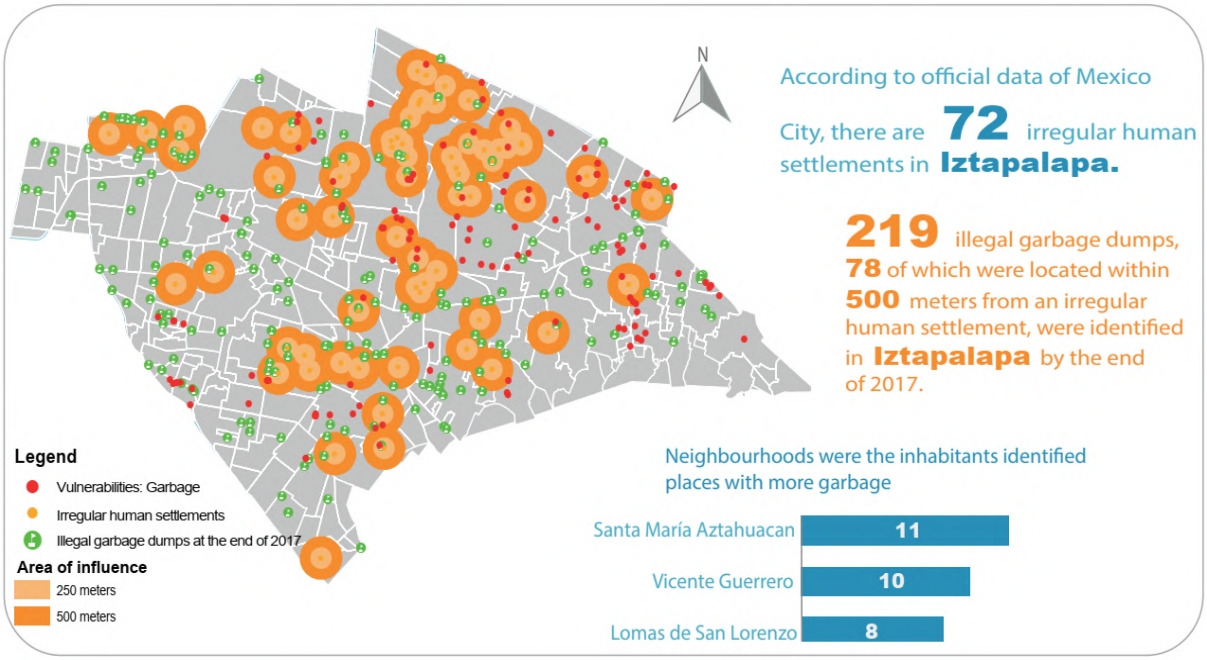
Garbage

Garbage on the streets is another problem in Iztapalapa. Illegal garbage dumps with all kinds of waste can be found. These are points of infection and represent a health hazard for due to the concentration of harmful fauna plus organic and inorganic waste. In relation to this problem, from field work the following aspects were observed:

a) The garbage collection service[185] does not collect garbage daily in all neighborhoods.
b) Irregular terrains make it difficult for garbage collectors to pick the garbage.
c) There is a lack of consciousness or civic culture related to garbage disposal, which causes many people to litter the streets.
d) Some garbage accumulated on the streets is caused by street vendors and informal commerce[186].

"After the truck passes by, people go and throw their garbage on the street, if we tell them something, it creates more problems. The people who work with garbage keep it all on the street, there is no hygiene".

"In places like Mexico Avenue, many dead dogs are thrown, there is an unpleasant smell, all of that contaminates and harms our health"



As can be seen in the following map, the sites with the highest concentration of garbage on the streets and illegal dumps in Iztapalapa are linked to irregular human settlements and areas with greater social vulnerability[187].

[185] According to the information provided by the staff from the Mayor's Office of Iztapalapa, garbage collection service is programmed daily to operate in all neighborhoods, 2020.
[186] Informal vendors and street markets do not meet the sanitary standards and the regulations in place such as the Special Regulation for the General Health Law on Health Control, Activities, Establishments, Products and Services. Ministry of Health (1988). Available at: http://www.salud.gob.mx/unidades/cdi/nom/compi/rlgsmcsaeps.html
[187] Social vulnerability is understood as the insecurity perceived by communities, families and induvial caused by a socio-economic event, as well as the strategies they use to face those challenges. CEPAL (2001). Social vulnerability and

Map 26. Garbage dumps and their relation to irregular human settlements

Source: Own elaboration obtained from Mexico City's open data, 2017; qualitative information obtained from field work, 2020.

Stray dogs

The large number of stray dogs in Iztapalapa is a public health risk due to the diseases they can transmit, such as the respiratory and gastrointestinal kind, as well as the formation of packs that represent a danger to the population. Unfortunately, there is no institution that accounts for, or deals with issue.

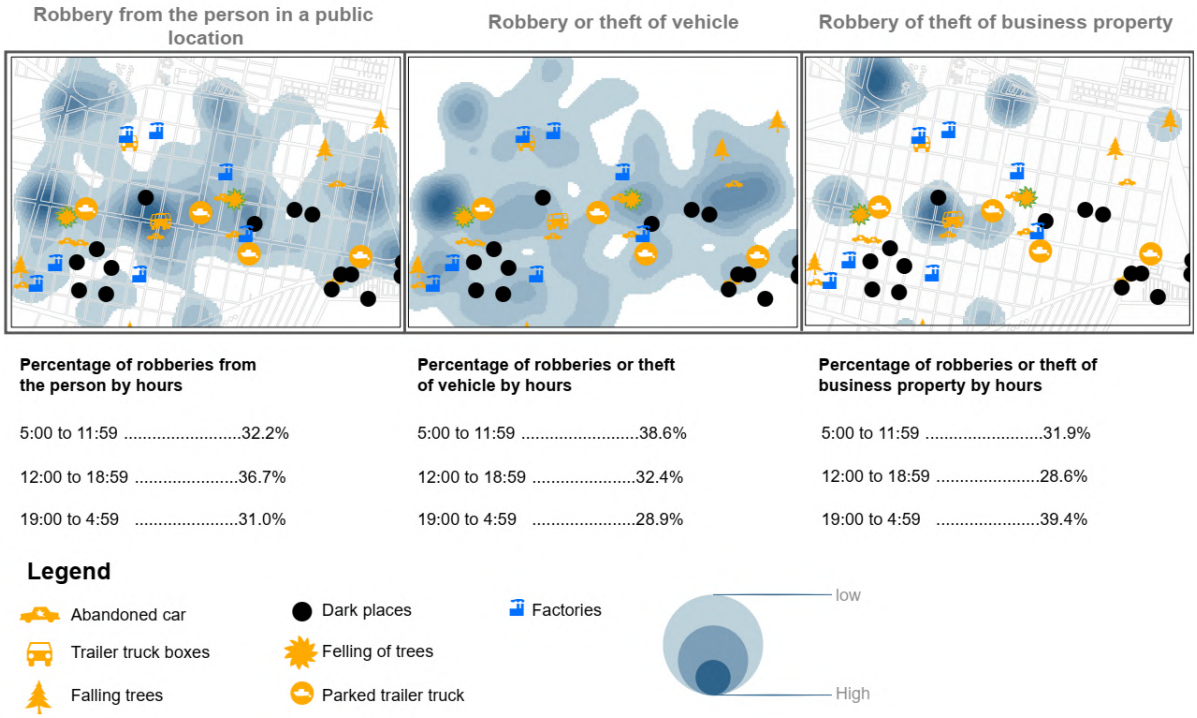
This was one of the main concerns that the inhabitants of Iztapalapa mentioned during field work for this Assessment. Measures need to be taken so that this problem does not aggravate urban deterioration and public health problems.

its challenges: a view from Latin America. Available at: https://repositorio.cepal.org/bitstream/handle/11362/4762/S0102116_es.pdf

"Then the dogs make a mess, they go and break the garbage bags. Nowadays, many neighbors carry their doggy bags (dog waste), but then they come from other neighborhoods with their dogs, they go on about their business here; there are even packs of up to 10 dogs".

"People take their dog out and don't pick up the feces, they have no education"

2.3.4 Deficiencies in infrastructure and equipment for urban mobility



Public lighting

The public lighting service is in poor condition due to poor maintenance and intentional damage provoked by people that seek to create conditions for committing crimes[188]. The following map shows crimes committed between 2016 and 2020 in the Leyes de Reforma 3rd section neighborhood: robbery from the person in a public location, robbery of vehicle and burglary of business property.

- Robbery from the person in a public location is the main crime recorded in the period analyzed, followed by robbery of vehicle. Both concentrate near dark places, where there were also abandoned cars and parked trailer trucks.
- In the case of burglary of business property, there was a concentration of these crimes in specific points of the neighborhood, and most of these were recorded at night, occurring without violence given that the businesses were closed.

[188] Brantingham, P. L. y Brantingham, P. J. (1984). Patterns in Crime. New York: Macmillan.

Map 27. Location of crimes and dark places in the Leyes de Reforma 3rd section neighborhood

Fuente: Own elaboration with data from the Executive Secretariat of the National System of Public Security (SESNSP) from 2016 to 2020, Mexico City's open data, 2017; qualitative information collected during field work, 2020.

"The lack of public lighting generates vulnerability and insecurity, sometimes only the neighbors' lights are on"

Mobility

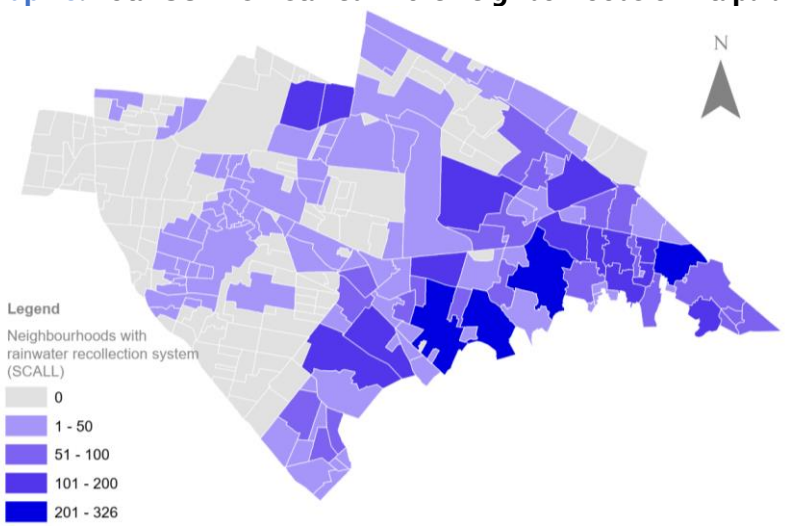
Pedestrian or vehicular mobility is complex due to the lack of a proper urban layout development for the neighborhoods. They have very narrow streets and the pavement is in poor condition, either narrow or non-existent. As for the neighborhoods located on hills or irregular human settlements, traffic is even more difficult in the alleys or perimeter blocks that predominate, especially in the multi-dwelling units. Difficult access is not only a problem for the inhabitants, but also for emergency services.

"The multi-dwelling unit only has enclosures that are narrow and not very well lit, so you can only enter and leave the unit by walking. In the alleyways, there are people that mug and get high"

"The neighborhood has many enclosures, it is a maze, and also has badly parked cars that make passage difficult and dangerous"

The Mayor's Office initiatives to address urban and environmental problems

The Mayor's Office has implemented two specific actions to address water shortages, flooding and public lighting:

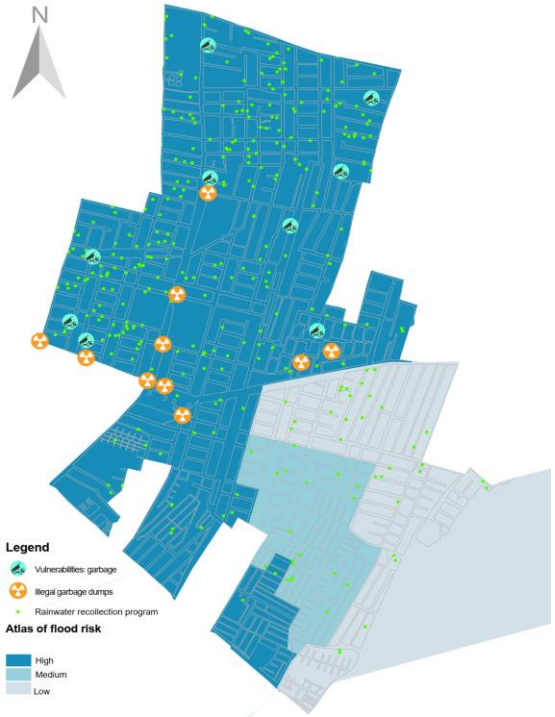


1) Regarding water shortages and flooding, the Mayor's Office has installed Rainwater Collection Systems (SCALLs, as abbreviated in Spanish)[189], hoping that in the future they will be able to reduce the risk of flooding. All the systems implemented correspond to the *Rainwater Harvesting Program*, which has the following goals:

   - Reduce the flow of rainwater that might saturate the drainage system, already in poor condition, or obstructed by garbage.
   - Facilitate access to water services.
   - Avoid the over-exploitation of the aquifer.

As of 2019, 5,832 SCALLs were installed in 100 neighborhoods and 13 original towns. The following map shows those beneficiary neighborhoods.

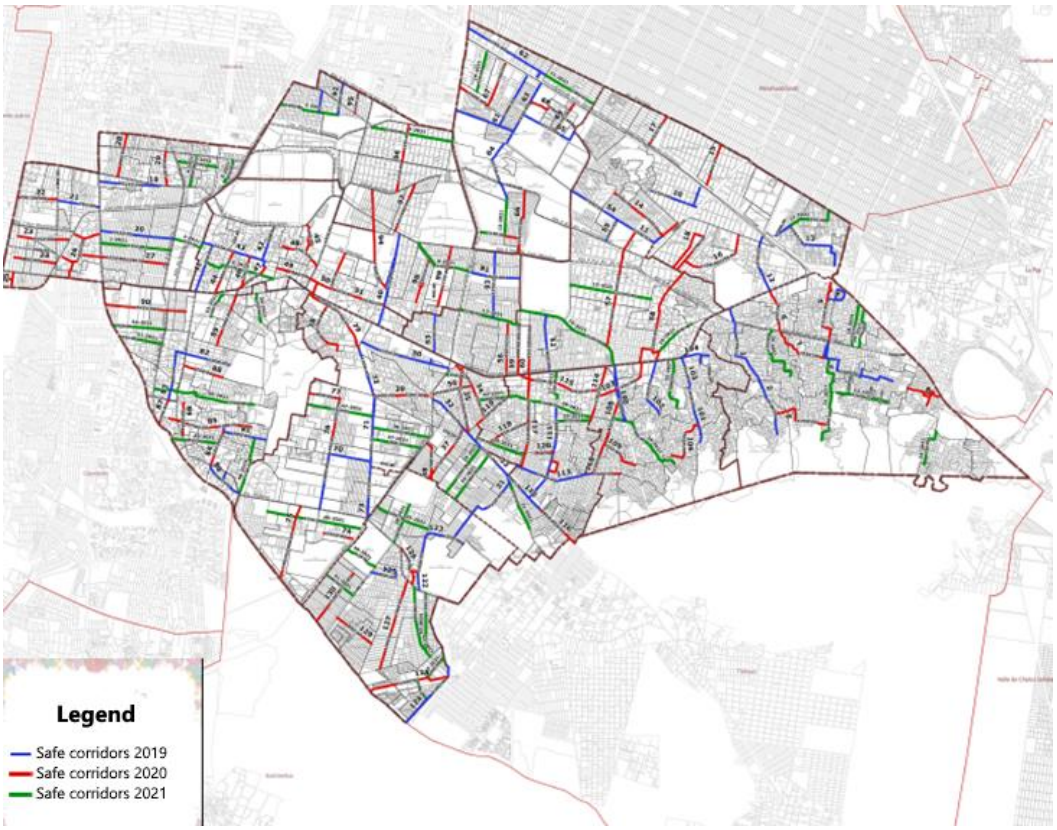
[189] Ministry of Environment (2021). Registration process to the Rainwater Collection Systems program. Available at: https://www.sedema.cdmx.gob.mx/servicios/servicio/programa-de-sistemas-de-captacion-de-agua-de-lluvia-en-viviendas-de-la-ciudad-de-mexico



Map 28. Total SCALLs installed in the neighborhoods of Iztapalapa

Source: Own elaboration with data from the Ministry of Risk Management and Civil protection of Mexico City, 2019 and the Ministry of Environment, 2020.

2) The Desarrollo Urbano Quetzalcoatl neighborhood presents risks of flooding due to the high accumulation of garbage on the streets and illegal dumps, which obstruct the drainage. As part of the *Rainwater Harvesting Program*, 334 SCALLs were installed in this neighborhood. These are meant to prevent the saturation of the drainage system by reducing the amount of rainwater.



Map 29. Risk of flooding and beneficiaries of the Rainwater Harvesting Program

Source: Own elaboration obtained from the Mexico City Open Data, the Ministry of Integral Risk Management and Civil Protection, 2019 and the Ministry of Environment, 2020.

3) Regarding public lighting, as mentioned previously, the Mayor's Office is implementing Free and Safe Women's Corridors, which aim for the comprehensive intervention of main roads in each of the neighborhoods of the borough[190]. Between 2019 and 2020, 130 corridors were enabled and in 2021, 54 more Corridors are projected, which are shown in the following map:

Map 30. Location of the Free and Safe Women's Corridors in Iztapalapa

Source: Elaborated by the Mayor's Office of Iztapalapa, 2021

4) Regarding the cracks in different neighborhoods of the borough, the Mayor's Office of Iztapalapa has established links with the Mexico City Government and academics from the National Autonomous University of Mexico, who have a track record in the investigation of cracks and their mitigation. The implemented actions consider the four risk levels identified by Works and Urban Development, Civil Protection, Urban Services, and Territorial Directorates[191].

[190] According to information provided by the Mayor's Office of Iztapalapa, 2020.
[191] Ibid.

These issues are directly related to the SDG 11 which seeks to *make cities and human settlements inclusive, safe, resilient, and sustainable*[192].

During field work, the deterioration and poor conditions of housing and urban infrastructure, the lack of urban services provision, as well as the proliferation of environmental problems such as garbage and dog feces on the streets were identified as the main **vulnerabilities** for the population (see section 2.4 Risk analysis in 44 neighborhoods of Iztapalapa).

The following recommendations on urban and environmental matters aim to suggest concrete actions, possible deadlines, partner institutions and the required participation from the population.

[192] UN (2016). Sustainable Development Goals. Available at: https://www.un.org/sustainabledevelopment/es/cities/

Urban and environmental development
Integral and inclusive urban development

Topic Short/ Medium/ Long term	Recommendations for the Mayor's Office	Recommendations for the population
Integral urban development	• Expand the actions carried out by the specialized personnel of the Mayor's Office of Iztapalapa for the protection and recovery of public space to restore its social and public character. One example is the ***UTOPIAS***.	• Report to the authorities about any damages found in public spaces or facilities located in their neighborhoods.
Inclusive and gender-based urban development	• Implement comprehensive urban operations to intervene in degraded areas within intraurban areas. • Set inclusive and participatory urban diagnosis and planning with the population. • Promote an *Urban Quality Audit with a Gender perspective*. • Continue giving maintenance to the ***Corridors for safe and free women***[193]. • Continue the involvement with the academic sector, for example, with the National Autonomous University of Mexico	• Request to the authorities the participation of your neighborhood in the participatory diagnosis. • Take part in the participatory meetings arranged by the Mayor's Office. • Report to the authorities about any damages found in the ***Corridors for safe and free women***. • Participate and support the adoption of strategies that seek to improve the urban environmental development of the borough.
Irregular human settlements	• Establish inter-institutional agreements to intervene in irregular settlements.	• Take part in the meetings arranged by the Mayor's Office.

2.4 Risk analysis in 44 neighborhoods of Iztapalapa

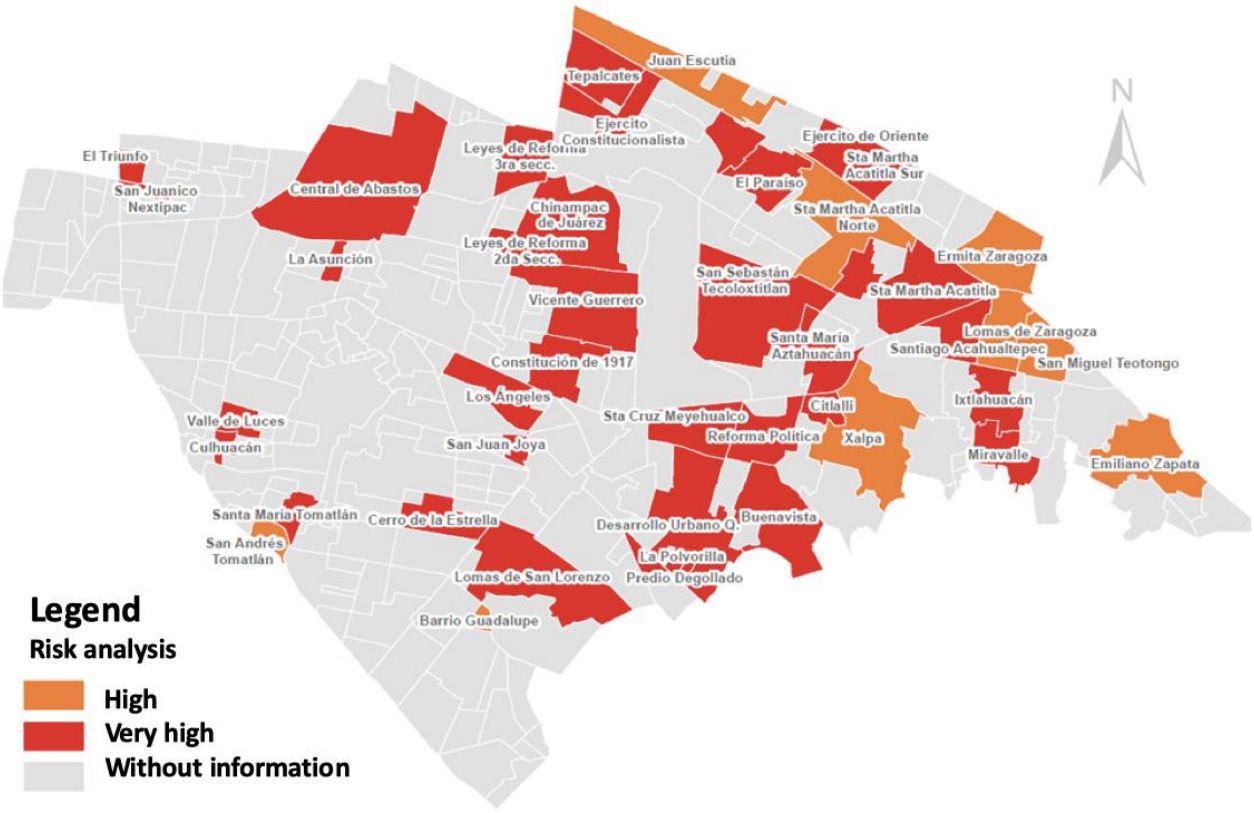
Based on the social risk theory, capacities, threats and vulnerabilities from 44 neighborhoods of Iztapalapa were analyzed. These neighborhoods were selected according to their crime incidence:

- 25 with high crime incidence
- 13 with medium crime incidence
- 6 with low crime incidence

The categories analyzed were:

1. **Threats:** refers to those circumstances that can damage people's integrity, such as crimes like robbery, extortion, domestic violence, crimes against women, as well as antisocial behavior such as problematic alcohol and drug use, the appropriation of public space for the development of illicit activities (illegal sale of auto parts) and illegal governance.
2. **Vulnerabilities:** refers to people's exposure to urban and environmental risks, for example: overcrowding, abandoned land or houses, infrastructure in poor or precarious condition, insufficient coverage of essential urban services, garbage, dog feces in public roads and floods. In addition, other factors such as homeless people, factories or warehouses were considered.
3. **Capacities:** refers to the strengths that communities have at the local level, either provided by the Mayor's Office or promoted individually or collectively. These can be actions aimed at promoting good governance, cultural activities, workshops, courses, libraries, schools at different levels, universities, hospitals, rehabilitation services, markets, sports, parking lots, churches, government institutions, patrols, neighborhood alarms, public squares, transportation, among others.

Results showed that out of 44 neighborhoods analyzed, 36 presented a very high level of risk and 8 a high level of risk. The analysis by category indicates the following:

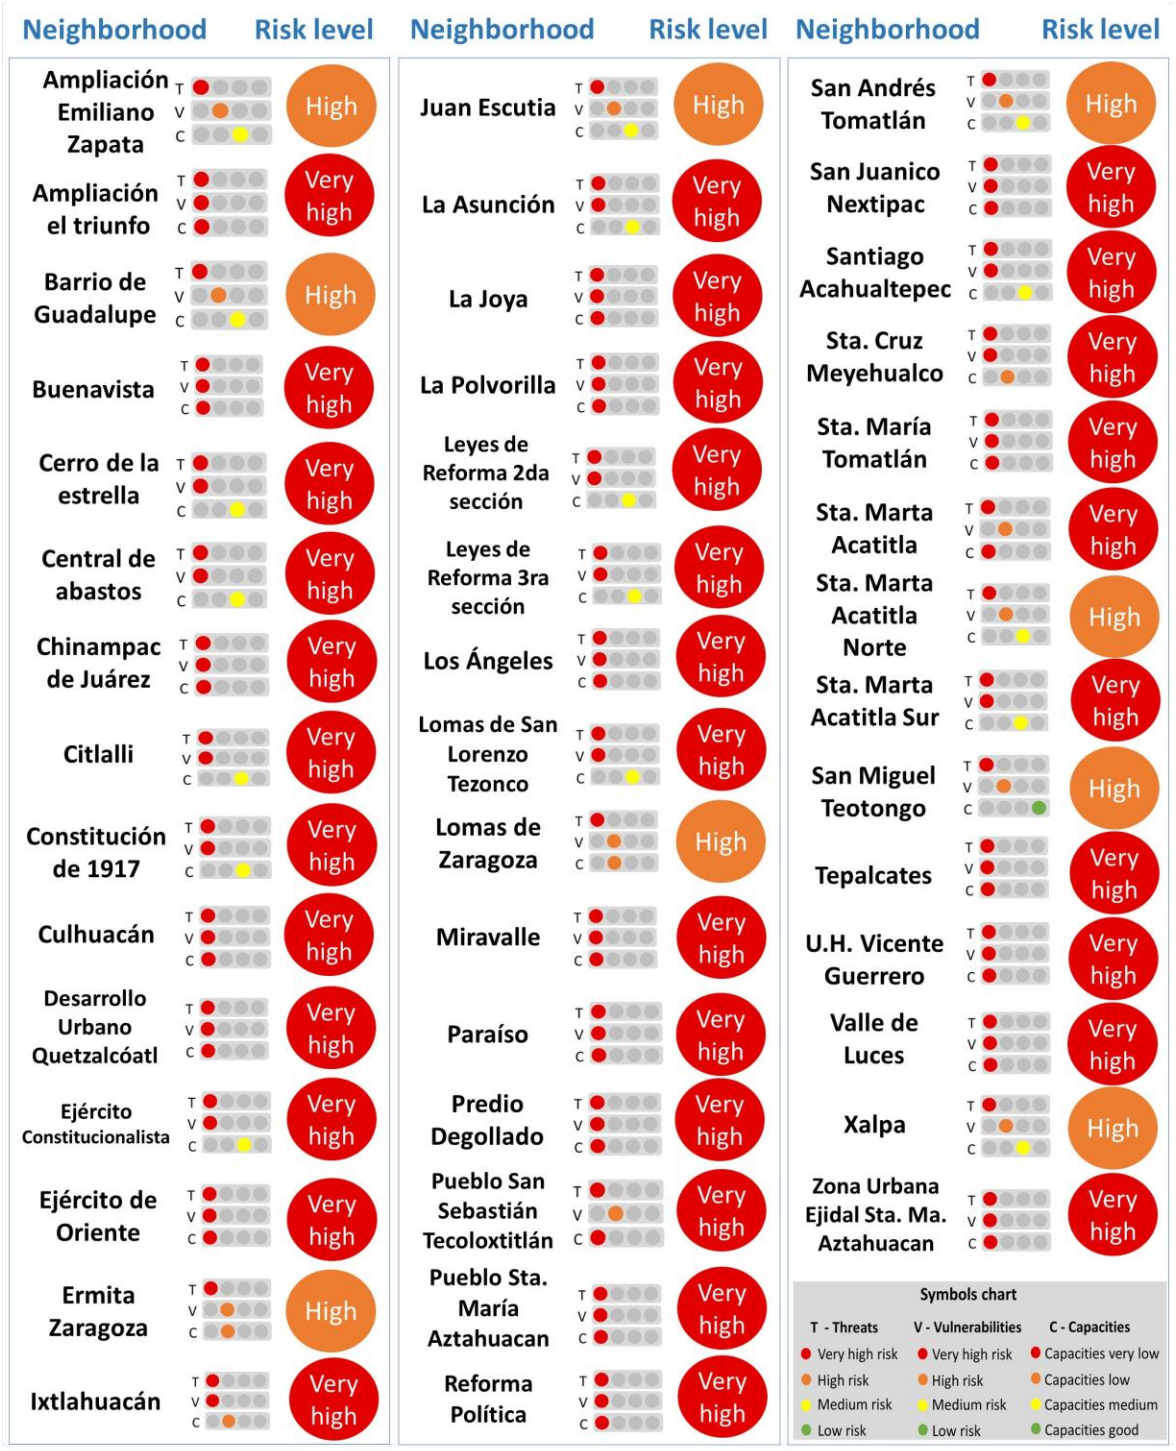


Threats	Vulnerabilities	Capacities
• 44 neighborhoods have a very high level of risk because all the crimes that occur affect people's integrity.	• 33 neighborhoods have a very high level of risk due to the conditions of the public space, which may favor the commission of crimes. • 11 neighborhoods have identified at a high level of risk due to their urban deterioration.	• 21 neighborhoods have very low capacities to deal with insecurity due to a lack of institutional presence (police, law enforcement officers, lack of patrolling) and lack of trust in authorities. • 4 neighborhoods have low capacities due to a lack of access to quality urban services and due to poor service

provision and urban maintenance.

- 18 neighborhoods do not have proper services coverage, especially those regarding: health provision, education, culture and housing.
- 1 neighborhood has strong capacities, which can be reinforced to prevent risks.

The following map shows the results per neighborhood.



Map 31. Results of the level of risk by neighborhood

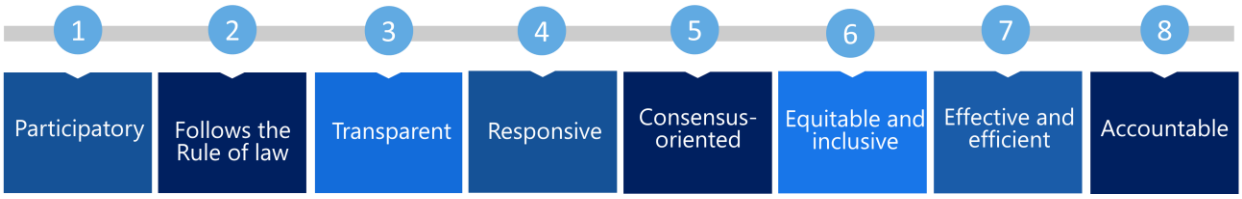
Source: Own elaboration with information obtained during field work, 2020.

The following figure presents the same 44 neighborhoods labeled according to the three categories and their level of risk.

Figure 27. Neighborhoods of Iztapalapa and their level of risk

Source: Own elaboration with information obtained during field work, 2020.

3. Analysis of the institutional capacities of the Mayor's Office of Iztapalapa



Despite the risk factors and challenges faced by the Mayor's Office, numerous efforts are being made to tackle threats and vulnerabilities, however, for such a complex territory due to its population density, criminality, and cultural diversity, the capacities available can be insufficient.

This Urban Safety Governance Assessment, based on the analysis of statistical and geographic information, as well as the social diagnosis for the identification of such challenges, raises specific recommendations based on evidence, both to guide the good governance of the Mayor's Office and to address specific problems in coordination with other institutions.

3.1 Good Governance

Governance can be understood as a set of processes and structures whereby decision-making is implemented[201]. Achieving effective governance involves promoting the following principles[202]:

Figure 28. The 8 principles of good governance

Source: Own elaboration with information from the Economic and Social Commission for Asia and the Pacific, (ESCAP), 2009.

Based on these principles, a capacity analysis of the Mayor's Office was carried out where strengths, weaknesses, threats and opportunities to improve governance were detected[203].

Principle 1. Promoting a participatory society

From a good governance approach, the Mayor's Office of Iztapalapa has different mechanisms to promote a **participatory society**. This implies that all sectors of society can be actively involved

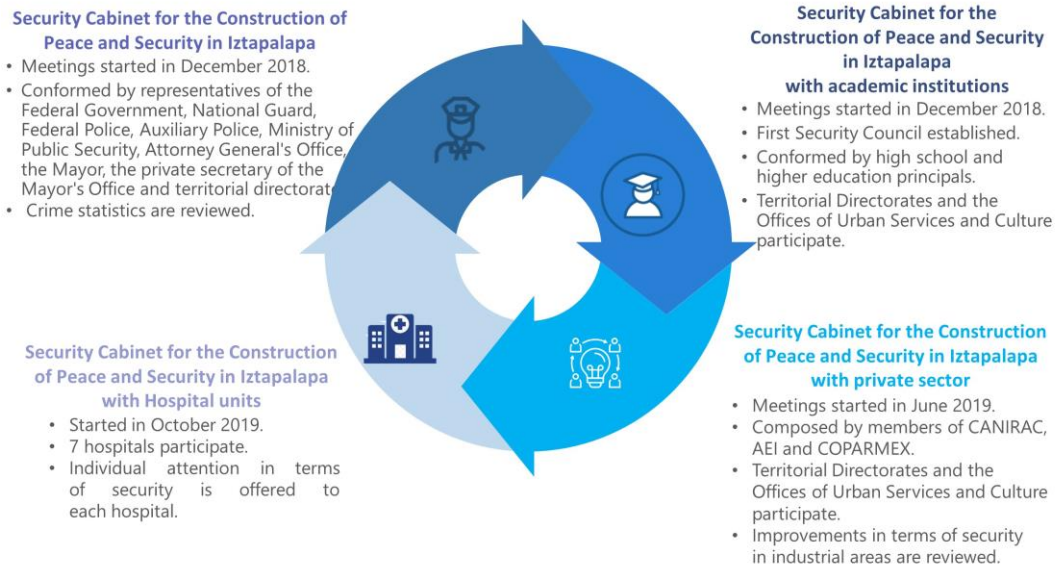
[201] UN (2016). Security Sector Reform Integrated Technical Guidance Notes Transnational Organized Crime and Security Sector Reform. Available at: https://www.unodc.org/documents/organized-crime/SSR_TOC_ITGN_2016_WEB.pdf

[202] UNODC (2009). What is good governance? Available at: https://www.unodc.org/e4j/en/anti-corruption/module-2/key-issues/what-is-good-governance.html

[203] Most of the information presented in this section was provided by personnel from the Mayor's Office of Iztapalapa during interviews conducted for this assessment in 2020.

in the decision-making process in issues of interest. Participation is informed, organized and citizens have access to this information and can express their opinion[204].

The Mayor's Office has promoted the following programs and actions to encourage social participation:



- The program ***Dialogues to achieve well-being and peace in Iztapalapa*** aims to build up social conditions, urban spaces, civil culture and citizen participation to recover and strengthen well-being and peace.
- As part of the program ***Dialogues to achieve well-being and peace in Iztapalapa***, the ***Neighborhood assemblies*** are social participation mechanisms through which the Mayor's Office promotes social conciliation and participatory planning processes. They have an action protocol and are developed from community liaisons understood as people interested in participating on behalf of their community in various issues to promote participation and establish a connection with the Mayor's Office. Up to 2020, the following connections were made by subject[205]:
    - 5,981 Peace and Well-Being
    - 3,184 Health
    - 3,898 Civil Protection
    - 1,631 Women
    - 1,035 Children
    - 745 Elders
    - 612 Youths

- The ***Cabinets for public security and service provision*** are political coordination mechanisms whose purpose is to complement the information available to the authority, based on an exchange of points of view and experiences.

[204] For the definition of this principle the following sources were considered: United Nations Economic and Social Commission for Asia and the Pacific (2009). What is Good Governance? Available at: https://www.unescap.org/resources/what-good-governance and UNODC The Doha Declaration (2020). What is Good Governance? Available at: https://www.unodc.org/e4j/en/anti-corruption/module-2/key-issues/what-is-governance.html

[205] Information provided by the Mayor's Office of Iztapalapa, 2020.

Figure 29. Coordinating mechanisms for the development of good governance

Source: Own elaboration with data provided by the Mayor's Office of Iztapalapa, 2019.

1. The **Security Cabinet for the Construction of Peace and Security in Iztapalapa with academic institutions** was one of the first to be integrated due to the lack of support that schools received in terms of security and lack of infrastructure, water, and garbage collection. Activities that do not fall under the authority of the Mayor's Office are brought before a competent authority of the Mexico City Government.

2. The **Security Cabinet for the Construction of Peace and Security in Iztapalapa**[206] has the goal of coordinating and planning continuous strategic actions for the attention and prevention of crimes, in addition to reviewing crime statistics for decision making. The three levels of government converge in this Cabinet, and its activities have been constant since the beginning of the term of office. From 2018 to March 2021, 425 sessions have been held:
   - 20 sessions in 2018
   - 233 sessions in 2019
   - 40 face-to-face sessions and 109 virtual sessions in 2020
   - 23 virtual sessions in 2021.

3. The **Security Cabinet for the Construction of Peace and Security in Iztapalapa with the private sector** is part of the strategy to tackle insecurity and corruption. The purpose of this cabinet is to hold regular meetings to listen to and address the problems of businesspeople. As a result of these meetings, businesspeople have

[206] Representatives of various security and justice institutions participate, as well as civil society organizations, such as the Citizen Council. Information provided by the Mayor's Office of Iztapalapa and by Mayor's Office of Iztapalapa (2019). Provisional Government Program 2019-2020. Available at: http://www.iztapalapa.cdmx.gob.mx/concejales/pdf/ProgPro19-20.pdf

contributed to setting up safe corridors in the industrial zone and conducting workshops on Civil Protection and Crime Prevention, linking their job demands with the population living in the Mayoralty's territory by way of job listings.

4. The **Security Cabinet for the Construction of Peace and Security in Iztapalapa with hospital units** aims to respond to security problems of the hospitals in the area. In the sessions, topics ranging from illegal taxi stands outside the hospital facilities to citizen complaints by patients are presented to avoid acts of corruption and impunity.

These social participation mechanisms enable communication between the three levels of government and different social sectors with the purpose of promoting joint decision-making. In addition, the Mayor's Office has promoted emerging cabinets, which are formed on the basis of a common problem of interest. One example was the creation of a health cabinet to deal with the COVID-19 pandemic[207].

Figure 30. SWOT analysis: social participation mechanisms

Strengths	Weaknesses

• Three actions aimed at promoting citizen participation were identified:
  • *Dialogues to achieve well-being and peace in Iztapalapa* has a budget and rules of operation.
  • Community Assemblies encourage the detection of problems, the execution of actions to solve them and have an action protocol.
  • Thematic Cabinets of the Mayor's Office (security, business, health, among others). They allow political coordination between different sectors of society in security matters, strengthening decision making.
	• Lack of methodologies to monitor and evaluate the results and impact of programs such as Dialogues to achieve well-being and peace in Iztapalapa and the Mayor's Office thematic cabinets (security, business, health, among others).

Threats	**Opportunities**
• Lack of interest among citizens to participate in the actions and programs implemented by the Mayor's Office. • Lack of trust in the authorities of the Mayor's Office.	• Technical assistance from specialized institutions such as UNODC in the design and evaluation of these programs. • Strengthening an active citizenry with the capacity of being resourceful. • Liaison with different sectors in the development of activities that promote citizen participation in order to increase the social capital of citizens (Mexico City's government agencies, business groups, academic institutions, international organizations, etc.). • Dissemination of the actions carried out within the framework of the Security and thematic Cabinets.

Source: Own elaboration.

[207] Information provided by personnel from the Mayor's Office of Iztapalapa during the interviews conducted for this assessment, 2020.

Principle 2. Guaranteeing the Rule of Law

This principle implies the existence of robust and impartially enforced legal frameworks. Human rights are respected and guaranteed, the justice system is independent and effective, and both the judiciary system and police force are impartial and incorruptible[208].

The actions of the Mayor's Office are based on the Organic Law of the Mayor's Offices of Mexico City[209], in which the rights and duties of the population are established, as well as the purpose of the Mayor's Offices (Article 20 of the Law).

Figure 31. SWOT analysis: mechanisms to guarantee the Rule of Law

Strengths	Weaknesses
• There are legal frameworks that regulate the activities of the Mayor's Office. • The Mayor's Office has a Control and Command Center (C2) Cuitlahuac Base, which attends to citizen emergencies 365 days a year. • There are 13 Territorial Directorates on Public Security and Law Enforcement in the borough, and they coordinate with the Specialized Agency for Public Security and Justice, the Specialized Agency for Sexual Crimes and with the Central Prosecutor's Office for Vehicle and Transport Theft Investigations. • There is a Special Unit for Crime Prevention, as well as Security Cabinets, plus actions to combat crime: operations and closure of illegal points of sale of alcohol.	• Insufficient institutional capacity for the attention and coverage of services and procedures due to the high demand and population distribution. • Lack of legal authority for decision-making regarding crime prevention.
Threats	**Opportunities**
• Persistence of structural problems. • Large population to be attended. • Lack of trust in the authorities could discourage reporting and increase the dark figure.	• Technical assistance from specialized institutions such as UNODC in the design and evaluation of programs. • Inclusion of international standards for the adoption of good governance principles. • Monitoring and evaluation of good governance principles.

Source: Own elaboration.

[208] For the definition of this principle the following sources were considered: United Nations Economic and Social Commission for Asia and the Pacific (2009). What is Good Governance? Available at: https://www.unescap.org/resources/what-good-governance and UNODC The Doha Declaration (2020). What is Good Governance? Available at: https://www.unodc.org/e4j/en/anti-corruption/module-2/key-issues/what-is-governance.html

[209] For more information, see the Official Gazette of Mexico City. Organic Law of Mayor's Offices in Mexico City (2018). Available at: http://www.paot.org.mx/centro/leyes/df/pdf/2018/LEY_ORGANICA_ALCALDIAS_CDMX.pdf

Principle 3. Having transparency mechanisms

This principle means that decision-making and its compliance can be under the scrutiny of members of society and is made in accordance with the norm. The information available must be free, accessible, sufficient and understandable[210].

According to the Mexico City Law on Transparency, Access to Public Information and Accountability[211], the Right of Access to Public Information requires the adoption of specific mechanisms and conditions, as well as the dissemination of data and information of public interest.

The website of the Mayor's Office of Iztapalapa[212] has a section focused on transparency where the articles and fractions of all obligations are available and information requests are also received. All information is updated on a quarterly basis.

The following are the sections contained in the website:

- *Information about COVID-19*: Infographics with preventive messages, a guide of measures to prevent contagion, social programs and a link to the publications issued in the Mexico City Official Gazette.
- *Committee of transparency:* Set of hyperlinks to the meeting acts held by the committee.
- *Historic 2015 - 2018:* Location of the Transparency Unit and applicable regulations.
- *The Mayor's Office of Iztapalapa 2018 – 2021*: Applicable regulation.

The goal of transparency is to keep citizens informed about public decisions. This requires a daily exercise of documentation of executed actions, publication of information through official channels, traceability of subjects and drafting using an inclusive language.

[210] For the definition of this principle the following sources were considered: United Nations Economic and Social Commission for Asia and the Pacific (2009). What is Good Governance? Available at: https://www.unescap.org/resources/what-good-governance and UNODC The Doha Declaration (2020). What is Good Governance? Available at: https://www.unodc.org/e4j/en/anti-corruption/module-2/key-issues/what-is-governance.html

[211] Official Gazette of Mexico City. Organic Law of Mayor's Offices in Mexico City (2018). Chapter 1 "Object of the Law". Available at: http://www.infodf.org.mx/documentospdf/Ley%20de%20Transparencia,%20Acceso%20a%20la%20Informaci%C3%B3n%20P%C3%BAblica%20y%20Rendici%C3%B3n%20de%20Cuentas%20de%20la%20Ciudad%20de%20M%C3%A9xico.pdf

[212] The Mayor's Office of Iztapalapa (2020). Office of Public Information. Transparency. Available at:: http://www.iztapalapa.cdmx.gob.mx/transparencia/index.php

Figure 32. SWOT analysis: transparency mechanisms

Strengths	Weaknesses
• The Mayor's Office website has a transparency section with the following topics: Transparency Committee, Mayor's Office Iztapalapa 2018 - 2021, Historical 2015-2018, and Information on COVID-19. • The official social networks of the Mayor's Office (Facebook, Twitter) are kept up to date, showing the actions implemented. • According to staff of the Mayor's Office, the Institute for Transparency, Access to Public Information and Accountability of Mexico City granted them the highest rating in compliance with their obligations in this area.	• The information on social networks and website is not homologated.
Threats	**Opportunities**
• Lack of continuity and sustainability in transparency actions in the borough regarding administrative changes.	• Technical assistance to homologate and update the Mayor's Office website to make it user-friendly and accessible.

Source: Own elaboration.

Principle 4. Acting responsibly and reactively

This principle implies that institutions and processes readily serve all stakeholders in a prompt and appropriate manner to protect the interests of the entire population. There is an inclusive and decentralized response capacity[213].

In order for the institutions and processes to guarantee the common interests of the population, adequate coordination between areas is required. The following actions have been identified within the Mayor's Office:

- Periodic meetings take place between the areas to ensure coordination and communication between its members.
- There is a close collaboration between all 7 General Offices, 3 Executive Offices and 13 Territorial Directorates of the Mayor's Office, which are organized and coordinated as follows:
    - General Offices plan and generate the programmatic offer and activities.
    - Territorial Directorates promote these activities and facilitate citizen's access to programs and activities.

To handle the health crisis provoked by the COVID-19 pandemic, the Mayor's Office of Iztapalapa responded as follows:

[213] For the definition of this principle the following sources were considered: United Nations Economic and Social Commission for Asia and the Pacific (2009). What is Good Governance? Available at: https://www.unescap.org/resources/what-good-governance and UNODC The Doha Declaration (2020). What is Good Governance? Available at: https://www.unodc.org/e4j/en/anti-corruption/module-2/key-issues/what-is-governance.html

- In terms of prevention, actions such as the mandatory use of masks in public spaces, lockdown measures or healthy distance in crowded places such as street markets, markets, cemeteries, as well as sanitization actions in buildings and public transportation units have been adopted.
- In order to contain the possibility of contagion, actions have been implemented, such as hyper-local health commissions, closure of street markets and markets, hiring of water pipes to supply the population without access to this service and emergency economic support for the families of Iztapalapa (Social Action *Emergency Family Income Mercomuna*).

All areas of the Mayor's Office developed different measures to deal with the pandemic. Among the activities performed were:

1. *Brigadas* or task force groups that attend to citizens at points of major confluence such as street markets, markets and cemeteries.
2. Activities that control the access to street markets, distribution of masks and anti-bacterial gel to citizens, placing of sanitation points such as water tanks or sinks, checking that vendors wear masks at all times.
3. Delivery of food allowances to beneficiaries of Social Action *Mercomuna*, which consisted of the provision of economic support through food allowances called *Cuitlahuac,* and the delivery of baskets with 10 kilos of season fruit, vegetables and grains.

Figure 33. SWOT analysis: acting responsibly and reactively

Strengths	Weaknesses
• Knowledge of functions and recognition of the attributions of other areas is identified. • Close relations between the 7 General Offices, 3 Executive Offices and the 13 Territorial Directorates. • Weekly meetings between areas to ensure organization and coordination. • The Mayor's Office staff shows commitment to service, willingness to provide support to the population, and teamwork. • Implementation of various actions to support the population in the context of the health crisis resulting from COVID-19, for example, the social action Emergency Family Income MERCOMUNA.	• In the case of some reports, the results or progress of social actions and programs are not public knowledge. • Lack of methodologies to monitor and evaluate the results and impact of programs can cause confusion among the population.
Threats	**Opportunities**
• Persistence of structural problems. • Difficulty in achieving 100% coverage due to the large territorial and population extension of Iztapalapa. • Health emergencies.	• Technical assistance from specialized institutions such as UNODC in the monitoring and evaluation of social programs and actions. • Timely dissemination of information to achieve accessibility and inclusion among the population. • Based on the actions implemented against COVID-19, an action protocol can be generated in case of future health crises.

Source: Own elaboration.

Principle 5. Maintaining consensus-oriented decision making

Good governance requires mediation of different community interests in order to reach a broad consensus in society on what is in the best interest of the whole community and how this can be achieved from a broad and long-term perspective. For this to be achieved, a structure for solid, impartial and flexible mediation is needed[214].

The Mayor's Office of Iztapalapa has a **Council** that serves as a consensus-oriented mechanism. The Council is defined as a collegiate body with a horizontal structure made up of 10 elected council people. Its functions are established in the Organic Law for the Mayor's Offices of Mexico City and include the following:

- The supervision and evaluation of government actions.
- The control of the exercise of public spending based on the objectives of the government program.
- The approval of the corresponding Expenditure Budget Project, in accordance with the terms established by the law.

Based on the Rules of Procedure of the Council[215], it should:

- Approve the General Program of the Mayor's Office of Iztapalapa.
- Review the annual and partial report on the budget public expenditure and governmental actions executed.
- Oversee the development of public work and public services in the Mayoralty's territory.
- Establish a commission in charge of monitoring and evaluating executed actions[216].
- Convene the Mayor and Directors to inform about their actions.
- Convene traditional authorities and representatives from indigenous communities to participate in the Council sessions[217].
- Assign a citizen chair for each session.

Since the beginning of COVID-19, the Mayor's Office has presented a report to the Council regarding the progress of the pandemic and the actions taken on a daily basis.

[214] Ibid.

[215] Iztapalapa's Local Council (2019). Rules of Procedure of the Council. Available at: http://www.iztapalapa.cdmx.gob.mx/concejales/pdf/ReglamentoConcejo.pdf

[216] The work of the Council is divided into 10 commissions: Legal and Government, Administration and public spending, Citizen Participation, Urban Development, Civil Protection and Risk Management, Urban services, Social Well-being, Sustainable and Economic Development, Culture and traditional communities and Public Security.

[217] It has three types of sessions: ordinary sessions that take place once every month, extra-ordinary sessions which are convened in case of urgency and solemn sessions that take place when reports are presented by the Mayor's Office.

Figure 34. SWOT analysis: consensus-oriented decision-making

Strengths	Weaknesses
• The Organic Law of Mayor's Offices of Mexico City establishes the actions of the Council. The Council has an internal regulation that regulates its operation. • The sessions of the Mayor's Council are public and can be consulted by the citizens on the Mayor's Office website or at the Council's offices.	• The Council section of the website is not user-friendly so that citizens can understand the functions and duties of the councilors. • The lack of information on how to access the "citizen's chair" limits its effectiveness.
Threats	**Opportunities**
• Lack of citizen participation in decision-making due to apathy or lack of knowledge about the mechanisms. • Lack of continuity of the agreements established by the members of the Council.	• Involvement of the different sectors in decision-making exercises when appropriate (Mexico City government agencies, businesspeople, academic institutions, international organizations, etc.).

Source: Own elaboration.

Principle 6. Performing in an equitable and inclusive manner

This principle implies to ensure that all members of society have opportunities to improve and maintain their well-being, especially the most vulnerable ones. That is, all people are considered in the decision-making processes and no one is deprived of their rights[218].

The Mayor's Office implements various social programs and actions aimed at addressing the social, cultural and economic rights of the population of Iztapalapa, based on a public policy strategy and taking up the 2030 Agenda for Sustainable Development.

Both programs and actions have a positive assessment by the Planning Committee for the Development of Mexico City and the Evaluation Council of Social Development of Mexico City, and were presented in international forums as well as replicated by other government agencies due to the results achieved.

The respective 11 programs and 6 general offices that are responsible for their implementation individually or in coordination with other sub-offices, general offices and operative areas of the Mayor's Office are presented below.

[218] For the definition of this principle the following sources were considered: United Nations Economic and Social Commission for Asia and the Pacific (2009). What is Good Governance? Available at: https://www.unescap.org/resources/what-good-governance and UNODC The Doha Declaration (2020). What is Good Governance? Available at: https://www.unodc.org/e4j/en/anti-corruption/module-2/key-issues/what-is-governance.html

GENERAL OFFICE OF PLANNING AND CITIZEN PARTICIPATION			
Sub-office of Citizen Participation. Head of Unit of Citizen Participation.	Operational Area: Office of the Director of Social Programs; Technical-Operational Unit: Head of Unit of Social Programs "A"; Technical-Operational Unit: Head of Departmental Unit of Social Programs "A".	Operational Area: Office of Social Programs; Technical-Operational Unit: Head of Unit of Social Programs "C".	Operational Area: Office of Social Programs; Technical-Operational Unit: Head of Unit of Social Programs "D".
Program: Strengthening participatory democracy for well-being and peace in Iztapalapa.	**Program:** Integral well-being for elementary school children residing in Iztapalapa.	**Program:** Economic assistance and integral welfare for senior citizens between the ages of 64 and 67 who reside in Iztapalapa and do not have the support of any other federal or local economic assistance program.	**Program:** Integral well-being for elementary school children residing in Iztapalapa.

GENERAL OFFICE OF INCLUSION AND SOCIAL WELL-BEING			
Coordinating Unit of Social Welfare. Sub-office of Sports. Head of l Unit of Community Sports.	Operational Area: Coordination Unit of Social Welfare and Head of Unit of Educational Programs; Coordinating Unit of Inclusion of Priority Groups; Head of Departmental Unit of Development and Welfare of the Elderly and Persons with Disabilities.	Operational Area: Sub-office of Educational Development; Technical-Operational Area: Head of Unit of Educational Programs	Operational Area: Sub-office of Educational Development; Technical-Operational Area: Head of Unit of Educational Programs
Program: Iztapalapa the Sportiest.	**Program:** Public care system, the Mayor's Office of Iztapalapa, 2020.	**Program:** Women studying in Iztapalapa, 2020.	**Program:** Support for families who lost a family provider due to COVID-19 or an associated disease.

GENERAL OFFICE OF INCLUSION AND SOCIAL WELFARE GENERAL OFFICE OF PLANNING AND CITIZEN PARTICIPATION EXECUTIVE OFFICE OF SUSTAINABLE DEVELOPMENT EXECUTIVE OFFICE OF CULTURE
Program: support for the promotion and access to the right to health, good administration, employment, culture and personal self-determination, Iztapalapa with full rights, 2020.

GENERAL OFFICE OF WORKS AND URBAN DEVELOPMENT
General Office of Sustainable Development Operational Area: Coordination Unit of Services and Maintenance Head of the Prevention and Environmental Impact Unit / Technical-Operational Unit: Departmental Unit Heads and Project Coordinating Leaders of the Coordinating Units and General Offices.
Program for the rescue of public space, attention to cracks and environmental attention: Iztapalapa is transformed, 2020.

EXECUTIVE OFFICE OF CIVIL PROTECTION
Program: Strengthening the culture of prevention and emergency response, 2020.

The 13 social actions, general offices, sub-offices and operational areas responsible are presented below. It is worth mentioning that *Mercomuna*[219] is one of the social actions with the greatest impact due to its positive results by tending to 100% of its target population in the whole territory of Iztapalapa. The Mexico City Government recommended its implementation to other Mayor's Offices to address the serious effects caused by the emergency measures of the COVID-19 pandemic.

GENERAL OFFICE OF INCLUSION AND SOCIAL WELL-BEING				
Operational Area: General Legal Department and Private Secretary's Office	Operational Area: Coordination Unit of Inclusion to Priority Groups; Technical-Operational Unit: Sub-office of Social Inclusion	Operational Area: Sub-office of Educational Development; Technical-Operational Area: JUD Educational Programs	Operational Area: Coordination Unit of Social Welfare and Sub-office of Educational Development; Technical-Operational Unit: JUD Educational Projects.	Operational Area: Coordination Unit of Inclusion of Priority Groups; Technical-Operational Unit: Sub-office of Social Inclusion, Sub-office of Educational Development, JUD Educational Projects, JUD for the Development and Welfare of the Elderly and the Disabled
Social action: Financial support to people in situations of vulnerability, extreme gravity and urgency for the health, life and development of individuals and families.	**Social action:** Authorization to grant support for funeral services in Iztapalapa, 2020.	**Social action:** Youths building their history, 2020.	**Social action:** Walking for your rights, school shoes for students in Iztapalapa, 2020**.**	**Social action:** In-kind support to people with disabilities through the delivery of wheelchairs, canes, hearing aids and eyeglasses.

DIRECCIÓN GENERAL DE INCLUSIÓN Y BIENESTAR SOCIAL		
Social action: Market, community, supply and food, Mercomuna Iztapalapa, emerging food and local economy action.	General Office of Government and Citizen Protection General Office of Works and Urban Development	Operational Area: Office of Social Programs; Technical-Operational Unit: JUD Social Programs "D".
	Social action: Awarding of incentives and recognitions to citizens for social aid work during the sanitary contingency, 2020.	**Acción social:** Emergency family income. MERCOMUNA.

GENERAL OFFICE OF GOVERNMENT AND CITIZEN PROTECTION		
Social action: Financial assistance to people who preserve traditional activities in Iztapalapa, 2020.	Operational Area: Technical Support Sub-office	Operational Area: JUD of Traditional Towns and Indigenous Neighborhoods
	Social action: Awarding of incentives and recognitions to elements of institutions responsible for citizen security and the administration of justice that are	**Social action:** Authorization to grant financial assistance to people who integrate the safeguard and preservation of the *comparsas* in Iztapalapa's fiscal year 2020.

[219] The progress and results were presented to the Mayor's Council at each stage and the Mayor's Office's Body of Internal Control accompanied the entire implementation process.

	outstanding in the performance of their duties.	

EXECUTIVE OFFICE FOR CULTURE
Social action to encourage individual or collective activities to disseminate and present artistic creation in Iztapalapa (crearte).

EXECUTIVE OFFICE OF CIVIL PROTECTION
Social action: Extraordinary financial assistance to people whose homes or property are affected by a hydrometeorological, geological, seismic, sanitary, chemical, pyrrhic or another socio-organizational event.

In relation to the budget available to expand its capacity to serve the population, the Mayor's Office has called for an increase in income, since the budget designated by the Mexico City Congress and the Mexico City Government is not sufficient in relation to the population.

The Mayor's Office of Iztapalapa faces several challenges that include poverty, inequality and informality, of which some have intensified since the COVID-19 pandemic. Therefore, during 2020, efforts were focused on generating social programs and actions to address these problems. Social programs and actions on care, economic support, food supply and nutrition, prevention and attention to emergencies and funeral services were strengthened without neglecting other strategies developed for vulnerable groups.

Figure 35. SWOT analysis: performance of the Mayor's Office

Strengths	Weaknesses
• 11 programs and 13 social actions were identified, some of which were carried out in the context of the pandemic by COVID-19. • There is a Unit for the Promotion of Women's Rights and Substantive Equality, which provides cross-cutting advice on the work of the general offices, as well as on the programs and social actions implemented by the Mayor's Office. • From the Security Cabinet for the Construction of Peace of the Mayor's Office, an institutional agreement was reached to improve the care of adolescents and young people in Iztapalapa, which seeks to strengthen the practices of care for this population sector. • Opening of the Colibrí Centers for users of psychoactive substances in order to receive therapeutic treatment applied from a health perspective with full respect for human rights at the UTOPIAS. • Coordinated work between different general offices for the implementation of social programs and actions. • Social programs and actions are focused on attending vulnerable groups. • Most of the programs are oriented to citizen protection and participation. • Some social actions have been promoted for replication in other boroughs, for example, MERCOMUNA.	• Insufficient personnel to provide service for social programs and actions. • The division and operation between social programs and actions is ambiguous due to the way they are presented. • The methodology used for monitoring and evaluation of implemented actions is not publicly identified, nor are there reports with results of executed programs available to citizens and experts.

Threats	Opportunities
• Large population in the Mayoralty's territory to serve. • Lack of continuity and sustainability of social programs and actions that are generating a positive impact in the borough in the face of administrative changes. • Lack of external communication of the social programs and actions implemented could generate little effectiveness and distrust among the population.	• Technical assistance with specialized institutions such as UNODC, to continue strengthening social programs and actions. • Alliances with CSOs for the implementation of social programs and actions in order to ensure their continuity (Mexico City government agencies, groups of businesswomen, academic institutions, international organizations, etc.). • Maintain active participation of the population by involving them in each of the social programs and actions implemented.

Source: Own elaboration.

Principle 7. Acting efficiently and effectively

From a good governance approach, government effectiveness and efficiency exist where processes and institutions make the best use of resources to produce results that meet the needs of society[220]. Effectiveness and efficiency require:

- The **enhancement of quality and standardization** of public service delivery. To this end, the agencies must attend to the needs of citizens in a timely and appropriate manner, simplifying government procedures and reducing bureaucracy, using appropriate technology whenever possible.
- The **professionalization** of public officials will allow for effective performance.
- The focusing of government efforts on **vital functions by eliminating redundancies or overlaps** in functions and operations.

The Mayor's Office's website has a section containing all the requirements needed for demanding a service provision or procedure. On the website, 40 procedures are listed, as well as 19 types of services[221]. The **40 procedures** address 11 different subjects[222], of which 24 procedures are related to commerce and markets, civil protection, public works and maintenance. Of the 40, 20 procedures have a cost, which is not indicated in the web page, 19 are for free and 1 does not provide any information. Waiting time varies, in average half of the procedures are solved in 15 days.

[220] For the definition of this principle the following sources were considered: United Nations Economic and Social Commission for Asia and the Pacific (2009). What is Good Governance? Available at: https://www.unescap.org/resources/what-good-governance and UNODC The Doha Declaration (2020). What is Good Governance? Available at: https://www.unodc.org/e4j/en/anti-corruption/module-2/key-issues/what-is-governance.html

[221] The Mayor's Office of Iztapalapa (2020). Services and Procedures. Available at: http://www.iztapalapa.cdmx.gob.mx/tramitesyservicios/

[222] Water, Civil: identity and land, commerce and markets, events, urban image, environment, public work and maintenance, citizen participation, civil protection and urban services.

Services are focused on seven topics: access to water, public lighting, access to justice, events, loans of different types to organize events, environment and urban works. Of the 19 services offered, 7 are focused on urban works, 4 on environment and 3 on water access. All services are free of charge and the average waiting time is 15 days. Only those services related to the provision of aid to women (MODAM) have no waiting time. It is recommendable to optimize the appointment method used for procedures and services online[223].

The Mayor's Office implemented the Iztapalapa's Attentive Government System (SIGA) to provide citizens with tools to carry out more agile and efficient procedures, as well as to issue comments and complaints about the work of the local government. The request for services can be made through four means of communication:

1. In-person attention at the Central Citizen Attention Unit (UNAC) or any of the 13 territorial directorates.
2. Iztapalapatel Call Center.
3. Free mobile application IztapalAPP.
4. WhatsApp line called Whatztappalapa.

As for the personnel employed by the Mayor's Office:

Figure 36. Personnel distribution per area in the Mayor's Office of Iztapalapa

Source: Own elaboration with information provided by the Mayor's Office of Iztapalapa, 2020.

Two General Offices concentrate more than half of the Mayor's Office personnel:

- The General Office of Urban Services, in charge of public works programs for water supply, drainage and sanitation services, employs 5,307 persons.
- The General Office of Inclusion and Well-Being, in charge of social programs, has employed 1,658 persons.

[223] A good practice could be: https://www.americanprogress.org/wp-content/uploads/issues/2007/04/pdf/citistat_report.pdf

Figure 37. SWOT analysis: acting effectively and efficiently

Strengths	Weaknesses
• Some of the procedures offered by the Mayor's Office are free of charge and the average waiting time is 15 days. • The Mayor's Office has 19 types of services, mostly focused on works, environment and water. • Information on procedures and services is public and is available on the Mayor's Office website. • As of 2021, the Mayor's Office has implemented the Iztapalapa's Attentive Government System (SIGA) program. • To face the health crisis derived from COVID-19, the Mayor's Office had an early and timely response to the population for the prevention of contagion and economic support, for example, to tenants and families.	• The information published on the website about procedures and services is unclear. • Insufficient resources to cover all the services requested, as well as lack of quality in them. • Lack of material resources, office equipment for most of the general offices, as well as personnel professionalization (at university level). • Lack of methodologies for results-based management.
Threats	**Opportunities**
• Large population in the Mayoralty's territory to attend. • The lack of knowledge that the population may have regarding procedures and services could generate distrust among citizens and discourage their participation. • The Mayor's Office does not have control over the personnel that is hired on a regular basis; this is assigned by the Mexico City Government, which could result in a lack of trained and sufficient personnel.	• Strengthen the capacities of the personnel through the generation of alliances with specialized agencies, which provide training to the personnel of the Mayor's Office. • Specialized technical assistance from UNODC to strengthen personnel capacities in data collection and analysis, based on which strategies can be designed to address specific problems.

Source: Own elaboration.

Principle 8. Accountability

From a good governance approach, accountability requires mechanisms through which decision-makers explain and respond to citizens regarding actions implemented. Accountability can be horizontal (checks and balances within the public sector) and vertical (responsibility of governments towards their citizens)[224].

The Mayor's Office has the following accountability mechanisms:

- Mayoral Council Sessions (see Principle 5. Maintaining consensus-oriented decision making). These are held periodically, are public and can be consulted by citizens on the Mayor's Office website (Transparency 2018-2021 (cdmx.gob.mx)) or at the Council Offices.
- Direct and periodic reports with the executive and legislative government bodies on the actions implemented by the Mayor's Office.
- Annual reports on the progress of the work carried out by the Mayor's Office to meet the requests and needs of the citizens.

[224] For the definition of this principle the following sources were considered: United Nations Economic and Social Commission for Asia and the Pacific (2009). What is Good Governance? Available at: https://www.unescap.org/resources/what-good-governance and UNODC The Doha Declaration (2020). What is Good Governance? Available at: https://www.unodc.org/e4j/en/anti-corruption/module-2/key-issues/what-is-governance.html

- Citizen hearings between the inhabitants of the borough and the Mayor of Iztapalapa to address any issue related to various problems, these were held weekly.
- Citizen assemblies led by the Mayor in all neighborhoods of Iztapalapa.
- Social networks and platforms for effective and direct communication with citizens.

Figure 38. SWOT analysis: accountability

Strengths	Weaknesses
• Accountability actions of the Mayor's Office are regulated by the Law of Transparency, Access to Information and Accountability. • Internally, the Mayor's Office of Iztapalapa has an Administrative Manual in which the attributions in this matter are established. • Constant accountability on the actions and achievements of the Mayor's Office through social networks.	• There is a lack of public access to accountability mechanisms, resources and executed expenditures. • Lack of technology that enables public access to information for accountability. • Lack of methodology and indicators to account for the results and impact of social programs and actions.
Threats	**Opportunities**
• Distrust of the population regarding the accountability of the Mayor's Office.	• Technical assistance from institutions specialized in design, monitoring and evaluation, such as UNODC. • Generate alliances between the Mayor's Office and CSOs for accountability. • Strengthen communication mechanisms between the Mayor's Office and citizens.

Source: Own elaboration.

Lastly, since the beginning of the current term of office of the Mayor's Office of Iztapalapa, actions have been oriented to the implementation of programs to reduce and solve the various problems that affect the borough. The efforts implemented have covered the 8 principles of good governance, especially accountability, citizen participation and transparency, even so, the conditions under which Iztapalapa exists represent an important challenge that requires time and assistance from expert institutions.

The strategies aimed at crime prevention carried out by the Mayor's Office have achieved an important impact among the population of Iztapalapa, for this reason, it is recommended to continue generating alliances with other institutions and civil society organizations for the deployment of actions or strategies in this area. An example could be the implementation of UNODC's *Strong Families* and *Line Up, Live Up* programs, linking them to the UTOPIAS.

Based on the information provided before, the following recommendations were identified in order to strengthen good governance in Iztapalapa:

1. **Improve data collection and analysis** according to international standards. Take advantage of the information obtained by the Command Center (C2) and the participatory mechanisms already taking place (*Dialogues to achieve peace and well-being in Iztapalapa* and the *Security Cabinets* with different sectors). Use this information to monitor actions and evaluate its results, as well as for strengthening accountability.
2. **Provide continuity through the design of strategies** for the social programs and actions that operate in the Mayoralty's territory.

3. **Promote** with the competent authorities the training of employees of the Mayor's Office.
4. From the Mexico City SSC, **provide follow-up** for the continuous training of police officers.
5. **Provide sufficient material resources** to all the General Offices and areas that constitute the Mayor's Office of Iztapalapa.

In terms of crime prevention and public security, the following suggestions are put forward for consideration:

1. **Optimize the territorial deployment of police officers** in those areas with the largest presence of criminal activity and organized criminal groups.
2. **Establish guidelines for cooperation** with the authorities from neighboring boroughs or municipalities to strengthen **law enforcement operations**.
3. **Adopt a crime prevention strategy** to improve **socio-emotional skills** (life skills) and **positive parenting**, in line with international standards**.**
4. **Prevent early drugs use** by adopting a strategy that includes up-to-date data of the users, the identification of selling points and a close collaboration with different stakeholders.
5. Strengthen **collaboration with specific sectors of society** (such as street market and Central Market vendors) **to prevent their involvement or collusion with organized criminal groups**.

Conclusions

The ***Safety Governance Approach for Safe, Inclusive and Resilient Cities*** allows for more effective evidence-based interventions to address internal and external threats to the communities. The Urban Safety Governance Assessment (USGA) in Iztapalapa identified the issues affecting its residents, as well as the main challenges faced by the Mayor's Office.

The methodological rigor of this tool, as well as its participatory approach, made it possible to conduct an exhaustive and holistic analysis of the borough, from which it was possible to detect **high** and **very high** risks. In many of the neighborhoods of Iztapalapa, crime had a strong presence and there were social impairments and deteriorating urban-environmental conditions unfavorable to its development. Additionally, the Mayor's Office and other institutions do not always have enough coverage to face these challenges, and its capacities are not sufficient to address these threats and vulnerabilities.

The challenges identified are not only of interest at the local level, but given that they are part of the issues addressed by the 2030 Agenda for Sustainable Development, it is vital to continue strengthening the articulation between various levels of government and sectors to achieve **good governance** and permanently apply gender and human rights approaches.

Iztapalapa is a complex borough due to its geographical location, social context and historicity, however, it has a population with a high sense of belonging and collaborative groups that can contribute to make a difference in achieving a safer environment.

One of the most visible problems is the problematic consumption of alcohol and drugs. This is reflected as an early start of drug use around the age of 16, so it is necessary to strengthen the implementation of actions to address this situation.

The most frequent crimes identified in Iztapalapa are robbery in all its modalities (robbery from the person in a public location, in public transportation and of business property), as well as domestic violence. Other crimes such as femicide, rape, sexual assault and sexual harassment continue to affect the well-being of women and girls, some of which worsened during the pandemic-related lockdown due to a lack of mobility. As a result, women and girls may be victims in their households and in other environments that should be safe for them. Although good practices regarding victim care and identification of femicide risk were identified, strengthening the support centers and timely attending these situations remain an urgent challenge to be addressed.

According to the analysis of illegal governance, the presence of criminal groups and their activities related to the illicit markets of drugs and arms trafficking was confirmed. The main form of control used by organized criminal groups is extortion, which they exercise through violent threats to

both tenants (small merchants) and drivers on public transportation routes; however, citizens in general are not exempt from this problem either.

Regarding urban environmental problems, the scarcity and poor quality of water in 73% of the neighborhoods stands out, as well as the deterioration and lack of coverage in the provision of essential urban services. It is worth emphasizing that there are the serious problems related to garbage and illegal dumps, feces and harmful fauna found across the borough. This situation is especially acute among vulnerable populations, such as the people living in irregular settlements.

To achieve good governance, it is necessary to know the specific context of each community and its relationship with the authorities. Based on the **analysis of the Mayor's Office's capacities,** the strengths, and areas of improvement in the **8 principles of good governance** were detected. There is room for improvement regarding personnel professionalization, strategic planning and program implementation, as well as in the monitoring and evaluation to ensure accountability. It is also essential to redouble efforts towards the digitalization and modernization of processes, procedures and access to services, among others.

In the short, medium and long term, UNODC in coordination with partner agencies and civil society organizations, seeks to build a solid and close relationship with the Mayor's Office of Iztapalapa, as well as with the people of Iztapalapa and their various sectors. To achieve this, it is necessary to address the 109 recommendations made in the Evaluation, which are associated to the following SDGs:

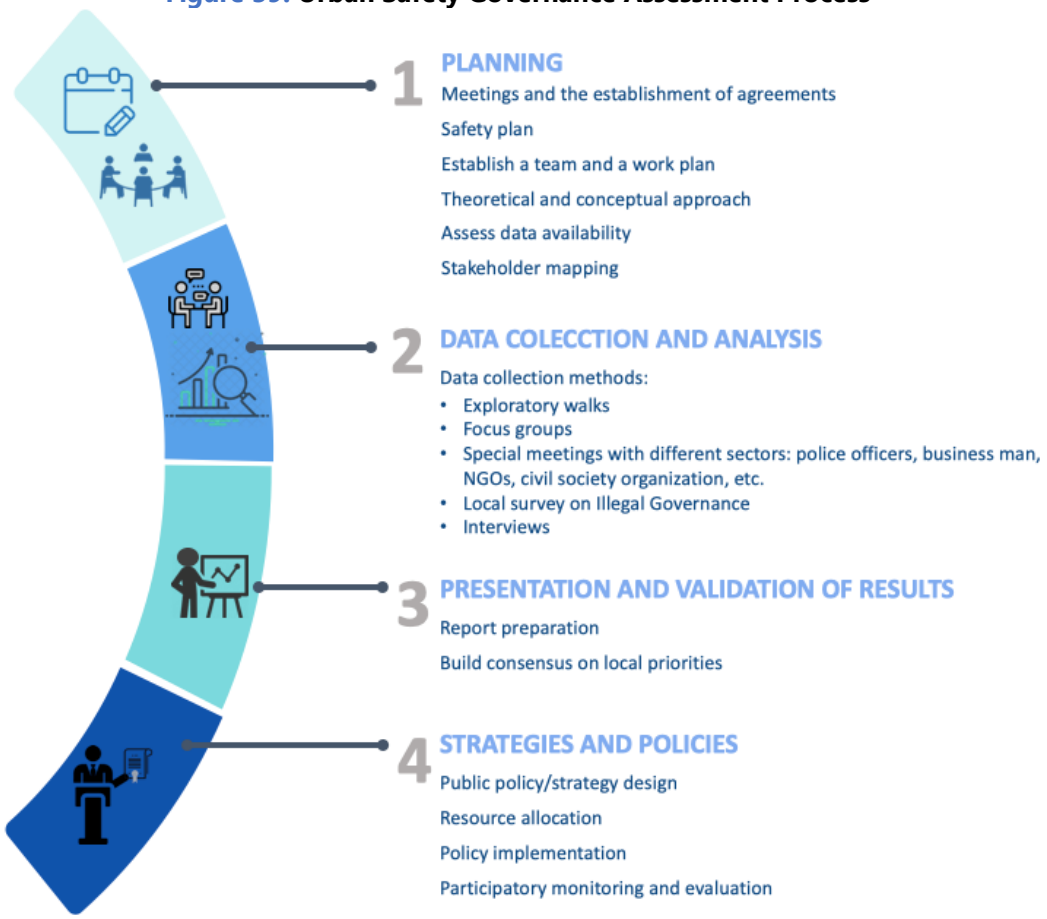
Sustainable Development Goals	Number of recommendations
SDG 3 Good Health and Well-Being	9
SDG 5 Gender Equality	31
SDG 11 Sustainable Cities and Communities	27
SDG 16 Peace, Justice and Strong Institutions	42

Together, we will achieve the implementation of actions that will allow us to understand and continue monitoring the threats and vulnerabilities of the borough. It is vital to jointly contribute to the strengthening of existing capacities to positively influence decision-making and evidence-based actions aimed at achieving **good governance** and the **reconstruction of the social fabric that that will increase the quality of life of its inhabitants and transition towards sustainable development**.

Methodological annex

Study objective

The Urban Safety Governance Assessment is part of a global initiative launched by the United Nations Department of Economic and Social Affairs (UNDESA) and implemented by the United Nations Office on Drugs and Crime (UNODC). The Evaluation is conducted in four regions around the world: Iztapalapa in Mexico City (Mexico), Mathare in Nairobi (Kenya), St. Michael and Christ Church (Barbados) and Tashkent (Uzbekistan).



This intervention is based on the project Local Safety Audits[225] and takes the Urban Security Governance Approach[226] as a conceptual framework, which seeks to provide public policy implementers with a framework to address the intersection of global hazards and local dynamics in search of the elements that enable resilience building.

The Urban Safety Governance Assessment process consists of the following stages which have a series of actions that in some cases were carried out simultaneously:

[225] Project focused on improving the capacity of city administrations to collect and analyze crime data, in order to formulate and adopt policies and programs for urban crime prevention and safety, using a participatory approach. It was implemented in three countries: Cali, Colombia; Durban, South Africa and Querétaro, Mexico. Available at: https://auditoriadeseguridad-cdeunodc.org/

[226] It seeks to understand the relationship and interaction of risk factors with illicit external flows and highlights the need for context-specific responses that seek to reverse these risk factors and thus restore governance, reduce inequality and promote individual and community inclusion and resilience.

Figure 39. Urban Safety Governance Assessment Process

Source: Own elaboration. Based on the Safety Governance Approach for Safe, Inclusive, and Resilient Cities, 2019.

Development of the process

The objective of the implementation of this project is the identification of challenges and priority areas for intervention in Iztapalapa based on quantitative and qualitative information. Statistics on crime incidence in the neighborhoods of interest were complemented with the application of a participatory social approach with the use of mapping to identify threats, vulnerabilities and capacities in each of the selected neighborhoods. It is expected that the results will allow the development of policies and strategies based on coordination, as well as an increase in the capacity of the institutions and their officials. All these actions are described in the following sections:

Stage 1 - Planning

Meetings and establishment of agreements with the Mayor's Office of Iztapalapa

- May 16th, 2019: Meeting with the advisory group, the Mayor, CoE-UNODC and the United Nations Department of Safety and Security (UNDSS).

- September 11th, 2019: Meeting with the advisory group for information exchange.
- December 4th, 2019: Signing and exchange of understanding agreement between UNODC and the Mayor's Office of Iztapalapa.
- December 2020: Attendance to sessions of the Cabinet for the Construction of Peace and Security in Iztapalapa.
- January 20th, 2020: Meeting with the advisory group and the Mayor.

The purpose of the meetings was to explain the *Urban Safety Governance Assessment* project, to agree on the actions that will integrate the collaboration between UNODC and the Mayor´s Office, and create a close collaboration to obtain the necessary inputs and access to the Mayoralty's territory.

Safety Plan

In order to guarantee the safety of the team members during field work and clarify the support of the Mayor's Office in terms or security provision, a safety plan was developed through which:

- Regular contact was maintained with UNODC's security focal point and UNDSS, who were informed about the locations in the field and any activities carried out by the team.
- On the other hand, the team was physically accompanied by personnel of the Auxiliary Police (PA) from the Mexico City Ministry of Citizen Security (SSC-CDMX).

Conformation of the work plan and team

The team included seven members who carried out specific tasks for the collection and analysis of information during the different stages. The profiles are varied due to the type of tasks performed and with the aim to have an interdisciplinary perspective:

- Head of the UNODC's Center of Excellence and the Program to Prevent and Counter Corruption
- Researcher in crime prevention
- Assistant in statistical analysis
- Assistant in institutional management
- Assistant in georeferencing
- Assistant in public policy analysis
- Assistant in information systematization

Activity planning began in December 2019.

Theoretical and conceptual approach

One of the priority activities before starting the field work was to establish the base variables to be used for the analysis of threats, vulnerabilities and capacities.

Assessment of data availability

From December 2019 to March 2021, the mapping of statistical, geographical and socio-demographic information was carried out. Official statistical information was obtained mainly from the following sources:

- Executive Secretariat of the National Public Security System.
- Mexico City General Prosecutor's Office.
- National Survey on Urban Public Security (ENSU), INEGI.
- National Survey on Victimization and Perception of Public Security (ENVIPE), INEGI.

The information on the programs, the calls for proposals for each program and the website of the Mayor's Office of Iztapalapa were reviewed. All the information was collected and recorded for later use in the drafting of the final report.

Additionally, after listing the information that was not freely available, several requests for information were made through the Transparency and Access to Public Information portals.

Stakeholder mapping

A database was developed with the name and contact information of key actors, members from civil society organizations, local leaders, representatives from the academic sector, businesspeople, as well as personnel from governmental institutions and non-governmental organizations that volunteered time to take part in the exercise.

Stage 2 - Data Collection and Analysis

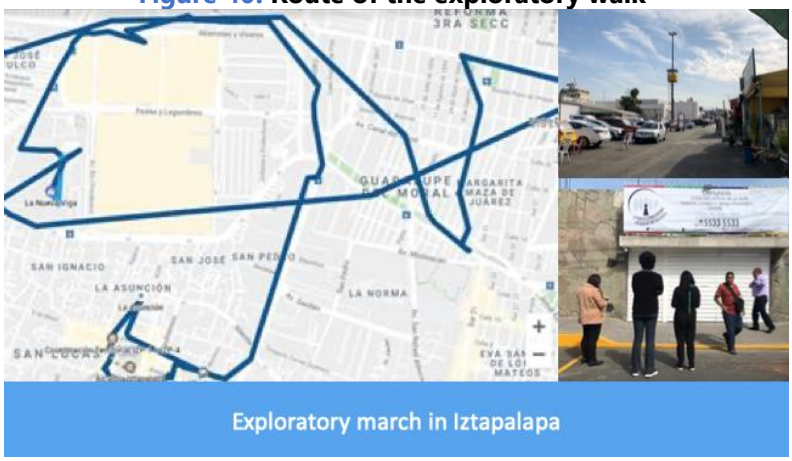
Data collection methods

Quantitative and qualitative methodologies were used for data collection. To implement a participatory diagnosis, focus groups and technical meetings were conducted. Guides were designed for the application of interviews and exploration walks. Additionally, a local survey on illegal governance was designed and applied to police officers.

Data collection and analysis process

Phase 1: The collection of information involved an institutional management phase from January to March 2020. This consisted of contacting each of the key actors, the authorities of the neighborhoods or institutions to agree on the entrance to closed spaces[227] and organize the call to gather groups with a maximum of 30, minimum 5, people who live, work, study or have any intervention in the neighborhood of interest. Also, the supplies to be used during all activities (stationery, refreshments and transportation for the CoE-UNODC team) were arranged.

Phase 2: Once the activities were organized, the implementation of the data collection methods began:



[227] Neutral spaces, without affiliation to any political party in order to preserve anonymity and for people to feel free to express themselves. Some examples of enclosed spaces used were sports facilities, cultural centers, classrooms, work facilities, auditoriums.

- Exploratory walks
- Focus groups
- Technical working groups
- Illegal Governance Survey
- Interviews

Exploratory walks

On January 7, an exploratory walk was held in the company of authorities of the Mayor´s Office of Iztapalapa. The objective was to identify the neighborhoods, organizations and key places of the Mayoralty's territory in order to have a first approach of its urban conditions.

Figure 40. Route of the exploratory walk

Source: Own elaboration with data collected during field work, 2020.

Focus groups

From January to March 2020, participatory social mapping was carried out in focus groups and technical working groups. The application of this qualitative technique focused on identifying the capacities, vulnerabilities and threats of the neighborhood to which the participants belonged (community leaders, citizens in general, children, representatives of civil society, academia or institutional sectors). High resolution maps of the neighborhoods were used as inputs, with symbology presenting the variables divided into the three categories of interest (capacities, vulnerabilities and threats).

Activities conducted by the team members were distributed as follows:

- Two facilitators who asked questions and pointed out on the map the variables mentioned by the participants.
- A person in charge of registering all the mentioned testimonies.
- One person in charge of logistics.

In some neighborhoods two or three information surveys were carried out as a form of validation and to corroborate the testimonies obtained at different times.

Table 1. Information collected by neighborhood.

Number of neighborhoods from which data was collected according to its number of crime reports	Neighborhoods with 1 information gathering	Neighborhoods with 2 information gatherings	Neighborhoods with 3 information gatherings	Total neighborhoods
25 high level 13 medium level 6 low	**35**	**6**	**3**	**44**

Source: Own elaboration.

Figure 41. Conduction of focus groups

Source: Own elaboration with data collected during field work, 2020.

Technical working groups

Eight technical meetings were applied in person with the following actors:

- Special Crime Prevention Unit
- Auxiliary Combat Police
- National Electoral Institute personnel
- Auxiliary Police and Special Crime Prevention Unit police officers
- Entrepreneurs and businesspeople
- Auxiliary Police from the Mexico City Ministry of Public Security, sectors: Oasis, Tezonco and Santa Cruz Meyehualco.

Local Survey on Illegal Governance

The surveys applied were a quantitative instrument based on the proposal of Campana and Varese[228], which consists of the creation of an Illegal Governance Index (i-Gov) based on the implementation of a survey applied to police officers in the United Kingdom.

In the case of the *Urban Safety Governance Assessment* in Iztapalapa, the survey was reused and adjusted to the context of the borough. The target population was the Auxiliary Police (PA) and the SSC-CDMX Police. It was implemented individually, confidentially and optionally, that is, at the end of the activity the participants of each focus group or technical working group could choose whether they wanted to answer it or not.

The survey had 11 questions with optional answers scaled from 0 to 4, organized in three sections:

A. **Organized criminal groups**: The questions in this section were aimed at identifying those criminal groups of which the police were aware of based on their work. The degree of fear, coercion, influence, control, involvement, neighborhoods with greater presence, and illegal markets were considered.
B. **Community role:** The questions were oriented to identify the community's interaction with criminal groups.
C. **Role of the police corporation:** In this section the questions were oriented to identify the acts of corruption within the corporation, as well as the respect they have to the code of ethics.

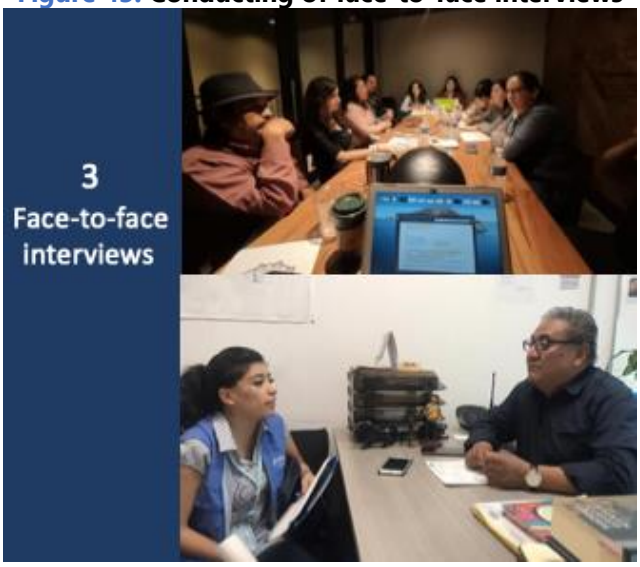
[228] Campana, P., y Varese, F. (2018). *Organized Crime in the United Kingdom: Illegal Governance of Markets and Communities.* British Journal of Criminology, 58 (6), 1381-1400. Available at: https://doi.org/10.1093/bjc/azx078

The survey was applied in person (43) and online (1,261)[229], resulting in the participation of 1,304 police officers from different sectors and territorial areas of Iztapalapa, both from the Mexico City Ministry of Security and from auxiliary police officers hired by the Mayor's Office of Iztapalapa.

Interviews

Twenty-seven interviews were conducted between February and September 2020, 3 interviews were carried out face-to-face and 24 were conducted online due to the COVID-19 lockdown. All interviews were applied to key actors from different sectors, including personnel from the Mayor's Office of Iztapalapa, officials of the Ministry of Citizen Security and representatives of civil society. The distribution was as follows:

- 17 public officials from the Mayor's Office of Iztapalapa
- 4 officials of the Mexico City Ministry of Citizen Security
- 2 from the business sector
- 3 from civil society
- 1 social stakeholder linked to the topic.



For their application, a semi-structured guide was designed with a series of topics of interest to identify current conditions, implemented actions and areas of opportunity of the Mayor's Office.

The structure of the guide was as follows:

- General data about the interviewee
- General information about the position
- Description of functions (services, programs, coverage and associations)
- Monitoring and evaluation (reports and results)
- Institutional coordination and linkage
- Human Resources
- Material resources and infrastructure
- Economic resources
- Regulations
- Main strengths of the General Office
- Main challenges of the General Office
- Main recommendations to strengthen the General Office
- Responses to COVID-19

[229] For the analysis only, the surveys applied remotely were considered, because the face-to-face ones were a pilot that enabled the improvement of the structure and questions for the analysis.

Figure 43. Conducting of face-to-face interviews

Source: Own elaboration with data collected during field work, 2020.

Phase 3: The systematization of the collected data, from the aforementioned 3 methods, was carried out at the same time the interviews were conducted. Regarding the social mapping and testimonies obtained from each focal group, they were recorded in writing and compiled in a database containing all the variables according to the three categories previously defined. As for the surveys, once the information was collected, it was compiled into a database to start counting the responses. Comments made during the interviews were recorded in the previously established guide, taking note of everything mentioned by the interviewees.

Difficulties in data collection

Field work began in January and activities had to be suspended in March 2020 due to the COVID-19 lockdown. Alternatives were sought out to complement the missing information. For this purpose, during lockdown, activities that had been planned to be carried out in person were carried out remotely, which did not affect the quality of the information collected.

As for the interviews, the missing ones were rescheduled during the months of April, May, June and July. They were applied remotely through a video call via Teams or WhatsApp. The procedure consisted of scheduling the interview days before and calling the interviewee on the selected day and time, when starting the interview the established guide was considered, notes were taken and the information was compiled to have a record and later use it for the analysis.

Figure 44. Conducting of the online interviews

Source: Own elaboration with data collected during field work, 2020.

The application of the survey on illegal governance was also suspended, so it was applied remotely. In the same way, the anonymity of the participants was respected and at the end, a total of 1,261 surveys were answered.

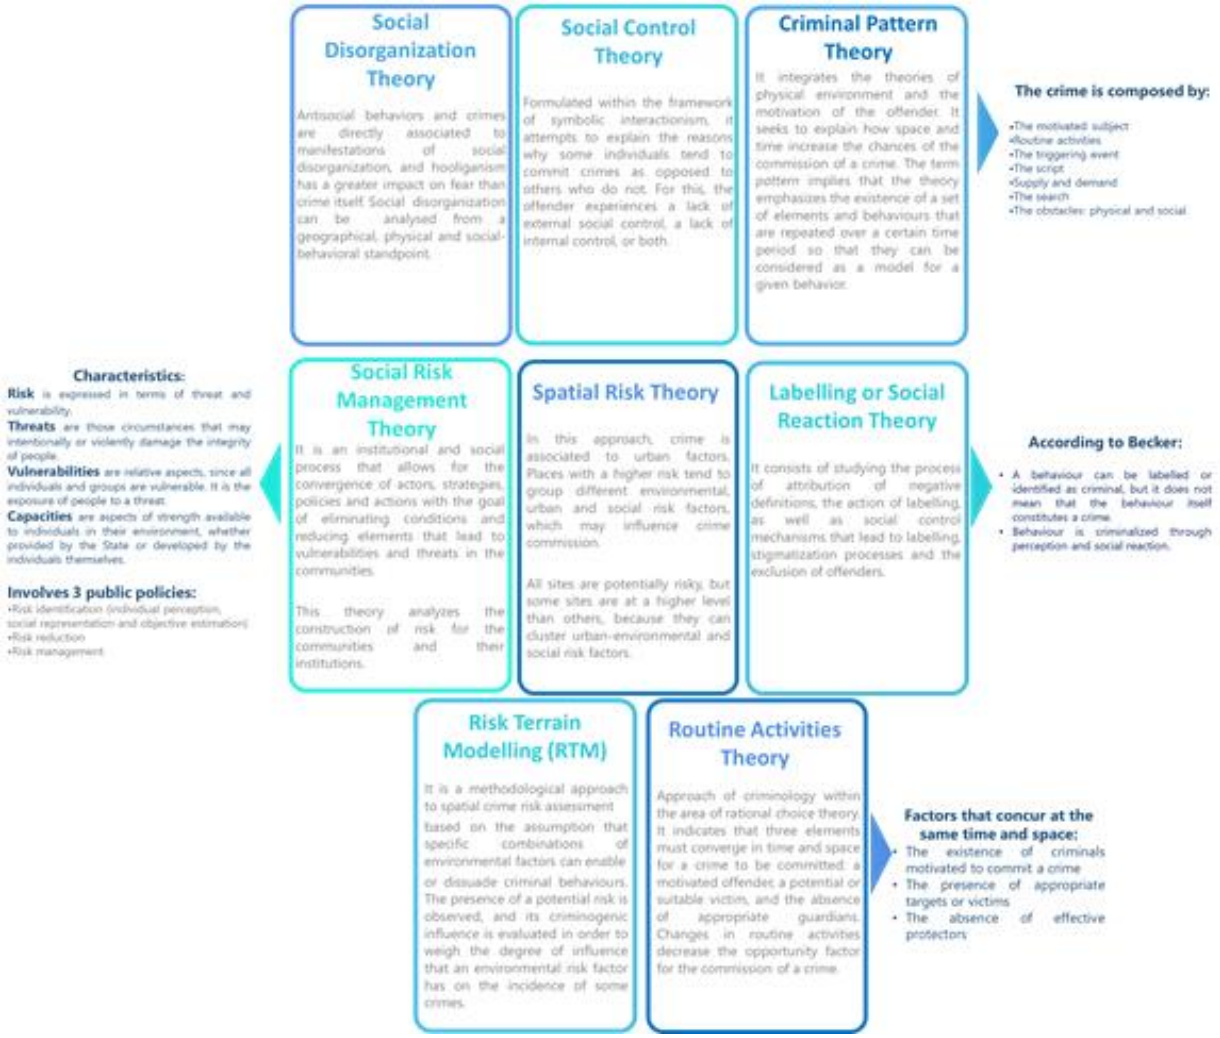
Quality control

Social participatory assessments

The information collected regarding capacities and some vulnerabilities during field work in the focus groups and technical working groups was validated using Google Maps. Based on the search of each neighborhood and using Street View, the variables mentioned were corroborated and those that were not pointed out were identified.

The photographic record of the activities served as evidence, but also as a form of validation of the number of participants. To ensure a greater quality control of the information in some neighborhoods, more than one information survey was carried out to verify the veracity and objectivity of the information. In addition, internal reviews of the final report were implemented.

Figure 45. Validation of data collection in the neighborhoods



Source: Own elaboration with data collected from Google maps, 2020.

Stage 3 - Presentation and validation of results
This stage is in the process of being drafted and revised.

Stage 4 - Strategies and policies
This stage will be implemented once the final report is presented and agreements are again established with stakeholders to begin the design of strategies and public policies, as well as the execution, monitoring and evaluation of these actions.

Theoretical approach
For the *Urban Safety Governance Assessment in Iztapalapa,* the following criminological theories were considered for the analysis.

Figure 46. Criminological theories

Indicators annex

The following indicators were used for the analysis and monitoring of the USGA in Iztapalapa and are mostly available for consultation at the national, state and borough or municipality levels.

Table 2. SDG 3-based indicators for Iztapalapa

SDG 3: Ensuring healthy lives and promoting well-being for all at all ages		
2030 Agenda indicators	**Indicators for the USGA analysis**	**Source and available years**
3.5.1 Coverage of treatment (pharmacological and psychosocial, rehabilitation and aftercare services) for substance use disorders **3.5.2** Harmful alcohol consumption defined according to the national context as the per capita alcohol consumption (from the age of 15) during a calendar year in liters of pure alcohol.	**1.** Average age of first drug use	• Institute for the Care and Prevention of Addictions, 2011
	2. Percentage of witnessed alcohol consumption	• INEGI, 2019-2020
	3. Percentage of witnessed drug use	• INEGI, 2019-2020
	4. Percentage of deaths related to the consumption of drugs	• Mexico City Ministry of Health, 2016
	5. Average age of patients admitted to the Iztapalapa Youth Integration Centers	• Youth Integration Centers, 2018
	6. Number of admissions to the Iztapalapa Youth Integration Centers	• Youth Integration Centers, 2018

Source: Own elaboration.

Table 3. SDG 5-based indicators for Iztapalapa

SDG 5: Achieve gender equality and empower all women and girls		
2030 Agenda indicators	**Indicators for the USGA analysis**	**Source and available years**
5.2.1 Proportion of women and girls aged 15 and over who have suffered physical, sexual or psychological violence at the hands of their current or former partner in the last 12 months, disaggregated by form of violence and age **5.2.2** Proportion of women and girls aged 15 and above who have experienced sexual violence by non-partners in the past 12 months, disaggregated by age and location **5.3.1** Proportion of women aged 20-24 who were married or in a stable union before their 15th birthday and before their 18th birthday	**1.** Number of domestic violence crime reports	• SESNSP, 2015-2020 • Mexico City General Prosecutor's Office, 2015-2020
	2. Number of domestic violence crime reports during the COVID-19 lockdown	• SESNSP, 2015-2020 • Mexico City General Prosecutor's Office, 2015-2020
	3. Number of emergency calls received for domestic violence	• Mexico City Emergency Attention Center (Locatel), 2020
	4. Number of rape crime reports	• SESNSP, 2015-2020 • Mexico City General Prosecutor's Office, 2015-2020
	5. Number of sexual harassment crime reports	• SESNSP, 2015-2020 • Mexico City General Prosecutor's Office, 2015-2020
	6. Number of sexual assault crime reports	• SESNSP, 2015-2020 • Mexico City General Prosecutor's Office, 2015-2020
	7. Number of femicide crime reports	• SESNSP, 2015-2020 • Mexico City General Prosecutor's Office, 2015-2020
	8. Number of violence against women crime reports	• SESNSP, 2015-2020 • Mexico City General Prosecutor's Office, 2015-2020

SDG 5: Achieve gender equality and empower all women and girls		
2030 Agenda indicators	**Indicators for the USGA analysis**	**Source and available years**

Good practices in crime prevention programs at the global level annex

Globally, different crime prevention and security programs have been adopted showing effectiveness and possible replicability. In Mexico City and in the Iztapalapa borough, some programs that are currently executed share similarities with others implemented in countries like Colombia, Argentina, Brazil, Canada and other locations in Mexico. Programs with sports and art components, as well as with urban transformation, have proven effective when promoting social cohesion.

Six good practices are presented in the following paragraphs, which have shown successful results in terms of crime prevention and security.

- UVA Medellin
- Barrio Adentro Program
- Government of the State of Minas de Gerais
- National Police of Colombia
- Justice Department of Nova Scotia
- The Advisory Center and Youth Promotion A.C.

Table 6. Global good practices in crime prevention

Units for Articulated Life (UVA, as abbreviated in Spanish) The program consists in the edification of 20 urban spaces in different neighborhoods in Medellin, Colombia. The objective of this program was to get the community close to different activities and services such as water, electricity, as well as cultural and leisure activities. These actions intended to boost the sense of belonging from the communities to the environment in which these urban spaces were located.	
Program Barrio Adentro, Altos de San Lorenzo This is a crime prevention program that targeted children and youth that come from vulnerable backgrounds, social exclusion and previous conflict with the law. The program provides individual sessions, as well as family and group workshops with the purpose of achieving social inclusion.	
Fica Vivo The project aims to prevent and reduce homicide in the Mines of Gerais, Belo Horizonte. The strategies adopted by the program focus on cultural and artistic workshops as well as sports. It also involves police intervention in conflict areas within the community.	

National Plan of Surveillance per quadrant The National Plan of Surveillance per quadrant in Cali, Colombia, focuses on violence and crime issues identified at the local level. The plan includes the construction of additional police stations, have small police walking groups and greater contact with the inhabitants from the community.	
Operation Ceasefire HRM[230] The program seeks to prevent youth, in the Halifax borough in Canada, from getting involved in gangs and violent crimes. The program has an extensive collaboration network: civil society organizations, members from the community, police services, schools, local business and other communitarian organizations. Workshops and capacity building sessions are conducted and promoted frequently.	
Transition from elementary school to high school The program is implemented in Ciudad Juarez, Chihuahua and consists of the provision of support to students from elementary schools who are at risk of dropping out of elementary or middle school or deciding against enrolment in high school level. As part of the program, summer courses are offered to students and their families to help them overcome their academic limitations.

Executive Summary

Organized crime is as deadly as armed conflicts

Since the adoption of the UN Convention against Transnational Organized Crime in 2000, **organized crime has been responsible for approximately 95,000 homicides every year**. This is roughly the same as the annual number of deaths caused by armed conflicts worldwide over the same period. However, unlike armed conflicts that can draw significant international attention, much of the human suffering caused by organized crime remains hidden and not fully understood.

While violence targeting the community, rival groups or the State is perhaps the most visible manifestation of organized crime, the absence of violence does not necessarily indicate the absence of organized crime. Dominant organized criminal groups may actively suppress violence in the areas they control by solving disputes and enforcing alternative rules to those of the State.

Competition between rival organized criminal groups can have considerable repercussions. For example, higher levels of lethal violence in Latin America can be partly attributed to competition between organized criminal groups over cocaine markets.

Organized crime is a multi-billion dollar industry

Organized crime groups engage in highly profitable activities, providing groups with significant financial leverage. The global illicit drug trade is likely to generate hundreds of billions of dollars for organized criminal groups each year. In the period 2019–2022, UNODC estimates that between US$3.4 and US$6.9 billion in illicit financial flows related to opiate and methamphetamine trafficking have crossed borders every year along the Balkan route, amounting to a sizeable share of the gross domestic product of some countries along the route such as Afghanistan (US$17.2 billion in 2023) and North Macedonia (US$16.7 billion in 2024). While drug trafficking remains the financial backbone of most transnational organized criminal groups, they are involved in a wide range of other forms of trafficking, from trafficking in persons to firearms, from wildlife to waste, and from fuel to counterfeited products. Cybercrime has also become an important source of income; financial losses from online scams targeting victims in East and Southeast Asia alone were estimated to range from US$18 billion to US$37 billion in 2023.

Organized crime contaminates licit economy, including legal businesses, financial sectors and livelihood

The actors involved in illicit markets associated with natural resources are highly diverse, with **organized criminal groups hiding behind legal businesses and professional service providers, blurring the line between legal and illegal markets**. Crimes that affect the environment typically involve a wide array of actors. In forest crime and mineral crimes, for instance, they range from organized criminal groups to legitimate companies and individuals. Businesses operating legally in these sectors may shift into illegal practices, engaging in bribery, collusion with officials, or violating permit conditions to maximize profits. Members of local populations – including unemployed youth, marginalized groups, Indigenous Peoples and migrant workers – may participate in illegal logging, whether to sustain livelihoods or under coercion. In trafficking in persons, the available evidence indicates that different actors operating under legal façades get involved in the exploitation of victims in forced labour, for instance in the form of licenced recruitment agencies, in the fishing industry, and agriculture and construction sectors among others. These networks are fluid, with illicit actors and lawful corporations often connected through supply chains. The result is a complex web of actors, motivations and relationships that blurs the line between legal and illegal activity.

Criminal organizations converge into the same areas for different markets

Organized crime actors often converge in geographical hotspots to exploit different criminal and criminal financial opportunities. This convergence of organized crime is evident in some parts of Latin America, where drug trafficking proceeds are used by organized criminal groups to further exploit the territories under their control through land speculation, illegal logging, illicit mining and wildlife crime. Trafficking in

1445

persons for forced labour and for forced criminal activities has also been documented in these contexts. Similarly, in some parts of Africa, armed groups recruit children to extract gold and cooperate with organized criminal groups to smuggle these minerals across national borders into international legal markets, while in the so-called "Golden Triangle" in Southeast Asia, organized criminal groups exploit weak jurisdictions to set up industrial-scale cyberfraud compounds, where victims of trafficking are coerced into carrying out online scams.

The organized crime use of cyberspace to target and profit from victims globally

The rapid development of new information and communication technologies (ICTs) has amplified opportunities for organized criminal groups worldwide. **New technologies have enabled criminal groups to more easily target victims globally and exploit the dependence of institutions, businesses, and individuals on ICTs**. While cybercriminals often operate as part of loosely organized networks that form and dissolve around specific projects, some cybercrime groups exhibit more hierarchical structures, carrying out industrial-scale online fraud and extortion operations. No country or community is immune to the threat posed by cybercrime, with increases in incidents reported in developing and developed countries alike. Technological developments have also facilitated the adoption of new money-laundering schemes. For example, virtual assets are used by criminals to launder funds from a wide range of predicate offences, including from fraud, ransomware attacks or drug trafficking.

Introduction

Marking the twenty-fifth anniversary of the adoption of the United Nations Convention against Transnational Organized Crime (UNTOC or "Palermo Convention"), this Research Brief analyses the features and dynamics of organized crime from a transnational perspective. It is based on UNODC studies and data that deal with organized crime at global, regional and national levels, or that examine organized crime through the lens of different illicit markets. UNODC sources were complemented by peer-reviewed academic studies, publicly available research reports and official information provided to UNODC by Member States.

The analysis is supplemented by 12 empirical case studies from different world regions. The case studies are presented in the Annex and illustrate the various trends, dynamics, and mechanisms shaping organized crime today. They are not meant to be comprehensive and should not be interpreted as representing the most harmful manifestations of transnational organized crime. Instead, they serve an illustrative purpose, highlighting issues of particular analytical and policy relevance. As with all desk-based research, the findings are shaped by the availability and quality of the available information. The Brief does not provide an exhaustive account of organized crime worldwide, but instead offers an analytically driven exploration of selected issues using a wide geographical perspective.

The Brief is structured around four chapters. The first chapter maps out the different manifestations of organized crime today and highlights its negative impacts on individuals and societies. The second chapter explores how organized criminal groups[1] (OCGs) establish and maintain criminal governance, enforcing alternative rules to those of the State in the territories under their control. The third chapter analyses how organized crime leverages modern technology to expand its criminal activities, while chapter four explores the different illicit markets in which OCGs are active, from drug trafficking to trafficking in persons and from crimes that affect the environment to firearms trafficking.

To conclude, the Brief presents key policy considerations for Member States, which emerge from 25 years of UNTOC implementation worldwide.

1447

The UN Convention against Transnational Organized Crime

The Convention against Transnational Organized Crime is one of the most widely ratified international treaties, with 194 Parties as of February 2025.[2] The Convention is further supplemented by three protocols, which target specific areas and manifestations of organized crime: trafficking in persons[3], smuggling of migrants[4] and the manufacturing of and trafficking in firearms.[5]

In line with Article 1, the Convention aims to promote international cooperation to more effectively prevent and counter transnational organized crime. To that end, it seeks to bridge differences across national legal systems, set standards for domestic normative responses and establish mechanisms for international cooperation.

Twenty-five years after the adoption of the Convention, tackling transnational organized crime remains a challenge that cannot be addressed by one State in isolation. OCGs continue to operate across national boundaries and take advantage of discrepancies in national legal systems, law enforcement structures and prosecution practices. Closing gaps in national legislation and enabling seamless international cooperation is at the core of effective responses to transnational organized crime.

In that respect, the Convention performs a dual function. First, it provides a subsidiary normative framework enabling cooperation where no bilateral or multilateral agreements exist. Second, it enables normative convergence by aligning national legal systems with international standards, thus promoting greater coherence in cross-border criminal justice efforts. The Convention regulates mutual legal assistance, extradition, and the transfer of criminal proceedings, as well as cooperation in the confiscation of proceeds of crime or property. These mechanisms allow authorities to gather evidence, access critical information, freeze and seize assets derived from criminal activity, and apprehend fugitives who might otherwise evade justice.

A key feature of the Convention is its open-ended definition of "serious crime" contained in Article 2. This prevents the Convention's obsolescence, enabling it to remain functionally adaptable in the face of new, emerging and evolving forms of crime, including, for example, the smuggling of commercial goods, trafficking in cultural property, and organized fraud (including cyber-enabled fraud) among others.

The UNTOC Review Mechanism, launched in 2020, reinforces this framework by providing for the systematic assessment of States Parties' implementation of the Convention and its three supplemental protocols. The process helps States Parties identify gaps, good implementing practices and technical assistance needs, thereby promoting the effective and coherent alignment of national frameworks with the international legal standards set forth by the four instruments.

The manifestations and impacts of **organized crime today**

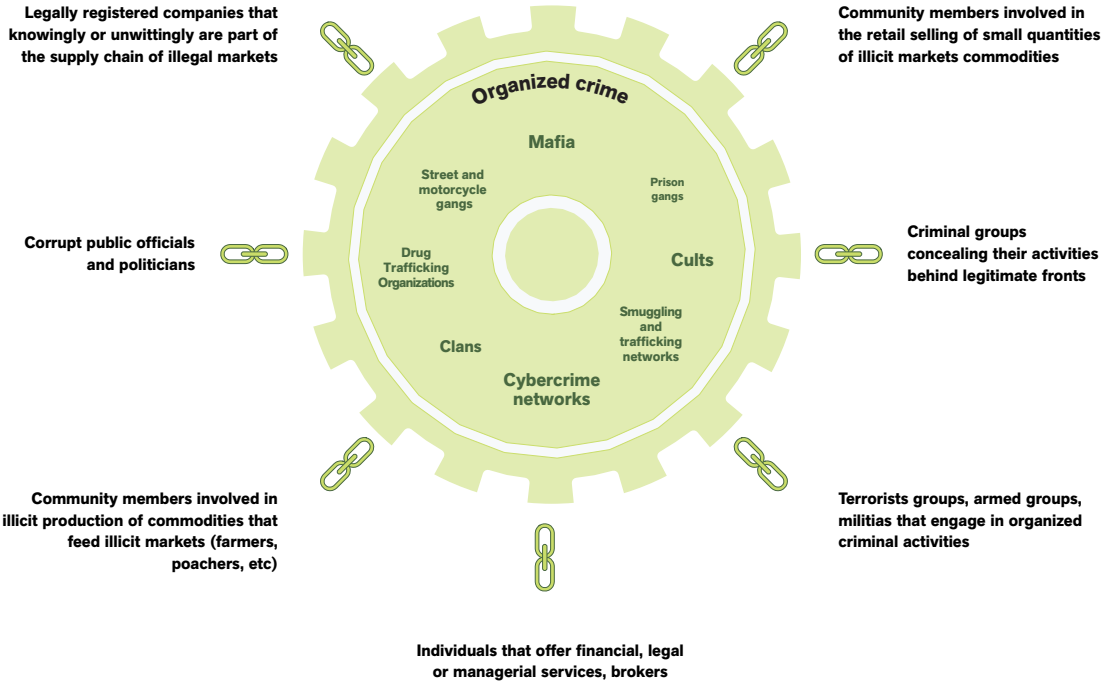
1450

Key points

- Since the adoption of UNTOC in 2000, organized crime has been responsible for approximately 95,000 homicides every year, roughly as many as the annual number of deaths caused by armed conflicts worldwide.
- Globally, around one-fifth of intentional homicides are caused by organized criminal groups. In the Americas, organized crime-related homicides represent around half of all intentional homicides.
- Organized crime today has many different manifestations, often eluding traditional labels and blurring legal categories.
- While more hierarchical organized criminal groups frequently employ violence to establish territorial control, groups with more horizontal structures are less likely to resort to violence, focusing instead on the efficient, short-term exchange of illicit goods and services.
- The proceeds derived from illicit activities provide organized criminal groups with significant financial leverage. For example, the illicit drug trade alone generates hundreds of billions of dollars per year. These profits enter and destabilise the international financial system and enable transnational organised crime groups to expand.

The challenge of labelling organized crime

UNTOC provides a legal and authoritative definition of organized criminal groups as "a structured group of three or more persons, existing for a period of time and acting in concert with the aim of committing one or more serious crimes or offences [...] to obtain, directly or indirectly, a financial or other material benefit."[6] In practice, a wide range of actors may be engaged in illicit activities, including gangs, insurgents, militias, private security contractors, logistics companies, and even licenced businesses. In many instances, these actors can be found to cooperate along the same supply chains.[7] However, no matter which specific terminology is used to describe the different groups engaged in illicit activities, they all have in common the commission of crimes for the purpose of financial gain.



Using strict labels for organized crime can be challenging. Some groups labelled as rebels, insurgents, terrorists or armed groups in conflict settings have adopted organized criminal practices to fund their political agenda; in South America, for instance, the armed groups *Ejército Gaitanista* de Colombia and the *Ejército de Liberación Nacional* are involved in transnational organized crime, including cocaine production and trafficking.[8] In the Mekong region, ethnic armed groups and militias play a key role in protecting physical sites of transnational organized crime, including cyber-enabled fraud compounds ("scam farms")[9] and gambling operations. In some cases, armed groups have been reported to hold direct stakes in the online fraud and gambling industries.[10]

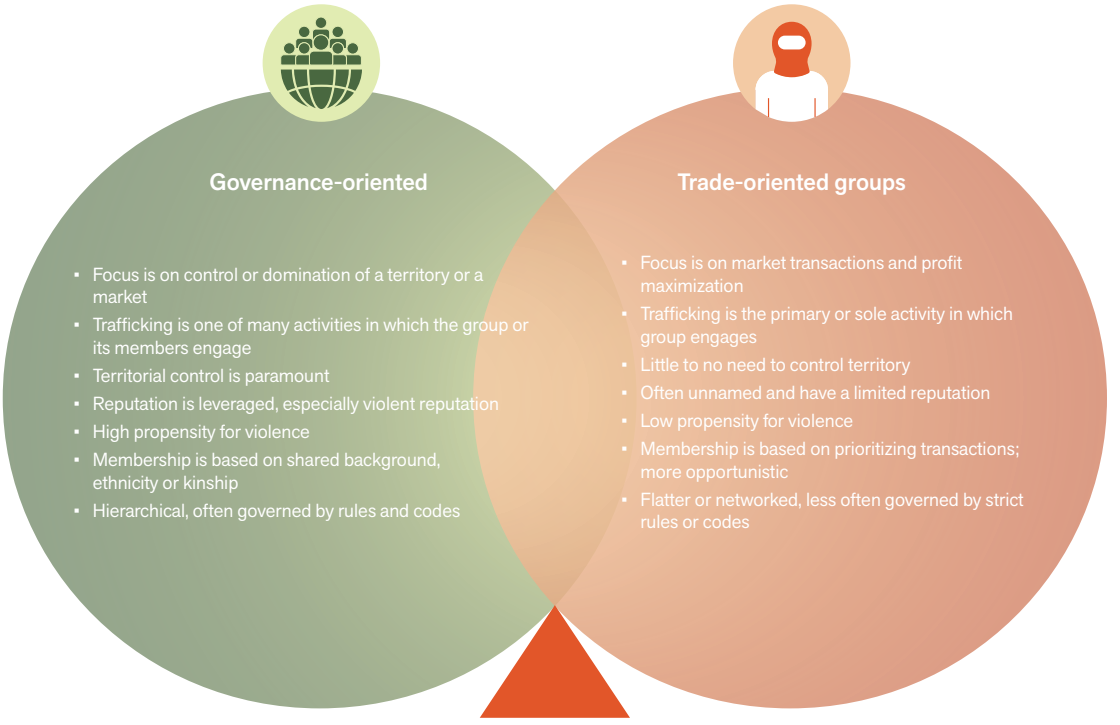
The diversity of actors and practices that are part of or linked to organized crime is particularly evident in relation to crimes that affect the environment. In forest and minerals crime, for instance, involved actors range from OCGs to legitimate companies and individuals. Businesses operating legally in these sectors may shift into illegal practices, engage in bribery or violate permit conditions to maximize their profits.[11] Members of local populations – including unemployed youth, marginalized groups, Indigenous Peoples and migrant workers – may participate in illegal logging and mining, whether to sustain their livelihoods or under coercion.[12] Criminals who engage in trafficking in persons may in turn disguise themselves behind the façade of a licenced recruitment agency,[13] while online gaming platforms in Southeast Asia may appear to be legal entities, even though they engage in industrial-scale money-laundering activities at the service of transnational OCGs.[14] The result is a complex web of actors, motivations and relationships that blurs the line between legal and illegal activities and makes it difficult to use traditional labels for organized criminal groups.

1451

The multitude of actors

involved or connected with organized crime

Characterizing organized crime[15]



UNTOC provides a global legal reference point to define OCGs. It does not differentiate between different types of organized groups or the structure of the groups, as long as the group is engaged in profit-driven (serious) criminal activities involving three or more individuals and operating over a period of time.[16] By contrast, the academic literature discusses additional defining characteristics of OCGs, such as internal hierarchies, the use or threat of violence, the use of corruption, continuity beyond present membership, and group adherence to an internal code.[17] Much of the academic literature argues that violence is a constitutive factor of organized crime. However, some OCGs, including those that traffic drugs, may not necessarily need to employ or threaten violence.

In relation to drug trafficking groups, the academic literature has analysed how groups vary in their activities and structure, but it is challenging to identify clusters of groups with the same characteristics. Like any other social organization, OCGs find ways to adapt to the environment in which they operate. Each groups' characteristics are dynamic and can change across places and time – shaped by issues such as State capacity to enforce the rule of law and underlying political, cultural and social conditions. This makes every group unique. But within this diversity and fluidity, groups generally appear to be oriented either towards governance or towards trade.

For example, drug trafficking groups oriented towards trade are generally more agile and prioritize market transactions and profit maximization, whereas those oriented towards governance are found to be more hierarchical and seek to control territories or the legal and illegal markets and people within them.[18] A key dimension to consider in analysing an OCG is whether it engages in criminal governance as a distinct activity from illicit trade or purely in predatory activities.[19] Groups oriented towards criminal governance have been identified as engaging in a variety of activities, both legal and illegal, in order to dominate a market or a geographical area.[20] They may have fixed hierarchies and use internal codes of conduct to maintain order. They typically regulate criminal (and sometimes non-criminal) activities, employing violence or the threat of violence to establish and maintain control of their territory, keep members in line, settle disputes and protect the group's reputation.[21] Corruption may also be utilized, including grand corruption that compromises State institutions. Control is paramount to governance-oriented groups, especially control over physical territory and services. Control can also extend to extortion in the form of taxes levied on the activities, licit or otherwise, that are carried out in that territory or market.[22]

Organized criminal groups

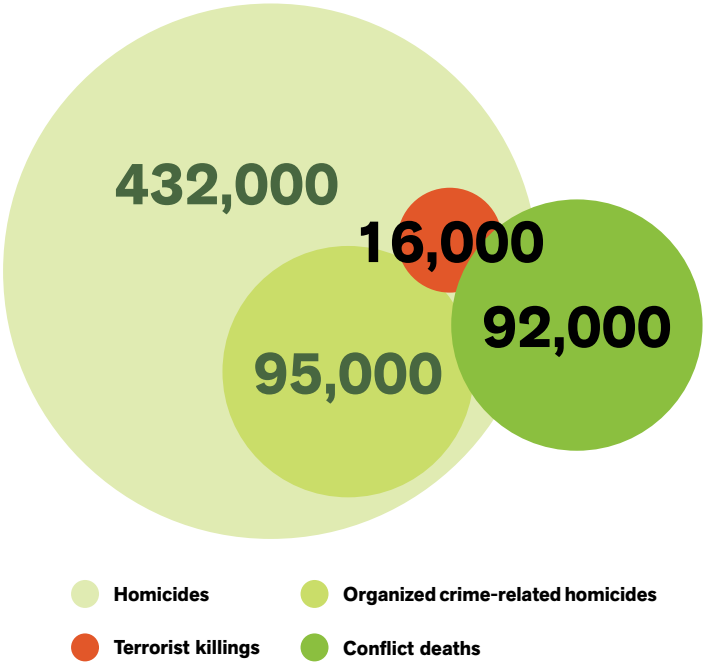
can be characterized around a continuum of activities that are oriented towards governance or trade

Transnational organized crime

impact crime

Spread violence

- 95,000 homicides per year
- Spread fear among population
- Violence against state actors



Multidimensional impact

- Harm to peace and security
- Harm to governance and role of law
- Harm to socio-economic development
- Harm to environment
- Harms to - financial stability and financial sector

1453

Average annual number of deaths

caused by homicide, organized crime-related homicide, terrorism and armed conflict, 2000–2023

Sources: Estimates are based on UNODC homicide statistics. Conflict death estimates are from the Uppsala Conflict Data Program/Peace Research Institute Oslo (UCDP/PRIO) Armed Conflict Dataset and include deaths from state-based violence, non-state violence, and one-sided violence. Terrorist killings estimates are from the Global Terrorism Database. Data on terrorist killings for the years 2021-2023 are not available.

Note: Death as a result of terrorist activities is counted as intentional homicide (ICCS). International datasets on conflict deaths and terrorism, on the one hand, and UNODC homicide statistics, on the other, have a certain degree of overlap. The same killing may meet the ICCS criteria, the criteria of the Uppsala Conflict Data Program (UCDP) database and those of the Global Terrorism Database.

By contrast, drug trafficking groups that are oriented towards illicit trade often have flatter structures than governance-oriented groups. This flatter structure facilitates the completion of transactions and enables flexibility in membership and roles.[23] The more fluid organizational structure reinforces their adaptability in different markets or regions.[24]

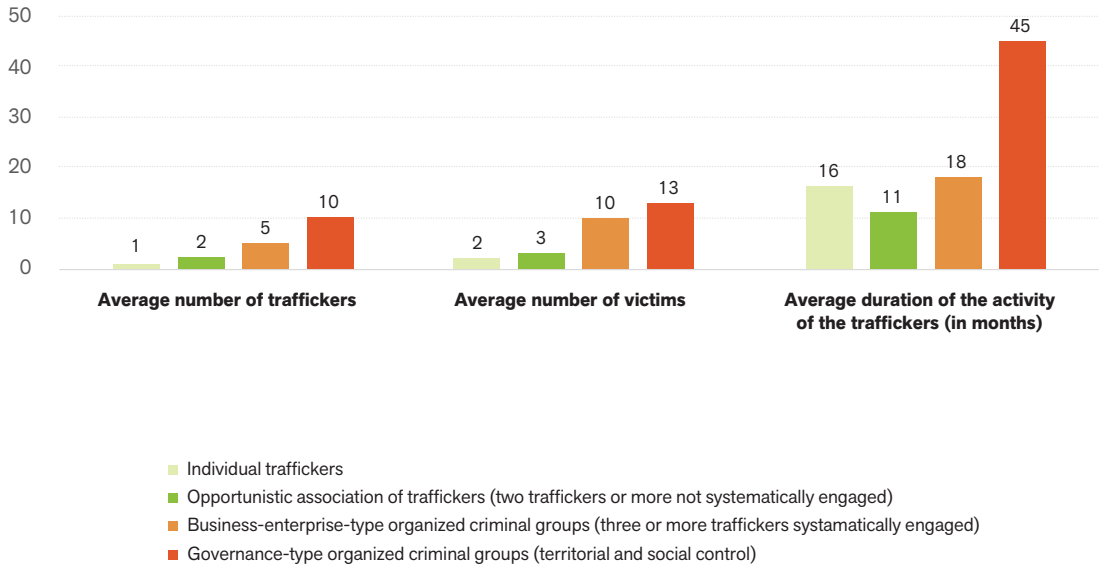
The global harm of organized crime is high, but much of it is hidden and not directly measurable

No country or region is unaffected by organized crime. OCGs operate in all environments, from local communities to entire sub-national regions, the high seas, and warzones. Across all these geographical areas, organized crime causes wide-ranging harm.

Violence is often the most visible manifestation of the harm generated by OCGs. Quantifying the global impact of violence caused by such groups remains challenging due to limited data. However, a rough estimate indicates that between 2000 – the year of the adoption of UNTOC – and 2023, organized criminal groups were responsible for approximately 95,000 homicides every year, roughly as many as the average annual number of deaths caused by armed conflicts (92,000).[25] Around one-fifth (22 per cent) of intentional homicides globally with information on their situational context are caused by organized criminal groups. In the Americas, organized crime-related homicides represent half (50 per cent) of all homicides with information on the situational context.[26]

Illicit activities are often carried out by individual criminals or opportunistic associations of criminals, but when OCGs engage in these activities, they tend to result in comparatively greater harm. For example, when OCGs engage in human trafficking, they tend to traffic more people than non-organized traffickers, for longer periods and in more violent ways.

Share of homicides by type



global and regional - 2021 (or latest year available)

Source: UNODC homicide statistics. Note: Data are from 108 countries that reported at least one data point on a homicide type. Missing values for homicide types are set to zero and the difference between reported total homicides and reported homicide types is assigned to the unknown homicide category. The lower bound share refers to the proportion of a reported homicide type over the total reported homicides. The best estimate share refers to the proportion of a reported homicide type over the sum of all reported homicide types (excluding the unknown homicides). The upper bound share refers to the proportion of the sum of a reported homicide type plus the unknown homicides over the total reported homicides. Unknown homicides are "re-assigned" at the regional level rather than the country level. Regional shares are computed by using the simple average shares of countries with data for countries without data. The global share refers to the average national shares weighted by the number of estimated homicides in each country for the year 2021. The total is not equal to 100 per cent due to rounding.

1455

FIG. 1 Average number of traffickers, average number of victims and average duration of traffickers' activity per single case, by type of criminal actor.

Note: Based on information on 3,121 traffickers convicted in 942 court case summaries.

Violence is only one part of the harm generated by organized crime. For example, the impact of organized criminal activities on public health is widely documented.[27] Globally, the use of drugs supplied through illicit markets is estimated to lead to millions of premature deaths and healthy years of life lost due to disability every year.[28] In territories where journalists, community leaders, and human rights defenders are targeted or killed for exposing the activities of organized crime, civic spaces shrink and public trust is eroded by fear. Trafficking in cultural property destroys irreplaceable heritage while also funding terrorist operations.[29] Crucially, organized crime also undermines the effectiveness, independence and legitimacy of government institutions, disrupts legitimate trade and financial systems, and exacerbates poverty and inequality.[30] Organized criminal groups may interfere with democratic processes, including by intervening in local elections, capturing local governance institutions, and murdering and intimidating politicians or community members.

The global scale of organized criminal activity and its impacts on the economy are difficult to reliably estimate due to the lack of quality data and the hidden nature of such activities. While estimates of the illicit proceeds from drug trafficking vary, the illicit drug trade is likely to generate hundreds of billions of dollars each year worldwide.[31] Proceeds derived from illicit activities provide organized criminal groups with significant financial leverage over local State institutions, enabling them to infiltrate key government institutions (see *Chapter 2: Criminal governance – how organized crime captures communities and institutions*). Research on illicit economies has shown that they can distort the legal economy and undermine investment and sustainable growth. The International Monetary Fund (IMF), examining the economic correlates of crime and violence in Latin America and the Caribbean, estimates that a 10-percentage point increase in the share of "crime-related news" is associated with a 2.5% contraction in industrial production three quarters later.[32] The cost of crime in the same region has been estimated at some 3.4 per cent of the countries' GDP.[33]

OCGs can also undermine the equal distribution of public resources, compromising and diverting public funds[34] that could be invested in health, education, infrastructure, and other public services.[35] Illicit financial flows from organized crime activities drain resources needed for sustainable development, hindering domestic resource mobilization efforts. Furthermore, OCGs can penetrate the legal economy through illegal means, for example by exerting influence over public administrations to unlawfully obtain public contracts or subsidies. Together with extortion rackets, these practices distort market competition and can drive up the costs of basic goods and services (see *Chapter 2: Criminal governance – how organized crime captures communities and institutions*).

1456

Criminal governance

how organised crime captures communities and institutions

1458

Key points

- Criminal governance refers to the capacity of organized criminal groups to establish and enforce alternative rules to those of the State, often through coercion, corruption, selective service provision, and market manipulation.
- Control over financial assets/proceeds of crime enables TOC groups to establish territorial and governance control and community capture.
- Extortion of local businesses is frequently used as a source of revenue for organized criminal groups engaged in criminal governance.
- No country or community is immune to the threat of criminal governance, which can occur at different levels of sophistication and in diverse contexts, from neighbourhood-level control to the systemic infiltration of national institutions.
- The result of criminal governance is often the erosion of State legitimacy and efficiency, including its capacity to provide protection and security to citizens and businesses.
- Territorial control also allows groups to consolidate and expand illicit activities, facilitating for instance the spread of drug trafficking.

Capturing institutions and communities

Criminal governance is one of the key global threats emanating from organized criminal groups. Criminal governance refers to the capacity of such groups to establish and enforce alternative rules to those of the State, through means that include coercion, intimidation, corruption, selective service provision, and market manipulation.[36] Criminal governance is not a new phenomenon. It has been widely documented since at least the nineteenth century and in all world regions.[37] Yet, it remains a significant threat to countries and communities worldwide. The impact of criminal governance is often the erosion of State legitimacy and efficiency, including its capacity to provide protection and security to citizens and businesses. And it extends to the people living in the affected communities as shown for example by the use of sexual violence against women and girls in the territories under OCG control and instances of recruitment of children in organized criminal groups (see *Case study 1 - Gangs and governance in Haiti: A fragile State at the crossroads of illicit markets*).

No country is immune to the threat of criminal governance

Not all OCGs engage in criminal governance,[38] but those that do pose a significant threat to the rule of law, democratic institutions, and human rights. Criminal governance can occur at different levels and contexts, from neighbourhood-level control to the systemic infiltration of State institutions.

Haiti is a particularly telling example of how criminal gangs can severely compromise State authority. In 2024, Haitian criminal gangs were estimated to control about 85 per cent of the capital, Port-au-Prince, and significant areas beyond. By seizing ports, border crossings and other key access points to the country and key financial resources, they have been able to weaponize crucial supply chains and exert further pressure on Haiti's State institutions.[39] In parts of the world where the rule of law is stronger and countries have greater institutional and financial capacity, OCGs may operate in a much more constrained environment.

1459

Criminal governance

is secured in two ways

By cooperation

Organized crime controls communities by providing services

By coercion

Organized crime controls communities by using violence, threats and intimidation

Targets of organized crime violence

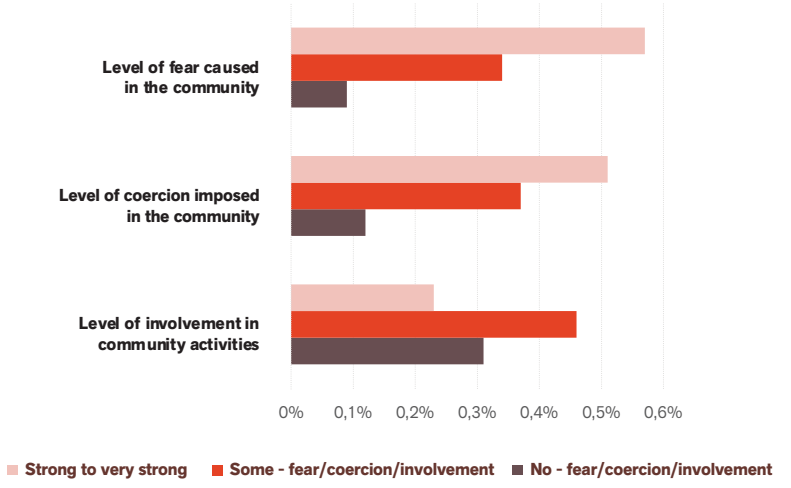
1

Against communities and civil society

2

Against other criminal groups

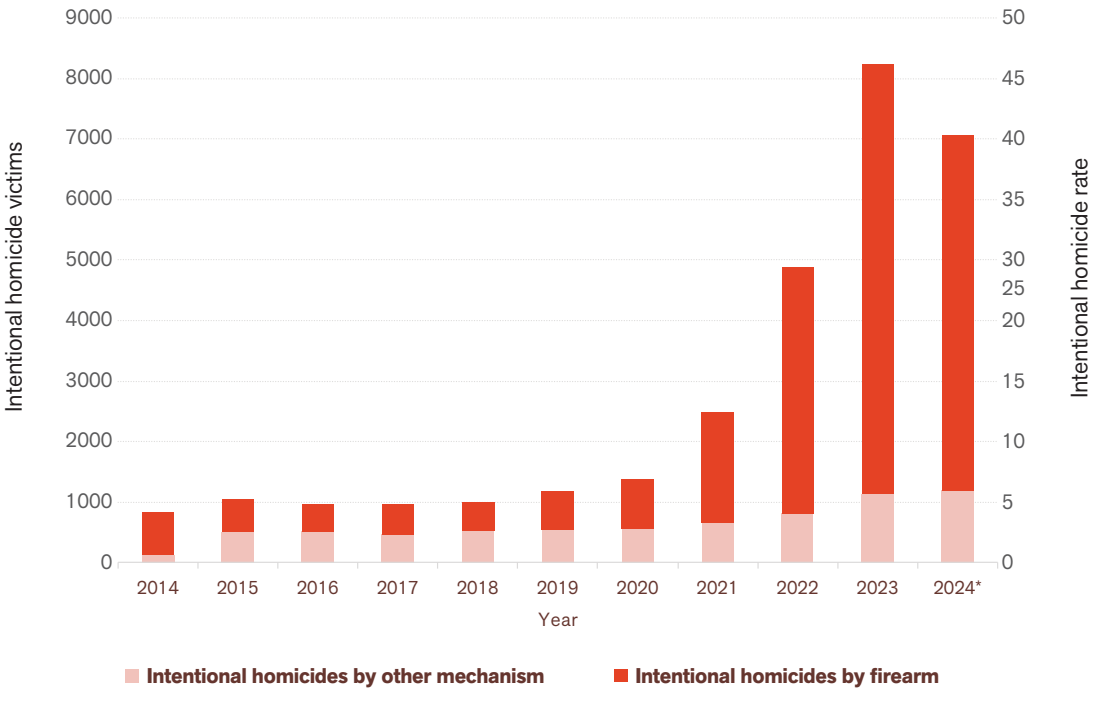
3



Against state actors and institutions

However, wherever they are active, governance-type OCGs typically seek to position themselves as an alternative source of authority over markets – both illegal and legal – as well as citizen's everyday lives.[40]

High income countries with comparatively strong institutions and entrenched rule of law are not immune to the threat posed by criminal governance, as criminal organizations try to infiltrate the texture of society wherever and whenever they find opportunities to do so. In Sweden, for example, research by the National Council for Crime Prevention (Brå) has shown that OCGs exercise territorial control and criminal governance in local communities. They divide up neighbourhoods to control drug markets, set rules, and claim a share of the profits from local sales.[41] The "physical, territorial control" of OCGs in certain Swedish communities, including through geographical surveillance control over drug markets, and the creation of an atmosphere of fear and insecurity, contributes to a culture of silence, where residents are unwilling to testify or cooperate with authorities.[42] These developments have given rise to what Brå refers to as "parallel structures", where criminal actors exert informal authority, influence local decision-making, and interfere with the provision of services and distribution of resources,[43] often through the systematic use of threats or violence.[44]



OCGs exercise criminal governance primarily through a mix of coercion – mainly fear – and consent – mainly through service provision.[45] Fear is established through the threat or use of violence, while consent is obtained by the provision of jobs, forms of livelihood, and basic services, such as the regulation of petty crime in the local neighbourhood. Nationally representative surveys conducted in 18 Central and Latin American countries in 2020 point to this double-sided reception of criminal governance by the affected communities. On average, one in three respondents reported the presence of organized criminal groups, gangs or armed groups in the area where they lived. When asked what role criminal groups played in their neighbourhood, 33 per cent reported that the groups use violence against people, 15 per cent reported that they control theft and improve security, and 12 per cent reported that they maintain order in the neighbourhood.[46]

1461

Criminal governance by coercion and violence

The use of violence is a key characteristic of OCGs and one of the main mechanisms through which they instil fear and control communities, extort businesses, protect and expand illicit markets against potential rivals, and threaten State actors to ensure impunity. In Latin America, certain countries have reached very high intentional homicide rates due to the violence perpetrated by OCGs.[48]

Violence against communities

To secure control and instil fear in communities, OCGs may target "exposed" citizens such as journalists and community activists. For example, in the period 2020–2022, about 200 journalists were killed globally, 20 per cent of whom were killed in connection to reporting on crime.[49] Local businesses are another segment of the community that is particularly exposed to violence by organized criminal groups.

In Haiti, homicides and kidnappings have increased dramatically as criminal gangs have strengthened their territorial control in recent years.[50] The systematic use of sexual violence against women and girls in areas under gang control and the recruitment of children as members of the gangs also highlight the significant impacts that criminal governance can have on community members.[51]

The extent to which OCGs exercise territorial control over communities through threats and violence was documented in Mexico City's most populous borough (Iztapalapa) in 2020 through a study.[52] Seventy per cent of the 1,261 police officers surveyed for the study indicated the involvement of OCGs in community activities and nearly four in ten perceived strong or very strong community interaction with organized crime, underscoring the territorial dimension of criminal governance.[53] Officers further reported that these groups exerted influence over illicit markets, particularly illicit drugs, counterfeit goods and illicitly sourced firearms.[54] Six in ten officers reported that OCGs generated significant fear in the community, while nearly half noted high levels of coercion being imposed on communities.

The businesses community is also particularly affected by OCG-related violence. The threat or use of violence to extort local businesses is frequently used by OCGs as a source of revenue. Nationally-representative surveys conducted in 18 Central and Latin American countries in 2020 suggest that, on average, about one third of respondents across all countries report organized criminal groups engaging in extortion in their neighbourhood.[55] In Italy, in the first half of 2023 alone, about 5,500 extortion cases by OCGs were reported.[56]Countless cases of intimidation, vandalization, violence and murder against businesspeople at the hands of these groups have been recorded by Italian authorities.[57]

Extortion is a secure and stable income for OCGs.[58] It can take the form of compelling businesses to purchase goods, services, or labour at rates slightly above market value.[59] These practices distort market competition and can, for example, drive up costs of basic goods and services (see *Case study 1 - Gangs and governance in Haiti: a fragile State at the crossroads of illicit markets*). Non-compliant businesses face threats, violence, or destruction of assets. Where there is criminal governance, OCGs can infiltrate the legal economy using criminal methods, influencing the public administration to award public subsidies illegally, and taxing small-scale criminals.[60]

Violence against rivals

Dominant controlling OCGs may also extort less powerful criminal groups that operate illicit businesses in the same territories. For example, some OCGs extort or 'tax' migrant smugglers to cross the territories under their control. Payment of the 'tax' is meant to guarantee migrants a safe passage. Failure to pay can result in the migrants' abduction, torture and killing.[61]

Ecuador today is a telling example of the lethal violence that can be unleashed by rival criminal groups competing for control over territory and illicit markets. Competition between different OCGs, including local and transnational cocaine trafficking groups, has fuelled a dramatic escalation of violence in the country in recent years.[62] Until the late 2010s, Ecuador recorded relatively low rates of intentional homicide compared with other countries in South America.[63] However, from 2020 onward, intentional homicide rates in Ecuador increased dramatically year-on-year, from 7.8 victims per 100,000 population in 2020 to 45.7 victims per 100,000 population in 2023.[64] While in 2024 Ecuador recorded, for the first time since 2016, a reduction in intentional homicides, preliminary data for 2025 indicate that this reduction was only temporary in nature. In the period from January to June 2025, there were 4,619 intentional homicides in Ecuador, compared with 3,149 over the same period in 2024.[65] (see *Case study 3- The rise of organized crime violence in Ecuador*).

Violence against State institutions

Violence against State institutions and their representatives can be common in territories where OCGs try to establish criminal governance. Two examples of this type of violence expanded on in the Annex of this Brief relate to Brazil in 2006 and more recently in Haiti. In 2006, the Brazilian prison-based OCG *Primeiro Comando da Capital* (PCC) orchestrated a number of riots in prisons across the State of São Paulo. At the same time, the PCC targeted individuals outside prisons, including police and prison officers, as well as carrying out assaults on banks, public transports, supermarkets, and police stations (see Case study 2 - *The Brazilian Primeiro Comando da Capital (PCC): from local prison gang to transnational threat*).[66] In February 2024, a coalition of Haitian criminal gangs launched at least ten attacks

against the National Palace, as well as the Ministries of Justice, Defence and the Interior, the general hospital, and Haitian national police units, including the Port-au-Prince police station, with the intention to establish a common front against the Government and disrupt the political transition. [67] (see *Case study 1- Gangs and governance in Haiti: a fragile State at the crossroads of illicit markets*).

Criminal governance by consent and provision of financial resources and services

While violence can be a defining feature of organized crime, the presence of OCGs does not always translate into high rates of violence. Instead, the consolidation of territorial and illicit market control by a single dominant OCG may suppress violence. By solving disputes, imposing rules and establishing a parallel (criminal) order, OCGs can suppress violence in the areas they control.[68]

In Mexico, studies have documented how OCGs impose criminal governance in the territories under their control. The analysis of 2021 data from the National Survey of Urban Public Safety (ENSU) have shown that overall, greater presence of organized crime does not always translate into a higher level of violence.[69] The *Cártel de Sinaloa* is reported to operate protection–extortion schemes while also moderating violence, thereby fostering a local social base.[70] The rival *Cártel de Jalisco Nueva Generación* (CJNG) has likewise undertaken initiatives to exert control and gain some support over communities by imposing order and security against petty crime.[71]

The perceived ability to provide security and resolve disputes is a common feature of OCGs trying to establish themselves as alternative authorities. In connection with solving disputes over criminal markets, a number of studies show that the presence of large criminal organizations in a territory may result in a reduction of violence. The term *pax mafiosa* has been used in Italy to describe how organized crime leaders deliberately reduced overt violence, resulting in fewer mafia-related killings.[72] Similar dynamics have been observed in Latin America, where the related concept of *pax narcotica* has referred to periods of tolerance toward drug trafficking that kept violence at comparatively low levels.[73]

A similar mechanism can also be observed in settings with much lower levels of violence and less entrenched OCGs. Using official police data from an 'average' police force in the United Kingdom for the period 2018–2021, it was found that organized crime exerts a dual effect as both a driver and a suppressor of violence. Higher levels of organized crime presence in a neighbourhood were associated with increased violence, yet a greater prevalence of organized crime members among all active offenders corresponded with lower overall violence.[74] This correlation is indicative of the capacity of organized crime to create high-risk environments, while simultaneously imposing order within illicit markets. This violence-suppressing role of dominant OCGs may conceal their consolidation, enabling such groups to entrench themselves in community life while progressively eroding the legitimacy, effectiveness, and integrity of institutions.[75]

Where organized criminal groups exert territorial control, the illicit economies they foster may also create short-term economic opportunities and help to legitimize their activities among local communities. But the long-term costs for society can be substantial, as illicit economies typically exploit public resources for the undue gain of a few, as in the case of illegal mining in the Sahel, which is providing some immediate relief to local communities, but undermining public benefits.[76]

Criminal governance as a springboard for other illicit trade and profit seeking activities

Control over a territory gives OCGs opportunities to start or expand other illicit activities. In this way, criminal governance can provide not only a consistent income stream via extortion and a way to cement a power base, but also a springboard for developing other illicit activities. In other cases, criminal governance could come as a result of consolidating control over other activities, particularly illicit trade.

Ecuador's geographical location between major cocaine production areas in Colombia and Peru[77] makes it a significant hub for cocaine trafficking and organized crime activity. [78] Yet, until recently, Ecuador did not have 'home-grown' OCGs with the capacity to coordinate transnational drug trafficking operations.[79] However, since the early 2020s, there have been indications that Ecuador's local OCGs, traditionally involved in small-scale robberies, kidnappings and extortion, have expanded their operations and become increasingly interlinked with foreign transnational OCGs active in international cocaine trafficking operations.[80] Strengthened through alliances with international drug trafficking groups, local groups have developed into professionalized criminal organizations, operating across international borders. [81]

In the Sahel, the groups that for a long time have exercised territorial control over informal trading routes have in the past two decades evolved into a more criminalized ecosystem with the transit of cocaine and other high-value commodities across the region, triggering competition over access to significant profits. Within this context, OCGs have played an important role in influencing the Sahel's current political and security challenges.[82]

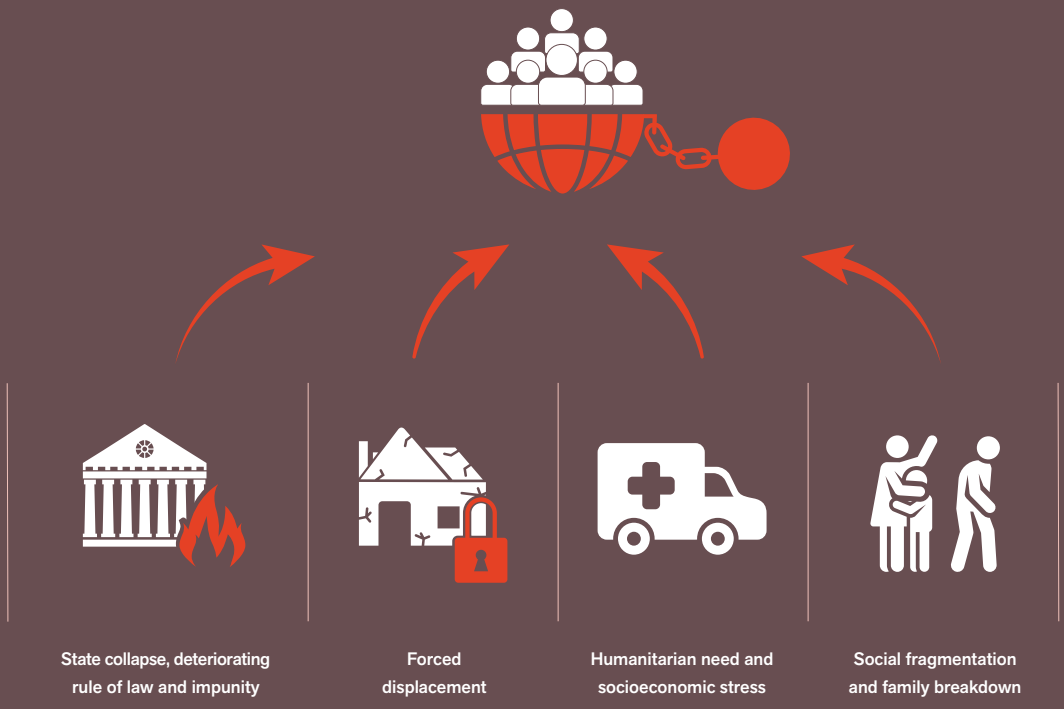
1463

Prisons at risk of criminal governance

The assumption that once an individual is incarcerated, organized criminal activity ceases, that criminal networks are permanently disrupted or that communication between associates ends, is often premature. Evidence from an increasing number of countries shows that prison systems are highly vulnerable to the risk that members of organized crime continue or consolidate their engagement in crime and project significant power within and beyond prison walls, especially when prison systems are marked by systemic deficiencies, such as overcrowding,[83] inadequate conditions, severe resource constraints and weak management capacities or compromised institutional integrity. The evolution of digital technology has further enhanced the capacities of members of organized criminal groups to operate from within their cells and to rapidly adapt to traditional prison security and disruption measures.[84]

As regards logistical and hierarchical structures, organized crime in prisons differs widely at international level, ranging from informal prison hierarchies dominated by high-level criminals, violent prison gangs and prison-based criminal organizations to a much less visible entrepreneurial trading culture run by professional criminals. What they do have in common is the profit-driven provision of illicit goods and services. If left unaddressed, organized crime has a devastating impact on safety and security in both custodial and community settings.

Prisons throughout Latin America and the Caribbean struggle to contain the unprecedented level of control that prison-based criminal organizations closely linked to drug trafficking have assumed. Violent clashes between rivalling prison gangs have left hundreds of prisoners dead and led to states of emergencies having been declared on various prison systems.[85] The trajectory of the *Primeiro Comando da Capital* (see *Case study 2 - The Brazilian Primeiro Comando da Capital (PCC): from local prison gang to transnational threat*) demonstrates how prison-based gangs can evolve into sophisticated transnational criminal organizations; the group started by providing goods and services to prisoners and support to their families, financed through membership fees, creating cohesion, compliance, and a reputation that facilitated recruitment.[86] It very rapidly managed to build on this core capacity to become a powerful international drug trafficking organization. Similarly, Ecuadorean gangs are primarily prison-based organizations, whose logistical centres are penitentiaries and prisons; these have become part of the struggle for territorial control and recruitment strategies (see *Case study 3- The rise of organized crime violence in Ecuador*).



In Eastern Europe and Central Asia, organized crime has often taken the form of powerful criminal networks led by high-level criminals ("thieves-in-law"), which first emerged back in the 1930s in the detention facilities of the Soviet Union.[87] Despite a progressive decline in their influence, influential figures from the criminal underworld continue to play an important role in prisons of the region.[88] More recently, for instance, national authorities in Ukraine dismantled several criminal organizations running call-centres operating frauds from correctional facilities in the country targeting relatives of Ukrainian military personnel (see *Case study 7 - Organized crime involvement in scam centres in Ukraine*).

In the Pacific Island Countries and Territories (PICTs), transnational criminal networks are exploiting the region as a "staging post" for cocaine shipments towards Oceania.[89] Additionally, the Pacific's strategic location between the two main global methamphetamine source regions – Southeast Asia and North America – further heightens its territorial vulnerability.[90] Recently, transnational OCGs from a variety of regions have been attracted to this part of the world, operating and cooperating along trafficking routes through the Pacific region.[91]

1464

Factors increasing vulnerability to

Trafficking in persons in armed conflicts

How organized criminal groups profit from armed conflict

Armed conflicts can disrupt the activities of OCGs, but they can also offer fertile ground for organized crime. While a comprehensive analysis of the role of OCGs in armed conflict situations is beyond the scope of this Brief, previous UNODC studies have documented the links between organized crime and conflict, with conflict creating favourable grounds for OCGs, which in turn may exacerbate conflicts. The breakdown of State institutions and resulting impunity that are characteristic of many armed conflicts contribute to an environment where organized crime can thrive.[92] One aspect concerns people affected by conflict who become at higher risk of falling prey to organized crime. The populations that are forcibly displaced as the result of conflict are vulnerable to becoming victims of various forms of organized crime such as human trafficking[93] and fraud.[94]

Beyond exploiting vulnerabilities, organized crime can also exacerbate conflicts. In the Sahel for example, OCGs with large financial resources fuel armed conflicts by increasing armed competition for illicit profits and territorial control in a region where firearms trafficking underpins a significant proportion of deadly violence.[95] OCGs operating in these territories provide financial and human resources to conflicting parties and delay conflict resolution. In the same region, the competition for control over gold mining sites has also fuelled tensions,[96] and similar patterns have been recorded in conflict-affected areas of Southeast Asia.[97]

There are multiple examples of organized crime activities in areas with geopolitical tensions and conflict, some directly perpetrated by parties to the conflict and some perpetrated by OCGs in cooperation or under the protection of parties to the conflict. For example, in 2023, 80-90 armed groups active in Africa trafficked children and used them in conflict-related operations. These groups recruited children to use them as fighters, support personnel, or force them to work to generate income. Trafficking by armed groups, both non-State and State actors, is carried out in different contexts.[98]

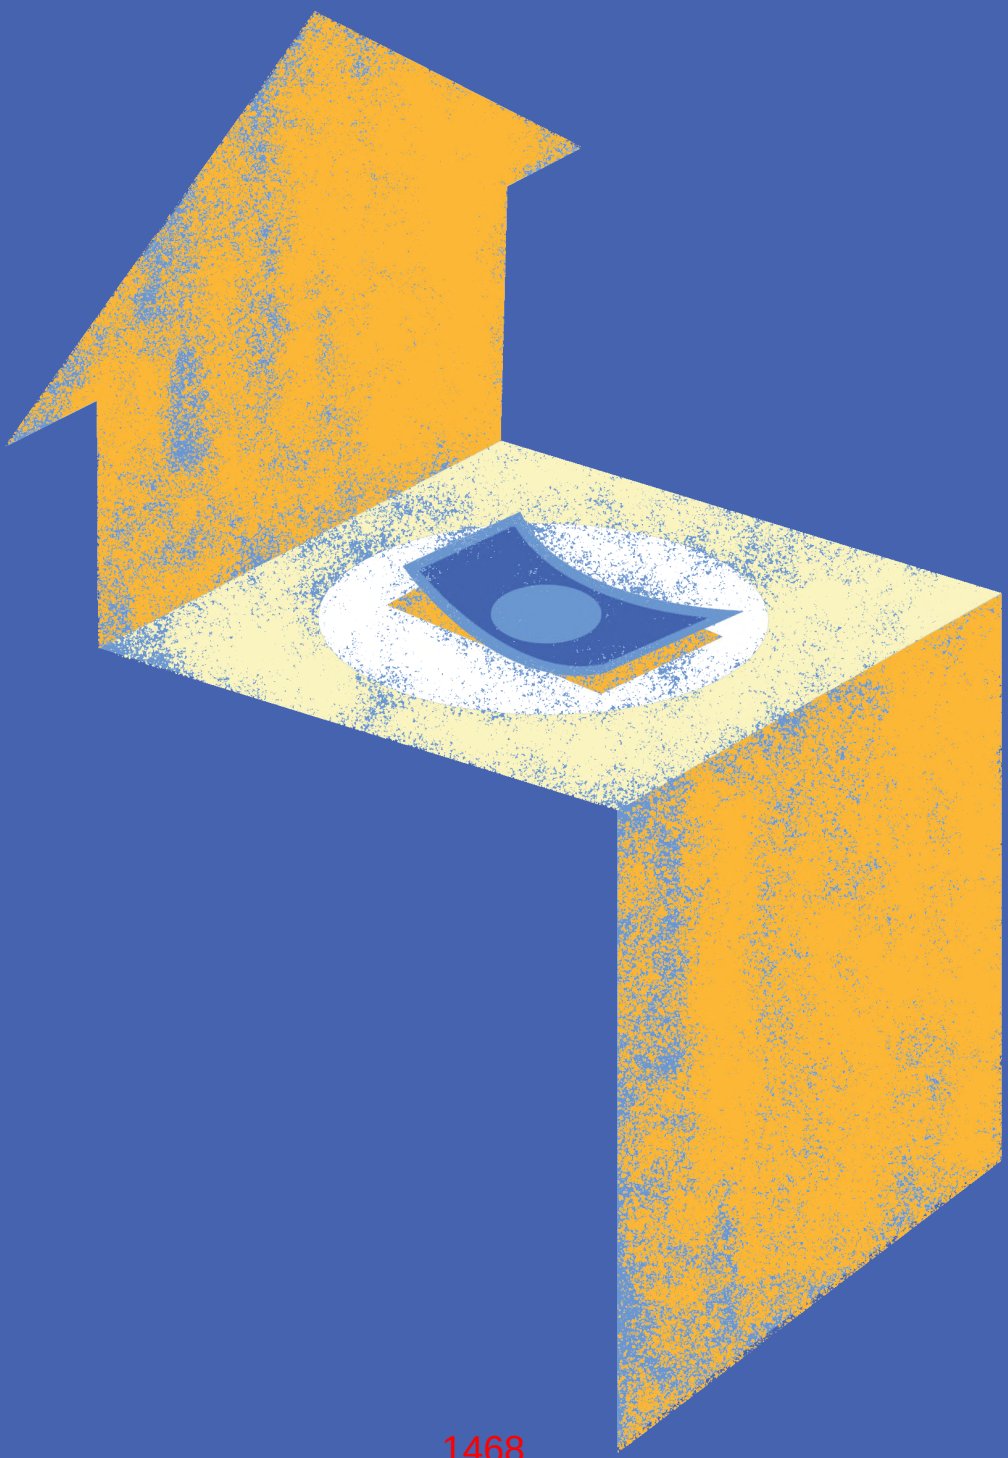
In 2023, cases of children recruited from villages and exploited in gold mining sites were reported after sustained clashes between *Coopérative pour le développement du Congo* (CODECO) factions and *Zaire* militias for the control over illegal mining sites in the Eastern part of the Democratic Republic of the Congo. Moreover, in the Eastern Provinces of the Democratic Republic of the Congo, the convergence of trafficking in persons, minerals trafficking and armed groups has been documented. These provinces are rich with precious minerals attracting armed groups to set up illegal mining operations to finance their activities. Armed groups traffic children to extract minerals and

1465

Source: UNODC World Drug Report 2024, p. 13.

cooperate with organized criminal groups to smuggle these minerals out of the country. The UN has reported gold, tin, tantalum and tungsten being sold by armed groups active in this area, to be then smuggled to international markets, with profits laundered in the region and large international financial centers.[99]

The opportunistic partnership between OCGs and armed groups has also facilitated the convergence of different forms of trafficking, money laundering and illicit markets in the "Golden Triangle" in Southeast Asia. Exploiting instability and rule of law challenges, organized crime has flourished and methamphetamine production has surged in recent years, outpacing the production of traditional opiates, with groups also diversifying their illicit activities beyond drug production, engaging in crimes that affect the environment and industrial-scale cybercrime activities.[100]



In the Golden Triangle area, transnational OCGs have established a large number of casinos and scam farms where profits are laundering using professional money-laundering services. These services are available to a wide variety of groups, including the multi-billion industry of online fraud. In these areas, OCGs exploit the absence of government control, as well as the complicity of the armed groups de facto controlling these territories (see *the case studies Scam farms in Southeast Asia – highly lucrative criminal enterprises that exploit territories with rule of law challenges* and *The role of the casino industry in money-laundering in Southeast Asia*).

In the context of Ukraine, the full-scale invasion by the Russian Federation in February 2022 has affected trafficking routes, disrupted criminal organizations, and spawned new forms of organized crime.[101] OCGs are now active in the Ukrainian scam-call centres industry, where the war has created conditions conducive for organized fraud targeting displaced people as recipients of State subsidies or deceiving the families of those missing from the frontline with the promise of selling them information about their loved ones.[102] (See *Case study 7 -Organized crime involvement in scam centres in Ukraine*)

Armed conflict and firearms trafficking are closely linked: conflict can exacerbate firearms trafficking and firearms trafficking can exacerbate conflicts.[103] Armed conflict tends to increase the demand for weapons and, therefore, may also result in increased firearms trafficking. At the same time, conflicts can also be a 'source' of such trafficking, since it may be more difficult for authorities to maintain effective control over State stockpiles during conflicts and firearms may end up in the hands of criminals or non-State armed groups. When the conflict is over, a pool of weapons may also remain accessible outside of legal control mechanisms. The availability of such conflict-legacy weapons can significantly undermine peacebuilding and stabilization efforts.[104]

Illicit markets and their profits

the lifeblood of organised crime

1468

Key points

- Drug trafficking remains one of the most profitable activities for organized criminal groups. However, organized crime is involved in a wide range of other forms of trafficking, from trafficking in persons to trafficking in firearms, wildlife, waste, fuel and counterfeited products.
- Transnational drug trafficking today is a highly specialized enterprise involving actors from numerous groups and networks.
- Comparatively high levels of lethal violence in Latin America and the Caribbean can be partly attributed to competition between organized criminal groups over cocaine markets as well as the availability of firearms.
- Actors involved in illicit markets associated with natural resources are particularly varied, with criminal groups cooperating with legal businesses, blurring the line between legal and illegal markets.
- When structured organized criminal groups operate in the field of trafficking in persons, they traffic more people, for longer, across greater distances and in more violent manners than individual or loosely connected traffickers.

Organized criminal groups are fundamentally profit-driven and engage in a wide range of criminal activities that span both illegal and legal economies. Their operations impact both local and transnational economies and, in some cases, they can affect national security and geopolitical relations. The illegal economies that OCGs may create, manage or simply profit from opportunistically are varied in nature. As analysed in Chapter 2, some profits arise from forms of criminal governance whereby OCGs exert control over local territories and profit, for instance, from extortion. However, OCGs likely derive most of their income globally through the illicit production and trafficking of goods and services that constitute the so-called illicit markets.

The range of goods trafficked and services provided by OCGs continues to evolve, often driven by gaps between demand and the availability of legal, regulated supply or by the comparative ease and profitability of unregulated markets. Certain forms of trafficking have remained consistently lucrative for decades. Drug markets remain today the financial backbone of most organized criminal groups operating across the globe. The profitability of other types of trafficking has fluctuated in response to shifting economic and political conditions.

For instance, fuel trafficking surged in the Sahel when disparities in fuel subsidies across national borders created lucrative opportunities (see *Case study 9 - West Africa and the Sahel – regional hubs for illicit trafficking*). In other parts of the world, international sanctions have triggered new trafficking operations. Illicit gold trafficking has in turn intensified during periods of rising global gold prices, while the illicit trade in rosewood has adapted over time by targeting different species to meet persistent demand, despite increasing international protections. These trends highlight the adaptability of organized crime in operating across illicit markets, exploiting regulatory gaps and market dynamics.

The role of OCGs in illicit markets and the business model adopted by OCGs to profit from the trafficking of goods and services vary by group, type of market and geographical reach (see also *Chapter 1, section Different dimensions of organized crime*), but they typically involve a division of roles among groups operating across jurisdictions, with groups – or elements within one group – specialized in the different stages of the supply chain, including production, procurement, shipment, document fraud, and financial transactions.[105] In some cases, OCGs are the primary actors; in others, they are facilitators.

1469

Sanction evasion is one example of a "crime-as-a-service" model with national security implications, whereby OCGs act as enablers of trafficking across different illicit supply chains.[106]

OCGs can have different characteristics, strategies and objectives. Some groups may focus primarily on trafficking and be trade-oriented, focusing on efficient, short-term exchanges of commodities such as drugs, often adopting flatter, more flexible structures and minimal hierarchy. These groups exploit global supply chain vulnerabilities to move drugs or other commodities across borders and typically avoid violence to minimize law enforcement attention.[107] Other groups are more focused on controlling illicit markets, rather than just trading in them.[108] For example, governance-oriented groups typically approach drug activities in the context of controlling a territory. They therefore tend to prioritize control over smooth business operations and they may make greater use of violence or the threat of violence even if it risks destabilizing the market.[109] In some cases, groups exert criminal governance in one territory and adopt a trade-focused approach in other territories, following a strategy that researchers have termed 'functional diversification'.[110]

Illicit markets constitute an important source of profits for OCGs, but not all aspects of illicit markets are managed by OCGs. For example, the markets of plant-based drugs, such as cocaine and heroin, originate from the illicit cultivation of coca leaves or opium, which can be done in remote rural areas by local people looking for income opportunities, with little or no connection to an organized criminal structure.[111] Illegally sourced natural resources, such as gold, timber or wildlife, may also end up in the legal supply chain and be sold, knowingly or unknowingly, at retail level by legitimate businesses.[112]

While illicit markets constitute a major source of revenue for OCGs, they are not the only actors involved; many participants are small-scale or subsistence-level operators who require responses distinct from those designed to target organized criminal groups. This is particularly evident in the illicit trade of natural resources and drugs.[113]

This chapter reports on some of the key global trends and patterns pertaining to the involvement of organized crime in different forms of trafficking, from trafficking in drugs, firearms and natural resources to trafficking in persons and the smuggling of migrants.

Organized crime and global drug trafficking

Drugs remain one of the most profitable markets for OCGs. Different groups are involved in drug trafficking, adopting more or less centralized structures and varying levels of hierarchical control over their members, as well as operating with orientations that range from purely trading activities to governance and control of markets and territories.[114] OCGs typically operate within transnational drug markets in a business-like fashion, coordinating their activities with other groups along the supply chain. This operational model is characterized by an opportunistic focus on exploiting business opportunities and a tendency to minimize violence.[115] In other contexts, OCGs may seek to control the drug trade within territories under their influence, which can generate violent confrontations with competing groups (see *Case study 2 - The rise of organized crime violence in Ecuador*).[116] The dynamics of OCGs can have a considerable impact on drug flows. For instance, when new groups entered the cocaine transnational trade between South America and Europe, the market grew significantly in size (see *Case study 12 - From local facilitators to international players: the growth of Balkan organized crime groups*).[117]

Organized criminal groups are known to operate in virtually all drug markets around the globe.[118] Evidence from Australia, European Union (EU) countries, Japan and the United Kingdom shows that drug trafficking is a major activity for a considerable proportion of OCGs, ranging from more than 50 per cent of groups involved in drug trafficking in the EU to about 80 per cent in Australia.[119] In Albania, drug production and trafficking of cannabis, heroin, and cocaine to the EU were the main activities of the majority (60%) of OCGs active in 2022–2023.[120] In Brazil, drug trafficking was the most common predicate offence linked to financial crimes in 2023, accounting for 31% of cases – up from 17% in 2014. This increase is believed to reflect the expansion of organized criminal activities related to drug trafficking over the past decade.[121]

In Japan, police report that drug trafficking – especially in methamphetamine – is the main income source for OCGs, including the *Yakuza*. In 2020, Yakuza members were linked to about 31% of drug offences in the country, with methamphetamine involved in over 80% of those cases and cannabis in around 15%.[122] In Australia, research indicates that more than 70% of OCGs are involved in methamphetamine trafficking, followed by trafficking in cocaine, cannabis, and heroin. This is unlike the situation in the EU, where cocaine dominates drug trafficking activities.[123]

Transnational drug trafficking today is often a highly specialized enterprise involving actors from numerous groups and networks. For example, drug trafficking organizations operating in the EU are typically not vertically integrated across the drug supply chain; they operate only at certain stages of the supply chain and specialize in specific tasks. Some only produce cannabis, for instance, while others only handle distribution or transport. Evidence from the EU suggests that groups that cover only part of the trafficking process tend to be active for fewer years than those whose control extends over multiple stages of the supply chain (or in some cases, end-to-end control).[124]

In Australia, polydrug trafficking groups that supply many different types of drugs (which account for more than half of the groups active in the country) are significantly more

likely than mono-drug trafficking groups to be involved at multiple stages of the supply chain.[125] People involved in the retail selling of drugs may operate at individual level, handling relatively small quantities.[126]

Drug trafficking is often linked to other serious crimes. For example, persistently high levels of lethal violence in Latin America and the Caribbean can be attributed to complex dynamics relating to criminal groups, including competition for control over illicit markets, record-breaking drug production and the availability of firearms.[127] But the convergence between drug trafficking and violence is not limited to this region. In Germany and Australia, for instance, between 21 and 36% of OCGs have engaged in violence; this figure goes up to 68% when looking at the EU as a whole.[128] Drug- and firearm-related crime can also overlap. The case of Haiti shows that firearms and drug trafficking can in some cases operate in opposite directions; firearms are smuggled into the country, sometimes by the same groups and via the same routes used to traffic drugs out of the country (see *Case study 1 - Gangs and governance in Haiti: a fragile State at the crossroads of illicit markets*).[129] In some contexts, drug trafficking is linked to trafficking in persons, when groups recruit and exploit victims to participate in drug-related activities, including serving as couriers, distributors, or spotters.[130] In Colombia, UNODC has documented the convergence of crime related to coca cultivation and illegal gold mining, as well as with the deforestation of rural areas. This link is deeply connected with the use of the territories for different criminal interests, but also serving the purpose of reinvesting the proceeds of these criminal activities.[131]

Drug trafficking is obviously strongly linked to money-laundering. As documented by literature and investigations money laundering is the enabler of drug trafficking, one cannot exist without the other.[132] Finally, groups may engage with or infiltrate legitimate businesses to support their criminal operations.[133]

1471

Cocaine trafficking: Specific groups may change, but supply chains remain resilient

As for other types of trafficking, in cocaine trafficking from South America to destination markets, the entire supply chain is rarely controlled by one organized criminal group. Different actors operate at different stages, often establishing mutually beneficial partnerships.

These business collaborations can be more or less transitory and volatile. Such volatility contributes to competition among organized criminal groups for control over trafficking corridors or distribution points, sometimes resulting in violence. In other instances, however, groups may cooperate at various points along the supply chain without resorting to violence.[134]

In 2023, it was assessed that small- and medium-sized criminal groups were playing an increasingly important role in global cocaine trafficking. These groups operate as part of larger networks, managing only parts of the supply chain and forming partnerships with other groups. This fragmentation has been observed across regions, accompanied by a trend towards greater specialization among actors.[135]

Linked to the shift toward decentralized cocaine trafficking networks has been the growth of a system of "service providers" that manage parts of the supply chain without owning the drugs. Their tasks include collecting shipments from ports, arranging local transport, or protecting the shipments.[136] In exchange, they guarantee delivery for a fee – sometimes in cash, sometimes in quantities of cocaine – fuelling cocaine availability in transit countries.

The profound changes observed in the global cocaine market in the last decade underscore how changes in the landscape of OCGs can transform a global drug market. The increased direct involvement of Balkan groups in supplying cocaine to Europe around 2012 facilitated an increased supply in Europe that shortly after started to lead to increased use. On the other side of the Atlantic, the dynamics around cocaine production in Colombia also changed following the demobilization of the *Fuerzas Armadas Revolucionarias de Colombia* (FARC) in 2016, and the involvement and later consolidation of groups that started to concentrate their presence in certain areas (see *Case study 10 - Continuity and adaptation: Colombia's enduring centrality in the global cocaine trade*), becoming more efficient and taking cocaine production to record highs. As the result of changes in OCG dynamics in both supply and demand markets, the current cocaine market continues to expand.

The latest data show that cocaine production reached records high in 2023, and while trends in seizures, drug use, and related treatment and deaths also indicate the expansion of the global cocaine market. These indicators reinforce the upward trajectory observed over the past decade in production and availability, and over the past five years in treatment and mortality outcomes.[137] Cocaine trafficking routes have also evolved alongside changes in actors and alliances. For instance, routes to Europe have diversified, with Colombia's ports playing a reduced role. From the mid-2010s, cocaine shipments started to increasingly transit through other South American countries en route to Europe (via the 'Southern Cone' route).[138] Since then, points of arrival in Europe have also shifted, with Northern European ports surpassing the Iberian Peninsula as the main hubs. These trends appear connected, as seizures linked to the Southern Cone route are increasingly detected in North Sea ports.[139] In recent years, Ecuador has increasingly become a main transit point for cocaine, a development that has coincided with a significant rise in violence since 2021 (see *Case study 2 - The rise of organized crime violence in Ecuador*).

1472

Los Blancos - A transnational response to a transnational drug trafficking organization

Operation *Los Blancos*, described as "an unprecedented operation" involving judicial and police authorities from many countries between Europe and South America, led to the dismantling of the transnational organized criminal group *Kompania Bello*, considered one of the most active cocaine trafficking networks in Europe. The investigation was launched in 2015 by the Italian Police following violence that erupted among members of the group over different criminal activities. The investigation led to the identification of an Albanian-speaking organized criminal group which, through its contacts in Ecuador, was able to traffic large amounts of cocaine by managing different phases, from purchase to transport, storage and distribution, with presence and corruptive powers in different European countries.

A highly structured, hierarchical group with trading capacities

Kompania Bello was able to traffic significant quantities of cocaine from South America by container ship. The group established cooperation with criminal actors in Ecuador using front export companies and individuals employed in the ports of departure and of arrival. The cocaine entered the European market, including by using corruption along the routes and at destination. The group had a stable structure with a clear division of roles, responsibilities, and resources, including weapons and equipment. The group members were mainly Albanian nationals. The criminal group, however, had a base in Apulia (Italy) and had placed members and associates in strategic locations, particularly in Antwerp (Belgium), Rotterdam (the Kingdom of the Netherlands) and Bremen (Germany), and others running activities in South America.

The level of criminal governance of this group emerged clearly from a number of very typical characteristics: it imposed a bond of silence on the associates in the event of arrest, under penalty of serious retaliation; it allocated part of the proceeds from cocaine consignments to paying salaries to associates, covering legal costs and maintaining families of arrested members; it recruited new affiliates who were entrusted with executive or manpower tasks; and it could count on the support of allied criminals in Albania with significant corruptive power. As its trafficking capacity increased, the group created a solid commercial network to ensure constant supplies of excellent-quality drugs at competitive prices. The system adopted included the use of non-suspicious individuals used as couriers who transported the imported cocaine across a variety of European countries. The group enjoyed a dense network of corruption along the cocaine route, and it relied on encrypted forms of communication.

From the financial aspect, the group made use of a complex system of internal financing and self-laundering of proceeds from the importation and sale of drugs. This system financed new shipments directed to the European market. Further, it exported large sums of cash in euros and pounds sterling from illicit activities to Ecuador and Albania, reinvesting them in commercial and real estate activities.

Trading across continents

The top figures of the group were reported to be considered equal partners with the drug trafficking groups operating in Ecuador, maintaining also close ties with the *Cartel de Sinaloa* and different Colombian groups based in the cocaine-producing areas. The sourcing, acquisition and shipment of cocaine was handled by members of the organization based in Guayaquil (Ecuador) in direct contact with the Ecuadorian criminal groups.

While the Latin American suppliers were able to offer a choice of shipping methods based on the financial resources of the buyers, the latter, i.e. members of *Kompania Bello*, were able to choose, through feasibility studies, the port of arrival for the cargos. Once the drug was unloaded in European ports, it came under the complete control of *Kompania Bello*. Through its network of cells across the continent, the organization collected the cocaine, stored it in specially rented apartments, concealed it in specially designed compartments in vehicles, and ultimately handled the collection of the proceeds. The group even conducted specialized workshops for couriers on how to best conceal the drugs during transportation.

The cocaine was then forwarded to the consumption markets in various European countries via a network of couriers based on purchase orders, using lorries and cars equipped with false bottoms and automatic concealment devices. Further, the South American drug traffickers were paid using "*fei chi'en*", an informal money transfer system run by another criminal group called *Agenzia*, operated mainly by East Asian nationals. The money-laundering group charged fees ranging from 22 to 27 per cent of the amount transferred.

Investigations and arrests across the regions

In December 2016, a joint investigation team was set up between the Italian and Dutch judicial authorities, with the participation of the national police forces, as well as the assistance and funding of Eurojust and Europol. The operation led to the identification of three different criminal organizations that made up *Kompania Bello*. The investigation brought the arrests of the apical figures of the group active in Europe and South America. As a result of the investigation, 84 people were arrested in Italy, Switzerland, the United Kingdom, Germany, Belgium, France, Malta, the Kingdom of the Netherlands and Ecuador, while authorities seized four tons of cocaine, weapons and €5.5 million (about US$6.5 million).

1473

Illicit firearms trafficking

Illicit firearms trafficking[140] encompasses cross-border transfers of firearms, their parts and components and ammunition that have not been authorized by one or more of the States involved.[141] It is a crime that affects all parts of the world and impacts on society in multiple ways. Firearms are instrumental in much violence, particularly homicide; they are often used by OCGs, and they support operations related to armed conflicts and terrorism. Firearms are the most commonly used weapon in homicides related to gangs or organized crime.[142]

Beyond their role as a commodity, OCGs may use firearms to enforce compliance and sustain control over territories, populations, and illicit activities. In contexts of weak governance or limited State presence, access to firearms facilitates criminal groups to exercise forms of de facto authority, regulate access to routes and markets, and impose rules through violence or the threat thereof.[143] The most common form of weapons trafficking involves small arms and light weapons; however, the character of this trafficking can vary significantly in different geographical contexts and in relation to different weapons.[144]

A variety of methods are used by organized criminal groups to carry out illicit firearms trafficking. Generally, larger consignments of firearms are trafficked via sea and ships, and smaller quantities are trafficked using vehicles on land, or through strategic 'ant trafficking'.[145] This type of trafficking involves many people transporting small consignments – often only what could be considered a violation of possession regulations – to avoid potential trafficking charges, while still meeting the demand for firearms in the destination market.[146] It has also been documented that mail services are exploited for firearms trafficking.[147] These trafficking methods frequently overlap with those used for other forms of contraband. Organized criminal groups commonly reuse the same facilitators, transport routes, concealment techniques, and logistical infrastructure to traffic firearms alongside drugs, migrants, or other illicit goods.[148] This convergence reflects the poly-criminal nature of many organized crime networks, in which firearms trafficking functions as an enabling activity rather than a standalone market.

Firearms trafficking-related cases reported by European countries show the involvement of street gangs and outlaw motorcycle gangs.[149] These actors are often simultaneously engaged in drug trafficking, extortion, and other serious crimes, with firearms serving as a cross-cutting enabler rather than a standalone market.[150] Cases reported by countries in South America in turn indicate the involvement of drug trafficking organizations in the illicit importation of firearms into major illicit drug production areas as well as into drug selling areas where groups sought to maintain a monopoly of violence.[151] In such contexts, firearms trafficking is closely intertwined with drug trafficking and other illicit economies.

Trafficking in natural resources and crimes that affect the environment

Natural resources are finite, and rising global demand is creating stronger incentives for organized criminal groups to engage in crimes that affect the environment as a means of securing profits. Crimes that affect the environment encompass a series of different illicit activities, including wildlife crime, forest crime, crimes in the fisheries sector, minerals crime, waste crime, and pollution crime. Different from drug trafficking, for example, where the business is illicit from production to retail distribution, most of the trafficking related to natural resources may be licit at a certain point of the supply chain. Some minerals, for example, may be legally extracted and processed but exported against national regulations and still sold in legal markets.

Trafficking in natural resources spans all regions of the world. For instance, between 2015 and 2021, wildlife trafficking seizures were recorded in 162 countries and territories, involving around 4,000 plant and animal species.[152] Any country – regardless of its level of development or geographic location – can serve as a source country for trafficking of wildlife, timber, or fisheries products.[153] For instance, several organized criminal networks have been identified as trafficking European glass eels from Europe to Asia. European nationals typically conduct the illegal fishing, while Asian counterparts coordinate logistics and transport. Some eels are poached, while others are diverted from the legal European market. Local fishers often use illegal methods that damage river ecosystems. Criminals also exploit legitimate European companies to launder illegal catches.[154] Compared to some other illicit markets, the trafficking of natural resources is characterized by a wider range of actors and by a more nuanced distinction between legal and illegal economies. For example, in several trade chains in wildlife crime, local people in remote areas might find income opportunities from involvement in illegal wildlife harvesting.[155] In other cases, for example in illegal fishing, more sophisticated and organized actors are involved. At an industrial level, illegal fishing operators often use flags of convenience and complex multi-jurisdictional business ownership networks to avoid exposure to law enforcement. Profits from a wide range of fisheries have attracted the involvement of organized criminal groups.[156] In forest crime, a great variety of organized criminal groups has also been observed: groups that are mainly profit-oriented, groups that are politically motivated, and loosely connected networks.[157]

OCGs rarely operate alone in the illegal markets of natural resources. For instance, organized criminal groups, actors operating under a legal façade, corporate criminals and legitimate businesses[158] are all implicated in forest crime, creating reinforced networks that intensify harm to communities, natural resources, and the environment.[159]

In Latin America, OCGs committing minerals crime create and use shell companies to launder money from drug trafficking.[160] They typically establish intricate transnational networks involving corporations in various countries to launder illicit proceeds.[161]

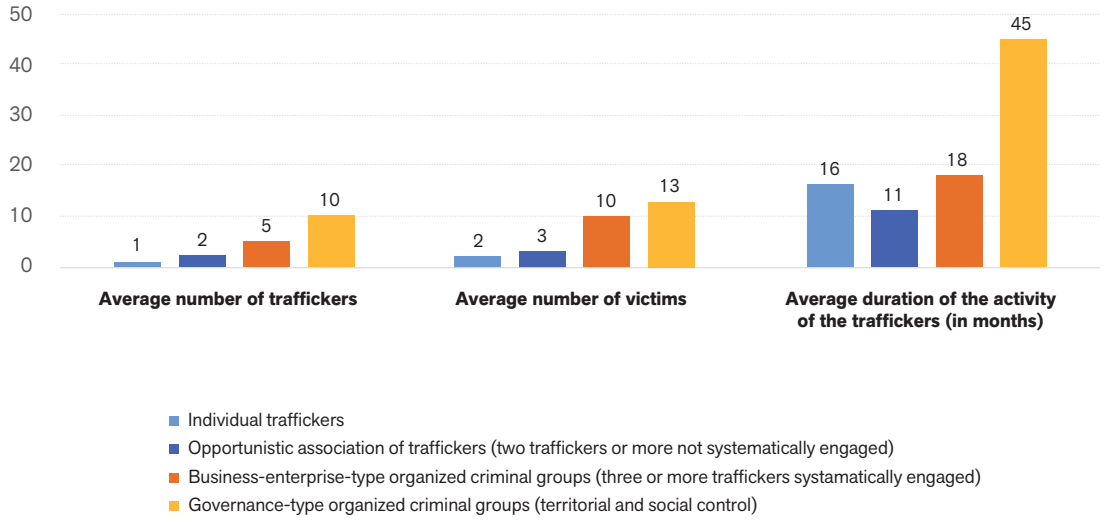
Illegal markets related to natural resources are particularly volatile, expanding and disappearing with criminal actors quickly moving from one type of resource to another to overcome the shortage of resources due to overexploitation or stricter regulations. This is particularly evident for rosewood, where trafficking is continually shifting from one species to another.[162]

OCGs involved in illegal markets related to natural resources may also exercise illegal governance. Some of the groups involved in illegal extraction and production of minerals for example, exercise control over the communities and the territories where there are minerals with the purpose of ensuring their exclusive extraction (for example in the case of crimes related to critical minerals in the Sahel and in Southeast Asia).[163] At the same time, the production and trade of natural resources may also come as the result of territorial control. In the Amazon for example, territorial OCGs involved in drug trafficking finance and provide support for illegal mining, illegal deforestation and wildlife trafficking.[164] OCGs may exercise violence to impose illegal governance over areas with natural resources that they want to exploit. A recent study from Latin America indicates that OCGs identify forest areas of interest and approach landowners to negotiate access, often offering minimal compensation. When landowners resist, intimidation and violence are employed, and in some cases, timber is harvested without consent or payment. Although landowners have reported such incidents to national authorities, inspections are frequently undermined as criminal groups use threats, kidnappings, and bribery to secure silence or compliance from local communities, private companies, and State officials.[165] There are also groups that are exclusively focused on the illegal trade of natural resources with no connection to illegal governance, such as criminal groups involved in the wholesale trafficking of ivory.[166]

The harms of OCGs engaged in crimes that affect the environment can take different forms, including loss of biodiversity due to wildlife and forest crime,[167] over-exploitation of natural resources such as fish, and pollution of the air, land and water in communities where minerals are illegally extracted and processed, waste is illegally trafficked, or synthetic drugs are illicitly manufactured.[168] Wildlife crime generates biodiversity loss, ecosystem damage, and deforestation, while also threatening food security, spreading zoonotic diseases and undermining preservation of natural heritage. Crucially, crimes that affect the environment undermine governance and the rule of law by fuelling corruption, money-laundering, and illicit financial flows. They deprive governments of revenue from legal activities such as timber licences, export fees, and taxation. Ultimately, this threatens biodiversity, weakens communities, and destabilizes economies.[169] In the Sahel, some transnational organized criminal groups control mining operations and smuggle gold across borders to Western Asia, depriving Sahelian countries of millions of dollars in fiscal revenue each year.[170] Gold extracted from artisanal and small-scale gold mining often bypasses formal channels, evading taxation and regulatory oversight. This allows criminal networks and, in some cases, armed groups to profit from gold laundering, using the proceeds to fund insecurity and interfering with local governance.[171]

Emerging patterns of convergence between crimes that affect the environment and other (serious) crimes have been observed. For instance, convergence between illicit drug trade and illegal deforestation has been highlighted in the context of Latin America. Through a process called 'narco-deforestation,' drug trafficking proceeds are laundered into land speculation, agriculture, cattle ranching, and related infrastructure, creating growing risks for the Amazon forest. Evidence also points to a reverse dynamic: in parts of the Amazon, profits from illegal logging generated by OCGs are reinvested into illicit coca cultivation.[172] Also in South America, OCGs have been documented taking control of gold mining sites while engaging in other criminal activities, such as extorting miners for fees, drug trafficking, arms smuggling, and trafficking in persons.[173] These organizations are diversifying their activities, using their technical skills and networks to trade other raw materials, including precious metals and minerals.[174]

Crime convergence has also been reported in the Sahel region, where many gold-mining areas are along trafficking routes with linkages to various illicit economies, such as drug trafficking, migrant smuggling, arms trafficking and banditry. The regional instability has also facilitated the proliferation of OCG activities around gold-mining areas, which have often become logistical hubs for trafficking activities.[175] In the Sahel, some transnational OCGs control mining operations and smuggle gold across borders to Western Asia, depriving Sahelian countries of millions of dollars in fiscal revenue each year.[176]



Smuggling of migrants

Smuggling of migrants refers to the facilitation, for financial or other material gain, of irregular entry into a country where the migrant is not a national or resident.[177] The criminals behind this business seize the opportunity created by the need or desire of people to escape not just poverty and lack of employment opportunities but also natural disaster, conflict or persecution.

Migrant smugglers may be organized in loose networks, which do not exhibit strict hierarchies. Smugglers may operate with much autonomy in different parts of the smuggling process, for instance, facilitating a certain border crossing, recruiting a particular group of migrants, counterfeiting documents or preparing vessels for sea smuggling. They do not work exclusively with only one smuggling network and the links connecting these operators are similar to business relations. Smugglers with 'broker' functions play key

1475

FIG. 4 Average number of traffickers, average number of victims and average duration of traffickers' activity per single case, by type of criminal actor.

Source: UNODC GLOTIP collection of court case summaries.

roles in this system as they are able to connect different actors along smuggling routes.[178]

Other smugglers belong to large and well-organized hierarchical criminal operations with transnational links, capable of organizing sophisticated smuggling passages that might involve the use of falsified or fraudulently obtained travel documents. Often, smuggling is sold as a 'package' that involves migrants travelling long distances, using multiple modes of transportation.[179]

Generally, smuggling networks seem not to be involved in other forms of major transnational organized crime. In some parts of the world, however, smuggling networks have links with violent criminal organizations to which smugglers have to pay for the 'right' to safe passage for migrants. In other cases, smugglers may hand over migrants to such groups for extortion of ransom, robbery or other forms of exploitation.[180] One of the most prevalent crimes perpetrated by smugglers is deprivation of liberty and extortion of their clients. The smugglers either demanded a ransom or detained them at 'credit houses' until they paid the full smuggling fee.[181]

Trafficking in persons

Trafficking in persons is the recruitment, transportation, transfer, harbouring or receipt of people through force, fraud or deception, with the aim of exploiting them.[182] In 2022, 42 per cent of all victims detected globally were trafficked for forced labour, 36 per cent for sexual exploitation, 8 per cent for forced criminality – from drug trafficking to working in online scam compounds – while the remaining detected victims were trafficked for other forms of exploitation.[183]

Trafficking in persons is perpetrated by actors with different levels of organizational structures.[184] Perpetrators may include youth who recruit younger schoolmates into sexual exploitation, parents who force their children to beg, street gangs, brokers negotiating child labour in rural villages, transnational organized criminal groups, as well as licenced multinational recruitment agencies and legal companies.[185] Most of the traffickers appear to operate as criminal networks loosely connected in a business-type relationship.[186] However, large criminal organizations with territorial control and governance functions also engage in trafficking in persons (18 per cent of the traffickers in court cases analysed by UNODC[187]). When these governance-type criminal groups engage in trafficking in persons, they appear to traffic more people, for longer, across greater distances and in a more violent manner compared with opportunistic traffickers or business-type trafficking networks that lack territorial control and governance functions.[188]

A structured organized criminal network can operate much longer than loosely connected business-type trafficking networks – an average of 45 months versus 18 months.[189] UNODC has reported examples of groups specialized in trafficking for sexual exploitation across regions operating for more than a decade before being dismantled. These well-organized groups are typically involved in other crimes. Some West African groups trafficking victims to Europe, for example, systematically engage in drug trafficking, money-laundering, financial

1476

fraud and other transnational crimes, as reported by national authorities.[190]

Trafficking in persons cases investigated by national authorities and submitted to UNODC provide examples of how organized trafficking groups engage in multiple types of crimes, including money-laundering, fraud and smuggling of migrants. The criminal phenomenon of trafficking victims exploited in scam centres in Southeast Asia is presented in a supplementary case study to this Brief (see *Case study 6 - Scam farms in Southeast Asia: highly lucrative criminal enterprises that exploit territories with rule of law challenges*).[191] The cases also reveal how governance-type organized criminal groups traffic victims from distant regions for the purpose of sexual exploitation by preying on victims' desire to migrate and exploiting them based on the supposed debt incurred from travel and document procurement.[192]

Analysis of traffickers operating in Africa shows how the continent has a unique landscape of traffickers, with large-scale and systematic operations carried by transnational OCGs, as well as small-scale and less organized operations, including individual and community-based traffickers.[193]

1477

Technology

how organized crime exploits global connectivity

Key points

- Technological developments have made it easier for organized criminal groups to carry out extremely profitable, industrial-scale fraud, extortion and other serious crimes, targeting victims across borders.
- Technological developments have also facilitated the adoption of complex new and traditional money-laundering schemes involving professional enablers. Virtual assets , bank and non bank financial institutions, hawala and other similar service and payments providers and professional money laundering networks. .
- Cybercriminals often operate as part of loosely organized networks that form and dissolve around specific projects. However, some cybercrime groups exhibit more hierarchical structures, carrying out industrial-scale cybercrime operations out of so-called scam centres.
- UNODC estimates financial losses between US$18 billion and US$37 billion from scams targeting victims in East and South East Asia in 2023 alone.
- Scam operators are frequently trafficking victims who are forced to commit cybercrimes.
- Large scale Scam Centres are known to proliferate in South East Asia and Africa and are increasingly detected in all areas of the world.

Technology amplifies opportunities for organized crime

The rapid development of new information and communication technologies (ICTs) has amplified opportunities for organized criminal groups worldwide. New technologies have enabled criminal groups to more easily target victims globally and exploit the dependence of institutions, businesses, and individuals on ICTs. As a result, organized criminal groups are now carrying out online extortions, frauds, and scams at an industrial scale.

Technology has not only amplified the scale, speed and scope of traditional crimes – making them potentially more harmful when cyber-enabled – but technology has also given rise to entirely new forms of crime, often referred to as cyber-dependent crimes.[194] Cyber-dependent crimes can be committed only through the use of ICTs, where the devices are both the tool and the target of the crime. For example, this can include crimes such as illicit intrusions into computer networks (hacking) or the disruption or downgrading of computer functionality and network space through malware or denial of service attacks.[195]

Both cyber-enabled and cyber-dependent crimes affect countries across all regions and income groups. They are extremely profitable due to their ability to victimize huge numbers of organisations and individuals which can transfer money via on-line channels. They pose a growing threat to individuals and businesses, regardless of their resources or digital resilience. Interpol reported a sharp increase in cybercrime incidents across Africa in 2025, with cyber offences accounting for over 30 per cent of all reported crimes in both Western and Eastern Africa.[196] Online scams[197] have been identified as the most frequently reported cybercrime in African countries, followed by ransomware, business email compromise, and other malware-based threats. Digital sextortion and identity theft have also emerged as significant and growing threats in African countries.[198] These trends have made cyber-criminal activity a major law enforcement and security concern on the continent,[199] demanding a greater level of cross-border cooperation among law enforcement, and greater engagement with the private sector.[200] Limited capacity in many African countries, jurisdictional hurdles, and slow access to cross-border data continue to impede cybercrime investigations.[201]

In the EU, according to a 2024 assessment by Europol, ransomware attacks and online fraud schemes remain the most threatening manifestations of cybercrime.[202]

1479

Technology
connects perpetrators, victims and service providers in multiple locations

Among all cyber-enabled fraud schemes reported in the EU, investment fraud, business email compromise and romance fraud were identified as the most common types.[203] Ransomware and multistage extortion schemes are key examples of cyber-dependent crimes affecting EU citizens and businesses, possessing a very high disruption potential.[204] In the EU, cybercrime groups increasingly target small and medium-sized businesses because of their lower digital defences, often relying on Ransomware-as-a-Service (RaaS) providers.[205] According to Europol, the actors involved in cyber-criminal activities in the EU are wide-ranging, from lone actors to groups and networks with various levels of expertise and capability.[206]

In North America, national authorities assess that cyber-enabled fraud and scams remain a common form of cybercrime affecting citizens and organizations. Investigative reports involve ransomware, viruses and malware, data breaches, and others.[207] Ransomware is considered one of the most disruptive forms of cybercrime, as it can hinder an organization's ability to function and produces significant volumes of stolen data that may be used to facilitate further criminal activities.[208] Since 2020, ransomware attacks have grown in scope, frequency, and complexity in North America.[209] Increasingly, cyber criminals provide services and tools which enable less skilled criminal actors to commit cyber-attacks. The development and proliferation of this business model have contributed to the increasing number of attacks. By lowering skills barriers to entry in this criminal activity, this model enables individuals with limited technical expertise to participate in cybercrime, thereby broadening the pool of actors involved.

Technology has changed the notion of the geography of crime

Technological developments have made it easier for criminal groups to target victims across borders, leading to a separation between the jurisdictions where offenders operate and where victims are located. This dynamic is increasingly reshaping the geography of crime and challenges traditional criminological notions that place perpetrators and victims within the same physical space.[210] As a result, crime prevention strategies based on situational opportunity theories,[211] where crimes are understood to occur as the result of the convergence in time and space of motivated offenders and suitable targets (in the absence of capable guardians),[212] are less effective, as evidenced, for example, in the case of online scam farms (see *Case study 6 -Scam farms in Southeast Asia: highly lucrative criminal enterprises that exploit territories with rule of law challenges*) as well as online financial sextortion of minors and adolescents (see *Case study 5 - Online financial sextortion: how West African crime groups leverage technology and social media to exploit vulnerable groups abroad*).

Internet technology has broadened the geographical scope of traffickers' operations. The Internet helps criminal organizations to operate across borders and in multiple locations at the same time, while physically targeting victims in other locations. Further, this evolution results in transforming traditionally very localized and small-scale crimes – such as fraud, extortion, gambling or others – into new forms of cyber-facilitated transnational organized crime activities operating at a global scale, which require international and multinationals responses.

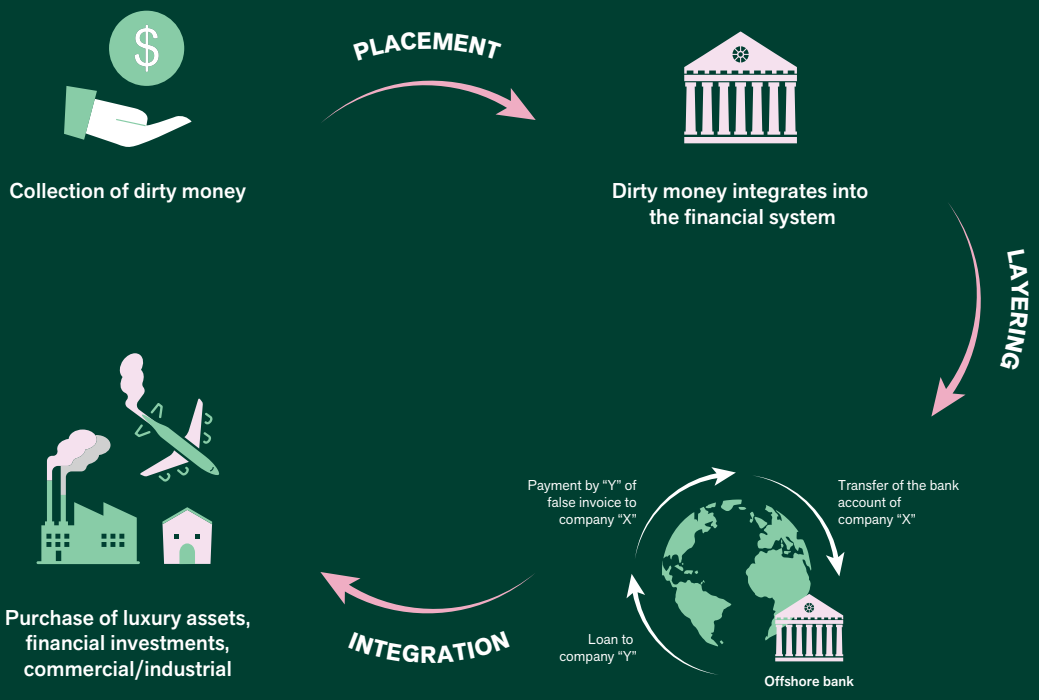
Organized crime has rapidly adapted to the digital age, often operating out of industrial-scale scam centres that target victims across multiple countries. These operations are frequently based in regions or areas affected by armed conflict, rule of law challenges, and illicit economies – conditions that offer greater protection from detection and interdiction. In recent years, for example, a number of organized criminal groups have diversified their activities into cyberfraud[213] operations in several countries in Southeast Asia.[214] Various East and Southeast Asian organized criminal groups, including networks linked to the *14K Triads* and other groups traditionally active in drug trafficking in the region, have been involved in these operations, in addition to armed groups operating in the region.[215] Elsewhere, in Ukraine, call centres dedicated to telephone and online frauds have been identified and linked to the *Dniprovski* and *Khimprom* criminal organizations.[216] Registered fraud crimes in Ukraine have rapidly increased in recent years, from around 15,000 in 2022 to more than 50,000 instances in 2023.[217]

Advances in technology have given rise to increasingly sophisticated and harmful cybercrime schemes. For instance, by using artificial intelligence (AI) to create computer-generated images and voices that are indistinguishable from real ones, cybercriminals are now executing social engineering techniques to defraud victims by exploiting their trust for financial gain,[218] as well as deepfake videos featuring legitimate public figures for investment fraud.[219]

In the case of online financial sextortion schemes, offenders approach victims on social media, gaming sites, and messaging apps using fake profiles, frequently posing as women or girls of a similar age.[220] After victims are deceived into sharing compromising content, they are blackmailed and threatened with the release of the sensitive content unless the victim pays money, sends gift cards, or transfers cryptocurrency.[221] Criminal groups involved in cybercrime often operate through flexible, loosely organized networks that form and dissolve around specific projects, though some develop more structured and hierarchical arrangements.[222]

Personal data of the victims are often a core asset in the operations of cybercriminals, which are subsequently used in phishing schemes and other fraudulent activities.[223] Some criminal groups behind organized fraud operations use the dark net[224] to procure sensitive data for criminal exploitation, such as bank client, postal courier service and mobile operator customer data.[225]

Large-scale cybercrime operations often concentrate in physical scam centres



Cybercrime can be perpetrated by single individuals operating remotely in many different locations, but large-scale cybercrime operations that involve OCGs tend to concentrate in specific geographical locations and involve large numbers of operators. For example, the centres operating online and telephone fraud in Ukraine involve large numbers of operators in different locations. In a single case, national authorities dismantled a network of centres operating across 16 regions of Ukraine, with some 2,500 operators employed across the network. Before being dismantled, the criminal network's annual turnover was reported to be around US$74 million, highlighting the significant scale of the criminal operation.[226] Similarly, some online financial sextortion schemes have been documented in specific geographical hubs in West Africa, where horizontal, flexible structures of organized criminal actors are involved.[227] These cybercrime networks collaborate on a project basis with temporary hierarchical relationships, but with no permanent hierarchy within the group.[228]

Large-scale cybercrime operations typically require anonymity – like the scam centres that operate in Ukraine under the façade of IT companies – and weak rule of law. The large scam farms in Southeast Asia, for example, are located in territories characterized by loose regulations and weak jurisdictions, including border areas controlled by armed groups.[229] In these geographical hotspots, it is estimated that several hundreds of thousands of cybercrime operators carry out various cyberfraud and scam activities.[230] UNODC estimates financial losses between US$18 billion and US$37 billion from scams targeting victims in East and Southeast Asia in 2023 alone, with a high proportion of these losses attributed to scams committed by OCGs in Southeast Asia.[231]

In some of the large scam centres in Southeast Asia, people are trafficked and forced to perpetrate cybercrimes. Reports of trafficking in persons and deceptive recruitment into these scam centres began emerging in the early 2020s. In the scam centres, victims are confined in compounds, their passports are confiscated and they are compelled to carry out cyber-enabled fraud.[232] They are forced to interact with social media users and may be given a daily target of numbers of potential new victims with whom they have established contact.[233] While the full scale of trafficking in these centres is difficult to assess, multiple sources, including police reports, court documents, rescue and anti-trafficking groups, survivor testimonies, and media investigations, indicate that it may be widespread. Trafficking victims can find themselves in the same scam centre as individuals who participate voluntarily, as not all scam operators are coerced.[234] Most trafficked victims in scam centres in Southeast Asia are from the region, though recruitment of victims has been documented across South and Central Asia, Africa, Eastern Europe, and Latin America,

Money laundering cycle

Source: UNODC. Available at: https://www.unodc.org/unodc/en/money-laundering/overview.html.

A basic introduction to money-laundering

The UN Convention against Transnational Organized Crime provides a legal definition of the laundering of proceeds of crime in its Article 6. [235] Money-laundering is one of the offences established under the Convention. The international community first called for the criminalization of money laundering in its 1988 Convention on Narcotics.[236] The UN Convention against Corruption contains multiple provisions for preventing money laundering.[237] The Financial Action Task Force (FATF) sets the global anti money laundering, countering the financing of terrorism and counter proliferation financing standards.[238]

In Australia, for example, money-laundering has been considered an intrinsic enabler of serious crimes and organized criminal groups, and has been carried out at different levels of sophistication by most, if not all, organized criminal groups.[239] The interconnectedness of money-laundering networks in Australia and the variety of laundering methods used by organized criminal groups are indicative of a truly global system of criminal business.[240]

In theory, money-laundering can take place in three stages: placement, layering and integration. Placement involves removing the funds from direct association with the crime; layering involves creating complex financial transactions to disguise the source and ownership of the funds; and integration involves making the money available to the criminals again by introducing it back into the economy, but now from seemingly legitimate sources.

In reality, money-laundering schemes may not always exhibit all three stages; some stages could be combined, or several stages repeat several times. For instance, if cash from drug sales is divided into small amounts, then deposited into banking accounts by "money mules", and afterwards transferred as payment for services to a shell company, placement and layering occur simultaneously.[241]

Organized criminal groups that generate income through drug trafficking or other illicit activities typically launder their income to hide its illicit origins. This frequently involves moving large amounts of assets across national borders. For example, it has been estimated that in most countries along the so-called Balkan route,[242] within the time period 2019–2022, between a quarter and half of the illicit net income from illicit drug markets related to opiates and methamphetamines was moved abroad.[243] These estimates suggest that within the defined time period, between US$3.4 and US$6.9 billion crossed borders every year along the Balkan route as illicit financial flows related to the two drugs.[244] The illicit profits accumulated by producing and trafficking opiates and methamphetamine along the Balkan route amount to a sizeable share of the gross domestic product (GDP) of some countries such as Afghanistan (US$17.2 billion in 2023) and North Macedonia (US$16.7 billion in 2024).[245]

reflecting the expanding geographical reach of these operations.[246] Available evidence also indicates that this criminal business model is rapidly spreading to other parts of the world, with groups establishing themselves in the Pacific,[247] Africa,[248] and South America.[249]

Casinos and online gambling have multiplied the opportunities for illicit gambling and facilitated new forms of money-laundering

Using modern ICTs, organized criminal groups have adopted new money-laundering schemes, increasing the challenges for criminal justice systems in tracing and seizing assets. An example of this technology-driven transformation is in the (mis)use of both online and onsite casinos, junket operations,[250] and online gambling to launder proceeds of crime (see *Case study 8 - The role of the casino industry in money-laundering in Southeast Asia*).

Advances in Internet speed and mobile app functionalities have expanded the online gambling sector, bringing additional opportunities for organized criminal groups not only to expand their operations in illicit gambling, but also to use the sector to launder money.[251] Law enforcement agencies reported that, throughout East and Southeast Asia, online casinos have been misused to serve as integral components of the money-laundering infrastructure, just as onsite casinos have.[252] The illicit nature of gambling transactions has generated an unprecedented demand for laundering-as-a-service providers, i.e., operators able to process transactions between players and operators that engage in illicit gambling seeking to circumvent detection. Such operators have been found to be introduced and controlled by organized criminal groups.[253] Additionally, such infrastructure built to launder illicit gambling operations has also been heavily utilized by other powerful criminal networks engaged in many other illicit activities.[254]

The rise of online social gaming has also changed the gambling industry and its associated money-laundering risks as so-called 'crypto casinos' and non-fungible token (NFT) play-to-earn games become more popular.[255] The online gambling sector is characterized by actors that operate remotely and anonymously, interconnected over the Internet, a minimal, if any, number of compliance staff, and large and complex volumes of transactions and financial flows that often span different jurisdictions. The speed and scale of financial transactions together with differences in legal frameworks, as well as legal loopholes, have created enforcement gaps and grey areas, allowing organized criminals to set up professional money-laundering operations.[256]

In East and Southeast Asia, casinos, junkets[257] and online gambling have become critical pieces in the underground banking and money-laundering infrastructure that serves transnational organized crime.[258] Several junkets in the region have been infiltrated or are directly controlled by organized criminal groups such as the *Lazarus Group*, *Sam Gor* or the *14K triad*, who use junkets to move money through and across casinos in order to launder their illicit proceeds.[259]

More broadly, what makes casinos – both online and onsite – together with their junkets and online gambling operations particularly attractive to organized criminal groups is that they can provide an end-to-end money-laundering service covering the entire laundering cycle.[260] Attractive features for organized criminal groups include large cash volumes, anonymous transactions, safekeeping arrangements and cross-jurisdictional credit relationships – all of which facilitate the concealment of illicit origins and the movement of value across jurisdictions.[261]

Organized criminal groups linked to this sector have demonstrated the ability to rapidly evolve and adapt to shifting contexts, regulatory frameworks, and institutional responses.[262] They have aggressively diversified their operations and increasingly exploit highly technical supply chains, complex transactions, and opaque money flows, as demonstrated by the case of online gambling.[263] Online gambling platforms often present themselves as legitimately registered businesses or as 'neutral third parties', sometimes appearing to be affiliated with larger business networks. In reality, many operate without authorization to conduct online payment processing, cryptocurrency trading and exchange, or related activities – functioning with little to no regulatory oversight.[264]

1483

Cheap, fast, and anonymous – the use of virtual assets for money-laundering

Virtual assets[265] are used by criminals to launder funds from a wide range of predicate offences, including from online frauds and scams, ransomware attacks, trafficking in drugs and chemical precursors as well as corruption.[266] Virtual assets are also used for financial transactions in illicit markets (e.g. illicit drug markets), in terrorism financing and proliferation financing,[267] as well as by international money-laundering networks, including for money-laundering services offered directly on dark net[268] marketplaces.[269] This does not, however, suggest that the existence and use of virtual assets are solely for criminal purposes. On the contrary, virtual assets are widely used in global finance and can offer access to finance and value movement for the poorest in society, often at less cost than traditional bank accounts. According to some estimates, which are subject to considerable uncertainty, the use of cryptocurrency in the context of crime represents less than one per cent of the total on-chain transaction volume.[270]

In recent years, Member States have reported the combined use of blockchain-based transactions[271] with other value transfer methods, including Hawala-type methods to launder crime proceeds.[272] In the Northern American context, for example, a recent case documented the work of international money-laundering networks using virtual assets to collect funds in one jurisdiction and making the equivalent value available in another, often by swapping virtual assets for cash.[273] The use of privacy coins[274] and technologies that can hide the identity of the parties involved, the amount being transferred, or even the existence of the transaction itself, has also been reported in relation to transnational money-laundering.[275] Stablecoins[276] have rapidly become the preferred medium for illicit financial transactions (compared with other types of cryptocurrency),[277] which criminals can combine with the use of mixers,[278] bridges, [279] and cross-chain swaps. The appeal of stablecoins lies in low volatility, fast settlement, and high liquidity – features that are valued by criminals.

Where there is the convergence between different forms of organized crime, virtual assets offer a common financial tool for money-laundering purposes. For example, in Southeast Asia, criminal networks involved in fraud, human trafficking for forced criminality, drug trafficking, gambling, and underground banking are increasingly intertwined.[280] Virtual assets are often a common denominator that connects these networks.[281] Criminals rely on over-the-counter brokers, unregistered exchanges, and nested accounts on major platforms to move and layer funds without detection. This convergence creates a resilient and globally connected ecosystem for illicit finance.[282]

Strategic priorities for action against organized crime

More than 25 years after the adoption of the United Nations Convention against Transnational Organized Crime and its supplementing Protocols, countering transnational organized crime increasingly requires a multilateral and multi-pronged response, including to address its ability to exploit technological advancements and its interlinkages with corruption, terrorism, conflict and development. Despite shifts in how organized crime operates, the Convention remains the central framework guiding these efforts, providing a flexible and robust basis for addressing traditional and new, emerging, and evolving forms of organized crime.

A number of actions have been identified below on how to respond to the current and prospective reality of transnational organized crime.

Action: When crime goes digital, so must the global response. As organized crime moves to the cyberspace, the international community must develop strategic responses to address the misuse of technology

Organized criminal groups are exponentially exploiting artificial intelligence and other emerging technologies as tools to carry out their activities. They also often take advantage of the increasing digitalization of public sectors and target key infrastructure to achieve financial gain. Governments, the private sector, and international institutions should strengthen joint threat analysis, improve cross-sector information exchange, and align responses to technology-enabled crime. Unlike traditional forms of organized crime, where public authorities were able to autonomously collect all relevant information for investigation and prosecution of cases, nowadays, cooperation with the private sector is indispensable, given that they are the main holders of key data.

Law enforcement and judicial authorities must be equipped with specialized training that includes real case scenarios, mock trials and simulations, as well as advanced digital forensic tools and software to enable rapid cross-border exchange of admissible digital evidence. Legal frameworks should be updated in line with the UN Convention against Cybercrime to address online- and AI-enabled threats, including the criminalization of deepfake abuse, large-scale organized fraud, and AI-generated exploitative content.

Action: Organized crime is borderless. So must be the institutional response to it. The international community needs to scale up its capacity to building partnerships and strengthen cross-border judicial and law enforcement cooperation

National competent authorities in countries involved in investigations, prosecution of judicial proceeding in respect to the same offences should enhance coordination. The deployment of liaison officers or magistrates, and the designation of specialized and stable focal points for international cooperation across jurisdictions has proven key to responding to the sophistication of organized criminal operations. Liaison magistrates act as an interface between the national central authorities of the deploying country, to which they maintain reporting lines, and the hosting country. In addition to their traditional functions which include facilitating the exchange of information and the transmission of Mutual Legal Assistance (MLA) requests, the Liaison Magistrates provide legal advice and solicit the prompt follow-up on cases and execution of MLA requests with the relevant authorities in the deploying country.

In relation to law enforcement cooperation, the expansion of joint investigations and the use of controlled delivery and other special investigative techniques, such as electronic or other forms of surveillance and undercover operations, have also proved especially impactful in combating organized crime across borders.

Adoption of digital technology solutions to enhance the scope and to speed the communication and the cooperation among national authorities should be in the agenda of the international community to combat transnational organized crime.

Action: Confronting criminal governance with integrated action. Territorial control of organized crime over vulnerable communities is increasing.

1485

Implementing multi-pronged interventions is required to limit such reality.

A combination of measures extending beyond the remit of the criminal justice system is essential to (re)establish State presence and legitimacy in the territories under the influence of the organized crime governance. In many contexts, this will require sustained long-term interventions aimed to reduce the dependence of local communities on criminal economies.

Individuals at the lower levels of the organized crime operations, such as farmers, small-scale smugglers and those involved in drug dealing due to poverty and limited livelihood options should be offered lawful socioeconomic alternatives, alongside focussed interventions to address structural drivers enabling the thriving of illicit activities, including deep-rooted poverty, underdevelopment, insecurity and inequality. Funding for such schemes may be mobilized through partnerships with the private sector, as well as through the social use of confiscated criminal assets. Human rights considerations should sit at the core of any anti-crime intervention.

Action: Profit is the main drive of organized crime. Target the criminal profits and Illicit financial flows to disarm the criminal organizations

Transnational organized crime is incentivized and enabled by its proceeds. Disrupting illegal financial flows, confiscating, and recovering the proceeds of crime through anti- money-laundering/combating the financing of terrorism/combating proliferation financing and anti-corruption measures is one of the most impactful ways in which Member States can combat transnational organized crime.

Such cooperation must be multi-sectoral, bringing together law enforcement authorities, financial intelligence and investigation bodies, prosecutors and the private sector. At the national level, priority should be given to strengthening financial investigation capacities, enhancing anti-money laundering frameworks, and ensuring the effective use of seizure, confiscation, and asset recovery mechanisms.

Cryptocurrencies are increasingly used for illicit purposes, the logic of following the money has expanded to include tracing the mining, transfer, and eventual confiscation of digital assets, including, where relevant, analysis of the energy consumption required to generate them. In response to this threat, digital technology needs to be used as a tool to combat illicit financial flows carried out through digital assets. Capacity-building for national authorities remains key to train relevant officials in the use of digital technologies for the investigation and prosecution of organized crime activities.

Action: Organized crime and instability are increasingly interconnected and interrelated. Address organized crime as agent of instability in conflict and related crisis areas

United Nations entities and other international actors, including peacekeeping personnel, must be able to identify and report organized crime dynamics within their mandates. Children recruited by terrorist and non-state armed groups are subjected to compounded violence and exploitation. At the same time, among displaced populations and veterans, the initiation of, or transition to, harmful use of substances is complex, and it often needs to be addressed against a backdrop of limited health infrastructures and constrained social and economic resources. Successful reintegration requires on targeted programmes combining educational and vocational opportunities, health and psychosocial support, crime prevention, and community-based inclusion measures for affected individuals and their families.

Border authorities and national law enforcement agencies should be strengthened to effectively detect, intercept, investigate, and prosecute illicit arms trafficking and manufacturing, particularly in conflict, post-conflict, and other fragile settings where risks of diversion and proliferation remain acute. These efforts should be reinforced through comprehensive arms control and preventive measures, including systematic record-keeping, marking and tracing, and safe and secure stockpile management to prevent diversion from national holdings.

In conflict situations, armed groups establish criminal partnerships with organized criminal groups to exploit territories under their control, ranging from the extraction of precious minerals to the establishment of scam centres, and from oil smuggling to drug trafficking. Illicit drug economies can flourish in situations of conflict. At the same time, conflicts may also disrupt traditional commercial trade and travel patterns, altering trafficking routes and methods, including drugs that are often concealed within legitimate channels. Systematic monitoring of these patterns based on a sound threat assessment methodology and solid evidence is needed to limit the impact and extension of conflicts.

1486

Endnotes

1 The definition of organized criminal group specifically refers to a structured group that acts "to obtain, directly or indirectly, a financial or material benefit" (Art. 2 (a) of the United Nations Convention against Transnational Organized Crime).

2 Currently, only four UN Member States are yet to adhere to UNTOC (Papua New Guinea, Republic of the Congo, the Solomon Islands and Tuvalu). More information: https://treaties.un.org/pages/viewdetails.aspx?src=treaty&mtdsg_no=xviii-12&chapter=18&clang=_en.

3 The "Protocol to Prevent, Suppress and Punish Trafficking in Persons, especially Women and Children", was adopted by General Assembly resolution 55/25. It entered into force on 25 December 2003. It is the first global legally binding instrument with an agreed definition on trafficking in persons. The intention behind this definition is to facilitate convergence in national approaches with regard to the establishment of domestic criminal offences that would support efficient international cooperation in investigating and prosecuting trafficking in persons cases. An additional objective of the Protocol is to protect and assist the victims of trafficking in persons with full respect for their human rights.

4 The "Protocol against the Smuggling of Migrants by Land, Sea and Air" adopted by General Assembly resolution 55/25, entered into force on 28 January 2004. It deals with the growing problem of organized criminal groups who smuggle migrants, often at high risk to the migrants and at great profit for the offenders. A major achievement of the Protocol was that, for the first time in a global international instrument, a definition of smuggling of migrants was developed and agreed upon. The Protocol aims at preventing and combating the smuggling of migrants, as well as promoting cooperation among States parties, while protecting the rights of smuggled migrants and preventing the worst forms of their exploitation which often characterize the smuggling process.

5 The "Protocol against the Illicit Manufacturing of and Trafficking in Firearms, their Parts and Components and Ammunition" was adopted by General Assembly resolution 55/255 of 31 May 2001. It entered into force on 3 July 2005. The objective of the Protocol, which is the first legally binding instrument on small arms that has been adopted at the global level, is to promote, facilitate and strengthen cooperation among States Parties in order to prevent, combat and eradicate the illicit manufacturing of and trafficking in firearms, their parts and components and ammunition. By ratifying the Protocol, States make a commitment to adopt a series of crime-control measures and implement in their domestic legal order three sets of normative provisions: the first one relates to the establishment of criminal offenses related to illegal manufacturing of, and trafficking in, firearms on the basis of the Protocol requirements and definitions; the second to a system of government authorizations or licensing intending to ensure legitimate manufacturing of, and trafficking in, firearms; and the third one to the marking and tracing of firearms.

6 The Convention goes on to define "serious crime" as "conduct constituting an offence punishable by a maximum deprivation of liberty of at least four years or a more serious penalty" and "structured group" as "a group that is not randomly formed for the immediate commission of an offence…". Taken together, these elements provide a basis for understanding transnational organized crime as serious profit-motivated criminal actions committed by a group to obtain a direct or indirect financial or other material benefit, conducted across national borders.

158 The industrial-type corporate crime often evident in CAE can be considered as organized crime in line with UNTOC. Legitimate corporations or businesses running logging operations, or employees thereof, may engage in illegal activities to further their profits. In addition, companies may be established specifically for the purpose of profiting from the illegal market of timber. The latter can be seen as a distinct form of structured organized criminal group that operates as a legal entity engaged in illegal activities. Ibid., 8.

VIOLENCE IN THE QUEENSLAND CFMEU

A. INTRODUCTION

1. The Administrator of the CFMEU has directed me to investigate violence in the Queensland operations of the CFMEU.[1]

2. Violence is any behaviour which is physically, sexually, emotionally, psychologically or economically abusive. It includes conduct which is threatening or coercive, or which causes a person to feel fear for their safety or well-being. It specifically includes conduct which "*causes a child to hear or witness, or otherwise to be exposed to the effects of, such behaviour".*

3. That definition of violence should not be unfamiliar to the CFMEU – the definition is one drawn up by the CFMEU to be included in its enterprise agreements.[2] The purpose of having such a wide definition of violence was, apparently, to protect CFMEU members from harm.

4. Yet, as will be seen, the CFMEU has breached – deliberately breached – every aspect of its own anti-violence policy. The CFMEU in Queensland actually intended to inflict physical, sexual, emotional, and economic abuse on others. The CFMEU used threats and coercion deliberately to cause fear. As will be seen, the CFMEU directed threats and intimidation at women and children.

5. In summary, there is no doubt that there is violence in the Queensland construction sector and there is no doubt that the CFMEU was a big part of that violence. This is hardly a revelation. In 2024 a federal judge said he did not require evidence of CFMEU violence because it was "*well documented"* that the Queensland CFMEU had "*engaged in thuggish behaviour".*[3]

6. The purpose of the violence is plain – the violence is used by the CFMEU to support a pursuit of political, industrial, and financial power. This included, if necessary, destroying individuals and businesses. The CFMEU is ruthless – it will crush anyone offering any resistance to it.

7. The campaign of violence was very likely planned and directed by the CFMEU leadership – principally by the secretary, Michael Ravbar, and an assistant secretary, Jade Ingham.[4] The campaign was eagerly executed by some CFMEU organisers,

---

1 The terms of reference are attached as Appendix A. The terms were altered on 27 May 2025 to extend the period under investigation back to 2015. References in this report to the "CFMEU" should be read as limited to the Union's Queensland operations, either through the Queensland Branch of the federally-registered CFMEU or the state-registered entity, the CFMEUQ.

2 See, as just one example, clause 42.3 of the "*RB Major Projects Pty Ltd and CFMEU Collective Agreement 2023-2027*"

3 Justice Rangiah in *CPB Contractors Pty Ltd v Construction, Forestry and Maritime Employees Union* [2024] FCA 459 at [51].

4 As will be explained, Ravbar and Ingham were given multiple invitations to attend an interview or to respond in writing. They declined all invitations. They were specifically requested to respond to this suggestion regarding their role in the violence. Neither did.

some delegates, and some rank-and-file members. Ravbar and Ingham successfully cultivated a culture of violence in the CFMEU.

8. This report is not motivated by any hostility toward the trade union movement - far from it. This report is generated from a genuine respect for the essential role trade unions hold in redressing the imbalance of power between labour and capital, in improving the lives of working Australians, and keeping workers safe. But the power and benefits conferred through the recognition given to a trade union carries with it responsibility and accountability, and subjects its conduct to scrutiny. The rights of organisation and protest are not unlimited; there is a line somewhere - and violence is always on the wrong side of that line.

9. The Queensland CFMEU has well and truly crossed that line. The problem of violence in Queensland is serious. Numerous instances of violence are detailed in this report.

10. The CFMEU methods have proved effective in Queensland. The CFMEU has got its way, time after time, on numerous aspects of policy and during practical negotiations. Many of the opponents of the CFMEU have stood up to the intimidation, but others have been cowed by the threats. One common CFMEU method is to target individuals, isolate them, attack them, and not let up. The CFMEU is relentless. The conduct of the CFMEU has required some of their targets to quit their jobs, to move their homes, and to seek medical assistance. The CFMEU has ruined careers and caused long lasting emotional and financial damage to its opponents.

11. Yet often the methods employed by the CFMEU are childish and cowardly - *childish* because many of the methods used are scarcely more sophisticated than schoolyard bullying; *cowardly* because the CFMEU commonly sends a dozen or more men to intimidate its targets. The CFMEU imagines that strength is best reflected in sending ten men to threaten one. That is not strength – it is thuggery. Consistent with the thuggery, the CFMEU targets the vulnerable, including women.

12. There is a lot of hypocrisy in the CFMEU. The leadership speaks of its concern for the mental health of workers, but then deliberately damages the mental health of its opponents. The leadership speaks passionately about job security, but then constantly calls for the sacking or resignation of its opponents. The leadership speaks emotionally of unity in the trade union movement, but then tries to wipe out competing unions.

13. But far and away the worst hypocrisy from the CFMEU relates to its treatment of women. The leadership speaks of its concern for women, but then viciously attacks the women who oppose it in degrading and sexist terms. A specific section of this report will focus on violence inflicted on women by officials and members of the CFMEU. One of the witnesses is a health and safety advisor with more than thirty years' experience on Queensland building sites - she said that the belief that conditions for women are

improving is wrong and, if anything, the way in which women are treated has been deteriorating.

14. Unless it is stopped the CFMEU violence in Queensland will get worse. That said, there is evidence that suggests that if changes are made the risk of violence can be reduced and may even be removed.

15. If there is to be a change it will need to be initiated by the Administration. Even though Michael Ravbar and Jade Ingham have been removed, and even though a handful of officials have resigned, there seems to be little willingness amongst the holdover officials to change. Instead, those officials I interviewed were steadfast in denying that there was any problem at all – I was told repeatedly by organisers that they had never seen any violence emanating from the CFMEU. That is laughable given the extensive court findings and the irrefutable video evidence.

16. The Administration's response needs to be swift and ensure long lasting change. To end the violence will require the immediate removal of some officials.[5] Those officials and delegates who remain will need to be warned that repetition of the violence will lead to termination of their employment or appointment. Violence by the CFMEU can no longer be tolerated.

The course of the investigation

17. Over three months, 55 people were interviewed during the investigation, most more than once.[6] Those interviewed included CFMEU officials and members, other trade unionists, politicians, bureaucrats, building contractors, representatives from employers' associations, bystanders and – worst of all – victims of the abuse. Speaking to the victims was especially eye-opening. Extensive video and photographic evidence has been obtained and examined. The information included contemporary press reports and social media posts made by the CFMEU. There are thousands of pages of material.

18. Yet I fear this investigation only scratched the surface of the violence in the Queensland CFMEU. There are many other potential witnesses and many other stories which could have been told. There was no chance nor need to pursue them all. Enough was uncovered to make me confident of the accuracy of the matters included in this report.

19. This investigation was conducted while the CFMEU constitutional challenge to the Administration was unresolved.[7] The investigation was hampered to some extent by that fact. While that decision was outstanding several potential witnesses were reluctant to co-operate in case Michael Ravbar and Jade Ingham were successful and reinstated.

---

5 The names of those officials will be provided separately to the Administrator in a private report.
6 A list of participating witnesses has been provided to the Administrator.
7 At the time this report was prepared the judgment had not been handed down.

A lack of co-operation from CFMEU witnesses

20. An investigation like this requires some degree of co-operation: potential witnesses need to be willing to talk; potential witnesses need to be truthful and accurate.

21. There was an obstinate refusal to co-operate from some critical witnesses with connexions to the CFMEU. It seems, sadly, that CFMEU officials are afflicted with widespread memory loss.

22. Four groups of witnesses connected to the CFMEU were identified as especially important to the investigation.

23. The first group comprised the former secretary Michael Ravbar, and a former assistant secretary, Jade Ingham.

24. Given the High Court challenge to the validity of the administration, it was regarded as inappropriate to require Ravbar and Ingham to attend an interview under s 323L of the *Fair Work (Registered Organisations) Act 2009*. Instead, Ravbar and Ingham were given multiple invitations to attend an interview. Neither took up the invitation.

25. This was a pity because there is no doubt that each could have assisted the investigation. It also meant that information adverse to Ravbar and Ingham was left uncontradicted.

26. A second group of current officials was identified as potentially helpful. Because this group comprised current employees of the CFMEU, they were directed by their employer to attend interviews. Independent legal representation was provided. They were [redacted]

27. The interviews were disappointing. Several of these men were deliberately unhelpful and even gave palpably false answers. A summary of what they had to say and the reasons for the adverse assessment of it is provided in my private report to the Administrator.

28. Because of specific matters adverse to him, a further invitation to attend or to provide a written response was sent to [redacted]

29. A third group of witnesses comprised previous employees of the CFMEU. This group could not be directed to attend, so they were invited to attend an interview. Again, independent legal representation was provided. Each of them declined to participate in an interview. This group comprised [redacted] a former co-ordinator, and the former organisers [redacted]

30. [redacted] accepted an opportunity to provide answers to written questions. Those answers are referred to where necessary in this report.

31. Because specific matters of concern arose during the investigation, further invitations were made to [redacted] to attend an interview or provide written responses to address the issues. [redacted] gave a minimal response and [redacted] declined to respond altogether.

32. A fourth group of witnesses are or were CFMEU delegates – ie officials of the CFMEU, but not employees of the CFMEU. They were also given an opportunity to attend an interview or answer questions. As none were employed by the CFMEU there was no power to direct them to attend an interview or to answer questions. Again, legal representation was made available, but each declined an interview. They are [redacted] and [redacted].

33. Because the investigation raised specific issues of concern against them, further invitations to attend an interview or provide written responses were extended to [redacted] to address the matters raised. Both declined the invitation.

The reports

34. My report is in two parts: this public report and a private report which will be provided only to the Administrator.

35. This public version has been deliberately framed to prevent repercussions against those who have provided assistance. Some names and other details have been withheld. Some of the images reproduced have been cropped or altered to protect identities. The content of some social media posts that targeted victims has been suppressed – to republish them would only retraumatise the victims and possibly grant some perverse pleasure to those who posted the abuse.

36. *Warning* - some of which follows in this report will certainly be distressing to some readers. It includes violence and threats toward women and, in one instance toward a child.

B. BACKGROUND: THE CFMEU IN QUEENSLAND

The legal structure of the CFMEU

37. Although references to the CFMEU will be made throughout this report, there are actually three separate bodies relevant to this investigation.[8]

38. The first body is the federally registered organisation, which has three Divisions – the relevant one being the Construction and General Division. The second body (and the principal focus of this report) is the federally registered Queensland and Northern

[8] Even the reference to the "CFMEU" needs to be qualified; because of amalgamations or separations, the Union has had different titles, but those make no difference to this report – throughout the Union will be referred to as the CFMEU.

Territory Branch of the C & G Division. The third body, typically referred to as the 'CFMEUQ', is registered under the *Industrial Relations Act 2016* (Qld).

39. It will generally be sufficient to refer simply to the CFMEU, using that as a means of describing the conduct of one or more of the CFMEU organisations operating in Queensland.

The leadership structure of the Queensland CFMEU

40. Before the Administration commenced the control of the Queensland Branch was vested in the Branch Committee of Management – commonly known as "*the COM*". The COM is elected by members.

41. Beneath the COM, during the period relevant to the investigation, [redacted] a secretary, Michael Ravbar, and two assistant secretaries, Jade Ingham and Kane Lowth. No adverse information was ever received in respect of Lowth.

42. Ravbar and Ingham were removed from their position upon the commencement of the Administration. [redacted] Under the Administration the powers and duties of the executive have been transferred to an executive officer.

43. Beneath the executive were, roughly, 40 organisers. The organisers were allocated roles, sometimes by reference to a geographical area, sometimes by reference to a task or trade. The number and names of the organisers changed occasionally. It will only be necessary to identify a few in this report.

44. The executive and the organisers were directly employed by the CFMEU.

45. Beneath the organisers there were, roughly, 400 delegates. Delegates are supposedly selected through a democratic process – ie a vote of members on a particular site. In practice the members are more commonly presented with a single candidate. The delegates are not employed by the CFMEU; they are employed by the contractor or contractors on a particular site. Upon selection a delegate will be recognised by the CFMEU and given specific training. The number and identity of the delegates changes often, and only those of particular present interest will be mentioned in this report.

46. Together the organisers and delegates are known as "*officials*" of the CFMEU and have a role of representing the Union in different circumstances. They are positions of power and authority.

C. THE CYCLE OF LAWLESSNESS

47. There is a plain and consistent theme running through the operations of the CFMEU in Queensland – that theme is the CFMEU's utter contempt for the law, its disregard for laws and rules, its refusal to be bound by ordinary norms of behaviour, and its attempt to take advantage of its acting outside the law. There is something deeply hypocritical

that, when challenging the validity of the legislation introducing the Administration, the CFMEU took their arguments to the High Court on the basis that the CFMEU was entitled to the protection of the rule of law – a protection it had repeatedly denied to those with whom it dealt.

48. In some ways the problem goes deeper than a mere disregard for the law, it seems to extend to deliberate breaches. The CFMEU wanted to have the reputation of an outlaw.

The CFMEU's attitude to industrial prosecutions

49. In August 2024 the Fair Work Commission detailed how, in the 21-year period between 2003 and 2024, there were 213 separate court proceedings brought against the CFMEU, resulting in 2,600 convictions and the imposition of $28 million in fines. Things were getting worse, not better: in the High Court challenge the Solicitor-General cited records showing how, in the five-year period between 2019 and 2024, the CFMEU had been convicted of 1,163 breaches of industrial laws, resulting in more than $10 million in fines.[9]

50. This is quite out of order with the experiences of other trade unions: the CFMEU had collected 55 times more convictions than its closest competitor; many large trade unions had not been prosecuted for a single breach. While it is fair to observe that the Australian Building and Construction Commission targeted the CFMEU, other unions were also subject to the ABCC, and did not have conviction rates anything like the CFMEU.

51. Some federal judges imposing punishment on the CFMEU have observed that the CFMEU has no regard for the fines and that fines have proved ineffective as a deterrent. Several judges have described the CFMEU's attitude as treating the fines as a cost of doing business.

52. I would go further – it seems more likely that breaching the laws and suffering fines was an integral part of the CFMEU business model. Its reputation as an aggressive outlaw created a fear and reticence amongst those dealing with the CFMEU. Those running the Queensland CFMEU were obviously content that the value of that outlaw reputation well exceeded the amount of the fines.[10]

53. Those statistics apply to the whole of the CFMEU; this investigation is focussed on Queensland Branch. For that reason literally dozens of Queensland court decisions were read as part of this investigation – there is something of a summary below. Reading judgment after judgment is dispiriting: the lawlessness in Queensland affects every aspect of the CFMEU's operations - its relations with government, its relations

---

9 See Ravbar v Commonwealth of Australia [2024] HCATrans 90 (10 December 2024).

10 In his evidence in the Trades Union Royal Commission, Michael Ravbar said that "*I don't have a problem*" with the CFMEU breaching court orders, including an injunction: Michael Ravbar, 6/8/14, T: 347.25-39. Referenced Heydon Report, Volume 5, page 400.

with regulators, its relations with other trade unions, its relations with contractors, its relations with women, and its relations with the public.[11]

Who paid the fines?

54. Unless a punishment stings it will not deter. For this reason, there is a statutory power to make an individual liable to pay the fine and to prevent recovery from the CFMEU or some third party.[12] Unless personal payment orders were made, the CFMEU routinely paid the fines imposed upon its officials. That meant the individual official faced no downside; the individual develops the confidence and impudence to continue breaching the law.

55. Several personal payment orders have been made against Queensland CFMEU officials by federal judges.

56. There were strong rumours that the CFMEU protects its officials and members from the impact of personal payment orders. An examination of CFMEU records was conducted which showed payments were being made which had the effect of defeating the sting of the personal payment orders. It seems the CFMEU may have received legal advice that third-party payments would be acceptable if made by the State registered union. That advice appears to have glossed over the complex financial relations between the Queensland Branch and the Queensland Union.

57. When individual officials were asked about the matter, objections were taken invoking the privilege against self-incrimination. Those who claimed the privilege were [redacted]

58. The only reasonable inference is that those claiming the privilege had not complied with personal payment orders made against them. There is no doubt that they and others were being funded in a way to evade the orders of the courts.

59. The step of consciously evading court orders is serious, and a further demonstration of the utter disregard the CFMEU has for the rule of law. It also explains why officials were repeatedly breaching the law.

D. INSTANCES OF VIOLENCE

60. The violence the CFMEU brings into the construction sector occurs in a wide variety of ways – in far too many ways to catalogue the lot. There is chaos – the CFMEU thrives on chaos. This makes it difficult to organise the violence into some kind of sensible order.

---

[11] These statistics grossly understate the actual number of breaches. One witness – in a very good position to know – explained that on the Cross River Rail Project there were thousands of individual breaches notified by contractors to the ABCC, but the ABCC were selective as to those which would be prosecuted.

[12] See s 546 of the Fair Work Act 2009.

61. Although there are many other types and occasions of violence, this report is limited to five categories or areas in which the CFMEU deliberately extended its violence.

62. The *first* is the approach the CFMEU took toward the government - the Ministry and the senior bureaucracy. It seems that the CFMEU thought it was, or at least should be, running the Queensland government.

63. The s*econd* is the way the CFMEU treated the Work Health and Safety inspectorate – another area in which the CFMEU decided it should be in control.

64. The *third* is in its relations with the Australian Workers' Union – an Australian trade union which the CFMEU in Queensland seems to have decided should no longer exist.

65. The *fourth* is the relations the CFMEU had with employers and with employer organisations. Here it is perfectly understandable that there would be tensions, but the CFMEU recognised no boundaries and went much too far.

66. The *fifth* is the way in which the CFMEU treated women. This issue has been left until last because in some ways it is the most important. It is a showcase of what is wrong with the CFMEU.

67. As foreshadowed, much of what follows involves abusive language. It might be said that these are only words, but that ignores the real effect the words had. The CFMEU knew by 2014 of the power and effect of abusive language, and why it was unacceptable. In *CFMEU v BHP Coal Pty Ltd*[13] a mine worker's employment was terminated because he was carrying a sign bearing the words "*No principles, SCABS, No guts".* The CFMEU litigated the matter all the way to the High Court, where the termination was upheld because the language was offensive, abusive, humiliating, harassing, and intimidatory.

68. It is stunning to compare those words – "*No principles, SCABS, No guts"* - with the horrifying abuse about to be disclosed below.

HOSTILITY TOWARD GOVERNMENT

69. Australian politics, especially at a State level, is notoriously robust; strong criticism is common. But even by those standards the CFMEU went too far.

70. The problem starts with Michael Ravbar. He, like all Australians, enjoys a freedom of political communication, but that does not entitle him or anyone to engage in persistent, threatening abuse. His language set a low standard of conduct for the whole of the Queensland CFMEU. If the CFMEU was sliding into violence, the slide was starting from the top.

[13] [2014] HCA 41.

"Politically moronic"

71. In speech after speech, Ravbar denigrated politicians because they would not give in to him. The attacks were personal, lifted straight from the Trump playbook. Ravbar described the Prime Minister as *"gutless", "willingly ignorant",* and *"politically moronic".* He said that the Prime Minister had "*lost control",* had a "*glass jaw",* was a "*bed wetter",* and had "*panicked and soiled himself".* In one memorable speech he shouted that the Prime Minister was *"doing a shit job"* four times in about two minutes.[14]

72. Ravbar also attacked a succession of Queensland Ministers. He described successive Premiers as "*increasingly remote and intolerant of criticism",* as demonstrating *"an appalling lack of judgement",* and as being *"a joke of a leader".* He described a Deputy Premier as a *"dud"* and another Minister as the "*worst industrial relations minister Queensland has ever seen".*[15] Meanwhile the CFMEU Facebook page told a Minister you have *"blood on your hands".*[16] Ravbar's standard response when faced with the slightest opposition was to call for Premiers, Deputy Premiers and Ministers to be sacked or to resign.

73. I spoke to politicians about this. Their stories were similar.

74. One Minister described the CFMEU as "*the most aggressive"* trade union, and "*so aggressive so that nothing can satisfy its appetite".* Another said "*the CFMEU is uncomfortable if there isn't a battle or a fight on".* One politician asked a very good question – *"the CFMEU is so aggressive, but the AWU is not. Both are building unions – why the difference?".*

75. On public occasions – even formal occasions – the CFMEU would have members attend and heckle politicians. When one Minister was addressing a group, they were drowned out by CFMEU members - *"you've got blood on your hands".* One Minister's office received so many abusive telephone calls that – ironically - as a workplace safety issue the staff were instructed not to take calls from the CFMEU. That Minister was constantly abused by Ravbar; his abuse was described as *"relentless".*

76. The abuse was so bad that the Queensland police insisted that one Minister be given a security upgrade.

77. The abuse was sexist. Occasionally signs were attached to the door of the ladies' facilities near a female Minister's office - "*Flush Labor Down the Toilet".* One of these signs actually used tampons to form the words.

---

[14] See as examples: *"Albanese shields mates, sells out workers",* CFMEU media release, 17 July 2024; *"Queensland Union boss lashes out out at Labor government over CFMEU probe*", Brisbane Times, 17 July 2024; *"Doing a sh*t job: Ravbar takes aim at Albanese" Courier* Mail, 27 August 2024; Ministers Media Centre, 14 August 2024.

[15] "*Michael Ravbar blasts Qld Labor for giving plum IR positions to senior union figures*", The Australian, 5 July 2019; "*Minister rejects resignation calls after worker injured*", Canberra Times, 26 July 2023; "*Ex CFMEU powerbroker savages Miles as 'a joke' '*", The Australian, 27 August 2024

[16] CFMEU Facebook post, 15 February 2024.

78. The aggression was quite mindless. For example, a Minister's electorate office was picketed, but when the Minister asked the men on the picket line what their issue was, they had no idea.

"*You're now working for us"*

79. The following might be the best example of how the CFMEU thought of government, especially a Labor government.

80. When Labor recovered government in Queensland in February 2015 the CFMEU seems to have regarded itself as having taken over administering industrial relations.

81. Just after the change of government, two members of an agency attended the CFMEU offices at Bowen Hills for stakeholder consultation over new industrial legislation. The new law had been a promise of the incoming government. I was told by a senior public servant that, upon arrival, they were verbally attacked by by [redacted]

82. According to that public servant, [redacted] complaint was that the CFMEU should have been involved in *drafting* the legislation, and not just consulted after the law was drafted. In other words, in [redacted] view the CFMEU should be making the law, not the Parliament.

83. The public servant said that [redacted] is a large man and he stood, towering above the consultative team. He shouted for about five minutes. The theme was consistent – *"I am your boss now".* He told them "*You'll take your directions from me"* and added "*You're now working for us".*

84. I wished to raise these issues with [redacted], but he declined my invitation to attend an interview. Instead, he gave a written response which contained no details beyond a bare denial.

"The crack was probably already in the glass… it was probably foreign product."

85. On 5 April 2023 the CFMEU organised a *"National Day of Action"* during which an estimated 5,000 of its members marched through the CBD toward the Commonwealth offices in Waterfront Place in Eagle Street.

86. The principal reason for the protest was to force the federal government to abolish the Fair Work Ombudsman – the body responsible for prosecuting the CFMEU for its many breaches.

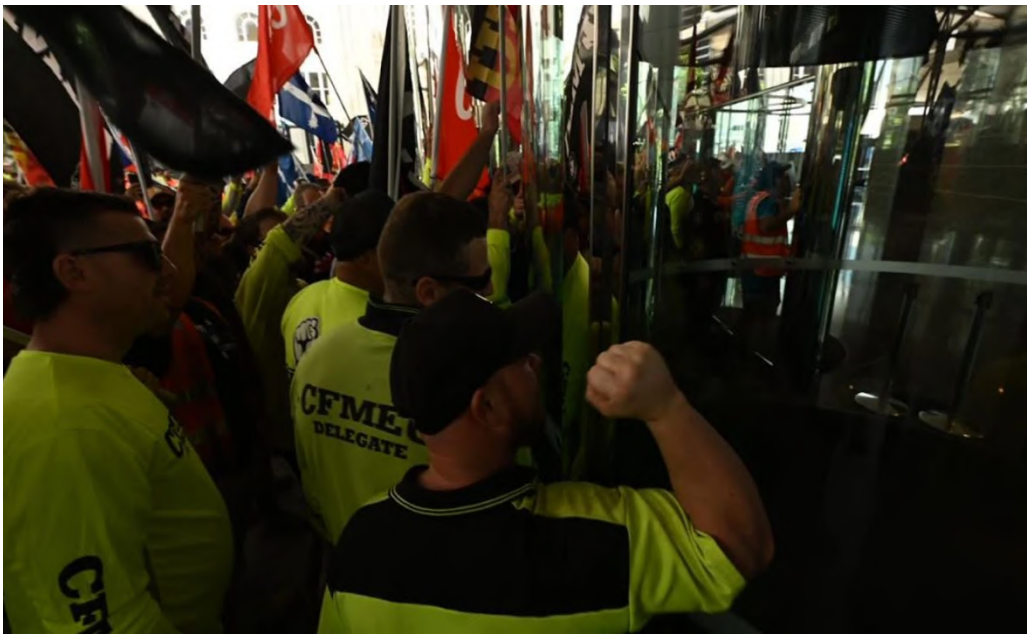

Figure 1: The protesters arrive at the Commonwealth offices (Source: Courier Mail 5/04/2023)

87. The premises at Eagle Street were locked down in advance of the protestors, but several men forced a glass revolving door, smashing it to pieces.

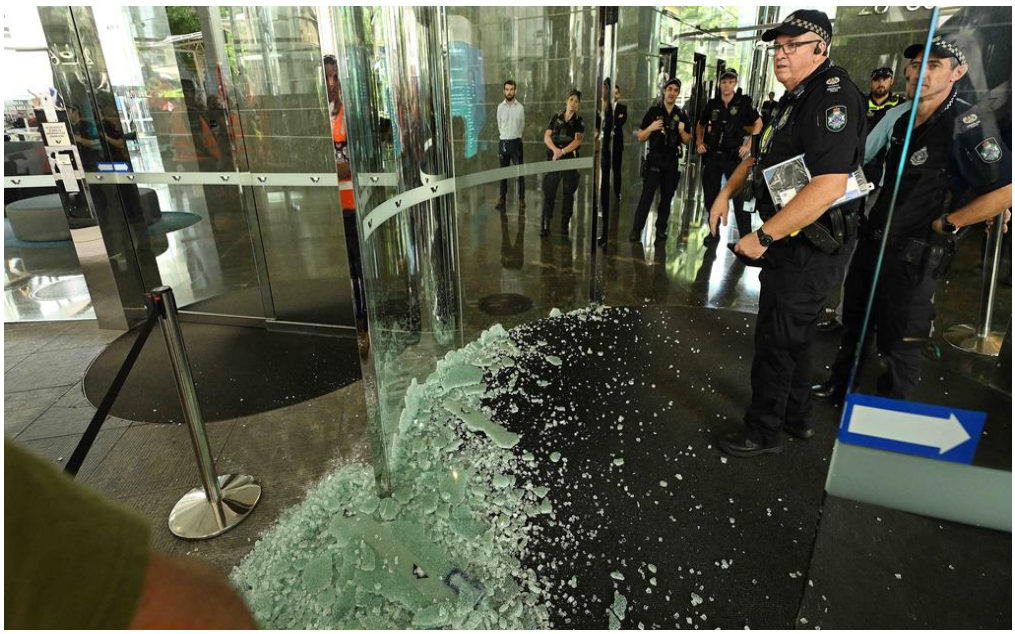

Figure 2:Police inspect the smashed glass door. (Source: Lyndon Mechielsen/Courier Mail 19/04/2023)

88. There was also graffiti found painted onto the building: for example, one message was "*Fuck ABCC*" and another simply said *"Pigs".*[17]

89. Apart from the inconvenience, the cost of the damage to the property was in the order of $25,000.

[17] "T*wo men face court after violent CFMMEU protest"* The Courier-Mail, 19 April 2023. The message regarding the ABCC is puzzling; the ABCC had already been abolished some months earlier.

90. Although there is clear video evidence that the locked door was smashed when CFMEU members were forcing it open, Jade Ingham brushed that aside: he told the mob – "*I know the crack was probably already in the glass and that it wasn't our fault".* He was even able to blame the destruction of the door on foreigners – *"It was probably foreign product to begin with".*

Workers just *"wanting to have a say"*

91. On 23 August 2022 the Queensland Transport and Roads Investment Program had organised an industry briefing at the Department of Transport and Main Roads offices in Mary Street in the CBD. This was an important strategic planning event. Amongst others, three senior officials of the CFMEU were invited to attend.

92. The event never happened. Before the briefing could commence around 200 members of the CFMEU "*stormed"* the premises, forced their way in, and occupied the area in which the briefing was to occur. The mob knocked a security guard to the ground, although he was not seriously injured.[18]

Figure 3: CFMEU protesters occupying the Department of Transport and Main Roads office. (ABC 26/08/22)

93. Departmental workers and persons attending the briefing were forced to take cover. The police were called. The building was placed into lock down. The departmental staff and the visitors were evacuated.

94. The CFMEU's tactic was effective: QTRIP had to abandon the remainder of the briefing program on safety grounds.

95. The Premier, Annastacia Palaszczuk, labelled the CFMEU conduct as "*disgraceful'* and called on the CFMEU to apologise to those hurt. The CFMEU refused: Jade Ingham made a statement that trespassing on the premises was *"nothing more"* than construction workers "*wanting to have a say".* He accepted no blame that an important

[18] See "*Queensland opposition calls on Labor to hand CFMEU donations to anti-bullying charity after protestors entered government building*", ABC News, 26 August 2022; and "*Qld state of disunity as CFMEU flexes muscle in construction industry*", The Courier Mail, 22 July 2024.

industry briefing had to be cancelled; instead he said "*the meeting was cancelled by a government too scared to face scrutiny".*

96. In a gesture typical of the CFMEU, Ingham called for resignations – *"Clean out your sclerotic bureaucracy, starting at the top".*

HOSTILITY TOWARD THE WHS INSPECTORATE

97. The CFMEU had no respect for the independence of the regulators; as far as the CFMEU was concerned, if the regulators would not bend to its will, then they were corrupt or incompetent[19] and could be subject to threats of violence, intimidation and targeting.

98. The CFMEU method for putting pressure on the WHS inspectors was to abuse them, to belittle them, and to whip up an angry response from the membership toward the inspectors. This last matter was commonly done through posts placed on the CFMEU Facebook page. The posts were often accompanied by doctored video images. The worst feature of this was undoubtedly deliberate – it meant the inspectors could be identified.

99. And, as will be seen, their families could be identified too (see "*Is that your old man on the video? – He's a fucking cunt*", below).

100. In case it appears that what follows is a biased account provided only from WHS inspectors, it might be important to know that the fact of the abusive conduct was independently corroborated. There are videos of the CFMEU captured by the inspectors. There is also independent corroboration from others who saw the exchanges on various worksites. For example, an employee of one of the contractors on the Cross River Rail Project was an independent witness to the way in which the CFMEU treated the WHS inspectors. He described how the CFMEU organisers and delegates would openly abuse the inspectors and attack them verbally if the inspectors declined to follow the CFMEU's directions.

"Fuck off – I told you I would get you removed"

101. A theme constantly repeated by the WHS inspectors raised issues surrounding the role of a former WHS director, Helen Burgess. This is problematic because those matters are currently under investigation by the Crime and Corruption Commission.[20] In fairness to Burgess I decided not to review those matters in this investigation.

102. But it is necessary to raise this present matter because it demonstrates just how much power the CFMEU wielded over the WHS Inspectorate.

---

[19] For example, in about 2021, a CFMEU organiser, [redacted], was disgruntled with the decision of a WHS inspector and so he told the inspector "*you're on the take from the builder*".

[20] See, for example, "*Health and safety officials under investigation for allegedly giving confidential information to CFMEU*", ABC News, 19 August 2019.

103. In about 2021 a bomb threat was made in respect of a building site in Edmondson Street, West End. The police were called and specialist teams carried out a search for the bomb. After some hours the threat was exposed as a hoax.

104. While work on the site was stopped a CFMEU organiser, [redacted] attacked the safety representative of the builder. [redacted] began screaming at the man that he was "*a fucking cunt*" and "*a fucking dog*".

105. A WHS inspector was standing nearby and stepped in and told [redacted] he was not permitted to speak to the safety representative that way, or to use that kind of language.

106. Within minutes the WHS inspector received a telephone call from his boss who ordered him to "*immediately remove himself*" from the site. When [redacted] saw the inspector preparing to leave, he called out to him "*Fuck off – I told you I would get you removed*".

The inspectors' own workplace became unsafe.

107. Things became so bad for the WHS inspectors that they had to introduce their own safe work practices to protect themselves from the CFMEU. This came in two waves.

108. The first change came in about 2018 when a direction was made that a lone inspector could not attend a site where there were multiple CFMEU officials present. In those circumstances a second inspector had to be called. From that time WHS inspectors have had to attend CFMEU sites in pairs for their own safety.

109. The second change came in 2022 when the inspectors were issued with body worn cameras as part of their PPE.[21] This came about because the CFMEU was shooting their own videos, then editing them to show the inspectors falsely in a bad light. When these videos were published on the CFMEU Facebook page they would be accompanied by critical or even humiliating commentary, setting off a thread of unhinged responses. To counter this, the WHS inspectors began wearing cameras and collecting their own videos. Thousands of hours of those videos have been provided to me.

110. The body worn cameras produced an unexpected beneficial result: when the CFMEU officials became aware they were being recorded, their behaviour improved markedly.

"You're that cunt from the video"

111. In about 2022, during the worst of the period of abuse caused by the CFMEU Facebook page, a WHS inspector attended a site in Brendale, just north of Brisbane. He was accompanied by two female trainee inspectors.

112. The inspector was talking to a representative of the builder on the top deck of the building under construction, when one of the workmen came at the inspector with an

[21] PPE – ie personal protective equipment.

angle grinder. The angle grinder was in operation. The workmen shouted at the inspector, "*You're that cunt from the video*".

113. The inspector shepherded the two trainees to safety but was followed by the man with the angle grinder. The man told the inspector "*I want to take you outside and bash the shit out of you*".

114. This happened shortly after the CFMEU had posted an inflammatory video about that inspector on its Facebook page.

"You're a bit of a fucking dog"

115. A WHS inspector was at the funeral of his friend's wife. His friend was from the construction sector and so were several of the other mourners.

116. The inspector was approached by three men he did not know. One of the men came to him and said "*You're that cunt from the video*". Another added "*You're a bit of a fucking dog*".

117. Not long before the funeral, that inspector had been the subject of an inflammatory video posted by the CFMEU on its Facebook page.

"You're a fucking dog, you're a fucking dog, you're a fucking dog"

118. On 4 April 2018 a CFMEU organiser, [redacted], was troubled by what he felt were deficiencies in an emergency evacuation plan. When a WHS inspector demurred, [redacted] responded by moving in close to the inspector and screaming at him "*You're a fucking dog, you're a fucking dog, you're a fucking dog*".

119. [redacted] admitted he did this.[22]

120. It is true that [redacted] was subsequently acquitted of criminal charges arising from this episode[23], but that in no sense excuses [redacted] for what he did: [redacted] was purporting to act under an authority received from the CFMEU while wearing a CFMEU uniform. His conduct was disgraceful.

121. The response from Michael Ravbar to this incident demonstrates just how far the leadership of the CFMEU had departed from the norms of conduct in a civil society: according to a newspaper report, Ravbar called on the WHS Inspectorate to apologise to [redacted] and the CFMEU.[24]

HOSTILITY TOWARD THE AWU

122. The worst violence coming from the CFMEU has been directed at the Australian Workers Union and its officials.

---

22 See [redacted]

23 [redacted]

24 " [redacted]

123. The key factor driving CFMEU hostility toward the AWU is an intention to drive the AWU out of the south-east corner of Queensland – if the CFMEU had its way, the AWU would cease to function in that area or, perhaps, cease to function altogether. The CFMEU could then take control of all building sites.

124. Not only is this inconsistent with the industrial legal system, but it is also directly contrary to the objects of the CFMEU which require the CFMEU "[t]*o work as far as is lawful in harmony with other labour unions*."[25]

125. The CFMEU was driven to illegal methods because legal methods were not open to it. Under the competing coverage rules, if the CFMEU had gone through conventional legal processes they would have lost. There is a sufficiently clear dividing line between the workers covered by the AWU and the CFMEU and it showed that the CFMEU did not cover workers on many sites where it was pressing its involvement. On those occasions where the coverage issue had been litigated, the CFMEU had lost.[26]

The commencement of the personal hostility

126. Before 2022 there had been decades of simmering political and industrial competition between the CFMEU and the AWU, but it did not cross into violence. In about 2022 something changed and the competition was converted into a hostile campaign.

127. It is possible to place a date on the spike in the violence deployed by the CFMEU against the AWU. In August 2022 Stacey Schinnerl was elected as the State Secretary of the AWU – the first woman to hold that office.

128. On 6 November 2022 Schinnerl spoke at the ALP State Conference and made a reference to the incident where the CFMEU had stormed the Department of Transport and Roads (see "*Workers just wanting to have a say*", above). Michael Ravbar was leading the CFMEU contingent at the conference. He erupted and demanded that all CFMEU delegates to the conference immediately leave. Those delegates followed their leader.[27]

129. From that time there has been continuous intimidation of the AWU by the CFMEU.

130. There are numerous instances of different kinds of violence inflicted by the CFMEU on members of the AWU – far too many to list all of them; these are just a few.

---

[25] See the Objects stated in Part 4 article (m) of the the most recent iteration of the rules of the CFMEU.
[26] One especially vivd example is in the decision of Justice Munro in *Re Australian Workers Union* (1998) 26 IR 197 at 200-201.
[27] Ravbar was specifically asked to respond to this, but declined. H

"You fucking sell-out cunts"

131. On 23 March 2023 there were two incidents at the Brisbane Metro site at the corner of Grey and Melbourne Streets in the city - one in the morning; the other in the afternoon. Each was serious.

Figure 4: CFMEU members blocking the AWU organiser's entry.

132. In the morning three AWU organisers arrived near the site to attend a scheduled meeting. The meeting was approved by the contractor.

133. The CFMEU were determined to prevent the AWU from gaining access to the site. A dozen or more CFMEU members waited for the AWU organisers and blocked their access to the site. The AWU organisers were then surrounded and two were pushed and shoved and dragged by their clothing.

134. Slogans were shouted – a rhythmic chant which starts "*AWU*" – then a pause before – "*Grubs*". It looks childish on paper but is not so harmless when repeatedly shouted by an angry mob. Personal abuse was hurled – "*You fucking sell-out cunts*" was one memorable line.

135. This was happening on a public street and members of the public were nearby – one CFMEU man, in an agitated an aggressive manner, approached bystanders at a bus stop screaming "*Do you think the AWU are grubs?*" Two women near the scene became distressed and commenced crying.

136. I was told by a person that [redacted] a CFMEU organiser, grabbed and manhandled him. This was corroborated by a witness. [redacted] sent a written response adamantly denying it – but I do not see why I should believe him given this seemed to be a miraculous improvement on his memory during his interview. [redacted] was involved, although it is not clear whether he became physically involved.

137. The AWU organisers, with the assistance of the contractor, were able to extract themselves and escape.

138. [redacted] was asked about this incident and, at least at first, he had some recollection – but, as questioning became closer his memory suddenly failed him. When [redacted] was asked about it he, at first, said he recalled being there, but when allegations were put to him he reverted to his standard answer - "*I don't recall*".

"We're the CFMEU – we're here for the Blue"

139. On the afternoon of 23 March 2023 the same three AWU organisers returned to the Brisbane Metro site with a view to speaking to their members. About 25 CFMEU men

again blocked their entry. Again, the conflict was taking place out on a public street. The chants and threats were repeated at full volume.

140. The episode was captured on a video from which screenshots can be extracted.

Figure 5: The point at which the CFMEU blocked AWU access.

141. These scenes show the point on the public street where the CFMEU blocked the AWU organisers from entering the worksite. The large man in the middle is [redacted], a delegate of the CFMEU. [redacted] had formerly been t[redacted]. The man in the yellow jacket being threatened by [redacted] is an AWU organiser. This was happening on a public street.

142. The screenshots do not convey the chaos and anger at the scene. The video does. The screenshots cannot capture the fact that the CFMEU members were screaming abuse at the AWU organisers. It was as though the CFMEU *wanted* to trigger a physical fight. One chant was "*CFMEU – We're here for the Blue*".[28]

143. The AWU organisers maintained their composure and did not respond; if they had physical violence was inevitable.

144. Participants in the afternoon episode can be identified from the video: the CFMEU officials included [redacted]

145. Some of those involved in this incident were directed to attend an interview with me. The interviews were quite unsatisfactory. I asked [redacted] about the incident but each claimed a defective memory prevented them from assisting.

146. Each of [redacted] and [redacted] declined to attend an interview, so each was sent a written request to answer questions about the incident. Both declined.

---

[28] [redacted] said that "*We're the CFMEU – We're here for the Blue*" is a common CFMEU chant, but each implausibly denied that the word "*Blue*" might be speaking of a physical fight.

"We know you have two young sons"

147. On 20 June 2023 there was an especially threatening incident at the Gabba Station site on the CRR.

148. Two AWU organisers had come to the site to address members on the progress toward a new EBA during the workers' lunch break.

149. The meeting should have been straightforward, but it was immediately disrupted by [redacted] and another CFMEU representatitve who were bellowing abuse and chanting "*Australia's Weakest Union*".

150. The meeting could not continue and the AWU organisers, together with the AWU site delegate, suspended the meeting. The AWU organisers were parked at a nearby shopping centre. As the AWU organisers then made their way to leave the site they were warned by a contractor – "*You have a crowd waiting for you*".

151. At the front gate there were about 40 CFMEU members waiting for the AWU organisers. A contractor assisted the AWU organisers to find an escape through a side entrance, but there were about 25 CFMEU members waiting there.

152. The AWU organisers were surrounded and prevented from moving for about five minutes. Meanwhile the abuse revved up – "*What the fuck are you doing here?*", "*You are screwing over workers*", "*You fuckers worked on ANZAC Day*", "*Are you scared now?*" – and more along similar lines.

153. The two AWU organisers were separated. One had his backpack ripped from his shoulders, he was pushed and shoved and encircled by angry men. Two men – one of whom has been identified as [redacted] – then shoulder charged the organiser, forcing him out onto the road into the path of traffic. One of the men told the organiser that he knew where he had previously worked; another said "*We won't stop coming for you – no-one can protect you*" and another said "*We know where you live*".[29]

154. Then one made an especially chilling remark – "*We know you have two young sons*".

155. The AWU organisers made their way back to the shopping centre, still surrounded by the CFMEU. The abuse continued even though they were in a public place - some of what then occurred was captured on CCTV footage taken inside the shopping centre.

[29] The CFMEU men did know where the AWU organiser lived. One morning when retrieving his rubbish bins, he found those bins covered with stickers disparaging the AWU. It is known that these stickers have been designed and purchased by the CFMEU (see *The sticker campaign*, below).

Figure 6: The CFMEU surround two AWU delegates in the Coles shopping centre on Stanley Street.

156. This screenshot shows a moment during which the two AWU organisers were surrounded by over ten CFMEU members. This occurred in a public area, adjacent to the opening of the shopping centre on Stanley Street. The movement of the AWU organisers was impeded for a long period.

157. Those from the CFMEU who can be identified as involved in this incident include the organisers [redacted] and [redacted] and the delegates [redacted], and [redacted]. There are many others, who engaged in criminal conduct, who remain unidentified.

158. [redacted] was asked about this incident, but claimed he had a defective memory which prevented him commenting. I had intended to ask [redacted] but it had become apparent that he was not assisting the investigation. [redacted] and [redacted] declined to attend an interview and declined to respond in writing.

"You don't know who I run with"

159. On 25 May 2023 there was an incident when an AWU organiser attended a site to engage in negotiations with an employer over a new AWU EBA. A CFMEU organiser, [redacted], turned up uninvited and inserted himself into the discussions.

160. When the AWU organiser objected to [redacted] involvement [redacted] insisted they take the matter outside – "*Can I have a word with this bloke?*".

161. Once outside [redacted] spoke aggressively to the AWU organiser:

> [redacted]: "*We have to work collaboratively*".
>
> AWU: "*Why – you have no coverage here*".
>
> [redacted]: "*Okay. You want to be a dog*".

162. When the AWU organiser raised the coverage rules [redacted] stopped him:

> [redacted]: "*Shut up little boy - remember what happened at Cross River Rail – we got you there*".

This was undoubtedly a reference to matters described earlier.

163. The AWU organiser then turned to walk away, but [redacted] called him back:

> [redacted]: "*I will see you down at my car later*".

[redacted] then rolled up his sleeve and showed off a tattoo – the AWU organiser said he did not know what the tattoo meant:

> [redacted]: "*You don't even know who I run with. You better watch yourself*".

164. [redacted] denies being a member of or being associated with any members of the Bandidos or any outlaw motorcycle gang, and I accept that denial – but otherwise the aggression disclosed in this encounter is regrettably consistent with other misconduct by [redacted] described in this report.

"You big fat cunt"

165. On 26 or 27 July 2023 an AWU organiser attended a site known as the Northern Portal on the CRR. The wider project was closed following an accident. The purpose of the organiser's visit was to address AWU members on the progress of the investigation into the accident.

166. To enter the site required the organiser to pass through a CFMEU picket line – which was permissible given the purpose of the visit. But when the organiser began to get out of his car he was surrounded by about ten CFMEU members, who got so close to the organiser he had to back up so that he was pinned to his car. More men joined the mob.

167. For 15 minutes the organiser had to suffer shouted personal abuse – "*You fucking grub*", "*Fuck off – it's our site now*" and the like. The men then started chanting "*You big fat cunt – You big fat cunt - You big fat cunt*". Meanwhile, one of the CFMEU men let the air out of one of the tyres on the organiser's car.

168. A CFMEU organiser, [redacted], was present, although he stood apart, watching the abuse go on, but from across a footpath. The AWU organiser also recognised the CFMEU delegates, [redacted] and [redacted].

169. Jade Ingham arrived a little later and when he arrived and spoke to the AWU organiser the hostility diminished. Eventually the AWU organiser was allowed to leave, driving his car with a partly deflated tyre.

170. I spoke to [redacted] about this incident but he claimed his defective memory meant he had no recall. Similarly [redacted] ability to recall the events was compromised, and he was

unable to assist. Invitations extended to [redacted] and [redacted] to be asked about this incident were declined.

171. Although Ingham had declined to attend an interview he did briefly respond by denying any knowledge of this incident.

"Do you want to step outside with me?"

172. On 28 February 2023 at the Gabba CRR site, two AWU organisers were conducting a scheduled meeting in the smoko shed. One of the organisers was new and was introducing himself to AWU members on-site. A CFMEU delegate, [redacted], entered the shed, disrupted the meeting, aggressively shouting abuse about the AWU.

173. When [redacted] was asked to leave he responded to the new organiser – "*Do you want to step outside with me?*" – obviously a threat of violence. When his threat was ignored, [redacted] remained in the smoko shed, disrupting the meeting by repeatedly shouting "*AWU – Australia's Worst Union*" and heaping childish personal abuse on the new AWU organiser.

174. When the organisers were leaving, [redacted] followed them to the perimeter of the site, hurling more abuse. An opportunity for [redacted] to speak about this incident was declined by him.

The Centenary Bridge incident

175. On 23 February 2024 there was an incident at the Centenary Bridge site at Jindalee. Two AWU organisers had been on the site with the knowledge and permission of the contractor and were leaving in their cars, one car following the other. As the first car reached the gates and was about to enter a public road more than ten CFMEU members surrounded the car, shouting at the driver and rocking the car.

176. The scene was captured by a dashcam on the second AWU car:

Figure 7: Dashcam footage of CFMEU officials surrounding an AWU car, blocking exit.

177. The identity of most of those involved remains unknown. Witnesses at the scene say that the CFMEU members were drawn from the so called "*Youth Crew*".

178. The action continued for about 20 minutes before the CFMEU members dispersed when they became aware the police had been contacted.

"When I say AWU, you say grub"

179. At about 9.30am on 2 March 2023 three AWU organisers attended a scheduled meeting at the Albert Street Mall site of the CRR. Two CFMEU organisers tried to break into the meeting.

180. By the time the meeting ended there were six or seven CFMEU members, including the two organisers, waiting outside. They encircled the AWU officials in a threatening fashion, slinging threats and personal abuse. They plastered "*AWU - Australia's Worst Union*" stickers onto the bodies of the AWU organisers (see "*The sticker and poster campaign*", below). The loud and childish chant was struck up – "*When I say AWU, you say grub*".

181. When the AWU organisers attempted to leave, the group blocked their path and surrounded them. Slowly the group inched forward and out onto the public street, with the abuse and chants still ringing.

182. The CFMEU group remained ringed around the AWU organisers, walking with them all the way back to the Adelaide Street offices of the AWU – a distance of several hundred metres. This was all occurring in a public space. Members of the public were pushed out of the way by the CFMEU to allow them to continue with their abuse.

The sticker and poster campaign

183. As part of its war against the AWU, the CFMEU designed and commissioned a range of stickers and posters with messages disparaging the AWU. It is, quite frankly, one of the most childish protests one could imagine.

184. Here is an example of one of their posters:

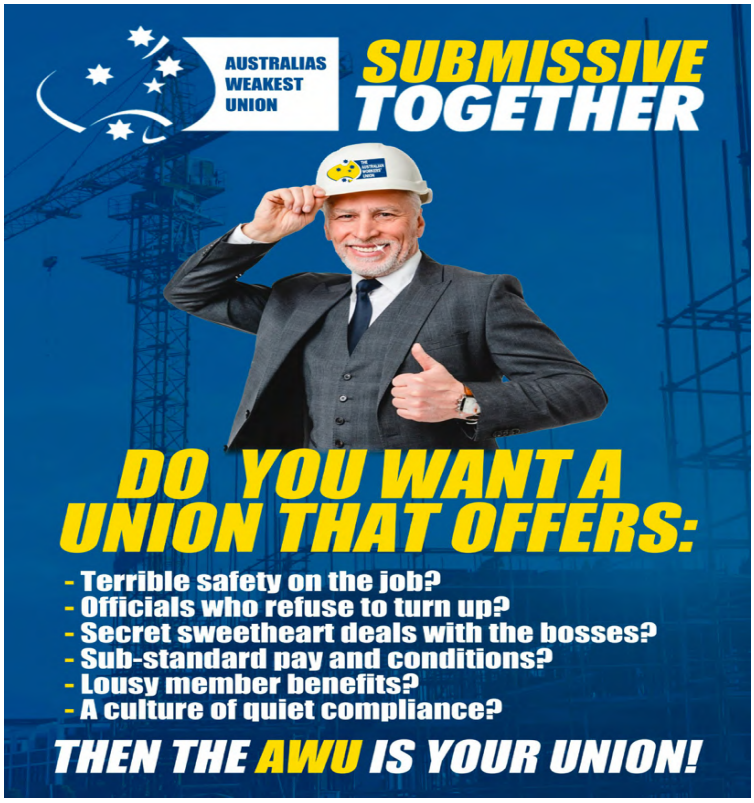

Figure 8A: CFMEU-designed poster.

185. Apart from the sheer stupidity of the campaign, there is a deep irony in some of the messaging. For example, when the poster says something about "*sweetheart deals with the bosses*", it is notorious that the CFMEU has favoured contractors with whom it is close and with whom the CFMEU entered favourable arrangements. When it says the AWU has "*officials who refuse to turn up*" – it is an odd complaint to make when, as shown above, the CFMEU did everything it could to prevent the AWU getting on to sites and organising its members.

186. These are some other examples of CFMEU creative abilities:

Figure 8B: CFMEU-designed stickers and posters.

187. A search of CFMEU financial records shows that substantial sums were spent on these posters and stickers. It is not possible to be precise, but nearly $40,000 of members' money was wasted on this rubbish.

188. The CFMEU went further and applied the stickers to private property.

189. For example, on 24 February 2023 two CFMEU organisers, [redacted] and [redacted], entered a secure carpark beneath the AWU offices and plastered stickers over the AWU vehicles. Stickers were also fixed onto the external walls of the building and the internal walls of the carpark.

190. These are some screenshots taken from CCTV footage from the carpark:

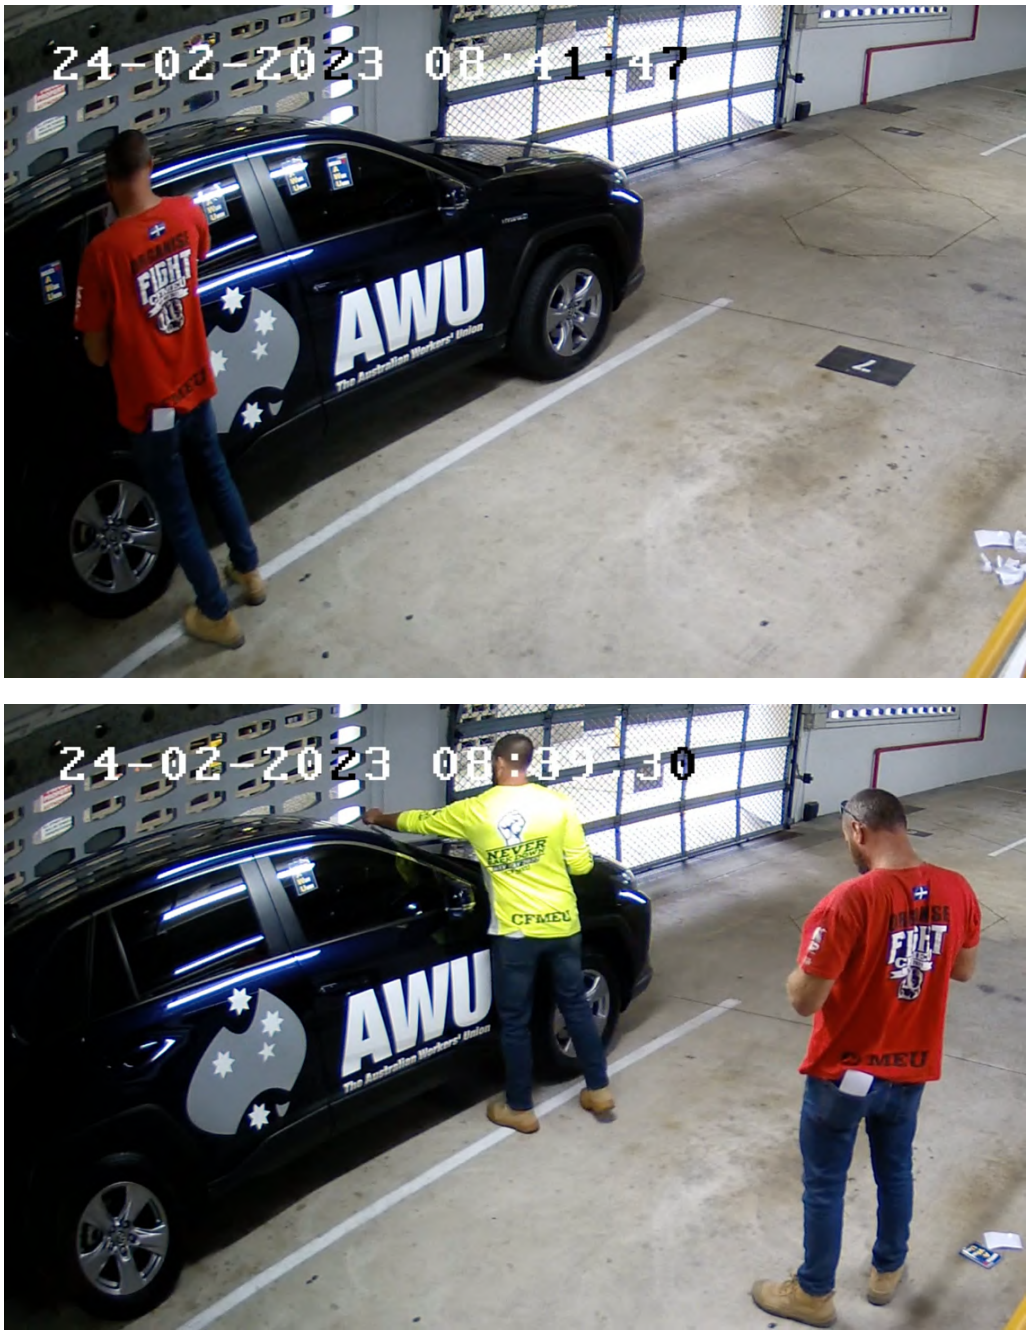

Figure 9: CFMEU member plastering AWU stickers on an AWU vehicle, and around the parking lot (Source: CCTV Camera)

191. An AWU organiser who knew [redacted] and [redacted] saw them and attempted to stop them, leading to a slanging match.

192. When [redacted] and [redacted] were finished the AWU cars were not driveable.

Figure 10: CFMEU-plastered stickers on AWU vehicle.

193. By itself, something like this sounds no worse than a childish prank, but it was the start of a pattern of conduct. The stickers became a large part of the CFMEU campaign. There are other instances where AWU officials returned to their cars and were unable to drive away because the windscreens were covered with these ridiculous stickers.

Figure 11: A separate incident of CFMEU members covering AWU vehicles in similar stickers.

194. In any event, the CFMEU conduct should not be dismissed as a joke - the entry to the carpark, and the damage to the carpark and to the AWU cars constituted deliberate trespasses committed by the senior CFMEU officials [redacted] and [redacted]. It is another example of lawlessness.

195. When I asked [redacted] about this incident he declined to answer the question upon the grounds he may incriminate himself. [redacted] was given the opportunity to be interviewed, but declined.

HOSTILITY TOWARDS CONTRACTORS AND EMPLOYER GROUPS

196. Hostility between trade unions and employers and employer associations is to be expected; in some ways it is the reason each exists.

197. Again, there is plainly a line in a civil society between representing contending interests and unjustifiable aggression. There is no room for violence.

198. Yet, there was violence.

"It's a picket line ya fuckin' cunt"

199. Throughout April 2024 there was a dispute over the Cross River Rail project.

200. As part of the dispute, the CFMEU organised and manned picket lines at various sites on the CRR. Picket lines are a common and legitimate means of protest. They provide an opportunity for the picketers to persuade others to join their cause. They should never result in violence.

201. On 30 April 2024 a picket line was formed at the Dutton Park site on the CRR. Non-CFMEU workers attempted to cross the picket line. There was a violent brawl between the two groups which was captured on video. Two non-CFMEU workers were manhandled, pushed and shoved and punches were thrown; one had his shirt torn off.[30]

[30] The man whose shirt was torn was the subject of an attempted assault at 5am on 31 July 2024 when two men, probably armed with baseball bats, attacked him as he was leaving his home to travel to his work on the disputed site. The press reported that the police were investigating whether the CFMEU was involved: "*I know it was you*: *Cross River Rail worker blames CFMEU for pre-dawn assault*", Nine.com.au, 1 August 2024.

Figure 12: Picket Line Brawl (Source: 9 News 31/07/2024)

202. No doubt it can be argued that responsibility for the outbreak of the brawl should be shared, but that would not excuse either side for participating. To the extent it matters, there is a reason to regard the principal fault to lie with the CFMEU. Amongst the CFMEU picketers were two organisers, [redacted][1] It has been alleged that when a non-CFMEU worker approached the picket line, [redacted] shouted "*It's a picket line ya cunt*" and encouraged a fight by daring the non-union workers with "*Try and cross it. Try and cross it*".[32]

The Grim Reaper

203. On 8 February 2022 the CEO of the Master Builders' Association was contacted by the Special Emergency Response Team of the Queensland Police and warned that a CFMEU protest was coming. SERT is commonly known as the Riot Squad.

---

31 [redacted]

32 [redacted]

204. The Riot Squad was correct: approximately 5,000 CFMEU members had gathered in Emma Miller Place in the CBD with the intention of marching on the MBA offices in Spring Hill.

205. The reason for the protest march was over a potential restructuring of BUSSQ – a superannuation fund favoured by Michael Ravbar.[33] It was not a real dispute; the issue had been manufactured by those organising the march.

Figure 13: The Grim Reaper expresses his disquiet with a proposed superannuation reform.

206. The march was led by Michael Ravbar and Jade Ingham, with special guest appearances by the Grim Reaper and a coffin – if what followed was not as serious as it turned out, the scene would have been comical.

207. Inflammatory speeches were given by both Ravbar and Ingham. By the time the protestors arrived at the MBA offices they were described as being in a "*frenzy*". The whole building was placed in lock down. The Riot Squad placed themselves on the ground floor. The offices have glass doors and glass curtain walls on the ground floor. The protestors tried to get access by beating on the glass and trying to force the doors. There was loud chanting, including protestors shouting "*You fucking cunt*" when they saw the CEO.

208. When they could not break in, the protestors hoisted the coffin into the branches of a pandanus tree immediately outside the window of the CEO of the MBA – he was shouted at – "*If you don't fix this we will end you*".

[33] The suggestion was that BUSSQ would be amalgamated with another construction industry superannuation fund, CBUS. But the protest was absurd: an amalgamation of that kind would require months of negotiation before it could be approved by APRA. In any event, the amalgamation never happened.

Figure 14: A coffin hoisted outside the window of the CEO just after the CFMEU promised to "end" him.

209. The cartoonish imagery of the Grim Reaper and the coffin stood as a warning to MBA employees of their likely fate should they disagree with the CFMEU. When the Grim Reaper leads a mob of 5,000 chanting workers it is bound to have some impact and, unsurprisingly, several MBA employees were very distressed by the incident.[34] There were also some quite appalling comments made by members of the CFMEU mob (see "*Come out here and I'll fuck you*", below).

"There's a bullet with your name on it"

210. The Cross River Rail Project was a hotspot for CFMEU violence. One witness called it "*Ground Zero*".

211. An industrial relations representative for one of the contractors on the CRR described how he suffered three years of constant abuse from CFMEU officials. He said the officials and members acted as a "*collective*" and described them as "*angry, foaming at the mouth*" and that they would "*attack anyone with industrial relations in their title*". The IR adviser ended up moving to another project.

212. In one instance it led to a death threat.

213. In 2021 an apparently simple disagreement over an asserted Right of Entry at the Boggo Road site escalated to a point where two CFMEU officials verbally assaulted an IR representative. The officials were named, but they will not be identified in this public version of the report because what follows clearly constitutes a crime.

[34] The estimate of 5,000 participants comes from the CFMEU press release. There was another estimate of "*thousands*" in the article "*Protest disrupts Brisbane traffic, streets closed*", Brisbane Times, 8 February 2022.

214. During the argument the more senior official told the IR representative that "*We know where you live*". By itself that is a threat. But the organiser went further – he told the IR representative "*There's a bullet with your name on it – we're gonna get you*".

A *"Convicted woman basher!!!"*

215. Around April 2023 the CFMEU began a personal campaign against another industrial relations adviser on the Cross River Rail Project.

216. When the CFMEU met resistance from the IR adviser it set out to destroy the man and his career.

217. The technique was crude: officials from the CFMEU made deliberate, serious, and false statements defaming the man and then published the false statements in the most public places in Brisbane.

218. It was an organised campaign: the CFMEU made up crude, hand-painted placards, each about 120cm by 60 cm. The placards named the man and included a large image of his face. The placards carried slogans – "*Convicted woman Basher!!!*" and "*General Degenerate*", and others. These are just two of the placards:

Figure 15: Publicly displayed poster (left) with the text "I like contacting female workers more than half my age!!" and "They scraped the bottom of the barrel when hired me". Another publicly displayed poster (right) with the words: "CPB IR" "Convicted woman basher!!"

219. The placards were placed on the public street in some of the busiest streets of Brisbane – Vulture Street and Roma Street.

"*Come on, fucking hit me, you weak cunts*"

220. On 20 April 2020, two organisers, [redacted] and [redacted], entered the site of the Marine Parade apartments in Labrador on the Gold Coast, fabricating a concern for the safety of workers on the site, and then acting entirely inconsistently with the safety of those workers.

221. [redacted] and [redacted] deliberately blocked a concrete pour. They spoke very aggressively to a Work Health and Safety Inspector who was on the site. [redacted] then tried to start a fight with the workers on the site.

222. [redacted] taunted the truck drivers; "*Come on, fucking hit me. I want you to hit me.*"

223. When the truck drivers declined to run him over, [redacted] turned to the workers on site and said "*Come on, fucking hit me, you weak cunts*."

224. A Deputy President of the Fair Work Commission described [redacted] conduct as "*totally aggressive and improper behaviour*" and said it was delivered in an "*intimidatory manner*". The Deputy President suspended [redacted] Right of Entry.[35]

225. Although this conduct might, by itself, seem extreme, the fact is that it was not the worst thing that [redacted] did on that occasion. [redacted] also abused a woman in the most disgusting and degrading terms – a matter which will be detailed later (see *"You fucking cunt dog"*, below).

"Grubby little cunt"

226. On 8 March 2019 a CFMEU official, [redacted], attempted to stop work on the Sunshine Plaza site because a worker, employed by a shop-fitting business, was not a member of the CFMEU.

227. [redacted] conduct was captured on video. He told the worker that he was a "*grubby little cunt who refused to join the union*".

228. The judge who heard the matter described [redacted] conduct as "*aggressive, intimidatory, loud, abusive*" and as "*pure industrial standover tactics*".[36]

"You fucking dog cunt"

229. On 23 August 2019 [redacted] entered the Logan Enhancement Project on the Gateway Motorway. In a completely unprovoked outburst, [redacted] called the site supervisor "*you fucking dog cunt*" and continued shouting and yelling aggressively.

35 [redacted]
36 [redacted]

230. Although there was no justification for doing so, [redacted] then fabricated an account that he had been assaulted – "*we're going to sue you, you grabbed my throat, you fucking dog cunt*".[37]

Other industrial prosecutions

231. A picture of the CFMEU attitude toward contractors can be obtained by taking a few examples from the long string of industrial prosecutions of the CFMEU. They tell a story that the CFMEU, and its officials, were quite willing to disrupt work on sites to inconvenience and financially damage contractors with a view to obtaining some kind of industrial advantage.

232. There are far too many prosecutions to list the lot - these are just some examples.

233. In 2018 Michael Ravbar, [redacted] disrupted the Bridge 21 site on the Sunshine Highway, shutting down operations, by placing themselves in front of moving trucks, and making "*unprovoked*" and "*entirely inappropriate*" attacks on the site safety officer. Heavy fines were imposed, including personal payment orders against Ravbar and [redacted] was required to undergo "*anger management*".

234. In 2018 a number of CFMEU officials manufactured a Right of Entry dispute, refused to produce entry permits, and shut down operations on a site on the Bruce Highway/Sunshine Coast Motorway. This was repeated on seven or more occasions. The officials were arrested – [redacted] twice, and [redacted] once each. Heavy fines were imposed and personal payment orders made against [redacted][38]

235. In 2018 a number of CFMEU officials disrupted the Logan Enhancement Project by making multiple illegal trespasses onto the site, and false Right of Entry claims. Very heavy fines were imposed, including personal payment orders against [redacted] ($24,000) and [redacted] ($12,000).[39]

236. Between 30 April and 2 May 2018 several officials of the CFMEU disrupted work on the Toowoomba Second Range Crossing by entering a site and refusing to produce entry permits. Amongst others, [redacted] were fined for their breaches.[40]

237. In 2019 [redacted] was prosecuted for stopping a concrete pour at the Bridge 22 Pacific Highway Upgrade. At trial and on appeal, [redacted] claimed an entitlement to have stopped the concrete pour on safety grounds, claiming there was an "*imminent danger*".

37 [redacted]
38 [redacted]
39 [redacted]
40 [redacted]

[redacted] evidence on this was rejected at both levels, with one of the judges expressing "*considerable credibility concerns as to the entirety of his evidence*".[41]

238. In 2020 Michael Ravbar and [redacted] deliberately entered the Southbank New Performing Arts Complex under a false Right of Entry claim. Heavy fines were imposed.[42]

239. In 2020 the CFMEU deliberately stopped a concrete pour during the construction of a Coles Distribution facility in Redbank. The two officials involved were [redacted] and [redacted]. The judge found that their actions were "*motivated by industrial relations conditions referable to the non-union agreement in place*".[43] Very heavy fines were imposed, including personal payment orders against [redacted] and [redacted].

240. In 2020 two organisers, [redacted], abused a site manager, stopping work at the Central Energy Plant Towers Site, telling him "*you don't know what the fuck you are doing*".[44]

241. In 2020 [redacted] and [redacted] manufactured a Right of Entry dispute on the CRR, making "*insultingly childish comments*" toward the site manager.[45]

242. In 2021 the organiser, [redacted], instigated a Right of Entry dispute by refusing to undergo a safety induction, and wandered unaccompanied around a site on the Pacific Motorway Upgrade. His actions caused the stoppage of the laying of a lane of asphalt.[46]

243. In 2021 Michael Ravbar and [redacted] were heavily fined following two instances – one at the Gabba site, and the other at the Roma site of the CRR. These were instances where Ravbar and [redacted] refused to sign in or undertake safety inductions. In the instance of [redacted] he made deliberate physical contact with those on site. Heavy fines were imposed and personal payment orders were made.[47]

244. In 2021 three officials of the CFMEU manufactured an industrial dispute for the purpose of moving a particular dogman from the Brisbane Racecourse project to another site. When the employer refused, the CFMEU simply shut down work on the project. Very heavy fines were imposed ($750,000 on the CFMEU).[48]

245. I could go on, but it seems pointless – it would just be more of the same.

41 [redacted]
42 [redacted]
43 [redacted]
44 [redacted]
45 [redacted]
46 [redacted]
47 [redacted]
48 [redacted]

HOSTILITY TOWARD WOMEN

246. This might just be the single worst aspect of the violence perpetrated by the CFMEU.

247. In addition, the CFMEU's treatment of women is deeply hypocritical.

248. Although the CFMEU boasts of its promotion of equal treatment of women, its actions show otherwise: the material shows the CFMEU had a focus on attacking women, and using tactics which were abusive and degrading.

249. Witnesses came forward with many stories proving dangerous and damaging conduct by CFMEU officials and members toward women. Some of the women are so traumatised they would not permit their stories to be reproduced in this report – they still feared retribution. In addition, I have decided not to include the accounts of some of the women because after speaking to them, I was concerned reproducing what they had to say may cause them emotional harm.

"You fucking cunt dog"

250. On 20 April 2020 [redacted] and [redacted] arrived at a site in Marine Parade, Labrador. Some of what happened that day on that site has already been detailed (see "*Come on, fucking hit me, you weak cunts*", above).

251. The fact is that [redacted] did something worse, much worse: he attacked a female health and safety advisor in terms which should never have been used and should never be used.

252. In his prosecution [redacted] admitted to disgraceful conduct, but as part of bargaining to secure a guilty plea, it was agreed with the CFMEU that the prosecutor would not press offences relating to [redacted] personal abuse of the safety advisor.

253. The true position is that when the safety advisor told [redacted] that she intended to call the police, he loudly said *"you fucking cunt dog*". If that was not bad enough, [redacted] then began to bark like a dog. He then repeated the statement and the barking on and off, until the police arrived, when he ran away.[49]

"You should be dragged out of here"

254. In about 2020 a female public servant arrived at the CFMEU offices as part of a delegation. She was soon asked by [redacted] to separate herself from her colleagues and to come with him into another office.

255. Once she was seated Michael Ravbar entered. He locked the door from the inside – which would prevent other members of the delegation entering the room. [redacted] – a big man – remained, standing beside Ravbar; both stood between the woman and the door – there was no escape.

---

[49] This account was given to me by the victim of the abuse. It is also recorded in press articles from the time: "*CFMEU Organiser abused female safety rep*", Courier Mail, 10 December 2020.

256. Ravbar began to berate the woman, shouting, getting close to her face, using abusive and denigrating language. Ravbar made it plain that the woman was being watched by the CFMEU. He said the woman "*should be dragged out of here*" and she was told "*we're after you!*". This went on for about 15 minutes.

257. The woman was alone and scared. There were times when the woman thought Ravbar was about to attack her physically. When the woman was allowed to leave the room she left the CFMEU offices immediately. A report of the incident was made. The woman required psychological assistance.

258. It should be noted that [redacted] responded in writing to questions about this episode. [redacted] vehemently denied it occurred. But I have no doubt the account of the woman, which was confirmed by an independent witness, is true. [redacted] had declined to meet me in person; the woman and her corroborating witness were perfectly believable. It is telling that Ravbar declined an invitation to respond to this matter.

"How does it feel to know your Mum is a fuckin' grub?"

259. The 2023 Labour Day celebration was intended to be a family event and unionists were encouraged to bring their children. There were special activities for children, including face painting.

260. Late in the day a female official from the AWU and her 13-year-old child were confronted by a heavily built man. The man was wearing a CFMEU t-shirt and his face and forehead were painted with the words "*Australia's Worst Union*".

261. The man came right up to the woman and the child and pointed to his forehead:

> Man: "*How do you fuckin' like this?*"
>
> Woman: "*Beautiful – you must be really proud.*"
>
> Man: "*Yeah, I fuckin' am*."
>
> Woman: "*Just leave, just leave*."
>
> Man: "*You're nothing. You're a grub. You're a sell-out. You sell out workers*."
>
> Woman: "*Don't do this in front of my kid*."

The man then drew near to the woman, turned and spoke directly to the child:

> Man: "*How does it feel to know that your Mum is a fuckin' grub who sells out workers?*"

Security then arrived and the man snuck away.

262. The man involved has not been identified, but this cannot be regarded as a rogue member acting on his own initiative. The conduct is similar to and consistent with aggressive conduct of other CFMEU members at around the same time. In any event,

the woman said she recognised Jade Ingham standing less than 50 metres away, probably within earshot of the conversation.

263. Although he declined to take an interview, Ingham did take an opportunity to deny any recollection of this incident in a written response to some questions.

"Come out here and I'll fuck you"

264. The following occurred during the protest by the CFMEU on 8 February 2022 which ended outside the offices of the MBA (see "*The Grim Reaper*", above).

265. When the CFMEU's protest arrived at the offices of the MBA, men in the front line, pressed on the glass walls and called out to young women they could see through the doors and windows – they called out to the young women "*Come out here and I'll fuck you*".

266. The Riot Squad stepped in and shepherded the women away to a safer place in the building.

"Is that your old man on the video? – He's a fucking cunt"

267. Reference has already been made to the use by the CFMEU of its Facebook page to identify and humiliate WHS inspectors (see "*Hostility toward the WHS Inspectorate*", above). The following is a graphic example of that and the CFMEU's attitude toward women.

268. In around June 2022, the 21-year-old daughter of a WHS inspector was attending her local gymnasium in suburban Brisbane. Thankfully, she was there with some friends.

269. Unprovoked and unexplained, a man came to the young woman in the gymnasium, and asked: "*Is your name [withheld]?*". When the young woman said "*yes*", the man responded "*Is that your old man on the video? – He's a fucking cunt*".

270. The young woman's friends intervened and stopped the man taking it further. The identity of the man is not known.

271. The only sensible inference is that the video the man referred to was one of the abusive "videos" posted by the CFMEU on its Facebook page.

"We know where you live"

272. In the afternoon of 23 March 2023 there was an incident involving approximately 25 CFMEU men threatening three AWU organisers, one of whom was female. There is a video recording of the incident (see "*You fucking sell-out cunts*", above).

273. The CFMEU singled the female out for special treatment, yelling at her that they knew her home address and the identity of her husband. One even observed that the organiser had changed her haircut from her Facebook posts.

274. It is not possible to identify the persons who actually conveyed the threats to the woman, but from the video and other means it is known that senior organisers from the CFMEU were present when the threats were made – [redacted] and [redacted] Two CFMEU delegates, [redacted] and [redacted], can also be seen on the video, directly involved when the threats were made.

E. WHAT MUST BE DONE?

275. Several witnesses said that since the commencement of the Administration the south-east Queensland construction sector has been peaceful or, at least, relatively peaceful.

276. This cessation of violence demonstrates two important things. The first is that the CFMEU campaign was planned and controlled from the top: once Ravbar and Ingham were removed, the violence abated. The second is that the cessation of violence proves that the cycle of violence can be broken.

277. In my view, the Queensland CFMEU can be restored to function as it used to function – a tough representative of its members, operating lawfully to secure improved conditions and safety in its members workplaces.

278. To break the cycle of violence and to end the culture of violence will require good strong leadership. That can be assisted, in the short term, by some steps which I will suggest below. But it will take time.

F. RECOMMENDATIONS

An end to the lawlessness

279. It might seem obvious, but the CFMEU's attitude to obedience to the law needs to change immediately. No longer can the CFMEU encourage or tolerate breaches of industrial and criminal and regulatory laws. No longer can a fine be absorbed as a cost of doing business. Members bear the extraordinary costs of such conduct, including by the payment of increasingly large penalties and the significant legal expenses incurred in defending such cases. The CFMEU bares the cost of the reputational damage caused by the lawlessness, but also inflicts it on other parts of the union movement. The Administration is committed to conducting an effective union, but also one that is a lawful enterprise.

> ***RECOMMENDATION 1:*** *I recommend that the employees, delegates and members of the CFMEU be advised that from now if they are successfully prosecuted for breaches of industrial laws they will be required to justify why they should not be disciplined for their unlawful conduct. Such discipline may, if the conduct is sufficiently serious, include termination of employment and expulsion from membership.*

Personal payment orders

280. Any attempt by the Administration to uncover information regarding the defeat of personal payment orders is likely to fail: further investigation will be stone-walled by privilege claims. The Fair Work Ombudsman, however, holds superior investigative powers which may be capable of getting to the bottom of this important issue. Advice should be promptly sought about whether steps taken to defeat personal payment orders is unlawful and, if so, what steps should be taken to draw this matter to the attention of the Federal Court or any other Court that made the order.

> ***RECOMMENDATION 2****: I recommend that the information collected in this investigation be referred to the FWO and that the Administration co-operate with the FWO in determining whether, and if so by whom, any personal payment orders have been disobeyed. Further, advice should be promptly sought about whether steps taken to defeat personal payment orders were unlawful and, if so, what steps should be taken to draw this matter to the attention of the Federal Court or any other Court that made the order.*

Disciplinary action

281. Immediate disciplinary action is warranted against several individuals named in this report. The disciplinary action against each varies depending on their present role with the CFMEU.

282. The reasons for this disciplinary action are sufficiently revealed in the body of the report. In some instances there are additional grounds: some of those named have repeatedly engaged in conduct which has led to heavy fines being imposed on the CFMEU; some have even had their rights of entry cancelled or withdrawn on character grounds.

> ***RECOMMENDATION 3****: I recommend the immediate dismissal of several current officials of the CFMEU and the removal of several more as delegates. Where appropriate, steps should be taken to determine whether their membership of the CFMEU should be terminated*

283. Those persons will be identified to the Administrator in a separate private report.

The Youth Crew

284. The Queensland CFMEU has a group or sub-branch known as the Youth Crew. The age of those eligible to join the Youth Crew is unclear: one witness, [redacted], said the potential members were aged between 17 and 23; another, [redacted] said it was open to members under 35 years. [redacted] said there were about 150 members.

285. Numerous witnesses said that the Youth Crew was a particular problem. Many witnesses described how the Youth Crew was critically involved in many of the violent

episodes catalogued above. One witness described the Youth Crew as a *"wrecking crew"* and "*a hit squad*".

286. It is presently not clear whether the Youth Crew serves any useful purpose. Until matters settle, it would be preferable if the Youth Crew in Queensland ceased operations.

> ***RECOMMENDATION 4****: I recommend that the operations of the group or sub-branch known as the Youth Crew be suspended.*

287. In due course it can be considered if there is good reason to revive the Youth Crew.

Facebook and other social media

288. The abusive and inflammatory content posted by the CFMEU on its Facebook page was repeatedly identified as a serious source of violence. The stories told by individual WHS inspectors, and their families, show just how pernicious these entries were. The most poisonous content was posted as a reply or comment following the original CFMEU post.

289. Yet it was not clear who was placing the posts. Whenever I asked a CFMEU official they claimed they did not know who controlled the Facebook page; when I attempted to ask questions of the person who was paid to be in charge of the CFMEU social media, he would not speak to me without the assistance of a lawyer.

290. There appears to be no clear chain of control, if there is any control at all.

291. This problem can be corrected. This solution can be applied to all aspects of social media used by the CFMEU. I understand that pursuant to a National restructure of the communications function of the Union, including that of the Branch, the role of the Branch in posting material on social media has recently been substantially changed.

> ***RECOMMENDATION 5****: I recommend the CFMEU's use of social media be in accordance with a clear social media policy.*

292. That policy should include the appointment of a small control group, being the only persons able to place posts on social media in the name of the CFMEU. In other words, it would mean someone could be held responsible if and when abuse occurs.

Women

293. The CFMEU's attitude and conduct towards women needs to change urgently.

294. The problem is serious and will be difficult to correct. Removal of some problematic characters will assist, but that is nowhere near enough.

295. I understand that pursuant to a National restructure, the CFMEU will invest $5.4 million over 5 years focussed on addressing behavioural change by men in the industry

towards women, including conduct by staff and delegates of the Union. The CFMEU will employ a Project Officer and staff necessary to deliver on the program and will be subject to a steering committee and an enhanced role for the National Women's Committee. I recommend that the Union appoint staff, as soon as possible, to advise on the design and implementation of a framework to address the gendered issues which currently dominate the CFMEU.

> ***RECOMMENDATION 6****: I recommend that the CFMEU appoint staff, as soon as possible, to advise on the design and implementation of a framework to address the gendered issues which currently dominate the CFMEU.*

296. That will take time, so an interim measure should be implemented.

> ***RECOMMENDATION 7****: I recommend that the employees, delegates and members of the CFMEU be advised that any conduct of a kind which is abusive or threatening, or is sexual harassment, is a ground for immediate termination of employment and may result in termination of membership of the CFMEU.*

Geoffrey Watson

17 June 2025

APPENDIX A

Terms of Reference

I request that that you Geoffrey Watson SC, investigate the CFMEU Construction and General Division, Queensland/NT Branch and the associated state registered entity ("the union") and inquire into the following matters:

1. Credible allegations of violence, threats of violence and menacing conduct from the period 2015 to date, including allegations of such conduct by or against employees and former officers of the union.
2. The culture and actions embraced by the former leadership that tolerated, accepted, promoted and failed to confront a culture of violence and menacing conduct in the union and the industry as a way of doing business.
3. The culture of the union that lead to threats against other unions and unionists, disrespect and threats against regulators, and isolation from the broader union movement.
4. Identify the consequences of the union's culture and attitude to the broader democratic principles of unionism and provide case studies about those consequences.

In the investigation of these matters, I request that you co-operate with and interview, if appropriate, police, regulators, others within the union movement and employers, as well as union employees.

In addressing the staff of the union, I made clear that union values include openness, honesty, accountability and transparency and that the values of criminal and threatening cultures include retribution, retaliation and a code of silence.

I directed staff to fully co-operate with this investigation, and made clear that I will not tolerate pressure, directly or indirectly, on others not to cooperate with the Administration or the investigation.

Information required should be treated with the strictest confidence. The capacity and willingness of those that are the subject of inquiry to seek to victimise and retaliate against members must be considered.

TRIBUNALE DI NAPOLI

Ufficio del Giudice per le Indagini Preliminari

Sezione XXI

ORDINANZA CAUTELARE

Il Giudice dr. Raffaele Piccirillo,
sulla richiesta di applicazione della misura della custodia cautelare in carcere presentata dai Pubblici Ministeri dottori Alessandro Milita e Giuseppe Narducci in data 17 febbraio 2009, integrata con trasmissione atti in data 27 febbraio 2009, 13 maggio 2009, 7 luglio 2009, 27 ottobre 2009 nei confronti di:
COSENTINO Nicola, nato a Casal di Principe il 2 gennaio 1959, ivi residente in Corso Umberto I n. 44

INDAGATO

del delitto di cui all'artt. 110, 416 bis - I, II, III, IV, V, VI ed VIII comma, C.P., perché non essendo inserito organicamente ed agendo nella consapevolezza della rilevanza causale dell'apporto reso e della finalizzazione dell'attività agli scopi dell'associazione di tipo mafioso denominata "clan dei casalesi" - promossa e diretta da Antonio BARDELLINO (fino al 1988), da Francesco SCHIAVONE di Nicola, detto "Sandokan", da Francesco BIDOGNETTI e da Vincenzo DE FALCO (dal 1988 al 1991) e infine da Francesco SCHIAVONE di Nicola e da Francesco BIDOGNETTI - dopo l'arresto di questi ultimi due, da Michele Zagaria e Iovine Antonio, quali esponenti di vertice, tuttora latitanti, della fazione facente capo alla famiglia Schiavone e da Bidognetti Domenico, Bidognetti Aniello, Bidognetti Raffaele, Guida Luigi, Alfiero Nicola, Setola Giuseppe e Cirillo Alessandro, quali componenti apicali che si avvicendavano alla guida della fazione facente capo alla famiglia Bidognetti (nei cui confronti si procede separatamente) che, operando sull'intera area della provincia di Caserta ed altrove, si avvale della forza di intimidazione del vincolo associativo e della condizione di assoggettamento ed omertà che ne deriva, per la realizzazione dei seguenti scopi:

il controllo delle attività economiche, anche attraverso la gestione monopolistica di interi settori imprenditoriali e commerciali;

il rilascio di concessioni e di autorizzazioni amministrative;

l'acquisizione di appalti e servizi pubblici;

l'illecito condizionamento dei diritti politici dei cittadini (ostacolando il libero esercizio del voto, procurando voti a candidati indicati dall'organizzazione in occasione di consultazioni elettorali) e, per tale tramite, il condizionamento della composizione e delle attività degli organismi politici rappresentativi locali;

il condizionamento delle attività delle amministrazioni pubbliche, locali e centrali;

il reinvestimento speculativo in attività imprenditoriali, immobiliari, finanziarie e

commerciali degli ingenti capitali derivanti dalle attività delittuose, sistematicamente esercitate (estorsioni in danno di imprese affidatarie di pubblici e privati appalti e di esercenti attività commerciali, traffico di sostanze stupefacenti, truffe, riciclaggio ed altro);

assicurare impunità agli affiliati attraverso il controllo, realizzato anche con la corruzione, di organi istituzionali;

l'affermazione del controllo egemonico sul territorio, realizzata non solo attraverso la contrapposizione armata con organizzazioni criminose rivali nel tempo e la repressione violenta dei contrasti interni ma altresì attraverso condotte stragiste e terroristiche;

il conseguimento, infine, per sè e per gli altri affiliati di profitti e vantaggi ingiusti;

in particolare contribuiva, con continuità e stabilità, sin dagli anni '90, a rafforzare vertici ed attività del gruppo camorrista facente capo alle famiglie Bidognetti e Schiavone (dal quale sodalizio riceveva puntuale sostegno elettorale in occasione delle elezioni a cui il Cosentino partecipava quale candidato divenendo consigliere provinciale di Caserta nel 1990, consigliere regionale della Campania nel 1995, deputato per la lista Forza Italia nel 1996 e, quindi, assumendo gli incarichi politici prima di Vice Coordinatore e poi di Coordinatore del partito Forza Italia in Campania, anche dopo aver terminato il mandato parlamentare nel 2001) attraverso le seguenti condotte :

garantendo il permanere dei rapporti tra imprenditoria mafiosa, amministrazioni pubbliche e comunali;

assicurando il perpetuarsi delle dinamiche criminali economiche, esemplificativamente esercitando indebite pressioni nei confronti di enti prefettizi per incidere, come nel caso della ECO4 s.p.a., sulle procedure dirette al rilascio delle certificazioni antimafia in situazioni nelle quali erano ravvisabili elementi ostativi al rilascio delle certificazioni stesse ovvero attivandosi ancora, con enti prefettizi e/o strutture del Ministero dell'Interno, al fine di impedire, come nel caso del Comune di Mondagrone, il corretto dispiegarsi della procedura finalizzata allo scioglimento dell'ente locale per infiltrazione mafiosa;

creando e co-gestendo monopoli d'impresa in attività controllate dalle famiglie mafiose, quali l'ECO4 s.p.a., e nella quale il Cosentino esercitava – in posizione sovraordinata a Giuseppe Valente, Michele Orsi e Sergio Orsi – il reale potere direttivo e di gestione, così consentendo lo stabile reimpiego dei proventi illeciti, sfruttando dette attività di impresa per scopi elettorali, anche mediante l'assunzione di personale e per diverse utilità;

Condotta delittuosa avvenuta in provincia di Caserta sin dall' inizio degli anni '90 e perdurante.

1. Coordinate giuridiche della collusione politico – mafiosa

La contestazione cautelare formulata a carico di Nicola Cosentino nel capo G) della richiesta del P.M. impone alcune premesse di tenore squisitamente tecnico – giuridico, fondamentali per chiarire il criterio che ha guidato la lettura del materiale investigativo e la selezione degli elementi rilevanti.

Si può dare per risolta la questione della configurabilità in astratto del concorso eventuale, materiale e/o morale, nel reato associativo mafioso.

Il dibattito ha investito per il passato soprattutto la configurabilità del concorso eventuale materiale, essendovi sostanziale accordo sulla configurabilità di un concorso morale esterno, nel caso emblematico (realmente verificatosi) del genitore ex capo

mafia ormai a riposo che spinga e convinca il figlio ad abbandonare l'attività bancaria alla quale si era avviato, per entrare a far parte di un'associazione mafiosa in qualità di dirigente della società finanziaria costituita e alimentata con i proventi dell'attività dell'associazione.
Più tormentata è stata la questione della configurabilità di un concorso esterno materiale.
Una serie di pronunce risalenti agli anni dell'emergenza terroristica riconosceva la configurabilità del concorso esterno in banda armata o nel reato di cospirazione politica mediante associazione, distinguendo dette ipotesi da quelle dell'appartenenza all'associazione eversiva sulla base del seguente ragionamento:
"l'appartenente all'associazione prevista dall'art. 305 c.p. è l'accolito del sodalizio, cioè colui che, conoscendone l'esistenza e gli scopi, vi aderisce e ne diviene con carattere di stabilità membro e parte attiva, rimanendo al corrente dell'intera organizzazione, dei particolari e concreti progetti, del numero dei consoci, delle azioni effettivamente attuate o da attuarsi, sottoponendosi alla disciplina delle gerarchie e al succedersi dei ruoli. La figura del concorrente, invece, è individuabile nell'attività di chi – pur non essendo membro del sodalizio, e cioè non aderendo a esso nella piena accettazione dell'organizzazione, dei mezzi e dei fini – contribuisce all'associazione mercè un apprezzabile e fattivo apporto personale, agevolandone l'affermarsi e facilitandone l'operare, conoscendone l'esistenza e le finalità, e avendo coscienza del nesso causale del suo contributo".
Nella declinazione giurisprudenziale le teorie negazioniste si fondavano per lo più sulla svalutazione dell'autonomia strutturale o almeno probatoria del requisito soggettivo della fattispecie associativa semplice o mafiosa, quell'*affectio societatis* dimostrabile per *facta concludentia* dalla ricostruibilità del contributo causale prestato dal soggetto alla conservazione o al rafforzamento dell'associazione criminosa. Laddove tale contributo vi fosse, si affermava, poteva presumersi automaticamente la qualità di "partecipe", essendo l'*affectio* insita nella volontarietà e consapevolezza della cooperazione prestata al sodalizio: indipendentemente dal fatto che risultasse o meno *aliunde* l'effettiva volontà dell'agente di "esser parte" del clan e l'effettiva volontà degli altri membri di accettarlo come tale.
In secondo luogo si rimarcava la necessità di non condizionare il giudizio di 'intraneità' associativa alle regole interne all'associazione per delinquere.
Esemplare di questa linea di ragionamento è la seguente massima:
"Al di fuori dell'ipotesi di concorso morale non è configurabile il concorso eventuale ex art. 110 c.p., nell'associazione per delinquere, sia essa di tipo mafioso o non. Ed invero, affinché una condotta sia ritenuta punibile a titolo di concorso in un determinato reato, ai sensi dell'art. 110 c.p., sono necessari un contributo causale (materiale o semplicemente morale o psichico) e il dolo richiesti per il reato medesimo. Ne consegue che, quando tali condizioni si siano verificate in relazione al delitto di associazione per delinquere, sono integrati gli estremi della partecipazione a detta associazione; mentre, allorché le dette condizioni non si siano verificate, il fatto potrà integrare gli estremi di altri reati (corruzione, favoreggiamento, ecc.) ma non quello di concorso in associazione per delinquere".

Il periodo compreso tra la fine degli anni ottanta e i primi anni novanta ha visto alternarsi le tesi negazioniste e quelle favorevoli alla configurabilità del concorso materiale nel delitto di associazione mafiosa, con un ritmo frenetico, soprattutto in relazione ai casi nei quali il soggetto processato appariva estraneo allo stereotipo dell'associato mafioso tipico: l'imprenditore che mantiene con il clan intensi rapporti d'affari; il magistrato colluso che si presti all'aggiustamento di un processo di mafia; il

politico che stringa con l'associazione mafiosa un patto di voto di scambio e di cooperazione, rendendosi disponibile a favorire variamente il sodalizio durante il mandato elettorale o comunque in virtù della sua posizione politica.
Il 1994 segna il momento apicale della confusione giurisprudenziale sulla materia.

Una prima soluzione della *vexata quaestio* viene offerta dalla sentenza S.U. 5 ottobre 1994, Demitry il cui impianto motivazionale può così essere sintetizzato:

Una condotta per essere ricondotta al tipo previsto dall'art. 416 bis c.p. deve rispecchiare "*un grado di compenetrazione del soggetto con l'organismo criminale, tale da potersi sostenere che egli, appunto, faccia parte di esso, vi sia stabilmente incardinato, con determinati, continui compiti anche per settori di competenza*". Il concorrente eventuale però è per definizione colui che pone in essere non già la condotta tipica (vale a dire la condotta di "far parte"), bensì una condotta di altro genere che, per essere rilevante, deve "*contribuire atipicamente alla realizzazione della condotta tipica posta in essere da altri*". Il concorrente eventuale non è "*coautore della stabile permanenza del vincolo associativo*", ma si limita a mettere a disposizione un proprio contributo atipico a favore di coloro per i quali, invece, la condotta è proprio la stabile permanenza nell'associazione. Il suo sarà un contributo 'esterno' che, pur non essendo caratterizzato dalla stabilità, dovrà dare ossigeno agli altri consentendo loro di "*continuare a dar vita alla stabile permanenza del vincolo*".

Il dolo che accompagna la condotta *tipica* di partecipazione è effettivamente un dolo specifico, che consiste nella "*consapevolezza di ciascun associato di far parte del sodalizio con la volontà di realizzare i fini propri dell'associazione*". Non è richiesto lo stesso tipo di dolo nel concorrente eventuale ("*non si può pretendere che chi vuol dare un contributo senza far parte dell'associazione abbia il dolo di far parte…*").
Richiamando le regole generali che governano l'elemento soggettivo del concorso eventuale, le S.U. ricordano che si può avere concorso con dolo generico in un reato a dolo specifico, a condizione che un altro concorrente abbia agito con la finalità specifica richiesta dalla legge.
Il concorrente eventuale può ben agire con un dolo generico, consistente nella volontà e consapevolezza di prestare un contributo destinato ad agevolare l'associazione criminosa, disinteressandosi poi della strategia complessiva di quest'ultima e degli obiettivi che la stessa si propone di conseguire: il concorrente eventuale non potrà avere, per la contraddizione che non lo consente, quel segmento del dolo specifico del partecipe che consiste nella volontà di far parte dell'associazione, ma potrà fornire il suo contributo esterno, in taluni casi con la volontà di contribuire alla realizzazione dei fini dell'associazione; o almeno alla realizzazione di quei fini che sono coerenti con la tipologia del suo contributo: "*volontà che ben può essere propria di chi, non essendo e non volendo esser parte dell'associazione, richiesto di un aiuto, lo presta per contribuire alle fortune dell'associazione, sapendo peraltro che, prestato il proprio contributo, si disinteresserà delle ulteriori vicende dell'associazione*".

Non colgono nel segno le tesi che inferiscono l'inconfigurabilità dell'innesto dell'art. 110 c.p. sul tronco della fattispecie descritta dall'art. 416 bis c.p. dall'introduzione nel sistema dell'aggravante della finalità agevolatoria del sodalizio mafioso (art. 7 della legge n. 203/91), aggravante che produrrebbe l'effetto di rendere superflua e ridondante la categoria del concorso esterno nel reato associativo.
Per confutare l'argomento le Sezioni Unite richiamano l'interprete alla necessità di riflettere sul fine che l'associazione, con la realizzazione di un determinato delitto

strumentale, persegue. Ed esemplificano, ipotizzando il caso del contributo consistito nell'esecuzione di un omicidio finalizzato semplicemente a 'impartire una lezione' a qualcuno che ha osato disobbedire: caso nel quale potrebbe essere corretto ravvisare a carico dell'esecutore non intraneo la sola aggravante dell'articolo 7 della legge n. 203/91. Diversamente, nel caso di un omicidio che ha di mira l'eliminazione di un qualche pericoloso concorrente o di altri che possono minare la vita dell'associazione. In questa ipotesi, se il killer è consapevole del peculiare 'valore' del suo contributo e lo presta con questa consapevolezza, anche se per suoi fini personali (e cioè senza dolo specifico) "*è da escludere che ci troviamo dinanzi ad un semplice esecutore di un delitto, meritevole soltanto di un aggravamento di pena*". Al contrario, tutto lascia ritenere che, in questo caso, ci si trovi di fronte a un concorrente esterno, la cui azione atipica consente la realizzazione dell'azione tipica e contribuisce in altri termini alla stabilità del vincolo associativo e al perseguimento degli scopi dell'associazione.

Un argomento testuale a sostegno del controverso innesto può trarsi dall'articolo 418 c.p. (assistenza agli associati). La Corte valorizza la clausola di riserva che apre la descrizione del comportamento incriminato: "*chiunque, **al di fuori dei casi di concorso nel reato** o di favoreggiamento, dà rifugio o fornisce vitto, ospitalità, mezzi di trasporto, strumenti di comunicazione a taluna delle persone che partecipano all'associazione*".

La clausola si riferisce non già alle ipotesi di concorso necessario, ma appunto alle ipotesi di concorso eventuale nel reato associativo. Quando infatti il legislatore ha voluto riferirsi al concorrente necessario del reato associativo ha fatto uso, nella stessa norma, della locuzione "persone che partecipano all'associazione".

L'argomento trova il conforto della relazione ministeriale sul progetto di codice penale del '30 nella quale si legge che il concorso di cui si parla nella norma dell'art. 418 c.p. "*non è il concorso degli esterni rispetto al reato – fine che gli associati si propongono di commettere, sibbene il concorso rispetto al reato di associazione che, per la sua distinzione, per il parallelo che la relazione fa tra quest'ultimo concorso e il concorso esterno nel reato – fine non può non essere anch'esso il concorso esterno, degli esterni, nel reato di associazione*".

Al termine di questa articolata disamina la Corte si preoccupa di dettare una linea di demarcazione tra il partecipe e il concorrente materiale eventuale, enunciando l'ormai nota 'teoria della fibrillazione' secondo la quale: partecipe è colui senza il cui apporto quotidiano, o comunque assiduo, l'associazione non raggiunge i suoi scopi o non li raggiunge con la dovuta speditezza; è insomma colui che agisce nella "fisiologia", nella vita corrente quotidiana dell'associazione; mentre concorrente eventuale è, per definizione, colui che non vuole far parte dell'associazione e che l'associazione non chiama a "far parte", ma al quale si rivolge, ad esempio, per colmare vuoti temporanei in un determinato ruolo; oppure nel momento in cui la "fisiologia" dell'associazione entra in fibrillazione, attraverso una fase "patologica" che, per essere superata, chiede il contributo temporaneo, limitato anche ad un unico intervento, di un esterno. Concorrente materiale esterno insomma è il soggetto che occupa uno spazio proprio "*nel momento di emergenza della vita dell'associazione o, quanto meno, non lo spazio della normalità, occupabile da uno degli associati*".

Ripropostosi il contrasto agli inizi del decennio 2000 per effetto soprattutto della sentenza Cass., VI, 21 settembre 2000, Villecco, le S.U. intervengono nuovamente sul tema con la nota pronuncia 30 ottobre 2002, Carnevale.

Il percorso argomentativo della pronuncia è il seguente.

Le S.U. contestano la costruzione 'monosoggettiva' del delitto di associazione mafiosa, affermando che in realtà "*tanto la costituzione dell'associazione quanto l'inserimento di un soggetto in un'organizzazione già formata postulano sempre e necessariamente la volontà e l'agire di una pluralità di persone*".

L'associazione mafiosa è dunque fattispecie plurisoggettiva propria giacché "*l'appartenenza di taluno a un'associazione criminale dipende anche dalla volontà di coloro che già partecipano all'organizzazione esistente*".

La prova di tale volontà plurale può desumersi da 'regole statutarie' (come quelle praticate dalle mafie storiche con i loro rituali di affiliazione) ma anche *per facta concludentia* indicativi di una "*volontà di inclusione del soggetto partecipe*". Si tratta di valutare in concreto l'effettiva volontà degli associati: sia la volontà del singolo partecipe di essere incluso nel sodalizio; sia la volontà degli altri membri di apprezzarne e accettarne l'inclusione, indipendentemente dal fatto che tale incontro di volontà possa desumersi dal rispetto di regole o prassi criminali.

Riprendendo la distinzione tra il contributo 'tipico' del partecipe e quello 'atipico' del concorrente eventuale, le S.U. ripropongono anche la definizione per la quale la condotta di partecipazione è ravvisabile in chi "*si impegna a prestare un contributo alla vita del sodalizio, avvalendosi (o sapendo di potersi avvalere) della forza di intimidazione del vincolo associativo, e delle condizioni di assoggettamento e di omertà che ne derivano, per realizzare i fini previsti*".

L'espressione 'far parte' impiegata nel comma 1 dell'articolo 416 bis allude secondo la sentenza a "*una condotta che può assumere forme e contenuti diversi e variabili, così da delineare una tipica figura di reato 'a forma libera', consistendo in un contributo apprezzabile e concreto, sul piano causale, all'esistenza o al rafforzamento dell'associazione e, quindi, alla realizzazione dell'offesa tipica agli interessi tutelati dalla norma incriminatrice*".

A quel 'far parte' dell'associazione "*non può attribuirsi il solo significato di condivisione meramente psicologica del programma criminoso e delle relative metodiche, bensì anche quello, più pregnante, di una concreta assunzione di un ruolo materiale all'interno della struttura criminosa, manifestato da un impegno reciproco e costante, funzionalmente orientato alla struttura e all'attività dell'organizzazione criminosa*". Il che equivale a dire che la condotta di partecipazione comporta "*un inserimento strutturale a tutti gli effetti in tale organizzazione, nella quale si finisce con l'essere stabilmente incardinati*".

Così letta e interpretata, la condotta tipica di partecipazione si sottrae alla critica dottrinale per la quale essa incriminerebbe uno 'status' piuttosto che un comportamento: il partecipe infatti è colui che svolge determinati e continui compiti anche per settori di competenza.

La premessa conduce all'affermazione della configurabilità del concorso eventuale nel reato associativo mafioso.

Se infatti la reciproca volontà di inclusione si atteggia come requisito imprescindibile della partecipazione tipica, non può negarsi la necessità politico-criminale e la rilevanza penale dei contributi significativi che possono esser resi all'organizzazione criminale da parte di chi non sia in essa considerato incluso dagli associati.

Se nel reato associativo la volontà collettiva di inclusione è determinante, da ciò non può scaturire "l'irrilevanza penale di comportamenti significativi sul piano causale e perfettamente consapevoli".

La fattispecie estensiva dell'articolo 110 c.p. non conosce del resto limiti applicativi legati alla fattispecie.

Essa inoltre consente di "dare corpo giuridico" a una distinzione presente nella realtà, quella appunto tra "*chi entra a far parte di un'organizzazione condividendone vita e obiettivi e quella di chi, pur non entrando a farne parte, apporta dall'esterno un contributo rilevante alla sua conservazione e al suo rafforzamento*".

Il limite applicativo non può essere individuato nella natura permanente del reato associativo (come sostenuto nella sentenza Villecco del 2001), perché nulla impedisce di considerare che il permanere di un'offesa possa essere determinato anche dall'aiuto portato da un soggetto estraneo al sodalizio in determinati momenti della vita dell'organizzazione.

Neppure esso può essere collegato alla tecnica di 'tipizzazione causale' che connota tanto la clausola generale dell'articolo 110 c.p. quanto la fattispecie di parte speciale dell'articolo 416 bis.

Se valesse questo limite, occorrerebbe negare il concorso eventuale nell'omicidio, essendo anche questa una fattispecie causalmente orientata:

"*il processo causale che presiede alla tipizzazione della condotta di chi spara e di chi fornisce la pistola è il medesimo, nondimeno il complice che ha dato l'arma all'esecutore materiale dell'omicidio verrà incriminato naturaliter a titolo di concorso e, soprattutto, realizza una condotta che già sul piano causale è pienamente distinguibile dall'altra*".

Sul piano dell'elemento soggettivo del concorso eventuale nel reato associativo, la sentenza Carnevale si discosta dal precedente del '94.

Il dissenso si appunta in particolare sull'affermazione precedente per la quale il concorrente eventuale "può anche avere la volontà di contribuire alla realizzazione dei fini dell'associazione", ma non è affatto richiesto che egli abbia tale volontà "*essendo sufficiente la consapevolezza che altri fa parte e ha voglia di far parte dell'associazione e agisce con la volontà di perseguirne i fini*".

Le S.U. respingono nel 2002 l'idea che il concorrente esterno possa "*disinteressarsi della strategia complessiva (dell'associazione) e degli obiettivi che la stessa si propone di conseguire*".

Il dissenso è così spiegato:

"*Nel reato di associazione per delinquere l'evento è la sussistenza e operatività del sodalizio, siccome idoneo a violare l'ordine pubblico ovvero gli altri beni giuridici tutelati dalle particolari previsioni legislative, la cui attuazione avviene attraverso la realizzazione del programma criminoso. Ne consegue – di necessità – che non può postularsi la figura di un concorrente esterno nel cui agire sia presente soltanto la consapevolezza che altri agisca con la volontà di realizzare il programma di cui sopra. Deve, al contrario, ritenersi che il concorrente esterno è tale quando, pur estraneo all'associazione della quale non intende far parte, apporti un contributo che 'sa' e 'vuole' sia diretto alla realizzazione, magari anche parziale, del programma criminoso del sodalizio. Il risultato così raggiunto, che – come detto – esige nell'atteggiamento psicologico del concorrente esterno sempre la ricorrenza di un dolo diretto, assorbe inevitabilmente le critiche rivolte a quell'elemento, definito eterogeneo, comunque incerto ed equivoco, che sarebbe stato inserito dalle sezioni unite nella componente soggettiva della condotta del concorrente esterno, e polemicamente indicato con le espressioni 'dolo di contribuzione' o 'dolo di agevolazione*'".

La puntualizzazione dell'oggetto del dolo richiesto nel concorrente esterno assume il rilievo di argomento cardine per la confutazione delle teorie negazioniste che s'incentrano sull'esistenza nel sistema di norme – quali l'art. 378 cpv. e l'art. 418 c.p. – che assorbirebbero il disvalore che si vorrebbe stigmatizzare con la figura del concorso eventuale in reato associativo.

Le S.U. hanno buon gioco nel precisare che tanto il reato di assistenza agli associati quanto il favoreggiamento aggravato dalla mafiosità del soggetto favoreggiato si caratterizzano per una finalità circoscritta alla tutela del singolo; laddove assumerebbero rilievo ex artt. 110 – 416 bis le condotte finalizzate al mantenimento o all'assicurazione dell'operatività del sodalizio nel suo complesso.

Trova pregnante confutazione anche l'opinione dottrinale che desume dalla previsione normativa dell'art. 416 ter (scambio elettorale politico - mafioso nella forma 'denaro contro voti') un argomento per affermare l'inconfigurabilità di un concorso eventuale del politico in associazione mafiosa, giacché "*sopperire ai vuoti di tutela determinati dall'infelice formulazione dell'art. 416 ter con la categoria del concorso esterno costituisce operazione apprezzabile sul piano etico-politico, ma scorretta sul piano giuridico penale, configurandosi un aggiramento dei precisi confini entro i quali il legislatore ha considerato penalmente rilevante un accordo politico-mafioso*".

Rovesciando la prospettiva, le S.U. affermano nel 2002 che l'introduzione dell'articolo 416 ter deve leggersi come strumento di estensione della punibilità oltre il concorso esterno, e cioè anche in casi nei quali il patto preso in considerazione, non risolvendosi in un contributo al mantenimento o rafforzamento dell'organizzazione, resterebbe irrilevante quanto al combinato disposto degli artt. 416 bis e 110 c.p.

La 'teoria della fibrillazione' è decisamente ridimensionata dalla sentenza Carnevale che, correttamente, reputa inesatta la massima che ha trasformato in principio generale un'affermazione di carattere eminentemente esemplificativo e strettamente collegata alle peculiarità del caso venuto all'attenzione delle S.U. Demitry.

Nel 2002 le S.U. stemperano il linguaggio, affermando che il concorso dell'esterno può connettersi a condizioni di 'mera difficoltà' del sodalizio o anche a esigenze congiunturali, non necessariamente contrassegnate da situazioni patologiche o di grave emergenza: "*non appare affatto necessario che lo stato di difficoltà sia tale che, senza il soccorso dell'esterno, l'associazione andrebbe inevitabilmente incontro alla sua estinzione (...) non è affatto richiesto che il contributo possa venire solo da quel soggetto e da nessun altro (...) la fattispecie concorsuale sussiste anche prescindendo dal verificarsi di una situazione di anormalità nella vita dell'associazione* ".

Il momento centrale della sentenza Carnevale è quello dedicato all'individuazione del "livello di intensità minimo e idoneo" a considerare il concorso dell'estraneo come concorso nel reato associativo.

Il contributo del concorrente esterno – affermano le S.U. nel 2002 – "*deve poter essere apprezzato come idoneo, in termini di concretezza, specificità e rilevanza, a determinare, sotto il profilo causale, la conservazione o il rafforzamento dell'associazione*".

E' indifferente che l'attività dell'agente esterno sia stata continuativa, ripetuta o sia invece consistita in un intervento occasionale e non istituzionalizzato perché, nell'uno e nell'altro caso, conterà soltanto la concreta e specifica idoneità della prestazione a conseguire il risultato.

Non saranno pertanto riconducibili nello spettro delle condotte punibili di concorso eventuale: la mera 'contiguità compiacente', la 'vicinanza', la disponibilità nei confronti del sodalizio o dei suoi esponenti di spicco; quando a siffatti atteggiamenti non si accompagnino "positive attività" che abbiano fornito uno o più contributi suscettibili di produrre un oggettivo apporto di rafforzamento o di consolidamento sull'associazione o anche su un suo particolare settore operativo.

Ciò che conta insomma "*non è la mera disponibilità dell'esterno a conferire il contributo richiestogli dall'associazione, bensì l'effettività di tale contributo, e cioè*

che, a seguito di un impulso proveniente dall'ente criminale, il soggetto si sia di fatto attivato nel senso indicatogli".
L'insistenza sul tema della concretezza e della 'positività' materiale del contributo consente alle S.U. di superare l'argomento ostativo che viene da chi rimarca l'irrazionalità del fatto che si sottopongano al medesimo trattamento sanzionatorio soggetti intranei e soggetti esterni alle organizzazioni criminali: "*in realtà la pericolosità espressa da chi in ipotesi garantisce con un comportamento illegale un'intera organizzazione criminale è ben maggiore di quella di un aderente di poco conto del sodalizio*".
La **sentenza S.U. 12 luglio 2005, Mannino** tocca più specificamente il tema al nostro esame.
La pronuncia risponde al contrasto giurisprudenziale determinatosi sul tema dell'individuazione dei requisiti per la configurabilità del concorso esterno in associazione mafiosa dell'esponente politico, nel caso paradigmatico di patto di scambio tra l'appoggio elettorale da parte dell'associazione e l'appoggio promesso a questa da parte del candidato.
Richiamato come jus receptum il tema della configurabilità del concorso eventuale nel reato associativo, le S.U. sviluppano in particolare due temi affrontati nelle sentenze del '94 (Demitry) e del 2002 (Carnevale): quello dell'efficienza causale del contributo prestato dal concorrente esterno e quello dell'elemento soggettivo che deve caratterizzarne la condotta.
Sul primo tema le S.U. del 2005 confermano lo stemperamento della 'teoria della fibrillazione'. Nel contempo portano a conseguenze ulteriori quell'istanza di 'effettiva idoneità' del contributo avanzata dalla sentenza Carnevale.
Riprendendo le linee tracciate in un'importante pronuncia in materia di 'colpa medica' (S.U., 10 luglio 2002, Franzese), la sentenza esige che la rilevanza causale del contributo prestato all'associazione dall'agente esterno sia apprezzata ex post e obbedisca a uno standard di '*certezza processuale*' e non di "*mero aumento del rischio*".
"In tema di associazione di tipo mafioso, assume il ruolo di concorrente esterno il soggetto che, non inserito stabilmente della struttura organizzativa dell'associazione e privo dell'affectio societatis, fornisce un contributo concreto, specifico, consapevole e volontario, sempre che questo esplichi un'effettiva rilevanza causale e quindi si configuri come condizione necessaria per la conservazione o il rafforzamento delle capacità operative dell'associazione (o, per quelle operanti su larga scala, come Cosa Nostra, di un suo particolare settore o ramo di attività o articolazione territoriale) e sia diretto alla realizzazione, anche parziale, del programma criminoso della medesima"
In motivazione si esplicita che l'efficienza causale ai fini della realizzazione concreta del fatto criminoso collettivo costituisce elemento essenziale e tipizzante della condotta concorsuale, di natura materiale o morale, per la cui verifica non è sufficiente una valutazione ex ante, risolta in termini di mera probabilità di lesione del bene giuridico protetto, ma è necessario un apprezzamento ex post, in esito al quale sia dimostrata, alla stregua dei comuni canoni di 'certezza processuale', l'elevata credibilità razionale dell'ipotesi formulata in ordine alla reale efficacia condizionante della condotta atipica del concorrente.
Neppure è consentito – secondo la Corte – il ricorso alla 'causalità psichica' cosiddetta da 'rafforzamento dell'organizzazione criminale' la quale consentirebbe di aggirare il compito probatorio e di concludere in ogni caso "*che la condotta atipica, se obiettivamente significativa, determinerebbe comunque nei membri dell'associazione criminosa la fiduciosa consapevolezza di poter contare sul sicuro apporto del*

concorrente esterno, e quindi un reale effetto vantaggioso per la struttura organizzativa della stessa".
Riprendendo il rigore della sentenza Carnevale, la sentenza Mannino esclude la sufficienza di un dolo eventuale, inteso come mera accettazione del rischio di verificazione dell'evento, ritenuto solamente probabile o possibile insieme ad altri risultati intenzionalmente perseguiti.
Si esige invece che la rappresentazione e volontà dell'agente estraneo investano sia il fatto tipico oggetto della previsione incriminatrice, sia il contributo causale recato dalla condotta dell'agente alla conservazione o al rafforzamento dell'associazione, "*agendo l'interessato nella consapevolezza e volontà di recare un contributo alla realizzazione, anche parziale, del programma criminoso del sodalizio*".
Il concorrente esterno dev'essere anche consapevole dei metodi e dei fini dell'associazione, "*a prescindere dalla condivisione, avversione, disinteresse o indifferenza per siffatti metodi e fini, che lo muovono nel foro interno*".

Applicata al caso dell'esponente politico colluso con la mafia, la figura del concorso eventuale in reato associativo esige che: a) tra il soggetto e il sodalizio s'instauri un rapporto basato su un patto di scambio di voti contro favori; b) tra il soggetto e il sodalizio non sussistano rapporti di altro tipo, precedenti all'instaurarsi del patto di voto di scambio, che possano indicare l'esponente politico come soggetto già organico al sodalizio.
L'ipotesi del patto di scambio implica che un candidato formalmente estraneo al sodalizio mafioso contratti con quest'ultimo il procacciamento del voto degli affiliati e la coercizione del voto altrui in cambio dell'offerta di favoritismi: comportamento questo che ordinariamente configura già i reati di corruzione e coercizione elettorale, aggravati ex art. 7 della legge n. 203/91.
Si tratta di stabilire se e a quali condizioni la condotta di questo candidato, complessivamente considerata, possa configurarsi anche come condotta di partecipazione interna ovvero di concorso esterno nel reato associativo di tipo mafioso, tanto più che il soggetto in questione ha dimostrato – con il suo concorso morale nella coercizione elettorale – di voler condividere in qualche misura, e di voler orientare a suo vantaggio, la logica intimidatoria propria del sodalizio.

Il primo provvedimento giudiziario che ha affrontato la questione, configurando la condotta dell'uomo politico colluso come partecipazione interna all'associazione mafiosa, è un'ordinanza del 1992 del Tribunale della Libertà di Reggio Calabria relativa ai rapporti intrattenuti da taluni esponenti politici calabresi con le cosche rosarnesi:
"L'uomo politico si serve dell'attività delle cosche per assicurarsi l'esito favorevole, e il più favorevole possibile, delle elezioni, restando pattuito o inteso che, una volta eletto, si metterà al servizio o a disposizione delle medesime, i cui interessi sono, appunto, l'acquisizione delle gestione o del controllo delle attività economiche, delle concessioni e autorizzazioni, degli appalti e dei servizi pubblici, e comunque, lo sfruttamento di qualsiasi vantaggio derivante dall'esercizio dei pubblici poteri. (...) Rivolgersi alla mafia per simili finalità, o accettarne l'impegno equivale di per sé all'adesione al programma criminoso della medesima, sia pure per la parte relativa agli affari amministrativi e ai relativi abusi".

Pronunciandosi sullo stesso caso, la S.C. conferma sostanzialmente il ragionamento di diritto sia pure rilevando l'insufficienza del quadro probatorio specifico:
"*Il fatto di chi promette voti contro l'impegno del candidato che, una volta eletto,*

concluderà il sinallagma attraverso l'elargizione di favoritismi è espressamente previsto e sanzionato dalla legge penale. A maggior ragione quindi, se un simile patto viene stipulato dal candidato con un'organizzazione di stampo mafioso, e la controprestazione del beneficiario del consenso elettorale è la promessa di agevolare chi gli assicura l'elezione nella realizzazione dei fini elencati dalla norma incriminatrice, il fatto è, se provato, suscettibile di integrare gli estremi non soltanto dello specifico delitto elettorale, ma anche di una partecipazione all'associazione criminale, tanto più se l'accordo risulta di tale portata e intensità da far apparire il candidato stipulante come autentica espressione del sodalizio criminale" (Cass., I, 8 giugno 1992, Battaglini).

In una nota sentenza del 2004 (Cass., II, 15 ottobre 2004, Andreotti) la Corte - occupandosi di un caso del tutto peculiare nel quale l'intraneità dell'imputato al sodalizio mafioso era stata ritenuta con riferimento ad un'epoca anteriore all'introduzione dell'art. 416 bis c.p.- riconosceva la correttezza del ragionamento probatorio della Corte d'Appello secondo cui l'imputato, facendo leva sulla sua posizione di uomo politico e di governo di rilievo nazionale, aveva manifestato la propria disponibilità – sollecitata o accettata da Cosa Nostra – a compiere interventi in armonia con le finalità del sodalizio, ricevendone in cambio la promessa, almeno parzialmente mantenuta, di sostegno elettorale alla sua corrente politica e di eventuali interventi di altro genere.
Il principio di diritto distillato dalla Corte in quel caso è il seguente: "*Integra la condotta di partecipazione, specie in mancanza di un'affiliazione rituale, l'esplicazione di attività omogenee agli scopi del sodalizio, apprezzabili come concreto e causale contributo all'esistenza e al rafforzamento dello stesso, da parte del soggetto che ne sia stato accettato e in esso sia stabilmente incardinato con l'assunzione di determinati e continui compiti, anche per settori di competenza"*.

In buona sostanza l'intraneità del politico al sodalizio sembra ipotizzabile soltanto quando siano provati rapporti collusivi consolidati da tempo e caratterizzati da una risalente continuità di scambi politico-mafiosi. Solo in questo caso il rapporto potrà assumere un carattere clientelare stabile, continuativo e fortemente personalizzato, e potrà implicare il riconoscimento di un 'ruolo' del politico all'interno del sodalizio mafioso.
Una pluralità di patti di scambio implicherà la modifica della posizione dell'uomo politico inizialmente *extraneus* alla compagine e animato da un movente fortemente autonomo. In tal caso il suo movente autonomo verrà inevitabilmente a sovrapporsi, intrecciarsi e confondersi con le finalità associative, sì da assumere una nuova significatività e concludenza in termini di *affectio societatis*. Potrà accadere che il soggetto finisca con il perseguire anche la realizzazione degli scopi del sodalizio, di cui ha mostrato, del resto, di condividere indirettamente la valenza coercitoria.

Qualora invece si ipotizzi che il politico ha allacciato per la prima volta il patto di scambio "voto contro favori", ben difficilmente si potrà configurare la sua condotta in chiave di 'partecipazione interna'. Tale rapporto, inevitabilmente contrassegnato all'origine da un movente fortemente autonomo dell'uomo politico e da una valenza di cooperazione relativamente 'paritaria', sarà tale da denotare un'assenza di affectio. Assenza di affectio che potrebbe rilevarsi anche nell'ipotesi di ripetuti patti di scambio, nel qual caso ci troveremmo in presenza di un concorso esterno nel reato associativo particolarmente intenso, consolidato e continuativo.

Non ricorrerà né intraneità né concorso esterno quando la condotta dell'uomo politico si riduca a un comportamento compiacente del tutto episodico, consistito ad esempio nell'appoggio di una pratica d'ufficio o nell'isolato sostegno del candidato in un concorso. In tal caso saranno eventualmente configurabili delitti specifici (ad esempio corruzione) aggravati ex art. 7 della legge n. 203/91.
Le difficoltà che si avvertono nel definire la posizione giuridica degli uomini politici collusi con la mafia non sono tanto di ordine dommatico – astratto quanto piuttosto di carattere probatorio.
Il *thema probandum* è l'accordo programmatico tra amministratori e cosche, cioè un fatto privo di visibilità esterna e ben nascondibile alle investigazioni, un fatto che può provarsi soltanto attraverso un'opera paziente di tessitura degli indizi.

Il percorso dell'indagine e della sua verifica è così scandito.
Il primo passo è costituito dalla verifica dell'effettivo radicamento in determinati luoghi di un'associazione che annoveri tra i suoi obiettivi quello di trarre profitto dall'amministrazione del potere.

Una volta che si sia data risposta affermativa a questo quesito, occorrerà individuare nella struttura associativa quei ruoli di partecipazione che porrebbero l'associazione nelle condizioni di realizzare gli obiettivi perché delle due l'una: o l'associazione non ha la capacità di realizzare quel programma, e allora manca l'idoneità offensiva; o ce l'ha e allora vi devono essere amministratori pubblici partecipi.

Una volta ammessa l'esistenza dell'associazione e l'idoneità della sua struttura adeguata alla realizzazione del programma di condizionamento dell'amministrazione, il fatto che gli unici personaggi pubblici con cui la cosca ha rapporti sia X costituirà "*un potente centro di gravità attorno al quale far ruotare la costellazione degli indizi*".

Calato nella concretezza del caso affrontato dalla citata sentenza Battaglini, questo modello conduce un commentatore a osservare:
"Quest' associazione vuole mettere sistematicamente le mani sul potere locale; essa non può contattare di volta in volta l'amministratore che le serve perché sarebbe dispendioso e rischioso; essa ha necessità, secondo il suo programma, di contare stabilmente su propri rappresentanti nelle strutture amministrative; il B. ha un ruolo istituzionale che fa proprio al caso dell'associazione; la sperimentata contiguità tra B. ed esponenti eminenti delle cosche, l'inserimento del suo nome nella quaterna dei candidati da votare, l'attivismo e il supporto organizzativo dato dalle cosche alla sua campagna elettorale, le sollecitazioni a lui più volte mosse da personaggi di primo piano delle cosche per l'apposizione del visto di controllo su delibere comunali sono tutti segni che avvalorano l'ipotesi dell'accusa".
Un problema probatorio che frequentemente si pone in concreto è quello della sufficienza della mera accettazione dei voti procurati dalle cosche a integrare il concorso eventuale del politico.
La realtà è che l'accettazione del voto delle cosche sottende sempre un sinallagma, ancorché simulato in termini tali da farlo apparire come una mera accettazione tacita di voti non richiesti; si tratterà allora di impegnarsi in quell' opera di tessitura che potrà consentire di provare il patto paritario.

Qualora invece il voto di mafia non sia stato accettato dal politico e gli sia stato dato a sua insaputa (magari per lanciare messaggi ad altri) e comunque senza alcuna richiesta del beneficiato, il sinallagma dovrà dirsi senz'altro incompiuto.

Altre difficoltà probatorie sono ingenerate dallo sfasamento temporale tra i momenti di esecuzione degli impegni corrispettivi assunti dalla cosca e dal politico: è immediata l'attività di sostegno elettorale; è differita all'epoca e all'eventualità dell'effettivo successo elettorale la traduzione in atto della promessa di favori da parte del politico.
La domanda è se la mera disponibilità data dal politico prima che si sia conclusa la competizione elettorale basti a integrare il contributo alla conservazione o al rafforzamento dell'associazione mafiosa.
Sul punto si sono contrapposti: un indirizzo draconiano che reputa ingenuo supporre un appoggio elettorale non accompagnato dalla disponibilità, sufficiente, del candidato ad assecondare i desideri della cosca; un orientamento che invece sottolinea come la mera promessa (esplicita o implicita) della controprestazione di benefici di là da venire non si traduce ancora, di per sé, in un fattivo contributo all'esistenza o al rafforzamento della struttura associativa.

L'approdo più recente, sostanzialmente recepito con qualche precisazione dalla sentenza Mannino 2005, stempera la divergenza tra le due tesi in conflitto.
Si afferma la necessità di valutare caso per caso se – tenuto conto del prestigio goduto dall'uomo politico, della sua autorevolezza, del livello in cui egli si colloca – la mera disponibilità scaturente dallo scambio di promesse non sia già essa stessa tale da costituire un valido contributo "alla conservazione o al rafforzamento" del sodalizio, idoneo a integrare il concorso esterno. Tutto dipende – osserva un commentatore – dalla qualità della promessa, dall'affidabilità e dalla caratura del politico promittente, dal contesto in cui i fatti si verificano.
Una sentenza del Tribunale di Palermo dà corpo al criterio appena enunciato:
"Nel corso della campagna elettorale il politico aveva promesso di attivarsi per l'erogazione di finanziamenti per appalti di opere pubbliche che il sodalizio mafioso intendeva controllare. La serietà e la concretezza di quell'impegno erano desumibili dal ruolo in precedenza assunto dal politico nell'ambito della giunta regionale, dall'indicazione specifica delle opere che avrebbe fatto finanziare e dalla sua affidabilità nell'assecondare certe sollecitazioni dell'associazione criminale in precedenti occasioni. La promessa fatta ai boss aveva loro consentito di elaborare un progetto occulto di spartizione degli appalti, da bandire dopo l'emissione dei decreti di finanziamento, tra vari imprenditori. Quel progetto, il cui input consisteva nella promessa elettorale dei menzionati decreti, era ovviamente reso possibile dalla forza intimidatoria del sodalizio in quel particolare territorio. Ma la promessa del politico, per ciò solo, aveva accresciuto la capacità del gruppo criminale di coinvolgere nel 'cartello di imprese' chiamato a spartirsi illecitamente gli appalti della zona, nuovi soggetti. Tale contatto con gli imprenditori, in epoca antecedente alle elezioni e alla effettiva emissione dei decreti, aveva fruttato all'organismo criminale vantaggi immediati" (Tribunale di Palermo, VI, 27 aprile 1999).

Si diceva della ricezione di questa visione da parte della sentenza Mannino.
Nella pronuncia in effetti si legge la distinzione tra: l'uomo politico di grande caratura, la cui rielezione sia universalmente percepita come certa, per il quale la promessa di favori può integrare concorso esterno anche prima che la competizione elettorale si sia svolta; l'esponente politico di caratura media, vissuto come affidabile dal gruppo mafioso, il cui contributo potrebbe essere apprezzato al momento dell'esito favorevole del voto; l'uomo politico di caratura 'medio-bassa', la cui sola disponibilità è di regola insufficiente, sicché l'idoneo contributo al mantenimento dell'ente associativo si manifesterà soltanto quando il patto elettorale politico-mafioso avrà avuto almeno un

principio di esecuzione bilaterale.

2. I rapporto di scambio 'voti contro favori' stipulato dall'indagato Nicola Cosentino con il Clan dei Casalesi nel racconto di Gaetano Vassallo

Breve profilo del collaboratore di giustizia

Una prima conferma della credibilità personale del collaboratore di giustizia Gaetano Vassallo ci è fornita dall'entità del compendio patrimoniale che le sue dichiarazioni hanno consentito di apprendere, privandone lo stesso dichiarante e i suoi familiari.

Con provvedimenti del 9/6/2008 (convalida GIP del 19/6/2008) e del 17/7/2008 veniva sequestrato a vari componenti della famiglia Vassallo un compendio mobiliare e immobiliare valutabile in circa 41 milioni di euro, comprendente tra l'altro: 48 appartamenti del valore di € 16.500.000,00; 27 garage/box per del valore di € 3.500.000,00; 1 fabbricato rurale del valore di € 200.000,00; 8 ville stimate al valore di € 4.800.000,00; 8 locali commerciali per € 4.200.000,00; 28 terreni per € 4.000.000,00; la societa' Park Hotel s.r.l. € 4.000.000,00; la società Novambiente s.r.l. € 1.300.000,00; La società Osea s.r.l. € 1.000.000,00; n. 10 conti correnti € 1.400.000; n. 26 auto/motoveicoli per € 500.000,00 (vedi i provvedimenti citati nel faldone n. 5 degli atti trasmessi in data 16.2.2009).

Questo dato concorre ad accreditare il peso imprenditoriale di Gaetano Vassallo, colletto bianco per eccellenza del gruppo criminale capeggiato storicamente da Francesco (Cicciotto) Bidognetti, confermando non soltanto l'autodefinizione del collaboratore, ma l'opinione unanime degli accoliti transitati nei ranghi dei collaboratori di giustizia.

Al rango imprenditoriale ed economico si connette la forte plausibilità delle relazioni istituzionali e politiche, nel cui orizzonte si stagliano i rapporti allacciati e coltivati dal collaboratore con il parlamentare indagato.

Inoltre quei sequestri, fondandosi in larga parte su elementi di prova indiziaria forniti dallo stesso destinatario del provvedimento, avvalorano la serietà della scelta collaborativa.

Si trae poi da quei provvedimenti una prima conferma della tenuta delle dichiarazioni del propalante che ben più solide corroborazioni troveranno nella serie di ordinanze cautelari personali che non si mancherà di citare nel corso di questa trattazione.

Le referenze che conferiscono credibilità al racconto di Gaetano Vassallo ce le forniscono poi tutti i collaboratori di giustizia provenienti dalle file della fazione bidognettiana. Tra questi spicca la figura di **Domenico Bidognetti**, congiunto dell'indiscusso 'titolare' del gruppo criminale, per il quale:

"***VASSALLO Gaetano era uomo di fiducia di Francesco BIDOGNETTI detto Cicciotto 'e mezzanotte. Ho incontrato più volte VASSALLO Gaetano presso l'abitazione di Cicciotto, sita in Casal di Principe in Via Firenze. In queste occasioni ho verificato che si trattava non di riunioni conviviali, ma di incontri finalizzati a pianificare ed a rendicontare gli interessi e gli affari del clan, soprattutto con riferimento al traffico di rifiuti.*** *Ciò è accaduto anche quando Cicciotto era detenuto agli arresti domiciliari, e addirittura quando Cicciotto era latitante. In questi casi gli incontri avvenivano sempre in Casal di Principe,* ***sia alla via Firenze presso l'abitazione di Cicciotto,*** *sia presso la casa di IORIO Pasquale (suocero di CERCI Gaetano),* ***sia presso l'abitazione di CIRILLO Bernardo*** *(...) "ADR: alle riunioni di cui ho detto, effettuate tra Cicciotto e VASSALLO, partecipavano spesso anche Gaetano CERCI ed Elio ROMA.* ***Per dare idea della frequenza con cui VASSALLO conferiva con Cicciotto, dico semplicemente che, per trovare VASSALLO a Casale, o lo si trovava a casa di Cicciotto o a casa di Gaetano CERCI*** *(...) "****ADR: come dicevo, VASSALLO Gaetano era uomo di fiducia di Cicciotto; e ciò non per gli affari di sangue, ma soprattutto per affari illeciti legati al traffico di rifiuti nonché per la gestione dei rapporti con le pubbliche***

amministrazioni e per l'ottenimento dei provvedimenti concessori e autorizzatori; questo perché era lui ad avere la "chiave giusta" per interloquire con le amministrazioni pubbliche. Con questa espressione intendo dire che si occupava di fare le corruzioni ai pubblici ufficiali e aggiungo anche che, nel fare ciò, era molto capace.
Per quanto io abbia capito, sapendo come funziona il sistema, in questi casi VASSALLO Gaetano diceva di impiegare i suoi soldi per fare le corruzioni, ma, con tutta evidenza, egli poi "scalava" le somme corrisposte per le corruzioni dalla quota che assicurava al clan per gli affari illeciti da lui compiuti.
***In poche parole, VASSALLO Gaetano era un "colletto bianco" del gruppo BIDOGNETTI**.*
L'altro colletto bianco del gruppo BIDOGNETTI era l'Avv. CHIANESE Cipriano. (...) ADR: ***Ho detto che VASSALLO Gaetano era persona di fiducia di BIDOGNETTI Francesco; infatti, per lui "la casa di Cicciotto era sempre aperta" e lo stesso avveniva anche quando Cicciotto era latitante perché essi trovavano il modo di incontrarsi con frequenza, come ho detto, presso le abitazioni di IORIO o CIRILLO. Per dare idea della posizione ricoperta da VASSALLO nel gruppo BIDOGNETTI, sottolineo che Cicciotto - quando persone pure appartenenti al clan, ma con un ruolo minore, tentavano di incontrarlo - "si faceva negare". Al contrario, per VASSALLO, Cicciotto "c'era" sempre.***
ADR: so che la famiglia del VASSALLO Gaetano è composta da circa una decina di fratelli.
In alcune occasioni ho visto Gaetano andare a casa di Cicciotto – anche quando questi era latitante - in compagnia di uno dei suoi fratelli che gli assomiglia, di cui però non ricordo il nome" (interrogatorio del 20.9.2008, punto 11 del faldone n. 1 degli atti trasmessi il 13 maggio 2009).

Le dichiarazioni a carico di Nicola Cosentino

Nell'**interrogatorio reso il 1° aprile 2008** Gaetano Vassallo introduce la figura dell'onorevole Cosentino collegandola immediatamente alla società ECO4 della quale Cosentino sarebbe stato 'controllore' politico fin dalla sua costituzione.
VASSALLO Gaetano è inserito nella compagine societaria come rappresentante della fazione bidognettiana del clan dei Casalesi, per investitura del capo Francesco Bidognetti, mediata da MIELE Massimiliano delegato ai rapporti con i fratelli Orsi da Aniello Bidognetti, gestore degli affari del clan sul finire degli anni '90.
Al rapporto tra Cosentino e la ECO 4 VASSALLO connette la dazione da parte di ORSI Sergio della somma contante di cinquantamila euro, consegnati da ORSI Sergio in una busta gialla della quale lo stesso ORSI rivelerà all'odierno collaboratore il contenuto:

"*Confesso che* ***ho agito per conto della famiglia Bidognetti quale loro referente nel controllo della società ECO4 s.p.a. gestita dai fratelli Orsi. Sono stato di fatto loro socio perché richiesto di farlo da parte di Massimiliano Miele investito da BIDOGNETTI Francesco come da questi stesso riferito.*** *All'epoca era BIDOGNETTI Aniello la persona a gestire gli affari del clan, riferiti alla famiglia Bidognetti e, a fronte degli impegni prestati dal clan ai fratelli Orsi, era stata fissata una tangente mensile pari a cinquantamila euro, con la previsione ulteriore dell'assunzione di cinquanta persone scelte dal clan. I rapporti economici tra i fratelli Orsi e il clan sono stati regolati direttamente da MIELE Massimiliano, con modalità che non conosco.*
Posso dire che la società ECO4 era controllata dall'onorevole Cosentino e anche l'onorevole Landolfi aveva svariati interessi in quella società. Presenziai personalmente alla consegna di cinquantamila euro in contanti da parte di ORSI Sergio all'onorevole Cosentino, incontro avvenuto a casa di quest'ultimo a Casal di Principe. Ricordo che Cosentino Nicola ebbe a ricevere la somma in una busta gialla e Sergio m'informò del suo contenuto (…) Spiegando le ragioni della mia presenza in occasione del versamento della somma contante dell'ORSI Sergio al Cosentino,

rappresento che io ero sostanzialmente un 'socio', seppure occulto, all'interno della ECO4 e la cosa era ben nota al Cosentino stesso. Astrattamente era come se quei soldi provenissero anche da me, tanto che Cosentino ebbe a ringraziare entrambi. Ricordo che in quell'occasione approfittai di quel momento per chiedere un favore a Cosentino nell'interesse di mio fratello, all'epoca impiegato nella GEOECO, una società analoga alla ECO4 che però operava nell'ambito del consorzio CE2".

Cosentino era al corrente dei rapporti di Vassallo con Francesco Bidognetti e del ruolo di 'socio criminale occulto, che Vassallo rivestiva nella ECO4 degli Orsi.
"Attraverso" esponenti della famiglia Bidognetti, e anzi proprio *attraverso* il capo Francesco Bidognetti detto 'Cicciotto 'e mezzanotte', VASSALLO asserisce di aver conosciuto l'indagato Cosentino, alcuni anni prima della costituzione della ECO4. In un periodo precedente l'arresto di Cicciotto. Quel risalente incontro ebbe luogo in coincidenza con l'impegno dell'indagato Nicola Cosentino in una campagna elettorale per l'amministrazione provinciale di Caserta:

"*Cosentino sapeva che io ero socio della ECO4 e sapeva perfettamente dei miei rapporti con la famiglia Bidognetti, per la quale ero il referente all'interno della società: faccio presente che io ebbi a conoscere Nicola Cosentino proprio attraverso Bidognetti Francesco, proprio in un periodo antecedente all'arresto di quest'ultimo. Mi ero aggiudicato il servizio di raccolta degli R.S.U.* (rifiuti solidi urbani, n.d.e.) *sul comune di San Cipriano con la SETIA SUD, intestata a mio fratello Salvatore e un giorno Bidognetti Francesco mi convocò affinché indicessi una riunione con le maestranze per sostenere il candidato COSENTINO Nicola per le elezioni provinciali. Me lo presentò come suo amico e io personalmente ebbi a prelevare il Cosentino insieme al fratello minore e a portarlo presso il deposito ove erano state riunite le maestranze, invitandole al voto secondo le indicazioni di BIDOGNETTI Francesco".*

A quella presentazione fecero seguito altri incontri, altre sponsorizzazioni elettorali ma anche l'impegno di proselitismo profuso dall'odierno collaboratore di giustizia in favore del partito dell'indagato:

"*A partire da quell'episodio ebbi ad incontrare il Cosentino anche dopo la sua elezione a parlamentare. Faccio presente che sono tesserato 'Forza Italia' e grazie a me sono state tesserate numerose persone presso la sezione di Cesa: mi è capitato in due occasioni di sponsorizzare la campagna elettorale del COSENTINO offrendogli cene presso il ristorante 'zì Nicola' di mio fratello, cene costose essendo invitate centinaia di persone delle quali io e i miei fratelli ci assumevamo interamente il costo".*

Il ruolo di 'grande elettore' rivestito nel clan Bidognetti da Gaetano Vassallo trova piena conferma in **Domenico Bidognetti** (interrogatorio citato):

"Con riferimento a VASSALLO Gaetano, specifico che tra i suoi compiti rientrava anche quello di convogliare i voti verso i candidati prescelti dai clan. (…) In questo senso, certamente anche VASSALLO Gaetano, che aveva un grosso bacino elettorale a Cesa anche in forza della consistenza numerica della famiglia di appartenenza e in forza delle sue conoscenze, si è sempre attivamente prodigato per convogliare i voti secondo le indicazioni fornitegli da mio cugino Cicciotto".

Il collaboratore di giustizia Vassallo ritorna sulla figura dell'indagato Cosentino

nell'**interrogatorio del 29 maggio 2008.** In quell'atto Vassallo ripercorre le strategie espansive perseguite dalla ECO4, con la piena complicità del presidente del Consorzio CE4 VALENTE Giuseppe, nella gestione dei rifiuti. Strategie il cui centro di gravità si allontana a un certo punto dai territori tradizionalmente controllati dal gruppo Bidognetti, per approdare ai comuni controllati da Cicciariello (SCHIAVONE Francesco di Luigi) e dal gruppo sessano dei 'muzzoni'.
Con questa politica espansionistica, contrassegnata da "grandi e piccole illegalità", Vassallo vede interagire le iniziative politiche dell'indagato Cosentino e del collega Landolfi. Un momento di convergenza è individuato dal collaboratore, nell'affare collegato ai terreni da espropriare per realizzare l'ampliamento della discarica Parco Saurino 2.
Vassallo riferisce di un progetto di ampliamento del sito, nel quale non fu direttamente coinvolto perché risalente già a un'epoca nella quale il gruppo bidognettiano, che lo aveva voluto 'socio' occulto dei fratelli Orsi nella ECO4 s.p.a., gli aveva imposto di ritirarsi ('***il clan dei casalesi mi disse di togliermi da mezzo'*).**
Le notizie relative a questo momento della vita della ECO4 pervengono perciò a Vassallo dai fratelli Antonio e Nicola che, secondo il patto stipulato con gli Orsi, egli era riuscito a far assumere dalla società mista e che ne rimarranno dipendenti mista per alcuni mesi dopo la fuoriuscita dell'odierno collaboratore (fino al novembre 2002).
A comunicargli l'interesse della 'famiglia' mafiosa facente capo agli Schiavone, e in particolare a Francesco Schiavone di Luigi detto 'Cicciariello', nella questione sono gli stessi fratelli Orsi e un consigliere comunale casalese amico di Vassallo, al quale gli Schiavone hanno intimato di non acquistare un terreno adiacente alla discarica perché "*il bene gli interessava*".
Un'ulteriore (diretta) conferma del passaggio di competenze criminali Vassallo la ricaverà allorquando tenterà di raccomandare agli Orsi un fornitore suo amico, tale Bortone, e verrà avvicinato da un emissario degli Schiavone che gli prospetterà persuasivi 'argomenti' ostativi. Di queste ragioni Vassallo avrà definitiva conferma dal geometra Bernardo Cirillo, cugino di Cicciotto Bidognetti.

"***Conosco la vicenda della discarica di Parco Saurino 2. In particolare in relazione all'ampliamento del sito avvenuto nel 2002.*** *Non mi sono occupato direttamente di queste vicende perché il clan dei casalesi mi disse di togliermi da mezzo. Come ho già riferito in precedenti verbali. Se ne occuparono però i miei fratelli Antonio e Nicola Vassallo che feci assumere come dipendenti della Eco4 da Sergio e Michele Orsi.* ***Anche nell'individuazione dei terreni dove ampliare la discarica c'è stato l'interesse della criminalità organizzata.*** *Infatti, Sergio e Michele Orsi mi hanno detto che c'è stato l'interessamento diretto di'Cicciariello'; e ciò mi fu confermato anche da Vincenzo Verazzo, consigliere comunale di Casal di Principe, mio amico, il cui cognato è detenuto per lo stesso processo mio degli arresti del 2002 per fatti di criminalità organizzata. Verazzo infatti sapeva bene i fatti, in quanto egli stesso voleva comprare altri terreni vicino a quello suo e allocati nei pressi della discarica, ma fu avvicinato da Cicciariello, ovvero SCHIAVONE Francesco (*di Luigi, da non confondere con SCHIAVONE Francesco di Nicola detto Sandokan, n.d.e.) *che gli intimò di non fare l'acquisto del terreno perché il bene gli interessava poiché dovevano fare l'ampliamento della discarica.* ***I miei fratelli invece mi riferirono della gestione della discarica ampliata, sempre riferibile a persone legate alla criminalità organizzata.*** *Essi mi specificarono che i fratelli Orsi scaricavano rifiuti speciali provenienti dalle lavorazioni stradali nella discarica ampliata; ciò ovviamente era contro legge perché i rifiuti provenivano da fuori regione e i rifiuti non venivano registrati in ingresso nella discarica per cui si trattava di un sistematico e organizzato*

smaltimento illegale di rifiuti. Di ciò era a conoscenza anche il Valente. In sostanza tutta la gestione della discarica ampliata era realizzata con piccoli e grandi illegalità. Gli imbrogli andavano dall'appropriazione del gasolio per le macchine private, ai fittizi rimborsi per le forniture dei gasolio, alle spese personali effettuate con le carte di credito della società fino al traffico di rifiuti e all'assunzione di persone legate alla criminalità organizzata; queste persone ovviamente non andavano a lavorare, ma intascavano i soldi della retribuzione. Tra questi falsi dipendenti ricordo il figlio di FRAGNOLI di Mondragone, ovvero il figlio del capo clan di Mondragone che conosco e che quindi saprei riconoscere in foto; a Sessa Aurunca vi era invece il suocero di DI LORENZO, ovvero persona legata al clan dei 'muzzoni'.
A.D.R. I gestori del consorzio ECO4 si servivano di società private per effettuare i trasporti dei rifiuti e si trattava di società sempre riferibili agli stessi gestori del consorzio: SOCOM, Flora ambiente, BORTONE Domenico. Proprio io chiesi a Sergio e Michele Orsi di far lavorare Bortone, ma dopo un po' di tempo fui avvicinato da tale 'zì Luigi', che operava per conto di 'Cicciariello', il quale mi disse che Bortone lì non doveva lavorare. ***Chiesi spiegazioni al geometra Bernardo Cirillo, affiliato al clan Bidognetti e lui mi disse che lì dovevano lavorare gli Schiavone. Era infatti il periodo che Sergio e Michele Orsi si erano allontanati da Bidognetti e si erano avvicinati a 'Cicciariello' ovvero Schiavone.*** *Poiché Bortone era stato segnalato da me in qualità di referente imprenditoriale del clan 'Bidognetti', essendo a quel tempo diminuita la forza di Bidognetti rispetto a quella di Schiavone, il Bortone non doveva lavorare più".*
A.D.R. I siti da utilizzare per l'ampliamento della discarica vennero scelti pertanto direttamente da Schiavone Francesco detto 'Cicciariello', spesso su indicazione di Michele e Sergio Orsi. La stessa procedura è stata utilizzata per l'allocazione dei siti dei depositi delle ecoballe. In poche parole tutto il sistema della gestione dei rifiuti – sia degli rr.ss.uu. che dei rifiuti speciali – nelle diverse fasi della gestione stessa (trasporto, smaltimento, raccolta) era completamente gestito e controllato dalla criminalità organizzata e ciò sia nel periodo in cui la gestione fu affidata ai privati, sia nel periodo in cui la gestione è passata al pubblico (ecoballe ecc.).

L'intervento dell'indagato Cosentino, del collega Mario Landolfi e del sindaco di Santa Maria La Fossa Abbate, converge con quello dei fratelli Orsi, allorquando i due parlamentari s'impegnano in una 'forte pressione' affinché in quel territorio fosse realizzato un termovalorizzatore dopo il fallimento del progetto iniziale di allocare in quell'area una discarica. Vassallo non esita ad accomunare le 'pressioni' dei due parlamentari a quelle della criminalità organizzata sul presupposto che la ECO4 fosse un'impresa mafiosa *("diretta espressione della criminalità organizzata")* che, nata da un accordo con il clan Bidognetti, si era poi legata agli Schiavone conservando con costoro un legame che durerà fino all'arresto dei fratelli Orsi. Una testimonianza diretta di questa compenetrazione Vassallo la trarrà da un colloquio avuto con Bernardo Cirillo, cugino di Bidognetti, nell'anno 2004.

"Con riferimento all'individuazione dei terreni da parte della criminalità organizzata, ricordo anche che vi fu una forte pressione da parte di Michele e Sergio Orsi, insieme all'onorevole Cosentino e all'onorevole Landolfi (al tempo in cui Landolfi era alla commissione vigilanza RAI) e al sindaco di Santa Maria La Fossa, affinché si costruisse il termovalorizzatore dopo che era fallito il progetto di realizzare una discarica nello stesso posto. Era il periodo subito prima che fosse nominato Catenacci Commissario Straordinario per l'Emergenza Rifiuti in Campania. <u>Per quanto ho detto prima, le pressioni fatte dalle persone suindicate erano comunque pressioni riferibili alla criminalità organizzata in quanto la Eco 4</u>

era diretta espressione della criminalità organizzata. Parimenti ho già spiegato che inizialmente la Eco4 era riferibile a Bidognetti e, via via, è passata sotto il controllo di Schiavone; e ciò fino all'arresto di entrambi i fratelli Orsi. Di ciò sono certo in quanto nell'estate del 2004 mi incontrai con il figlio di Cicciariello e con il geometra Bernardo Cirillo in Baia Domitia e, nell'occasione, chiesi come mai lui fosse lì. Il CIRILLO mi spiegò che erano stati sequestrati alcuni grossi trattori ed essi si dovevano occupare di farli sparire (a rilettura: i trattori dovevano essere nascosti presso un'azienda del figlio di Cicciariello); gli chiesi della ECO4 e lui mi specificò che "non c'era da preoccuparsi" in quanto i soldi li prendevano anche loro e che poi, quando i cugini sarebbero usciti, se la sarebbero vista loro"

Nell'**interrogatorio reso il 18 giugno 2008** Vassallo si sofferma sui rapporti intrattenuti dai fratelli Orsi con l'onorevole Cosentino, riprendendo l'episodio della consegna del denaro contante in busta gialla (questa volta Vassallo riduce la cifra a 50milioni di lire, per l'equivalente in euro). In quella stessa occasione Cosentino pronuncerà in presenza di Vassallo delle frasi che assumono rilievo cruciale nella presente trattazione:
"Cosentino si espresse, con riferimento proprio alla ECO4, dicendo che quella società era "una sua creatura", dicendo testualmente – sempre riferito alla ECO4 – che quella società "song' io".
Cosentino insomma considera la ECO4 una "sua creatura", anzi s'immedesima nella società mista. Questo elemento (il dominio clientelare e strategico della società mista), confortato da granitici riscontri, costituisce un tassello essenziale della ricostruzione, data la natura camorristica che la ECO4 manifesta sin dal suo sorgere e continua a palesare nelle fasi cruciali della sua irresistibile ascesa.
E' importante notare come in quell'incontro Sergio Orsi – secondo il racconto di Vassallo - non avrebbe mancato di comunicare a Cosentino le sue ambizioni e a perorare presso di lui un aiuto perché potessero tradursi in realtà. L'obiettivo immediato palesato da Orsi era quello di monopolizzare il settore della raccolta degli R.S.U. in tutti i comuni del bacino consortile CE4, per poi estendersi agli altri consorzi della provincia casertana. Detta strategia e le garanzie di praticabilità offerte dagli Orsi, costituivano anche la ragione per la quale i 'cicciottiani' avevano sposato il loro progetto: un matrimonio d'interesse nel quale i camorristi porteranno in dote il *know how* e le referenze del colletto bianco Gaetano Vassallo, ma anche il supporto 'militare' diretto a neutralizzare i concorrenti e ad assicurare gli affidamenti comunali.

"***Per quanto concerne i rapporti tra Sergio, Michele Orsi e i politici, rappresento che ebbi conoscenza diretta delle loro relazioni con Nicola Cosentino. In particolare, in un'occasione databile nel periodo 2002 – 2003, mi incontrai con Sergio Orsi a casa di Nicola Cosentino, in Casal di Principe, abitazione situata sulla strada che collega Casal di Principe a Villa Literno. Quel giorno ci demmo appuntamento a casa del parlamentare e lì presenziai alla consegna di una ingente somma di denaro da parte di Sergio al Cosentino, somma pari a circa 50 milioni di lire, per l'equivalente in euro (a rilettura: fu Sergio a dirmi il valore della somma consegnata al parlamentare, al momento del nostro allontanamento). Si trattava di una somma raccolta in una busta ma comunque ben visibile, poiché raccolta in una busta gialla che avvolgeva la somma di denaro. Io mi ero recato da Cosentino per chiedergli se potesse raccomandare mio fratello Renato il quale aveva subito una menomazione a un arto che gli impediva di svolgere le sue regolari funzioni presso il consorzio CE2, in modo che potesse essere spostato di mansione e non licenziato. Chiesi quindi a Cosentino – che ben conoscevo – che si rivolgesse all'ingegner Madonna affinché***

modificasse le mansioni di mio fratello, cosa che poi fece. Mio fratello fu spostato al controllo della pompa di gasolio posta presso l'impianto di deposito sito in prossimità del nuovo carcere di Santa Maria Capua Vetere. Ricordo che in quell'occasione Cosentino si espresse, con riferimento proprio alla ECO4, dicendo che quella società era "una sua creatura", dicendo testualmente – sempre riferito alla ECO4 – che quella società "song' io". Il progetto di Sergio Orsi, ribadito anche in quella occasione, era volto ad "appropriarsi" di tutti i consorzi dell'area casertana aggiungendo al Consorzio CE4 che già sostanzialmente dipendeva da lui, i consorzi CE1, CE2, CE3.

Cosentino, all'epoca coordinatore provinciale di Forza Italia, controllava tutti i consorzi e Sergio si rivolse a lui per perorare il suo interesse a espandersi.

Nell'occasione Cosentino, affermando e confermando come detto la sua appartenenza alla ECO4, gli disse che sarebbe stato fatto tutto a suo tempo e che Sergio doveva attendere affinché potesse operare gradualmente.

A rilettura: per la precisione, era in particolare su CE2 e CE3 che si concentrava l'interesse degli Orsi, trattandosi di consorzi riferibili all'area politica vicina a Forza Italia.

Faccio presente che questi discorsi erano peraltro a me noti, essendomi stati rappresentati spesso in precedenza, in particolare dallo stesso Sergio Orsi. Sergio mi ribadiva spesso che non vi erano problemi nella gestione dei rapporti con i Comuni, in quanto vi era la copertura offerta da Nicola Cosentino.

Si trattava di discorsi prevalentemente – o quasi esclusivamente – intercorsi con Sergio Orsi, in quanto Michele era decisamente più riservato del fratello.

Io ho sempre preso "con le molle" quello che mi diceva Sergio perché tendeva a ingigantire quelle che erano le sue possibilità, ma nelle occasioni che ho descritto il coinvolgimento di Cosentino del consorzio e nell'Eco4 fu esplicitamente confermato dallo stesso interessato.

Sia Cosentino che Sergio Orsi non badarono alla mia presenza in occasione della dazione di denaro, in considerazione del fatto che quest'ultimo ben sapeva del mio coinvolgimento nella ECO4 e del mio legame con BIDOGNETTI Francesco; faccio presente che la consegna del denaro fu rapida e fugace; nessuno indugiò nel sottolineare questo momento.

Faccio presente che io ho incontrato in varie occasioni Nicola Cosentino che conosco da oltre 15 anni.

Cosentino quindi ben conosceva il mio coinvolgimento in quella società e ciò fu esplicitamente rimarcato anche nell'incontro che si tenne a casa sua con Sergio Orsi.

Nella memoria difensiva del 12.11.2008 l'indagato segnala l'incongruenza dell'attribuzione di un controllo politico esercitabile dal Cosentino sui consorzi CE2 e CE3 che, negli anni 2002 - 2003, sarebbero stati riconducibili all'area politica dei DS. Ricorrono però in atti elementi indicativi di una 'trasversalità' dei rapporti politici allacciati da Cosentino in relazione alla 'questione dei rifiuti'.

Il primo è costituito da un'intercettazione (n. 3261 del 5.3.04, decreto n. 2501/03 relativo a un'utenza in uso a Sergio Orsi) nella quale Sergio Orsi, dialogando con Carlo Savoia (presidente di nomina cosentiniana della società mista ECO4) propone di cedere proprio al consorzio CE2 due dipendenti (PICONE e OLIVIERO) piuttosto inefficienti ed evoca il Cosentino come persona da consultare per realizzare la 'cessione'.

Valente Giuseppe, nell'interrogatorio reso al P.M. in data 23.2.2009, fa un'osservazione che troverà puntuale conferma nella ricostruzione della vicenda IMPREGECO (un superconsorzio che sarà costituito tra il consorzio CE4 controllato dai politici del centrodestra casertano; e i consorzi NA1 e NA3 riferibili invece al centrosinistra). Dice Valente di Landolfi e Cosentino (che aderirono all'operazione): "*Nessuno dei due si interessò al fatto che il nuovo ente era di natura politica trasversale, trattandosi peraltro di fatto indifferente, nella norma, per i*

politici".

Nello stesso **interrogatorio del 18.6.2008** Vassallo ripercorre e precisa lo svolgimento del suo primo incontro con l'indagato Cosentino, attribuendo la presentazione del politico, all'epoca candidato alle elezioni provinciali, al geometra Bernardo Cirillo e situando quell'incontro in un'epoca anteriore all'anno 1992, nella quale Francesco Bidognetti era libero:

"Ho conosciuto il Cosentino perché me lo aveva presentato il geometra CIRILLO Bernardo, in periodo in cui BIDOGNETTI Francesco era ancora libero; quindi certamente prima del 1992. Bernardo Cirillo disse che il 'parente', ossia BIDOGNETTI Francesco aveva chiesto di aiutare Cosentino per le elezioni che all'epoca si stavano per svolgere; mi disse di raccogliere tutte le maestranze che lavoravano per me presso il Comune di San Cipriano d'Aversa, organizzare un buffet e indurre i miei uomini a fare del volantinaggio e a promettere il loro voto e quello dei loro familiari al Cosentino, cosa che feci.
Io convinsi il personale a fare quanto richiesto, promettendo loro che l'amicizia con il politico, qualora eletto, avrebbe consentito di ampliare l'impegno anche su altri comuni e quindi consentire assunzioni di ulteriore personale da reperire presso i loro parenti. Non ricordo se venne poi eletto.
Ebbi personalmente a recarmi da Nicola Cosentino e accompagnai quest'ultimo insieme al fratello più piccolo e a CIRILLO Bernardo presso il cantiere di San Cipriano d'Aversa.
Qui si tenne l'incontro con le maestranze, si trattava di 15-20 persone.
A memoria posso dire che questa riunione dovrebbe essersi tenuta prima della creazione della Ecologia 89 di Gaetano Cerci. Era ovviamente risaputo chi fosse all'epoca BIDOGNETTI Francesco e la presenza del nipote CIRILLO Bernardo si spiegava da sé".

Nell'**interrogatorio del 1° luglio 2008** VASSALLO Gaetano intrattiene gli inquirenti sul tema dei rapporti del gruppo BIDOGNETTI con esponenti politici di rilievo nazionale, come poté apprenderli dalla viva voce di BIDOGNETTI Raffaele, all'epoca reggente del gruppo camorristico, in una riunione avvenuta nel 2007, poco prima dell'arresto dello stesso BIDOGNETTI:

"*Mi sono ricordato di una riunione tenuta nel 2007 presso il domicilio di un parente di Raffaele Bidognetti, e più in particolare presso l'abitazione ove Raffaele Bidognetti è stato arrestato in occasione della sua ultima latitanza.*
In questa abitazione mi sono recato più volte proprio per incontrarmi con Raffaele. Si tratta di una casa sita nei pressi della piazza Padre Pio di Casal di Principe, di piccole dimensioni, dove peraltro avevo già accompagnato i Carabinieri di Caserta per indicargli il luogo dove si nascondeva Raffaele Bidognetti.
Nel corso di questa riunione, che peraltro avvenne nello stesso giorno, poche ore prima, dell'arresto di Bidognetti Raffaele, io parlai della circostanza che mio fratello Salvatore voleva cedere le quote del Park Hotel di sua spettanza a Ventre, di cui non ricordo il nome, e a Nicola Gargiulo 'o capitone, entrambi di Lusciano.
(omissis)
Tornando alla riunione in cui venne arrestato Bidognetti Raffaele, ricordo che si fecero i nomi anche di alcuni politici nazionali. In particolare, Bidognetti Raffaele alla mia presenza e alla presenza di DI TELLA Antonio, riferì che gli onorevoli Italo Bocchino, Nicola Cosentino, Gennaro Coronella e Landolfi facevano parte del

"nostro tessuto camorristico".
Devo dire che non era la prima volta che, con riferimento a queste personalità politiche, sentivo parlare in tal senso e cioè come politici che potevano favorire gli interessi del clan camorristico e che per questo stavano a nostra disposizione.
Ricordo che Landolfi, in occasione della penultima campagna elettorale, aveva chiesto l'assunzione presso l'ECO4 di diverse persone da lui indicate tramite Peppe Valente e Sergio Orsi che poi lo avrebbero dovuto votare.
In cambio Landolfi era a disposizione del clan al fine di consentire l'aggiudicazione di appalti intervenendo su politici locali, ovvero per i trasferimenti di affiliati detenuti.
(…) A proposito del trasferimento di detenuti, ricordo che una figlia di Sergio Orsi a nome Flora è amica della sorella di "Carusiello", di cui non ricordo il nome, e spesso l'accompagnava a fare i colloqui con "Carusiello". Sergio Orsi mi ha raccontato di aver mandato dei soldi a "Carusiello" in carcere, ammontanti a circa cento milioni di lire. Ciò avveniva alla fine degli anni '90. Inoltre il "Carusiello" aveva chiesto di intervenire su qualche politico locale per avere un trasferimento dal carcere. Sergio Orsi parlò con Nicola Cosentino per il trasferimento di Cantiello Salvatore, alias Carusiello in un altro carcere e il Cosentino si mise a disposizione per la richiesta di Orsi. Non so se il trasferimento si è avverato".

Nella memoria depositata presso l'ufficio di Procura il 12.11.2008 l'indagato segnala l'implausibilità della raccomandazione di Cantiello Salvatore per un trasferimento carcerario, rimarcando come il Dipartimento dell'Amministrazione Penitenziaria sia costituito in gran parte da magistrati.
Deve osservarsi che questo passaggio delle dichiarazioni di Vassallo non risulta riscontrato, né smentito da risultanze obiettive.
Pertanto ad esso non si attribuirà rilievo nella presente decisione. Tanto più che si tratterebbe di un favore personale promesso da Cosentino a Sergio Orsi, i cui esiti sono sconosciuti allo stesso collaboratore.
L'unica utilità che tale episodio (ove adeguatamente provato) potrebbe rivestire sarebbe quella di delineare l'esistenza di rapporti tra Cosentino e Sergio Orsi, rapporti che però possono peraltro ritenersi pacifici in base ad una serie di - ben più tranquillizzanti - evidenze.
Qualora poi si volesse inferire dalla 'teorica implausibilità' dell'assunto, un profilo di inattendibilità di tutta la narrazione di Vassallo, dovrebbe osservarsi che il dichiarante riferisce l'episodio per averlo appreso da Sergio Orsi e non per scienza diretta. Potrebbe dunque trattarsi di una millanteria del 'socio', incapace di inficiare di per sé la genuinità di Vassallo che si limita a riportarla, avendo cura di precisarne la fonte. Sono del resto acclarati, in base alle dichiarazioni convergenti di Luigi e Alfonso Diana, i rapporti tra Sergio Orsi e Salvatore Cantiello (vedi nel capitolo 3).

L'**interrogatorio del 28 agosto 2008** si apre con una manifestazione di intenti. Gaetano Vassallo intende storicizzare e puntualizzare i rapporti intrattenuti con Nicola Cosentino e quelli che gli risultano allacciati dal medesimo con esponenti di gruppi diversi della criminalità organizzata casalese.

"*Intendo ricostruire precisamente tutte le vicende concernenti i miei incontri con l'onorevole Cosentino Nicola e i suoi rapporti con i diversi gruppi della criminalità organizzata. Ciò fin dall'origine dei nostri rapporti e fino alle elezioni politiche del 2006.*

Il punto di partenza è segnato da una candidatura del nostro indagato alle elezioni provinciali casertane, per un partito che Vassallo non è in grado di rammentare, elezioni tenutesi molti anni addietro ('circa agli anni 80' dice il collaboratore).
La conoscenza dell'indagato è propiziata, ribadisce Vassallo, da Cirillo Bernardo,

espressamente delegato da Francesco Bidognetti attraverso un'imbasciata mandata dal carcere.
I canali attraverso i quali l'autorevole detenuto poté incaricare Cirillo e il significato di quel patrocinio sono chiariti dal collaboratore:
"Il fatto che si trattasse di un nostro candidato significava che si trattava di un candidato del clan Bidognetti: il messaggio era arrivato attraverso un'imbasciata ovvero attraverso canali illegali (avvocati o familiari) in quanto il Bidognetti era a quel tempo detenuto e, ciononostante, continuava a gestire gli affari del clan".
Questa ricostruzione rappresenta l'ultimo approdo di un lavorio mnemonico del quale è dà atto lo stesso dichiarante: "***In questo senso preciso le dichiarazioni precedentemente rese –*** dice Vassallo - ***in quanto, facendo mente locale, ho ricostruito in maniera più precisa e dettagliata diversi passaggi".***

Il collaboratore descrive i contenuti della riunione elettorale con le maestranze, ma anche l'offerta di disponibilità formulata dall'indagato Cosentino. Ribadisce poi il ruolo giocato Cirillo, cugino di Cicciotto e pacificamente affiliato al clan già all'epoca, nell'organizzazione di quella riunione.

"La mia conoscenza con l'attuale onorevole di Forza Italia Nicola Cosentino risale a molti anni addietro, circa agli anni '80, quando lo stesso era appena uscito dall'allora P.S.D.I. e si era candidato alla provincia, non ricordo per quale partito.
Ricordo che in quell'occasione fui contattato da Bernardo Cirillo il quale mi disse che dovevamo organizzare un incontro per il Cosentino che era uno dei 'nostri' candidati di riferimento. In particolare Cirillo specificò che era stato proprio lo 'zio' a far arrivare questo messaggio mediante un'ambasciata. In questo senso preciso le dichiarazioni precedentemente rese, in quanto, facendo mente locale, ho ricostruito in maniera più precisa e dettagliata diversi passaggi.
Il significato della richiesta del Cirillo era molto chiaro. Infatti lo 'zio' altri non era che BIDOGNETTI Francesco alias Cicciotto 'e mezzanotte, denominato, come ho specificato in altri verbali, 'zio barbone'. Il fatto che si trattasse di un nostro candidato significava che si trattava di un candidato del clan Bidognetti: il messaggio era arrivato attraverso un'imbasciata ovvero attraverso canali illegali (avvocati o familiari) in quanto il Bidognetti era a quel tempo detenuto e, ciononostante, continuava a gestire gli affari del clan.
Alla richiesta del Cirillo, organizzai una riunione presso il mio deposito – riunione di cui ho riferito in altri verbali – e avvisai di ciò il Cirillo. Il giorno stabilito pertanto io e il Cirillo ci recammo presso l'abitazione del Cosentino, mi sembra trattavasi della casa paterna, in Casal di Principe 'in miez 'a villa' e prelevammo Nicola Cosentino e il suo fratello minore. Ricordo che il fratello minore del Cosentino era molto amico di Bernardo Cirillo, mi pare per questioni di scuola.
(…) Come ho già rappresentato in altri verbali, la riunione ebbe luogo presso il mio deposito. Presente il candidato, io rassicurai i presenti che lo stesso ci avrebbe in futuro ricompensato del nostro appoggio in quanto "se fosse cresciuto lui, saremmo cresciuti anche noi". A titolo esemplificativo, tra l'altro, io avrei avuto altri appalti dai comuni limitrofi della provincia e avrei pertanto potuto assumere i figli dei miei dipendenti che avessero avuto bisogno di lavoro. Come ho già specificato altrove, dopo un breve discorso, il Cosentino mi lasciò del materiale elettorale.
A.D.R. alla fine dell'incontro il Cosentino mi prese da parte e, alla presenza solamente di Bernardo Cirillo e del fratello minore del Cosentino stesso, mi disse "per qualsiasi cosa di cui avete bisogno fate riferimento al geometra Bernardo, che lui sa rintracciarmi".

A.D.R. Alla riunione avevano partecipato anche i miei fratelli Amedeo e Renato.

Non è convincente il rilievo svolto dall'indagato nella memoria datata 12.11.2008 circa l'implausibilità del ruolo giocato da Bernardo Cirillo nella presentazione del candidato Cosentino all'imprenditore Vassallo. Non è vero infatti che Vassallo colloca quel comportamento del Cirillo nell'anno 1980 (nel quale il 'geometra' cugino del famigerato Bidognetti Francesco aveva 14 anni di età). In realtà Vassallo, esercitando palesemente lo sforzo di ritornare con la memoria a un passato lontano, situa quell'incontro più genericamente "negli anni '80". Egli usa un'espressione che denuncia il carattere approssimativo della collocazione temporale di quell'evento: ***"La mia conoscenza con l'attuale onorevole di Forza Italia Nicola Cosentino risale a molti anni addietro, circa agli anni '80".***
Detta espressione non può non essere coordinata con quanto Vassallo afferma nel verbale del 5 giugno 2008, in cui ricostruisce il suo rapporto con Bernardo Cirillo situandolo sul finire degli anni '80: "*Faccio presente che CIRILLO Bernardo, da me già indicato nel corso di altri interrogatori come il geometra CIRILLO, fu da me conosciuto a partire dal periodo relativo all'ECOLOGIA 89 di CERCI Gaetano, la società di cui ho già parlato a proposito del traffico di rifiuti provenienti dal nord Italia;* ***lo conobbi verso la fine degli anni '80".***
Può dunque affermarsi che lo stesso collaboratore colloca in realtà l'incontro in epoca non anteriore alla fine degli anni '80, quando il cugino di Bidognetti (nato il 6 ottobre 1966) aveva ventitre o ventiquattro anni.
E' probabile l'imprecisione della rievocazione di Vassallo, laddove egli situa sul finire degli anni '80 una consultazione elettorale (quella relativa alle provinciali casertane) che ebbe in realtà luogo nel 1990. Trattasi però di modesta discrasia assolutamente compatibile con la realistica 'traccia mnesica' di un individuo normale il quale peraltro ebbe (stando a quanto afferma non solo il dichiarante qui scrutinato, ma anche il collaboratore BIDOGNETTI Domenico) con Francesco Bidognetti e i suoi affiliati una consuetudine quotidiana, contrassegnata da una pluralità di eventi; e che, soprattutto, non poteva prevedere all'epoca di doverli memorizzare per riferirne all'A.G.
Si vedrà poi in apposito capitolo quanto il profilo criminale di Bernardo Cirillo sia compatibile sul piano cronologico e della tipologia di ruolo con la vicenda della presentazione del candidato Cosentino.

Il sostegno dell'imprenditore camorrista accompagna altri momenti della carriera politica dell'indagato. Ricostruita una cena elettorale tenutasi in favore di Cosentino e di altri candidati aversani, con esborsi di Vassallo per il pagamento dei manifesti elettorali e della relativa affissione, Vassallo ripercorre un incontro con Bernardo Cirillo, successivo alla cena appena menzionata, nel quale costui lo invitava a "mettersi a disposizione degli Orsi" perché questi potessero operare nel settore dei rifiuti:

"Ebbi modo di sostenere politicamente il Cosentino anche nelle campagne elettorali del '93-'94. Ricordo che l'avv. Castelluzzo venne a trovarmi presso la mia abitazione in quanto ero detenuto agli arresti domiciliari e mi propose di organizzare una riunione per sostenere l'elezione politica di Mario Gatti e dell'onorevole Giuliani. L'avv. Castelluzzo era in compagnia di mio fratello Antonio. Io gli feci presente che ero agli arresti domiciliari e chiesi se anche gli altri ne fossero a conoscenza ed egli mi rassicurò in tal senso. L'avv. Castelluzzo mi specificò che ero io tra i fratelli il più idoneo ad organizzare l'incontro in quanto dotato di più forte personalità e di maggiori contatti. Fu così che l'incontro venne organizzato a casa di mio padre, attuale abitazione di mio fratello Salvatore e vi parteciparono 200/300 persone. Nell'occasione l'avv. Castelluzzo fece riferimento alla mia pregressa conoscenza con Cosentino che all'epoca era coordinatore provinciale di Forza Italia, o almeno così mi sembra. All'incontro seguì un buffet da me ordinato al bar Pink House, cui mi ero rivolto per avere un servizio di qualità e fu da me pagato. E' per questo che dico che detti sostegno alla compagine politica cui apparteneva lo stesso Cosentino.

Ebbi poi un ulteriore incontro con Cosentino.
Infatti Pino Salpa, segretario cittadino di Forza Italia, come riferito in altri verbali, mi disse che Nicola Cosentino gli aveva chiesto di organizzare una manifestazione dello stesso tipo di quella che avevo organizzato a casa di mio padre per Giuliani e Gatti.
Egli mi specificò che avevamo fatto 'bella figura'. Visto il numero delle persone che vi avevano partecipato e che adesso, anche in relazione al fatto che ero libero, dovevamo organizzare una cosa più in grande e più bella per sostenere i candidati Santulli e Cosentino alla Camera dei deputati e Giuliani al Senato.
Mi sembra, se non erro, che per l'occasione organizzammo la cena al ristorante 'zì Nicola', di cui ho parlato nei precedenti verbali.
Questa cena elettorale è stata pagata da me; provvidi pure a far stampare a mie spese manifesti elettorali e a pagare gli 'attacchini' (omissis).
Continuando nella narrazione dei miei rapporti con il Cosentino, ricordo che, successivamente a quella cena elettorale, fui chiamato da Bernardo Cirillo che mi disse che dovevo 'mettermi a disposizione' con i fratelli Orsi nel settore dei rifiuti".

Nella memoria del 12.11.2008 Nicola Cosentino evidenzia, quale profilo ulteriore della ritenuta inattendibilità del propalante, la collocazione negli anni 1993 – 1994 di una manifestazione di sostegno elettorale in suo favore. L'indagato segnala che in realtà negli anni 1993 e 1994 egli non partecipò alle elezioni politiche e che, per giunta, essendosi aggregato dopo lo scioglimento del Partito Socialdemocratico Italiano alla formazione di Alleanza Democratica (orbitante nell'area di centrosinistra), egli non poteva essere sostenuto da Vassallo nei termini di schieramento indicati dal collaboratore; né poteva rivestire l'incarico di coordinatore di Forza Italia.
In realtà la cena elettorale che Vassallo asserisce di aver organizzato e pagato negli anni 1993/1994 non riguardò il Cosentino ma altri candidati. Fu l'avv. Castelluzzo – secondo il collaboratore di giustizia – a spendere la referenza del rapporto tra Vassallo e Cosentino per ottenere dal primo la promozione dell'iniziativa.
Si riferisce invece al Cosentino la seconda iniziativa di sostegno elettorale narrata dal collaboratore: quella che sarebbe stata richiesta a Vassallo dal segretario cittadino cesano di F.I. Iniziativa che Vassallo chiaramente colloca in epoca successiva indicando anche i candidati di centrodestra che, con il Cosentino, furono effettivamente coinvolti in quella competizione politica.
Detto riferimento induce a ritenere plausibile una collocazione dell'iniziativa di sostegno dell'indagato Cosentino nell'anno 1996 (in cui Cosentino pacificamente concorse con successo alle elezioni politiche nelle file di Forza Italia, per poi effettivamente assumere, nel 1997 e nel 2005, incarichi interni di coordinamento territoriale).
Deve comunque affermarsi l'irrilevanza delle due cene di sostegno del candidato Cosentino nell'economia di questa trattazione. La prima infatti non riguarda l'indagato personalmente e viene ascritta al medesimo sulla base non già di una richiesta che Vassallo affermi di aver da lui ricevuto, bensì di una referenza spesa da terzi. La seconda (quella che abbiamo collocato nell'ambito della campagna elettorale per le politiche del 1996) è collegata alla richiesta che lo stesso Vassallo asserisce di aver ricevuto da un segretario politico di F.I. e non già da un camorrista.
Il valore assegnabile a questa parte delle dichiarazioni del collaboratore Vassallo è dunque soltanto quello di 'tassello' della ricostruzione di un risalente e consolidato rapporto di conoscenza e supporto politico.

A questo punto Vassallo, ripercorsi gli aspetti salienti della collaborazione prestata agli Orsi, situa un altro incontro personale con Cosentino nell'epoca in cui – mutato l'asse territoriale strategico dell'interesse degli Orsi – egli viene costretto dai "cicciottiani" ad abbandonare il suo impegno nella ECO4.

A Cosentino egli si rivolge per poter rientrare, attraverso la *finestra politica,* nel lucroso affare dal quale gli era stato imposto di uscire dalla *porta camorrista*.
Vassallo puntualizza che la cessazione della partnership tra Bidognetti e la ECO4 coincide con una fase nella quale la priorità strategica è rappresentata dalla realizzazione di un termovalorizzatore, da realizzarsi in ambito consortile quale struttura 'differente' da quella affidata contrattualmente a livello regionale al gruppo FISIA Italimpianti – FIBE s.p.a.

"Successivamente, come ho riferito in altri verbali, sono uscito dalla società mista per aderire alla volontà del clan Bidognetti. (…) Ovviamente ero rimasto male per questa mia uscita forzosa dalla compagine societaria e intendevo 'riciclarmi' in qualche maniera.
La mia uscita dalla società mista ECO4 fu determinata da un mutamento degli equilibri. Siamo ormai nel periodo in cui si discute anche la tematica della individuazione dei terreni ove realizzare il termovalorizzatore.
Si trattava di un termovalorizzatore differente rispetto a quello della FISIA – FIBE, in quanto avrebbe dovuto essere un termovalorizzatore realizzato con finanziamenti dello stesso consorzio CE4. Era stato all'uopo individuata un'area del comune di Santa Maria La Fossa.
E' per questo che nascono i problemi in quanto, in quel territorio, il gruppo Bidognetti non ha nessun referente, essendo la zona di Santa Maria La Fossa sotto il dominio incontrastato di Francesco Schiavone detto Cicciariello, del gruppo degli Schiavone".

Al mutamento dell'area territoriale d'interesse e al conseguente mutamento del 'clan' di riferimento degli Orsi fa seguito dunque, secondo il racconto di Vassallo, un cambiamento dei referenti criminali di Cosentino, considerato da Vassallo come partner a tutti gli effetti dell'impresa mafiosa dominata dagli Orsi:

"Ne deriva che Cosentino, con gli Orsi, per realizzare il progetto economico della costruzione del termovalorizzatore in Santa Maria La Fossa, lasciano il gruppo Bidognetti e 'passano' con gli Schiavone.
Tale passaggio è stato ovviamente incruento, in quanto rispondente esclusivamente a dinamiche di controllo territoriale già preesistenti all'interno del clan dei casalesi. In altre parole, il gruppo imprenditoriale, al fine di garantire il buon esito al suo progetto, ha seguito la geografia criminale del clan dei Casalesi.
Da Sergio Orsi ho avuto una conferma di questa ricostruzione. Infatti egli mi ha spiegato che il sindaco di Santa Maria La Fossa ABBATE, mentre per un verso, in maniera palese, con la popolazione contrastava il progetto di costruzione del termovalorizzatore sul territorio di Santa Maria La Fossa; per altro verso aderiva, o comunque soggiaceva, alle necessità imposte dal clan Schiavone e sosteneva il progetto di fattibilità del termovalorizzatore".

Nella memoria difensiva già citata l'indagato contesta con toni decisi l'assunto del collaboratore di giustizia Vassallo che lo vede fautore della realizzazione di un termovalorizzatore in Santa Maria La Fossa e allega: 6 interpellanze e interrogazioni parlamentari (in data 2.3.04, 29.4.03, 17.9.03, 30.9.02, 26.6.03, 8.10.01), nonché vari articoli di stampa (pubblicati tra il 2004 e il 2007) nei quali egli manifesta decisa contrarietà per l'ipotesi di localizzazione del termovalorizzatore e di siti di stoccaggio inseriti nel C.I.R. regionale (quello governato dall'asse Commissariato di Governo – ATI FISIA ITALIMPIANTI) nel territorio di Santa Maria La Fossa e in altri comuni del bacino consortile. Negli atti parlamentari allegati e nelle dichiarazioni rese alla stampa si palesa una linea di contrarietà per

la gestione accentrata in sede regionale del ciclo dei rifiuti; unita all'auspicio di una rapida cessazione della (fallimentare) gestione commissariale, di un'immediata restituzione ai Comuni delle loro competenze, dell'instaurazione di un regime di 'provincializzazione' del ciclo dei rifiuti.
A ben vedere la contestazione dell'onorevole Cosentino si traduce nella conferma di una strategia di boicottaggio del C.I.R. regionale che è puntualmente riscontrata dall'indagato **VALENTE Giuseppe, 'uomo di Cosentino' nel Consorzio CE4, nell'interrogatorio reso al P.M. il 23.2.2009** (allegato alla missiva trasmessa a questo Ufficio in data 27.2.2009).
E' proprio Valente ad evidenziare come detta strategia prevedesse la creazione di un ciclo integrato alternativo e concorrenziale, destinato anzi a soppiantare quello gestito dalla FIBE; ciclo del quale avrebbe fatto effettivamente parte, come momento terminale, la realizzazione e gestione consortile di un termovalorizzatore. Ed è ancora Valente a coinvolgere in questo progetto di lungo termine l'indagato Cosentino:
"ADR: ***attraverso IMPREGECO si intendeva garantire tutto il ciclo dei rifiuti, a livello regionale, e si intendeva anche garantire la fase terminale, quella della termovalorizzazione, anche se si pensava ad un sistema diverso rispetto a quello praticato da FIBE, quale ad es. l'elettropirolisi. Faccio presente che oltre all'IMPREGECO – che offriva una soluzione alternativa a FIBE a livello regionale - il progetto politico di COSENTINO e VENTRE era anche quello di "provincializzare" i rifiuti, ossia di creare un'autonomia gestionale completa a livello provinciale, coinvolgendo tutti e quattro i Consorzi di Bacino, creando dei Consorzi specializzati in determinate attività della filiera. Vi erano poi anche gli impianti propri del bacino del Consorzio CE4, disponendo il Consorzio direttamente non solo di una discarica ma anche di un impianto di stabilizzazione e anche di vagliatura. L'impianto di stabilizzazione fu formalmente imposto da FACCHI con delle ordinanze, nelle quali questi imponeva al Consorzio di acquistare dalla ICOM di Milano – una società di impianti – queste strutture.***
La stabilizzazione dei rifiuti, anche provenienti dai Comuni del bacino CE4, fu attuata in questi impianti. FACCHI ci disse che per poter disporre e realizzare un impianto di stabilizzazione era necessario rivolgersi alla ICOM, l'unica società che disponeva di un brevetto – a suo dire – adeguato.
Era quello l'unico modo per farci autorizzare alla realizzazione di un impianto di stabilizzazione.
ADR: (...) il rifiuto "secco" sarebbe stato destinato alla discarica sita a Lo Uttaro-Torrione, non ancora attiva a quella data e mai entrata in esercizio (che io sappia non sono stati neppure acquistati i suoli). Il rifiuto "umido" era già stabilizzato negli impianti di Santa Maria La Fossa, quelli ubicati in Parco Saurino, vicino alla discarica. ***A quel punto sarebbe stato possibile gestire anche un termovalorizzatore – come espongo nella conversazione – per essere del tutto autonomi. Come si può vedere in questa conversazione, che ne è prova, io comunicavo tutto a COSENTINO e ne ricevevo la sua precisa disposizione.***
(…) Nicola COSENTINO (…) voleva che "tutto quel che si faceva doveva passare attraverso di lui". Non era pensabile che la FIBE potesse realizzare un termovalorizzatore in Santa Maria La Fossa, così come chiunque che volesse procedere ad una rilevante attività economica in quella zona, con carattere pubblico.
Nicola COSENTINO insieme a Gennaro CORONELLA incisero sul Sindaco di Santa Maria La Fossa, Bartolo ABBATE, il quale fece delle manifestazioni contro il termovalorizzatore, prendendo posizione diretta a livello comunale, contro FIBE.
Sia COSENTINO, sia CORONELLA, sia Bartolo ABBATE hanno sempre comunemente affermato che il termovalorizzatore non sarebbe mai stato realizzato lì e il ruolo del sindaco dipendeva necessariamente dal CORONELLA e dal COSENTINO, sicché ABBATE era vincolato a seguire la linea a lui imposta.
Faccio presente che COSENTINO Nicola, per quel che mi disse Sergio ORSI per dimostrarmi la solidità del suo legame con il politico, aveva una quota azionaria all'interno della Enterprais, società acquirente di quote della Flora Ambiente *(....)".*
Nell'interrogatorio del 12.9.08 è poi lo stesso Vassallo a precisare che il 'termovalorizzatore' 'voluto' da Cosentino, dagli Orsi e dai Casalesi non è quello programmato dalla FIBE ma un impianto diverso, finalizzato proprio all'emancipazione del bacino CE4 dal CIR regionale: "***il***

tutto collegato alla necessità di realizzare un termovalorizzatore nella zona di Santa Maria La Fossa e così rendere possibile la realizzazione di un ciclo integrato dei rifiuti gestito autonomamente dal Consorzio CE4".

Di questo spostamento, in parallelo, degli Orsi e del politico Cosentino sulle direttrici della "geografia criminale casertana", Vassallo trae la conferma certa da alcune parole pronunciate dallo stesso Cosentino (ormai onorevole) in occasione dell'incontro personale nel quale il collaboratore andava a perorare la causa del proprio rientro nell'affare ECO4. Cosentino, dice Vassallo, rispondeva negativamente argomentando di essersi 'adeguato' ai mutamenti della 'geografia criminale' .

"A.D.R. Ho avuto un'altra conferma della correttezza della ricostruzione proprio dallo stesso Cosentino.
Infatti avevo sostenuto Cosentino anche nelle elezioni del 2001 e durante questo periodo avevo avuto altri incontri con lui.
In queste occasioni egli mi rassicurava sulla possibilità di essere io ricompensato del mio appoggio in diversi modi, tra cui mediante il mio inserimento nella compagine del consorzio CE4.
Anche in questa campagna elettorale ho partecipato a cene elettorali.
Subito dopo le elezioni telefonai personalmente all'onorevole Cosentino sul suo telefono cellulare e gli dissi "onorevole, vi devo chiedere una cortesia!".
Egli pertanto mi fissò un appuntamento presso la sua abitazione di Casal di Principe di lì ad un paio di giorni dopo. Mi recai all'appuntamento da solo verso le 10 del mattino. L'incontro ebbe luogo solo tra noi due.
Sono in grado di descrivere l'abitazione. Ricordo di non essere salito al primo piano della casa, ma di essermi fermato al piano terra. Entrai in una stanza che si trova nel cortile, appena entrati sulla destra, e adibita a ufficio. Si trattava comunque del medesimo stabile dove anni prima ero andato a prenderlo. In quell'occasione chiesi all'onorevole Cosentino di essere inserito nella compagine del Consorzio Pubblico CE4 che a sua volta faceva parte della società mista ECO4. L'onorevole mi disse che, a causa dei miei precedenti penali e poiché erano 'cambiate alcune situazioni', non poteva aiutarmi. Mi specificò di essere perciò dispiaciuto di dirmi di no perché io ero un suo 'buon elettore'. Mi propose pertanto 'per accontentarmi' di divenire concessionario di un distributore di gas. Ciò in quanto il fratello dell'onorevole Cosentino è titolare di un'azienda operante nel settore petrolifero, l'Aversana Petroli che all'epoca stava aprendo diversi distributori di GPL.
Io insistetti nella mia richiesta perché tenevo molto a non rimanere fuori dalla gestione dei rifiuti, anche perché una mia esclusione significava perdita di prestigio sia a livello imprenditoriale che a livello di 'sistema'. Per 'sistema' intendo gruppo criminale camorristico.
L'onorevole Cosentino mi spiegò, vista la mia palese delusione, quali erano le ragioni del suo diniego, e quindi della mia esclusione dal Consorzio. Mi spiegò pertanto che ormai gli interessi economici del clan dei Casalesi si erano focalizzati, per quanto riguarda il tipo di attività in questione, nell'area geografica controllata dagli Schiavone (in particolare Francesco Schiavone detto Cicciariello, unico ad avere potere su tutto il territorio di Santa Maria La Fossa) e che pertanto il gruppo Bidognetti era stato 'fatto fuori' perché non aveva alcun potere su Santa Maria La Fossa. Ne derivava la mia estromissione.
In poche parole l'onorevole Cosentino mi disse che si era adeguato alle scelte fatte 'a monte' dal clan dei casalesi che aveva deciso che il termovalorizzatore si sarebbe dovuto realizzare nel comune di Santa Maria La Fossa e che anche l'affare del Consorzio CE4 / ECO4 era uno degli affari degli SCHIAVONE. Egli pertanto aveva

dovuto seguire tale linea e avvantaggiare solo il gruppo Schiavone nella gestione dell'affare e, di conseguenza, tenere fuori il gruppo Bidognetti, e quindi anche me.
Da quanto detto fino a ora, risulta chiaro che, a questo punto, l'affare Consorzio CE 4/ ECO 4, nato per favorire il clan Bidognetti, era diventato un 'affare' del gruppo Schiavone.
Ne conseguiva la mia estromissione e quella dei miei fratelli Nicola e Antonio da qualsivoglia vantaggio economico. Io non sono entrato nella compagine sociale e i miei fratelli sono stati licenziati dall'ECO4.
In questo senso rettifico e preciso le mie precedenti dichiarazioni in quanto ho avuto tempo di ripensare con calma a questi fatti".

In data **12 settembre 2008** Vassallo Gaetano ritorna sul tema dell'incontro avuto con l'indagato dopo la sua estromissione dalla ECO4 e lo situa più precisamente nel tempo sulla base di una serie di antefatti coerenti e significativi:

"Precisando il contesto temporale faccio presente che questo incontro avvenne tempo dopo rispetto all'imposizione da me subita – da parte degli uomini di Bidognetti di cui ero il referente nei rapporti societari con gli Orsi di abbandonare i fratelli Orsi, uscendo dalla società con loro intercorsa. Colloco temporalmente l'incontro in un periodo di poco successivo a quando i miei fratelli Antonio e Nicola vennero licenziati dall'ECO4. In via approssimativa dovrebbe trattarsi del 2003. Non ricordo esattamente quale fosse il giorno della settimana, ma posso dire che generalmente l'Onorevole incontrava le persone in Casal di Principe, il sabato, la domenica o – al più – il lunedì. Ricordandomi meglio, deve essersi verificato il sabato mattina poiché ricordo che l'onorevole Cosentino – che contattai telefonicamente qualche giorno prima rispetto all'incontro – mi disse che ci saremmo potuti incontrare il giorno successivo al suo ritorno da Roma.
Chiamai l'onorevole Cosentino con un cellulare, ma non posso ricordare quale fosse. All'epoca utilizzavo anche cellulari con schede non registrate. Io possedevo all'epoca il numero di telefono cellulare di Cosentino ed ebbi a chiamarlo sul numero che questi ebbe a lasciarmi, affinché potessi contattarlo.
Faccio presente che nella sezione di Forza Italia in Cesa, sezione che io frequentavo e alla quale ero iscritto, si aveva la disponibilità dei recapiti telefonici dell'onorevole, sia in Roma che a Casal di Principe.
Posso dire con sicurezza che io rappresentai a Pino Salpa – segretario cittadino di Forza Italia nel comune di Cesa – la necessità di parlare con Cosentino. Non ricordo invece se ebbi a rendergli note le ragioni della necessità di incontrarlo.
In relazione alla natura dei rapporti tra me e Salpa, è possibile che io lo abbia informato delle ragioni per cui volevo incontrare Cosentino.
Intesi rivolgermi a lui perché volevo rientrare nel Consorzio, superando il divieto imposto dal gruppo di Bidognetti e l'imposizione a uscirne, e volevo farlo proprio attraverso la via politica. Io già sapevo che l'ECO4 degli Orsi si era legata al gruppo Schiavone e venni informato della cosa anche da Sergio Orsi al quale mi rivolsi chiedendo che fossi nuovamente inserito, rimanendo nell'ECO4, nei ruoli che questi – inteso Sergio Orsi – avrebbe voluto concedermi.
Sergio Orsi mi fece presente che 'era cambiata la geografia', facendo poi esplicito riferimento al fatto che ormai erano gli Schiavone a dirigere le scelte.
Per queste ragioni mi rivolsi a Cosentino, come via per superare ogni impedimento e consentire il mio nuovo ingresso in ECO4 con gli esiti negativi che ho riferito.
Non ho ritenuto necessario chiedere alcun preventivo permesso al gruppo di Bidognetti prima di rivolgermi al Cosentino perché ormai non vi era nessun rapporto

con Bidognetti, ma le relazioni erano intercorse ormai con gli Schiavone.
Temporalmente ritengo rilevante il momento del licenziamento dei miei fratelli Antonio e Nicola dall'ECO4.
Durante la riunione durante la quale venne minacciato Michele Orsi, cui presenziai e di cui ho già parlato, Cirillo Bernardo e Fioretto Giosuè imposero a Michele che non avrebbe dovuto comunque licenziare i miei fratelli e questi garantì, con MIELE Massimiliano, il perpetuarsi del rapporto lavorativo.
I miei fratelli furono invece licenziati sei o sette mesi dopo quell'incontro e Sergio motivò quel licenziamento facendo riferimento al pericolo rappresentato dalla presenza di miei familiari nell'ECO4 e parlando del passaggio di consegne dai BIDOGNETTI agli Schiavone: il tutto collegato alla necessità di realizzare un termovalorizzatore nella zona di Santa Maria La Fossa e così rendere possibile la realizzazione di un ciclo integrato dei rifiuti gestito autonomamente dal Consorzio CE4".

L'informativa del Nucleo Investigativo – Prima Sezione del Comando Provinciale dei Carabinieri di Napoli in data 25 febbraio 2009 (allegato c della nota di trasmissione di atti integrativi datata 27 febbraio 2009) così ricostruisce la carriera politica e istituzionale dell'indagato Cosentino:

negli anni **1978-80** Consigliere Comunale di Casal di Principe nelle file del P.S.D.I.;
nell'anno **1980** è eletto alla Provincia di Caserta;
negli anni **1985** e **1990** è rieletto alla Provincia di Caserta;
il 23 aprile 1995 è eletto al Consiglio Regionale della Campania;
nel **1996** è eletto alla Camera dei Deputati nelle file di Forza Italia ed entra nel direttivo parlamentare del partito;
nel **1997** la base del partito lo elegge coordinatore di Forza Italia per la Provincia di Caserta e vice coordinatore regionale per la Campania;
nel **2001** è nuovamente eletto alla Camera dei Deputati nelle file di Forza Italia;
nel **2005** assume l'incarico di coordinatore regionale del partito;
nel **2005** è candidato alla Presidenza della Provincia di Caserta, ma è superato dal candidato di centro-sinistra DE FRANCISCIS Sandro;
nel **2006** è eletto alla Camera dei Deputati nelle file di Forza Italia;
nel **2008** è rieletto alla Camera dei Deputati nelle file del Popolo delle Libertà.

Gli uffici assunti dall'onorevole Cosentino durante i suoi mandati parlamentari sono i seguenti:

dal **1996** al **2001** (componente della commissione Politiche U.E. e della commissione per le questioni regionali);
dal **2001** al **2006** (vicepresidente della X commissione - attività produttive, commercio e turismo)
dal **2006** al **2008** (componente della commissione politiche U.E.);
dal **2008** ad oggi (componente della commissione bilancio, tesoro e programmazione, nonché Sottosegretario di Stato all'Economia ed alle Finanze) (*ALL. 1-2-3-4, annotazione citata*)

Riportate le dichiarazioni di Gaetano Vassallo specificamente riferite all'indagato Nicola Cosentino, non ci si può esimere dallo svolgere alcune considerazioni che guideranno il ragionamento valutativo secondo un modulo che progressivamente avvicinerà l'obiettivo della prova del rapporto di scambio 'voti contro favori' instaurato dall'indagato con il gruppo camorristico denominato clan dei casalesi.
Vassallo descrive in buona sostanza un patto societario stipulato tra il clan Bidognetti e i fratelli Orsi nel momento in cui costoro (l'iniziativa sembra ascrivibile nelle sue fasi iniziali soprattutto a Sergio Orsi) decideranno di investire nel settore dei rifiuti.
I termini esatti del patto saranno precisati dallo stesso collaboratore nelle dichiarazioni che di seguito si riporteranno. Troverà in esse precisazione l'assunto della sostanziale appartenenza dell'ATI capeggiata dagli Orsi e partner della società mista ECO4 s.p.a. alla 'criminalità organizzata casalese', con una scansione dei legami strettamente

collegata alla ripartizione territoriale delle competenze criminali: gruppo Bidognetti (e dunque socio occulto Vassallo) fino alla metà circa del 2002; gruppo Schiavone da quell'epoca in poi.
Alla società con Bidognetti si ascrivono: la nascita della società mista, con la selezione, quale partner privato, del gruppo di imprese controllato dagli Orsi; la partecipazione all'iniziale fase di realizzazione del progetto di monopolizzazione dei servizi di raccolta dei rifiuti affidati dai comuni consorziati.
Al patto con il gruppo Schiavone si annettono le lucrose prospettive collegate all'ampliamento della discarica di Parco Saurino 2.
I collanti che tengono insieme l'alleanza tra soggetti politici e soggetti criminali sono rappresentati da: le assunzioni clientelari a fini di aggregazione del consenso elettorale; e soprattutto da quello che i Pubblici Ministeri procedenti chiamano – in più parti delle loro richieste e delle annesse memorie integrative – "la strategia diretta alla creazione di un Ciclo Integrato dei Rifiuti", alternativo e concorrenziale rispetto a quello stabilito a livello regionale dalle Ordinanze della Presidenza del Consiglio dei Ministri e dai contratti già stipulati dagli organi commissariali con l'ATI FISIA ITALIMPIANTI.
Trattasi però soltanto della definizione di sintesi di una serie di comportamenti ai quali l'indagato Cosentino avrebbe prestato il proprio rilevante contributo di: soggetto politico autorevole; referente ed effettivo controllore del Consorzio CE 4; in una logica che, secondo il narrato di Vassallo, culmina nella perfetta identificazione tra il politico e le ragioni dell'impresa mafiosa (***"l'ECO4 è una mia creatura, l'ECO4 song'io"***).
Il primo passo del ragionamento non può che essere quello della prova dell'effettiva mafiosità dell'impresa in oggetto.
Una prova che questo Giudice ritiene pienamente raggiunta sulla base degli elementi che saranno esposti nella lunga trattazione che farà seguito a questa premessa.
Questo essenziale segmento della dimostrazione deve molto al collaboratore di giustizia Gaetano Vassallo, le cui dichiarazioni hanno però trovato riscontri (documentali, intercettivi, dichiarativi) tutti assolutamente autonomi rispetto alla fonte da verificare e, per giunta, di densità e significatività tali da assumere il valore di prova autosufficiente; sì da conferire al narrato del chiamante in correità il valore residuale di mera chiave di lettura e di trama espositiva, cronologicamente ordinata, di un composito intreccio di evidenze.

3. I fratelli Michele e Sergio Orsi, dominatori della Eco4, erano imprenditori mafiosi. Le dichiarazioni di Luigi e Alfonso Diana

La forte compenetrazione tra i fratelli Orsi e gli uomini del clan dei Casalesi è dichiarata da una serie di collaboratori di giustizia, provenienti sia dalle file del gruppo Bidognetti che da quelle del clan La Torre, imperante in Mondragone nell'epoca in cui quel territorio rappresentava il centro di gravità delle attività economiche della Flora Ambiente e delle altre società del gruppo Orsi dedite al settore dei rifiuti.
Una prima affermazione della storica compenetrazione tra gli Orsi e il clan dei Casalesi si trova nelle dichiarazioni di DIANA Luigi e DIANA Alfonso: due collaboratori di giustizia di provatissima estrazione bidognettiana (almeno fino al transito nel gruppetto scissionista capeggiato da Guida Luigi detto ' drink).
Nelle dichiarazioni di DIANA Luigi figurano: il legame particolare, anche se non esclusivo, degli Orsi con il gruppo camorristico capeggiato da Bidognetti; la relazione di scambio e reciproco vantaggio, non confondibile con una posizione meramente vittimistica (sostenuta invece, più o meno ostinatamente, dagli Orsi nei loro interrogatori); la partecipazione sistematica del gruppo Bidognetti agli utili imprenditoriali del gruppo Orsi; la prosecuzione del rapporto d'affari anche dopo

l'arresto di 'Cicciotto'; la partecipazione dei Bidognetti all'affare degli r.s.u. che costituiva una novità rispetto al tradizionale impegno dei fratelli nel settore edile.

DIANA Luigi, nell'interrogatorio reso il 12.5.2005, riferiva delle parentele criminali illustri dei due fratelli; dell'aiuto prestato a uno dei fondatori del sodalizio casalese (IOVINE Mario) durante la sua latitanza; della disponibilità offerta per la trasmissione del messaggio estorsivo ai colleghi imprenditori; della notizia carceraria inerente il patto sociale stipulato dagli Orsi con Bidognetti per l'affare dei rifiuti; ma anche del ruolo di interfaccia tra il clan e il potere politico (***Siccome avevano legami con ambienti della politica, portavano i politici a parlare con il clan***):

"*...**posso affermare con certezza che i due ORSI sono imprenditori del clan; essi sono lontanamente imparentati a Mario IOVINE e, durante il periodo in cui Mario IOVINE è stato latitante, ha utilizzato l'abitazione di Sergio ORSI per nascondersi e per fare riunioni. Io stesso ho accompagnato Francesco BIDOGNETTI a casa di Sergio ORSI per incontrarsi con Mario IOVINE e con altri componenti del clan**. Ho già riferito poco sopra come Sergio ORSI, proprio grazie al clan e grazie ai rapporti con Gaetano CORVINO, aveva aperto delle cooperative sociali in cui faceva false assunzioni di personale. **Gli ORSI però, che erano anche imprenditori edili, erano anche disponibili a fare da intermediari per fare estorsioni da fare ad altri imprenditori.** Siccome avevano legami con ambienti della politica, **portavano i politici a parlare con il clan. Dopo la morte di Mario IOVINE, i fratelli ORSI si sono legati a BIDOGNETTI; tutto quello che riguardava i loro lavori veniva gestito con il gruppo BIDOGNETTI. Tutti i soldi che lui doveva versare al clan per i lavori che prendeva, li concordava con il gruppo BIDOGNETTI; lo stesso BIDOGNETTI Aniello si è incontrato più volte, anche in mia presenza, sia con Michele che con Sergio ORSI durante il periodo della latitanza di Francesco BIDOGNETTI. Anche dopo l'arresto di Francesco BIDOGNETTI gli ORSI si sono incontrati sia con Aniello che con Domenico BIDOGNETTI. Non so che cosa si dicessero perché non partecipavo alle discussioni, ma sono certo che anche nell'acquisizione dei lavori il gruppo BIDOGNETTI aiutava i fratelli ORSI. Quando sono stato arrestato, ho saputo in carcere parlandone con CATERINO Mario, APICELLA Pasquale, Sebastiano PANARO e altri, che i f.lli ORSI erano entrati in un consorzio che si occupava della raccolta dei R.S.U. Mi venne riferito in quell'occasione che gli ORSI avevano chiuso il lavoro con i BIDOGNETTI al quale riconoscevano il 6% degli introiti dell'attività. Prima degli arresti di "Spartacus" ho incontrato una volta a casa di Walter SCHIAVONE, ORSI Sergio. Non so perché era a casa di Walter SCHIAVONE, ma certamente l'ho visto lì**...*".

Diana Alfonso, in data 13.1.2006, confermava il legame tra gli Orsi e Bidognetti operando un interessante confronto con quelli che emergeranno come i più temibili competitori degli Orsi nel settore dei rifiuti: i fratelli FERRARO, titolari della Ecocampania, collegati alla famiglia Schiavone:

"*…D: Lei conosce la famiglia ORSI ? R: Si tratta di tre fratelli, uno dei quali si chiama Sergio; gli altri non li ricordo. Ho avuto modo di incontrarli a Casale, presso l'abitazione di mio cugino DIANA Carmine; Sergio aveva rapporti con mio cugino, anche lui imprenditore. Si tratta di incontri intercorsi tra il 1990 ed il 1993; l'ORSI Sergio gestiva un'impresa edile, così come i fratelli. Essendo un imprenditore, per quanto ne so, versava la tangente estorsiva quando era impegnato in lavori nella nostra zona. **Ricordo che, nel periodo 1997 - 1998, il padre di CANTIELLO Salvatore***

giunse a casa di PANARO Francesco, chiedendo l'intervento del figlio per far riappacificare ORSI Sergio e il cognato, titolare della DIANA Gas, persona che io non conosco personalmente. Non so dire, peraltro, chi dei due avesse interpellato CANTIELLO. *C'era stata una lite, per quel che compresi, legata a questioni familiari e venne richiesto l'intervento di CANTIELLO Salvatore, perché conosceva entrambi e per il suo prestigio in zona di Casal di Principe, essendo affiliato al clan. Posso dire che, alcuni giorni dopo essersi prodigato per risolvere il litigio, incontrai il CANTIELLO con un Rolex di valore; mi disse che glielo aveva regalato l'ORSI, quale ringraziamento, avendo questi risolto la questione.* ***Il padre del CANTIELLO Salvatore era stato inoltre assunto dall'ORSI Sergio – credo che in realtà fosse pagato in nero – perché aprisse e chiudesse i cancelli di un deposito di camion della N.U. dell'ORSI, in Casal di Principe, un impegno di lavoro del tutto insignificante. Posso dire che gli ORSI avevano un legame con il gruppo di BIDOGNETTI, mentre i fratelli FERRARO si riferivano al gruppo di SCHIAVONE. Gli accordi erano stati già presi con i vertici delle due famiglie e il mio gruppo – partecipato da me, mio fratello Luigi, i fratelli CANTIELLO, APICELLA Pasquale, PANARO Francesco, ZARA Nicola ed alcuni altri ragazzi - era estraneo alla cosa, pur essendo tutti stipendiati dalla famiglia SCHIAVONE. Sia gli ORSI che i FERRARO avevano ottenuto degli appalti comunali; non so dire quale fosse il ruolo del clan nell'aggiudicazione degli appalti e se ve ne fosse uno. Si trattava di rapporti curati dai vertici, sui quali noi non potevamo entrare.*** *Per far comprendere i limiti delle mie conoscenze, faccio presente che io fui arrestato nel febbraio 1993 e fui scarcerato nell'ottobre 1995, rimanendo agli arresti domiciliari fino al giugno del 1996. A ottobre del 1996 mi resi latitante all'ordine di cattura successivo all'indagine cd. "Spartacus 2" e dopo poco iniziò la guerra con il gruppo di BIDOGNETTI; sono rimasto latitante fino all'inizio della collaborazione di mio fratello LUIGI, nell'aprile 2005. Era prevalentemente mio fratello, fino al suo arresto del 1999, a mantenere i rapporti con gli SCHIAVONE, unitamente a CANTIELLO Salvatore. A partire dal suo arresto, ricevendo il consiglio di mio fratello Luigi, preferii evitare di espormi, "richiudendomi". Del mio gruppo ero rimasto io solo, gli altri erano stati tutti arrestati ed ho preferito evitare i vertici; mi limitavo a mandare qualche ambasciata ma ero rimasto isolato; temevo potessi essere ucciso. C'erano infatti degli accordi nascosti che mi facevano temere. Io avevo una mia autonomia patrimoniale, tramite la società Concordia, di cui ero socio; non era quindi vitale o necessario espormi troppo.* ***ADR: l'esistenza di rapporti stringenti tra gli ORSI e i BIDOGNETTI era un fatto noto, all'interno del gruppo, già a partire dagli inizi della scissione tra noi e la famiglia BIDOGNETTI, collocata verso la fine del 1996 - inizio 1997. Me ne parlò CANTIELLO Salvatore, mio fratello DIANA Luigi, DE VITO Luigi ed anche ZARA Nicola. Non so dire quanto denaro versassero, ma ritengo si trattasse di una quota pari al 5 o 6% sul valore degli appalti aggiudicati presso i Comuni ove svolgevano la raccolta dei rsu.*** *Non ho peraltro informazioni specifiche su questo punto, si tratta di una mia deduzione sulla base delle nostre consuetudini. Non so dire nulla quanto a specifici rapporti con le Amministrazioni comunali concedenti gli appalti. Ricordo che la madre degli ORSI è imparentata con IOVINE Mario o con la famiglia della moglie.* ***All'epoca della latitanza di IOVINE Mario – anni 1989, 1990 – talvolta questi si recava a dormire presso l'abitazione della madre degli ORSI, notizie tratte dall'interno del nostro gruppo….".***

4. I fratelli Orsi s'inventano imprenditori nel settore dei rifiuti e stringono un patto con il gruppo di Francesco Bidognetti. La neutralizzazione del concorrente Ecocampania s.r.l. di Nicola Ferraro

Vi è un momento nel quale la compenetrazione tra le iniziative economiche degli Orsi e i programmi del gruppo Bidognetti prende corpo in maniera irrefutabile: è il momento nel quale i due fratelli s'inventano imprenditori del settore rifiuti e si aggiudicano, senza disporre di alcuna competenza specifica né di mezzi adeguati, il ruolo decisivo di partner privato del consorzio CE4, nella società mista Eco4.
La vicenda è ricostruita nel procedimento n. 49946/03 N.R. ed è compendiata in una serie di ordinanze cautelari: la n. 215 del 22.3.2007; la n. 707 del 29.10.07; la n. 45 del 26.1.2009; la n. 472 del 7.7.09; tutte emesse dal GIP del Tribunale di Napoli dr. Alessandro Buccino Grimaldi (le prime due sono contenute nel faldone n. 9 degli atti trasmessi il 18.6.08; la terza è contenuta nel faldone n. 4 degli atti trasmessi il 13.5.2009; la quarta è stata trasmessa dal P.M., insieme all'informativa n. 1065/11 del Nucleo Investigativo – Comando Provinciale dei Carabinieri di Caserta, con missiva del 27.10.2009).
Si osserva nella dinamica di quell'aggiudicazione la perfetta sinergia tra: l'azione corruttiva e la turbativa d'asta esercitate con il concorso rilevantissimo di VALENTE Giuseppe e Claudio De Biasio, presidente e direttore generale del consorzio che costituiva il partner pubblico della futura società mista; la pressione intimidatoria esercitata dagli uomini del gruppo Bidognetti per ridurre al silenzio il più temibile avversario degli Orsi in quella competizione, la Ecocampania dei fratelli Ferraro, già indicati da DIANA Alfonso e Gaetano Vassallo come operatori vicini alla famiglia Schiavone; la massiccia attività fraudolenta finalizzata a stornare sul partner pubblico le uscite clandestine.

5. L'azione corruttrice e la turbativa d'asta

Gli Orsi costituivano in data 18.11.1999 la srl Flora Ambiente, quindi operavano su due fronti.
Da un lato instauravano uno scambio pressoché paritetico con il vertice della famiglia Bidognetti (Bidognetti Aniello, Miele Massimiliano e Cirillo Alessandro).
Chiamati a partecipare alla creazione della costituenda società mista, i '*Cicciottiani'* (secondo la designazione invalsa in Casal di Principe, riferita dalla vedova del defunto Orsi Michele) rispondevano offrendo il know how, le referenze bancarie e i mezzi operativi di Gaetano Vassallo, imprenditore del settore dei rifiuti storicamente collegato al clan dei Casalesi, prima di transitare nei ranghi dei collaboratori di giustizia.
Il partner criminale offriva poi la sua risorsa tipica, l'intimidazione finalizzata a piegare l'opposizione concorrenziale dei fratelli Nicola e Luigi Ferraro.
Gli Orsi conferivano dal loro canto: un continuativo contributo economico determinato in lire cinquanta milioni mensili, oltre ad altre somme collegate all'accaparramento della gestione del servizio di raccolta nei più importanti Comuni consorziati; l'assunzione di soggetti collegati con il gruppo criminale; i loro rapporti preferenziali con il Presidente del consorzio e della costituenda società mista Valente Giuseppe.
Il secondo piano d'intervento, successivo alla stipula del patto con i camorristi, è costituito dal negozio corruttivo contratto con Valente Giuseppe, che si presterà – concorrendo alla predisposizione di un bando di gara cucito su misura per l'associazione temporanea d'imprese degli Orsi e attraverso ulteriori condotte turbative - a violare i propri doveri d'ufficio per consentire alla Flora Ambiente di aggiudicarsi in data 10.7.2000 il ruolo cruciale di 'braccio operativo' della società mista.
Il coordinamento dei due piani di intervento è reso evidente dal fatto che gli affiliati al clan dei Casalesi sapevano, addirittura prima che fosse approvato il bando di gara

(28.3.2000) e che questo fosse pubblicato (19.4.2000), non soltanto che gli Orsi erano destinati ad aggiudicarsi la gara ma anche che il progetto di medio termine prevedeva l'affidamento del servizio di raccolta da parte di plurimi comuni casertani.
E' illuminante la conversazione telefonica n. 33 del 25.2.2000, ore 17.31, nella quale Miele Massimiliano tratta l'argomento con Setola Giuseppe: *"...sono quei camion dell'immondizia, sono vecchi diciamo, non è che sono camion nuovi...mo' a lui gli servono perché tengono il decreto sopra per fare la raccolta, hai capito ? Se li deve prendere per forza perché, diciamo, subito può incominciare a lavorare con quei decreti. Man mano che lavora, prende l'appalto e se li compra. Ogni Comune si deve comprare..."*

Emerge pure dall'indagine captativa come il vertice del consorzio Ce4 fosse informato della penetrazione mafiosa della società creata dai fratelli Orsi e non esitasse a fornire ai camorristi casalesi notizie rilevantissime sulle iniziative assunte dai fratelli Nicola e Luigi Ferraro: il tutto in un momento nel quale la rivelazione non poteva che rispondere al fine di propiziare la pressione camorrista sugli avversari dei fratelli Michele e Sergio Orsi (cfr. la conversazione oggetto di intercettazione telefonica avvenuta in data 10.8.2000, alle ore 10.54, tra il Miele Massimiliano ed il Cirillo Alessandro e le dichiarazioni rese dal Vassallo Gaetano in data 10.7.2008, sulle quali ci si soffermerà in seguito).

La sinergia di delitti contro l'imparzialità della pubblica amministrazione e di pressioni camorristiche consentirà alla ATI Flora Ambiente di riuscire vincitrice della gara in data 10.7.2000 e di formare, in data 28.8.2000, la spa Eco4, che effettivamente poi acquisirà l'affidamento diretto del servizio di raccolta dei rifiuti solidi urbani in numerosissimi comuni del bacino consortile.
La compiuta ricostruzione della vicenda corruttiva e della turbativa d'asta coinvolgente il presidente Valente e il Direttore Generale del consorzio CEe4 (nonché presidente della commissione aggiudicatrice) De Biasio Claudio è contenuta nel capitolo dell'ordinanza n. 707/2007 dedicato alla verifica dell'addebito cautelare sub A).
In quel provvedimento (pagg. 11-34) si rinviene l'accurata ricostruzione della procedura amministrativa viziata, una ricostruzione affidata a fonti inoppugnabili.
Le prime sono costituite dalle dichiarazioni dei beneficiati **Orsi Sergio e Orsi Michele**.
Il primo, negli interrogatori resi in data 8 e 25 giugno, 23 luglio 2007, descriveva puntualmente l'attività corruttiva svolta nei confronti di Valente Giuseppe, precisando in quali termini e con quali complicità aggiuntive fosse stato confezionato il bando di gara per favorire le pretese della neonata Flora Ambiente:

"(...) prendendo atto della parte delle dichiarazioni rese da GUIDA Luigi in data 7.6.2007, laddove questi afferma di avermi incontrato ricordandomi che lui aveva fatto molto per me e che quindi era necessario che io mi sdebitassi e prendendo altresì atto del fatto che l'ufficio mostra perplessità sulla regolare aggiudicazione della gara indetta dal Consorzio CE4, ***voglio dire che io ho effettivamente vinto l'appalto grazie all'aiuto che mi ha dato VALENTE Giuseppe****. Accadde che io ebbi a incontrare un giorno,* ***prima dell'indizione del bando di gara****, il VALENTE; (...) In quell'occasione* ***questi mi fece presente l'opportunità di partecipare alla gara che stava per essere indetta dal Consorzio CE4 di cui lui era presidente facendomi presente le sue difficoltà economiche in quel periodo, in particolare per alcuni pignoramenti che, a suo dire, gravavano alcuni immobili. Io gli parlai della società Flora Ambiente la quale disponeva dei requisiti della "imprenditoria giovanile" collegati alla giovane età delle mie figlie; alla fine ci accordammo che a fronte del versamento di 100***

milioni lui avrebbe fatto in modo da inserire esplicitamente questo requisito nel bando, per farmi vincere. *(...) Ricordo che riferii l'accordo preso a mio fratello Michele. Agii in modo sommerso come un palombaro e così riuscii praticamente a sorprendere tutti, tanto da aggiudicarmi la gara superando addirittura l'Ecocampania di Nicola FERRARO che era una società nettamente più potente della Flora Ambiente"* (8.6.2007).

"*Sponte. Sempre con riferimento agli scorsi interrogatori, voglio rappresentare come fu attuato il versamento dei 3/10 del capitale sociale all'atto della costituzione della società Eco4. Non ricordo a quanto ammontasse la quota spettante all'Ati capeggiata dalla Flora Ambiente, né l'ammontare complessivo del versamento. Posso dire che comunque l'intera quota devoluta dall'ati-Flora Ambiente fu versata da me, nelle modalità che descrivo: quanto alla quota riferita alla Flora Ambiente Srl, si tratta di una somma versata che proveniva dai conti correnti della BNL, agenzia di Caserta, le quote riferibili alla Brignoli ed a CAPASSO Ciro vennero ugualmente pagate da me ma – per simulare il pagamento delle stesse da parte dei soci dell'Ati – furono formalmente imputate a quelle società, monetizzando dei fondi disponibili presso conti correnti riferibili a me aperti presso altre banche ove avevo i conti correnti (Banca di Roma, BNL, Banca Commerciale di Capua); operai dei prelevamenti in contanti e versai le somme ai soci dell'Ati, per imputarne il versamento di loro spettanza".*

Si armonizzano perfettamente con il narrato di Gaetano Vassallo (che tra breve compiutamente esporremo) le dichiarazioni con le quali Sergio Orsi scolpisce il legame corruttivo instaurato con il funzionario commissariale Bruno Orrico:

"Sponte: voglio riferire in ordine alla persona di ORRICO Bruno; questi era un vecchio funzionario della cassa del mezzogiorno che fu nominato tecnico dal Commissariato di Governo o dalla Regione o dal Prefetto e che risultava fondamentale in relazione alle sue competenze. Questi mi fu presentato da VALENTE Giuseppe prima che fosse indetta la gara dal Consorzio CE4 e il VALENTE mi indicò l'utilità di rivolgermi a questi per costituire una Ati che fosse attrezzata formalmente per disporre dei requisiti indicati sul bando di gara. Fu proprio attraverso l'ORRICO che ebbi a conoscere BRIGNOLI Ettore, di Cretaro (BG), cui proposi di partecipare alla costituenda Ati.
ADR: dal contenuto dei colloqui tra me, VALENTE e ORRICO era chiaro che quest'ultimo sapesse degli accordi presi con VALENTE per aggiudicarmi la gara.
Faccio presente che io insieme al VALENTE ci rivolgemmo all'avv. ADINOLFI, anche questi conosciuto dall'ORRICO e, mi sembra, proprio da questi indicato, al fine di stabilire e predisporre il bando di gara in modo da consentire l'aggiudicazione alla Ati-Flora Ambiente.
Il bando fu quindi tecnicamente redatto grazie all'apporto di questo legale. Il legame con ORRICO Bruno si è sviluppato maggiormente nel tempo a seguire; posso dire che ho avuto modo di prestare gratuitamente della manodopera privata per la realizzazione di un manufatto (un muro) a una signora sua amica in Valle di Maddaloni e dei lavori d'imbiancatura della sua abitazione.
Ci adoperammo inoltre per procurare una Bmw allo stesso, grazie ad un concessionario di Caserta attraverso un rappresentante di nome ISERNIA Fabio; voglio subito dire che l'intenzione era quella di concedere gratuitamente la Bmw qualora l'ORRICO si fosse dato disponibile a nostro favore e se ce lo avesse chiesto; di fatto la vettura non fu poi mai consegnata né pagata; l'ORRICO era importantissimo per noi per i suoi rapporti col Commissariato di Governo e per la sua

competenza tecnica (25 giugno 2007).

"ADR: per quanto concerne la predisposizione del bando di gara indetto dal Consorzio CE4 per l'individuazione del partner privato, faccio presente che mi sono personalmente recato insieme al VALENTE Giuseppe presso l'avvocato ADINOLFI, presso lo studio DE MARTINO in via Riviera di Chiaia, in modo da predisporre il bando stesso secondo i requisiti che mi avrebbero consentito con certezza l'aggiudicazione.
Ricordo che io e VALENTE fummo accompagnati da ORRICO Bruno il quale individuò il legale come colui che avrebbe curato la redazione del bando; non rammento se ORRICO presenziò personalmente o se si limitò ad accompagnarci presso questo studio, fu comunque VALENTE Giuseppe a dare l'incarico formale a questo legale.
Rammento che personalmente curai che nel bando fosse inserito il requisito dell'imprenditoria giovanile e che fosse limitata ai 29 anni l'età massima di coloro, soci, il cui inserimento avrebbe consentito l'assegnazione del punteggio. Curai inoltre che nel bando fosse inoltre riportata un'indicazione che escludesse che l'assegnazione del punteggio potesse essere attribuita a quella società che non vedeva una maggioranza assoluta numerica dei soci giovani.
Si trattava di un requisito attributivo di punteggio che, calcolato in 40 punti, avrebbe dovuto essere sufficiente per consentirmi agevolmente di aggiudicarmi la gara.
Faccio presente che la Flora Ambiente aveva la maggioranza assoluta numerica di soci giovani, nelle persone delle mie figlie, Elisa Flora e Antonietta e anche la totalità delle quote sociali a loro intestate.
Sulla base delle mie esplicite indicazioni venne quindi redatto il bando di gara.
ADR: io mi presentai personalmente all'avvocato ADINOLFI, dichiarandomi come ORSI Sergio, insieme a VALENTE Giuseppe, presentato da ORRICO quale presidente del Consorzio.
Dal colloquio che si ebbe con il legale nella materiale stesura del bando e nel contesto in cui ebbi a dare indicazioni di quelli che erano i punteggi da attribuire, era evidente che il legale comprendesse che vi fosse in animo la volontà di creare un bando su misura di un concorrente; io non precisai che avrei partecipato alla gara ma posso dire che se io fossi stato l'avvocato l'avrei capito o comunque avrebbe certamente dovuto comprendere che io ero interessato all'aggiudicazione.
All'epoca il bando di gara non era ancora ovviamente presentato ed io non avevo idea delle società con cui i fratelli FERRARO avrebbero partecipato né avevo idea di chi potessero essere altri concorrenti. Avevo una generica conoscenza di quelle che erano le società facenti capo ai FERRARO e rammento che ritenevo probabile che gli stessi avrebbero potuto partecipare alla gara con una società partecipata da SCIALDONE Antonio; non ricordavo esattamente che età avesse costui ma credevo che la sua età fosse superiore ai 29 anni; anche per questo limitai il massimo di età fissato per il punteggio per l'imprenditoria giovanile ai 29 anni.
Sulla base della bozza redatta con l'apporto dell'avvocato ADINOLFI fu quindi pubblicato il bando di gara e lo schema dell'atto costitutivo della società mista che si sarebbe formata a seguito dell'aggiudicazione.
Furono presentate le varie domande di partecipazione e ricordo che gli unici concorrenti ammessi alla gara furono l'Ati Flora facente capo a me e mio fratello Michele e l'Ati capeggiata dall'Ecocampania dei fratelli FERRARO.
Rammento che, onde impedire anche l'ammissione alla gara della Ecocampania, fu inserito nel bando l'impedimento alla partecipazione per le società morose o che comunque avevano contenziosi in corso con il Consorzio o con i Comuni consorziati; fu VALENTE a dirmi che Ecocampania era morosa rispetto al Consorzio e per questo

inserimmo tale clausola nel bando; non so dire chi abbia informato VALENTE della cosa.
Rappresento che il VALENTE ebbe anche a curare la riscossione di questi crediti, agendo comunque successivamente agli atti della gara; non so dire le ragioni per la quale abbia poi proceduto ad esigere questi crediti né so se siano stati riscossi od altro.
La commissione di gara fu decisa da VALENTE Giuseppe che diede la presidenza a DE BIASIO Claudio, essendo questi il direttore generale facente funzione del Consorzio e nominò il professor INGROSSO e il professor NAPOLI.
Mentre so che il professor Napoli ha avuto delle consulenze da parte del Consorzio insieme a Orrico Bruno, il professor Ingrosso era vicino all'onorevole Coronella e amico del Ferraro: ricordo, in particolare, che quest'ultimo potesse fare gli interessi del Ferraro e mi preoccupai della cosa parlandone col Valente. Fu Valente a parlarmi del pericolo rappresentato dal professor Ingrosso.
ADR: VALENTE Giuseppe non partecipava all'attività della commissione ma agiva attraverso le persone da lui nominate, tra cui principalmente DE BIASIO Claudio, dipendente del Consorzio.
ADR: io mi aspettavo che l'Ati Ecocampania fosse esclusa dalla gara per i debiti con il Consorzio e quando seppi che ciò non era avvenuto mi lamentai col VALENTE dicendogli che avevo pensato di denunciare la commissione; non so dire attraverso chi il VALENTE Giuseppe abbia presentato alla commissione la morosità della Ecocampania, ma ritengo che quasi certamente ciò sia avvenuto attraverso il DE BIASIO.
VALENTE Giuseppe mi sconsigliò qualsivoglia denuncia nei confronti della commissione, rappresentandomi che non mi dovevo preoccupare in quanto avrei vinto lo stesso, anche palesandomi che questa morosità avrebbe inciso sui punteggi da attribuire alla capacità finanziaria.
Prendo atto che la mia aggiudicazione si collega in modo decisivo al punteggio attribuito per l'imprenditoria giovanile e prendo atto altresì che non vi è alcuna specificazione nel bando dei parametri attraverso cui calcolare tale punteggio; prendo atto altresì che anche l'Ati Ecocampania risultava avere un socio infra-trentenne.
Faccio presente che secondo me il bando avrebbe dovuto escludere che potesse essere attribuito qualsiasi punteggio all'Ati Ecocampania in relazione alla carenza di una "maggioranza aritmetica" di soci "giovani". Prendo atto che ciò non è avvenuto ma rappresento che non fui informato delle modalità attraverso cui la commissione decise di attribuire i punteggi, modalità che furono decisive per la mia aggiudicazione.
Rappresento che alle mie deduzioni nei confronti del VALENTE quanto alla mancata estromissione della Ecocampania, questi fece esplicito riferimento al fatto che "avrei vinto comunque" e che era preferibile che vi fossero dei punteggi attribuiti al concorrente, anche oltre misura, in modo da fornire una "copertura" alla commissione e a lui stesso quanto alla turbativa della gara, e in modo da eludere successive verifiche.
Posso dire che fino a questo momento non mi era chiaro che la ragione formale decisiva della mia aggiudicazione era legata solo ai punteggi di fatto attribuiti all'imprenditoria giovanile, secondo i parametri stabiliti dalla commissione aggiudicatrice.
ADR: VALENTE aveva piena conoscenza che la nostra Ati-Flora fosse costituita al 100% da "soci giovani" e posso dire che in un periodo di tempo che non so indicare mi sono adoperato per acquisire le visure camerali delle società facenti capo all'Ati Ecocampania; non ricordo se fu VALENTE Giuseppe a consegnarmi una copia della visura afferente alla compagine societaria della società che includeva il socio

"giovane" oppure fui io a procurarmela autonomamente, consegnandola al VALENTE.
Non so dire quale fu l'uso di tale documento da parte di VALENTE, ma a me servì per valutare eventuali comportamenti del concorrente suscettibili di essere valutati per una sua estromissione ovvero per paralizzare anticipatamente loro ricorsi; rammento ad esempio che parlai con SCIALDONE Antonio rappresentandogli che, nel caso di un suo ricorso, io l'avrei denunciato per le dichiarazioni infedeli nelle autocertificazioni di accompagnamento della domanda di partecipazione alla gara.
Voglio conclusivamente dire che a me interessava vincere e che VALENTE mi aveva assicurato il risultato finale sicché non mi interessava come ciò fosse avvenuto e così spiego il fatto che non fui messo a conoscenza dei dettagli in ordine all'andamento dei lavori della commissione di gara".

Orsi Michele confermava le dichiarazioni del fratello sul tema che ci occupa in due interrogatori.

<u>Interrogatorio in data 15 giugno 2007</u>:

"Ho chiesto di essere interrogato per chiarire integralmente i miei rapporti con la famiglia BIDOGNETTI e raccontare la progressione dei fatti che hanno condotto all'aggiudicazione della gara indetta dal Consorzio CE4 che fu vinta dal gruppo Ati-Flora capeggiato da me e da mio fratello Sergio. Tutto ***iniziò nel '99 quando incontrammo, io e mio fratello Sergio, VALENTE Giuseppe a Mondragone****.*
Fu un incontro casuale durante il quale VALENTE si rivolse a Sergio – persona che conosceva da tempo per una comune militanza politica – e si confidò con lui raccontandogli delle sue difficoltà economiche; ci disse che era divenuto presidente del Consorzio CE4 e ci chiese se fossimo in grado di prestargli del denaro, 70 o 80 milioni di lire.
Mio fratello manifestò la sua disponibilità e gli diede la somma che questi gli aveva chiesto versandola con modalità che ignoro nello specifico; seppi che VALENTE fece un assegno a mio fratello quale ipotetica garanzia per il prestito anche se era inteso tra i due che in realtà non vi sarebbe stata alcuna restituzione.
Credo che l'assegno sia ancora nella disponibilità di mio fratello.
(…)Faccio presente che VALENTE dopo la disponibilità manifestata da mio fratello ebbe a proporci la costituzione di una società mista che doveva essere gestita da noi come partner privato; la sua idea, poi attuata, prevedeva che noi costituissimo una Ati per partecipare alla gara che il Consorzio stava per indire in modo da poterla aggiudicare proprio con l'aiuto di VALENTE Giuseppe. VALENTE decise quindi di creare un modo per realizzare un bando vestito "su misura" sulla Ati da noi creata e si fece aiutare da un tecnico per riuscire nell'intento.
Venne quindi stabilito un bando di gara che fosse calibrato sui requisiti della nostra Ati-Flora in modo da consentirci una sicura aggiudicazione; tra i requisiti decisivi che poi ci consentirono effettivamente di vincere la gara come stabilito con il VALENTE vi fu il punteggio fissato per la presenza tra i soci dell'Ati-Flora di componenti sociali di sesso femminile e rientranti in una età inferiore agli anni 21.
Secondo questi accordi, precedenti al bando, questo fu pubblicato in modo che l'Ati capeggiata dalla Flora Ambiente fosse sicura di aggiudicarsi la gara.
Il progetto dava per scontato che una volta aggiudicata la gara e costituita la società mista quest'ultima avrebbe ottenuto tutti gli affidamenti da parte dei comuni del bacino CE4, il che avrebbe garantito la gestione di tutti i servizi di raccolta degli rsu.
(…) Ricordo che fu poi formata la commissione aggiudicatrice nella quale erano

presenti DE BIASIO Claudio, INGROSSO e NAPOLI.
Avevo già conosciuto DE BIASIO Claudio come persona presentatami dal VALENTE ma i rapporti con lui si strinsero dopo l'aggiudicazione e dopo la costituzione della società.
Anche se gli accordi intercorsi con VALENTE Giuseppe e i punteggi stabiliti a tavolino ci tranquillizzavano sull'esito dell'aggiudicazione, fu necessario evitare sorprese e seguire anche i lavori della commissione.
VALENTE Giuseppe un giorno venne a dire a mio fratello Sergio che l'On. Gennaro CORONELLA, amico del FERRARO Nicola, aveva segnalato alla commissione l'Ecocampania.
Si trattava di una decisione riservata, con riferimento all'aggiudicazione, e si rese necessario redigere un memoriale scritto, redatto dai legali, in modo da sottolineare che avremmo vigilato su eventuali altrui scorrettezze sulla aggiudicazione.
Si trattava di una mossa che voleva impedire possibili sorprese da parte del nostro concorrente.
L'Ati-Flora grazie al contributo decisivo del VALENTE si aggiudicò quindi la gara e venne costituita di lì a poco l'eco 4 nell'agosto del 2000.
(...) Faccio presente che ORRICO Bruno fu da me conosciuto attraverso VALENTE Giuseppe, prima che costituissi l'Ati –Flora Ambiente; dopo che ideammo di costituire l'Ati al fine di aggiudicarci l'appalto grazie al contributo di VALENTE, fu necessario reperire i nostri partner.
ORRICO già lavorava nel Consorzio quale consulente della Prefettura e conosceva diverse imprese; VALENTE si rivolse a lui e fu l'ORRICO a indicarci quello che poi fu il nostro principale partner nell'Ati e cioè BRIGNOLI Ettore.
Fu mio fratello a occuparsi personalmente dei rapporti con ORRICO e con BRIGNOLI ed è lui a conoscere il grado di consapevolezza dell'ORRICO in ordine agli accordi presi con VALENTE per pilotare la gara".

Interrogatorio in data 19.6.2007**:**

(…) ADR: Posso dire che i Carabinieri di Caserta ebbero a sentire mio fratello Sergio e sua figlia ORSI Elisa Flora in relazione – per quel che mi dissero – all'aggiudicazione della gara svolta dal CE/4; rappresento che non mi preoccupai dell'indagine benché l'aggiudicazione, come ho detto, era stata pilotata attraverso VALENTE GIUSEPPE. *(...)*

Lo stesso **Giuseppe Valente,** presidente del Consorzio CE4 nell'epoca in cui si svolse la procedura diretta alla selezione del partner privato dell'ente nella costituenda società mista, non poteva fare a meno di rendere dichiarazioni che - per quanto inattendibilmente riduttive e precipuamente tese ad escludere la propria consapevolezza circa il patrocinio camorristico dell'*affaire* ECO4 - suonano sostanzialmente ammissive in ordine al risalente rapporto personale con Sergio Orsi e alla relazione corruttiva allacciata con il medesimo nei mesi che precedettero l'indizione della gara.

Dal verbale dell'interrogatorio di garanzia celebrato innanzi al GIP in data 6 febbraio 2009 (allegato alla nota integrativa trasmessa dall'Ufficio di Procura in data 27.2.2009):

"*Io Sergio l'ho conosciuto verso la fine degli anni settanta, adesso con precisione, l'anno preciso non glielo so dire, penso il 1979 sia, in occasione delle elezioni politiche che furono fatte in quell'anno nel 1979. Conobbi questo Sergio Orsi perché*

frequentavamo a livello politico la stessa componente che faceva capo all'onorevole Grippo (...) Democrazia Cristiana. L'ho conosciuto come un imprenditore, come una persona…Io ero certo che fosse una persona per bene, tanto è che insieme ad altre persone che facevamo politica ci consentiva di fare, cioè quando c'erano della riunioni a Caserta ci vedevamo e quindi ci si frequentava in termini politici (...) che io sapessi lui era un imprenditore che si interessava in generale del movimento terra, fogne, escavazioni, costruzioni, insomma sapevo che avesse…, però di preciso io non è che ne avessi la conoscenza perché non avevo questa certezza. Cioè era un problema che, tutto sommato, io non mi ero mai posto. E quindi poi questa conoscenza è continuata negli anni. (...) ***più che 1999 io vorrei dire veniamo al 2000 perché poi in effetti io di fatto ho iniziato le mie funzioni di presidente del Consorzio il 30 o 31 dicembre dell'anno 1999, quindi di fatto stiamo nel 2000.*** *Che io ricordi, dal momento che sono passati nove anni, io ho cercato in questi tre giorni di sforzare la mia mente per cercare di mettere insieme quante più date possibili per potermi ricordare.* ***Di questo ne ho certezza, del fatto che appena eletto Presidente, immediatamente dopo, venni contattato da Sergio Orsi e da lui venni contattato, non dal fratello. Venni contattato da Sergio Orsi perché, ripeto, fu lui a contattare me, non è che io contattai lui. Contattai Sergio Orsi e lui venne a Mondragone e ci incontrammo (…) Lui mi disse che aveva saputo della mia elezione a presidente e che aveva una società che si interessava della raccolta, smaltimento rifiuti, cioè tutto quello che attiene al mondo dei rifiuti. E mi chiese se potevo dargli una mano. Io chiaramente dissi "vabbè, se tu lavori in questo…" (…) Lui mi disse che si voleva interessare di questo settore e se io gli potevo dare una mano.*** *Siccome il precedente consiglio di amministrazione, perché io fui eletto a seguito di un cambio del consiglio di amministrazione, nel passare in consiglio di amministrazione si stava lavorando per la creazione di una società mista. Dissi "vabbè, ma tutto quello che è già avviato dalla passata amministrazione non intendo, non credo ci siano motivi per poterlo cambiare".* ***Lui mi chiese se io potessi in qualche maniera dargli una mano in questa vicenda. Al che io, lì per lì, non è che ero in grado di potergli dire se potevo dargli una mano o non potevo dargli una mano. Dissi "vabbè, se si deve fare una gara, se si deve trovare un partner privato, dei partners privati per fare questa gara, io, per me, insomma o uno o l'altro non è che cambia molto. Se dovesse essere una società che fa riferimento a te la cosa potrebbe farmi piacere perché sei una persona che conosco da tanti anni, so che sei una persona per bene e quindi*** *(...) fu lui che cercò me (...) era una cosa già conosciuta e se ne parlava. Tanto è che di questa vicenda all'interno del consorzio che è che aveva grosso interesse che andasse avanti era una società che all'epoca lavorava e svolgeva il servizio a Mondragone, che era la COVIM. Quindi, in effetti, erano questi qua che…perché all'interno del consorzio io trovai…la maggior parte del personale del consorzio era personale che proveniva dal ramo di azienda della COVIM che gestiva la discarica di Castel Volturno…Bortolotto. (...)* ***Orsi venne da me a chiedere la disponibilità per poter essere aiutato lui con questa società. Che poi mi disse che era una società proprio familiare, perché era una società in cui ci stavano…, i riferimenti erano i suoi tre figli, tre o quattro figli, tre figli (…) e quindi lui mi chiese di poter essere aiutato in qualche maniera per questa società (****...) Io certamente non gli potevo dire 'non ti preoccupare, tu vincerai la gara!'. Io dico "se tu hai delle caratteristiche per poter partecipare alla gara, puoi partecipare e potrai eventualmente anche vincere" (...) Io gli chiesi "ma tu, innanzitutto questa società è una società che può avere le caratteristiche per partecipare alla gara (...) A seguito di ciò l'Orsi iniziò a frequentarmi, veniva spesso a Mondragone, spesso iniziò a portare anche la moglie, veniva a casa mia lui e la moglie…e,* ***tra un parlare e l'altro, lui continuamente mi chiedeva di questa gara (…) stiamo parlando sempre del 2000 (…)***

poi Orsi venne anche al Consorzio. *Le stavo dicendo in quel periodo Orsi iniziò a venire spesso a Mondragone e a frequentare casa mia, con una scusa o con l'altra portava pure la moglie, veniva ospite a casa mia con la moglie. La moglie conobbe pure mia moglie.* ***Subito dopo di questo iniziò a venire al consorzio dove conobbe anche il direttore generale (…) Claudio De Biasio (…) La mia era una funzione di rappresentanza (…) chiaramente politica e di rappresentanza con rapporti istituzionali a livello politico.*** *La figura del direttore generale era una figura che comprendeva tutto ciò che riguardava la gestione amministrativa e tecnica del consorzio stesso (…) Per carità non intendo assolutamente esimermi da una responsabilità del genere.* ***Se in qualche maniera lei vuole dire che io ho cercato di favorire o ho favorito, io non ho nessun problema a dire che probabilmente l'ho anche favorito, gli ho dato anche una mano. Ma nella certezza e nella convinzione di dare una mano a una persona onesta, ad una persona per bene (****…) Innanzitutto io non ho fatto nessuna accordo corruttivo con Sergio Orsi, assolutamente. Non ho mai detto a Sergio Orsi "tu mi dai dei soldi e io ti faccio una favore"; mai! Non è mai successo questo.* ***E' successo che durante – e qua, in questo io ho commesso, credo di aver commesso, anzi sono convinto di aver commesso prima una leggerezza e poi mi rendo conto di avere commesso un reato. Durante queste frequentazioni di Sergio Orsi a casa mia lui venne a sapere che io avevo delle difficoltà di carattere economico e non abbiamo fatto nessun accordo corruttivo. Sergio Orsi mi ha prestato dei soldi a fronte dei quali io gli ho fatto un assegno e non credo che quando due persone fanno un accordo "io ti do, tu mi dai", quello che riceve dà in garanzia…E' stato all'inizio del 2000…certamente sì, prima della gara. Questo prima della gara. Sergio Orsi ha ancora il mio assegno in mano (…) Io ebbi un prestito da Sergio Orsi per far fronte a delle mie difficoltà di carattere economico, perché non navigavo nell'oro, non ci navigavo nel mentre e non ci navigo adesso (…) settantuno milioni delle vecchie lire. Settantuno milioni delle vecchie lire. Io questi soldi non glieli ho restituiti a Sergio Orsi. Per la verità lui non me li ha chiesti e io non li ho restituiti. Però Sergio Orsi non è che mi ha restituito l'assegno, io sono sempre debitore nei confronti di Sergio Orsi. Perché lui ha un titolo di credito nei miei confronti (…) P.M.: questi soldi glieli diede in contanti Sergio Orsi? Valente: credo di sì. Credo di sì. Sì, sì in un'unica soluzione (…)*** *Io avevo dei debiti con la banca che avevo estinto e questi soldi me li aveva prestati, per pagare, me li aveva prestati mio suocero (…)* ***Io non glieli ho chiesti (…) Io posso dire che, chiaramente, il fatto che Sergio Orsi mi avesse prestato questi soldi mi metteva in una condizione di poterlo in qualche maniera dare una mano rispetto alla gara, nel senso di dare qualche consiglio. Però da questo a dire che io avessi un patto scellerato con il Sergio Orsi…****".*

Altra voce sentita a conferma della ricostruzione è quella del soggetto penalizzato dal favoritismo prezzolato dei dirigenti del Consorzio CE 4: **FERRARO Nicola**, già amministratore della EcoCampania S.r.l., il quale confermava quello che riduttivamente definiva un sospetto circa la regolarità del bando e della gara. **Non possono sfuggire i riferimenti di Nicola Ferraro al dissimulato 'patrocinio' di Nicola Cosentino sull'iniziativa degli Orsi.**

<u>Dal verbale delle informazioni rese dal FERRARO Nicola in data 11.6.2007</u>:

"(…)Se ricordo bene ***entrambi i f.lli ORSI parlarono e mi dissero che stavano preparandosi a partecipare alla gara per la società mista che doveva fare il consorzio CE 4, gara alla quale avevano grosse chances di vincere perché all'interno del***

consorzio potevano contare sui rapporti con VALENTE Giuseppe, che conoscevano da tempo, e con DE BIASIO Claudio, che pure conoscevano da tempo.(…)
A.D.R.: io non avevo mai saputo, prima di questo incontro, che il consorzio CE 4 volesse costituire una società mista; non vi era sicuramente ancora alcun bando di gara. (...) mi dissero che con o senza di me avrebbero partecipato alla gara e con o senza di me avrebbero vinto. (...) A distanza di pochi mesi da questo incontro, ricordo che eravamo nel periodo del marzo/aprile 2000, quando era in corso la campagna elettorale per le regionali, venne emanato il bando di gara da parte del CE 4. ***Io appena vidi il bando di gara, capii chiaramente che il bando era stato vestito addosso agli ORSI e che vi erano indicati dei requisiti che gli ORSI avevano creato proprio per vincere questa gara. Ricordo che io mi lamentai di questo fatto con il coordinatore provinciale di F.I. on. Nicola Cosentino, rappresentandogli che l'amministratore del consorzio era vicino al nostro partito (all'epoca anche io facevo parte di F.I.) e che gli Orsi erano notoriamente vicini ad un esponente dei popolari, tale Giuseppe Sagliocco da Trentola. L'on. Cosentino mi disse che lui non poteva fare niente perché Valente non rispondeva a lui e se ne lavò le mani senza precisarmi le ragioni per le quali lui non poteva intervenire su Valente.*** *(...)A.D.R.:* ***ritengo che gli ORSI non disponessero di nessun requisito per potersi aggiudicare la gara, ad esclusione del punteggio legato all'imprenditoria giovanile (…) A distanza di pochi mesi dall'aggiudicazione della gara, ho incontrato i fratelli Orsi a Casal di Principe, nella segreteria dell'on. Cosentino e sono rimasto molto deluso dalla loro presenza in quel luogo tanto che questa è stata la principale ragione per la quale decisi di abbandonare F.I."***

Solidi riscontri delle dichiarazioni degli Orsi erano contenuti nell'informativa della Tenenza G.d.F. di Mondragone in data 3.7.2007 e negli atti allegati.

Premesso l'integrale rimando all'atto di sintesi e all'ordinanza cautelare che lo riprende, basterà in questa sede evidenziare:

la costituzione in data 18.11.1999 della società Flora Ambiente s.r.l.;

il conferimento della veste formale di amministratore unico alla ventenne ORSI Elisa Flora;

il conferimento di procura speciale, nell'ottobre 2000, ai fretalli Sergio e Michele Orsi con poteri statutari assai estesi;

la costituzione dell'ATI partecipante alla gara con le imprese: CAPASSO Ciro, di Ciro CAPASSO, nato a Grumo Nevano (NA) il 10/02/1956; B.E.A. - BRIGNOLI ECOLOGICA AMBIENTE s.r.l. con sede in *Credaro (BG)*, rappresentata da BRIGNOLI Ettore, nato il 4/05/1945 a Castelli Calepino (BG); CALEPIO SCAVI S.p.a., con sede *Credaro (BG) alla via Rossini n°2*, P.I. 02145510166, rappresentata dallo stesso BRIGNOLI Ettore, nato il 4/05/1945 a Castelli Calepino (BG);

l'approvazione in data 28.3.2000 del bando di gara ad evidenza pubblica a firma di VALENTE Giuseppe, con la fissazione del termine di presentazione delle candidature dal 19 aprile alle ore 12 del 15 maggio 2000;

la partecipazione alla gara di due sole entità: l'A.T.I. FLORA AMBIENTE S.r.l (capogruppo); l' A.T.I. ECOCAMPANIA S.r.l (capogruppo), GREEN LINE s.a.s. – TREA SUD S.r.l.

Soprattutto rileva l'individuazione di un verbale della commissione di gara datato 28 giugno 2000, ore 15.00 nel quale si precisano i requisiti dettati dal Bando di Gara assegnando (ex post) decisiva rilevanza al requisito del 'socio infratrentenne', unico rispetto al quale l'a.t.i. Flora Ambiente era avvantaggiata rispetto alla concorrente .

Più precisamente, in quella riunione sarà stabilito che, nel caso in cui entrambi i

concorrenti potessero vantare la presenza di "soci infratrentenni", il punteggio sarebbe stato attribuito "*in misura proporzionale alla percentuale di capitale sociale" in possesso del socio giovane"*.
Questo criterio di graduazione del punteggio risulterà decisivo, atteso che la Flora Ambiente poteva vantare una proprietà assegnata al 100% a soci giovani; mentre la Ecocampania si attestava sul 66%.
Dall'esame della Nota del 15/5/2000 – allegata al verbale – e dalla lettura del verbale di commissione del 28.6.00 emergeva poi che l'unico soggetto in quel momento a conoscenza delle domande presentate e dell'identità dei candidati poteva essere DE BIASIO Claudio, uomo strettamente collegato a Valente, a Cosentino e naturalmente agli Orsi.
Dal verbale emergeva che invece gli altri due componenti della Commissione (l'Ing. Rodolfo Napoli e il Prof. Manlio Ingrosso) avevano preso visione dell'elenco dei candidati soltanto in quello stesso giorno.
Appariva dunque decisamente anomala la fissazione di un criterio di valutazione delle offerte operata su indicazione dell'unico commissario che era in quel momento già in grado di tradurlo in punteggi.

Illuminanti sul punto risultano **le deposizioni rese dal prof. Manlio Ingrosso in data 26.7.2007 e dal prof. Rodolfo Napoli in data 20.7.2007.**
Il primo, oltre a confermare di aver preso visione soltanto nella data del 28.6.00 delle candidature pervenute, ripercorreva la discussione avvenuta sulla questione del punteggio da assegnare per il requisito dell'imprenditorialità giovanile e segnalava le ragioni (palesate a suo dire anche in sede di commissione) per le quali riteneva inopportuno che a presiedere la commissione di gara fosse il direttore generale del partner pubblico. Egli rappresentava inoltre una richiesta di esclusione della Ecocampania formulata da Di Biasio sulla base dell'acquisita conoscenza di 'morosità' della società nei confronti del consorzio:

"*…una più particolare e approfondita discussione si è avuta riguardo al punteggio da attribuire alla voce imprenditoria giovanile. Ricordo che io personalmente posi il problema di interpretare correttamente il punto relativo al requisito del ventinovesimo anno perché poteva lasciarsi a prestare ampi margini di discrezionalità alla commissione. Io stesso proposi subito di adottare la soluzione che poi è stata verbalizzata, in quanto da me ritenuta la più garantista nello spirito della legge sulla imprenditoria giovanile. I restanti membri della commissione manifestarono dubbi sulla interpretazione giuridica in quanto per loro il ventinovesimo anno scadeva al compimento del ventinovesimo anno stesso…Confermo di avere preso visione della nota n. 1943 del Consorzio CE4 datata 15.5.2000, relativa all'elenco dei candidati trasmesso alla commissione. Confermo di avere conosciuto in quella sede l'architetto De Biasio il quale svolgeva le mansioni di direttore generale del Consorzio CE4. Mi accorgo solo ora che me lo fate notare che la nota n. 1943 del Consorzio CE4 datata 15.5.2000 era indirizzata anche al direttore generale dell'ente, il quale devo rilevare che aveva assunto anche le funzioni di presidente della commissione.* ***Premesso che nell'atto dell'insediamento avanzai una perplessità circa l'opportunità dell'avvenuta nomina a presidente della commissione dello stesso direttore generale dell'ente, in quanto è prassi consolidata che tale nomina avviene all'interno della commissione medesima e solo dopo l'insediamento, ora che ho preso visione del fatto che il De Biasio sia venuto a conoscenza delle società partecipanti anticipatamente all'insediamento della commissione sarebbe stato sicuramente avanzato da me un ulteriore dubbio sulla procedura.*** *Preciso che all'atto dell'insediamento e della mia*

prima perplessità il De Biasio mi fece presente che la nomina era stata già deliberata e non era quindi la commissione a dover scegliere il presidente. ***Ricordo che l'architetto De Biasio nella sua qualità di direttore generale del Consorzio CE4 ci mostrò l'elenco dei morosi nei confronti dell'ente dal quale si evinceva che due società dell'a.t.i. capeggiata dalla Ecocampania erano morose e chiedeva quindi alla commissione di valutare l'esclusione della citata a.t.i.. Preciso che tale osservazione non fu accolta in quanto non di competenza della commissione medesima, nello spirito di massima garanzia per i concorrenti. Questo passaggio del De Biasio, ripeto, fatto in qualità di direttore generale del Consorzio CE4 e non di presidente della commissione, aumentava in me i dubbi circa l'opportunità del doppio ruolo rivestito dal medesimo. La commissione non doveva essere a conoscenza di tale morosità, in quanto ininfluente ai fini dell'attribuzione dei punteggi;*** *tale controllo poteva e doveva essere eseguito dal Consorzio anche in una fase successiva alla conclusione dei lavori della commissione…".*

Il prof. Rodolfo Napoli confermava la decisività del criterio di graduazione del punteggio indicato nella rappresentata riunione di commissione, oltre che la conoscenza acquisita soltanto in quella sede delle candidature pervenute:
"*…ricordo che l'esito della gara in argomento fu nettamente a favore di un candidato rispetto all'altro, questo soprattutto in virtù del punteggio attribuito all'elemento presenza di imprenditorialità giovanile, per il quale fu adottato il criterio parametrico derivante dal rapporto tra il numero di soci giovani e le quote di capitale sociale da ognuno di loro detenute…Preciso che le voci da valutare ed i relativi punteggi erano già stati stabiliti dall'ente appaltatore nel relativo bando di gara, che prevedeva per ogni voce da valutare un punteggio massimo attribuibile; in sede di discussione preliminare, la commissione decise all'unanimità solo i criteri da adottare per l'attribuzione dei punteggi ai concorrenti nel rispetto di quanto stabilito dal bando…D: quando è venuto a conoscenza dei nomi delle società partecipanti alla gara ? R: solo dopo l'insediamento della Commissione, precisamente durante le fasi relative alla procedura per la valutazione delle offerte descritte precedentemente…".*

Il rilievo del commissario Ingrosso circa la segnalazione operata da De Biasio per ottenere l'esclusione di Ecocampania (unico concorrente della Flora Ambiente nella gara) per 'morosità' trovava conferma documentale nei verbali delle riunioni nn. 2 e 3, tenutesi rispettivamente in data 3 e 10 luglio 2000 (allegati nn. 8 e 9, dell'informativa della Tenenza GdF di Mondragone).
Il verbale n. 3 del 10 luglio 2000 faceva anche emergere come il criterio di graduazione del punteggio connesso all'imprenditorialità giovanile aveva deciso le sorti della gara che si chiudeva in favore dell'ATI Flora Ambiente con un punteggio di 78 contro i 69 punti assegnati all'ATI ECOCAMPANIA: di questi 78 punti ben 40 corrispondevano al requisito suddetto, contro i 27 assegnati per lo stesso requisito (diversamente graduato) alla Ecocampania.
Questa dunque, in sintesi, la ricostruzione del patto corruttivo stipulato dagli Orsi con i pubblici amministratori.

6. Il patrocinio della fazione bidognettiana
Veniamo ora alla ricostruzione dell'accordo contratto con i camorristi di fede 'Cicciottiana', con l'avvertenza che i materiali che saranno qui di seguito valorizzati sono stati già vagliati dal GIP nelle ordinanze nn. 45 del 26 gennaio 2009 e 472 del 7 luglio 2009 (la prima annessa al faldone n. 4 degli atti trasmessi con la richiesta del 16.2.09; l'ultima trasmessa con missiva del 27.10.09).

Lo squarcio di questo antefatto della vicenda di corruzione e turbativa d'asta che si è appena richiamata è aperto naturalmente da Gaetano Vassallo.

Le dichiarazioni di Gaetano Vassallo

Vassallo Gaetano comincia, **nell'interrogatorio del 1° aprile 2008**, a presentarsi come referente della 'famiglia Bidognetti' nel controllo della società mista Eco4 s.p.a. la cui gestione senz'altro attribuisce ai fratelli Orsi. Indica immediatamente i soggetti che hanno deciso e che hanno curato l'instaurazione della collaborazione d'affari con i due imprenditori casalesi, nonché il soggetto che lo ha cercato a nome del capo detenuto.

Si tratta di BIDOGNETTI Aniello, riconosciuto reggente del clan negli anni '99 e 2000; e di MIELE Massimiliano. Sono noti a Vassallo anche i termini economici del contributo dovuto dagli Orsi all'organizzazione dei 'cicciottiani. Non esita Vassallo a definirsi 'socio occulto' della società mista e a precisare: i conferimenti che gli meritano questa qualità (automezzi; referenze bancarie; ma soprattutto *know – how*); le prospettive lucrative personali che lo inducono ad accettare la proposta di MIELE (l'assunzione di due fratelli con incarichi di responsabilità; la direzione, almeno di fatto, della discarica del cd. Parco Saurino 2).

"*…confesso…che ho agito per conto della famiglia Bidognetti quale loro referente nel controllo della società Eco4 spa gestita dai fratelli Orsi.* *Sono stato di fatto loro socio perché richiesto di farlo da parte di Massimiliano Miele, investito da Bidognetti Francesco, come da questi stesso riferito.* ***All'epoca era il Bidognetti Aniello la persona a gestire gli affari del clan riferiti alla famiglia Bidognetti e, a fronte degli impegni prestati dal clan ai fratelli Orsi, era stata fissata una tangente mensile pari a cinquantamila euro, con la previsione ulteriore dell'assunzione di cinquanta persone scelte dal clan.*** *I rapporti economici tra i fratelli Orsi e il clan sono stati regolati direttamente da Miele Massimiliano, con modalità che non conosco (…)* ***Io ero sostanzialmente un socio, seppure occulto, all'interno dell'Eco4 (****…) Faccio presente che quando fu creata la società di fatto tra me e i fratelli Orsi io fornii loro sette od otto automezzi per la raccolta dei rifiuti urbani.* ***Gli Orsi non erano minimamente attrezzati e, grazie ai miei mezzi, fu possibile per loro apparire concorrenziali nella gara dell'ATI. Non venni pagato al momento del conferimento proprio perché ero in realtà loro socio (…) Faccio presente che l'inadeguatezza degli Orsi nel gestire e operare nell'ambito della raccolta e gestione dei rifiuti era tale che fu necessario far assumere nell'Eco4 e impiegare operativamente due miei fratelli, Nicola ed Antonio, i quali furono impegnati operativamente nella gestione della discarica del Parco Saurino 2 (…)"**

Nell'**interrogatorio dell'8 maggio 2008** Vassallo si sofferma su LUBELLO Giovanni, genero di Cicciotto per averne sposato la figlia Katia, che egli stesso, su incarico di Bernardo Cirillo, asseriva di aver inserito tra i fornitori della ECO4, per via di affidamento diretto:

"Conosco Lubello Giovanni, titolare della rivendita di computer sita in Villa di Briano, sulla strada che da Frignano conduce a Casal di Principe. So che ha sposato la figlia di Bidognetti Francesco alias Cicciotto 'e mezzanotte'. ***Sapevo che era affiliato al clan Bidognetti da quando si fidanzò con la figlia del Bidognetti perché me lo riferì lui stesso. Quando io fui incaricato dal clan Bidognetti di dare una mano per la gestione della Eco4****…****mi fu detto da Cirillo Bernardo, cugino di Bidognetti, di far effettuare la fornitura di computer e programmi alla Eco4 a Lubello Giovanni, titolare della*

società La Nota. *Infatti, questo Giovanni effettivamente venne negli uffici della Eco4 di S. Maria Capua Vetere e fece la fornitura dei computer così come richiesto dal gruppo Bidognetti.* ***Sergio Orsi accompagnò il Lubello al Comune di Villa Literno dove ottenne un appalto per la fornitura dei computer.*** *In particolare, ricordo che il Lubello doveva vincere l'appalto perché così aveva deciso la famiglia Bidognetti e non si doveva fare la gara ma l'affidamento privato…Tali episodi sono avvenuti alla fine degli anni '90. Per la mia intermediazione per la fornitura alla Eco4 il Lubello mi regalò un computer portatile.* ***Il Lubello, per quanto mi risulta, è stato affiliato ai Bidognetti, in particolare a Bidognetti Francesco alias Cicciot' 'e mezanotte', fino al 2007, come mi ha riferito Cirillo Bernardo in occasionale di una festa di laurea della fidanzata di Bernardo Ciro avvenuta nel periodo estivo dell'anno 2006 – 2007 presso il mio albergo****"*

La vicenda è obiettivamente riscontrata dalle indagini eseguite dai CC del Comando Provinciale di Caserta e dalla Tenenza di Mondragone della Guardia di Finanza. Da queste emergeva che:

LUBELLO Giovanni, nato a Casal di Principe in data 24.8.1976, marito di **BIDOGNETTI Katia**, figlia del **BIDOGNETTI Francesco,** nel periodo indicato dal Vassallo Gaetano, era libero (egli risulta tratto in arresto in epoca recentissima dal 19.3.2008 al 18.6.2008).

Era titolare di un negozio per la vendita di materiale informatico;

E' inserito tra i fornitori della ECO4 con riferimento proprio al periodo indicato dal collaboratore di giustizia (1.1./31.12.2000) in relazione alla vendita di beni strumentali (computer pentium III e accessori) venduti da LA NOTA s.n.c. per l'importo di lire 65.700.000.

L'**interrogatorio del 3 giugno 2008** è in larga parte dedicato al rapporto di Vassallo con i fratelli Sergio e Michele Orsi.

Il collaboratore descrive la presentazione degli Orsi che gli fu fatta da MIELE Massimiliano in un incontro, tenutosi nell'ufficio di Vassallo Salvatore in Cesa, al quale Vassallo era stato convocato da Bernardo Cirillo, cugino di Cicciotto (la stessa persona che ebbe a presentare Vassallo a Nicola Cosentino tra l'89 e il '90).

All'incontro presenziavano, oltre ai fratelli Vassallo, il già menzionato MIELE Massimiliano, tale Borrato e naturalmente ORSI Sergio.

E' interessante notare come, nello spiegare le ragioni per le quali accettò l'idea di cooperare con gli Orsi, Vassallo si soffermi sulle grandi ambizioni del soggetto che sarebbe divenuto di lì a poco il *'braccio operativo'* della società mista ECO4. Il progetto di Orsi troverà infatti conferme molteplici nell'indagine intercettiva e documentale compendiata nelle richieste in esame e costituirà un cruciale momento di convergenza tra le strategie della camorra imprenditrice e quelle politiche di Nicola Cosentino.

E' significativo pure che quel primo scambio verbale con Sergio Orsi contenga già la chiara definizione della più importante contropartita che gli Orsi possono garantire ai soci camorristi: le relazioni preferenziali con le istituzioni, e in particolare con Giuseppe Valente e Claudio De Biasio, rispettivamente presidente e direttore tecnico del Consorzio CE 4, entrambi come vedremo uomini di Cosentino.

Orsi esplicita il progetto – che vedremo poi puntualmente realizzato – di accaparrarsi 'senza gara' il servizio di raccolta dei rifiuti solidi urbani per quasi tutti i comuni consorziati CE4; ma anche le lucrose prospettive annesse all'ampliamento della discarica di Parco Saurino 2.

A garanzia della 'fattibilità' del progetto Sergio Orsi descrive a Vassallo il meccanismo (il bando *su misura* del quale abbiamo già detto) attraverso il quale conta di accaparrarsi il ruolo di braccio operativo della società mista.

*"**conosco entrambi i soggetti. Ricordo a tal proposito che un pomeriggio alla fine degli anni '90 fui chiamato dal geometra Cirillo Bernardo, nipote di Bidognetti Francesco e affiliato al clan Bidognetti, dicendomi che voleva incontrarmi. Il Cirillo mi chiese, a nome del clan Bidognetti, di dare una mano ai fratelli Sergio e Michele Orsi di Casal di Principe ad inserirsi nel mondo dei rifiuti. Io risposi che da parte mia non c'era nessun problema, però volevo capire qual era il mio compito. Ricordo in particolare che ci incontrammo nell'ufficio di mio fratello Salvatore Vassallo sito in Cesa alla via De Tilla n. 43, dove eravamo presenti io, mio fratello Salvatore e i seguenti soggetti: Massimiliano Miele, fratello di Gaetano Miele cognato del geometra Bernardo Cirillo, affiliato del clan Bidognetti Francesco (ricordo che fu arrestato per traffico internazionale di stupefacenti); Borrato, non ricordo bene il nome, mi sembra Nicola o Francesco ed era di Lusciano (anche lui arrestato con Massimiliano Miele per lo stesso reato a Caserta sud ed anche lui attualmente detenuto come Miele) e Sergio Orsi di Casal di Principe. Iniziò a parlare Massimiliano Miele che mi disse che, come mi aveva già anticipato Bernardo, il Compare, ossia Francesco Bidognetti detto Cicciotto 'e Mezzanotte, voleva che io dessi una mano con la mia conoscenza e la mia esperienza agli Orsi a entrare nel mondo dei rifiuti e mi riferì che i fratelli Sergio e Michele Orsi di Casal di Principe avevano costituito una società la FLORA AMBIENTE Srl – Amministratore unico la figlia di Sergio ORSI, FLORA ORSI - e che doveva entrare a lavorare nel Comune di Mondragone ma non aveva i requisiti per entrare.** Io gli dissi che non conveniva entrare nel Comune di Mondragone a fare il servizio, perché non c'erano grossi utili per il servizio di raccolta; infatti conoscevo la ditta che stava già facendo il servizio di raccolta che è la "COVIM" di Pierino, di cui non ricordo il cognome, e Lello Sarnataro, che si lamentavano già da prima del fatto che avevano molti operai assunti e che non lavoravano perché appartenevano al clan "Fragnoli", come ad esempio il figlio di Fragnoli. **Gli Orsi mi diedero ragione ma dissero che il loro progetto era quello di essere il braccio operativo del consorzio pubblico "Ce 4" il cui presidente è Giuseppe Valente di Mondragone, mentre il direttore del consorzio Ce4 è l'Architetto De Biaso che "erano persone loro"; gli Orsi mi dissero che non dovevano fare solo il servizio di raccolta e trasporto dei rifiuti solidi urbani nel Comune di Mondragone, ma bensì in tutti i Comuni che fanno parte del bacino di utenza del Consorzio Ce4 e dovevano fare anche lo smaltimento dei rifiuti solidi urbani con l'ampliamento della vecchia discarica di Parco Saurino e farne una nuova; per far questo si doveva costituire una società mista il cui 51% è del pubblico (Consorzio dei Comuni Bacino Caserta 4) ed il 49% ai privati della FLORA AMBIENTE Srl. In tal modo avrebbero preso gli appalti per tutta la provincia di Caserta della N.U. La Flora Ambiente è stata costituita con la legge dell'imprenditoria giovanile al fine di agevolare l'aggiudicazione dell'appalto in questione, poiché tra le voci di capitolato era prevista come condizione quella di essere una società i cui soci dovevano essere donne, come mi disse lo stesso Sergio Orsi. Gli Orsi mi chiesero di aiutarli a trovare le attrezzature che la FLORA AMBIENTE non aveva e in particolare gli automezzi e le attrezzature speciali da indicare nel capitolato della gara, così da superare qualsiasi ditta che volesse partecipare alla gara. Io accettai l'incarico, m'impegnai a fargli avere tutto quello che serviva per vincere l'appalto; in cambio della mia collaborazione dovevo essere assunto come direttore della discarica Parco Saurino".***

Ricostruiti i temi di quel primo incontro, nello stesso interrogatorio, Vassallo ripercorre le tappe iniziali di quella collaborazione, con una ricchezza di dettagli che agevolerà la ricerca dei riscontri.
Riferisce del trasferimento degli automezzi nella titolarità della SETIA Sud (una sua

società) alla Flora Ambiente; del bando di gara studiato per neutralizzare la concorrenza di Nicola Ferraro, con l'introduzione del requisito dell'imprenditorialità giovanile e (aspetto fino quel momento sfuggito agli inquirenti) di una clausola di 'capacità finanziaria' che troverà perfetto riscontro; di Giuseppe Valente e Claudio De Biasio che, come sopra si è plasticamente dimostrato e come ulteriormente si dimostrerà, "*facevano tutto quello che gli chiedevamo";* delle complicità interne al sistema bancario, e in particolare all'agenzia BNL di Caserta; dell'avvenuta assunzione dei fratelli Nicola e Salvatore presso la ECO4 e dell'assunzione dello stesso Gaetano Vassallo presso la SOCOM, altra società del gruppo Orsi:

*" **Ci salutammo e per 3 o 4 mesi lavorammo solo per creare le condizioni e tutti i requisiti necessari per far vincere l'appalto alla Flora Ambiente. La prima cosa che feci fu quella di andare a Giugliano io, Sergio Orsi, Massimiliano Miele ed Aldo Schiavone, prestanome di Michele Orsi e fratello dell'assessore Schiavone di Casal di Principe e da quest'ultimo fatto assumere presso la ditta dell'Orsi dalla ditta CAVIS di Guarino, a ritirare tutti gli automezzi nostri della SETIA Sud che avevo venduto alcuni giorni prima a tale Guarino titolare della ditta Cavis di Giugliano. Ricordo che al ritorno fummo fermati dalla Polizia e registrati. Parlai con Guarino che, dopo essersi allontanato in disparte con Miele Massimiliano, accettò di restituirmi i mezzi che non mi erano stati ancora pagati. Pertanto, riavuti i mezzi, la S.E.T.I.A. SUD SRL vendette alla Flora Ambiente 7 – 8 autocarri compattatori monopoli di marca Antonicelli X1 e X2, autorizzati per la raccolta dei rifiuti solidi urbani dal cassonetto.** Inoltre dalla NOVAMBIENTE SRL dei F.lli Vassallo fu venduto alla Flora ambiente un compattatore HANOMAG CL 66. Dopo questi passaggi ci incominciammo a interessare al capitolato di gara che il Consorzio Caserta 4 doveva indire e, in particolare, ricordo che la prima cosa che fece Sergio Orsi fu quella di portare via alla ECOCAMPANIA di Nicola Ferraro che aveva l'ufficio a Teverola un loro esperto in materia di raccolta differenziata, il sig. GOLINO di Marcianise, non ricordo il nome ma lo saprei riconoscere dalle fotografie, il cui padre è un funzionario della Bnl di Caserta. **Voglio precisare che il capitolato della gara doveva essere fatto da Giuseppe Valente, presidente del consorzio, insieme a Di Biasio, direttore del consorzio Ce4, i quali facevano tutto quello che gli chiedevamo.** Inoltre in quel periodo **Bidognetti Francesco attraverso i suoi affiliati, come prima vi ho riferito, aveva deciso che l'appalto doveva vincerlo la società dei fratelli Orsi e non la Ecocampania società di Ferraro Michele, fino a quel momento sponsorizzata dalla famiglia Bidognetti**. Ricordo a tal proposito che **Sergio Orsi e Michele Orsi fecero inserire, oltre quella della imprenditoria femminile, nel capitolato la voce "possono partecipare quelle ditte che dimostrano avere una potenzialità economica notevole e che la ditta partecipante doveva allegare una garanzia rilasciata da un istituto bancario…". A tal fine ricordo che i fratelli Sergio e Michele ORSI esibirono in sede di partecipazione alla gara una lettera di credito rilasciata dalla Bnl di Caserta sita in Corso Trieste, tramite il funzionario GOLINO papà del GOLINO di cui ho parlato in precedenza, poi sparita nel nulla nella fase dei controlli eseguiti a seguito di esposti fatti anonimamente.** Tuttavia la lettera era citata, se ben ricordo, nell'atto di aggiudicazione della gara. Ricordo ancora che all'inizio della vicenda i fratelli ORSI si appoggiavano per le operazioni amministrative presso gli uffici del Consorzio CE 4 siti in Castelvolturno, vicino al Commissariato di Polizia, poi ci incominciammo a incontrare presso gli uffici della SOCOM srl di Schiavone Aldo, ma di fatto di Michele e Sergio Orsi, siti in Santa Maria Capua Vetere. Dopo vinto la gara la FLORA AMBIENTE srl, si doveva dare una denominazione e una sede legale alla nuova società che aveva vinto la gara che fu chiamata ECO4. **Ricordo che io, Golino, Sergio***

e Michele Orsi ed il Presidente Peppe Valente, eravamo da poco scesi dal Notaio Decimo di Santa Maria Capua Vetere e, appena entrati negli uffici della SOCOM che erano situati dall'altro lato della strada, Sergio Orsi telefonò al direttore del Consorzio CE 4, arch. De Biase, e gli chiese di preparare due mandati di cinque milioni di vecchie lire alla Flora Ambiente come anticipo e dopo gli avrebbero portato le fatture*…I soldi servivano ufficialmente per sistemare i loro impegni economici della Flora Ambiente ma in realtà mi disse il Sergio Orsi che se li sarebbero divisi, Sergio e Michele Orsi e Giuseppe Valente e l'Arch. Di Biase…Michele Orsi aveva i conti correnti presso una piccolissima banca sita in SanTammaro (CE) ove riteneva più facile sfuggire ai controlli. Successivamente feci avere delle fideiussioni bancarie ed altri automezzi alla FLORA AMBIENTE che aveva la partecipazione del 49 % nella spa Eco 4 mentre il Consorzio CE4 aveva il restante 51%. Gli uffici della ECO4 furono fittati in Santa Maria Capua Vetere di fronte agli uffici della SOCOM ed erano di proprietà di Sergio Orsi.* ***Io non fui assunto come Direttore perché avevo delle pendenze giudiziarie ma furono assunti presso la ECO 4 come responsabili di cantiere della discarica i miei fratelli Nicola ed Antonio Vassallo, che si avvalevano dei miei consigli per la gestione della discarica perché gli Orsi non avevano alcuna esperienza. Io invece fui assunto presso la SOCOM come geometra.*** *Quando furono fatti i lavori per allestire gli uffici della ECO 4 negli appartamenti di proprietà degli Orsi, ricordo che i computer furono forniti dalla ditta LA NOTA di Giovanni Lubello, marito della figlia di Bidognetti Francesco, affiliato al clan come già riferito. Ho lavorato…con FLORA AMBIENTE ed ECO 4, mettendo a loro disposizione tutta la mia esperienza e le mie conoscenze per fare avere i mezzi all'ECO 4 (ricordo che in una occasione, per far fronte ad una emergenza a Castel Volturno dove non si era ancora cominciato il servizio, chiamai la ditta CICCARELLI Giovanbattista SpA di Giugliano che inviò 12 autocompattatori con autisti) (…)*

L'assunzione dei fratelli di Vassallo presso la ECO4 è riscontrata dall'esame del libro matricola della società dal quale risulta l'iscrizione dei dipendenti Vassallo Nicola e Vassallo Antonio, con mansioni di addetti ad impianto di smaltimento nel periodo 20.11.2000 - 25.11.2002.
Ha trovato conferma documentale anche l'assunzione di Gaetano Vassallo presso un'impresa del gruppo Orsi. Non si tratta però della Socom, indicata dal collaboratore, ma della ditta individuale ORSI MICHELE, dalla quale Gaetano Vassallo risulta avere percepito redditi negli anni 2000 *(vedi inf. del 22/10/2008, allegato n. 4)* e 2001 *(allegato n.5).*
L'imprecisione mnemonica conferma quanto quell'assunzione rappresentasse un dato puramente formale, essendo ben altra l'allocazione effettiva della risorsa umana Vassallo Gaetano.
L'argomento vale a superare anche un passaggio della memoria difensiva depositata dall'indagato Cosentino presso l'ufficio di Procura in data 13.11.2008 nel quale si richiamano una serie di cause di lavoro che sarebbero state intentate da esponenti della famiglia Vassallo nei confronti della ECO4 e del Consorzio CE4. Questi contenziosi dimostrerebbero, nella prospettiva dell'indagato, che Vassallo si attribuisce nella sede investigativa un ruolo di 'socio occulto' che evidentemente nega (non è dato stabilirlo con certezza, atteso che gli incarti indicati non sono stati mai acquisiti) davanti al giudice del lavoro. In realtà però il ruolo effettivo di Vassallo nell'operazione ECO4 trova conferme plurime, promananti da fonti esterne rispetto al dichiarante (primi fra tutti i fratelli Orsi), sulle quali non mancheremo di intrattenerci.

E' stata pure riscontrata l'introduzione nel bando di gara del requisito di capacità finanziaria, così come la collaborazione prestata da Vassallo a tale riguardo.
Nel bando di gara del 28.3.2000 *(allegato n. 6 inf. del 22/10/2008)*, al punto 9. ("criteri di scelta") è appunto previsto il requisito di "Capacità finanziaria", così definito "*per capacità finanziaria si intenderà il possesso in proprio di detta capacità e/o il possesso di idonee referenze bancarie*". Nel verbale di gara n. 3 *(allegato n.7 inf. del 22/10/2008)*, la Commissione

rilevava che effettivamente la referenza bancaria richiesta da tale A.T.I. era stata rilasciata dalla "*Banca B.N.L.*".
E'stato poi Michele Orsi a riscontrare l'impegno profuso dal Vassallo per assicurare ai fratelli Michele e Sergio Orsi la concessione di fidi bancari. Vanno poste in risalto le dichiarazioni rese dall'Orsi Michele in data 6.6.2007 che così descrive un momento della sua rottura con il partner Vassallo: "(*...) **VASSALLO** si infastidì del diniego e **di lì a poco ci fece revocare un fido che era stato aperto, attraverso lui, presso la banca Monte Paschi di Aversa, trattandosi evidentemente di un rapporto che il funzionario di banca aveva deciso di accettare soltanto ed esclusivamente in funzione della persona del VASSALLO Gaetano**...".

La parte finale dell'interrogatorio è dedicata alla ricostruzione degli avvicendamenti al vertice del gruppo Bidognetti, per tutto il periodo della militanza di Vassallo: da Cicciotto 'e mezzanotte ad Alessandro Cirillo detto 'o sergente:

*" **In ogni caso, essendo io un fiancheggiatore del gruppo Bidognetti, posso dire che per tutto il periodo in cui sono stato legato, e per quanto appreso in prima persona, le gerarchie erano le seguenti: al vertice vi era Bidognetti Francesco detto Cicciotto 'e mezzanotte, poi i figli, in particolare Bidognetti Raffaele e Aniello; dopo l'arresto di Francesco Cicciotto 'e mezzanotte, le redini del gruppo passarono a Bidognetti Aniello**, che poi fu arrestato e pertanto **passarono a Guida Luigi detto o'drink**, anche se vi era una forte pressione all'interno del gruppo Bidognetti per far fuori il Guida e far gestire il gruppo a Bidognetti Raffaele. **Dopo l'arresto del Guida il gruppo viene comandato da Bidognetti Raffaele detto il puffo**, con il sostegno di Emilio Di Caterino, Cirillo Alessandro detto o' sargente, Letizia Giovanni e altri fiancheggiatori, come Di Tella Antonio e tale Oreste. **Dopo l'arresto di Bidognetti Raffaele il gruppo viene comandato da Alessandro Cirillo (**...)*"

Nell'**interrogatorio del 5 giugno 2008** Vassallo confermava e precisava quanto già riferito in relazione alla convocazione ricevuta da Bernardo Cirillo per il primo incontro con Sergio Orsi, ribadendo la provenienza della disposizione dallo stesso Cicciotto o comunque dagli esponenti apicali del gruppo. Si soffermava con ricchezza di dettagli sul risalente rapporto con Bernardo Cirillo. Riprendeva il tema delle grandi ambizioni di Sergio Orsi, rimarcando nuovamente quanto e perché fosse appetibile ('un progetto eccezionale') il programma di Orsi sulla discarica Parco Saurino 2. Rivela il collaboratore che l'ambizione reale della società mista (e dei camorristi che ne divennero di fatto soci) era quello di monopolizzare il settore della raccolta e, sul lungo termine, di dar vita ad un ciclo integrato alternativo a quello dominato dall'ATI FIBE s.p.a. – FISIA Italimpianti in base ai contratti stipulati nel 2000 e nel 2001.
L'analisi dei benefici è degna di un professionista del settore e l'indagine intercettiva la riscontrerà in pieno.
Stabilisce Vassallo una cronologia tra l'azione corruttiva e quella camorristica messe in campo dagli Orsi: all'epoca dell'incontro negli uffici della SETIA Sud era già sorta la Flora Ambiente, nella titolarità esclusiva (e nominale) di due donne infratrentenni che lasciava presagire quale sarebbe stato l'*atout* fondamentale previsto dal bando di gara.

"*Ricevo lettura di parte dell'interrogatorio reso il 3 giugno 2008 nella parte in cui parlo di Sergio e Michele ORSI, di seguito riportato: "ricordo a tal proposito che un pomeriggio alla fine degli anni '90 fui chiamato dal geometra Cirillo Bernardo nipote di Bidognetti Francesco e affiliato al clan Bidognetti, dicendomi che voleva incontrarmi. Il Cirillo mi chiese, a nome del Clan Bidognetti, di dare una mano ai fratelli Sergio e Michele Orsi di Casal di Principe ad inserirsi nel mondo dei rifiuti. Io risposi che da parte mia non c'era nessun problema però volevo però capire qual era il*

mio compito". Confermo quanto riferito e posso dire che io non conoscevo prima di allora Michele e Sergio ORSI ed ebbi a conoscerli nell'incontro successivo di cui ho parlato, proprio a seguito della mia manifestazione di disponibilità nei confronti di CIRILLO Bernardo. Quanto al ***CIRILLO questi ebbe e riferirmi che l'incarico di avvicinarmi per saggiare la mia disponibilità gli fu dato dal "parente", intendendo riferirsi in tal senso, apertamente, a BIDOGNETTI Francesco oppure ad una persona dei suoi familiari più stretti.*** *Era evidente dal discorso, in ogni caso, che la decisione proveniva da BIDOGNETTI Francesco e doveva essere stata veicolata attraverso uno dei suoi figli; faccio presente che in quel periodo BIDOGNETTI Francesco era ovviamente detenuto da lungo tempo e ricordo che invece BIDOGNETTI Aniello era latitante, ricordo per un fatto omicidiario. Anche BIDOGNETTI Raffaele era detenuto in quel periodo. Faccio presente che CIRILLO Bernardo, da me già indicato nel corso di altri interrogatori come il geometra CIRILLO, fu da me conosciuto a partire dal periodo relativo all'ECOLOGIA 89 di CERCI Gaetano, la società di cui ho già parlato a proposito del traffico di rifiuti provenienti dal nord Italia;* ***lo conobbi verso la fine degli anni '80 e questi svolgeva effettivamente le mansioni di ragioniere per l'ECOLOGIA 89 di Gaetano CERCI. I rapporti con CIRILLO Bernardo erano talmente solidi che io ebbi a farlo risultare assunto fittiziamente presso la società NOVAMBIENTE s.r.l. dei f.lli VASSALLO,*** *allorché si ebbe il c.d. passaggio di cantiere tra gli operai impiegati presso la mia discarica e il consorzio che subentrò nella gestione a seguito della requisizione ed esproprio della discarica. Ciò accadde in un periodo di poco successivo al '95, ma rifiutò di recarsi presso una discarica di Salerno per svolgere l'attività e quindi di fatto fruì di un assegno di mobilità per 7/8 mesi.* ***Nell'occasione CIRILLO Bernardo, in quel primo contatto, mi rappresentò che se mi fossi messo a disposizione per BIDOGNETTI si poteva fare una grossa operazione nel campo dei rifiuti: in quel periodo c'era il boom dei consorzi e delle società miste pubblico-private e mi disse a grandi linee che era un'operazione che consentiva di trarre cospicui guadagni. Fu quindi fissato un incontro. Dopo pochi giorni da questa mia assunzione di disponibilità, CIRILLO Bernardo mi chiamò telefonicamente preannunciandomi l'incontro specificativo degli accordi che si sarebbero dovuti tenere e del ruolo che io avrei dovuto assumere per conto di BIDOGNETTI Francesco. Mi disse che sarebbe venuto da me Massimiliano MIELE, fratello di Gaetano MIELE e cognato del CIRILLO, senza anticiparmi chi sarebbero state le altre persone che avrei potuto incontrare a casa mia. L'incontro si tenne dunque presso l'Ufficio di mio fratello Salvatore sito in Cesa alla Via De Tilla n° 43, ove io e Salvatore incontrammo Massimiliano MIELE, tale BORRATA di Lusciano e Sergio ORSI.*** *Faccio presente che io non conoscevo prima di allora nessuna di queste tre persone ed ebbi a frequentarli assiduamente a partire da quel giorno.* ***Per questo seppi poi che sia il MIELE che il BORRATA vennero arrestati per un traffico di droga.*** *Fu in quella riunione che si specificò, per quanto mi riguarda, l'accordo societario che evidentemente era stato già preso tra le persone ivi convenute. Faccio presente che io in quella riunione ero l'unico, insieme a mio fratello Salvatore, che avevo una esperienza specifica e professionalità nel settore dei rifiuti, sicché il mio giudizio e le mie decisioni sarebbero state chiaramente determinanti per la concretizzazione del loro progetto. Compresi chiaramente dai discorsi che l'unico interlocutore tra i presenti che aveva un chiaro programma era Sergio ORSI, mentre gli altri due erano palesemente del tutto inesperti in quel settore.* ***Dal discorso che si fece e di cui ho già parlato nell'interrogatorio del 3 giugno scorso, era chiaro che Sergio ORSI avesse già creato i presupposti e definito i termini per la concretizzazione del suo programma. Ho già descritto l'andamento di quell'incontro e della discussione nello***

scorso interrogatorio del 3 u.s. Era chiaro che Sergio ORSI avesse preso accordi con il gruppo di BIDOGNETTI e che le persone del gruppo avevano necessità, non essendo esperte, di comprendere la bontà del progetto per calcolare anche i proventi e per questo si erano rivolti a me godendo con loro di relazioni privilegiate ormai da anni*. Compresi immediatamente le specificazioni di Sergio ORSI e capii che* ***quello era un progetto eccezionale: si trattava del primo caso di una società mista pubblico-privata che avrebbe monopolizzato la raccolta degli R.S.U. sull'intero bacino consortile. Da quando era iniziato il commissariamento del ciclo dei rifiuti in Campania, praticamente tutti i privati erano stati esclusi dalla gestione diretta e i consorzi erano interamente Comunali. La previsione, di cui mi parlò ORSI Sergio, di una società mista pubblico-privato costituiva una breccia fondamentale per consentire nuovamente ai privati e, conseguentemente anche ai gruppi organizzati mafiosi quali quello di BIDOGNETTI, di ingerirsi direttamente nella gestione. Mi spiegò inoltre Sergio ORSI che il loro progetto prevedeva che il consorzio avrebbe creato un c.d. "braccio operativo" che avrebbe non solo acquisito tutti gli appalti per la raccolta degli R.S.U. comunali, ma cosa molto più importante e lucrosa, avrebbe assunto anche la gestione della discarica di Parco Saurino. La discarica di Parco Saurino era una discarica dismessa sita molto vicino alla calcestruzzi BASCHI, sotto sequestro e abbandonata, e il progetto di cui mi parlò Sergio ORSI era quello di sfruttarne le capacità residue e provvedere al suo ampliamento. Era previsto inoltre lo sfruttamento del biogas della discarica, la messa in sicurezza della discarica e anche la realizzazione di un impianto di tritovagliatura da collocare nell'area Parco Saurino. Faccio presente che quella discarica avrebbe dovuto sostenere il peso di tutto il carico dei rifiuti della Campania perché in quel periodo non vi erano soluzioni alternative e quindi la gestione di quella discarica avrebbe comportato dei profitti elevatissimi. Già soltanto gestire lo smaltimento dei rifiuti in discarica comporta dei profitti elevatissimi, senza parlare poi dei lavori accessori a questo, che consentono spazi di manovra altissimi e incontrollabili…Posso dire che la gestione della discarica comporta la gestione diretta dei lavori per trasporto di ghiaia, dello smaltimento del percolato, dell'acquisto del terreno vegetale per la copertura, la messa in opera dei teli, la realizzazione di pozzi per il biogas, la realizzazione del progetto di messa in sicurezza e così via, senza qui entrare nello specifico, preciso che tutte queste attività furono demandate alla SOCOM, previa gara o licitazione, del tutto pilotata; la SOCOM era una società degli ORSI, amministrata da SCHIAVONE Aldo; fui io stesso ad accompagnare SCHIAVONE Aldo e Michele ORSI presso il MPS di Aversa, istituto di credito presso il quale io ero cliente e che scelsi per loro, avendo dei privilegi.*** *Ricordo che addirittura fu ORSI Michele a siglare con una firma al posto di SCHIAVONE Aldo le sottoscrizioni necessarie per operare su quel conto corrente. Ritornando a parlare di questa prima riunione, faccio presente che mio fratello Salvatore era presente durante l'intero colloquio e la sua partecipazione era non solo motivata dal fatto che ci trovavamo negli uffici della SETIA SUD da questi amministrata, ma anche legata al fatto che anche Salvatore sarebbe entrato a far parte di questa società.* ***Questo primo incontro si ebbe certamente diversi mesi prima della indizione della gara che intervenne da parte del consorzio CE4; come ho già sinteticamente riferito era stata già creata la società FLORA AMBIENTE da parte di Sergio ORSI, predisponendo quelli che sarebbero stati i dati distintivi della società che avrebbero consentito l'aggiudicazione della gara attraverso la delibazione di un bando costituito proprio su misura della FLORA AMBIENTE. Faccio presente che la FLORA AMBIENTE all'epoca era praticamente una "scatola vuota" e l'unica peculiarità di questa società che avrebbe consentito di pilotare l'aggiudicazione di una…gara d'appalto era costituita dal fatto che i soci erano di sesso femminile".***

La ‘scatola vuota’ che Vassallo aveva il compito di riempire di esperienza e mezzi aveva un unico avversario: la Ecocampania dei fratelli Ferraro, con i quali Sergio Orsi asseriva di aver stipulato un ‘patto di desistenza’, un patto che sarebbe stato però sospetto se avesse comportato addirittura l’astensione dell’impresa dalla partecipazione al bando.
In sostanza Ferraro Nicola, dopo essere stato avvicinato da uomini di Bidognetti, aveva garantito – secondo quanto Orsi ebbe a riferire al socio Vassallo – “***che la sua partecipazione sarebbe stata del tutto formale e che non si sarebbe comunque opposto alla sua successiva esclusione”.***

“ *Si trattava di un requisito insufficiente* (Vassallo sta parlando del requisito legato alla giovane età dei soci, n.d.e) *per una competizione con altre società strutturate e, in particolare, in una gara partecipata anche dalla ECOCAMPANIA.* ***Praticamente l’avversario con cui concorrere era la ECOCAMPANIA e per noi era necessario creare quindi un’ATI competitiva, cosa di cui mi occupai io personalmente. Faccio presente che in realtà Sergio ORSI mi disse che era già stato avvicinato, prima della gara, Nicola FERRARO, amministratore della ECOCAMPANIA unitamente al fratello. ORSI Sergio mi disse che a seguito dell’avvicinamento Nicola FERRARO aveva garantito che non avrebbe concorso realmente a quella gara, ma che avrebbe partecipato al bando soltanto perché sarebbe stato singolare non farlo. Aveva garantito, sempre a dire di Sergio ORSI, che la sua partecipazione sarebbe stata del tutto formale e che non si sarebbe comunque opposto alla sua successiva esclusione. Sergio ORSI mi disse che il FERRARO era stato avvicinato da qualcuno del clan BIDOGNETTI e proprio per questa ragione si era reso disponibile”.***

Un’altra prestazione faceva parte del ‘pacchetto’ conferito dal gruppo bidognettiano agli Orsi: la mediazione criminale con i clan dominanti nei territori in cui avrebbe operato la ECO4, dopo l’affidamento dei servizi. E anche questo tema illustrato da Vassallo è copiosamente riscontrato dagli atti.

“ Faccio presente che il ruolo e l’impegno del gruppo BIDOGNETTI era proprio quello di garantire l’aggiudicazione di quella gara a ORSI Sergio e garantire la società affidataria dei servizi con tutti i Comuni del consorzio nei rapporti con i singoli clan locali. In pratica compresi agevolmente che gli accordi tra Sergio ORSI e BIDOGNETTI prevedevano che tutti i clan che insistevano sui singoli Comuni sarebbero stati garantiti nel percepire una tangente attraverso il gruppo BIDOGNETTI, che si poneva come intermediario necessario. Era un modo per evitare che diversi clan potessero fare confusione e che il servizio funzionasse bene senza che vi fossero contrasti da parte dei singoli capi zona”.

Abituato ad agire all’ombra di Bidognetti, Gaetano Vassallo diventa l’eminenza grigia degli Orsi. E’ lui, tra l’altro, a individuare nella rete delle sue conoscenze i soggetti idonei a diventare *partners* della Flora Ambiente nell’ATI che parteciperà alla gara. Il racconto è, come al solito, puntuale nell’enunciazione delle referenze degli imprenditori prescelti (CAPASSO e BRIGNOLI) e delle ragioni per le quali ciascuno di loro accettò la proposta. La precisione del propalante è tale da indurci a ritenere che, quando Sergio Orsi afferma di avere in prima persona scelto gli imprenditori da associare alla Flora Ambiente, tace deliberatamente la segnalazione ricevuta da Vassallo, con il comprensibile intento di allontanare da sé i sospetti di mafiosità. Vassallo ritorna poi sugli stretti rapporti tra la coppia Valente – Di Biasio e i fratelli Orsi.

E’ emblematica della forte coerenza delle dichiarazioni la spiegazione che Vassallo fornisce dell’attività posta in essere per rendere competitiva la ATI capeggiata dalla Flora Ambiente dei fratelli Orsi.
Sergio Orsi – dice il collaboratore – non si fidava pienamente della promessa di desistenza formulata dall’avversario Nicola Ferraro. L’indagine intercettiva che tra breve illustreremo dimostra quanto detti timori fossero fondati e quanto fu decisivo l’intervento minatorio dei *cicciottiani* per indurre Ferraro alla rassegnazione!

“ Ritornando alla prima riunione, praticamente in quel contesto io entrai in società con loro proprio quel giorno e da quel giorno in poi, praticamente tutti i giorni, sono stato sempre con Michele e Sergio ORSI. A partire quindi dal giorno dopo o comunque dai giorni immediatamente successivi, ebbi modo di conoscere Michele ORSI, fratello di Sergio…Già nel corso di questa riunione, Sergio ORSI mi disse che l’affare era seguito anche da suo fratello e quindi già sapevo che mi sarei dovuto relazionare con i due fratelli. A partire da quel giorno io ho collaborato per molti mesi per la realizzazione dei progetti di questa società; certamente ho operato con loro anche alcuni mesi dopo la costituzione della ECO 4 avvenuta presso il notaio Decimo di S. Maria C.V.. Faccio presente che io praticamente tutti i giorni stavo con loro e i due fratelli operavano congiuntamente presso l’ufficio del consorzio CE 4 in Castel Volturno, uffici dislocati vicino al locale Commissariato. Quando invece era necessario uscire per portarsi nei luoghi diversi secondo le varie necessità i due fratelli operavano disgiuntamente; quando c’era Sergio non c’era Michele e viceversa. Praticamente fin quando le persone del gruppo BIDOGNETTI mi imposero di abbandonare la società con i f.lli ORSI, sono stato protagonista diretto degli avvenimenti. Fui io stesso, nel periodo antecedente alla partecipazione alla gara, a creare i presupposti della sua aggiudicazione individuando i partner che avrebbero partecipato all’ATI in modo da consentire un’agevole aggiudicazione, individuando i requisiti che sarebbero stati inseriti nel bando di gara.
Come già riferito, ***VALENTE Giuseppe, presidente del consorzio, e l’arch. Claudio DE BIASIO, direttore generale del consorzio stesso, erano “culo e camicia” con entrambi i fratelli ORSI; si trattava di quattro persone che rappresentavano un unico soggetto; facevano tutto insieme, uscivano, mangiavano e praticamente tutto ciò garantiva l’aggiudicazione della gara.***
L’attenzione che abbiamo posto nella creazione di un’ATI apparentemente competitiva e nella individuazione dei requisiti per rendere certa l’aggiudicazione era legata al fatto che Sergio ORSI non si fidava di quello che Nicola FERRARO aveva garantito quando era stato avvicinato dagli uomini di BIDOGNETTI. Fu sempre Sergio ORSI a far presente la sua sfiducia nelle promesse di FERRARO e da qui la necessità di attrezzarci in modo pienamente adeguato al risultato da raggiungere. Sergio ORSI aveva il progetto imprenditoriale ma non aveva le capacità e le relazioni per portarlo a compimento e fui quindi io a fare tutto. Individuai, quale partner dell’ATI: CAPASSO Ciro, il quale era uno dei pochi a godere delle autorizzazioni per la raccolta dei rifiuti direttamente dal cassonetto e tale autorizzazione all’epoca era vantata anche dalla sola ECOCAMPANIA. Convinsi CAPASSO Ciro di partecipare all’ATI, partecipazione peraltro meramente formale, in quanto alla sua quota del 10% non corrispondeva alcun versamento, promettendogli che una volta aggiudicati i servizi di raccolta dei RSU con i diversi Comuni ci saremmo rivolti a lui per il noleggio di alcuni automezzi; gli feci presente che nell’ATI i miei soci erano “due amici di Casale” evitando di dargli eccessive spiegazioni circa le relazioni che questi avevano con BIDOGNETTI. CAPASSO Ciro sapeva invece perfettamente i miei trascorsi con il gruppo di BIDOGNETTI Francesco, ma comunque decise di

partecipare perché "non stavamo facendo delle rapine" e si trattava di un modo per lavorare. È ovvio che alla gara avrebbe potuto partecipare qualsiasi società e la necessità di porre dei requisiti particolarmente stringenti era legata alla necessità di sconfiggere qualsiasi ipotetico concorrente. Individuai poi in tale BRIGNOLA di Brescia un altro partner dell'ATI. Lo conobbi attraverso un mio amico (…) Toni MAROTTA. Gli chiesi se conoscesse qualcuno che stesse facendo gli smaltimenti in Campania e che fosse stato autorizzato a farlo, in quanto mi serviva una società che fruisse delle autorizzazioni per lo smaltimento dei rifiuti. Non gli diedi altre spiegazioni e lui m'indicò questo BRIGNOLA, il quale stava facendo dei lavori sulla discarica LO UTTARO di Caserta. Promisi al MAROTTA di concedergli poi la progettazione della messa in sicurezza della discarica Parco Saurino, nell'ipotesi in cui avesse convinto BRIGNOLA a partecipare all'ATI, cosa che poi accadde. *BRIGNOLA prese poi gli accordi diretti con Sergio ORSI e il primo acquistò formalmente una quota dell'ATI, senza versare alcunché, per una contropartita che non so riferire nel dettaglio o che comunque al momento non ricordo. Ricordo comunque che BRIGNOLA era interessato a disfarsi di un'azienda sita a Venafro e ORSI gli garantì che avrebbe poi acquistato questa società denominata ECO TOP, che svolgeva la raccolta delle batterie esauste".*

Protagonista, durante tutti i mesi della partnership Bidognetti – Orsi, delle vicende salienti del progetto nel periodo '99-2002, Vassallo può attendibilmente riferire quali fossero i rapporti instaurati dagli ORSI con la coppia Valente - De Biasio.

"Per quanto riguarda i rapporti tra VALENTE ed i f.lli ORSI, questi erano estremamente legati tra loro; VALENTE era originariamente un funzionario INPS e faceva attività politica per F.I. e fu individuato come presidente del consorzio CE 4, ritengo proprio grazie ai f.lli ORSI; credo che la scelta del presidente del consorzio spettasse al comune più popoloso nell'ambito del consorzio, ma io non posso dire il dettaglio perché io conobbi VALENTE dopo i f.lli ORSI quando era divenuto già presidente. Per quanto concerne il direttore Claudio DE BIASIO io, nei primi giorni in cui operavo con Sergio ORSI, chiesi a quest'ultimo per quale motivo fosse stato scelto proprio il DE BIASIO quale direttore, in considerazione del fatto che palesava dei chiari limiti in materia di rifiuti, poteva essere un bravo architetto, ma capiva poco, era però intelligente e ci mise poco a impratichirsi della materia. Chiesi quindi a Michele ORSI le ragioni per le quali era stata scelta questa persona e Sergio fece riferimento al fatto che, oltre ad essere una "persona loro", era parente di un magistrato di Napoli. Si trattava di una di quelle affermazioni dopo le quali non si fanno più domande ed io non indagai oltre; non so dunque dire se quest'affermazione corrispondesse a realtà. Non mi interessai molto di approfondire la questione anche perché Sergio, a differenza di Michele, mi ispirava meno fiducia in quel che diceva; eccedeva in chiacchiere. Una volta creati i presupposti per rendere agevole l'aggiudicazione della gara, il bando fu predisposto dai fratelli ORSI unitamente a VALENTE e DE BIASIO, inserendo tutti i requisiti che caratterizzavano l'ATI".

A questo punto del lungo interrogatorio sostenuto il 5.6.2008 Vassallo riprende e precisa alcuni dei temi già trattati. Ritorna sul rilievo strategico dell'operazione Parco Saurino 2 e sulla sua ambizione di divenire, di fatto, direttore tecnico di quella discarica.
Puntualizza anche come fu necessario l'esercizio di una certa capacità 'persuasiva' per ottenere, dal soggetto al quale aveva già venduto i suoi automezzi (tale Guarino della

CAVIS di Giugliano), la restituzione degli stessi al fine di conferirli agli Orsi: operazione questa che richiese l'intervento di MIELE Massimiliano.

" Confermo quanto dichiarato nell'interrogatorio dello scorso 3 giugno di seguito riportato e di cui ricevo lettura: "La Flora Ambiente è stata costituita con la legge dell'imprenditoria giovanile al fine di agevolare l'aggiudicazione dell'appalto in questione poiché tra le voci di capitolato era prevista come condizione quella di essere una società i cui soci dovevano essere donne, come mi disse lo stesso Sergio Orsi. Tale escamotage era stato suggerito all'Orsi da un commercialista di SMCV, tale Pirone…Intendo fare le seguenti precisazioni: quando mi riferisco al fatto che la FLORA AMBIENTE era nata con una legge che favoriva l'imprenditoria giovanile, in realtà intendo dire che la legge agevolava le partecipazioni femminili per le società e la cosa mi fu detta da Sergio ORSI (omissis) Faccio presente incidentalmente che la mia unica formale presenza con i f.lli ORSI era legata alla mia formale assunzione come geometra presso la SOCOM facente capo di fatto a Michele ORSI, ma formalmente riferita ad Aldo SCHIAVONE. ***Faccio presente che io avevo interesse di avere ruoli formali nella ECO 4 e chiesi di fare il direttore della discarica di Parco Saurino, ma i f.lli ORSI mi dissero che, per i miei precedenti giudiziari, la cosa avrebbe potuto creare dei problemi per la certificazione antimafia e quindi mi dirottarono con un ruolo formale alla SOCOM. Certamente risulto ancora sul libro matricola della SOCOM, ma comunque non ho mai preso nessuna retribuzione. La FLORA AMBIENTE era talmente poco attrezzata che fu necessario dotarla, in vista della partecipazione alla gara di appalto e per la futura realizzazione dell'attività, dei mezzi necessari; furono pertanto da me alienati 6/7 autocarri Fiat 145.13, specificamente autorizzati per la raccolta dei rifiuti dal cassonetto, e un compattatore Hanomag CL 66, gli autocarri intestati alla SETIA SUD e il compattatore alla NOVAMBIENTE s.r.l.. Fu pattuita una somma pari a 15/20 milioni di lire circa per mezzo e comunque sono state emesse le fatture, anche se poi il pagamento dei mezzi avvenne dopo la mia uscita di scena dalla società. Non ebbi particolare interesse nel fruire di un pagamento immediato dei veicoli, perché il tenore degli accordi era tale che mi sembrava irrilevante; secondo gli accordi economici degli ORSI la mia partecipazione alla loro società avrebbe visto un corrispettivo di 6/7 milioni al mese, a fronte dell'investitura – necessariamente di fatto alla luce delle cautele dei f.lli ORSI - quale direttore della discarica di Saurino. Si trattava di un ruolo strategico attraverso il quale era possibile praticamente dominare la discarica e tutti gli affari ad essa legati. Faccio presente che presso la discarica Saurino furono assunti regolarmente a operare come responsabili tecnici, ben pagati, i miei fratelli Antonio e Nicola (licenziati…dopo la rottura)*** *e la nostra presenza familiare nella discarica avrebbe comportato la gestione di fatto del sito.* ***A proposito della vendita degli automezzi, faccio presente che, quando fui fermato con MIELE Massimiliano e gli altri, stavamo tornando da Giugliano essendomi recato lì da GUARINO della CAVIS per indurlo a restituirmi i mezzi che io gli avevo già praticamente venduto ad un prezzo anche più elevato, benché ancora non corrisposto, rispetto a quello stabilito con gli ORSI. Ero andato con MIELE Massimiliano proprio perché attraverso MIELE sarebbe stato impossibile per GUARINO eludere la restituzione dei mezzi. Ricordo che MIELE si allontanò con il GUARINO, parlò brevemente con lui e fu evidentemente persuasivo nel restituire i mezzi affinché io li cedessi alla FLORA AMBIENTE. I mezzi poi rimasero alla FLORA AMBIENTE e, quando fu costituita la ECO 4, la FLORA AMBIENTE li noleggiò alla struttura pubblico - privata ad un prezzo certamente più elevato rispetto a quello di mercato".***

Ha trovato conferma la circostanza per la quale il Vassallo Gaetano, già amministratore unico della S.E.T.I.A. Sud, ne rimaneva amministratore di fatto. Tanto emergeva da pregressa attività investigativa originata dall'incendio di un compattatore di proprietà della S.E.T.I.A. Sud e noleggiato alla GEO.ECO Servizi S.P.A.
Il puntuale resoconto del collaboratore consentiva anche di riscontrare e situare precisamente nel tempo il controllo stradale eseguito dalla Polizia mentre Vassallo faceva ritorno, con Orsi e gli altri soggetti indicati, dalla Cavis di Guarino ove aveva ottenuto in restituzione gli automezzi che contava di conferire alla 'scatola vuota' della Flora Ambiente: in data 22.3.2000, alle ore 17,54, alla via A. Gramsci di Caserta, veniva controllata dalla l'autovettura targata AW569HG a bordo della quale vi erano**: ORSI Sergio**, nato il 05/06/1957; **SCHIAVONE Aldo**, nato il 21/10/1969; **MIELE Massimiliano**, nato il 26/07/1972 a Caserta e **VASSALLO Gaetano**, nato il 18/10/1958 a Cesa (CE).
La consultazione dell'elenco delle attrezzature, presentato in data 10.5.2000, dalla capogruppo FLORA Ambiente s.r.l. per partecipare alla gara indetta dal consorzio CE4, combinata con il controllo dei certificati cronologici forniti dal Pubblico Registro Automobilistico, conferma poi tanto l'avvenuta cessione degli automezzi, quanto l'inserimento degli stessi tra le referenze presentate dalla società privata al momento della gara.
Figurano in quell'elenco i seguenti automezzi, tutti di proprietà della SETIA Sud di Vassallo e trasferiti alla capogruppo dell'ATI concorrente: un autocarro targato CE563751; un autocarro targato CE551166; autocarro targato NAS40490; un autoveicolo per il trasporto dei rifiuti targato AW470NV; un autoveicolo per il trasporto dei rifiuti targato AW471NV; autoveicolo trasporto rifiuti targato AC866HJ; autoveicolo trasporto rifiuti targato CE588212.
Il tema del noleggio a freddo degli automezzi acquistati dalla Flora Ambiente alla società mista ECO 4 è riscontrato dalla registrazione, in data 14.12.2000, presso l'Agenzia delle Entrate – Ufficio di Caserta, del contratto con il quale la srl FLORA AMBIENTE concedeva a titolo di "nolo a freddo" mezzi meccanici. Il contratto reca la data del 15.11.2000 e palesa il conflitto di interessi tra i soggetti contraenti: srl FLORA AMBIENTE, rappresentata dall'ORSI Elisa Flora; ECO4 s.p.a. rappresentata da ORSI Sergio.

L'interrogatorio del 5.6.2008 si conclude con il racconto di due incontri di Gaetano Vassallo con esponenti del gruppo Bidognetti, emblematici della fase in cui si chiude (con alcuni conti in sospeso) il rapporto societario tra i fratelli Orsi e i 'cicciottiani'.
Il segnale della rottura è l'intimazione a Michele Orsi (presente al secondo dei due incontri) di pagare gli automezzi ricevuti da Vassallo al momento della costituzione dell'ATI.
In un colloquio in auto sulla strada del ritorno dal luogo dell'incontro Bernardo Cirillo presagisce quello che sarà l'effettivo destino di Michele Orsi: "***Tornando in macchina, CIRILLO Bernardo fece riferimento al fatto che ormai avevano la sentenza di morte e, prima o poi, avrebbero regolato i conti"***.
Il 1° giugno 2008 (quattro giorni prima che Vassallo rendesse le dichiarazioni in commento) ORSI Michele rimarrà vittima di un agguato nei pressi del Roxy Bar di corso Dante in Casal di Principe. Ad attingerlo saranno i colpi esplosi da almeno quattro bocche di fuoco (due pistole semiautomatiche Beretta cal. 9x21; una pistola cal. 9x17; una 357 magnum).
Per il delitto di sangue e i connessi delitti di detenzione e porto illegale di armi saranno sottoposti a fermo, convalidato dal gip con la contestuale emissione di ordinanza cautelare: SETOLA Giuseppe, CIRILLO Alessandro, LETIZIA Giovanni, ALFIERO Massimo e DI PUORTO Mario.

"Per quanto concerne gli ulteriori incontri che ebbi direttamente con esponenti del gruppo BIDOGNETTI, relativi alla specifica vicenda della ECO 4, ho ricordi nitidi in ordine a due incontri. ***Un primo incontro si è verificato in un periodo che colloco immediatamente dopo la scarcerazione di GUIDA Luigi detto o drink; venni convocato dal geom. CIRILLO Bernardo e da FIORETTO Giosuè; il primo ebbe a***

contattarmi telefonicamente dandomi appuntamento nei pressi di DITELLANDIA di Mondragone; mi sono lì recato con la mia macchina da solo e lì incontrai il FIORETTO e il CIRILLO i quali mi dissero di seguirli con la mia macchina dicendomi che saremmo dovuti andare a parlare da Gigino o drink che si trovava poco distante da lì. *In particolare parcheggiai l'auto in un distributore Q8 sito sulla variante che porta verso la tangenziale e salii a bordo della loro auto. Ci portammo quindi in prossimità della pista di kart sita nelle vicinanze di Castelvolturno e poco distante dal luogo dell'appuntamento e mi portarono presso un podere di bufale ove mi aspettava il GUIDA con altre tre o quattro persone che non avevo mai visto prima; ricordo in particolare una persona veramente brutta, ma comunque colloquiai con GUIDA separatamente rispetto a queste persone, insieme al CIRILLO e al FIORETTO.* ***In quell'occasione il GUIDA, persona che non avevo mai incontrato ma che conoscevo di nome e che avevo visto nelle foto apparse sul giornale, mi chiese sostanzialmente quello che io avevo fatto insieme ai fratelli ORSI.*** *In pratica m'interrogò sulla situazione che mi aveva visto implicato con i f.lli ORSI, situazione che chiaramente già conosceva, ma di cui aveva necessità evidenti di dettagli. Io ho detto a GUIDA tutto quello che ho già riferito nel corso dei miei interrogatori, in modo più essenziale, e ricordo interventi sia di FIORETTO sia di Bernardo che confermavano quella che era la mia fedele ricostruzione degli avvenimenti, dal mio punto di vista.* ***Compresi che GUIDA aveva bisogno di chiarimenti diretti dalla mia persona per decidere cosa fare e comunque prima di incontrare gli ORSI, in modo da essere pienamente informato.*** *Io mi proposi di essere presente in un incontro con gli ORSI e risolvere eventuali falsità che potessero loro dire nei miei confronti e quindi salvaguardarmi; gli dissi dunque che potevo anche rimanere per un eventuale confronto laddove fosse stato necessario.* ***Il GUIDA mi disse testualmente: "comparié vattenne, perché se vengono potrebbero non tornare a casa !", aggiungendo che quelle erano cose che se le regolavano loro****. Io andai via con FIORETTO e CIRILLO. Strada facendo ricordo che interpellai CIRILLO e gli chiesi chi fosse quella persona con la faccia brutta; CIRILLO mi rispose in modo molto eloquente dicendomi che io ero il primo che avevo visto in faccia quella persona potendosene poi tornare a casa, facendo chiaro riferimento al fatto che si trattava di un killer. Mi disse anche che erano lì riuniti pronti per partire per Villa Literno per uccidere alcuni liternesi. Da quello che mi dissero, in quel giorno stesso o nei giorni successivi, avrebbero incontrato i f.lli ORSI. Ricordo che durante il colloquio con GUIDA, CIRILLO Bernardo disse che i f.lli ORSI non venivano mai tutti e due insieme, ma il GUIDA disse che avrebbe fatto in modo di farli arrivare insieme all'appuntamento. Parlando davanti a tutti e tre i presenti disse che avrebbero preso il figlio di Michele per costringerli ad andare insieme all'appuntamento.*

Alcuni giorni dopo avvenne un ulteriore incontro di cui ho già parlato nell'interrogatorio del 3 u.s., presso l'autoricambi di VEROLLA in Lusciano, dove erano presenti oltre che me, GUIDA Luigi detto o'drink, Massimiliano MIELE, Michele ORSI, BORRATA, Giosuè FIORETTO. *Fu in quell'occasione che* ***venni a conoscenza degli accordi economici tra Aniello BIDOGNETTI e i f.lli ORSI secondo cui l'impegno degli ORSI era quello di pagare 50 milioni al mese e di assumere 50 persone a lavorare presso l'ECO 4, persone indicate dal gruppo BIDOGNETTI.*** *In quell'occasione si fece anche riferimento a un momento temporale in cui era avvenuto questo accordo, poiché FIORETTO Giosuè contestò ad ORSI Michele che i precedenti accordi avevano visto scomodare BIDOGNETTI Aniello durante la sua latitanza sottolineando la gravità del fatto; fece riferimento FIORETTO ad un incontro con i f.lli ORSI presso un distributore dell'autostrada, dove si era parlato di questi accordi.* ***MIELE Massimiliano cercò di mediare dicendo di garantire per gli ORSI, ma fu***

FIORETTO a intervenire con durezza dicendogli che, se avesse voluto garantire per gli ORSI, avrebbe potuto essere ucciso in quel momento stesso. *A quel punto FIORETTO disse che Aniello BIDOGNETTI avrebbe regolato direttamente i conti con loro, perché prima o poi sarebbe uscito, dicendogli che prima o poi gli avrebbe fatto "la cartella".* ***GUIDA a quel punto intervenne dicendo ai presenti che queste cose se le sarebbero regolate le persone che avevano preso accordi diretti e che lui per il momento avrebbe dovuto avere dagli ORSI 15 mila euro al mese, la stessa somma che la COVIM pagava al clan per Castel Volturno…allorché FIORETTO Giosuè contestò a Michele ORSI il contenuto degli accordi presi con Aniello BIDOGNETTI, ORSI Michele rimase completamente muto e impallidì, senza opporre alcuna versione.*** *Faccio presente che questi due incontri avvennero quando la ECO 4 aveva già iniziato ad operare sui Comuni di Mondragone, Castel Volturno e Sessa Aurunca ed erano in corso trattative per l'affidamento del servizio di raccolta degli R.S.U. su Grazzanise. GUIDA aggiunse che ORSI Michele avrebbe dovuto pagarmi gli automezzi il cui prezzo non era stato ancora corrisposto e mi impose di abbandonare gli accordi societari intercorsi con gli ORSI. Michele ORSI mi disse che il giorno dopo sarei potuto andare in sede per riscuotere il danaro che mi spettava, cosa che effettivamente feci, riscuotendo gli assegni dalle mani di Sergio ORSI. Tornando in macchina,* ***CIRILLO Bernardo fece riferimento al fatto che ormai avevano la sentenza di morte e prima o poi avrebbero regolato i conti****. Ricordo che il periodo in cui incontrai GUIDA era il periodo primaverile e comunque faceva sufficientemente caldo.* ***In un incontro successivo che ebbi con Bernardo CIRILLO e il figlio di SCHIAVONE Francesco detto Cicciariello, in Baia Domitia, seppi poi che gli ORSI si erano legati proprio a Cicciariello e compresi che i soldi che prima arrivavano direttamente alla famiglia BIDOGNETTI, in relazione al servizio di raccolta degli RSU sui Comuni, venivano percepiti indirettamente tramite proprio Cicciariello, all'epoca latitante…"***

Lo scioglimento dell'accordo degli Orsi con il ramo bidognettiano del clan dei Casalesi avvenuto, secondo Vassallo, nella primavera dell'anno 2002 evidentemente si riflette nella seguente **conversazione (n. 3519 del 26.7.2004, ore 11.56)**.
Decreto n°: 1478/04
Progressivo: 3519
Numero intercettato: 335…..999 in uso a Michele ORSI
Data fonia: 26.07.2004 ora: 11.56.46
Interlocutore: Giuseppe VALENTE
Chiamata: Entrante
Numero: 335……879
LEGENDA
M: Michele Orsi
P: "Peppino" Valente
M: Peppino
P: Michele, scusami se ti disturbo...
M: Sì, dimmi
P: Senti un poco, **io avrei bisogno di un numero, di parlare con Gaetano VASSALLO**, ma tu ce l'hai ancora il numero di telefono?
M: Qua no
P: E chi mi può...
M: **Non è il caso, capito**?
P: Come ?
M: Non è il caso
P: No, lo so, per carità, ci mancherebbe, **ma è per la questione dell'albergo, no, no, per l'albergo, lui sta aprendo un albergo** e mi serviva, volevo chiedergli se poteva assumere una signora in gamba **perché so che stanno aprendo**, niente di particolare, no, no…

Nell'interrogatorio del 18 giugno 2008 Gaetano Vassallo ribadisce la circostanza per la quale la predestinazione delle imprese degli Orsi a divenire 'braccio operativo' della costituenda società mista era nota tra gli uomini del gruppo Bidognetti. Spiega poi una serie di meccanismi fraudolenti (sovraffatturazioni e fatture per operazioni inesistenti), servendosi dei quali i fratelli Orsi scaricavano sul partner pubblico tutti i costi sostenuti, per convogliare sulle loro imprese tutti i profitti; seguendo uno schema che definiremmo di "socializzazione delle perdite e privatizzazione degli utili".
Anche di questo aspetto del comportamento societario del partner Flora Ambiente esistevano, già prima che Vassallo decidesse di collaborare, numerose testimonianze.

"Proseguendo nel narrare le vicende relative alla costituzione della ECO 4 e agli accordi intercorsi per la relativa attività, ribadisco che l'esistenza di un accordo predeterminato circa l'aggiudicazione della gara alla ATI FLORA AMBIENTE, indetta dal consorzio, era ben nota agli uomini di BIDOGNETTI, come appresi nel corso del primo incontro di cui ho già riferito; io appresi proprio in quel primo incontro di tale decisione e del coinvolgimento delle persone del consorzio per avvantaggiare i f.lli ORSI. Si trattava di notizie che non erano all'epoca note nell'ambiente, che mi colsero di sorpresa (...) Per quanto concerne la questione relativa al maggior costo del servizio svolto dalla società ECO 4 rispetto ad altre società selezionabili attraverso la pubblica gara, devo dire che i costi della società mista ECO 4 erano sostenuti totalmente dal partner consortile, mentre i ricavi facevano capo solo ai privati e cioè ai f.lli ORSI. ***Posso riferire alcuni casi esemplificativi ed emblematici del modo di agire. Come già detto, l'ECO 4 iniziò a ricevere affidamenti da parte dei Comuni pur non essendo minimamente attrezzata a svolgere i relativi servizi e procurai io alcuni mezzi necessari attraverso la SETIA SUD; fu poi necessario incrementare il parco automezzi e ricordo che mi portai personalmente con Michele ORSI presso una rivendita di veicoli, dal concessionario ESPOSITO di Melito, meglio conosciuto come "ex COSCIA e BORRELLI"; fui io a individuare questo rivenditore essendo una persona che già conoscevo e acquistammo da lui 30 automezzi per un ingente valore; i veicoli non furono pagati immediatamente, ma fu soprafatturato il prezzo di acquisto, in modo che l'intero costo fosse assunto dal solo Consorzio lasciando indenne la FLORA AMBIENTE dal sostenere l'impegno economico. In pratica fu stabilito con il rivenditore di non calcolare formalmente lo sconto che poteva essere praticato in relazione all'importanza di questo acquisto, così da poter rientrare del valore dello sconto, restituito brevi manu dal rivenditore ai f.lli ORSI. Spiego come si agì: il valore dei mezzi era orientativamente pari a 4 miliardi di lire, lo scontro praticato dal concessionario era pari a circa il 30%, ma non figurò nella cifra fatturata; quando poi il Consorzio doveva versare le somme al concessionario questi avrebbe restituito la somma in contanti agli ORSI, equivalente al valore dello sconto. Per la precisione, ricordo con chiarezza che Michele ORSI disse al concessionario che avrebbe simulato l'espletamento di lavori di ristrutturazione presso il concessionario stesso, in modo che quest'ultimo pagasse con assegni la differenza tra il fatturato ed il pattuito, in modo da giustificare formalmente il versamento della somma stessa. Questo tipo di soprafatturazione fu praticata anche per le successive opere di attrezzatura degli autocarri secondo accordi presi con una ditta privata della zona di Bari, da me stesso individuata; furono pattuiti lavori per oltre un miliardo e gli accordi furono analoghi a quelli già riferiti, anche se lo sconto questa volta fu inferiore..il titolare di questa ditta, se ricordo bene, si chiama FARELLI Filippo e la regolamentazione e copertura della tangente attraverso la fattura di comodo fu realizzata attraverso la SOCOM riferita a SCHIAVONE Aldo, prestanome degli ORSI. Analoga sovraffatturazione fu attuata attraverso i cassonetti riciclati,***

falsamente fatturati come nuovi (fu individuata la ditta venditrice tramite FARELLI); analoga azione fu ideata elevando fittiziamente le buste paga degli impiegati".

Le dichiarazioni di VASSALLO relative alle prestazioni di "attrezzatura" dei mezzi della Eco4 s.p.a. eseguite dalla ditta intestata a FARELLI Filippo sono state riscontrate da due conversazioni telefoniche. Nella prima (**n. 160 del 5.1.2004)**, intrattenuta con TOMMASINO Carmelo sul tema della gara d'appalto indetta dal Comune di Sessa Aurunca per l'aggiudicazione del servizio di raccolta dei r.s.u., Orsi Sergio afferma: "…*Altamura, Altamura poi è il paese, no, di Filippo FARELLI … Da loro non mi devo mai comprare più un mezzo, da Filippo.... un mezzo di questo* ...". Nella seconda (**n. 2631 del 27.2.2004**) Orsi Sergio domanda a Farelli Filippo se fosse possibile bloccare la riscossione di un assegno. Il FARELLI Filippo lamenta di essere, da un anno e quattro mesi, in attesa del pagamento di alcune macchine.

Sul tema delle sovraffatturazioni, effettuate dagli Orsi per stornare sul partner pubblico gli esborsi destinati alla criminalità organizzata, si sofferma l'ordinanza cautelare n. 45/2009 (procedimento n. 49946/03 N.R.) nella parte in cui suffraga l'addebito di truffa aggravata formulato al capo E) di quel provvedimento (pagg. 316-327).
Un primo momento di specificazione e riscontro di questo profilo delle dichiarazioni di Vassallo è segnato dalle propalazioni di **Di Caterino Emilio *detto Emiliotto*** che, in data 12.11.2008, indicava BIDOGNETTI Claudio, titolare di un'impresa denominata Oleodinamica e cugino dell'odierno collaboratore BIDOGNETTI Domenico, come esattore del contributo versato dagli Orsi al partner camorrista. Nel contempo DI CATERINO assegnava a BIDOGNETTI Claudio il compito di rilasciare false fatture "*che consentissero agli ORSI di far figurare tali tangenti come costo, fatturandole falsamente…In pratica le fatture venivano gonfiate e così si dava copertura formale e giustificazione al versamento della tangente".*
L'assunto trovava la conferma di **Orsi Michele, negli interrogatori resi in data 6.6.2007 e in data 15.6.2007.** L'imprenditore, pur situando la *vicenda nella cornice di una mera dazione estorsiva*, affermava*: "(...) Pensai di rivolgermi a BIDOGNETTI Claudio, un meccanico di Casal di Principe, parente di Francesco; faccio presente che in quel periodo tutte le persone che io sapevo essere referenti di zona per conto di BIDOGNETTI erano state arrestate (mi riferisco a BIDOGNETTI Aniello e a MIELE Massimiliano) e quindi non reperii una persona diversa da Claudio quale possibile interlocutore (...) A partire dal 2001 - 2002 fu deciso di stabilire modalità di pagamento meno pericolose e fu attuato un sistema che prevedeva una sovrafatturazione per il versamento della tangente che durò per svariati anni, fino alla fine del contratto.* ***Poiché usavamo servirci, come Eco4, di un'officina di Casal di Principe gestita da Claudio BIDOGNETTI, appartenente alla omonima famiglia, decidemmo di sovrafatturare i pagamenti calcolando anche il costo della tangente di 10.000 euro mensili. La fattura veniva emessa da Claudio BIDOGNETTI a nome della società OLEODINAMICA, con cadenza mensile; la fattura veniva quindi pagata da Eco4 e Claudio BIDOGNETTI si preoccupava di consegnarla al destinatario….***".

In senso analogo si esprimeva **Orsi Sergio, nell'interrogatorio del 28.6.2007**: "(…) *Faccio presente che individuai "zio Armando" quale referente della famiglia BIDOGNETTI attraverso BIDOGNETTI Claudio, il quale curava l'assistenza e la manutenzione dei mezzi utilizzati per la raccolta dei rsu, essendo l'unico sul territorio.* ***Chiedemmo a BIDOGNETTI Claudio che ci desse informazioni sulla persona a cui rivolgerci e questi ci indicò "zio Armando" (…) venne definita la tangente da versare, quantificandola nella somma di 10.000 euro mensili; dopo il versamento di due o tre rate periodiche nelle mani di FORLANO Pasquale, fu stabilito, su richiesta di "zio Armando", un sistema per versare la somma senza apparire personalmente. Venne quindi da loro chiesto di incrementare artatamente la fattura mensilmente emessa da BIDOGNETTI Claudio, attraverso la società OLEODINAMICA, in modo da includere nella stessa sia il costo del servizio svolto da questa società sia il costo della tangente. La fattura veniva utilizzata dall'Eco4 s.p.a. e computata quale costo, includendo dunque anche la tangente…".***

Veniva quindi reperita nelle scritture contabili delle ECO4 s.p.a. la traccia delle fatture emesse, negli anni 2000 – 2004, dalla Oleodinamica per un ammontare complessivo superiore al milione di euro. Il cerchio si chiudeva con alcuni reperti intercettivi.

Ancora nell'interrogatorio del 18 giugno 2008 Vassallo riprendeva il tema delle connivenze che gli Orsi potevano vantare nell'ambiente bancario. Tema anche questo, per così dire, pre-riscontrato.

"…per quanto concerne i rapporti con funzionari della BNL, ricordo che i f.lli ORSI ***conoscevano il direttore della BNL di Caserta che poi fu trasferito a Napoli, il quale aveva garantito e garantiva dei favori agli ORSI, in particolare per quanto concerneva gli affidamenti. Gli ORSI non avevano inizialmente disponibilità finanziarie, né godevano di persone in grado di garantire i fidi e gli affidamenti bancari, sicché fu per loro necessario reperire funzionari compiacenti presso gli istituti di credito tra cui questa persona di cui ho già riferito.*** *Oltre a questo direttore, vi era anche GOLINO che favoriva nelle operazioni gli ORSI. Io stesso ebbi a garantire delle fideiussioni personali nei rapporti creditizi che i f.lli ORSI aprirono presso il Monte dei Paschi di Siena – ag. di Aversa - a favore sia della SOCOM che della FLORA AMBIENTE…".*

Il miglior riscontro delle dichiarazioni rese da Vassallo sulle relazioni corruttive allacciate da Orsi con funzionari della BNL di Caserta si rinviene nelle pagg. 512 – 551 dell'ordinanza cautelare n. 707/2007.
Vi si ricostruisce un'ingegnosa frode che ha comportato per la società mista un'esposizione debitoria pari a 4milioni700mila euro, derivata dalla combinazione dei seguenti artifici: l'emissione di fatture ideologicamente false da parte delle società Flora Ambiente e Ambiente e Territorio s.r.l. nei confronti del Consorzio; il riconoscimento (frutto di deceptio) del debito da parte del Consorzio Pubblico CE4; la cessione del credito gonfiato, indebitamente riconosciuto dagli organi consortili, alla BNL; l'utilizzo di detto credito ceduto quale garanzia atipica per l'apertura di una linea di credito e per lo sconto delle false fatture; la contraffazione di un verbale delle adunanze e deliberazioni del Consorzio datato 14.7.2004, riflettente l'accettazione da parte del (presunto) debitore della cessione di credito operata dagli Orsi nei confronti dell'istituto bancario. All'esito di questa operazione il Consorzio si ritrovava debitore della BNL per l'ammontare sopra indicato, mentre gli Orsi ricevevano dallo stesso istituto bancario l'apertura di una linea di credito per complessivi 3milioni700mila euro. Le pagg. 528 – 540 espongono elementi intercettivi e copiosi riscontri (tra i quali le dichiarazioni rese da ORSI Michele in data 21 giugno 2007) circa la relazione 'corruttiva' allacciata da ORSI Michele con alcuni funzionari della BNL di Caserta coinvolti nell'operazione.

Tra le assunzioni fittizie operate per assecondare i desiderata delle organizzazioni criminali di zona, Vassallo rammentava - nell'interrogatorio del 18 giugno 2008 - quella di un familiare di Antonio Mezzero, esponente del clan imperante in Grazzanise e amico di Michele Orsi.

A proposito delle ***assunzioni fittizie di persone legate alla criminalità organizzata****, ricordo un familiare di MEZZERO Antonio, anche questi di cognome MEZZERO, il quale si presentò direttamente presso l'ufficio della SOCOM, a Santa Maria Capua Vetere, affermando di essere dipendente della società affidataria del servizio su Castelvolturno prima dell'appalto alla ECO 4. Ricordo che MEZZERO fece riferimento al fatto che Sergio ORSI era già a conoscenza della sua richiesta e chiese direttamente che il passaggio di cantiere lo includesse; noi in realtà non lo avevamo mai visto al lavoro, ma si decise comunque di assumerlo fittiziamente; in particolare Michele disse che avrebbe parlato direttamente con MEZZERO Antonio, con cui era*

amico, e che avrebbero deciso congiuntamente di vedere dove impiegarlo fittiziamente; non so dire dove venne poi assunto, credo a Grazzanise, almeno questi furono i discorsi dell'epoca. A rilettura: ricordo che Sergio ORSI suggerì a MEZZERO di mettersi in malattia, per farlo poi assumere dopo il passaggio di cantiere, così da giustificare la sua assenza dal cantiere…

Il MEZZERO Antonio richiamato dal collaboratore Vassallo s'identifica in MEZZERO Antonio, nato a Grazanise il 25.06.1962. Fino alla data del 12.03.1999, giorno della sua cattura avvenuta a seguito di periodo di latitanza, era il capozona per conto del clan dei Casalesi di Grazzanise e zone limitrofe. Egli risultava strettamente legato al super latitante **ZAGARIA Michele** ed al braccio destro di questi, **NOBIS Salvatore** detto "scintilla". **MEZZERO Antonio**, allo stato, risulta essere detenuto in quanto condannato alla pena dell'ergastolo per un omicidio di stampo mafioso. Dall'interrogazione della banca dati carceraria risulta che **MEZZERO** ha scontato i seguenti periodi detentivi:
- dal 7.11.1990 al 16.04.1991;
- dal 17.04.1992 al 19.01.1994;
- dal 4.7.1995 al 27.10.1995;
- dal 5.5.1996 al 16.04.1998;
- dal 12.03.1999 ad oggi.

Il rapporto esistente tra ORSI Michele e il boss Mezzero è attestato da una segnalazione del 15/9/1987, connessa al fatto di essersi accompagnato con MEZZERO Antonio, all'interno di un'autovettura condotta da quest'ultimo, ove veniva rinvenuta una pistola clandestina (vedi inf. G. di Finanza del 14/4/2005, all. 16).
MEZZERO era stato più volte tratto in arresto, da ultimo in esecuzione dell'o.c.c. n. 7279/99 mod.21 - n. 5300/99 R.GIP, n. 514/02 R.Mis.Caut. emessa dal Tribunale di Napoli - uff. del G.I.P. - in data 26.11.2002 per i reati di associazione mafiosa, omicidio, estorsione, violazione legge sulle armi, truffa ed altro.
Il congiunto di MEZZERO Antonio effettivamente assunto presso la ECO4 s'identifica, stando al libro matricola della società, in MEZZERO Giuseppe.

Nell'**interrogatorio del 24 giugno 2008** Vassallo rievocava due relazioni corruttive allacciate dagli Orsi con l'indagato Bruno Orrico e con l'ispettore del lavoro Salvatore Andreozzi. Si tratta di relazioni importanti perché garantiscono agli imprenditori camorristi: il rilascio del certificato antimafia richiesto da alcuni dei comuni ai quali la ECO4 si proponeva per la gestione della raccolta; l'autorizzazione a sversamenti non consentibili, per ragioni tecniche accuratamente descritte dal collaboratore, presso la discarica di Parco Saurino; attestazioni di esaurimento della capacità recettiva di discariche gestite da consorzi concorrenti, con il conseguente incremento degli sversamenti effettuati nella discarica gestita dalla ECO 4; comportamenti omissivi che garantivano agli Orsi l'indisturbata perpetrazione delle loro frodi. Anche l'esistenza di queste relazioni risulta da evidenze granitiche, acquisite prima che Vassallo cominciasse a parlare.

*"Mi sono ricordato, in riferimento all'ECO 4 e quindi voglio aggiungere, che **c'è una persona della Prefettura di Caserta che ho conosciuto: si tratta del dottore Orrico, all'epoca vice commissario per l'emergenza rifiuti di Caserta**. Ricordo che alla fine degli anni '90 - inizio 2000 una mattina ci incontrammo per pranzo io, Michele e Sergio Orsi, con il dottore Orrigo e una giovane donna la sua amante, in un ristorante tra Capua e l'ingresso dell'A1, nei pressi della strada direzione Trifrisco. Ricordo che il ristorante si chiamava La stalla, La mangiatoia o cosa simile e che di fronte c'era un mercato di meloni. Non ricordo bene il contenuto della riunione, ma **si doveva parlare del certificato antimafia che gli Orsi (Michele e Sergio) non riuscivano a ottenere e si erano rivolti in precedenza ad un'altra persona, tale Salvatore Andreozzi ispettore***

<u>del lavoro e facente parte della commissione per il rilascio del certificato antimafia.</u> *In relazione a quest'ultimo soggetto, ricordo che una sera ci vedemmo ad Aversa piazza Lucarelli io, Salvatore Andreozzi e Michele Orsi; in quella occasione ricordo che l'Andreozzi estrasse dalla propria borsa dei fascicoli, tra cui quello che interessava l'Eco 4, dove c'erano i pareri espressi dalle altre forze di Polizia per l'informativa del certificato Antimafia, e lo assicurò che nella prossima seduta avrebbe fatte carte false affinché gli fosse rilasciato. Già conoscevo Salvatore Andreozzi che mi aveva chiesto più volte del danaro che in due tre occasioni gli ho dato sempre fra il 1999 ed il 2000 in cambio del parere favorevole per il rilascio del certificato antimafia della Setia sud ed altre pratiche che ci interessavano come per la 488. Analogo comportamento, come vi ho riferito, ANDREOZZI ha avuto con i fratelli ORSI. A tal proposito, tornando all'incontro di Piazza Lucarelli di Aversa, ricordo che l'Andreozzi riferì all'Orsi che a seguito dei passaggi di cantieri la commissione della Prefettura aveva riscontrato che l'Orsi aveva assunto diversi soggetti affiliati a famiglie camorristiche come tale Mezzero e altri di Mondragone di cui adesso non ricordo il nome ma di cui già ho parlato. Adesso che mi dite il nome ricordo uno di questi nominativi: era il figlio di Fragnoli. Questo era un motivo ostativo per il rilascio della certificazione, secondo quanto indicato dalla relazione della Commissione, e pertanto l'Andreozzi, che aveva il compito di verificare i libri matricola della società dell'Orsi, disse di licenziarli. L'Orsi Michele riferì che non poteva perché temeva rappresaglie ma* ***l'Andreozzi disse testualmente: "licenziamoli, prendiamoci il certificato antimafia e dopo li riassumi."*** *Il Michele Orsi mi disse che in cambio delle notizie dategli dell'Andreozzi gli aveva versato del danaro in più occasioni ed in particolare due tremila euro ogni volta che lo vedeva. Voglio riferirvi il numero di cellulare di Salvatore Andreozzi che è 339 11 69632; lo stesso aveva una 190 Mercedes grigio metallizzata che gli aveva regalato tale Dello Margio di Gricignano, che ha una impresa di trivellazioni del quale faceva il consulente e percepiva uno stipendio e si fece da me dare le ruote dalla 190 di mio padre che doveva essere rottamata. Tornando al* ***dottore Orrico, ricordo che questi era il vice Commissario di Governo per l'Emergenza rifiuti in Campania ed era colui che doveva attestare la regolarità dei lavori sulla discarica Parco Saurino, che era gestita da Sergio e Michele Orsi.*** *In cambio di tale attestazione, durante il pranzo presso il ristorante che prima ho indicato,* ***Orrigo chiese a Michele Orsi di completare i lavori sulla villa della signora, l'amante del dottor Orrico, che furono poi fatti come mi disse il Michele per un valore di 50 - 60 milioni di lire, e di assumere sulla discarica un suo parente di cui non ricordo il nome.*** *Seppi poi dai miei fratelli Nicola e Antonio che lavoravano presso il consorzio che effettivamente fu assunto come responsabile della discarica ed era originario di Torre del Greco o Annunziata. In particolare ricordo che questi si dimise dopo un po' in quanto non voleva attestare falsamente dei noli di automezzi e l'utilizzo di questi sul Parco Saurino, discarica della società dei fratelli Orsi. In realtà questi automezzi lavorano a Siena o Avezzano presso cantieri edili degli Orsi o addirittura in officina, fermi per riparazione. Mi spiego meglio.* ***I fratelli Orsi, per sottrarre soldi dalle casse del CE 4, fatturavano con il consorzio Geoeco noleggi di escavatori, bob cat, autocarri ecc. che in realtà stavano in officina per autorimessa oppure stavano lavorando presso altri cantieri di Siena e di Avezzano, a favore di proprie ditte…come Flora Ambiente e Socom.*** *Di questi falsi noleggi erano ben a conoscenza Peppe Valente e l'architetto De Biasio. L'Orrico in cambio dei favori ricevuti degli Orsi non ha mai creato problemi agli Orsi e anzi ha consentito il raddoppio del quantitativo di rifiuti da smaltire presso la discarica degli Orsi di Parco Saurino, attestando che la discarica Geoeco che si trova a San Tammaro aveva esaurito i quantitativi smaltibili, non rilevando altresì - per favorire gli Orsi - che*

anche la loro discarica di Parco Saurino era esaurita, cosi consentendo a tale discarica di accogliere i rifiuti della Geoeco".

L'interrogatorio del 25 giugno 2008 è dedicato al tema del traffico illecito di rifiuti speciali e alla complicità offerta dai Consorzi campani. La discarica Parco Saurino della ECO4 riceveva ad esempio rifiuti cimiteriali e riuscì ad ottenere, grazie al sistematico rapporto corruttivo allacciato dagli Orsi con il già mentovato Orrico, un'autorizzazione *ad horas* per la ricezione di questa tipologia di rifiuto.

"...Presso la "NOVAMBIENTE", come anche presso l'ALMA di Luca AVOLIO e presso le altre discariche, come anche quella di Parco Saurino, sono stati scaricati sistematicamente per tutto il tempo in cui le stesse hanno funzionato - lecitamente e illecitamente – anche i rifiuti cimiteriali. ***Infatti, in un primo periodo, i rifiuti cimiteriali sono stati smaltiti in maniera clandestina e successivamente in forza di vere e proprie autorizzazioni fornite dai Consorzi. Ovviamente, queste autorizzazioni non avevano alcuna validità sotto il profilo tecnico in quanto le discariche non erano minimamente attrezzate per ricevere questi tipi di rifiuti. Basti pensare che le discariche non erano adeguate a ricevere i rifiuti solidi urbani, figurarsi i rifiuti cimiteriali; e ciò anche in considerazione del fatto che, oltre ai fiori ed ai lumini che erano le categorie previste, sistematicamente giungeva alle discariche anche materiale proveniente dalle esumazioni, bare e parti di esse, sia di legno che di zinco.*** *Ricordo che, quando abbiamo aperto la discarica di "Parco Saurino" dell'ECO/4, già il primo giorno si pose il problema dei rifiuti cimiteriali, in quanto era arrivato un carico di rifiuti cimiteriali insieme ai carichi di rifiuti solidi urbani.* ***Il carico era stato scaricato e immediatamente bloccato dagli addetti; eravamo presenti sul posto io e Sergio ORSI, nonché Peppe VALENTE. Immediatamente, Sergio ORSI e VALENTE telefonarono a ORRICO della Prefettura (che a quel tempo era vicecommissario dell'Emergenza Rifiuti) e si fecero autorizzare a ricevere anche questo tipo di rifiuto.*** *Nell'occasione, Sergio ORSI fece pressioni a ORRICO per ottenere tale autorizzazione nel senso che fece valere la preesistenza di un rapporto sistematico di corruzione tra lo stesso Sergio ORSI e ORRICO;* ***di tale rapporto di sistematica corruzione ho già accennato in altri verbali.*** *C'è anche da dire che un parente di ORRICO era stato messo quale responsabile della discarica per attestare la conformità dei carichi e la corretta gestione della discarica; tale responsabile era stato assunto su richiesta di ORRICO".*

Nell'interrogatorio del 10 luglio 2008 Gaetano Vassallo ritorna sui progetti espansivi della ECO4 e sull'ambizione dei creare un C.I.R. consortile, completamente autosufficiente, nel quale gli Orsi avrebbero potuto monopolizzare tutti i servizi: dalla raccolta degli rr.ss.uu. municipali, alla tritovagliatura del rifiuto, alla gestione delle discariche, alla creazione di nuovi invasi per lo sversamento dei rifiuti, fino all'esazione della T.A.R.S.U. di fatto aggiudicata alla ECO4 da alcuni Comuni. Fa la sua comparsa, in questo quadro, anche l'*intenzione* di Sergio Orsi di realizzare un termovalorizzatore in Santa Maria La Fossa.

"...come già riferito nel corso di precedenti interrogatori, ***decisi di seguire il progetto di Sergio ORSI, realizzato attraverso la società ECO 4, perché altamente redditizio e molto rilevante.*** *Il progetto iniziale, parlo del periodo in cui ebbi ad incontrare Sergio ORSI - risalente ai mesi finali dell'anno 1999 - prevedeva che* ***la costituenda società mista (poi denominata ECO 4), avrebbe dovuto progettare e gestire un ciclo integrato dei rifiuti in ambito consortile, ossia ricadente sui comuni costituenti il consorzio CE***

4…Il progetto prevedeva che la società mista ricevesse tutti gli affidamenti dei servizi di raccolta degli RSU comunali, predisponesse e realizzasse la raccolta differenziata dal cassonetto e gestisse le discariche ove smaltire i rifiuti comunali stessi. Ovviamente ***ciò avrebbe poi comportato la gestione dei ruoli, da parte di ECO 4, per l'esazione della TAR.SU, cosa che fece poi su alcuni Comuni****.* ***Questo progetto non prevedeva originariamente, a mia memoria, nessuna realizzazione di impianti di termovalorizzazione e di CDR.*** *Come ho già detto era un progetto particolarmente allettante e per questo consigliai ai miei referenti appartenenti al gruppo BIDOGNETTI di seguire gli ORSI e di entrare nell'affare…****Già all'origine il progetto prevedeva l'individuazione delle discariche in Parco Saurino (quella che poi sarà effettivamente la discarica gestita da ECO 4) e in S. Maria la Fossa.*** *La prima discarica insisteva su una ex discarica dismessa e non presentava delle volumetrie così ampie da poter sostenere per lungo tempo lo smaltimento;* ***la seconda discarica di S. Maria la Fossa, invece, doveva essere una cava o una gross**a vallata, interamente disponibile previo attrezzamento.* *Posso dire peraltro che,* ***a partire da un certo periodo successivo alla mia estromissione dalla società mista (quale socio occulto), Sergio ORSI mi parlò della previsione di realizzare un termovalorizzatore a Santa Maria la Fossa; l'interesse era quello di gestire il termovalorizzatore, ma non so dire se la realizzazione di un termovalorizzatore implicasse una revisione del CIR originariamente progettato dal CE 4 e per esso dall'ECO 4; oppure costituisse semplicemente un modo per localizzare l'impianto di termovalorizzazione in un sito facente capo territorialmente al consorzio stesso. Sempre in tempi successivi, effettivamente l'ECO 4 avrebbe dovuto realizzare un impianto di selezione di materiali presso la discarica Parco Saurino;*** *si trattava di un impianto che aveva lo scopo di selezionare e suddividere i rifiuti secchi dagli umidi, per ridurre il carico di rifiuti da smaltire. Effettivamente questo tipo di selezione prelude a uno smaltimento anche attraverso la termovalorizzazione, ma non so dire se il progetto iniziale includesse anche questa fase ultima.* ***Certamente Sergio ORSI mi parlò dell'intenzione di realizzare un termovalorizzatore".***

Per rendere l'idea di quale solida conferma abbia trovato l'assunto di Vassallo inerente l'importanza strategica assunta per la ECO4 dal sito denominato Parco Saurino 2, basti pensare alle 18 ordinanze emesse dal sub commissario Facchi tra il 2001 e il 2004 con le quali si autorizzavano una serie di impianti destinati a realizzare quel C.I.R. parallelo funzionale alla neutralizzazione di fatto dell'esclusiva contrattualmente riconosciuta all'ATI FIBE – FISIA ITALIMPIANTI. Nella sponsorizzazione politica di questo progetto la Pubblica Accusa fa consistere il principale 'favore' concesso da Cosentino al clan dei casalesi (vedi sul punto l'annotazione di P.G. del Nucleo Carabinieri per la Tutela dell'ambiente di Roma in data 20.4.2009, trasmessa a questo Ufficio con nota del 13.5.2009):

l'***Ordinanza n. 027,*** del 20/2/2004, di **autorizzazione ad utilizzare, per la trasferenza dei rifiuti urbani prodotti dai comuni consorziati, l'area già autorizzata e destinata alla rotoimballatura**.

Quindi Vassallo parla delle difficoltà incontrate dagli Orsi, allorquando alcuni dei Comuni (Vassallo ricorda distintamente il caso di Castel Volturno) ebbero a chieder loro la 'certificazione antimafia'.

"...Ho già riferito in ordine ai problemi che si rilevarono per il rilascio della certificazione antimafia all'ECO 4, problemi che collego agli affidamenti dei servizi di raccolta dei rifiuti da parte dei singoli comuni o alcuno di essi. Per quel che concerne invece la partecipazione alla gara indetta da CE 4 da parte della FLORA AMBIENTE, ricordo che si doveva trattare di una mera autocertificazione; in ogni caso ritengo che la FLORA AMBIENTE fosse una società "apparentemente pulita" e credo che possa non aver avuto problemi. Il problema del rilascio della certificazione antimafia alla ECO 4 si collegò alla nomina di Sergio ORSI quale amministratore della ECO 4 e i problemi sorsero per questo. ***Ricordando meglio, il problema della certificazione antimafia nacque in relazione all'affidamento alla ECO 4 del servizio di raccolta di RSU da parte del comune di Castelvolturno. Rammento personalmente di aver questionato e litigato con TRAETTINO, responsabile dell'ufficio ecologia del Comune di Castel Volturno, il quale condizionava in modo rigoroso l'affidamento del servizio al rilascio della certificazione antimafia; certamente questi aveva ragione, ma io personalmente spinsi in modo che fosse affidato il servizio a prescindere dalla certificazione stessa.*** *Stessa posizione l'avevano gli amministratori comunali e in particolare l'assessore alla N.U. dr. SCHIAVONE…*

L'accaparramento dei servizi comunali di raccolta richiese in qualche caso la spendita delle referenze camorristiche della ECO4. Accadde ad esempio a Castel Volturno, dove lo stesso Vassallo s'impegnò, su incarico di Sergio Orsi, a persuadere i titolari della COVIM (Pierino Barbieri e Lello Sarnataro) ad abbandonare il campo.

"Per quanto riguarda gli affidamenti del servizio raccolta di RSU dei comuni di Mondragone e Castelvolturno, prima che fossero affidati alla ECO 4, gli stessi era in capo alla COVIM. Fu dunque necessario convincere i titolari della COVIM a cessare l'attività su questi comuni in modo che l'ECO 4 li sostituisse. Fu Sergio ORSI personalmente a richiedermi di avvicinare i titolari della COVIM Pierino BARBIERI e Lello SARNATARO, in modo da convincerli ad abbandonare il campo alla ECO 4. Costoro evidentemente non avevano tale intenzione ed io stesso, insieme allo stesso Sergio ORSI, incontrai i due titolari presso il bar SCALZONE di Castel Volturno; lì feci chiaramente riferimento al fatto che in quella zona si era deciso che dovesse operare ECO 4 e si trattava di un modo chiaro per far capire che vi erano delle decisioni da parte di gruppi potenti che non potevano essere contraddetti, gruppi facenti capo a organizzazioni mafiose. *I titolari della COVIM resistevano all'allontanamento e quindi fu necessario intervenire personalmente per convincerli.* ***Sia SARNATARO che BARBIERI sapevano che io ero legato a BIDOGNETTI e ben sapevano altresì che il gruppo BIDOGNETTI aveva scelto Sergio ORSI quale loro referente in quella zona****...Posso dire peraltro che ORSI Sergio fu in quella occasione accomodante nei riguardi dei titolari, proponendogli anche di noleggiare i veicoli della COVIM, non avendo peraltro mezzi disponibili per sostenere il servizio.* ***SARNATARO e BARBIERI non avevano evidentemente capito che dovevano risolvere i loro rapporti contrattuali con i due comuni e per questo fu necessario spiegarglielo apertamente; la presenza di Sergio era appunto legata a dimostrare loro che questa era la determinazione del clan."***

L'interrogatorio del 10 luglio 2008 si chiude con importanti precisazioni circa: il riferito ruolo agevolatore di Orrico, con la specificazione de: la vicenda inerente la chiusura per esaurimento della discarica gestita dal consorzio CE2 in San Tammaro; i termini esatti della relazione corruttiva allacciata dagli Orsi con questo funzionario.
Quindi Vassallo illustra i profili di alcuni dei criminali 'puri' del gruppo Bidognetti che ha indicato nei precedenti interrogatori o che assumeranno rilievo per la comprensione delle indagini di riscontro: VERDE Enrico, capozona 'cicciottiano' di Villa Literno; ALFIERO Nicola detto 'capretto', munito di ruoli di comando in Castel Volturno; MIELE Massimiliano e BORRATA Francesco, già indicati come latori del messaggio di Bidognetti di mettersi a disposizione degli Orsi.

(*...) in uno scorso interrogatorio ho parlato di* ***un impegno profuso dal dr. ORRICO per favorire i f.lli ORSI****; tra queste agevolazioni ricordo la chiusura della discarica aperta a S. Tammaro in modo da consentire lo sfruttamento esclusivo e lo smaltimento presso la sola discarica Parco Saurino 2. Per la precisione le due discariche si trovavano in luoghi limitrofi l'uno all'altro ma facevano capo a due consorzi diversi: la discarica di S. Tammaro faceva capo alla CE 2 e per esso alla GEOECO, mentre Parco Saurino 2 faceva capo al Consorzio CE 4 e per esso alla ECO 4. ORRICO, su pressioni degli ORSI, riuscì a far chiudere la discarica di S. Tammaro per esaurimento delle volumetrie e consentire dunque l'esclusivo smaltimento presso la Saurino 2; fu proprio ORRICO l'artefice. L'espediente fu quello di far apparire che del provvedimento beneficiasse soltanto il consorzio CE 4 e non invece la società di gestione, società mista, ECO 4..nell'interrogatorio del 29 maggio 2008, ho riferito in ordine allo smaltimento di rifiuti illegali avvenuti presso la discarica Saurino 1; faccio presente che si trattava di rifiuti prodotti da opere di lavorazione dei f.lli ORSI, i quali gestivano una impresa edile ed operavano in Avezzano e Siena, rifiuti che venivano appunto smaltiti presso quella discarica. Ivi erano smaltiti anche rifiuti di diversi*

produttori, ricordo tra questi quelli relativi alla SIRTE, società di telefonia (...) ***per quanto concerne gli aiuti forniti dal dr. ORRICO di cui ho già parlato, questi fu remunerato sia con del denaro consegnato attraverso il suo uomo che lavorava presso la ECO 4, proprio presso la discarica Saurino 1, sia attraverso i lavori che vennero realizzati presso l'abitazione della sua amante, come già ho riferito in altro precedente interrogatorio***
Il nome di VERDE Enrico *che mi fa l'Ufficio corrisponde al luogotenente per BIDOGNETTI nella zona di Villa Literno. Quest'ultimo comune fa capo al consorzio CE 2 e VERDE Enrico era il capo zona di Villa Literno*
Il cognome ALFIERO *che mi fa l'Ufficio corrisponde al cognome di Nicola ALFIERO detto capretto; si tratta di un affiliato del clan BIDOGNETTI e aveva ruoli di comando sul litorale domizio, zona di Castel Volturno. Era legato anche a FRAGNOLI, e con ciò mi riferisco al padre, detenuto in carcere a S. Maria C.V., ove fui io stesso detenuto insieme a lui ed uno dei suoi figli. Fu DI MAIO Francesco, alias ciccio 'o luongo, a presentarmelo proprio in carcere e mi raccomandò a lui indicandomi quale "compariello", in modo da far comprendere che ero una persona a loro vicina. Io conobbi DI MAIO proprio dentro il carcere allorché questi mi si avvicinò, mi prese sotto braccio e mi disse che aveva ricevuto l'imbasciata di Bernardo CIRILLO il quale gli aveva detto di mettersi a mia disposizione perché ero un amico loro. Sono stato detenuto a S. Maria C.V. nel gennaio 2002 per circa 15 giorni.*
In un precedente interrogatorio ho parlato di ***MIELE Massimiliano e tale BORRATO o BORRATA****; quest'ultimo era una persona che in quel periodo si accompagnava sempre a MIELE Massimiliano ed ebbi modo di incontrarlo 6 - 7 volte; nei rapporti tra lui e MIELE appariva come se il BORRATA avesse un ruolo subordinato, sembrava il suo autista, ma comunque anche lui s'interessava attivamente delle vicende afferenti alla ECO 4. BORRATA fu poi arrestato e comunque non ebbi più modo di incontrarlo a partire dal mio allontanamento dalla società con gli ORSI".*

Infine Vassallo adduce argomentazioni convincenti a sostegno dell'assunto per il quale **VALENTE e DE BIASIO, i soggetti situati al vertice della ECO4 e del superconsorzio IMPREGECO** (del quale parleremo in seguito)**,** erano perfettamente consapevoli del suo ruolo di rappresentante occulto del gruppo Bidognetti nella società mista.

*"**Per quanto riguarda il presidente del consorzio CE 4, VALENTE Giuseppe, ebbi a conoscerlo tramite Sergio ORSI e da allora ci fu una assidua frequentazione, direi amicizia tra noi, anche separatamente, ci incontravamo spesso, così come accadeva riguardo a Claudio DE BIASIO. Erano tutti a conoscenza che io fossi una persona molto vicina a BIDOGNETTI Francesco e che fossi stato prescelto per aiutarli proprio dal BIDOGNETTI stesso attraverso le persone già indicate negli altri interrogatori. Faccio presente che era talmente chiara la mia origine e il mio legame che VALENTE Giuseppe e ORSI Michele, diversamente da ciò che pensava di fare Sergio ORSI, ritennero di evitare di farmi figurare all'interno della ECO 4, temendo che i miei legami potessero incidere negativamente sullo sviluppo della società; è per questo che venni assunto presso la SOCOM degli ORSI in modo da agire nella sostanza ma non apparire nelle forme. A proposito di VALENTE Giuseppe lo ricordo anche come il mio primo cliente in assoluto presso il mio albergo Vassallo Park Hotel; ha preso una stanza, per qualche ora, e non lo feci pagare. Si trattava del mese di luglio del 2004".***

Nell'interrogatorio del 28 agosto 2008 (dedicato per la gran parte all'odierno indagato e

perciò integralmente riportato nella parte iniziale di questa esposizione) Vassallo ribadisce il fatto che fu Bernardo Cirillo a chiedergli di mettersi a disposizione degli Orsi. E non può sfuggire che lo stesso Cirillo presentò Vassallo all'indagato Cosentino e fu da questi indicato, in occasione di quella riunione elettorale avvenuta nel 1990, come il tramite del quale Vassallo avrebbe dovuto servirsi per rappresentare al politico le proprie necessità.

"…Fui chiamato dal Bernardo Cirillo che mi disse che dovevo mettermi a disposizione dei fratelli Orsi nel settore dei rifiuti. Successivamente ebbi numerosi incontri con gli Orsi e con gli altri, tra cui Miele Massimiliano – incontri di cui ho già parlato – al fine di incanalare e di avviare la costituzione della società mista che sarebbe poi stata denominata Eco4…"

I riscontri raccolti sulle dichiarazioni di Vassallo inerenti la genesi mafiosa, le dinamiche intimidatorie, le strategie espansive della società mista ECO4 sono di consistenza tale da fungere, per moltissimi aspetti, da prova autosufficiente di questa parte del ragionamento accusatorio.
Il materiale ha varia natura (intercettivo, dichiarativo, documentale) e risale spesso a epoca anteriore rispetto alla scelta collaborativa di Vassallo.
Può affermarsi che la buona memoria del collaboratore e l'effettività delle sue conoscenze (anche tecniche) hanno in molti casi soltanto propiziato il recupero di elementi la cui significatività non era ancora emersa per l'assenza di un racconto capace di cucirli in una sintassi leggibile.
Ma procediamo con ordine.

7. Le intercettazioni telefoniche del 2000 e i riscontri documentali delle dichiarazioni di Gaetano Vassallo sull'origine mafiosa di Eco4

Il **servizio di intercettazione telefonica compendiato nell'informativa redatta in data 20.11.2008, n. 462/166 – 5 di prot. 1999, dal Comando Provinciale di Caserta** testimonia il decisivo sostegno economico e "militare" fornito dalla famiglia Bidognetti, all'A.T.I. capeggiata da Flora Ambiente, onde assicurare alla stessa l'aggiudicazione della gara indetta dal Consorzio Ce4 per la scelta del partner privato della costituenda società mista.
Questo sostegno veniva fornito, come si è anticipato e come Vassallo ha spiegato, a partire da un'epoca anteriore all'approvazione e alla pubblicazione del bando di gara (28.3 – 19.4.2000). Il che non può che dimostrare la preesistenza, rispetto alla vicenda di corruzione e turbativa procedurale, dell'accordo camorristico tra gli Orsi e i bidognettiani.

La prima conversazione interessante è la n. 33 del 25.2.2000, avvenuta alle ore 17.31 tra Miele Massimiliano (soggetto che Vassallo indicherà otto anni dopo come protagonista della fase iniziale del patto societario Orsi - Bidognetti) e il famigerato Setola Giuseppe.
Il primo informava il secondo delle attività in corso per concretizzare il 'conferimento' del gruppo camorristico alla società con gli Orsi. E' chiaro il riferimento all'ambizione della società costituenda di acquisire l'affidamento del servizio di raccolta dei rifiuti solidi urbani in plurimi Comuni del casertano. Così come non può sfuggire il riferimento il ruolo di un *amico* a nome *Gaetano* (che, a questo punto, possiamo ben identificare nel dichiarante Vassallo) il quale fornirà alla società appena costituita (Flora Ambiente) i 'camion' abilitati al servizio di trasporto dei rifiuti:

"***…si sta comprando pure i camion…i cosi da quel GAETANO là, quell'amico…e perché quello… per prendersi la società di quello, si deve comprare per forza pure i camion…perché tiene già i decreti per fare la raccolta…come soldi non ci vuole assai, il problema è cartaceo, roba di carte che è problematica, hai capito?…quelli tutti i camion, tutto cose, pare che sono 140 milioni… cinque camion, sei camion…sono quei camion dell'immondizia, sono vecchi diciamo, non è che sono camion nuovi……mo' a lui gli servono perché tengono il decreto sopra per fare la raccolta hai capito?...se li deve prendere per forza perché diciamo subito può incominciare a lavorare con quei decreti…man mano che lavora, prende l'appalto e se li compra, ogni Comune si deve comprare…***".

E' significativa poi **la conversazione telefonica n. 1189 avvenuta in data 8.5.2000, alle ore 14.32, tra Cavaliere Mario e Russo Giovanni,** durante la quale costoro – affiliati al gruppo Bidognetti con mansioni 'esattoriali' – commentano con disappunto ("abbiamo fatto un grande figura di merda") la decisione assunta da Bidognetti Aniello ("il figlio dello zio"), Miele Massimiliano ("Emiliano") e da Cirillo Alessandro di mollare l'impresa di Nicola Ferraro in favore degli Orsi. La preoccupazione degli affiliati è ovviamente quella che Nicola Ferraro non voglia più pagare il suo 'contributo'. Se ne fa interprete Russo Giovanni:

"***e' un bordello qua…io mo' gliel'ho mandato a dire… che abbiamo fatto una grande figura di merda…a questo l'abbiamo gettato nel cesso… questo i soldi non li vuol cacciare neanche più 'sto mese. Là si va a taccariare EMILIANO*** (MIELE Massimiliano) ***là, io non voglio sapere niente più***".

Cavaliere Mario domanda: "***com'è, mo' lui ci dovrebbe dare venticinque*** (milioni) ***a noi o no?***". E Russo ribadisce: "***non ci dà neanche il cazzo. Se l'abbiamo gettato nel cesso, l'abbiamo garantito e poi l'abbiamo gettato, scusa…chi te li dà questi soldi****…**io l'ho detto. Va da EMILIANO*** (MIELE) ***e se li fa dare da EMILIANO. Come la vedi****?...**e mo' gliel'ho detto pure un'altra volta, perché le cose non stanno bene. Ma quello deve andare pure su QUEST'APPALTO….".***

I due affiliati sono in perfetta sintonia nella valutazione di questa scelta dei capi. Cavaliere Mario rivela anzi di avere avuto un aperto contrasto con Bidognetti Aniello e con Cirillo Alessandro:
"…***io ho ribattuto vicino al figlio dello ZIO*** (BIDOGNETTI Aniello). ***Lui*** (CIRILLO Alessandro) ***non ha detto neanche una parola…non disse neanche una parola, quando mi stavo appiccicando****…**quando io mi misi ad appiccicarmi con il figlio dello ZIO, quando mi misi ad appiccicarmi. Il compagno nostro non disse neanche una parola, Alessandro non disse neanche una parola, non gli disse niente***".
La convenienza avrebbe consigliato - secondo i due *cicciottiani* (evidentemente all'oscuro delle grandi prospettive strategiche dell'accordo stretto dai capi con gli Orsi) – di rispettare l'intesa con Ferraro Nicola: "…***pure lui lo sapeva, che…dovevano rimanere sempre questi… come ha cambiato idea non ho capito…mo' quando quello inizia a non dare più i soldi, si va da EMILIANO*** (MIELE Massimiliano) ***e ve li dà EMILIANO****…*".

All'indomani (**9.5.2000, ore 12.59, telefonata n. 1228**) **CAVALIERE Mario e Russo Giovanni** s'interrogano sull'opportunità di pretendere comunque da Ferraro il contributo legato ai profitti conseguiti nel mese precedente:

"…***Quello della MONNEZZA là…ce li dobbiamo far dare…. Il mese che lui ha faticato ce li dobbiamo far dare i cosi. O no?***". RUSSO risponde affermativamente ma ribadisce che "***comunque ha fatto sempre figure di merda…gli scemi siamo sempre noi qua…***".

L'indagine intercettiva, coordinata con l'acquisizione di alcuni documenti, ci offre anche la prova autosufficiente della pressione militare esercitata dai 'cicciottiani' sui fratelli Ferraro per scoraggiare, una volta aggiudicata la gara ai fratelli Orsi, qualsiasi iniziativa procedurale diretta all'annullamento del risultato.

In data **10.7.2000, alle ore 12.45 (n. 525)**, Cirillo Alessandro ordina a Verde Enrico (capozona di Villa Literno): "***…mi dovresti fare l'appuntamento un poco con quella guagliona che va a scopare sul MUNICIPIO… che dopo…una cosa urgente però***". VERDE Enrico dimostra di avere inteso: "..***ho capito, ho capito…quello che parlammo allora…e mo' vedo di rintracciarlo, mo' vado a casa sua…***".
Il riferimento alla 'guagliona che va a scopare sul municipio' deve intendersi evidentemente alla Ecocampania, titolare *illo tempore* del servizio di raccolta per il comune 'comandato' da VERDE.

Alle **ore 15.14 del 10.7.2000 (tel. n. 531)** VERDE Enrico domanda a Cirillo Alessandro: "…***dimmi che gli devo dire a questo…***". CIRILLO Alessandro palesa la necessità di portare il Ferraro Nicola al cospetto di un altro affiliato che una conversazione successiva ci consentirà di identificare in Alfiero Nicola.
VERDE Enrico rappresenta che è per lui difficile convincere Ferraro Nicola, estremamente diffidente, a presentarsi ad un incontro con estranei: "***…è una parola mo'…non lo so se ci viene. Quello è un tipo un poco curioso, è un tipo un poco…. È fatto così, se per esempio: <<se devo andare con te>> ha detto <<non ci sono problemi… però se mi dite qualche problema a girare torno torno, non esiste proprio!***". CIRILLO Alessandro spiega all'interlocutore che l'incontro si risolverà in un colloquio fraterno ("…***con un fratello mio…***"). VERDE Enrico risponde che però Ferraro Nicola conosce perfettamente quale sarà l'argomento e preferisce trattarlo con un soggetto del quale si fida come lo stesso Verde: "***…già sa tutti i cazzi… ha detto: <<perché, non è la stessa cosa… me lo dicono… voglio avere a che fare solo con te, me lo dicono e stiamo a posto… che cambia qualcosa? Fattelo dire e parliamo a me e te…>>***".

Nel **colloquio n. 532 del 10.7.2000, ore 15.17**, Verde Enrico domanda a Cirillo Alessandro se sia sua intenzione portare Ferraro Nicola al cospetto di BIDOGNETTI Aniello (" ***il grosso***"). Ricevuta una risposta negativa, VERDE Enrico propone di occuparsi da solo e in prima persona dell'incontro con il Ferraro Nicola: "***…e allora vediamo noi, che ce ne fotte… l'importante solo che…ce la vediamo noi, dimmi a me quello che devo dire ed è la stessa cosa...***". CIRILLO Alessandro ribadisce l'importanza per il gruppo della questione da trattare con Ferraro. Egli è evidentemente al corrente del calcolo di convenienza che sta alla base della scelta del gruppo di allearsi con gli Orsi ("***è importante, è una cosa buona per noi… deve parlare con uno…***").
VERDE Enrico - per persuadere Cirillo Alessandro della necessità di non urtare la comprensibile diffidenza di Ferraro Nicola, costringendolo ad un incontro plurale - racconta di avere di già contattato il fratello Ferraro Luigi che gli aveva confermato i suoi dubbi circa l'eventualità che il germano si facesse condurre con vari affiliati: "***…e***

non lo so, fammici prima… io già gliel'ho detto… io già gli ho parlato un poco di corsa – di corsa così…però l'ho detto al fratello… il fratello… ha detto: <<vedi se ci devi parlare tu non ci sono problemi.. però io lo so che è capace che vado torno torno>>. Si preoccupa assai, quello è tutte cose…poi vedi tu, se poi è necessario proprio che dobbiamo fare… però se è così fattelo dire…glielo diciamo noi…".
Quindi il CIRILLO Alessandro ribadisce la sua posizione, spiegando che la questione è complicata che egli stesso avrebbe difficoltà ad illustrarla compiutamente: "***….quella persona glielo deve spiegare…è un impicchiaccarolo, devo andare io con un libro in mano là e mi devo far spiegare tutte cose… mi scordo qualcosa… qualche punto e virgola…***". VERDE Enrico promette allora di contattare nuovamente Ferraro Nicola, e di proporgli un incontro per "domani" (11.7.2000) "***…dal lava piatti…***".

Nella **conversazione n. 552 del 10.7.2000, ore 18.23**, è ALFIERO Nicola a rammentare a Cirillo Alessandro la necessità di fissare un appuntamento con il Ferraro Nicola (affidatario del servizio di raccolta dei rifiuti solidi urbani nel Comune di Villa Literno): "***…non ti scordare il fatto di…di Villa Literno…di Villa Literno…***". CIRILLO Alessandro lo rassicura, segnalandogli di avere già provveduto: "***…non ti preoccupare ho già chiamato…domani vede se stasera ci fa l'imbasciata e domani lo vado a prendere…***".

Alle successive ore 20.39 Verde Enrico informa Alessandro di avere proposto l'appuntamento a Ferraro: "***…ohè…ho parlato con…me lo fa sapere stasera a che ora è, tu chiama a questo e viene al lato dei piatti…hai capito? Prendi a questo al lato dei piatti, poi ti do la conferma più precisa…***".

La piena comprensione della sequenza colloquiale finora riportata e la definitiva certezza sull'identità dei soggetti menzionati la conseguiamo grazie ad alcune acquisizioni documentali, che chiariscono anche la ragione per la quale i 'cicciottiani ' hanno tanta premura di incontrare il Ferraro.

In data 10.7.2000 (ossia nello stesso giorno in cui avvengono le conversazioni nn. 525, 531, 532, 552 e 572) la Commissione aggiudicatrice del Consorzio Intercomunale Obbligatorio Ce4 si riuniva per la valutazione delle offerte relative alla gara per la scelta del partner privato della costituenda società a capitale misto, gara cui avevano partecipato la srl FLORA AMBIENTE (riconducibile ai fratelli Michele e Sergio Orsi) e la srl l'ECOCAMPANIA dei germani Nicola e Luigi Ferraro (entrambi costituitesi in due distinte a. t. i.).
Al termine della riunione, tenutasi dalle ore 10 alle ore 14 (come si rileva dall'esame del verbale n. 3 del 10.7.2000), la Commissione aggiudicatrice dichiarava vincitrice l'A.T.I. FLORA Ambiente.
Sennonché dagli atti preliminari all'aggiudicazione della gara (la cosiddetta fase di verifica dei presupposti amministrativi) risulta che non presenziarono a questa operazione i rappresentanti dell'A.T.I. ECOCAMPANIA.
Tantevvero che con missiva acquisita al protocollo del consorzio CE4 in data 12.7.2000 al n. 283 (ossia due giorni dopo l'aggiudicazione) la srl l'ECOCAMPANIA lamentava: "*...apprendiamo con viva sorpresa che la gara in oggetto risulta essere stata già aggiudicata a precisamente, come da Voi indicato, alla A.T.I. FLORA Ambiente S.r.l. (quali sono le atre imprese associate?). La sorpresa ci deriva dal fatto che, sebbene regolarmente ammessi alla gara in questione, non siamo stati avvisati del giorno, dell'ora e del luogo di svolgimento della stessa, come a Voi ben noto, la segretezza della seduta di gara, enunciata nel bando, si riferiva testualmente, com'è ovvio e*

legittimo, alla fase di "raffronto concorrenziale" delle candidature, che è una fase successiva a quella della verifica dei presupposti amministrativi per la gara medesima…ci permettiamo al riguardo di ricordare come la Corte di Giustizia CEE abbia reiteratamente ritenuta illegittima la mancata indicazione del giorno, dell'ora e del luogo dell'apertura delle offerte…".

Nella **conversazione telefonica n. 1033 del 13.7.2000**, ore 14.35, Verde Enrico domandava a Cirillo Alessandro: "***…ma che dobbiamo fare, non ci dobbiamo parlare più con quello?***". Alessandro rispondeva che la necessità di incontrare il Ferraro Nicola perdurava. Al che Verde mostra rammarico spiegando che l'imprenditore era disponibile ma, non avendo ricevuto specifiche indicazioni, era ritornato "…***un'altra volta a Gaeta…***".
Inoltre VERDE Enrico informava CIRILLO del proposito di darsi nuovamente da fare per contattare il Ferraro Nicola, chiedendo delucidazioni sull'effettiva urgenza dell'appuntamento ("***…comunque non è una cosa urgente, si può aspettare, diciamo, si può fare ancora…***"). CIRILLO Alessandro replicava: "***…domani o dopodomani, si può aspettare ancora, non ti preoccupare…***".

La conversazione n. 1513 delle ore 17.47 del 19.7.2000 conferma ulteriormente il coinvolgimento di MIELE Massimiliano nella questione.
Il Miele aveva cercato vanamente più volte di contattare telefonicamente Cirillo Alessandro. Si rivolgeva quindi a Di Maio Francesco che confermava di aver anch'egli trovato difficoltà per rintracciare 'o sergente ("***…non sono capace di rintracciarlo a questo, mannaggia Dio, il telefono non risponde***"). Quindi Miele chiede di Alfiero Nicola detto *'o zio* ("***ma neanche NICOLA ?***"), ottenendo analoga risposta negativa: "***…no, neanche lo ZIO, il numero dello ZIO non lo tengo…***".

Alle ore 22.09 (tel. n. 1723) MIELE Massimiliano contattava il CIRILLO Alessandro chiedendogli l'esito di un colloquio che Alfiero Nicola doveva avere in quella giornata con uno dei Ferraro: "…***mi dovevi far sapere una risposta, mi vuoi far sapere ?...***". CIRILLO Alessandro si giustificava affermando di non essere ancora riuscito a parlare con l'Alfiero Nicola: "…***e come non ti dovevo far sapere! Sto ancora ad aspettare, questo ancora lo devo rintracciare…s'è ritirato alle nove*** (ore 21)***…io me ne sono andato dal Paese*** (Casal di Principe)***… mo' ho mandato a uno là, però penso che ci ha parlato, mo' mi dovrebbe telefonare…***".

Il 20.7.2000, alle ore 12,24 (tel. n.1803), CIRILLO Alessandro riusciva finalmente a contattare ALFIERO Nicola e a domandargli l'esito del colloquio: "***…'O ZIO, ci avete parlato con quello?***". L'ALFIERO Nicola risponde, informandolo di avere parlato con il Ferraro Luigi: "***…ho parlato con il fratello ha detto <<sì, però questa è una cosa di mio fratello… io non c'entro con mio fratello…>>. Però ho detto: tu inizialo a chiamare… Ha detto: <<ma per telefono come glielo spiego?>>. Mo' questo viene mercoledì, il fratello lo deve andare a prendere mercoledì all'aeroporto…***".
Terminato il colloquio con Alfiero, Cirillo Alessandro, alle ore 12.27, chiamava Miele Massimiliano (**tel. n. 1808**) al quale riferiva l'esito dell'incontro avvenuto il giorno precedente con Ferraro Luigi, affermando falsamente di avervi preso parte direttamente: "***io ci ho parlato con… sono andato proprio, diciamo, da lui…l'interessato, diciamo, mo' abbiamo parlato con lo scemo*** (il fratello)***…perché questo qua sta fuori, non so dove ha detto che sta… mercoledì lo va prendere all'aeroporto***". Miele replicava che non era possibile attendere il successivo mercoledì (26.7.2000): a quel punto sarebbe stato tutto inutile. Ipotizzava che Nicola Ferraro,

fiutate le possibili richieste, si stesse deliberatamente sottraendo all'incontro: "***…Noi dobbiamo avere una risposta, perché là si deve fare una cosa pesante… hai capito? Allora se non si sa la risposta…mercoledì non c'è più tempo… questi lo stanno a fare apposta… è inutile… guaglio'… se è dimmelo… che io glielo dico a questi… <<guaglio', non è cosa più>>, ci togliamo di mezzo. Perché questi hanno detto la data proprio, che non si può fare niente più. Hai capito? Questa data che ti hanno detto a te, non si può fare niente più…hai capito? Perciò hanno detto questa data…***". Infine Miele concordava con l'interlocutore un incontro personale.

A chiarirci le ragione della premura di Miele è ancora una volta l'acquisizione documentale.
In data 19.7.2000, con protocollo n. 2937, il consorzio CE4 invitava l'ATI ECOCAMPANIA a fornire le certificazioni richieste dal bando di gara entro dieci giorni dal ricevimento della richiesta; in data 20.7.2000 (lo stesso giorno in cui avveniva la conversazione telefonica n. 1808), PALMA Nicola nella qualità di amministratore unico della srl ECOCAMPANIA - società capogruppo dell'A.T.I. - presentava a mano una richiesta di accesso agli atti di gara, acquisita al protocollo n. 2946.

Sempre in data 20.7.2000, alle 12.29 **(n. 1809)**, CIRILLO Alessandro contattava nuovamente Alfiero Nicola per riferirgli l'urgenza della convocazione di Ferraro: "***…'O ZIO questo dice, per esempio, che per mercoledì…dice che per mercoledì…è tardi…non ce la fanno…dice che non per niente lo hanno fatto apposta…***". A questo punto Alfiero Nicola chiedeva ordini, dichiarandosi pronto ad assumere iniziative intimidatorie nei confronti dei familiari di Ferraro Nicola: "***…dimmi tu che devo fare e io lo faccio…questo non ci sta, dimmi che devo fare…lo devo andare a dire alla mamma, al padre, a chi lo devo andare a dire?***". CIRILLO suggeriva di ritornare su Ferraro Luigi, fratello di Nicola. Era esplicito il messaggio da riferire: "***…si deve dire allo scemo che si deve ritirare tutte cose… si deve dire…per quieto vivere… come si dice…***". ALFIERO rappresentava di avere già operato in tal senso nel colloquio avvenuto il giorno precedente: "***…eh! Ma io già gliel'ho detto questo. Lui ha detto: <<quello che posso fare io lo faccio… però>>, ha detto, <<là se non mette la firma mio fratello…>>, ha detto, <<io non sono nessuno…>> ha detto <<se vado là e voglio ritirare ci vuole la firma… non sono autorizzato a firmare, a fare…***". CIRILLO informava poi ALFIERO Nicola del fatto che i fratelli Nicola e Luigi Ferraro stavano con ogni probabilità cercando di guadagnare tempo per eludere il comando promanante dal gruppo Bidognetti: "***…questi sono proprio figli di puttana, perché l'hanno fatto apposta, mercoledì non c'è più tempo… hai capito? Va bene, dopo parliamo da vicino di questo fatto, dai…***". ALFIERO Nicola concordava un incontro personale con l'interlocutore: "***…dimmi quando ci dobbiamo vedere, parliamo da vicino e decidiamo…***". CIRILLO riferiva brevemente il 'messaggio' da mandare a Ferraro Nicola: "***eh! Ma questo qua ancora lo deve fare, capito? Tutte cose, non lo deve far andare avanti… hai capito? Dopo parliamo da vicino…***".

Alle ore 12.56 **(tel. 1818)** Cirillo Alessandro chiedeva ad Alfiero Nicola di organizzare un incontro con Ferraro Nicola, al quale anche lui si riprometteva di presenziare: "***…ci vuoi far fare un appuntamento, ci voglio stare pure io quando viene…***". ALFIERO Nicola si rendeva disponibile, stabilendo che l'incontro sarebbe avvenuto alle ore 17 di quello stesso giorno. Cirillo segnalava di aver saputo che in realtà Ferraro si trovava sul territorio, diversamente da quanto aveva riferito il fratello Luigi: "***…mi hanno detto che il fratello grosso sta qua…t'hanno detto la bugia…me l'hanno detto a me…***".

ALFIERO Nicola rassicurava Cirillo Alessandro: ***"…lo chiamo e ci parliamo tutt'e due…".***

Alle ore 14.40 (tel. 1831), Alfiero Nicola informava Cirillo Alessandro di avere provveduto ad organizzare l'incontro: "***…ho fatto l'appuntamento alle cinque*** (ore 17)". Appreso ciò, il Cirillo Alessandro domandava: "***…alle cinque! Dove, a casa vostra ?...***", ottenendo risposta affermativa.

Alle ore 18.24 (1884), Cirillo riferiva a Miele Massimiliano, che lo contattava per ricevere notizie, l'avvenuto svolgimento del rendez-vous: "***…ho parlato a quattr'occhi stretto con quello…ho parlato con quello, con quello che tenevo l'appuntamento alle cinque…***". Ogni dettaglio era rimandato ad un incontro personale da realizzare al più presto: "***…poi te lo dico da vicino, dai; quando stai nella zona mia, vieni là e te lo dico…***".

Alle ore 18.28 dello stesso giorno, Cirillo Alessandro, conversando con Alfiero Nicola, gli manifestava il convincimento che, dopo l'incontro avvenuto tra loro due e il fratello, Ferraro Nicola avrebbe fatto immediatamente ritorno: "…***subito viene, quell'amico…è capace subito viene domani…***". ALFIERO Nicola conveniva: "***è normale. Quello mo', ti faccio vedere, subito prende l'aereo e viene qua…***".

Il 21.7.2000, alle ore 12.25 (tel. n. 1968), MIELE Massimiliano chiedeva a Cirillo Alessandro di incaricare Alfiero Nicola del controllo sull'avvenuto ritorno di Ferraro Nicola: "***…che volevo dire… diglielo a NICOLA*** (ALFIERO) ***che vada a vedere se quello se n'è venuto…che insista, hai capito… mandalo a casa sua…***". CIRILLO Alessandro tranquillizzava l'interlocutore sul fatto che l'incontro del giorno prima aveva destato timore in Ferraro Luigi: "***…io gli feci un parlare ieri… dopo non se ne voleva andare più da lì, dice <<me ne posso andare, non me ne devo andare…>>"***. MIELE Massimiliano sottolineava che era comunque necessario completare l'opera mediante un colloquio diretto con il Ferraro Nicola: "***no, e tu devi parlare con il fratello…***". CIRILLO Alessandro ribadiva : "***…quello disse: <<io mo' lo telefono subito>>. Quando se ne andò, uscì là fuori… <<me ne posso andare, non me ne posso andare?>>***…".

Tre ore dopo aveva luogo tra gli stessi Miele e Cirillo un colloquio del tutto analogo: ***"…ma a quello lo hai chiamato a vedere se se n'è venuto quel cane di pecora…*** " - ***"…e mo' tengo l'appuntamento dopo, non ti preoccupare. Dopo ti faccio sapere stasera…***".

Alle ore 20,35 (**tel. n. 2065**), i due affrontavano lo stesso tema. Cirillo rassicurava nuovamente Miele sull'atteggiamento remissivo tenuto da Ferraro Luigi nel pomeriggio del giorno precedente: "***…eh! Disse: <<io mò sto a fare…>> disse <<però non ti preoccupare, come è stato fatto, come è stato parlato la prima volta, così tornano le cose… c'è stato un frainteso… io non mi permetto proprio… non voglio sapere più niente, se me ne devo andare fuori me ne vado fuori…>>***…".
Il 25.7.2000, alle ore 13.42 (**tel. n. 2507**), ALFIERO ricordava a CIRILLO Alessandro un appuntamento fissato con i germani Nicola e Luigi Ferraro per il pomeriggio dell'indomani: "***…ti volevo pure avvisare che noi domani alle cinque teniamo l'appuntamento…deve venire quell'amico che ci parlasti… i due fratelli…***". CIRILLO faceva presente che avrebbe preferito evitare di prender parte alla riunione, temendo di essere pedinato e controllato dalle forze dell'ordine: "***…io non vengo***

perché… non vengo là, che ne so, se mi vanno trovando !?...".

Alle ore 19.26 **(tel. n. 2550)**, CIRILLO Alessandro segnalava ad Alfiero di avere avuto notizia di un ricorso presentato dall'A.T.I. Ecocampania: "***…'o zio, ma questo che ha fatto 'sto Picone, ha mandato le carte là sopra là, ha mandato il fax per fare il ricorso?***". Alfiero Nicola mostrava sorpresa, essendo stato diversamente informato da tale D'Agostino (evidentemente vicino ai fratelli Ferraro). D'Agostino si era presentato da lui in mattinata, asserendo che i Ferraro intendevano incontrarlo all'indomani per risolvere definitivamente la questione nel senso auspicato dai 'cicciottiani': "***….D'AGOSTINO mi ha detto di no. E' venuto stamattina a dirmi vicino a me il fatto dell'appuntamento di domani…che loro domani si voglio incontrare; e poi faceva questo ?...***". A questo punto Cirillo Alessandro aveva invitato Alfiero Nicola a sincerarsi dell'accaduto: "…***chiamalo e avvertilo, devi dire: <<ma che hai fatto qualcosa ?>> Ma fai che qualcuno ha fatto qualcosa e lui non lo sa!...***". ALFIERO Nicola ribadiva il contenuto distonico dell'incontro avuto con Ferraro Luigi: "…***e senti: quello è venuto lui da me stamattina, però sempre il piccolino*** (FERRARO Luigi), ***non il grosso*** (FERRARO Nicola)***…è venuto a dire che il fratello*** (FERRARO Nicola) ***questa sera si ritirava, no, che domani mattina se ne veniva e che domani pomeriggio dovevano fare quell'incontro…Mo', se era qualcosa, quello*** (FERRARO Luigi) ***non ci veniva da me !...***". Comunque Alfiero avrebbe 'mandato a prendere' Ferraro Luigi per chiedergli spiegazioni: "***…comunque mo' lo mando a prendere subito e vedo che ha combinato…***". Cirillo esortava Alfiero Nicola a usare decisi toni minatori: "***…digli: <<ma che cazzo state a combinare, ma manco lo volete capire?>>, devi dire: <<ma che dobbiamo fare domani, ce lo dobbiamo mandare per posta a questo fratello !!>>…***".

Alle ore 19.39 **(tel. n. 2552)**, Cirillo contattava nuovamente Alfiero Nicola e apprendeva che era imminente la 'traduzione' di Luigi presso 'o capritto: ***"..hai parlato con questo ?...***" - "…***mo' l'ho mandato a chiamare, ancora lo devo trovare, mo' proprio ohè… appena ci parlo…***". Cirillo ribadiva l'esortazione a minacciare: "***…devi dire: <<ma la volete finire di fare gli scemi, ma che dobbiamo fare… in faccia al muro !! Che dobbiamo fare…domani va a finire che così succede…***".

Alle ore 20,14 (**tel. n. 2553**), Alfiero informava Cirillo Alessandro: "***…quella situazione che mi hai detto tu… IL FAX… non esiste proprio…sta vicino a me, <<non esiste proprio>> ha detto. Ha detto: <<fategli fare la copia>>, ha detto, <<poi domani teniamo l'appuntamento che ci dobbiamo incontrare>>, ha detto…perché li stanno a calunniare in questa maniera, quando loro non hanno fatto niente ?...***".

Dopo tre minuti (**tel. n. 2554**), Cirillo Alessandro contattava Alfiero Nicola. Prima di iniziare la conversazione, Cirillo Alessandro chiedeva a una persona che si trova con lui: "***… se me la puoi far recapitare questa carta prima delle cinque…"***. Quindi assicurava all'interlocutore telefonico che 'quella carta' era stata effettivamente presentata dall'A.T.I. Ecocampania al consorzio Ce4: "***…'O ZIO, il nome è il suo, domani gli porto pure la carta…il nome è il suo… mi senti ?...il nome è il suo, è CAMPANIA*** (ECO CAMPANIA, n.d.e.)***…capiscimi…il nome è il suo perché dopo, domani ti faccio vedere pure la carta…'ste cartelline che cazzo le mandano a fare..***.". Appreso ciò, ALFIERO Nicola invitava Cirillo a portare 'la carta' con sé quando si sarebbero incontrati con i fratelli Ferraro, all'indomani: "***…allora portati la carta…allora domani, quando facciamo l'incontro, portati la carta…***" .

La 'carta' menzionata nel colloquio sopra riportato s'identifica in un fax 'provocatorio' pervenuto alla sede consortile CE4 alle ore 18.00 del giorno **24.7.2000.** Il fax proveniente da ECOCAMPANIA s.r.l., protocollo n. 2986 del 25.7.2000, aveva il seguente contenuto: "*OGGETTO: richiesta documentazione… Con riferimento all'oggetto, Vi richiediamo copia dell'Ordinanza o Istanza che Autorizza la Vs. attività di discarica. Certi di Vs. sollecito riscontro porgiamo distinti saluti"*. Il consorzio Ce4 rispondeva con nota n. 2992 del 25.7.2000, del seguente tenore: "*facendo seguito alla vostra nota n. 2068/99 del 24.7.2000, genericamente firmata Ecocampania s.r.l., si chiede motivazione della richiesta"*.

Claudio De BIASIO, direttore generale del consorzio Ce4, riferiva alla p. g. in data 2.12.2004: "*....con nota protocollo 2986 – l'Ecocampania faceva pervenire via fax una richiesta di documentazione riguardante l'ordinanza o l'istanza che autorizza l'attività di discarica al consorzio CE4. A tale nota venne fornita risposta con nota 2992 del 25.7.2000 con la quale il consorzio chiedeva motivazioni della richiesta. Voglio cogliere l'occasione per rappresentare che in relazione a tale ultima corrispondenza della Ecocampania mi venne qualche dubbio sulla effettiva provenienza della missiva anche perché non vi fu più alcun seguito…*".
In data 26.7.2000, alle ore 11,48 (**tel. n. 2666**), Cirillo Alessandro prima esternava ad Alfiero Nicola il proprio allarme per la pressione delle forze dell'ordine: "***…la cosa è seria! Mo' che ne so com'è la situazione…da me che vogliono? E perché, ieri sera si è fatta un'altra situazione ad un'altra parte……andai ad una parte e stavano…poi andai ad un'altra parte e mi chiamarono e mi dissero: non venire che stanno ad aspettare…stavano nelle piante ad aspettare…mo' che ne so che cazzo vogliono. Se era una cosa normale…dice: vieni qua, fatti vedere come stai…il medico mi visitava e mi mandava…invece quelli stanno come i cani da presa dietro le piante…***". Quindi rispondeva a una domanda di Alfiero sull'incontro fissato per il pomeriggio: "…***dopo ti faccio sapere, ZIO…alle cinque dai…alle cinque, quando siete pronti mi chiamate, se è prima, prima mi chiamate…***".

Alle ore 17.36 (**tel. n. 2752**), Alfiero chiamava Cirillo e lo avvertiva dell'arrivo dei fratelli Ferraro. Quindi l'informava del fatto che Ferraro Nicola si era definitivamente convinto a non coltivare azioni oppositive avverso l'aggiudicazione della gara: "***…ha parlato con me, ha detto: <<senti, tutto questo non esiste proprio…io mi sono levato da mezzo, non mi interessa più…>>*** ". Sentito ciò, CIRILLO Alessandro appariva provvisoriamente rassicurato, fermo restando il proposito – qualora in futuro Ferraro Nicola avesse disatteso questo impegno – di intraprendere una reazione 'tipica': "***…allora facciamo una cosa, se sta un'altra carta*** (documento) ***faccio a modo mio, faccio a cosa mia…senza che…se c'è qualche altra carta, se esce qualche altra carta…faccio…diciamo a modo nostro…***".
ALFIERO Nicola tranquillizzava il sodale ribadendo la solennità dell'impegno assunto da Ferraro Nicola: "***…ha detto: del suo non può arrivare mai niente più là sopra là, soltanto il primo giorno quando…quando noi lo chiamammo… - ha detto – lui non si è interessato più. Ha chiamato gli avvocati, ha detto: <<levate da mezzo, perché è una situazione che a me non interessa>>.*** Ferraro aveva anzi dimostrato una sorta di complicità nei confronti dell'interlocutore, mettendolo in guardia rispetto al pericolo rappresentato dalle voci correnti circa l'impegno tangentizio assunto dall'ATI aggiudicataria. E così raccogliamo l'ennesima obiettiva conferma dell'accordo riferito da Vassallo:

"***Lui l'unica cosa che voleva parlare, voleva parlare di un'altra cosa, voleva parlare,***

ha detto: <<stanno a fare troppo bordello, 'sta cosa la stanno a fare andare in bocca a tutti quanti>>. Ha detto: <<sta quell'amico là, parla troppo…tiene fiducia di tutti quanti…>>. Ha detto: <<io vi voglio assicurare che dopo se succede qualcosa non ve la venite a prendere con me, ma prendetevela con lui, perché è lui che sta parlando con tutti quanti…>>. Ha detto: <<perché non si rende conto che la sopra là, se stanno venti persone, di dieci può avere fiducia ma degli altri dieci non deve avere fiducia…perché se va a dire qualcosa così lo vanno a rapportare… LA TANGENTE… cose…e questa cosa sta in bocca a tutta la provincia…>>, ha detto: <<solo di questo vi voglio…però se mo' me la vogliono dare io non la voglio…>>. Ha detto: "perciò non mi interessa e non dicessero bugie perché io non ho fatto niente più… non ho chiamato IL PRESIDENTE… gli avvocati". Ha detto: "non mi interessa, se mo' me la volete dare…non la voglio". Queste sono le parole sue…".

In data 1.8.2000, alle ore 15,52 (**tel. n. 3493)**, Alfiero contattava Cirillo Alessandro per informarlo del fatto che il Ferraro Nicola gli aveva riferito di avere ricevuto una comunicazione dal consorzio Ce4 alla quale egli si riteneva obbligato a rispondere trattandosi di lettera protocollata: "…***senti un poco, ma quell'amico che ci parlammo assieme…sta da ieri a venire da me perché dice che…che questo là…gli hanno mandato la lettera a lui…mo' quello stava qua che voleva parlare con te…***(…) ***perché dice: <<non dobbiamo fare che loro si vogliono acconciare le cose loro…perché hanno sbagliato a fare…>> dice <<se vogliono acconciare le cose loro e a me mi vogliono buttare nel casino>> dice <<perché gli hanno fatto una lettera che io devo presentare urgentemente certi documenti…così…così…così…>> mo' dice: <<la lettera me l'hanno mandata tramite protocollo>> ha detto <<che io…>> Ha detto che lui deve rispondere per forza…dice che è una lettera che loro devono presentare certi documenti…Poi lui ha detto, ha detto: <<io mo' gli rispondo, però dopo andateci voi, andateglielo a dire che non mi devono scrivere più…comunque mo' questo torna a venire qua, che gli devo dire?...***". Proseguendo nel resoconto Alfiero riferiva:"***…il consorzio ha mandato la lettera a lui e lui mo' gli deve rispondere per forza…deve rispondere per forza perché quello è tramite protocollo, perché là sopra ha scritto…entro tre giorni ci deve mandare…***".
Alessandro domandava quali sarebbero state le conseguenze di una mancata risposta. ALFIERO riportava le asserzioni di Ferraro Nicola: "***dice: mi metto in difficoltà se non rispondo. E perché quello là dice: <<quello il CONSORZIO quello vuole, vuole che non rispondo, perché se succede qualcosa dice: vedete? Quello è lui che non ha risposto>>. Dice: <<mo' perché mi scrivono, se è una cosa che io mi sono tolto di mezzo…quello è d'accordo, perché mi scrivono ancora?>>***".

La lettera che Ferraro Nicola comunicava di aver ricevuto dal Consorzio CE4 s'identifica nella missiva datata 19.7.2000 (protocollo n. 2937) con la quale il consorzio Ce4 invitava la srl ECOCAMPANIA a produrre le certificazioni richieste dal bando di gara nel termine di dieci giorni. Tale missiva, inviata a mezzo raccomandata, veniva ricevuta dalla srl Ecocampania in data 27.7.2000. Ne derivava che i dieci giorni previsti per la trasmissione della documentazione richiesta dal consorzio Ce4 sarebbero scaduti il 5.8.2000 (cfr., al riguardo, la conversazione oggetto di intercettazione telefonica n. 3493 dell'1.8.2000).
In risposta a tale richiesta, la srl ECOCAMPANIA con nota recante la data dell'1.8.2000 - assunta al protocollo del consorzio Ce4 n. 3102 – esponeva, non senza ironia: *<<Oggetto: gara per la costituzione società mista (Vs. comunicazione prot. n. 2937 del 19.7.2000). In riferimento all'oggetto vi significhiamo, anzitutto, che la Vs. richiesta relativa alle certificazioni di cui al punto 8 lett.a) e b) del bando di gara ci*

sorprende sia per la sua intempestività che per la sua inutilità. Lo scopo di tale richiesta, infatti, come agevolmente si evince dal combinato degli artt. 1 comma 2, 2 comma 3 ed 11 del d. lgs n. 403/98 è quello di verificare la rispondenza a verità delle dichiarazioni sostitutive sia di certificazioni che dell'atto notorio, così che, qualora dai controlli emerga <<la non veridicità del contenuto della dichiarazione, il dichiarante decade dai benefici eventualmente conseguenti al provvedimento emanato sulla base della dichiarazione non veritiera>> (art.11 comma 3). Ora, posto che la scrivente A.T.I. ormai non risulta aggiudicataria della gara in oggetto, non si comprende da quali benefici, allo stato attuale, essa potrebbe o dovrebbe decadere. Ad ogni buon conto, vi rimettiamo la documentazione da Voi richiestaci, invitandoVi, nel contempo, ad inviarci a stretto giro di posta i documenti richiestiVi ai sensi della legge n. 241/90 con la detta ns. nota del 12/07/2000, comprensivi delle certificazioni da Voi richieste (supponiamo) anche all'A.T.I. vincitrice.>>

In data 3.8.2000, alle ore 14.46 (tel. n. 140), Cirillo Alessandro, evidentemente preoccupato per il contenuto della risposta epistolare di Ecocampania, chiedeva ad Alfiero di organizzare un nuovo incontro con il solito Ferraro: "….***senti una cosa: vorresti fare un appuntamento con quel FUCONE***…***ci devo parlare un poco a quattro occhi seriamente. Poi dopo vi faccio sapere pure a voi come stanno le cose…***". ALFIERO rispondeva che Ferraro Nicola si era già portato presso di lui, dicendosi disponibile per un incontro: "***…e quello venne, voleva parlare, non è che non è venuto…***". A questo punto CIRILLO illustrava le ragioni che intendeva rappresentare a Ferraro: "***…ho capito che venne e voleva parlare…poi vi faccio vedere che il CONSORZIO non gli ha mandato nessuna carta…è stato lui che ha mandato la CARTA AL CONSORZIO". A***LFIERO confutava l'ipotesi dietrologica di Cirillo asserendo di avere visto la missiva del consorzio Ce4: "***…quello mi portò la carta, l'ho vista la carta del CONSORZIO, la lettera…***".

A seguire con preoccupazione le evoluzioni della vicenda era anche Miele Massimiliano (espressamente indicato da Vassallo, si ricordi, come coinvolto nel patrocinio armato dell'operazione ECO4). Miele, nella conversazione n. 187, rappresentava a Cirillo la necessità di contattare urgentemente Ferraro Nicola: "***…tu allora devi chiamare solo a quello del paese nostro*** (di Casal di Principe)***…devi andare avanti, perché quello là ha fatto quel fatto di quelle carte. Capito?...***".

Qualche minuto dopo **(tel. n. 189)** Miele rappresentava la necessità di dissuadere Ferraro dall'intento di recarsi all'indomani presso il consorzio Ce4: "***…che volevo dire: quello là con cui tu dovevi parlare…del paese nostro*** (Casal di Principe)***…domani verso le dieci - le undici devono andare a ritirare dei documenti su quell'ente***…***mo' tu per stasera glielo devi mandare a dire che non ci devono andare*** (…) ***il fatto di quella carta che hanno mandato, mo' si dovrebbero andare a prendere la risposta…tu glielo devi far sapere…che non devono andare…***".

Alle ore 21,38 (tel n. 202), CIRILLO Alessandro – adempiendo a quanto a lui richiesto dal Miele Massimiliano nella precedente conversazione n. 189 - contattava Alfiero affinché rintracciasse Ferraro Nicola, per dissuaderlo dal recarsi all'indomani presso il consorzio Ce4: "***…sentitemi: allora domani mattina, l'amico che vende il concime…quello che vende il concime…allora: domani mattina alle undici e mezzo dovrebbe andare a firmare una cosa lui…mo' se lui quella cosa là non la firma, allora va tutto a posto; ma se lui ci mette la mano sua sopra, ha detto che inguaia tutte cose…Lui non può firmare domani mattina, se vuole non firma, se poi ci vuol***

fare dispetto firma…si deve vedere come si deve rintracciare… domani mattina vengo là, ci parlo, perché non deve firmare alle undici…perché se vuol fare il dispetto firma…". Quindi l'ALFIERO Nicola si dichiara disponibile a rintracciare al più presto il Ferraro Nicola.

La preoccupazione palesata dagli affiliati del gruppo Bidognetti nella ultime conversazioni riportate si connette alla nota n. 3004 del 26.7.2000, con la quale il consorzio Ce4 comunicava alla srl Ecocampania che: *<<…l'accesso è consentito in conformità delle previsione della legge n. 241/90 e potrà avvenire il giorno 4.8.2000 dalle ore 10.00/11.30; la riproduzione fotostatica di atti e documenti sarà possibile all'esito dell'accesso, a fronte di dettagliata istanza scritta e previo pagamento dei costi di riproduzione….>>***.

In data 4.8.2000, alle ore 11,38 (tel. n. 234), Cirillo Alessandro contattava Alfiero Nicola per chiedergli se fosse riuscito a rintracciare Ferraro Nicola o il fratello Luigi. Alfiero Nicola rispondeva di aver parlato con Luigi che aveva escluso l'intenzione sua o del fratello di mettere in pericolo l'aggiudicazione della gara da parte dell'A.T.I. Flora Ambiente: "***…gliel'ho fatta…ha detto: <<non esiste proprio>>. Ha detto: <<prima di tutto…quello il grosso*** (FERRARO Nicola) ***non ci sta manco, figurati se alle undici*** (ore 11) ***potrebbe stare là...>> Ha detto <<poi non hanno fatto altro che rispondere a quella lettera che loro…>> che ti dissi, che loro gli hanno fatto…e hanno detto soltanto…Ha detto <<in quella lettera>> ha detto <<non ci scrivete più, che è una cosa che a noi non interessa, perché ci mandate a chiamare a chiedere questi documenti se è una cosa che a noi non interessa…>> ha detto: <<se noi non l'abbiamo presa noi sta cosa, perché ci scrivete a noi?>> ha detto <<è una cosa che non ci interessa, perciò noi non vi rispondiamo proprio…>>. Mi ha portato la copia, me l'ha fatta leggere…***".

Evidentemente l'assidua pressione di CIRILLO Alessandro, MIELE Massimiliano e ALFIERO Nicola produceva i suoi effetti.

La mattina del 4.8.2000 i titolari della srl Ecocampania non si presentavano presso la sede del consorzio Ce4 per avere accesso agli atti della gara bandita il 19.4.2000 (cfr. la nota n. 3004 del 26.7.2000).
Formalmente la srl ECOCAMPANIA giustificava l'assenza con il tardivo ricevimento dell'invito: *<<…vi comunichiamo che la Vs nota prot. n. 3004 del 26..7.2000 ci è pervenuta soltanto in data 5.8.2000. Vi richiediamo, pertanto, di comunicarci quando potrà avvenire l'accesso agli atti, con le modalità descritte nella Vs. citata nota….>>*.
Dalle comunicazioni telefoniche appena riportate traiamo invece il convincimento che i Ferraro fossero perfettamente al corrente della convocazione per il giorno 4 e che furono altre ragioni a dissuaderli dell'esercizio del loro diritto.

Come pronosticato da Sergio Orsi nei suoi colloqui con il socio Vassallo, il comportamento di Nicola Ferraro continuava però a essere ambiguo. L'uomo della Ecocampania non sembrava rassegnarsi del tutto alla sconfitta subita dagli Orsi.

La nota consortile n. 3205, preso atto delle giustificazioni fornite da Ferraro, lo riconvocava per la data del 10.8.00: *<<la nostra nota n. 3004 del 26.7.2000 risulta pervenuta con ricevuta del 4.8.2000; la nuova richiesta di accesso del 10.8.2000, consentita ai sensi della legge n. 241/90 con le modalità già descritte, potrà avvenire in data 1.9.2000, alle ore 10.00 – 11.30>>*.

In tempo reale i camorristi venivano informati della cosa.
In data 10.8.2000, alle ore 10.54 (tel. n. 1062) Miele Massimiliano – nell'esternare nuove preoccupazioni a Cirillo Alessandro – ci rivelava l'esistenza di una 'gola profonda' che rivelava ai 'cicciottiani' le faccende interne che potevano compromettere il varo della ECO4 secondo il progetto camorrista. Il comportamento di Giuseppe Valente ci dice quanto sia stretto il rapporto tra le tre componenti della società mista che sta per nascere (consorzio pubblico – privati – camorra) sin dalle sue origini.
E' assai rilevante anche il fatto che il bidognettiano MIELE – perfettamente aderendo alla rappresentazione di Vassallo - parli della costituenda società come di 'cosa loro': ***"noi stiamo a fare pure la società…".***

"***…l'avvocato di quello sporco di Casale no…è andato là, si è andato a prendere la carte stamattina…ma questi sono sporchi davvero allora. Mo' mi ha chiamato il Presidente e me l'ha detto…Noi stiamo a fare pure la società, tutte cose, questo è andato a prendere le carte, l'avvocato suo proprio. Guaglio', dobbiamo fare subito o sennò questo ci inguaia tutte cose…dobbiamo fare pure i versamenti per la società…".***

Ancora una volta il soggetto delegato per i contatti con i Ferraro è Nicola Alfiero detto 'capritto':***"…chiama un poco allo ZIO là e vedi un poco dai…***".
Alla domanda di CIRILLO Alessandro su quale impiego potrebbe fare Ferraro Nicola della documentazione acquisita presso il consorzio Ce4, MIELE Massimiliano risponde con una formula che esprime plasticamente la partecipazione diretta della fazione camorristica 'cicciottiana' nell'iniziativa.
Ferraro Nicola, con la sua ambiguità, non mette a rischio semplicemente l'interesse di imprenditori 'protetti' dalla camorra ma un investimento diretto dell'organizzazione criminale:

"***…se questo fa un coso*** (un ricorso, n.d.e.)***…perdiamo tutte cose, ci fa rimettere…questo deve fare il versamento di centocinquanta milioni qua …abbiamo fatto tutto questo, ci stiamo a taccariare*** (litigare) ***una continuazione e mo' sto bastardo, <<tutto a posto!>>, e poi piglia e fa il merda…***".

Ancora una volta i dati documentali ci aiutano a comprendere il colloquio. Risulta infatti che il 10.8.2000 (lo stesso giorno in cui è avvenuta la conversazione n. 1062), alle ore 12.40 (due ore dopo il colloquio tra MIELE e CIRILLO), il consorzio Ce4 deliberava con voti unanimi espressi per alzata di mano: "*...di approvare lo schema di Statuto per la costituzione della società mista* (consorzio Ce4 e a. t. i. Flora Ambiente) *ai sensi dell'art. 22 comma 3 lett. e) della legge n. 142/90, composto da n. 30 articoli…*" (v. Deliberazione dell'Assemblea Consortile n. 15 del 10.8.2000).

MIELE Massimiliano operava poi un esplicito ***riferimento alla somma di £ 150.000.000,*** da versare all'atto della costituzione della società a capitale misto.
Dall'atto costitutivo della spa Eco4 rogato in data 28.8.2000 dal notaio dott. Antonio DECIMO di Santa Maria Capua Vetere (esattamente il professionista indicato da Gaetano Vassallo nelle sue dichiarazioni) risulta allegata la ricevuta della Banca Nazionale del Lavoro n. 0127681 del 18.8.2000 relativa al deposito provvisorio dei tre decimi del capitale della medesima società per la somma di lire 150.000.000 – somma così proporzionalmente suddivisa: consorzio Ce4 lire 76.500.000; Flora Ambiente lire 64.500.000; Calepio Scavi spa lire 3.750.000; Brignoli Ecologica Ambiente srl lire

3.750.000; Capasso Ciro 1.500.000 - (v. l'atto costitutivo repertorio n. 5657 raccolta n.588).

In data 10.8.2000 (lo stesso giorno della conversazione telefonica n. 1062) la srl Ecocampania presentava al consorzio Ce4 la nota protocollata con il n. 3171, con la quale comunicava: *<<…che la Vs nota prot. n. 3004 del 26.7.2000 ci è pervenuta soltanto in data 5.8.2000. Vi richiediamo, pertanto, di comunicarci quando potrà avvenire l'accesso agli atti, con le modalità descritte nella Vs. citata nota…>>*.
Con nota n. 3205 del 21.8.2000 il consorzio Ce4, pur segnalando che la nota n. 3004 del 26.7.2000 era pervenuta alla srl Ecocampania in data 4.8.2000, fissava un nuovo accesso agli atti della gara pubblicata per l'1.9.2000, sempre dalle ore 10 alle ore 1.30.
In data 1.9.2000, l'avvocato Pietrofranco Purgato, all'uopo delegato dalla srl Ecocampania, si recava presso la sede dal consorzio Ce4 per avere accesso agli atti della gara e per ritirare la relativa documentazione (cfr. la nota n. 3280 di cui al protocollo del consorzio Ce4).
Tuttavia Ecocampania s.r.l. non presentava il temuto (dai bidognettiani ma anche dal *presidente*) ricorso.

8. Le dichiarazioni rese da Emilio Di Caterino, Nicola Ferraro e Michele Orsi

Chi ancora dubitasse della matrice mafiosa della società ECO4 non ha che da leggere le seguenti dichiarazioni rese dal collaboratore di giustizia **DI CATERINO Emilio**, anch'egli ex – militante del gruppo bidognettiano.
Nell'interrogatorio reso il 12.11.2008 DI CATERINO esprimeva, con linguaggio 'atecnico' consono alla sua adibizione a ruoli 'esattoriali' e militari, concetti sovrapponibili a quelli espressi, con maggiore competenza, dal colletto bianco Gaetano Vassallo.

La convergenza tra DI CATERINO e VASSALLO riguarda:
la stipula di un patto societario tra il gruppo Bidognetti e i fratelli Orsi relativo all'affare del Consorzio dei Rifiuti;
l'individuazione dei soggetti che all'interno del clan gestivano gli affari ed ebbero a decidere la stipula di detto accordo;
l'individuazione degli affiliati di rango inferiore che curarono l'attuazione dell'iniziativa, primi fra tutti MIELE Massimiliano e ALFIERO Nicola;
il ruolo strategico assegnato all'intraneo Gaetano Vassallo nella realizzazione di quel progetto;
il dominio sostanziale esercitato dagli Orsi sulla società mista ECO4;
il conferimento di automezzi e autocompattatori effettuato, gratuitamente, da Vassallo agli Orsi;
le sovraffatturazioni attraverso le quali i privati stornavano sul partner pubblico i contributi versati al socio criminale, con specifico riferimento al duplice ruolo di Claudio Bidognetti e della Oleodinamica;
il ruolo di Bernardo Cirillo;
l'inadempimento dei patti sociali da parte degli Orsi, la rottura e la reazione che ne conseguì.

Le dichiarazioni del DI CATERINO si fanno apprezzare come pienamente attendibili anche perché coerenti con il materiale intercettivo sopra esposto, così come con le conoscenze investigative valorizzate nelle ordinanze cautelari emesse nell'ambito del procedimento n. 49946/03 r.g.n.r. che si sono sopra più volte richiamate.

Rilevano in particolare i seguenti temi: attribuzione ad Aniello Bidognetti della scelta di sacrificare la Ecocampania di Nicola Ferraro sull'altare del remunerativo accordo con i fratelli Orsi; il ruolo protagonistico di Alessandro Cirillo nella fase in cui tale scelta trovò esecuzione; pretese estorsive del clan La Torre e del clan Esposito in relazione agli appalti del servizio di raccolta ottenuti dalla ECO4 in Mondragone e Sessa Aurunca; il ruolo di Vincenzo Filoso nella vicenda estorsiva mondragonese; la scelta di BIDOGNETTI Claudio quale esattore del contributo sociale mensilmente versato dagli Orsi al socio criminale e, nel contempo, quale fornitore della ECO4, emittente fatture ideologicamente false, utilizzate dagli Orsi per stornare le uscite clandestine.

"…Il reggente del clan, nel 2001, era Alessandro CIRILLO il quale fu incaricato della gestione dopo le catture, avvenute in successione in tempi diversi, di Domenico BIDOGNETTI, Aniello BIDOGNETTI, DELL'AVERSANA Giuseppe e SETOLA Giuseppe, quest'ultimo tratto in arresto nel 2000 a Pompei. ***CIRILLO Alessandro, nel 2000, decise di estromettere i fratelli FERRARO – monopolisti degli appalti comunali del casertano per la raccolta dei rsu – dallo specifico settore per affidarlo ai fratelli ORSI, Michele e Sergio. Gli ORSI furono scelti da Aniello BIDOGNETTI, prima del suo arresto, perché avevano raggiunto un accordo con il capo clan nel dividere al 50% i profitti tratti dalla complessiva attività; a ciò si aggiungeva una somma da versare "a titolo di camorra", che era stata pattuita riguardo al servizio che gli ORSI, con la società ECO4, avrebbero svolto sui Comuni di…Castel Volturno****. **Fui incaricato io stesso nello svolgere distinte operazioni, sicché le mie informazioni sono frutto di mie esperienze dirette****. ***L'esistenza di un accordo tra gli ORSI e Aniello BIDOGNETTI mi fu rappresentata sia da CIRILLO Alessandro, nel periodo che precede il suo arresto del 17 agosto del 2001, sia da VASSALLO Gaetano, nel 2002****.** *Quest'ultimo è* ***un amico intimo della famiglia BIDOGNETTI e per conto del clan aveva sempre trattato nel campo dei rifiuti. Gaetano VASSALLO aveva messo a disposizione i suoi mezzi proprio alla famiglia BIDOGNETTI in modo da consentire agli ORSI di operare; inizialmente gli ORSI erano dei semplici imprenditori edili e non avevano alcuna struttura per poter svolgere il servizio, sicché i mezzi di VASSALLO – si trattata di autocompattatori - furono determinanti per consentire lo svolgimento dei servizi****. ***VASSALLO aveva praticamente "regalato" i suoi mezzi ad Aniello BIDOGNETTI e quindi erano stati utilizzati dagli ORSI con la società che io conosco con il nome ECO4.*** *Per quelle che sono le mie informazioni* ***l'ECO4 era una società dei fratelli ORSI. I fratelli FERRARO furono allontanati – come seppi poi da FERRARO Luigi, in tempi successivi, quando vi fu il loro riavvicinamento a CIRILLO – perché minacciati proprio da CIRILLO Alessandro il quale gli puntò una pistola alla tempia, costringendoli ad abbandonare i territori, prima da loro governati in questo settore. Gli ORSI non hanno mai tenuto fede all'impegno di pagare il 50% degli utili e si sono limitati soltanto a pagare "la camorra", ossia a versare una somma pari ad iniziali lire 10 milioni, poi elevate a 15 mila euro, il tutto in relazione al servizio svolto dall'Eco4 nei comuni di Castel Volturno…Gli ORSI svolgevano anche il servizio di raccolta dei rifiuti nei Comuni di Mondragone e Sessa Aurunca e anche lì erano vincolati a versare la "camorra"; su Mondragone, governata dal clan La Torre, la tangente veniva riscossa da Vincenzo FILOSO, all'epoca reggente o comunque incaricato della esazione, non so tramite chi.*** *Su Sessa Aurunca la persona delegata era Vincenzo GALLO, che ricordo latitante nel 2002. Ricordo che ebbi a incontrare con GUIDA Luigi proprio Vincenzo GALLO, a Pontecorvo, in modo che i due si conoscessero. Con me c'era anche ALFIERO Nicola e GRASSIA Luigi e rammento che sopraggiunse FILOSO Vincenzo, insieme a Enzo*

*GALLO, responsabile appunto, in quel tempo, di Sessa Aurunca…**Gli ORSI hanno sempre versato la "camorra" per 15 mila euro al nostro gruppo ed era stato incaricato della riscossione BIDOGNETTI Claudio, il quale era titolare della Oleodinamica Isa, una società di Casal di Principe che si occupa della realizzazione di tubi idraulici. Claudio BIDOGNETTI è cugino di primo grado di Domenico BIDOGNETTI. Poiché Claudio BIDOGNETTI era stato scelto dall'ECO4, per volontà degli ORSI, come una delle società di servizio per i lavori di idraulica e saldatura che si rendevano necessari per i camion (veicoli acquistati dalla Germania, in tempi successivi alle forniture di VASSALLO, mezzi da modificare proprio per renderli servibili per l'aggancio dei cassoni della nettezza urbana), gli ORSI utilizzarono proprio BIDOGNETTI Claudio per il versamento, facendo figurare tali tangenti come costo, fatturandole falsamente; in pratica le fatture venivano gonfiate e così si dava copertura formale e giustificazione al versamento della tangente. Fu proprio Claudio BIDOGNETTI a informarmi della cosa e anzi proprio lui mi suggerì – dopo che mi aveva personalmente consegnato un paio di rate mensili – che sarebbe stato più opportuno che le consegne del denaro contante fossero poi attuate a casa di Esterina PAGANO, zia di Domenico BIDOGNETTI e moglie di Armando LETIZIA. Si trattava di un modo per evitare pericolose esposizioni per Claudio BIDOGNETTI: io ero noto alle forze dell'ordine e se fossi stato visto vicino all'officina di Claudio, posta vicino all'Ipam di Dante Passatelli, Claudio BIDOGNETTI avrebbe potuto correre dei rischi.** *In pratica io ho sempre raccolto la "camorra", ogni mese, intorno al 20 - 22 di ogni singolo mese, portandomi con GRASSIA Luigi, prima presso l'officina e poi prelevando le somme a casa di PAGANO Esterina, la quale le raccoglieva per noi. La donna sapeva che si trattava della tangente proveniente dai fratelli ORSI. Tutto questo è accaduto – con assoluta certezza – dal 2001 al 16 settembre 2003, quando iniziai la mia latitanza e mi allontanai dalla operatività nel clan. In pratica la cosa dovrebbe essere proseguita allo stesso modo anche nel periodo successivo. Il denaro, una volta prelevato, veniva portato da VEROLLA Nicola, il quale lo custodiva per il clan, in pratica teneva la cassa comune…**Come detto, gli accordi tra i fratelli ORSI ed il clan BIDOGNETTI prevedevano che i primi avrebbero dovuto corrispondere la metà dei profitti al clan ma, atteso il mancato rispetto dei patti, vi furono degli incontri volti ad imporne il rispetto; io stesso ebbi ad accompagnare, insieme a SPENUSO Salvatore, MIELE Massimiliano e GUIDA Luigi a casa di Sergio ORSI, in Casal di Principe. Io e SPENUSO scortammo a bordo di una vettura il GUIDA insieme a MIELE; il GUIDA era latitante e l'incontro si ebbe nel 2002.** *Io e SPENUSO non assistemmo e ci limitammo ad accompagnare i due sotto il portone dell'abitazione di Sergio ORSI e lì si intrattennero per un paio d'ore, dalle undici e mezzo fino all'una e mezzo di notte. L'incontro doveva tenersi con entrambi i fratelli ORSI ed è probabile che anche Michele – il quale abitava vicino a casa di Sergio – abbia partecipato, essendo socio del fratello. L'esito dell'incontro non fu peraltro come previsto, poiché gli ORSI si limitarono a garantire un aumento della tangente, portandola dagli originari previsti 10 milioni di lire mensili alla somma di 15 mila euro, che da lì in poi pagarono secondo questo importo…**non so dire le ragioni per le quali gli ORSI non mantennero i patti societari, non ne sono stato informato.** *Per quanto concerne la tangente di 15 mila euro, la somma veniva consegnata a Claudio BIDOGNETTI a volte dagli stessi ORSI, a volte da SCHIAVONE Alduccio, il loro geometra che dovrebbe essere stato anche inserito in una loro società o nella stessa Eco4.* **MIELE Massimiliano era una persona del clan, era vicino a noi in qualsiasi cosa ed è imparentato con Bernardo CIRILLO: la sorella di quest'ultimo ha sposato il fratello di MIELE Massimiliano, di nome Gaetano. Si trattava di una persona di estrema fiducia e CIRILLO Bernardo presentò a GUIDA Luigi proprio il MIELE,**

insieme a BORRATA Francesco, quali suoi fiduciari. MIELE Massimiliano era anche molto vicino ad Aniello BIDOGNETTI e aveva un buon rapporto con entrambi i fratelli ORSI. *Tale era il suo rapporto con entrambi che il MIELE prendeva sempre le parti dei due fratelli e ciò accadde anche quando GUIDA decise di togliere da mezzo i due ORSI, ripristinando il rapporto esclusivo con i fratelli FERRARO…*" .

Le dichiarazioni di **Nicola FERRARO** sono perfettamente compatibili con il quadro risultante dalla combinazione delle dichiarazioni dei collaboratori di giustizia Vassallo e Di Caterino, degli esiti intercettivi e delle acquisizioni documentali; pur essendo piuttosto "prudenti" in ordine alle indicazione soggettive che, stando alle captazioni, il dichiarante sarebbe stato senz'altro in grado di effettuare.

Nel verbale di assunzione delle informazioni rese in data 11 giugno 2007 egli dichiarava:

"…Io mi sono occupato del settore dei rifiuti dal 1987 ed ero socio della ECOCAMPANIA s.r.l. che, se ricordo bene, fu costituita nel 1994; sono stato anche amministratore della predetta società dal '95 al '99, periodo dopo il quale io rimasi semplicemente socio di maggioranza insieme a mio fratello Luigi. Nel periodo del '99, i Comuni del casertano presso i quali l'ECOCAMPANIA operava per la raccolta dei R.S.U. erano Castelvolturno, S. Maria C.V., Bellona, Frignano, San Marcellino, Gricignano, Carinaro, Marcianise e Maddaloni. Non sono sicuro se i Comuni che ho indicato sono stati gestiti contestualmente o in periodi sfalsati; aggiungo che ci occupavamo della raccolta dei R.S.U. anche in altri comuni fuori regione; ricordo a solo titolo esemplificativo Assisi e Riva del Garda. A.D.R.: nel 1999, come ECOCAMPANIA, avevamo raggiunto la categoria di iscrizione che ci permetteva di partecipare agli appalti per Comuni sino a 500 mila abitanti; avevamo anche acquisito delle certificazioni di qualità, quali ISO 14000 e ISO 9000. ***Nel 1999, se ricordo bene, il consorzio CE 4 che era stato costituito a metà degli anni '90, vide un mutamento dei suoi vertici; in particolare VALENTE Giuseppe, che era collegato ai popolari insieme al sindaco di Mondragone Ugo CONTE, passarono a F.I. e modificarono la maggioranza all'interno del consorzio precedentemente in capo al centro sinistra. Il VALENTE in questo modo divenne presidente del consorzio con i voti del centro destra.*** *Alla fine del '99, attraverso un comune amico, il dr. Antonio SCIALDONE, gli ORSI mi chiesero un incontro; SCIALDONE mi portò a S. Maria C.V. in uno studio che si trovava di fronte al bar Seven Up. SCIALDONE era stato vicino al gruppo politico della DC di cui facevano parte gli ORSI e nell'ultimo periodo si era avvicinato a me; in quel periodo SCIALDONE era amministratore di una società denominata TREA SUD che io stesso avevo costituito. A.D.R.: credo che gli ORSI mi contattarono tramite SCIALDONE perché all'epoca noi non avevamo particolari rapporti. Quando arrivai nell'ufficio mi pare che vi fossero entrambi i fratelli ORSI; all'incontro partecipò per tutto il tempo anche Antonio SCIALDONE. Se ricordo bene* ***entrambi i f.lli ORSI parlarono e mi dissero che stavano preparandosi a partecipare alla gara per la società mista che doveva fare il consorzio CE 4, gara alla quale avevano grosse chances di vincere perché all'interno del consorzio potevano contare sui rapporti con VALENTE Giuseppe, che conoscevano da tempo, e con DI BIASIO Claudio, che pure conoscevano da tempo. Ricordo che loro facevano riferimento al DI BIASIO come una persona in stretti rapporti con loro****. A.D.R.: io non avevo mai saputo, prima di questo incontro, che il consorzio CE 4 volesse costituire una società mista; non vi era sicuramente ancora alcun bando di gara. Prima di questo incontro, tra l'altro, io non avevo mai saputo che gli ORSI fossero interessati al settore dei rifiuti; non sapevo*

assolutamente che gli ORSI avessero, o avessero intenzione, di costituire società operanti in questo ambito. ***A.D.R.: ho un ricordo preciso di questo incontro, perché si è trattato di una di quelle cose che hanno cambiato il corso della mia vita. Nel corso di questa chiacchierata, gli ORSI mi chiesero se ero disponibile a collaborare con loro; mi dissero che con o senza di me avrebbero partecipato alla gara e con o senza di me avrebbero vinto.*** *Mi dissero che se io ero disponibile, loro mi avrebbero fatto lavorare per conto loro. Io risposi in modo alquanto piccato che non ero interessato a questa proposta e che al massimo avrei potuto accettare di fare una società a condizione che essi avessero riconosciuto a me il diritto di nominare l'amministratore; gli dissi che io avevo il KNOW HOW e che quindi avevo ben diritto a pretendere un ruolo di primo piano. Dissi agli ORSI che avremmo potuto nominare amministratore proprio Antonio SCIALDONE. Aggiunsi che volevo anche capire fino a che punto essi fossero effettivamente in condizione di vincere la gara e loro mi dissero che ne avevano la possibilità e che, se avessimo operato insieme, avremmo vinto senza discussione. L'incontro si chiuse in modo interlocutorio nel senso che io precisai che l'unica condizione per la quale avrei accettato di collaborare con loro era quella di fare la società con l'amministratore da me nominato. A distanza di qualche giorno, gli ORSI riparlarono con SCIALDONE e chiesero a SCIALDONE qual era la mia posizione; nel corso di questo incontro gli ORSI dissero a SCIALDONE cose che credo SCIALDONE non mi ha mai riferito con precisione per non farmi innervosire; ricordo comunque che* ***SCIALDONE mi disse che gli ORSI avevano utilizzato un linguaggio alquanto minaccioso dicendo che mi avrebbero distrutto e non solo imprenditorialmente.*** *A distanza di pochi mesi da questo incontro, ricordo che eravamo nel periodo del marzo/aprile 2000, quando era in corso la campagna elettorale per le regionali, venne emanato il bando di gara da parte di CE 4. Io, appena vidi il bando di gara, capii chiaramente che il bando era stato vestito addosso agli ORSI e che vi erano indicati dei requisiti che gli ORSI avevano creato proprio per vincere questa gara…Alla gara per la società mista io partecipai con un'ATI ECOCAMPANIA - TREA SUD, ATI che mi garantiva il requisito della imprenditorialità giovanile in quanto della TREA SUD faceva parte Antonio SCIALDONE che aveva da poco compiuto i 29 anni, anni fino ai quali valeva il punteggio aggiunto per l'imprenditorialità giovanile.* ***Poco dopo venne espletata la gara e ricordo che l'aggiudicazione all'ATI FLORA ci venne comunicata con una raccomandata o con un fax. Io restai un po' perplesso perché mi sarei aspettato di essere convocato al momento in cui si aprivano le buste, cosa che non avvenne affatto.*** *Io come socio della ECOCAMPANIA, tramite il mio avvocato, cercai di prendere visione degli atti di gara;* ***devo dire che il direttore DI BIASIO cercò di fare melina sino a quando l'avvocato non riuscì a vedere gli atti. Il giorno in cui l'avvocato si recò a visionare gli atti presso la sede della CE 4, nella stessa mattinata, a casa di mio padre, a Casal di Principe, si recarono due giovani con modi molto spicci che chiesero insistentemente a mio padre di incontrarmi; mio padre si preoccupò di questa visita e mi informò immediatamente. Il giorno dopo, si ripresentarono questi due giovani a casa di mio padre e chiesero di nuovo di me in modo insistente e in modo che mio padre si preoccupasse molto. All'epoca, io abitavo a Casale nello stesso palazzo in cui abitava mio padre, ma mi stavo separando con mia moglie e non andavo spesso a casa, anche perché mia moglie aveva già lasciato la nostra casa. Questi giovani sono venuti per due o tre giorni di seguito e io non sono mai andato a Casale proprio perché non volevo assolutamente incontrarli. A.D.R.: Io ricollegai la visita di questi giovani al fatto che l'avvocato si era recato a visionare gli atti presso la sede del CE 4. A.D.R.: le visite di questi giovani si sono interrotte quando noi facemmo sapere, tramite il nostro avvocato, che non avevamo alcun interesse a impugnare l'aggiudicazione della gara. A.D.R.: faccio presente che*

il bando del concorso prevedeva che fossero inammissibili le partecipazioni da parte di società "in contenzioso" con il consorzio e accade che, proprio in vista e in un periodo coevo al bando di gara, ricevetti una lettera del consorzio nella quale venivano chieste delle spettanze arretrate; si trattava evidentemente di una richiesta pretestuosa e compresi subito che era un ulteriore modo per pilotare la gara. *Ebbi comunque a pagare la somma richiesta che peraltro non era neppure ingente e che quindi non diede luogo a nessun contenzioso. A.D.R.: ritengo che gli ORSI non disponessero di nessun requisito per poter aggiudicarsi la gara, ad esclusione del punteggio legato all'imprenditoria giovanile.* ***A.D.R.: quanto al comportamento dei due giovani di cui ho parlato, faccio presente che gli stessi vennero a casa di mio padre in diverse occasioni, almeno tre o quattro giorni diversi, continuativi; ogni volta si rivolgevano a mio padre per fissare un appuntamento con me, per un incontro da tenersi a casa mia. Proprio temendo di incontrare queste persone, evitai di far ritorno a casa di mio padre dove in quel periodo dimoravo. Faccio presente che non tornai fin tanto che non giunsero a scadenza i termini per presentare ricorso al TAR a fronte dell'aggiudicazione all'ATI FLORA. Faccio presente che dopo la nostra estromissione, noi preparammo, insieme ai legali, sia una richiesta di accesso agli atti amministrativi, sia una formale contestazione quanto alle modalità di svolgimento della gara. Ribadisco che vi fu una sostanziale sovrapposizione tra le nostre deduzioni e richieste di chiarimenti al consorzio e la visita ricevuta a casa di mio padre, tanto che ricordo che la prima telefonata ricevuta da mio padre, particolarmente allarmante, fu fatta proprio mentre io mi trovavo con il mio legale al suo ritorno dal consorzio dopo aver richiesto di visionare gli atti per la prima volta, parlando con DE BIASIO Claudio. Ritenni che tale coincidenza non potesse essere casuale anche con riferimento al fatto che gli stessi giovani smisero di cercarmi quando decorsero i termini per ricorrere al TAR. A.D.R.: mio padre mi parlò di due giovani, sempre gli stessi, che minacciandolo richiedevano urgentemente un appuntamento con me perché dovevano parlarmi. A.D.R.: non ebbi mai a denunciare questo episodio neppure quando fui sentito dai CC. di Casal di Principe i quali mi interrogarono proprio sulla gara, peraltro facendolo in contemporanea proprio con gli ORSI.*** *A.D.R.: ricordo che mio padre, al cospetto delle minacce, mi chiese chiarimenti di quali fossero gli affari rilevanti che io stavo trattando; parlando con lui compresi con chiarezza che* ***l'unica questione che poteva giustificare un comportamento così pesante nei confronti della mia famiglia e tanto assiduo era quella relativa al possibile ricorso al TAR a fronte della mia esclusione. Ne ero e ne sono tuttora assolutamente certo****. Faccio presente che si trattava di un ricorso al TAR che io ritenevo già vinto…".*

Fungono da argomento di chiusura rispetto a questo profilo del ragionamento probatorio le **dichiarazioni rese da Orsi Michele in data 3.10.2006 ed in data 6.6.2007**.
Per quanto assai attento ad allontanare da sé qualsiasi sospetto di mafiosità e piuttosto propenso ad presentarsi quale 'pura vittima' della criminalità organizzata, ORSI non poteva fare a meno di ammettere l'incontro con Aniello Bidognetti e Gaetano Vassallo avvenuto nelle fasi iniziali dell'iniziativa ECO4; la vicenda del trasferimento dei mezzi della SETIA SUD; la partecipazione a questa fase di Massimiliano Miele.

"…Io e mio fratello Sergio, abbiamo sempre svolto attività imprenditoriale nell'ambito del settore edile nel centro-nord Italia e solo sporadicamente abbiamo svolto attività in zona…Utilizzando la società FLORA AMBIENTE, io e mio fratello pensammo di partecipare a questo bando e siccome non avevamo ancora i mezzi e

*nemmeno il know-how decidemmo di creare un ATI con entità che già operavano nel settore e che avevamo conosciuto per motivi lavorativi…**Rappresento che la nostra esperienza nel settore era limitata e così pure la dotazione di mezzi da parte della nostra società, sicché l'idea era quella di consorziarci con società e persone che avessero una specifica esperienza e potessero fornirci adeguata copertura strutturale e relazionale**…**Rappresento che MIELE Massimiliano, come ho detto, ebbe a introdurci ad Aniello BIDOGNETTI, e successivamente ci fece conoscere VASSALLO Gaetano; in particolare ricordo che essendo necessario acquistare 7-8 camion per la Flora Ambiente, il MIELE ci disse che avremmo potuto acquistare quanto necessario da VASSALLO Gaetano. Questi era un imprenditore specializzato nella raccolta dei rifiuti e che disponeva di mezzi per svolgere il servizio; per quale che ci disse si trattava di una persona inquisita e per problemi giudiziari aveva interrotto l'attività, sospendendola; a detta del MIELE avremmo potuto acquistare dei mezzi per la raccolta dei rifiuti. Si recarono dunque MIELE Massimiliano, VASSALLO Gaetano, ORSI Sergio e Aldo SCHIAVONE presso un deposito di Giugliano dove si trovavano parcheggiati gli autoveicoli; nell'occasione fu proposto l'acquisto a un prezzo contenuto di circa 60 milioni, acquisto che venne poi perfezionato**…**Non venne precisato se intendesse partecipare in modo occulto o palese. Faccio presente che non era stato ancora corrisposto il denaro pattuito per la vendita dei mezzi, vendita che si era già perfezionata; si trattò di un acquisto che avvenne dopo l'aggiudicazione della gara.** ADR: **Ancorché possa apparire singolare, faccio presente che l'interesse di acquistare i veicoli in capo alla Flora Ambiente era legato alla necessità di attrezzare, nella prospettiva di possibili appalti al di fuori dell'attività che sarà svolta dell'Eco/4; i mezzi erano in capo alla CAPASSO Ciro, componente dell'ATI e la Flora ne era sprovvista. Faccio presente che la Flora Ambiente ebbe poi a noleggiare alla Eco/4 i mezzi essendo la Eco/4 sprovvista di sufficienti automezzi ma questa utilità non era stata immediatamente prefigurata…"*

9. La realizzazione della prima tappa del progetto strategico di Sergio Orsi e Gaetano Vassallo. La monopolizzazione del servizio di raccolta

La richiesta presentata dal Pubblico Ministero in data 16.2.2009 dà conto, nelle pagg. 64 – 96, di come la ECO4 s.p.a. riuscì a realizzare il primo e fondamentale obiettivo strategico della partnership Orsi – Bidognetti: l'accaparramento del servizio di raccolta dei rifiuti solidi urbani presso quasi tutti i comuni consorziati.
L'obiettivo è nitidamente esposto dal collaboratore Vassallo nelle dichiarazioni rese il 3.6, il 5.6, il 18.6 e il 1° luglio 2008:

*"…omissis…**Gli Orsi mi diedero ragione ma dissero che il loro progetto era quello di essere il braccio operativo del consorzio pubblico "ce 4" il cui presidente è Giuseppe Valente di Mondragone, mentre il direttore del Consorzio CE 4 è l'Arch. Di Biaso che "erano persone Loro"; gli Orsi mi dissero che non dovevano fare solo il servizio di raccolta e trasporto dei rifiuti solidi urbani nel Comune di Mondragone, bensì in tutti i Comune che fanno parte del bacino di utenza del Consorzio Caserta 4 e dovevano fare anche lo smaltimento dei rifiuti solidi urbani con l'ampliamento la vecchia discarica di " Parco Saurino " e farne una nuova; per far questo si doveva costituire una società mista il cui 51% è del pubblico (Consorzio dei Comuni Bacino Caserta 4) ed il 49% ai privati della " FLORA AMBIENTE Srl ". In tal modo avrebbero preso gli appalti per tutta la provincia di Caserta della n.u."* **(interrogatorio del 3.6.08)**

"Compresi immediatamente le specificazione di Sergio ORSI, e capii che quello era un progetto eccezionale: si trattava del primo caso di una società mista pubblico-privata, che avrebbe monopolizzato la raccolta degli R.S.U. sull'intero bacino consortile. Da quando era iniziato il commissariamento del ciclo dei rifiuti in Campania, praticamente tutti i privati erano stati esclusi dalla gestione diretta e i consorzi erano interamente Comunali.
La previsione, di cui mi parlò ORSI Sergio di una società mista pubblico-privato, costituiva una breccia fondamentale per consentire nuovamente ai privati e, conseguentemente anche ai gruppi organizzati mafiosi, quali quello di BIDOGNETTI, di ingerirsi direttamente nella gestione.
Mi spiegò inoltre Sergio ORSI, che il loro progetto prevedeva che il consorzio avrebbe creato un c.d. "braccio operativo"che avrebbe non solo acquisito tutti gli appalti per la raccolta degli R.S.U. comunali, ma cosa molto più importante e lucrosa, avrebbe assunto anche la gestione della discarica di parco Saurino **(interrogatorio del 5.6.07)**

"***Una volta costituita l'ECO 4, la stessa iniziò a ricevere gli affidamenti da parte dei comuni; si trattava di affidamenti diretti, senza alcuna gara, e proprio la previsione di affidamenti diretti alla ECO 4 da parte dei comuni del consorzio, costituiva una delle ragioni fondamentali per cui si era inteso dare seguito a questo progetto; faccio presente che i Comuni partecipavano al consorzio CE 4, ente presieduto da VALENTE Giuseppe e il cui direttore generale era Claudio DE BIASIO, uomini legati agli ORSI, la presenza dei quali dunque garantiva i successivi affidamenti da parte dei singoli comini.***
Compresi agevolmente che si trattava di accordi prestabiliti e posso dire con sicurezza che vi fu anche il contributo del Commissariato di governo nel consentire l'attuazione di questo progetto*…omissis…"* (interrogatorio del 18.6.08)

"**I*l progetto prevedeva che la società mista ricevesse tutti gli affidamenti dei servizi di raccolta degli RSU comunali, predisponesse e realizzasse la raccolta differenziata dal cassonetto e gestisse le discariche ove smaltire i rifiuti comunali stessi.***
Ovviamente ciò avrebbe poi comportato la gestione dei ruoli, da parte di ECO 4, per l'esazione della TARSU, cosa che fece poi su alcuni Comuni.
Questo progetto non prevedeva originariamente, a mia memoria, nessuna realizzazione di impianti di termovalorizzazione e di CDR.
Come ho già detto era un progetto particolarmente allettante e per questo consigliai ai miei referenti appartenenti al gruppo BIDOGNETTI di seguire gli ORSI e di entrare nell'affare. Successivamente venne aggiudicata la gara a livello regionale alla FIBE ma io ero già stato estromesso dalla ECO 4 e praticamente ebbi modo di ricevere informazioni occasionali da parte di Sergio ORSI, senza conoscere nel dettaglio quali fossero, e se vi fossero, delle interferenze tra la gestione affidata alla FIBE e il progetto ideato e sviluppato nel tempo da parte dell'ECO4. Già all'origine il progetto prevedeva l'individuazione delle discariche in Parco Saurino (quella che poi sarà effettivamente la discarica gestita da ECO 4) e in S. Maria la Fossa". **(interrogatorio del 1° luglio 2008)**

La premessa normativa di questa parte del nostro discorso è segnata dai contratti stipulati in data 07.06.2000 (per la provincia di Napoli) e in data 5.9.01 (per le altre province campane), in attuazione dell'ordinanza n. 16 datata 09.02.2000, tra il Presidente della Giunta Regionale della Campania - Commissariato di Governo delegato ai sensi dell'O.C.P.M. n. 2425 del 18.3.1996 e l'ATI capeggiata da FISIA

ITALIMPIANTI s.p.a.
Il contratto aveva ad oggetto "*il servizio di smaltimento dei rifiuti solidi urbani a valle della raccolta differenziata, prodotti nella regione Campania*".

Fu così previsto che lo smaltimento avvenisse attraverso impianti di produzione di combustibile derivato dai rifiuti (C.D.R.) e di termovalorizzazione del CDR, a fini di produzione dell'energia elettrica.

La FIBE S.p.A. sarebbe così divenuta l'unico affidatario dei servizi e prestazioni a valle della raccolta differenziata, ivi compresa la realizzazione delle discariche di servizio.
L'O.P.C.M. n. 3100 del 22/12/2000 all'art. 3 dava seguito al regolamento contrattuale stabilendo la sospensione del *"rilascio delle autorizzazioni alla costruzione ed esercizio degli impianti di smaltimento dei rifiuti";* se non in presenza delle seguenti condizioni:
1) che vi fossero "particolari situazioni";
2) che l'ordinanza venisse sottoscritta dal Presidente della regione Campania quale commissario delegato.

Rimaneva in capo ai consorzi di bacino il solo compito di organizzare la raccolta differenziata ed il relativo trasporto.

La lettura di alcuni verbali di conferenze di servizi tenutesi nell'aprile e nel maggio 2001 - con il coinvolgimento dei comuni consorziati, del Direttore Generale De Biasio e del Presidente del Consorzio Ce/4, della società Eco/4, del Commissariato di Governo per l'Emergenza Rifiuti in Campania - conferma le affermazioni di Vassallo relative ai soggetti pubblici coinvolti nell'azione che garantì all'impresa mafiosa l'ambito monopolio.
Si legge ad esempio nel verbale del 04.05.2001 *(allegato n.11, inf. del 22/10/2008)*, una dichiarazione del subcommissario Facchi per la quale "*tutti i contratti in scadenza saranno affidati al Consorzio, fermo restando che successivamente bisogna innescare un meccanismo di concorrenzialità tra il partner del Consorzio e il mondo imprenditoriale esterno*".
Nel verbale del 24.5.01 si leggono dichiarazioni di tenore identico del direttore generale De Biasio *(allegato n.12 inf. del 22/10/2008): "l'affidamento dei servizi da parte dei Comuni è al Consorzio e, per esso, alla società consortile ECO QUATTRO s.p.a. e ciò si rende necessario per prevenire la concreta possibilità che a sostituirsi ai consorzi sia la FIBE Italimpianti, aggiudicataria di appalto regionale per la gestione e livello regionale. Con l'affidamento ai Consorzi invece si garantisce il ruolo degli stessi e anche dei singoli comuni nella politica di gestione delle attività di competenza. Per rendere concreta questa possibilità, i Comuni dovranno affidare i servizi al Consorzio e quindi alla ECO Quattro s.p.a. come forma di gestione scelta ai sensi dell'art. 113 del T.U. Altre possibilità per i comuni non esistono, prevedendo la normativa la gestione unitaria a livello di bacino".*

Il riscontro documentale delle aggiudicazioni per affidamento diretto e senza gara è incorporato nell'informativa della Tenenza di Mondragone del 22.10.08 che riporta l'analisi delle procedure di affidamento seguite nei comuni di Bellona, Calvi Risorta, Carinola, Castel Volturno, Cellole, Falciano del Massico, Francolise, Giano Vetusto, Grazzanise, Mondragone, Pastorano, Pignataro Maggiore, Roccamonfina, Santa Maria La Fossa, Sessa Aurunca, Sparanise, Teano, Vitulazio.
La notevole acquisizione documentale consente di apprezzare innanzitutto il

generalizzato sistema di affidamenti diretti, realizzato: ora con la proroga reiterata di affidamenti temporanei (13 proroghe per il comune di Bellona; 10 proroghe per il comune di Calvi Risorta; 10 per il comune di Sessa Aurunca); ora con affidamenti diretti di durata quinquennale o decennale (Carinola; Castel Volturno, dopo 5 proroghe di affidamento temporaneo; Cellole; Falciano del Massico; Grazzanise; Mondragone; Pastorano; Pignataro Maggiore).

Ha poi trovato pieno riscontro il passaggio delle dichiarazioni di Gaetano Vassallo nel quale il collaboratore evidenziava il caso 'isolato' del comune di Cancello e Arnone che non aveva aderito al diktat consortile:

"Rappresento che non tutti i Comuni, in realtà, furono d'accordo nell'affidare all'ECO 4 il servizio di raccolta dei RSU…omissis… ***ricordo in particolare il comportamento del sindaco di Cancello Arnone, AMBROSCA, il quale si dimostrò apertamente contrario a quella soluzione affermando che si trattava di una decisione che spettava esclusivamente al Sindaco e che era contraria all'interesse del Comune. Il subentro di una diversa società e comunque quelle condizioni provocavano un incremento – per lui ingiustificabile e effettivamente ingiustificato – della spesa pubblica. Questo sindaco fu convinto proprio grazie all'impegno di FACCHI il quale gli inviò una lettera e lo indusse a mutare il suo orientamento.*** *Per la precisione ricordo con chiarezza che il sindaco di Cancello Arnone aveva già predisposto il capitolato di gara con la precisione di un certo esborso per sostenere il costo del servizio e contrastava l'ipotesi di affidamento alla ECO 4 perché svantaggiosa economicamente. Fu per questo necessario che Giulio FACCHI inviasse una specifica lettera per indurre il Sindaco ad affidare il servizio alla ECO 4; non so dire se vi fossero delle intese precedenti tra FACCHI e i f.lli ORSI, ma in ogni caso* ***si trattava di una "politica" che consentiva ai Comuni di cautelarsi, appoggiandosi a un provvedimento commissariale, per affidare direttamente il servizio anziché svolgere una gara pubblica****".*
…omissis…

Si riporta qui di seguito la scheda dedicata al caso del comune di Cancello e Arnone dall'informativa sopra citata che riscontra pienamente le dichiarazioni:

"In merito, veniva accertato che il Comune di Cancello ed Arnone in data 23.03.2000 con determina n. 110 del 16.03.2000 indiceva una gara col sistema del pubblico incanto per l'affidamento dell'appalto del servizio di raccolta e trasporto RR.SS.UU. – spazzamento ed igiene urbana – raccolta differenziata, eseguita il 27.04.2000.
La Struttura Commissariale con Ordinanza n. 81 del 29.03.2000 (a firma di LOSCO) disponeva, tra l'altro:
"…che i Comuni ricadenti nei Consorzi di Bacino … CE4 … possano procedere a nuove gare di appalto per il servizio di raccolta del rifiuto, solo tramite intesa con il Commissariato e con Capitolato d'appalto approvato dalla Struttura Commissariale;
che tutti i Comuni della Regione Campania nell'affidamento delle gare di appalto relative alla raccolta dei rifiuti urbani, a valle della raccolta differenziata, evidenzino l'obbligo derivante dalle emanande ordinanze commissariali di conferimento dei suddetti rifiuti agli impianti di produzione del CdR. …"""

Con nota n. 3321 del 14.04.2000, l'Ufficio Tecnico del citato Comune richiedeva chiarimenti al Commissariato di Governo in ordine all'espletamento della gara già in atto, visto che il capitolato d'appalto non poteva essere sottoposto alla preventiva approvazione commissariale, in quanto approvato e pubblicato tempo prima rispetto alla emissione dell'ordinanza n. 81/2000.

Alla suddetta nota, il Sub Commissario - Giulio FACCHI - con nota n. 3654/CD del 02.05.2000 invitava il Comune di Cancello ed Arnone a **sospendere l'aggiudicazione** e a **prorogare** fino ad un massimo di mesi 6 il servizio di raccolta attualmente in corso.

In ossequio a questa direttiva, l'Ente, con delibera di G.C. n. 87 del 10.05.2000, provvedeva a prorogare per mesi 6 (**così come da invito del Sub-Commissario dott. Facchi**) il servizio in favore della ditta appaltatrice dello stesso (GEKON SNC di Napoli).

Si rappresenta che a tale ultima data non solo non era ancora stata costituita la società ECO/4, ma non si era neppure proceduto all'apertura delle buste (28.06.2000 ndr) per l'aggiudicazione della gara finalizzata all'individuazione del partner privato da affiancare al Consorzio Ce/4.

Con nota n. 8640 del 26.10.2000 l'Ufficio Tecnico del predetto Comune, richiedeva alla Struttura Commissariale (dott. Giulio FACCHI) il rilascio del nulla osta all'affidamento diretto del servizio rr.ss.uu. e raccolta differenziata alla Eco/4 o, viceversa, di autorizzare l'Ente a procedere all'indizione di gara per affidamento con bando pubblico.
Il Sub Commissario - **Giulio FACCHI** - con nota n. 9931/CD del 26.10.2000 **concedeva il nulla osta all'affidamento al Consorzio CE/4,** a condizione che venisse effettuato il servizio di raccolta differenziata.

Infatti, con Ordinanza n. 51 del 10.11.2000, il Sindaco **affidava il servizio al Consorzio CE/4** per il periodo 11.10.2000-31.12.2000. Tale servizio veniva prorogato con O.S. n. 57 del 29.12.2000 fino al 31.01.2001.

Con determina n. 5 del 12.01.2001 a firma del Responsabile U.T.C. veniva approvato, tra l'altro, il verbale di gara redatto in data 03.01.2001 relativo al servizio di raccolta e trasporto r.s.u. con aggiudicazione dell'appalto alla "ECOCAMPANIA SRL".

Il sub Commissario - **Giulio FACCHI** -, con nota n. 873/CD del 16.01.2001 disponeva:
"…di affidare, per un periodo non oltre mesi 6 (sei) al Consorzio di Bacino CE/4 il servizio di raccolta integrata dei R.U. del Comune di Cancello ed Arnone e ***si diffida il Comune dal procedere all'aggiudicazione della gara*** *per il servizio di raccolta dei R.U.. Il Consorzio dovrà altresì, entro 30 gg., documentare i costi sostenuti per il servizio e dovrà elaborare una proposta economica documentata, riferita al sistema integrato.".*

In risposta alla suddetta nota del Commissariato, l'Ente, con nota n. 766 del 26.01.2001, indirizzata anche alla Prefettura di Caserta, chiedeva chiarimenti in merito alla vicenda, affermando, tra l'altro, che:
"…non appare, inoltre, ipotizzabile l'affidamento di un servizio in dispregio alle disposizioni di cui al D.Lgs n. 157 del 17.03.1995 attuativo della Dir. 95/50/CEE in materia di affidamento dei pubblici servizi, considerato che non appare ricorrente, ne tantomeno richiamato in motivazione, alcuno dei presupposti che legittimino la disapplicazione della normativa in questione; …".

In data 29.01.2001, in forza della espletata gara d'appalto, tra il Comune di Cancello ed Arnone e la "ECOCAMPANIA SRL", veniva stipulato il contratto per l'esecuzione del servizio di raccolta e trasporto RR.SS.UU. – Rep. 07 del 29.01.2001.

Il Sub Commissario – **Giulio FACCHI** – con nota n. 2246/CD del 31.01.2001, rispondeva alla richiesta del Comune, ribadendo quanto già disposto nella nota n. 873/CD del 16.01.2001, ***diffidando***, nuovamente, il Comune di Cancello ed Arnone ***"…a procedere all'aggiudicazione della gara per il servizio di raccolta dei R.U."*** ed informava, inoltre, che ai sensi dell'art. 4 comma 7 *"il Commissario Delegato nelle more della costituzione e dei modi della cooperazione e delle società miste … provvede in ciascuno dei Bacini di utenza serviti dai*

consorzi individuati con L.R. 10 febbraio 1993, all'esercizio delle funzioni amministrative relative alla gestione dei rifiuti ed assicura le attività di raccolta, trasporto, recupero e smaltimento dei rifiuti ***anche*** *mediante i predetti consorzi".*

Nella stessa data - 31.01.2001 – il Presidente del Consorzio CE/4 (**VALENTE Giuseppe**), trasmetteva un telegramma indirizzato sia al Comune di Cancello ed Arnone che alla ECOCAMPANIA SRL con il quale, ribadendo il contenuto delle suddette note Commissariali (873/CD e 2246/CD), rappresentava che:

"…lo scrivente Consorzio, si presenterà in data 01.02.2001 all'espletamento del servizio, con le proprie maestranze in ottemperanza agli obblighi di legge posti a suo carico. …".

Con nota n. 358/15.5/GAB del 02.02.2001, il Prefetto di Caserta **richiamava l'attenzione del Comune su quanto ripetutamente disposto dal Sub Commissario delegato**.

A tale nota, il Sindaco rispondeva con nota n. 999 del 02.02.2001 trasmettendo, nuovamente, la nota n. 766 del 26.01.2001.

Va evidenziata, altresì, la relazione prot. n. 998 del 02.02.2001 a firma del Segretario Comunale - D.ssa Carmela Bruna TRIMARCO – con la quale **sosteneva l'illegittimità** (per i particolari si rimanda al documento) della nota prot. 873/CD del 16.01.2001, consigliando il Sindaco **affinché questi impugnasse il provvedimento** nelle sedi competenti.

In tale documento, tra l'altro, si legge:

"La nota del Presidente della Giunta Regionale della Campania – Commissario del Governo, ***prot. n. 873/CD del 16.01.2001****, a firma del Sub Commissario Giulio FACCHI, …* ***apparirebbe a parere della sottoscritta illegittima*** *sotto diversi profili, tra i quali, …: …****la violazione dello statuto e della convenzione col Consorzio, nella parte in cui prevedono il carattere obbligatorio solo per la gestione degli impianti di smaltimento e non anche per la gestione della raccolta differenziata, la cernita, il recupero, il riciclo dei rifiuti e delle M.P.S.****; …*

In relazione al telegramma trasmesso dal Consorzio CE/4, l'Ufficio Tecnico del Comune di Cancello ed Arnone, rispondeva con la nota n. 1042 del 05.02.2001 inviando la stessa anche alla Struttura Commissariale ed al Prefetto di Caserta, chiarendo che:

"In relazione al Vs. telegramma … l'affidamento del servizio di raccolta e trasporto RR.SS.UU. al Consorzio CE/4, è venuto a cessare in data 31.01.2001.
Pertanto, non avendo lo stesso alcun titolo all'espletamento del servizio, che anzi è stato ***affidato con regolare procedura di evidenza pubblica ad altra ditta****, a partire dal 01.02.2001,* ***si invita ad astenersi da qualunque attività in contrasto …****"*

Tale ultima frase, fa presumere che il Consorzio CE/4 abbia posto in essere condotte idonee ad ostacolare la ditta vincitrice della gara di appalto (ECOCAMPANIA SRL) nel regolare svolgimento del servizio in parola.

Infatti, l'ECOCAMPANIA, con nota n. 277 in data 01.02.2001, **data coincidente con l'inizio del servizio**, aveva segnalato al Comune di Cancello ed Arnone:
"*…il Ns. automezzo con targa BR239AN, che ha effettuato il previsto servizio di igiene urbana sul Vs. Comune,* ***non ha potuto effettuare sulla discarica "Saurino2" lo sversamento dei rifiuti*** *pur essendo l'automezzo in possesso di tutte le autorizzazioni richieste e* ***senza alcuna motivazione e/o giustificazione da parte del personale della discarica****. …".*

Il Prefetto di Caserta - dott. SCHILARDI - con ulteriore nota n. 400/15.5/GAB del 06.02.2001, ribadendo il contenuto della precedente nota 358/15.5/GAB del 02.02.2001, richiamava nuovamente l'attenzione del Comune di Cancello ed Arnone su quanto già disposto dal Sub

Commissario delegato.
Il Sindaco del suddetto Comune, con nota 1162 del 07.02.2001, invitava il Responsabile dell'Ufficio Tecnico Comunale ad adottare i conseguenti e necessari provvedimenti di competenza al fine di conformarsi al disposto della nota n. 2246 del 30.01.2001 del Sub Commissario di Governo.

Quindi, con determinazione n. 42 del 08.02.2001, il Responsabile dell'U.T.C. determinava:

*Di prendere atto **dell'affidamento da parte della struttura commissariale del servizio di raccolta integrata dei rifiuti del Comune di Cancello ed Arnone al Consorzio CE/4 per il tramite della società mista "ECO QUATTRO SpA"** per un periodo di sei mesi a decorrere dal 09 febbraio 2001, giuste note del Sub Commissario n. 873/CD del 16.01.2001 e n. 2246/CD del 31.01.2001, alle condizioni e nei modi dallo stesso stabilito.*

*Di **revocare l'aggiudicazione disposta in favore della EcoCampania srl** e per l'effetto risolto il contratto stipulato, venendo meno la "condicio iuris" alla sua base.*

Come visto nel riportato caso di Cancello e Arnone gli affidamenti diretti dei servizi comunali di raccolta non mancarono di essere caldeggiata dai *partners* criminali della società mista.

Valente Giuseppe, nell'interrogatorio reso al GIP il 6.2.2009 (trasmesso con missiva del 27.2.2009 a questo ufficio) affermava di aver ricevuto le lamentele di alcuni sindaci (citava i casi del sindaco di Falciano del Massico Zannini e di Sparanise Merola) per i metodi arroganti con i quali gli Orsi peroravano gli affidamenti alla ECO4.
Lo stesso Valente, nel rappresentare agli Orsi che "*i sindaci con loro non ci volevano avere a che fare perché avevano paura*", si sentiva rispondere "*ed è bene che sia così !*".

Ma la testimonianza più vivida del metodo mafioso con il quale quegli affidamenti venivano ottenuti in molti casi - quando evidentemente non bastava la *moral suasion* degli organi consortili e del sub commissario Facchi - è costituita dagli atti di concorrenza illecita violenta posti in essere, tra il 1° e 10 novembre 2000, in danno della COVIM s.r.l. al fine di indurla alla risoluzione anticipata degli impegni contratti con i Comuni di Mondragone e Castel Volturno per il servizio di raccolta degli r.s.u.
La vicenda è ricostruita nell'ordinanza 45/2009 del 26.1.2009 (pagg. 312-324), alla quale si fa in questa sede rinvio.

10. La *mediazione criminale* ofefrta alla eco 4 dal gruppo bidognetti

Altro aspetto della relazione sinallagmatica allacciata dagli uomini della ECO4 con la camorra casalese è costituito dalla mediazione che ha consentito agli Orsi di operare, attraverso gli affidamenti ricevuti dai diversi comuni consorziati, in territori controllati da altre organizzazioni criminali, estromettendo i 'clienti' tradizionali e talvolta lucrando più favorevoli condizioni estorsive, proprio grazie all'autorevole raccomandazione di 'Cicciotto'.
Su questo profilo dello scambio appaiono illuminanti le dichiarazioni di una serie di Collaboratori di giustizia provenienti dalle file del clan La Torre: (LA TORRE Augusto, ORABONA Salvatore, SPERLONGANO Mario, PICCIRILLO Stefano, PERSECHINO Michele, VALENTE Giuseppe, DIANA Giacomo, VALENTE Giuseppe) e del clan Esposito (DE MARTINO Antonio).
Esse realizzano una *mutual corroboration* probatoria così puntuale da rendere sufficientemente persuasiva la riproduzione sequenziale.

La Torre Augusto (cfr. i verbali degli interrogatori resi in data 21.2.2003, in data 20.3.2003, in data 22.7.2003 e in data 30.7.2003): "…per quanto riguarda il consorzio CE4 e soprattutto gli appalti a Mondragone non sono a conoscenza diretta dell'avvicinamento di VALENTE. *Se vi è stato un avvicinamento, comunque, questo deve essere stato effettuato da FRAGNOLI, sempre con l'appoggio di BIDOGNETTI. Dico che ci sia stato un interessamento di BIDOGNETTI perché ho ricevuto questa informazione da mio cognato..." – ossia dall'Orabona Salvatore - "...durante un colloquio in carcere qui a L'Aquila. Durante il colloquio io mi preoccupavo di capire se vi fosse la possibilità di ottenere la quota di danaro che ci consentiva di fare gli stipendi e difatti dopo l'arresto di DIANA Giacomo, SARNATARO ed altre persone era venuta meno una parte delle estorsioni che noi ricevevamo.* ***Mio cognato mi fece capire che per il nuovo appalto della CE4 si era interessato Panzone, soprannome con il quale indicavamo BIDOGNETTI e che noi avremmo avuto la nostra quota… seppure non sono in grado di essere preciso è certo che qualcuno del clan ha fatto in modo che la CE4 avesse l'appalto anche su Mondragone***…Per quanto riguarda invece la gestione della nettezza urbana dopo la COVIM io ho avuto contatti per avvicinare la nuova ditta, la CE4, che stava lavorando a Mondragone. *Attraverso mio cognato, ho mandato delle imbasciate a Tonino IOVINE 'o ninno per chiedergli di intervenire e sistemare la questione del pagamento su Mondragone perché sapevo che alcuni camion della CE 4 erano stati bloccati a S. Cipriano, Castelvolturno e in altri Comuni.* IOVINE si è interessato per un periodo e mi aveva assicurato che avrebbe risolto la situazione e in questo periodo mi ha anche mandato un regalo a titolo personale di 50 milioni. ***Successivamente mi ha fatto sapere che non era in grado di risolvermi la questione. Allora io ho mandato un messaggio a BIDOGNETTI tramite l'avv (…)…che spesso nei colloqui mi portava i saluti dello zio, termine con cui intendevamo BIDOGNETTI. In questo biglietto io avevo scritto di chiedere un interessamento di BIDOGNETTI per l'immondizia a Mondragone. Successivamente mio cognato mi ha confermato che la questione era stata curata da BIDOGNETTI ed era stata chiusa bene anche se non a quel livello in cui prendevamo i soldi dalla COVIM….****Voglio dire poi che, successivamente all'arresto di SARNATARO, BARBIERI e DIANA avvenuto nel settembre del 2000, rimase scoperto l'appalto della raccolta e smaltimento dei rifiuti con il Comune di Mondragone. Ebbe termine l'appalto e mi occupai di trovare una ditta compiacente che potesse sostituirli e diedi incarico a mio cognato ORABONA Salvatore di interessarsi per verificare come stessero andando le cose. Venni a sapere che era subentrato nell'appalto della raccolta e smaltimento dei RSU affidato dal Comune di Mondragone il consorzio CE4; lo stesso consorzio gestiva analogamente la raccolta e lo smaltimento per conto di altri Comuni della Provincia di Caserta. Onde capire quale fosse il rapporto del consorzio con il clan dei Casalesi – avendo inoltre letto sui giornali che vi erano stati degli avvertimenti in zone diverse di Mondragone ai gestori del servizio – diedi incarico ad ORABONA Salvatore mandandogli un bigliettino per lui ed una lettera che lui avrebbe dovuto consegnare a IOVINE Antonio detto "o ninno" – il principale esponente dei Casalesi a partire dall'arresto di Sandokan e comunque già molto stimato prima - onde assumesse informazioni relative al rapporto che legava il consorzio al clan; avrei così compreso come mi sarei dovuto comportare in relazione al comportamento tenuto dallo IOVINE. Sono in grado di riferire maggiori dettagli ma ora sono un po' stanco e posso* ***comunque aggiungere che diedi l'incarico scritto ad ORABONA i primi mesi del 2002 e ricevetti la risposta verbale ma criptica, in sede di colloquio, un mese dopo circa. Seppi che il consorzio era avvicinabile, nel senso che pagava la tangente a titolo estorsivo e che quindi avrei potuto regolarmi di conseguenza.*** *La prima imbasciata dello IOVINE era che questi avrebbe contattato direttamente il*

responsabile del consorzio quanto alla competenza per l'appalto di Mondragone e che avrebbe chiuso lui l'estorsione e che mi avrebbe dato i soldi, certamente una somma ben più bassa di quella che avevo ricevuto nei tempi precedenti, anche in ragione del diverso rapporto che c'era in precedenza con gli appaltatori. ***Incaricai l'avv…– scrivendoglielo - di riferire a BIDOGNETTI Francesco di interessarsi della questione relativa all'appalto, cosa che fece, secondo quanto mi riferì poi ORABONA****…Prendo atto del contenuto delle dichiarazioni rese nel corso del precedente interrogatorio innanzi alla S.V., datato 22 luglio 2003, nella parte in cui ho riferito in ordine ai rapporti con il consorzio CE4, appaltatore dello smaltimento dei rifiuti con il Comune di Mondragone;* ***voglio subito specificare che, allorché ho riferito di aver scritto all'avv….di riferire a BIDOGNETTI Francesco di interessarsi della questione relativa all'appalto, io ebbi a intrattenermi a colloquio con questi presso questo stesso carcere tra dicembre 2001 e gennaio 2002. Nell'occasione io scrissi su un foglietto di "dire a mio zio, non appena andava allo studio, di interessarsi per l'appalto delle immondizie di Mondragone perché stavamo in difficoltà"; collocai questo foglietto tra gli atti processuali e lo posi sul vetro affinchè potesse vederlo. Con tale messaggio io, indicando "mio zio", intendevo riferirmi a BIDOGNETTI Francesco – cosa che egli ben sapeva – e, riferendomi "allo studio", intendevo indicare il carcere ove era recluso BIDOGNETTI al quale l'avvocato avrebbe dovuto riferire il mio messaggio. Tali cautele si rendevano necessarie nell'eventualità che il colloquio potesse essere registrato e filmato. Faccio presente che era noto a…che io parlando di "mio zio" intendevo alludere a BIDOGNETTI Francesco; il riferimento al medesimo avrebbe comportato per l'avvocato la chiara comprensione del fatto che parlando de "lo studio" in realtà intendevo un futuro colloquio da tenersi – da parte dell'avvocato…– presso il carcere ove era detenuto BIDOGNETTI. In due successivi colloqui, uno con l'avv…ed un altro con ORABONA Salvatore, seppi poi che l'imbasciata era stata effettivamente portata a BIDOGNETTI e che l'estorsione era stata chiusa proprio grazie all'intervento offerto dal BIDOGNETTI e dai suoi uomini.** *In particolare lo stesso avvocato, in un colloquio di qualche mese successivo, dicendomi che aveva parlato con BIDOGNETTI, mi disse che si stava interessando della cosa – ossia della tangente sull'appalto per lo smaltimento dei rifiuti di Mondragone – affermando in modo criptico, ma per me chiaro, che "i documenti processuali se li stava facendo lui e che tutto stava a posto". Nel colloquio con mio cognato ORABONA Salvatore, questi – alludendo a BIDOGNETTI mimando la sua precedente grassezza (fece in particolare il gesto della pancia) – disse che "per quanto riguardava il capannone l'aveva messo quasi come nuovo don Andrea". Faccio presente che avevo già precedentemente spiegato ad ORABONA, attraverso messaggi fatti pervenire nei modi che ho già riferito, che per "il capannone" doveva intendersi un nome di copertura per indicare l'appalto dei rifiuti; quanto a "Don Andrea" si trattava di una persona esistente ma priva di significato, utilizzata solo per sviare eventuali ascoltatori. Ho così avuto conferme del fatto che la tangente è stata effettivamente percepita…Quanto ai dettagli relativi alle persone che si siano materialmente interessate per richiedere la tangente e riscuoterla, così come quanto ai valori della stessa, non sono in grado di riferire alcun dettaglio.* ***Posso solo dire che ORABONA Salvatore mi disse che la tangente sull'appalto aveva dei valori decisamente minori rispetto al passato, pari a circa la metà, come mi fece capire tramite allusioni…".***

<u>Orabona Salvatore</u> (cfr. i verbali degli interrogatori resi in data 21.5.2003 ed in data 10.12.2003): "***quando ci furono gli arresti collegati alla vicenda COVIM venne sospeso l'appalto alla COVIM. Non so dire a distanza di quanto tempo, ma so per***

certo che con l'arresto di SARNATARO si crearono grossi problemi perché gli operai non venivano più pagati. *Io sapevo di questa vicenda perché mio genero era stato assunto da SARNATARO grazie all'intervento di Giacomo DIANA. Mio genero quando cominciarono a non pagare, non si recò più a lavorare.* ***Il clan con l'arresto di SARNATARO ebbe un duro colpo perché non riscuoteva più i 60 milioni mensili. A distanza di non molto tempo, l'appalto già della COVIM venne vinto da un consorzio che si chiama CE4. Di questa situazione s'interessò anche Augusto dal carcere, perché sapeva che sarebbe stata una grossa perdita per il clan il mancato introito dei 60 milioni. Nel corso di un colloquio, mi fece capire che io dovevo andare a parlare di questa vicenda con Enrichetta che era il nome in codice che noi utilizzavamo per indicare Antonio IOVINE detto 'o ninno.*** *Io riuscii a fare un appuntamento con IOVINE al quale portai un biglietto di Augusto che chiedeva ad Antonio IOVINE di dargli dei soldi e soprattutto di interessarsi della vicenda della raccolta dei rifiuti, in modo che anche il clan di Mondragone potesse continuare ad avere degli introiti. Riuscii con le modalità che dirò a fare un incontro con IOVINE Antonio il quale non appena vide il biglietto mi disse che per i soldi non vi era problema e che me li avrebbe dati, ma che per l'immondizia non poteva fare niente perché non era una questione di cui si interessava lui.* ***FRAGNOLI Giuseppe si era già mosso autonomamente, mi disse attraverso una persona del consorzio che forse era di Mondragone, ed era riuscito a parlare con uno dei titolari della ditta che si occupa della raccolta e cioè l'ing. ORSI. Era riuscito ad ottenere, quale somma che veniva versata mensilmente, quella di 30 milioni, somma che ORSI consegnava al figlio di FRAGNOLI, Giacomo, che poi la portava al clan. Giacomo FRAGNOLI era dipendente della ditta di ORSI così come era stato dipendente anche della COVIM.*** *Io a FRAGNOLI chiesi di interessarsi anche della vicenda di mio genero che non essendosi più recato a lavorare, aveva perso il posto e non era stato riassunto dalla CE4. FRAGNOLI mi disse che si sarebbe interessato, ma mi disse che forse potevo io personalmente andare a parlare con ORSI. Mi rappresentò che uno dei fratelli ORSI aveva una villa a Baia Domitia. Mio genero riuscì ad avere l'indirizzo della villa e io mi recai a Baia Domitia, dove dopo molti tentativi riuscii a parlare con uno dei fratelli ORSI. A costui io mi presentai come il cognato di Augusto LA TORRE e chiesi di far riassumere mio genero. Questa persona fu gentile, mi offrì il caffè, ma non volle accettare di riassumere mio genero perché mi disse che essendo parente a LA TORRE lui avrebbe avuto non poche scocciature da parte delle ff.oo. e della magistratura. (...) Si riferisce, invece, a me quando afferma che il cognato Salvatore gli portò i saluti di Gigino "o Drink", cioè di Guida Luigi, dicendogli "tutto a posto".* ***Riferii, infatti, a mio cognato La Torre di un colloquio avuto con il Guida affinché questi intervenisse presso il titolare di una ditta di raccolta di rifiuti di Casal di Principe avente un appalto a Mondragone, la "Eco 4", presso la quale intendeva essere assunto mio genero Parascandolo Salvatore.*** *Quest'ultimo aveva già lavorato per la ditta "Covim", che in precedenza aveva l'appalto della raccolta dei rifiuti a Mondragone. A tale ditta, a seguito dell'arresto del suo titolare Sarnataro Raffaele, era subentrata la "Eco 4". Essa aveva assunto tutti i dipendenti della "Covim" che avevano lavorato fino al momento della sostituzione. Mio genero, invece, un paio di mesi prima aveva abbandonato il lavoro poiché i dipendenti non venivano più pagati.* ***Avevo parlato a mio cognato La Torre Augusto del desiderio di mio genero di essere assunto dalla "Eco 4". Augusto, pertanto, mi aveva indirizzato da Gigino "o Drink", che fino ad allora conoscevo soltanto di nome, dicendomi che sarebbe potuto andare a parlare lui dal titolare della "Eco 4", rappresentando di parlare a suo nome.*** *(...)".* .

Sperlongano Mario sosteneva (cfr. i verbali degli interrogatori resi in data 26.8.2003,

in data 2.9.2003, in data 8.9.2003 ed in data 26.9.2003): "…*Mi risulta che FILOSO abbia avuto anche degli incontri con Ugo CONTE e con* ***VALENTE Giuseppe*** *e che abbia fatto sì che il clan si sia impegnato a favore della lista di CONTE. Io stesso ho dato indicazioni di aiutare il dott. PAGLIARO. FILOSO, a proposito di CONTE, mi fece sapere che di lui ci potevamo fidare perché fra l'altro era cugino di Mario CONTE, dipendente comunale e persona da tempo a noi vicina. Il dott. PAGLIARO è stato eletto ed è diventato anche vice sindaco per un periodo. Io non ho mai incontrato il sindaco CONTE che pure conosco bene in quanto entrambi mondragonesi.* ***So però che si è incontrato in almeno due occasioni con Peppe FRAGNOLI e a questi incontri ha partecipato anche Giuseppe VALENTE il politico, presidente della CE 4, e FILOSO Vincenzo.*** *Si tratta di incontri per i quali io stesso sono stato preventivamente informato e che si sono verificati presso il ristorante degli Ulivi a Formia. Ci sono stati almeno due incontri ai quali ha partecipato Peppe FRAGNOLI con il sindaco, in uno dei quali si è parlato della questione della raccolta dei R.S.U. e del nostro interessamento a favore dei f.lli ORSI e, in un'altra occasione, si è parlato delle difficoltà della Giunta CONTE che nel 2000 stava per cadere e che non cadde grazie al fatto che noi intervenimmo facendola appoggiare da Maria D'AGOSTINO…****Le vicende dell'estorsione versata sulla raccolta dei R.S.U. nel periodo successivo all'arresto di SARNATARO sono state seguite direttamente da Peppe FRAGNOLI che si è incontrato in più occasioni con Peppe VALENTE il politico e con il sindaco CONTE. Mi risulta che l'appalto per la raccolta dei rifiuti sia gestito da un parente del titolare della DIANAGAS e che proprio il titolare della DIANAGAS abbia fatto da tramite per la chiusura dell'estorsione.* ***<u>So anche che vi è stato un intervento da parte del gruppo BIDOGNETTI</u>*** *che ha fatto sapere ai titolari della ditta che loro avrebbero dovuto versare una somma anche a Mondragone e certamente ha avuto un ruolo da tramite anche Nicola ALFIERO detto 'o capritto. L'estorsione che venne concordata era di 30 milioni al mese ed è stata raccolta da Giacomo FRAGNOLI che svolge il ruolo di coordinatore nella società che si occupa della raccolta dei rifiuti. Giacomo FRAGNOLI soprattutto dopo il pentimento di PERSECHINO ha cercato di evitare di farsi dare lui la somma per paura di essere arrestato e in questo periodo la somma è stata versata per il tramite del titolare della DIANAGAS a SORRENTINO Gennaro detto bello 'e papà,*** *che a sua volta la faceva avere a PIGNATARO Aniello e successivamente ad Amerigo DI LEONE. Subito dopo l'arresto di Peppe FRAGNOLI si è verificato un problema con la ditta che si occupava della raccolta dei rifiuti. Costoro non volevano pagare per tre mesi perché sostenevano di avere versato tre ratei anticipatamente a FRAGNOLI. Io mandai un'imbasciata tramite Giacomo al padre in carcere per sapere notizie di questa vicenda e Peppe mi fece sapere che lui aveva avuto anticipato un solo rateo. Siccome i titolari della ditta insistevano che non volevano versare i tre ratei, io diedi disposizioni di farli andare via da Mondragone. <u>Venne trovato però un accordo tramite ALFIERO Nicola detto o capritto e GUIDA Luigi detto o drink, persona fidata di BIDOGNETTI, nel senso che la ditta avrebbe dovuto pagare per un periodo 27 milioni invece di 30 per scalare i 30 milioni</u>…l'intervento di GUIDA Luigi è stato necessario perché i titolari della ditta che raccoglie i rifiuti a Mondragone, di cui non ricordo il cognome, sono amici dei Casalesi e quindi GUIDA avrebbe potuto effettuare una mediazione vincente. Siccome la ditta in parola aveva anche la gestione della raccolta dei rifiuti su Cellole, Enzo FILOSO nel 2001, dopo l'arresto di FRAGNOLI, chiuse un'ulteriore estorsione; stabilì che per l'appalto di Cellole dovessero essere versate le somme di 4 milioni al mese e per i primi tre mesi dieci milioni al mese…SORRENTINO è stato anche utilizzato nell'estate del 2000, perché stava per cadere la giunta CONTE. Di questa questione mi informò direttamente Giacomo DIANA in un incontro a Pescara, dicendomi che Ugo*

CONTE si era rivolto a lui per avere un mio intervento, recandosi insieme a Peppe VALENTE della CE4. Io mandai Enzo FILOSO a parlare con SORRENTINO, che è l'amante di Maria D'AGOSTINO, affinchè Maria appoggiasse la Giunta CONTE. Maria ha accettato di fare questa operazione ma ha preteso in cambio tre posti di lavoro per tre suoi parenti nella raccolta dei R.S.U. Per quanto riguarda Assunta D'AGOSTINO, costei è la compagna di Mimì BIDOGNETTI e la figlia è fidanzata con Mario FRAGNOLI figlio di Peppe. So che Peppe e Mimì BIDOGNETTI si sono molto legati in carcere e so che quando Peppe ha bisogno di far sapere qualcosa a Mimì BIDOGNETTI manda le imbasciate proprio tramite Assunta. Del resto i rapporti di conoscenza che hanno portato al fidanzamento dei figli derivano dalle frequentazioni di Assunta con la moglie di Peppe FRAGNOLI…Nel '97 so che c'è stato uno screzio fra Giacomo e Salvatore per una questione di 10 milioni e Giacomo FRAGNOLI si è allontanato dal clan, nel senso che non ha voluto più la responsabilità della gestione della cassa. È rimasto però a tutti gli effetti attivo e anche con la nuova gestione della raccolta dei rifiuti, in qualche occasione, ha ritirato lui direttamente le somme delle estorsioni versate dalla CE4. Era inoltre il trait d'union fra il padre che non poteva stare in Campania e numerosi imprenditori. Lui stesso ha accompagnato più persone a parlare con il padre a Pescara. Era presente quando Giacomo DIANA è venuto insieme a FRAGNOLI Giuseppe ad un incontro verificatosi nei pressi del lago di Scanno ed in particolare al ristorante Il Vecchio Mulino, incontro nel corso del quale si stabilì che CORNACCHIA Ernesto dovesse violare gli obblighi e rendersi irreperibile. Io stesso ho parlato telefonicamente con CORNACCHIA e lui dal giorno dopo si è reso irreperibile. Quando FRAGNOLI è stato arrestato era attraverso Giacomo che mi portava richieste ed imbasciate. Ricordo che Giacomo venne in un'occasione ad Avezzano e mi portò un foglietto manoscritto da Peppe FRAGNOLI, in cui vi erano tutta una serie di debiti che dovevano essere saldati dal padre…GRAVANO in società con Giacomo FRAGNOLI ha anche gestito il deposito dei camion della nettezza urbana che era una vera e propria estorsione, una quota della quale veniva al clan. In particolare la ditta CE4 paga per il deposito dei camion una certa cifra pari a circa 3 milioni al mese ed il clan ha imposto il parcheggio individuando quello spazio di Cicciotto GRAVANO. Una quota di questi soldi viene versata al clan. Non conosco vicende estorsive specifiche a cui ha partecipato. So che è molto legato ad Antonio LA TORRE anche per il rapporto di parentela che c'è…Titolari ditta raccolta R.S.U. di Cellole; la raccolta dei rifiuti a Cellole veniva effettuata dalla CE4 dei f.lli ORSI che già pagavano 30 milioni al mese per Mondragone. FILOSO chiuse l'estorsione tramite Peppino DIANA della DIANAGAS che è cognato a uno dei fratelli ORSI facendosi dare 30 milioni da versare nelle prime tre tranches e poi 3 milioni al mese. Organizzò un incontro che si verificò dopo il Garigliano con uno dei fratelli ORSI che fu portato proprio da Peppino DIANA e in quell'occasione chiuse l'estorsione. I soldi venivano consegnati da Peppino DIANA a Gennaro SORRENTINO che a sua volta li dava a Enzo FILOSO…".

Piccirillo Stefano (cfr. i verbali degli interrogatori resi in data 5.9.2002 ed in data 11.9.2002): *"**…mi sono effettivamente interessato di una questione che riguarda l'appalto per la raccolta dei rifiuti solidi urbani. Si tratta di una vicenda particolarmente complessa che ancora oggi non ho compreso completamente ed ho sempre pensato che in realtà si trattasse di una trappola. Nel mese di maggio - giugno 2002 venne da me un giorno Nicola "O' Capritto" e mi disse che vi era un compariello di Cicciotto Bidognetti che voleva parlare con qualcuno dei mondragonesi di una vicenda che riguardava la raccolta dei rifiuti. Mi disse che questo compariello di BIDOGNETTI, che lui chiamava "COMPÀ GIGINO", aveva***

avuto una imbasciata diretta da Augusto. Con il soprannome compà <u>Gigino, Nicola faceva riferimento a un personaggio noto come "O' DRINK</u>", ritenuto un personaggio di vertice del gruppo BIDOGNETTI che aveva un vero e proprio gruppo di fuoco, tant'è che si spostava sempre con due, tre macchine e sempre armati. Io dissi a Nicola che di questa vicenda si sarebbe potuto parlare direttamente con Enzo FILOSO e con Mario SPERLONGANO, perché io anche per ragioni di cautela preferivo non vedermi con questi personaggi. *Questa era una mia decisione che risale a tempi pregressi. Mandai attraverso Amerigo l'imbasciata a Enzo FILOSO e venne organizzato un incontro che si tenne nei pressi dell'uscita dell'autostrada di Cassino. All'incontro doveva partecipare un personaggio di Sessa, certamente latitante, che si chiama Enzuccio, detto "FASULIELLO". All'incontro però parteciparono Nicola o' Drink, accompagnato da tre, quattro persone tutte armate, questo Enzuccio di Sessa che credo si chiami Gallo, Amerigo, Enzo Filoso e Antonio Luongo che accompagnò Amerigo. Questo Antonio Luongo è uno estraneo al clan ma è un amico del DI LEONE ed io stesso mi sono meravigliato del fatto che abbia partecipato a questo incontro. Sperlongano Mario, malgrado dovesse andare, non si recò all'incontro, ma mandò in regalo un orologio a questo Drink (...)* ***Giorni dopo quest'incontro, venne di nuovo da me Nicola e mi disse che bisognava andare a parlare con Peppe Valente, presidente del consorzio CE4, persona che io conosco a titolo personale da moltissimi anni. Nicola mi disse che io dovevo fare questo discorso a Peppe Valente; dovevo dirgli che lui non doveva preoccuparsi se della raccolta di immondizia non si sarebbe più occupato Orsi in quanto la sua parte sarebbe stata assicurata e anzi aumentata.*** *Io andai da Peppe Valente e gli feci il discorso che mi disse Nicola. All'incontro venni accompagnato da Nicola O' CAPRITTO, da Amerigo e da Antonio LUONGO. Peppe Valente rimase stupito dal discorso che gli feci; mi disse che pochi giorni prima si era incontrato con Enzo FILOSO e che Enzo FILOSO gli aveva chiesto di far rinnovare l'appalto agli Orsi in tempi più rapidi possibili. In carcere ho poi saputo da Aniello PIGNATARO che a questo incontro c'era pure lui e che Valente non me lo aveva detto perché aveva avuto la raccomandazione da Aniello stesso di non parlare della sua presenza. Aniello del resto già prima che fosse arrestato aveva più volte detto che bisognava parlare con Valente per far rinnovare l'appalto agli Orsi.* ***Devo qui rappresentare che gli Orsi versavano all'organizzazione 30 milioni al mese che venivano versati, a quello che so, tramite il socio di Gennaro SORRENTINO della Domizia Gas. Più affiliati, tra cui lo stesso Aniello PIGNATARO e PALMIERI Salvatore, mi hanno detto che questi Orsi sono persone di Bidognetti e che tramite BIDOGNETTI avevano fatto l'accordo anche con i mondragonesi, perché è noto che esiste un rapporto diretto fra BIDOGNETTI Francesco e Augusto La Torre.*** *Io ho fatto una serie di collegamenti dopo quest'incontro che ho avuto con Valente della CE4; avevo saputo che agli Orsi era stato fatto un attentato esplosivo poco prima e mi era stato detto che ciò era dovuto al fatto che non vi era un accordo sulle quote che gli Orsi versavano ai Casalesi. Successivamente a questo incontro con Valente della CE4, io ho raccontato tutto a FILOSO e FILOSO mi è sembrato stupito dell'imbasciata del CAPRITTO e mi ha detto che si trattava di una sua iniziativa che non era stata concordata con il clan. Quest'affermazione di FILOSO mi ha fatto convincere che effettivamente quest'incontro era finalizzato a una trappola in cui si voleva attirare SPERLONGANO.* ***Ho anche pensato che pure io e VALENTE potevamo essere attirati in trappola da questi Casalesi perché, pochi giorni dopo l'incontro con VALENTE, venne un giorno da me 'O CAPRITTO accompagnato da un soggetto chiamato EMILIO, di giovane età certamente al di sotto dei 30 anni, che mi venne presentato come un compariello di CICCIOTTO 'E MEZZANOTTE. Nel corso di quest'incontro nel quale non parlammo di niente, Nicola mi chiese due o tre volte***

come mai non vi era il DOTTORE, cioè VALENTE Giuseppe, fatto che mi lasciò molto preoccupato perché pensai che si voleva fare un agguato contestualmente a me e VALENTE Giuseppe*. Quest'incontro si è verificato presso l'Hotel D'AMORE sulla SS. Domitiana. I titolari dell'Hotel D'AMORE sono amici di Augusto e so che spesso Augusto manda lì a dormire amici siciliani o baresi. Spesso mi sono incontrato con Nicola nell'Hotel D'AMORE e precisamente in un saloncino subito dopo l'entrata dal lato del parcheggio…Quando ho incontrato Giuseppe Valente della CE4 mi sono recato a casa sua e ho parlato nella sua cucina. Ricordo che Valente mi disse che non era andato a lavorare perché doveva portare una sua parente, o una zia o una nonna, o in ospedale o comunque a fare degli accertamenti. Ci siamo recati a casa di Valente con una macchina Y10 di proprietà di Antonio Luongo, al cui interno vi era oltre il Luongo anche Amerigo e Nicola o' capritto che era stato prelevato nella sua casa di Pineta Riviera. Anche Nicola doveva salire per parlare con Valente ma non potette più salire perché ricevette una telefonata all'ultimo momento. Nicola mi disse che in quella stessa giornata nella quale io andai a parlare con Valente i sessani erano andati a parlare con un altro soggetto che si occupava della nettezza urbana per il Comune di Sessa e lo stesso Nicola aveva provveduto a far bloccare da sue persone sulla Domiziana uno dei fratelli ORSI a cui era stata fatta un'imbasciata. Nicola mi disse che le tre azioni vennero fatte nello stesso giorno perché evidentemente bisognava che tutti i soggetti che si occupavano della nettezza urbana si preoccupassero di quanto stava avvenendo…Nicola o'capritto mi indicava i f.lli Orsi come coloro che gestivano la situazione della nettezza urbana per conto di BIDOGNETTI Francesco. Mi disse Enzo FILOSO, quando gli ho raccontato tutta questa vicenda, che i f.lli Orsi gli avevano mandato un messaggio che io non ho ben compreso e che cioè loro pensavano che su Mondragone era uscito qualche personaggio più importante di Augusto che voleva cambiare le carte in tavola e per questa ragione era stata fatta tutta questa operazione. Come ho già riferito nell'altro verbale in tutta questa vicenda c'è qualcosa che mi sfugge. Palmieri Salvatore in carcere mi ha anche detto, commentando queste vicende che riguardavano gli Orsi, che il genero di Orabona Salvatore, per un periodo, aveva lavorato con gli Orsi ed era stato licenziato o comunque se ne era andato ed Orabona pretendeva dagli Orsi che continuassero a dargli lo stipendio senza lavorare. Orabona si era comunque legato al dito questo rifiuto degli Orsi ed aveva quindi lui potuto mettere bacchetta con Augusto contro gli Orsi.* ***Voglio precisare che quasi tutte le persone che a Mondragone lavorano per la nettezza urbana sono state raccomandate dal clan e sono o amiche o parenti di componenti del clan. Questa presenza di persone del clan fra i lavoratori del clan della nettezza urbana data ormai da moltissimi anni. Qualunque iniziativa volessero prendere i lavoratori dovevano concordarla con il clan, compresa l'iscrizione al sindacato o comunque eventuali iniziative di protesta. Mi risulta per esempio che con il venir meno della società che si era occupata prima degli Orsi della raccolta della nettezza urbana tutti i dipendenti avrebbero dovuto ricevere una corposa liquidazione ed invece hanno solo avuto una piccola somma di circa due milioni e non hanno potuto dire nulla perché il clan così aveva stabilito.*** *Mi risulta che nel corso degli anni sono stati organizzati dal clan vari pranzi o riunioni elettorali nei periodi immediatamente precedenti alle elezioni per cercare di far votare tutti i dipendenti della nettezza urbana per una certa persona…".*

Persechino Michele (cfr. il verbale dell'interrogatorio reso in data 31.1.2002): *"…Gli introiti riguardavano estorsioni che in gran parte non ho chiuso io ma che ho già trovato e mi risulta che prima della mia scarcerazione si recava a prendere una parte di questi soldi TIMPANELLI, soggetto che è stato da poco arrestato insieme a Razzino Pasquale; il Timpanelli, prima di abbandonare l'incarico su ordine del Fragnoli, mi*

portò da una serie di persone che pagavano e mi presentò come colui che si sarebbe occupato delle future riscossioni; ***gli introiti erano:...30 milioni al mese vengono dalla società CE4 che gestisce la raccolta dei rifiuti solidi urbani in Mondragone; voglio precisare che quando fui scarcerato la raccolta dei rifiuti veniva gestita da una società, la Covim, che faceva capo a Sarnataro Raffaele e che versava 60 milioni al mese già da molto tempo; quando il Sarnataro venne arrestato per un periodo vennero versate ancora le somme dal suo socio, un uomo molto grosso di statura…Successivamente la COVIM ha lasciato l'appalto che è stato preso dalla CE 4; non so materialmente con chi ha parlato il titolare della CE4, credo che si sia visto tutto il FRAGNOLI Giuseppe. I soldi mensili della CE4 mi venivano portati da FRAGNOLI Giacomo, figlio di Giuseppe e dipendente della CE 4. FRAGNOLI Giacomo era già dipendente della COVIM ed era lui stesso che mi portava i soldi del SARNATARO;*** *voglio precisare che il SARNATARO Raffaele io lo conosco di persona, così come conosco il socio; io stesso su ordine di Renato Pagliuca nei primi anni '90 sono andato a chiamarlo sulla discarica per dirgli di venire a Mondragone perché Renato gli doveva parlare…".*

Valente Giuseppe, mero omonimo dell'indagato Valente Giuseppe (cfr. i verbali degli interrogatori resi in data 16.4.2003, in data 3.7.2003 ed in data 30.5.2003):

"...non ho mai conosciuto personalmente GUIDA Luigi detto "O DRINK", ma ne ho sentito parlare sia in passato sia nel presente. PICCIRILLO mi aveva detto che lui aveva villeggiato per un periodo a Mondragone e che era in buoni rapporti con Augusto LA TORRE. Se pure era di Napoli era legato a BIDOGNETTI, cosa che mi è stata riferita da Aniello PIGNATARO a seguito della vicenda che Le racconto. ***Nel 2001, prima del suo arresto, una sera io mi trovavo presso la sua officina e venne una persona a fargli visita con un paio di macchine. Aniello si mise in una parte dell'officina, in una specie di ufficio, ed io non riuscì a vedere chi c'era né mi volevo io far vedere. Aniello parlò con queste persone e fu raggiunto da Salvatore ORABONA che mi si avvicinò ed io gli dissi di allontanarsi perché Aniello stava parlando con delle persone. Quando andarono via Aniello mi disse che chi era venuto era Giggino O DRINK che era accompagnato con delle persone legate a BIDOGNETTI; lui era venuto a rappresentare che essendo amico di Augusto stava a disposizione se noi avevamo bisogno di lui. Aniello mi disse che questo Giggino gli aveva parlato del fatto che un mondragonese, Pietro TIMPANELLI detto "Cacatiello", stava dando fastidio nella zona del Villaggio Coppola e lui voleva sapere se si doveva fare qualcosa. Aniello gli aveva risposto che lui non si interessava di queste cose. Successivamente a questo incontro, mi è stato riferito che Giggino O DRINK, Enzo FILOSO ed Enzo GALLO in rappresentanza dei sessani si sono incontrati dopo il Garigliano per un incontro. O DRINK era stato accompagnato a questo incontro da Americo DI LEONE che lo aveva portato dove stava Enzo FILOSO e lì erano stati raggiunti da Enzo GALLO. Questo incontro doveva riguardare una vicenda collegata all'appalto per la nettezza urbana che riguardava sia Casale, sia Mondragone che Sessa A.*** *A questo incontro avrebbe dovuto partecipare anche Mario SPERLONGANO che però non vi si recò e mandò soltanto un regalo a Gigino. Io ho sempre pensato che questo incontro era stato fatto per far vedere a Giggino Mario SPERLONGANO per poi successivamente ammazzarlo. So che successivamente a questo incontro Enzo GALLO venne riaccompagnato a Roma e che in quel periodo era latitante. Sempre a seguito di questo incontro mi risulta che Stefano PICCIRILLO è andato a parlare con VALENTE Giuseppe del consorzio che si occupava dei rifiuti. In quella stessa giornata i casalesi avrebbero dovuto o fare*

un'azione o andare a parlare con un'altra persona che si occupava dei rifiuti in quella zona e pure i sessani avrebbero dovuto fare un'altra azione…Dell'incontro di cui ho parlato mi ha riferito Americo DI LEONE che, come ho detto, aveva accompagnato "O DRINK" a parlare con FILOSO…mi risulta che il regalo che venne mandato da Mario SPERLONGANO era un orologio…mi risulta che insieme ad Americo fosse andato Antonio LUONGO che era un amico di infanzia di Americo DI LEONE che mi risulta estraneo alle vicende del clan…forse a Roma Enzo GALLO è stato accompagnato da Americo, ma non sono sicuro di questa circostanza…Nella fotografia n. 75 riconosco SORRENTINO Gennaro. Questa persona prima faceva l'idraulico, oggi è socio di una grossa rivendita di gas dove sono stati arrestati CORNACCHIA, FRAGNOLI ed i fratelli BOVA…Non appena siamo rientrati nel clan, Aniello PIGNATARO ha riferito a me ed al PICCIRILLO che ***SORRENTINO (Gennaro n.d.r.) si occupava di riscuotere i soldi da parte della ditta incaricata dell'appalto per i RSU e di portarli ad Enzo FILOSO. Per la precisione il socio di Gennaro SORRENTINO, che era cognato o comunque parente del titolare della ditta incaricata della raccolta dei RSU, prendeva il denaro e lo consegnava a Gennaro, il quale a sua volta si incaricava di farlo giungere ad Enzo FILOSO…L'Ufficio dà atto che la foto n. 75 ritrae il volto di SORRENTINO Gennaro…Della vicenda di cui lei mi ha richiesto so cose molto vaghe. Quando l'appalto era gestito dalla COVIM di SARNATARO al clan entravano 60 milioni al mese. Con la nuova società invece entravano 30 milioni al mese. Ho sentito dire che per un periodo questi soldi venivano ritirati da un socio di Gennaro SORRENTINO che era imparentato con uno dei soci della società che si occupava della raccolta dei rifiuti. I soldi venivano dati a Gennaro da questo suo socio e Gennaro li dava a Enzo FILOSO. Ricordo che durante il periodo in cui noi eravamo rientrati nel clan, Nicola ALFIERO detto 'o capritto chiese a me e a PICCIRILLO di andare a parlare con Peppe VALENTE di Mondragone in quanto nella stessa giornata bisognava fare un'imbasciata contestuale, oltre che a questo VALENTE, ad una persona di Sessa da parte dei Sessani e da una persona di Casale o di Caserta da parte dei Casalesi. Siccome io avevo soggezione di questo VALENTE, che forse è anche un mio lontano parente, io non volli andare e dissi a PICCIRILLO di recarsi lui e fu lui quindi che si fece precisare da Nicola quello che doveva dire…***".

<u>Diana Giacomo, già titolare di fatto della srl Covim</u> che gestiva il servizio di raccolta dei rifiuti solidi urbani nel Comune di Mondragone, prima che le subentrasse la ECO4, nell'interrogatorio reso in data 14.4.2005, dichiarava: *"…Nel maggio del 2000 si è verificato un altro episodio importante di cui intendo parlare.* ***La moglie di Augusto, GIARRA Anna Maria, mi mandò a chiamare tramite Angelo BARBATO. Io andai a casa sua e GIARRA mi disse che Augusto LA TORRE aveva mandato a dire dal carcere che lui voleva che io fossi presente a un incontro fra Peppe FRAGNOLI e Raffaele SARNATARO. L'incontro doveva riguardare il pagamento della somma mensile da parte della COVIM. Io diedi il mio assenso e la GIARRA mi disse che l'incontro si sarebbe fatto a Formia. Fu la GIARRA che organizzò l'incontro e mi fece sapere tramite Angelo BARBATO il giorno nel quale si sarebbe tenuto; mi disse che l'appuntamento era al mercato di Formia. Io andai facendomi accompagnare da Angelo BARBATO e trovai nel mercato SARNATARO che era già arrivato. SARNATARO mi disse che l'appuntamento era fissato in un ristorante di cui aveva l'indirizzo. Il ristorante si trovava in una traversina nei pressi del mercato ed era al secondo piano di uno stabile. Salimmo nella sala ristorante e trovai a mia insaputa un tavolo nel quale erano presenti il sindaco Ugo CONTE, Giuseppe VALENTE, presidente del consorzio che si occupava della raccolta dei R.S.U., e due***

***persone vestite di nero che mi vennero presentate come i f.lli ORSI. Di lì a poco giunse Peppe FRAGNOLI. FRAGNOLI disse che lui era il latore di un messaggio di Augusto LA TORRE, disse che gli risultava che il sindaco e VALENTE stavano costituendo con questi ORSI una società privata per la raccolta dei rifiuti in Mondragone che si chiamava ECO 4; aggiunse che Augusto LA TORRE non avrebbe mai tollerato di perdere l'introito su questo settore e che quindi, qualunque cosa sarebbe stata fatta, si doveva tener conto di questo fatto. Disse poi al sindaco che lui non si era messo a disposizione del clan perché non gli aveva mai fatto avere la lista dei lavori. CONTE disse che non gliela aveva mai fatta avere perché non gli era mai stata chiesta. VALENTE disse che effettivamente stavano facendo questa società, ma che loro non avevano mai pensato di escludere LA TORRE. FRAGNOLI disse che LA TORRE voleva il 5% di questa società che si stava formando, oltre i 60 milioni che venivano versati da SARNATARO. VALENTE disse che su questo punto avrebbero riflettuto e poi ne avrebbero parlato. Ribadì che per il denaro erano a disposizione. FRAGNOLI, dopo aver parlato con tono anche alterato, si allontanò. Io rimasi molto imbarazzato e, dopo aver mangiato il primo, me ne andai…la mia presenza a quell'incontro si spiegava con il fatto che io ero stato presente all'incontro fra SARNATARO e LA TORRE nel '95, quando si era concordato il pagamento di 60 milioni al mese…**"*.

Rozzera Girolamo (cfr. i verbali degli interrogatori resi in data 8.10.2003 e in data 22.12.2003):
*"…**VICENDE CO.VI.M.** Devo premettere che fino al nostro arresto avvenuto nel gennaio del 1991, il servizio di raccolta RSU del comune di Mondragone veniva affidato a più ditte. Nel '89 – '90, come ho già spiegato in precedente verbale, una di tali ditte era quella mi pare intestata alla moglie di **PALUMBO Luigi**, i cui proventi venivano divisi al 33% tra il **PALUMBO** stesso, **PAGLIUCA Renato e Augusto LA TORRE**. Questa attività era perfettamente legale. Successivamente, nel 1991, il **PAGLIUCA** si attivò presso l'amministrazione comunale per unificare il servizio di raccolta RSU, che fu affidato alla CO.VI.M. Si tenga presente che alla fine degli anni '80 il **LA TORRE** incominciò ad avere un parziale controllo dell'amministrazione comunale di Mondragone. Devo premettere che il **LA TORRE**, sin dalla seconda metà degli anni ottanta, instaurò stretti rapporti con **DIANA Giacomo**, il quale sin dagli anni settanta aveva avviato un'importante attività nel settore delle discariche. Il **DIANA,** che era diventato con gli anni una persona assai facoltosa, era proprietario di una grossa discarica sita in località Bortolotto, situata tra Mondragone e Castelvolturno. Con il **DIANA,** il **LA TORRE** aveva risalenti rapporti familiari che si intensificarono verso la seconda metà degli anni ottanta, allorquando il **DIANA** cominciò a fare, tra l'altro, prestiti in denaro che a volte non venivano nemmeno restituiti. Nel 1990 il **DIANA**, incoraggiato anche dal **LA TORRE**, decise di vendere la sua discarica. Il **LA TORRE** fece da intermediario e la discarica venne venduta per la somma di circa 2 miliardi, con pagamento dilazionato, a tali **Raffaele** e **Pierino**…il Raffaele di cui parlo è **SARNATARO Raffaele**, come mi ricorda la S.V. Non ricordo bene invece il cognome del **Pierino**. L'occasione fu propizia per avviare gli interessi del clan nel settore dei rifiuti. Il **LA TORRE** fece da intermediario, stabilendo con **Raffaele** e **Pierino** che dopo aver completato il pagamento del prezzo al **DIANA** si sarebbe dovuto definire l'importo della tangente a lui spettante. **Fatto sta che successivamente tale tangente non fu mai pagata a noi, in quanto successivamente al nostro arresto si intromisero i "Casalesi", i quali stabilirono che la tangente spettasse ai loro referenti di Castelvolturno in quanto la discarica era situata in territorio di loro competenza. Tale situazione fu, seppure a malincuore, da noi accettata.** Intanto,*

*il **Raffaele** ed il **Pierino** erano anche i proprietari di fatto della CO.VI.M., cui come ho detto nel 1991 fu affidato l'appalto comunale per i RSU sull'intero territorio di Mondragone. La società del **PALUMBO** pertanto scomparve ed il **PAGLIUCA** stabilì che la CO.VI.M., dovesse pagare una tangente di 40 milioni mensili, ripartita per un terzo al **PALUMBO**, per un terzo al **PAGLIUCA** e per un terzo ad **Augusto LA TORRE**…Il **LA TORRE**, che fu arrestato nel 1991, seguiva ed impartiva le direttive dal carcere. Il **PAGLIUCA**, da parte sua, divideva la sua quota di tangente con **FILOSA Vincenzo**, il quale era confluito nel gruppo **LA TORRE** nel 1991 insieme al **PAGLIUCA,** cui era legato da stretti rapporti di amicizia. Tali vicende mi furono riferite dal **BRODELLA** successivamente alla mia scarcerazione, il quale tra l'altro si lamentava di tale situazione in quanto la somma non veniva interamente versate nelle casse del clan. In effetti, dei 40 milioni della tangente CO.VI.M., la parte del **PALUMBO** si giustificava quale sorta di "risarcimento" per la dismissione della precedente attività, la parte del **PAGLIUCA** costituiva lo "stipendio" di quest'ultimo e la parte di **Augusto** era a titolo personale. Il **BRODELLA** si lamentava con me in quanto, in assenza di **Augusto,** io ero destinato a prendere il comando e ad assumere le decisioni per quanto riguardava la gestione del gruppo. Io gli risposi che volevo prendermi un periodo di riflessione, per cui mi riservai di fornirgli ulteriori indicazioni in merito. Nel 1994 - 95 il **FRAGNOLI** mi mise al corrente che dopo la scomparsa del **BRODELLA** si era stabilito che i 40 milioni dovessero interamente confluire nelle casse del clan. Credo che tale decisione dovesse essere concordata tra il **PAGLIUCA**, il **LA TORRE** e forse anche **Mario ESPOSITO.** Dico ciò sia in quanto all'epoca il gruppo **ESPOSITO** era un'unica cosa con il gruppo **LA TORRE** sia in quanto, successivamente alla scomparsa del **BRODELLA,** il **PAGLIUCA** non era personaggio di grosse capacità…Successivamente alla morte del **PAGLIUCA**, e cioè a fine estate del 1995, prima dell'imprevista scarcerazione del **LA TORRE**, designai il **FRAGNOLI** per la futura gestione del clan. In quel frangente, decisi di aumentare l'importo della tangente CO.VI.M. da 40 a 60 milioni di lire mensili. Dopo la morte del **PAGLIUCA**, il **Pierino** ed il **Raffaele** chiesero un incontro o con me o con il **FRAGNOLI**. Devo precisare che il **PALUMBO** Luigi faceva da tramite per il pagamento della tangente, nel senso che i soldi venivano consegnati a lui, il quale poi provvedeva a consegnarli o al **PAGLIUCA** ovvero ai referenti del clan. Al **PALUMBO**, inoltre, era stato dato anche un lavoro presso la CO.VI.M. Per chiarire il clima di quei giorni, devo dire che la morte del **PAGLIUCA** aveva un po' agitato gli animi. **VALENTE** e **PICCIRILLO** non si facevano vedere più in giro, mentre il **FILOSA** ed il **PERSECHINO** si erano addirittura allontanati da Mondragone. In altri termini, si era diffusa la voce che ad ordinare la morte del **PAGLIUCA** ero stato io. Tramite il **PALUMBO**, **Raffaele** e **Pierino** chiesero di incontrare me oppure **FRAGNOLI**. Poiché il **FRAGNOLI** non era all'altezza, prima mandai a chiamare **DIANA Giacomo** e gli chiesi se era disposto a tenere l'incontro a casa sua; ottenutane la disponibilità, dissi al **FRAGNOLI** che tramite il **PALUMBO** doveva riferire a **Pierino** e **Raffaele** che l'incontro si sarebbe tenuto presso l'abitazione del **DIANA**. L'incontro si tenne presso l'abitazione del **DIANA** sita in Mondragone dietro il bar Europa. Presenti erano il **DIANA**, **Raffaele**, **Pierino** ed io. Preciso che il **DIANA** era a conoscenza che il Raffaele e il Pierino pagavano la tangente. Dopo i convenevoli, chiesi al DIANA la cortesia di farci parlare da soli. Inizialmente Raffaele e Pierino mi chiesero cosa stesse succedendo dopo la morte del **PAGLIUCA**. Io deviai il discorso e li rassicurai. A questo punto iniziammo a parlare della tangente. Io feci presente che erano passati alcuni anni e che, tenuto anche conto dell'importo dell'appalto, l'importo della tangente andava riveduto. **Raffaele**, con il quale io avevo buoni rapporti, mi manifestò una generica disponibilità ed io iniziai a chiedergli la somma di 50 milioni per il mese di agosto che ancora non*

era stata pagata. Gli dissi inoltre che per il futuro avrebbe avuto rapporti con il ***FRAGNOLI****, che gli indicai come "persona" di* ***Augusto****. Rimanemmo d'accordo che comunque ne avremmo riparlato a breve termine. Di lì a poco uscì* ***Augusto*** *dal carcere, il quale poi seguì in prima persona gli sviluppi…Devo ricordare che all'epoca io ero detenuto e non seguii personalmente la vicenda, mi risulta però che ci furono dei "contatti" con le altre ditte interessate, alle quali fu anche riconosciuta una "buona uscita". Non so dire di quali appoggi il* ***PAGLIUCA*** *ed il* ***LA TORRE*** *in particolare godessero presso l'amministrazione comunale. E' ovvio però che qualche appoggio vi fosse. Fu il* ***BRODELLA*** *che mi riferì i fatti di cui sto parlando. Preciso inoltre che, benché già nel 1991 ci si attivò per portare l'operazione a termine, non escludo che poi l'operazione stessa sia stata completata in epoca successiva e cioè fino al 1992…mi risulta che successivamente all'intervento di* ***Augusto*** *l'importo della tangente fu portata a 60 milioni di lire. La tangente è stata regolarmente pagata dal 1996 fino al 2000 ai vari referenti che si alternarono alla guida del clan. Nella primavera del 2000* ***FRAGNOLI*** *fu scarcerato con divieto di dimora in Campania. Iniziai una corrispondenza cifrata con il* ***FRAGNOLI****, il quale mi scriveva e mi informava delle vicende del clan. Ad un certo punto, verso la fine del 2000, il* ***FRAGNOLI*** *mi mise a conoscenza che l'appalto alla CO.VI.M. stava per scadere definitivamente e che ovviamente Raffaele e* ***Pierino*** *non avrebbero più pagato. Ciò avrebbe sicuramente cagionato un notevole danno alle casse del clan. A quell'epoca anche lo* ***SPERLONGANO*** *aveva il divieto di dimora, ma si teneva un po' lontano dalle vicende del clan, per cui chiesi al* ***FRAGNOLI*** *se era disposto a seguire le vicende del clan. Il* ***FRAGNOLI*** *mi diede la sua disponibilità.* ***Successivamente il FRAGNOLI mi comunicò che l'appalto della nettezza urbana era stato o doveva essere assegnato al consorzio e mi comunicò che si stava adoperando per cercare un "contatto" e stabilire un'eventuale tangente sul futuro appalto. Il FRAGNOLI però mi fece capire che c'erano i "casalesi" di mezzo. Io scrissi al FRAGNOLI facendogli capire che doveva farsi valere e non doveva farsi mettere i piedi in testa. Devo dire che io all'epoca non ero ancora al regime di cui all'art. 41 bis dell'Ord.Pen., che mi fu successivamente applicato solo nel mese di marzo del 2001, per cui la mia corrispondenza non era sottoposta a censura. In tutto questo devo far presente che, successivamente alla sua scarcerazione, il LA TORRE mi disse che durante la detenzione aveva incontrato Cicciotto BIDOGNETTI con il quale c'era stata una sorta di riavvicinamento.*** *Mi disse anche che si era incontrato anche con "****Sandokan****" con il quale però non riusciva in alcun modo a dialogare…Quanto ai rapporti recenti, nel 2000, se ricordo bene FRAGNOLI mi mandò una lettera con la quale mi fece sapere che aveva avuto un incontro con il Sindaco CONTE o comunque un approccio con costui che aveva ad oggetto l'appalto per la raccolta degli R.S.U. che in quel periodo stava passando o doveva passare al nuovo consorzio….di questo consorzio* ***FRAGNOLI in altra occasione mi ha fatto sapere che vi era un interesse diretto dei casalesi nel senso che erano i casalesi che erano dietro il consorzio, tant'è che lui doveva avere contatti proprio con i casalesi per concordare la somma che dovevano avere i mondragonesi…****".*

De Martino Antonio, collaboratore di giustizia reduce del gruppo camorristico sessano dei 'muzzoni' (Esposito) - interrogatori del 24.5.2006, 25.5.2006, 21.6.2006:
"…Di Gino Fragnoli ho sentito poi parlare a proposito di un'altra vicenda che riguarda Nicola 'o Capritto, persona che era presente all'incontro di cui ho detto. Un giorno Giannino Esposito, tramite Aquilino, mi convocò nella zona di Cellole; ci incontrammo e lui mi disse che tramite Cipriano io dovevo urgentemente contattare Nicola 'o capritto perché Nicola doveva far avere a lui 5000 euro che era un ulteriore

residuo di soldi che il clan doveva ricevere dalla ECO4…In un'altra occasione, circa un anno fa o persino di più, Giannino mi diede l'incarico di bloccare i lavori che si stavano facendo nella periferia di Cellole, non lontano dall'abitazione di Mimmo Gallo. Stavano facendo degli scavi e credo che stavano facendo delle fognature; si tratta di un lavoro molto significativo perché dura già da tempo. ***Giannino mi disse che i titolari dell'impresa erano i fratelli ORSI di Casale e che io dovevo recarmi a bloccare il lavoro con più persone, in quanto gli Orsi erano persone pericolose per essere legati ai casalesi e, quindi, qualcuno avrebbe potuto anche reagire****. Ho poi saputo che il clan Esposito ha ottenuto 25 mila euro per questo lavoro; non so se a titolo di anticipo o definitivamente; l'ho saputo indirettamente e perché un giorno, di circa tre -quattro mesi fa, io dissi ad Orlandino che avevo bisogno di soldi e di dirlo ad Emilio. Orlandino mi disse che il clan stava aspettando i 25 mila euro di Orsi e che...* ***Sono stati effettuati degli atti intimidatori anche nei confronti della ECO 4 che pure si occupa della raccolta dei rifiuti urbani, credo in Cellole, oltre che certamente a Mondragone. So che di questa vicenda Emilio ESPOSITO aveva più volte parlato con Roberto PAGLIUCA e Roberto aveva detto ad Emilio che loro erano in contatto con il Presidente del Consorzio VALENTE, non so precisamente se VALENTE volesse o meno pagare.*** *So per certo che nell'autunno/inverno 2005 Orlandino LETTIERI con Armando MARTUCCI vennero a prendersi la moto e andarono a bruciare dei camion nella zona di Falciano della Eco 4. Io non so se poi materialmente sono o meno andati, Orlandino mi disse che lo avevano fatto. A distanza di tempo e cioè all'inizio del 2006, penso già eravamo in marzo, Orlandino mi disse che Emilio aveva dato ordine di andare a bruciare i camion della Eco 4 e voleva che partecipassi anch'io. Ci siamo recati una sera con l'autovettura di Giovanni FLORIO, io, Giovanni e Orlandino e siamo andati nei pressi della Stazione di Falciano e lì Orlandino ha scavalcato il muro di cinta, salendo dal tetto della macchina e ha bruciato più di un camion. Questo episodio non è avvenuto in periodo molto distante a quello analogo riguardante la Eco Campania. Di questa vicenda poi ho parlato con Emilio che mi ha detto che dell'estorsione si stavano occupando direttamente i Mondragonesi; non so però altre notizie su questa storia e né so se sono state o meno pagate estorsioni dalla ditta Eco 4…".*

Assume particolare rilievo ai fini che ci occupano la posizione del Presidente del Consorzio CE 4 Valente che risulta coinvolto nella vicenda estorsiva realizzata in danno della ECO4 s.p.a. dal clan La Torre, dal racconto convergente di: DIANA Giacomo, ORABONA Salvatore, SPERLONGANO Mario, ROZZERA Girolamo, ORSI Michele, ORSI Sergio.
La combinazione di questo comportamento con altri, sintetizzati alle pagg. 500 e ss. dell'ordinanza cautelare n. 707 del 29.10.07, fonderà a carico del Presidente del Consorzio CE4 e della stessa ECO4 s.p.a. (a partire dal 9.6.2004) un addebito di collusione con l'attività associativa del clan La Torre che la dice lunga sulla personalità del principale *rappresentante politico* dell'onorevole Cosentino nelle questioni ECO4.

11. La nuova alleanza stretta dagli Orsi con il gruppo Schiavone

Si è già visto come le dichiarazioni, sopra già riportate, di Emilio Di Caterino offrano adeguato riscontro a quelle rese da Vassallo sul tema della rottura tra i fratelli Orsi (ovvero la società mista ECO4) e il gruppo bidognettiano.
Vale ora la pena di soffermarsi sul momento finale del lungo racconto dedicato dal collaboratore di giustizia alle *liaisons* camorriste del gruppo imprenditoriale casalese.
La ricostruzione assume particolare significato perché, sullo sfondo di quel 'passaggio

di competenze mafiose', si situa un incontro tra il parlamentare Nicola Cosentino e l'imprenditore camorrista Vassallo nel quale il primo pronuncerà parole dense di significato:

"Io insistetti nella mia richiesta perché tenevo molto a non rimanere fuori dalla gestione dei rifiuti, anche perché una mia esclusione significava perdita di prestigio sia a livello imprenditoriale che a livello di 'sistema'. Per 'sistema' intendo gruppo criminale camorristico.

L'onorevole Cosentino mi spiegò, vista la mia palese delusione, quali erano le ragioni del suo diniego, e quindi della mia esclusione dal Consorzio. Mi spiegò pertanto che ormai gli interessi economici del clan dei Casalesi si erano focalizzati, per quanto riguarda il tipo di attività in questione, nell'area geografica controllata dagli Schiavone (in particolare Francesco Schiavone detto Cicciariello, unico ad avere potere su tutto il territorio di Santa Maria La Fossa) e che pertanto il gruppo Bidognetti era stato 'fatto fuori' perché non aveva alcun potere su Santa Maria La Fossa. Ne derivava la mia estromissione.

In poche parole l'onorevole Cosentino mi disse che si era adeguato alle scelte fatte 'a monte' dal clan dei casalesi che aveva deciso che il termovalorizzatore si sarebbe dovuto realizzare nel comune di Santa Maria La Fossa e che anche l'affare del Consorzio CE4 / ECO4 era uno degli affari degli SCHIAVONE. Egli pertanto aveva dovuto seguire tale linea e avvantaggiare solo il gruppo Schiavone nella gestione dell'affare e, di conseguenza, tenere fuori il gruppo Bidognetti, e quindi anche me.

Da quanto detto fino a ora, risulta chiaro che, a questo punto, l'affare Consorzio CE 4/ ECO 4, nato per favorire il clan Bidognetti, era diventato un 'affare' del gruppo Schiavone".

L'esistenza di relazioni degli ORSI con i componenti della famiglia SCHIAVONE, in epoca compatibile con quella riferita dal collaboratore, è comprovata dagli elementi compendiati nell'informativa n.1000/II/2006/S.M. del 6 dicembre 2006, redatta dalla Squadra Mobile di Caserta, nell'ambito del Procedimento Penale 48659/03 R.G.N.R. (vedi faldone n. 1).

In data 13 dicembre 2004 la Squadra Mobile eseguiva una perquisizione presso l'abitazione di SCHIAVONE Vincenzo, nato a Santa Maria Capua Vetere il 10.10.1974 residente a San Cipriano d'Aversa (CE) alla via Tevere nr.10.

Nel corso della perquisizione, nelle tasche di un giubbotto in renna, custodito nell'armadio della camera da letto occupata dallo SCHIAVONE, venivano rinvenuti vari involucri contenenti:

Lista manoscritta su foglio di carta uso bollo e su foglio di carta a quadri, riportante il nominativo di capi e affiliati al clan dei "casalesi" recante a margine l'indicazione di somme di denaro, da intendersi corrispondenti ai salari mensili dei camorristi (Lista n. 1 in allegato 1 dell'inf.va citata)

Lista, redatta con l'uso di p.c., riportante il nominativo di capi e affiliati al clan dei "casalesi" con l'indicazione a margine della posizione giuridica e di altre somme di denaro (Lista n.2 in allegato 2)

Lista, redatta con l'uso di p.c., riportante anche in questo caso il nominativo di capi e affiliati al clan dei "casalesi", la posizione giuridica e la somme di denaro (Lista n. 3 in allegato 3).

L'analisi dei 3 elenchi conduceva alle seguenti evidenze:

gli elenchi contenuti nelle liste n.1 e n.3 sono identici benché il primo sia scritto a mano e il secondo redatto con l'uso di un personal computer;

l'elenco contenuto nella lista n. 2 non riporta i nomi degli affiliati al gruppo c.d. dei sanciprianesi né degli affiliati a RUSSO Giuseppe, che appaiono invece sia nella lista nr.1 e nella nr.3;

nella lista nr.1 manca l'indicazione della posizione giuridica degli associati che invece è riportata sia nella lista nr.2 che nella lista nr.3;

i nomi contenuti nelle liste consentono, nella maggior parte dei casi, l'esatta identificazione degli affiliati al gruppo;

il clan si presenta all'esterno con un'unica struttura di vertice mentre al suo interno è organizzato in 10 gruppi o bande ognuna di esse con propria giurisdizione territoriale;

il clan dispone di una cassaforte comune che viene in parte ridistribuita ai singoli affiliati sotto forma di stipendio o quota di partecipazione;

in nessuno degli elenchi viene indicato il gruppo di riferimento alla famiglia Bidognetti, nonostante il capofamiglia Bidognetti Francesco sia uno dei fondatori del clan ;

in nessuno degli elenchi vengono indicati gli affiliati al gruppo Zagaria, benché sia riportata la somma complessiva da corrispondere al gruppo, per l'ammontare di euro 33mila.

Nel corso della medesima perquisizione veniva rinvenuto altro involucro sigillato con nastro isolante con sopra riportata la dicitura "LAV." (evidentemente 'lavori').
Questo involucro conteneva altre quattro liste:

In una era riportato un elenco di lavori e di imprese, a margine del quale erano indicate somme di danaro (Lista n.4 in allegato 4)

In un'altra, manoscritta, erano riportati altri nominativi di imprenditori. (Lista n.5 in allegato 5)

In un'altra ancora, manoscritta su un foglio di carta di piccole dimensioni di colore bianco/verde, altri nominativi di imprese e imprenditori estorti. (Lista n.6 in allegato 6)

Nella quarta lista, redatta con l'uso di un p.c, comparivano esclusivamente lavori eseguiti nel comune di Casal di Principe, con l'indicazione a margine di somme di danaro (Lista n.7 in allegato 7).

Era senz'altro possibile, in base a questi rinvenimenti, assegnare a SCHIAVONE Vincenzo il ruolo di contabile della fazione 'Schiavone' del clan, addetto: sia al pagamento dei salari mensili; sia al controllo delle dazioni estorsive.
Tra i dati riportati nei documenti caduti in sequestro figurava la seguente scritturazione "*39) ORSI ?"*.

In altra parte del documento, era annotato accanto al nome Orsi, l'indicazione numerica corrispondente evidentemente alla tangente dovuta ("300"), interpretata dagli inquirenti come corrispondente a 300mila euro annui.

Dagli interrogatori di DI GRAZIA Paolo e DI GRAZIA Riccardo, titolari in Carinaro dell'omonimo clan, si traevano notizie utili a leggere anche la relazione allacciata dagli Orsi con il gruppo Schiavone come improntata a corrispettività di vantaggi.
In particolare i due collaboratori di giustizia fornivano informazioni sul ruolo di Sergio ORSI nella Multiservizi (altra società mista partecipata al 49% dagli Orsi) e sull'espansione delle commesse, propiziata dall'impegno dei clan.

Di Grazia Paolo, il 22 giugno 2006:

(...) in quel periodo, era stato pensato un discorso più generale in relazione alla gestione dei rifiuti per i comuni di CARINARO e GRICIGNANO, disegno del quale era parte anche (...), che era ***uno dei fondatori della MULTISERVIZI, la quale aveva sostanzialmente la gestione, insieme al comune di GRICIGNANO, della gestione dei rifiuti. Mi pare che la società vedesse la partecipazione anche di altri comuni. La gestione era di estremo rilievo per i clan camorristici della zona perché nella MULTISERVIZI il 49% era partecipato da ORSI Sergio, dietro al quale vi erano i CASALESI e in particolare - per le nostre zone - il LETIZIA. L'eventuale ingresso del comune di CARINARO nella MULTISERVIZI si sarebbe tramutato in un vantaggio anche per il mio gruppo criminale, perché in base ad un accordo con i CASALESI, noi avremmo avuto una percentuale per tonnellata di rifiuti in relazione al comune di CARINARO.*** *(...)*

10 aprile 2008:

(…) Sapendo a questo punto del legame della Multiservizi con ORSI Sergio e di questi con i casalesi, mi rivolsi quindi a LETIZIA Raffaele "Lello", che era il referente dei casalesi nei rapporti con me, per ricevere ulteriori informazioni ed avere assicurazioni.
Io mi incontravo sovente con il LETIZIA e nel corso di uno di questi incontri questi mi confermò dell'esistenza di un accordo quale quello riferitomi dal (…)e delle intese intercorse tra (…) ed il LETIZIA stesso, a nome dei casalesi.
LETIZIA mi garantì che, se fossi stato in grado di convincere il Sindaco di Carinaro MASI a far accedere il Comune di Carinaro nella Multiservizi, mi sarebbe stato assicurato un provento, in percentuale, sui rifiuti trasportati e destinati alla discarica.
(...) In questi incontri ebbi conferma dal (...) che questi aveva stretto accordi con (...)e con ORSI Sergio in ordine al successivo ingresso del Comune di Carinaro nella Multiservizi.

Di GRAZIA Riccardo il 9 luglio 2008

(...) Come già ampiamente riferito il clan dei casalesi manteneva con noi rapporti attraverso ***LETIZIA Lello, una persona di Casal di Principe che ci fu presentata da RUSSO Giuseppe "il Padrino", in occasione degli accordi intercorsi con il gruppo dei Casalesi.*** *Devo ricordare che le relazioni sono state sempre tese tra il nostro clan e quello dei casalesi, per le ragioni legate all'opposta militanza nella NCO e Nuova Famiglia.*
LETIZIA era dunque per noi il referente nei rapporti con il clan dei casalesi, facendo lo stesso capo specifico alla famiglia dei RUSSO.
LETIZIA aveva comunque rapporti anche con il gruppo BIDOGNETTI e ZAGARIA come ho desunto dagli episodi – di cui ho già parlato in precedenza – in cui il LETIZIA ebbe a spendersi e richiedere nostri favori per conto di queste due famiglie.
Nei limiti dunque di un possibile eventuale riserbo del LETIZIA rispetto ai mandanti, questi agiva per conto di RUSSO Giuseppe e della sua famiglia.
Un giorno del 2003 LETIZIA incontrò dunque sia me che Paolo, giungendo presso l'abitazione di mio fratello Paolo, sita a Vico dell'Assunta. Ci incontrammo, come al solito, all'interno del portone e qui LETIZIA ci spiegò sinteticamente ciò che ora riferisco (...).
Il LETIZIA ci disse che aveva un "discorso aperto" con ORSI Sergio, persona da loro "tenuta", con la quale si era accordato – per conto del gruppo – in modo da

gestire i servizi dei Comuni di Gricignano, Succivo ed Orta di Atella. La società di ORSI era entrata dentro questi Comuni (non sono in grado di essere più preciso sulle modalità con cui fu reso possibile) ed il progetto vedeva la possibilità di estendere anche a Carinaro l'influenza di questa società; (…).
LETIZIA spiegò che tramite la società di ORSI era possibile gestire non solo la raccolta dei rifiuti e i servizi accessori ma persino discariche ed appalti per opere comunali varie.
Si trattava di una prospettiva estremamente allettante, perché "più si operava e più si guadagnava". LETIZIA ci disse cha a fronte del nostro impegno per garantire che ORSI agisse anche su Carinaro, avremmo ricevuto la somma annua di Euro 50 mila, denaro che ci avrebbe consegnato proprio il LETIZIA.
Si trattava dunque di un'attività che rimaneva riservata esclusivamente a LETIZIA Lello e le persone che lo avevano incaricato. Accettammo dunque la proposta del LETIZIA (…). ***Evitammo di spiegare a (…) che dietro la società degli ORSI vi fossero i Casalesi e quindi, ai suoi occhi, in quel periodo, eravamo noi gli sponsor.(…)***

<u>Sergio ORSI</u>, sempre nella cornice di un rapporto descritto come puramente estorsivo, riferiva il 15 luglio 2008:

"Da allora non abbiamo più pagato il gruppo BIDOGNETTI ma altri diversi pagamenti vennero fatti in mano a LETIZIA Lello, a nome di RUSSO Giuseppe detto il padrino (in occasione delle festività; sarò più preciso in un successivo interrogatorio) e, precedentemente, a CATERINO Oreste e DIANA Raffale detto Rafilotto. (…) Diverse altre promesse vennero fatte direttamente a SCHIAVONE Francesco detto cicciariello, nel periodo in cui era attiva la discarica Saurino, prima del suo arresto in Polonia, anche se non venne mai versato il denaro".

12. La Ecoquattro e il paradigma dell'impresa mafiosa

Sono maturi i tempi per confrontare gli accertamenti svolti sulla nascita, l'espansione imprenditoriale e le dinamiche di mediazione criminale praticate dalla società mista ECO4 con il paradigma dell'impresa mafiosa dettato dalla giurisprudenza della Suprema Corte di Cassazione.
Sul punto basterebbe richiamare l'ordinanza n. 45 del 26.1.2009 (nel faldone n. 4 degli atti trasmessi il 13.5.2009), le cui pagg. 337 e s., scolpiscono l'intraneità dell'imprenditore Sergio Orsi al sodalizio casalese, ritenendo che egli abbia 'navigato' tra le due fazioni (Bidognetti e Schiavone) in ragione delle congiunturali convenienze.
Si è pure detto degli elementi di collusione – questa volta con il clan La Torre – gravante sul presidente del *partner* pubblico Valente Giuseppe.

Appare francamente inequivocabile nelle vicende trattate il riconoscimento di quegli indici che consentono di far propendere – nella nota alternativa tra *contiguità compiacente* e *contiguità soggiacente* – per l'appartenenza della ECO4 e dei suoi principali esponenti alla prima categoria.

La sentenza Cass., I, 11 ottobre – 20 dicembre 2005, D'Orio scolpisce questa distinzione sottolineando che 'imprenditore vittima' è colui che cede all'imposizione e subisce il relativo danno ingiusto, limitandosi eventualmente a perseguire intese volte alla limitazione del danno; mentre ciò che caratterizza l'imprenditore colluso è l'esistenza di un 'rapporto sinallagmatico' con la cosca, tale da produrre vantaggi ingiusti per entrambi i contraenti, e tale da consentire all'imprenditore di rivolgere a proprio profitto il fatto di essere venuto in relazione col

sodalizio mafioso.

La sentenza esemplifica i vantaggi ingiusti che possono caratterizzare il sinallagma in favore dell'imprenditore (e qui pare davvero di leggere la sintesi del quadro probatorio appena descritto): "***ingresso dell'imprenditore in un sistema illecito di esercizio dell'impresa contraddistinto da appalti e commesse ottenuti grazie all'intermediazione mafiosa";*** **al "*beneficio insito nella possibilità di assicurarsi illegalmente una posizione dominante a scapito della concorrenza, nonché risorse e/o linee di credito a prezzi di favore, sino a godere di un sostanziale monopolio su un dato territorio***".

La sentenza specifica come poi l'imposizione dell'imprenditore colluso in posizione dominante su una certa area debba essere contrassegnata dall'intervento del sodalizio "***il cui apparato intimidatorio si è reso disponibile a sostenere l'espansione dei suoi affari in cambio della sua disponibilità a fornire risorse, servizi o comunque utilità al sodalizio medesimo***".

Soltanto quando sia raggiunta la prova di una tale relazione di scambio di vantaggi ingiusti il comportamento dell'imprenditore assumerà rilevanza penale: in termini di piena intraneità, quando il soggetto risulterà inserito stabilmente nella struttura organizzativa dell'associazione, sì da avervi consapevolmente assunto un ruolo specifico, funzionale al perseguimento dei fini programmatici del clan o di un settore di essi; in termini di concorso eventuale, quando il soggetto – privo di *affectio* e non inserito stabilmente nel tessuto organizzativo – agisca dall'esterno con la consapevolezza e la volontà di fornire un contributo causale alla conservazione o al rafforzamento dell'associazione, nonché alla realizzazione, anche parziale, del suo programma criminoso

Resta invece vittima l'imprenditore che "*non tenta di venire a patti con la mafia per rivolgere a proprio vantaggio il relativo apparato strutturale – strumentale basato sull'intimidazione, ma cede all'imposizione mafiosa (versando tangenti o piegandosi a prestazioni di altro tipo) e subisce il relativo danno ingiusto limitandosi a perseguire semmai un'intesa col sodalizio al solo fine di tentare di limitare il danno*".

Appare inequivocabile che, nel rapporto con il clan dei Casalesi, i fratelli Orsi e la Eco4 s.p.a. abbiano allacciato una relazione sinallagmatica nella quale il corrispettivo rappresentato dall'erogazione del *contributo sociale* fu ampiamente remunerato con: l'inserimento dell'esperto imprenditore camorrista Vassallo; l'ausilio intimidatorio offerto per sbaragliare sia la concorrenza di Ferraro (nella fase genetica dell'aggiudicazione del contratto), che quella successivamente incontrata a mano a mano che si affermava il sistema degli 'affidamenti diretti' e l'ambizione espansiva di Sergio Orsi; l'avallo nella mediazione con i clan preposti ai territori dove la ECO4 andava ad operare.

Mutuando degli stilemi dottrinari può davvero dirsi che gli Orsi, dominatori della ECO4 allacciarono, con la piena complicità degli organi consortili, con l'*industria casalese della protezione* un rapporto attivo.

Essi stabilirono un'interazione fondata, anziché sulla pura coercizione,

su legami personali di fedeltà.
La loro cooperazione fu contenutisticamente ricca (assunzioni di personale; inclusione del socio criminale; versamenti periodici di denaro); fu motivata da prospettive di vantaggio economico, da incentivi materiali e simbolici che alimentarono un buon margine di *voice,* spesa: all'esterno del gruppo criminale, come una credenziale che favorì l'assegnazione dei lavori pubblici o privati*;* all'interno del mondo criminale, come possibilità di negoziare in maniera più favorevole i termini della protezione.
L'agire esterno della ECO4 s.p.a. fu insomma dinamico.
Per gli Orsi il legame con il camorrista – piuttosto che essere imposto da cogenti esigenze di *non conflittualità* - fu una credenziale che moltiplicò le occasioni espansive e poté determinare l'acquisizione di una presenza monopolistica nel mercato di competenza.

13. Profilo di Bernardo Cirillo 'o geometra

La posizione associativa di Bernardo Cirillo merita di essere esplorata per varie ragioni:

Bernardo Cirillo ha, secondo il racconto di Gaetano Vassallo, un ruolo importante nell'inclusione dell'odierno collaboratore nella costituenda società mista;

egli accompagna Vassallo in più momenti della sua relazione con i fratelli Orsi, ivi compresi quelli che sanciscono la rottura dell'accordo societario e, probabilmente, concorrono alla condanna a morte dell'imprenditore;

è lo stesso Cirillo, secondo la versione 'definitiva' di quell'evento risalente che Vassallo ha illustrato in data 28.8.2008, a presentare l'indagato Nicola Cosentino all'odierno collaboratore di giustizia, in occasione delle elezioni provinciali dell'anno '90;

il rapporto tra Nicola Cosentino e Bernardo Cirillo è confermato da Anna Carrino in pregnanti dichiarazioni che in seguito si riporteranno, sì da costituire un fatto provato capace di consolidare la tenuta complessiva del racconto di Vassallo sul patto 'voti contro favori' che si è sopra illustrato.

Conviene prendere le mosse dalle dichiarazioni di **Michele Orsi** che inserisce Cirillo Bernardo tra i soggetti che avevano partecipato attivamente, nella prima metà dell'anno 2002, alla riunione che segnava la definitiva estinzione del rapporto societario con la fazione bidognettiana.

Nell'<u>interrogatorio reso in data 6.6.2007,</u> Orsi riferiva:

"….tornando a parlare dell'incontro con Vassallo e Miele, questo avvenne in Lusciano presso l'autoricambi di tale Verolla Nicola. Qui ***erano presenti Vassallo Gaetano, tale Bernardo, Miele Massimiliano, tale Giosuè detto avvocato e un altro che non conosco; sono in grado facilmente di riconoscere sia Bernardo sia Giosuè.*** *Si dà atto della esibizione di un fascicolo fotografico del Comando Provinciale di Caserta IV sezione datato 11.10.2005 n. 92/115 prot. composto da n. 252*

fotografie, chiedendo all'indagato se riconosce Bernardo e Giosuè (…) ***Proseguendo nella narrazione dell'incontro, ricordo che in quella occasione Vassallo rappresentava ai presenti la circostanza secondo la quale io gli avrei promesso una quota della costituenda società; gli opposi che mai gli avevo fatto una promessa simile. Nel discorso fu Bernardo Cirillo che sostanzialmente sostenne le ragioni di Vassallo Gaetano e che rispetto agli altri svolgeva il ruolo di arbitro tra le mie ragioni e quelle del Vassallo stesso.*** *Non mi piegai a quella che era la pretesa del Vassallo e ribadii che nessuna promessa era stata espressa.* ***Ovviamente si fece riferimento al debito che io avevo in relazione all'acquisto degli automezzi ed io promisi al Vassallo di pagare il prezzo pattuito, cosa che feci successivamente mediante un assegno tratto sul conto della Flora Ambiente.*** *Ricordo che* ***poco prima di allontanarmi Bernardo Cirillo mi disse, con riferimento ad un appalto per operazioni di scavo per il metadonotto da indire da parte del Comune di Villa Literno (appalto per il quale gli assessori…mi avevano dato assicurazioni per una aggiudicazione), che non mi sarei dovuto più interessare, cosa che poi effettivamente non feci…****".*

Lo stesso episodio emerge dalla narrazione 'de relato' di **Orsi Sergio,** in data 8.6.2007:

*"…****sono in grado riferire in ordine ad un incontro che mio fratello Michele ha avuto con Bidognetti Aniello, a due incontri intercorsi con Guida Luigi, a un incontro con un parente di Bidognetti di nome zio Armando che sarei in grado facilmente di riconoscere, con tale Bernardo (mi sembra Cirillo) e altre persone di cui parlerò…"****.*

Un significativo indice rivelatore dell'inclusione di Cirillo nel gruppo Bidognetti, è costituito dalla richiesta formulata a Michele Orsi dopo la sua scarcerazione nel luglio 2007:

"…in un periodo di poco successivo alla scarcerazione di Michele, quindi dopo il 15.7.2007, questi venne avvicinato da Cirillo Bernardo, il quale gli chiese se lo avesse accusato. Michele gli disse che non lo aveva affatto accusato, così tranquillizzandolo…".

V'è poi **Di Caterino Emilio** che, nel ricostruire il complesso rapporto tra gli Orsi e i cicciottiani in maniera aderente alla narrazione del Vassallo, non trascura il particolare dello stretto vincolo fiduciario esistente *illo tempore* tra Cirillo Bernardo e Miele Massimiliano (interrogatorio reso in data 12.11.2008):

"…Miele Massimiliano era una persona del clan, era vicino a noi in qualsiasi cosa ed è imparentato con Bernardo Cirillo; la sorella di quest'ultimo ha sposato il fratello di Miele Massimiliano, di nome Gaetano. Si trattava di una persona di estrema fiducia e Cirillo presentò a Guida Luigi proprio il Miele, insieme a Borrata Francesco, quali suoi fiduciari…".

E' molto interessante la testimonianza di **Diana Miranda,** vedova di

Orsi Michele che, in data 16.9.2008, rivelava:

"…dopo la morte di Michele ho trovato un suo memoriale da lui manoscritto, insieme a un incartamento relativo ad atti processuali. Non so ovviamente dire se il relativo contenuto sia poi stato reso in un atto istruttorio, ***ma ho letto attentamente il documento e mi sono rimaste impresse alcune vicende ivi scritte: si trattava di quattro o cinque pagine manoscritte, interne a un block notes, documento che però Sergio volle prendere e trattenere con sé. Faccio presente che io ho trovato il memoriale una ventina di giorni dopo l'omicidio e ritengo che lo stesso sia stato scritto negli ultimi tempi. Con certezza posso dire che in quel memoriale Michele aveva scritto l'episodio del litigio con Vassallo e dell'intervento di Miele Massimiliano – che io comunque già sapevo – nonché un incontro intercorso con Cirillo Bernardo e Letizia Armando, vicenda quest'ultima che invece ignoravo.*** *Dallo scritto io ho compreso che Michele si era incontrato, giungendo a uno specifico appuntamento con i due, in un periodo certamente precedente all'arresto di Michele.* ***Dal contenuto del memoriale veniva affermato che Cirillo volesse partecipare all'Eco4 e che Michele si era preoccupato per la sua incolumità e quindi aveva – per quel che ricordo – chiamato Miele Massimiliano a sua tutela. Un altro incontro tra Cirillo Bernardo e Michele avvenne verso l'ottobre del 2007 a seguito di vari tentativi di incontro…".***

Numerose altre sono le conferme dell'inclusione e del ruolo di Bernardo Cirillo nel clan capeggiato dal cugino Francesco Bidognetti.
Il collaboratore di giustizia **CIRILLO Francesco** rendeva poi, in data 19 aprile 2002, le seguenti dichiarazioni:
…omissis…La foto nr. 91 raffigura una persona che non conosco. L'Ufficio dà atto che la foto nr.91 ritrae CIRILLO Bernardo nato a Casal di Principe (CE) il 06/10/1966. CIRILLO Francesco dichiara: in questa foto è irriconoscibile per come me lo ricordo. ***E' un mio parente. E' una pedina importante del gruppo criminale di BIDOGNETTI, in quanto faceva la contabilità ai BIDOGNETTI. In seguito, venne un po' accantonato e al suo posto subentrò CORVINO Davide, poi ucciso.*** *…omissis…*

Francesco CIRILLO, in data 11 novembre 2004, riferiva:

"*…omissis… La foto nr. 35 ritrae una persona che conosco; trattasi di* ***Cirillo Bernardo. Alla fine degli anni 1980, BIDOGNETTI gli aveva intestato la pasticceria Katia, pasticceria dove anche io lavoravo.*** *Lo chiamavano il ragioniere perché effettivamente aveva fatto ragioneria. Proprio lavorando in pasticceria, mi capitava di vedere Bidognetti che discuteva di conti con CIRILLO Bernardo; si trattava però di conti che riguardavano le masserie e non la pasticceria.*
A.D.R. Nel corso del 1990, ricordo che Bidognetti Francesco era latitante per cui molto spesso stava fuori; tuttavia egli rientrava ogni tanto a Casal di Principe. Ricordo, poi, che era molto assidua la sua presenza prima delle elezioni comunali, perché sosteneva un candidato che si chiamava Antonio che faceva l'architetto. Ricordo il particolare

molto bene perché Bidognetti Francesco, prima delle elezioni mi disse "mi raccomando, vota Antonio" ed io, un po' imbarazzato, gli dissi che non potevo votare perché avevo ancora 17 anni".

Diana Luigi poi, nell'interrogatorio del 29 aprile 2005, dichiarava:

"***…omissis… Le preciso che CIRILLO Bernardo, grazie ad un diploma di geometra preso in tarda età, riuscì a convincere BIDOGNETTI Francesco di poter svolgere la funzione di colletto bianco dell'organizzazione. BIDOGNETTI Francesco fu ben contento di assegnare questo ruolo al CRILLO Bernardo sin dalla fine degli anni 80.*** *Il CIRILLO Bernardo aveva il compito di parlare con gli avvocati, doveva tenere la contabilità del gruppo, far avere gli stipendi agli affiliati.* ***Dal canto suo, riceveva uno stipendio assai cospicuo ben superiore al mio.*** *Noi ci appoggiavamo sempre a casa sua, che è esattamente di fronte alla casa di APICELLA Pasquale, non solo perché era una persona "pulita" ma anche per una specifica ragione: su suggerimento del BIDOGNETTI Francesco, CIRILLO Bernardo aveva richiesto e ottenuto il porto d'armi per uso caccia e, quindi, teneva a casa un fucile, che ricordo ancora bene, era marca Franchi a sette colpi con caricatore automatico; aveva altresì una pistola Pietro Beretta 9X21, queste armi erano state acquistate con i soldi di BIDOGNETTI Francesco ed erano custodite in una vetrina le cui chiavi erano in possesso sia di BIDOGNETTI Francesco che di CIRILLO Bernardo.…omissis…*

Lo stesso **DIANA**, in data 03 maggio 2005, affermava:

"*…omissis… In particolare, tramite IOVINE Antonio detto 'o ninno, Francesco DI PUORTO e DIANA Giuseppe, BIDOGNETTI era entrato in contatto con imprenditori della zona di Lucca che avevano l'esigenza di smaltire illegalmente i rifiuti tossici e speciali.* ***BIDOGNETTI subodorò l'affare, creò una società nella quale inserì due suoi parenti, e cioè CERCI Gaetano e CIRILLO Bernardo e utilizzando la discarica del CHIANESE e, simulando conferimenti di rifiuti ordinari, faceva immettere in discarica rifiuti speciali****.…omissis…*

In data 26 maggio 2005:

"*…omissis… Ho avuto, molte volte, incontri con DE ANGELIS Gennaro, sia a Casal di Principe, dove lui veniva spesso per incontrarsi con i capi, sia nelle sue zone.* ***Quando veniva a Casal di Principe, era solito appoggiarsi nella casa di CIRILLO Bernardo. Il CIRILLO Bernardo era il suo punto di riferimento, era colui il quale gli fissava gli appuntamenti a Casale, l'andava a prendere dalle parti di Cassino. Posso chiarirle, che questa particolare confidenza, fra il De Angelis Gennaro e il Cirillo Bernardo, discendeva dal fatto che quando il De Angelis, 30 o 40 anni fa abitava a Casale, era vicino di casa del Cirillo Bernardo****. De Angelis Gennaro nasce come un bardelliniano di ferro; fu lui che creò la rete di appoggi alla famiglia Bardellino a Formia, rete di appoggi che consentì poi alla famiglia Bardellino di insediarsi in quelle*

zone. …omissis… Come le ho già accennato in precedenza, io stesso mi sono recato presso il De Angelis, dalle parti di Cassino, dove lui abitava; non si trattò di una visita di cortesia, avevamo uno scopo preciso. ***Eravamo andati io, Cirillo Bernardo, Domenico Bidognetti e Sagliano Giovanni. …omissis… Il viaggio a Cassino, era stato fatto, in quanto, il De Angelis Gennaro, doveva rifornirci di tritolo. Così fu, e in effetti il De Angelis, dopo averci salutato, ci condusse in un vicino capannone dove teneva occultato circa 200 Kg di tritolo, perfettamente confezionato e con l'imballo nuovissimo. Caricammo l'esplosivo sulla Lancia Delta rubata, con cui eravamo giunti, e insieme all'esplosivo ci diede micce e detonatori.*** *Preciso quale era esattamente la nostra formazione: Bidognetti Domenico andava avanti a bordo della sua motocicletta; seguiva Cirillo Bernardo a bordo della sua auto pulita; dietro ci stavamo io e Sagliano a bordo della Lancia Delta rubata, ove era stato caricato l'esplosivo.…omissis…****La foto nr. 35 ritrae una persona che conosco, trattasi di Cirillo Bernardo, di cui ho parlato ampiamente in precedenti interrogatori. E' il cugino di Bidognetti Francesco e fa parte del suo gruppo".***

Ancora DIANA Luigi, in data 21/06/2005:
" …omissis… Nei fogli nono, decimo e undicesimo, voglio riferire di CIRILLO Bernardo e dell'utilizzo della sua abitazione, nella quale egli stava con la madre Lina per fare gli appostamenti per ammazzare Pacifico DIONIGI, nipote di Enzo DE FALCO. CIRILLO Bernardo ha fatto lo specchietto e ci doveva indicare quando si trovava in zona il Pacifico. A casa sua eravamo appostati io, BIDOGNETTI Raffaele e BIFULCO Luigi armati di un mini UZI, un kalashnikov e fucili e con una Tipo rubata. Questo episodio risale al 94. Il medesimo CIRILLO Bernardo, che noi chiamavamo magnariello o Nuova Famiglia, è titolare di un autosalone che si trova sulla strada di S. Maria a Cubito nei pressi dell'abitazione di CIOFFI Fortunato, cognato del fratello, che dovrebbe essere il fittizio intestatario dell'autosalone. ***L'autosalone in questione è stato acquistato con i soldi del clan, in quanto CIRILLO Bernardo ha la cassa del gruppo BIDOGNETTI. CIRILLO Bernardo è persona che ha sempre avuto, fin dagli anni 80, rapporti con altri gruppi della camorra campana; noi per tale ragione lo chiamavamo Nuova Famiglia. Egli teneva, per conto dei BIDOGNETTI, rapporti con il clan MALLARDO, con il clan MOCCIA, con il clan VERDE, con la famiglia CIPOLLETTA di Mugnano, con i LUBRANO di Pignataro*** *e con tante altre persone.* ***Lui ci guardava dall'alto in basso perché ci considerava dei piccoli delinquenti mentre lui si considerava un boss.…omissis…"***

In data 8 settembre 2005 **Luigi Diana riferiva**:

"*I Bidognetti si avvalevano di Morrone Pasquale, Dell'Aversana Giuseppe detto "o riavolo", Letizia Armando, …omissis…, D'Alessandro detto "o' sergente", …omissis… Miele Massimiliano, …omissis…****Cirillo Bernardo,*** *…omissis… ed altri soggetti.…omissis…*

In data 16 settembre 2005:

"*…omissis… A proposito di* ***Cirillo Bernardo****, il Diana precisa che veniva utilizzato dal Bidognetti Francesco come* ***suo ambasciatore*** *per le famiglie camorristiche Mallardo e Moccia. Di ciò ebbi la prova quando la prima volta che mi incontrai con Giuseppe Mallardo agli inizi del 1988, questi mi disse di salutargli Bernardo Cirillo.* ***Quest'ultimo, inoltre, unitamente a Gaetano Cerci, aveva il compito di occuparsi dell'affare della raccolta e dello smaltimento di rifiuti e, addirittura, per stare più all'interno della situazione si fece assumere, non so con quale qualifica, all'interno della società controllata da Gaetano Cerci****. …omissis…*

In data 26 settembre 2005

"*Confermo integralmente il contenuto sintetico dell'appunto. Si dà atto che come da registrazione vengono specificati tali beni.* ***In particolare i beni intestati a:…omissis… CIRILLO Bernardo, cugino di BIDOGNETTI Francesco, abitante in via Firenze di Casal di Principe. Era il contabile del clan come ho già detto in tanti interrogatori;…omissis…***

In data 8 ottobre 2005 **Luigi Diana** affermava:

" *…omissis…Quanto all'avv. CHIANESE preciso che lo stesso era in rapporti con BIDOGNETTI Francesco fin dagli anni "80, avendolo visto io più volte a casa di "CICCIOTTO".* ***Altre volte ho visto il CHIANESE a casa di CIRILLO Bernardo che era il contabile dei BIDOGNETTI, come ho già spiegato.*** *Inoltre, BIDOGNETTI Aniello mi spiegava che il CHIANESE trafficava in rifiuti unitamente a CERCI Gaetano, CIRILLO Bernardo ed allo stesso BIDOGNETTI Francesco. ….omissis…*

E' la volta del collaboratore di giustizia **DIANA Alfonso**.

In data 24 novembre 2005:
"*…omissis… A questo punto il P.M. sottopone in visione al DIANA Alfonso l'album fotografico predisposto dalla Questura di Caserta – Squadra Mobile - dal quale è stata preliminarmente separata la legenda che riporta nominativi: sono riportate 128 fotografie numerate progressivamente da 1 a 128 e l'album è composto da 32 pagine. In ognuna delle citate pagine sono riportate n. 4 fotografie anch'esse numerate progressivamente di modo che le generalità delle persone raffigurate sono individuabili nel corrispondente numero progressivo dell'elenco che segue. …omissis…* ***La n. 98 ritrae CIRILLO Bernardo, che abita nella mia stessa strada ed è il cugino di BIDOGNETTI Francesco. Si tratta di un affiliato al clan BIDOGNETTI presso la cui abitazione si sono sempre tenute le riunioni del clan. Ho già dichiarato che egli ha preso parte in qualità di mandante ad un omicidio e, precisamente, a quello di "SCASSACARRETTA". Nell'ultimo periodo, aveva molti contatti con Nicola ALFIERO detto "o' capritto" e imponeva la propria ditta per la realizzazione di lavori edili privati. Inoltre il CIRILLO mantiene i contatti tra il clan e gli avvocati. Negli***

anni 90 aveva realizzato una società con Gaetano CIRCE per la gestione dei rifiuti ed ha avuto un ruolo nell'importazione di rifiuti dal nord Italia. Per questa attività mentre il CIRCE è stato processato il CIRILLO, che mi risulti, non è stato mai inquisito. Anzi su domanda della S.V. mi correggo: il socio del Bernardo CIRILLO si chiama CERCI e non CIRCE. …omissis…

DIANA Alfonso, in data 2 dicembre 2005 riferiva:

"*…omissis…* ***I fucili ci furono consegnati a casa di CIRILLO Bernardo direttamente da BIDOGNETTI Domenico; noi chiamammo BIDOGNETTI Michele fratello di "CICCIOTTO" che faceva il muratore, MACCARIELLO Raffaele e il tunisino Ben MAZUR che doveva trasportarli a bordo di un furgone***. *…omissis…*

DIANA Alfonso, in data 25 gennaio 2006, proseguiva:

"*…omissis…A questo punto si sottopone al DIANA il medesimo album già indicato negli ultimi due interrogatori del 18 e del 20 gennaio 2006. …omissis…Foto n.189: si tratta di* ***CIRILLO Bernardo, cugino di Francesco BIDOGNETTI Francesco di cui ho più parlato varie volte. Il CIRILLO Bernardo si occupa di curare i contatti tra gli avvocati e la famiglia BIDOGNETTI e si incarica di portare i soldi ai difensori. Qualche volta mi sono recato insieme a CIRILLO Bernardo ed a BIDOGNETTI Aniello presso lo studio dell'avv. …omissis….***

BARRA Angela, ex-convivente di Francesco Bidognetti, in data 5 aprile 2003 riferiva:

"*..omissis… l'Ufficio mi chiede di chiarire di spiegare nel dettaglio quanto successo negli scorsi giorni con riferimento alla visita ricevuta. Le rispondo che,* ***senza alcun preavviso telefonico l'altro ieri, senza alcun preavviso, si è presentato presso la mia abitazione Michele Bidognetti, fratello di Francesco. Per la verità Michele Bidognetti era già venuto a casa mia altre due volte nel periodo in cui stavo agli arresti domiciliari La prima volta venne insieme al fratello Renato, al cugino Bernardo, di cui non conosco il cognome, e insieme a Giosuè.*** *In questa circostanza si discusse del fatto che io aveva cambiato avvocato …omissis….* ***Venne dopo qualche giorno e in quella occasione si incontrò a casa mia con Giosuè, Michele Bidognetti, Renato Bidognetti e Bernardo***. *Fu in questa occasione che i predetti pagarono l'avvocato …omissis…* ***Spontaneamente: voglio dirle che Bernardo, il cugino di Cicciotto, era venuto anche un'altra volta a casa mia. In particolare una volta, circa 4/5 mesi fa, siccome io avevo avuto una discussione con il Giosuè, e non avevo voluta accettare il mensile da lui, si presentarono a casa mia il Bernardo e il Giosuè. Il Bernardo mi chiese cosa era successo e io gli dissi che il Giosuè aveva minacciato di spararmi in quanto io avevo tradito Cicciotto convivendo con Antonio Pannone. Il Bernardo, allora, redarguì il Giosuè e disse che non dovevo dargli retta****…omissis…*

Cirillo Bernardo risulta poi imputato nell'ambito del procedimento penale contrassegnato dal n. 19341/05 R.G.N.R. P.M. Trib. Napoli, relativo all'omicidio di Chiarolanza Arcangelo, commesso in data 15.10.1992 in S. Cipriano d'Aversa e realizzato, secondo l'ipotesi di accusa, in concorso con Bidognetti Francesco, Bidognetti Aniello, Diana Alfonso, Maccariello Raffaele.
Sono stati poi controllati alcuni passaggi descrittivi delle dichiarazioni di Gaetano Vassallo che investono il Cirillo:
1) Cirillo Bernardo è effettivamente cugino del Bidognetti Francesco detto Cicciotto 'e mezzanotte, essendo i due figli delle sorelle Maddalena e Cristina Iorio;
2) Miele Gaetano è effettivamente cognato del Cirillo Bernardo, avendone sposato la sorella Cirillo Giuseppina;
3) Miele Massimiliano è effettivamente fratello del Miele Gaetano, cognato del Cirillo Bernardo;
4) Miele Massimiliano, unitamente a Borrata Francresco, è stato effettivamente tratto in arresto in data 9.12.2002 nell'ambito del procedimento penale n. 60345/02 R. G. N. R. per il reato di traffico internazionale di sostanza stupefacente del tipo eroina (e da allora si trova ininterrottamente in stato di detenzione intramuraria);
5) le strette relazioni esistenti tra il Cirillo Bernardo da un lato ed il nucleo familiare dei Miele dall'altro risultano confermate dalla circostanza che il predetto Cirillo, raggiunto da un provvedimento che gli vietava di continuare a detenere le armi il cui possesso era stato da lui in precedenza denunciato agli Organi competenti, in data 4.8.1998 aveva a cederle al Miele Gaetano.

Di notevole interesse risultano anche dei colloqui oggetto di intercettazione telefonica (captati tra il mese di gennaio ed il mese di agosto dell'anno 2000, sì da riscontrare l'intraneità del Cirillo nell'arco temporale interessato dalla vicenda della società Orsi - Bidognetti), tutti attestanti consolidati rapporti fiduciari e intensa cooperazione criminale tra il Cirillo Bernardo, tra i quali SETOLA Giuseppe, DI MAIO Francesco, MIELE Massimiliano, CIRILLO Alessandro detto 'o sergente.
Per la lettura integrale dei dialoghi si rinvia alle pagg. 327-331 dell'ordinanza cautelare n. 472 del 7 luglio 2009 (corredata dell'informativa del Nucleo Investigativo del Comando Provinciale dei Carabinieri di Caserta n. 1065/11 del 20 giugno 2009), ordinanza trasmessa dall'Ufficio di Procura con missiva del 27.10.2009.
L'ultimo dato meritevole di essere riportato è quello che attesta la militanza perdurante di Cirillo Bernardo nel gruppo Bidognetti, nonostante l'arresto intervenuto in data 19.12.2007.
In data 14.1.2009, all'interno del rifugio ubicato alla via Cottolengo del Comune di Trentola Ducenta, utilizzato dal latitante Setola Giuseppe, venivano sequestrati dei documenti riflettenti la contabilità della banda. Tra i nominativi degli affiliati beneficiari dello stipendio mensile, figurava quello di *Bernardo*.

Tirando le somme, può affermarsi la sussistenza dei seguenti elementi di plausibilità della narrazione di Vassallo che associa Cirillo alla presentazione dell'indagato

Cosentino, conferendogli il ruolo di emissario di Bidognetti, primo decisore di quell'endorsement elettorale:

Cirillo Bernardo è indicato da CIRILLO Francesco e DIANA Luigi come '*pedina importante e colletto bianco*' del clan sin dalla fine degli anni '80 (epoca compatibile con quella nella quale si tennero elezioni provinciali);

Gli è riconosciuta da più collaboratori (DI CATERINO, DIANA Luigi, DIANA Alfonso) il ruolo di ambasciatore del cugino latitante presso i professionisti e presso i criminali di altre consorterie;

Gli è riconosciuta poi (DIANA Alfonso, DIANA Luigi) una speciale competenza nel traffico dei rifiuti in cui si inserì sul finire degli anni '80, stringendo esattamente le stesse relazioni indicate dal collaboratore Vassallo per datare l'inizio della sua conoscenza (in particolare CERCI Gaetano socio di Vassallo nella Ecologia '89).

14. Il dominio gestionale di Sergio Orsi sulla società mista ECO4

Occorre a questo punto dimostrare il dominio gestionale effettivo che l' imprenditore mafioso Sergio Orsi ha esercitato sulla società mista ECO4, anche dopo la sua costituzione.

Si tratta di un altro passaggio che ci avvicina al riscontro individualizzante dell'addebito formulato a carico di Nicola Cosentino.

Le relazioni tra Orsi e l'odierno parlamentare non rappresentano infatti soltanto un enunciato del collaboratore. Esse sono solidamente provate dall'attività intercettiva utilizzabile (quella cioè che non coinvolge, neppure *casualmente*, il parlamentare) e da altri contributi dichiarativi (primi fra tutti quelli del presidente Valente e dell'imprenditore Michele Orsi).

E' importante allora chiarire il profilo in rubrica per fissare un tassello di quella gerarchia di rapporti che vede:

Sergio Orsi e il fratello Michele (conclamati imprenditori mafiosi), titolari delle scelte gestionali della società mista;

Nicola Cosentino, loro interlocutore assiduo, dominatore (o co-dominatore) politico delle assunzioni e delle strategie della società mista;

Una gerarchia che – è appena il caso di dirlo – ulteriormente avvalora la credibilità del racconto di Vassallo.

Il dominio effettivo degli ORSI – soci del gruppo Bidognetti – sulle vicende della ECO4 s.p.a. emerge dalle risultanze intercettive compendiate nell'informativa della Tenenza di Mondragone, N. 39/R-bis/8995 del 27.01.2004.

Al momento della costituzione (28.8.00) la società mista aveva un consiglio di amministrazione presieduto (a titolo puramente formale, secondo il racconto di Valente) da MIRRA Bruno.

In data 10.10.2000 ORSI Sergio veniva nominato Amministratore delegato con poteri di firma e rappresentanza. Gli succedevano prima TRAPANI Giovanni, poi RAGUCCI Michele.

Alla cessazione formale della carica di Amministratore Delegato non conseguiva però la reale perdita del potere gestionale

ORSI Sergio, titolare dell'utenza cellulare intestata alla ECO4 (335/1216000), evitava soltanto nel colloquio con interlocutori 'sconosciuti' o 'scomodi' – di far trapelare l'effettiva posizione di dominio sulla società.

Ciò accadeva ad esempio in due conversazioni captate proprio sull'utenza sopra

menzionata.
Nella prima (n. 117) ORSI veniva chiamato da tale RUBINO, della cooperativa di vigilanza "Lavoro e Giustizia" che riferiva di aver avuto un colloquio con l'onorevole Paolo ROMANO relativo al deposito di Castel Volturno e che questi lo aveva indirizzato all'Orsi. Sergio rispondeva di non essere più l'amministratore della ECO/4 ma di essere ancora in grado, avendo conservato dei rapporti, di passare la notizia.
Nella seconda (n. 208) Orsi, contattato dalla Polizia Stradale di Pozzuoli per il controllo di un mezzo della ECO/4 in pessime condizioni, negava qualsiasi ruolo nella società, pur ribadendo la conservazione di alcuni contatti.

Le altre comunicazioni registrate facevano emergere invece l'assiduo controllo di Sergio ORSI sulle faccende societarie e la propensione a delegittimare gli amministratori formali che credessero di poter 'fare di testa loro'.
A titolo esemplificativo si riporta sommariamente il contenuto delle seguenti comunicazioni.
n. 59 – Sergio ORSI conviene con tale Ciro un incontro finalizzato a nominare i responsabili di cantiere;
n. 87 – Raffaele PICARO chiama Sergio ORSI e lo porta a conoscenza del fatto che SAVOIA (presidente del CdA) osa dare direttive sull'impiego del personale. I due concordano sul fatto che tali decisioni spettano all'amministratore delegato (RAGUCCI). Sergio dice a Raffaele (con tono perentorio) di chiamare SAVOIA per un appuntamento, in modo da chiarire con chi il personale deve interloquire. Piccato per quella che considera evidentemente un'insubordinazione, Sergio manifesta l'intenzione di prendere a calci SAVOIA, chiamandolo "*zuzzuso*". I toni della conversazione rivelano la sottomissione del dipendente verso il categorico Orsi;
n. 386 – Sergio chiama l'ECO/4. Interloquisce con tale Francesca che gli riferisce il rifiuto di Carlo SAVOIA di firmare un documento che pare formi oggetto di un ricorso. Francesca ipotizza che il diniego di SAVOIA sia in realtà dovuto a ragioni politiche. ORSI dice a Francesca che SAVOIA non vale niente e ordina che il documento sia firmato.

Il servizio di intercettazione effettuato sull'utenza 348/3126450 corrobora l'assunto del ruolo dominante di Sergio Orsi nelle cose della ECO4.
Nella telefonata n. 203 Sergio ORSI riceva da Carlo SAVOIA un resoconto degli atti che sta per compiere in relazione all'aggiudicazione di un appalto in Sessa Aurunca.
Tra le conversazioni captate sull'utenza 0823/812678 meritano di essere richiamate le telefonate:
n. 705 – il presidente SAVOIA, conversando con tale Elio, rimanda l'adozione di alcune direttive all'esito di un incontro con Sergio;
n. 833 – tale Franco chiede alla segretaria se ha sentito il "capo". Questa risponde "chi, Sergio ?", ottenendo risposta affermativa.

La gerarchia reale vigente nella ECO4 è plasticamente rivelata anche dalla conversazione n. 689 (utenza n. 335/1216000) nella quale l'amministratore delegato della ECO4, Michele RAGUCCI chiama Sergio ORSI, lamentandosi sommessamente di sentirsi abbandonato dai fratelli ORSI ("*senza il vostro contatto io mi sento perso perché ho cercato di contattare Michele in tutti i modi inutilmente, che devo fare, rassegnare le dimissioni?*"). Sprezzante, Sergio risponde a Ragucci che in quel momento non può fargli da balia, perché ha problemi seri. Al che RAGUCCI, sottomesso, si scusa ripetutamente.

Assunzioni e licenziamenti passano ovviamente per il placet, obbligatorio e vincolante, di Sergio ORSI.
Nella conversazione n. 924 del 17.01.2004 (utenza n. 335/1216000) Raffaele PICARO, consulente del lavoro della ECO/4, dà lettura di un fax che il Presidente SAVOIA ha inviato all'Amministratore delegato, al direttore generale ed alla CONTAB, concernente i temi della tipologia di contratto dei lavoratori in forza alla ECO/4, delle mansioni e dei cantieri nei quali operano detti lavoratori. Nella missiva SAVOIA statuisce altresì che ogni decisione sul personale dovrà essere da lui stesso preventivamente autorizzata. Nel commentare la disposizione, i due definiscono SAVOIA "pazzo" e "scemo", mostrandosi contrariati da una missiva che evidentemente intacca quella che ritengono una loro prerogativa.

Nella conversazione n. 441 del 09.01.2004 (utenza 335/1216000) tale dottor Monaco verifica con Sergio Orsi la serietà di un colloquio avuto con SAVOIA in ordine ad alcune assunzioni di personale. Sergio lo rassicura asserendo di avere egli stesso promosso l'iniziativa. Egli autorizza pertanto le assunzioni, raccomandando che si tratti di qualifiche non elevate come quella di operatore ecologico.

Nella conversazione n. 203 del 09.01.2004 (utenza n. 3483126450) è lo stesso CARLO SAVOIA a consultarsi con Sergio Orsi circa assunzioni da effettuare sul territorio di Teano (*"...sennò faccio una brutta figura..."*). Sergio assume un atteggiamento concessivo, condizionato al fatto che si tratti di assunzioni di breve durata, del genere di quelle già effettuate in Roccamonfina quando una persona '*non ha mantenuto l'impegno'*. Nella stessa conversazione SAVOIA comunica la necessità di assumere un soggetto di Casal di Principe, a nome ZACCARIELLO, su input di *Nicola* (individuabile, in base ad un interrogatorio di Orsi Michele che di seguito si riporterà, nell'indagato Nicola COSENTINO).

La pretesa di SAVOIA di esercitare poteri reali evidentemente finiva per sfibrare i fratelli Orsi. Michele riceve da Raffaele Chianese, soggetto strettamente collegato all'onorevole Mario Landolfi, la seguente informazione.

N. 6 del 20.04.2004 - ore 11:53 - (3351215999).
CHIANESE informa ORSI Michele che nella mattinata Mario (Landolfi) è andato a Roma insieme a Nicola (cosentino). Riferisce che i due hanno parlato tra di loro e che "*a questo punto diciamo l'operazione defenestrazione del Presidente è un'operazione che penso che sia pronta* "

Le seguenti due conversazioni, oggetto di captazione ambientale, ritornano sul tema della 'defenestrazione' del presidente Savoia ma soprattutto rivelano linee di tendenza generale nella gestione del Consorzio CE4 e della società mista:
- l'indicazione di Claudio De Biasio come uomo degli Orsi al quale sarebbe stato auspicabile far assumere incarichi maggiormente significativi;
- l'obiettivo di Raffaele Chianese, strettamente collegato all'onorevole Mario Landolfi, è quello di assumere nel consorzio incarichi la cui remunerazione gli consenta di ricavare profitti significativi (evidentemente maggiori di quelli rivenienti dal ruolo di consulente informatico rivestito all'epoca della conversazione) da destinare al 'finanziamento della politica' e, in particolare, dell'onorevole Landolfi;
- l'organigramma deve tener conto non già della migliore efficienza dei servizi demandati al consorzio, ma dell'inserimento di soggetti capaci di stringere il patto con la politica nel reciproco vantaggio dei contraenti;

- l'affidamento degli incarichi è considerata una forma di remunerazione del partner politico.

N. 15026 del 26.04.2004 - ore 15:56 (conversazione "tra presenti" intercettata presso gli uffici dell'Eco/4).
Trascrizione
....Omissis.....
R (Raffaele CHIANESE): abbiamo iniziato un ragionamento, diciamo che abbiamo iniziato un ragionamento
M (Michele ORSI): sì
R: nel bene o nel male, questo ragionamento richiedeva una serie di cose
M: mmh
R: richiedeva il cambio della dirigenza, per due ordini di motivi, il primo perché ci veniva indicato dalla prefettura come uno dei, delle cose positive, cambio della dirigenza, cambio della presidenza, ci veniva indicato dalla prefettura come una delle cose positive, io ho pensato di far quadrare il cerchio, come dissi già a lui adesso lo dico pure a te, io ho pensato di fare a Claudio io, proprio io, autonomamente
S (Sergio ORSI): ma mica hai sbagliato
R: perché ho pensato di far quadrare il cerchio dicendo, alla Madonna, ***Claudio sicuramente veniva visto da Mario come l'uomo degli ORSI all'interno del Consorzio***
S: ed è giusto
...Omissis....
R: poi facciamo il fatto del cambio della presidenza
M: eh
....Omissis.....
R: l'incarico ci interessa e serve nella cornice generale, ma solo l'incarico
M: posso dire una cosa?
R: non serve a niente
....Omissis.....
R: se io, o le cose le so oppure se le cose non le so a me il consulente informatico non mi serve a un cazzo
M: certo
R: perché il consulente informatico a me sai a cosa serve, Michè, mi serve soltanto a fare un po' di soldi, per fare altri cazzi
M: quella è una risposta immediata
R: e non ad altro (le voci si accavallano) perché io a Michele gli piglio i soldi, li piglio e li do, ci faccio altre cose
...Omissis....
R: adesso che tu dici io ti faccio fare il consulente informatico, ma a me che me ne fotte del consulente informatico. Non me ne fotte un cazzo!
...Omissis...
S: il dunque qual è, altro dunque, il dunque è per esempio, allora, dobbiamo levare il Presidente dall'Eco/4 vabbè, bene, è una cosa che ci siamo stranamente, di nostra iniziativa partita da noi che ci fa piacere, cioè il fatto che tu vuoi la stessa cosa nostra a noi ci fa piacere perché se non la volevi noi stavamo adesso a casa tua a convincerti a dire 'guagliò, noi dobbiamo fare questa cosa!'. Non so se è chiaro, questo fatto qua, questo fatto qua che noi dobbiamo fare questo che cosa succede, succede in questo modo, che noi ci siamo detti tutti quanti, dice guarda: fare Presidente GAMBARDELLA non lo possiamo fare, se però vogliamo dare una risposta ancora migliore, ancora migliore, aspettiamo tanto sono altri 15 giorni ....incomprensibile... allora io che facetti, chiamai Antonio RUSSO, ci stava lui e Mattia. Allora dissi: guagliò però

facciamo una cosa, se GAMBARDELLA tra 15/20 giorni dovesse
...Omissis...
S: tra 15-20 giorni pure se COSENTINO dovesse dire guagliò lo avete fatto apposta, sì a quel punto non ci stanno problemi, e questo era il problema (le voci si accavallano)
R: …incomprensibile… Carlo SAVOIA non è difendibile
S: ma, ma figurati
R: ma non è difendibile nemmeno da COSENTINO
S: ma si
R: …incomprensibile… quello COSENTINO deve chiamare a Mario e poi Mario gli dice caro Nicola, ma questo faceva questo, questo questo e questo
S: COSENTINO non me lo voglio inimicare
..Omissis....
S: noi dobbiamo essere amici
R: io non voglio soldi
S: ma noi dobbiamo essere pure quelli, se serve …incomprensibile… la campagna elettorale
R: …incomprensibile… bene, lavorando e guadagnando
S: però io ti voglio dire una cosa ...incomprensibile... non che volessi convincere, questo o quell'altro
R: senti Sergio, Mario i soldi se li può prendere solo da me, e non se li può prendere da nessun altro, quindi è inutile
S: questi sono fatti
R: è un discorso ... ma non i soldi che io mi piglio, sti soldi
S: no
R: si fanno cose che servono al partito, no che
S: lo so, lo so
R: io soldi non ne piglio Sergio
S: ma figurati
R: lui soldi non ne piglia
S: ma lo so bene
R: cioè, i soldi che danno per fare l'attività, …incomprensibile… finanzia il partito
…Omissis…
R: io me ne avvantaggio dal partito, perché io prendo un incarico, prendo una cosa e io giustamente devo dare un contributo di quello che io faccio ...incomprensibile... è un fatto normale
S: non dico adesso, ma nel futuro se potessimo partecipare
R: tu come puoi partecipare, puoi partecipare ...incomprensibile... se tu devi prendere un appalto per un lavoro che va fatto, anziché darlo a un altro, lo dai a me
...Omissis...
R: tu così ottieni
S: questo
R: due risultati, caro Sergio
S: ma questo qua, questo qua già è una cosa
R: ottieni il lavoro fatto da un lato, e quindi contribuisci perché quello è un contributo, perché tu a farlo fare a un altro, lo fai fare a me, e non me lo fai fare perché io sono più bravo ma lo puoi fare perché hai la referenza, ma ottieni un'altra cosa
S: ...incomprensibile...
R: che è ancora più importante di questa caro Sergio, oltre a questo, il tuo contributo, anziché dirti dammi i soldi, ti dico fammi lavorare. È un contributo anche questo, che tu invece di farlo fare a qualcun altro, preferisci a me, ma che cosa ottieni oltre a

questo, oltre ad avere il lavoro fatto, Sergio, ottieni il coinvolgimento per altre cose, ma perché aspetta, perché è normale che se io vedo le tue carte e so quello che succede ma non perché voglio fare i cazzi tuoi Sergio, non me ne fotte un cazzo dei fatti tuoi ...Omissis... però almeno voglio dire, posso dire di averci capito, di sapere cioè posso essere partecipe ...Omissis... tutti i ragionamenti che abbiamo fatto si vanifica nel momento in cui, cioè si vanifica nel momento in cui io non essendo partecipe di niente e con il consulente informatico per esempio non sono partecipe di niente... ...Omissis...
…Omissis…

N. 15032 del 26.04.2004 - ore 16:43 - conversazione "tra presenti" intercettata presso gli uffici dell'Eco/4.

Trascrizione
…omissis…
M (Michele ORSI): … il Presidente, la figura del Presidente, penso se ho capito bene, spetta comunque sempre a Forza Italia, no
R (Raffaele CHIANESE): uh
M: diciamo a dare un indirizzo
…Omissis…
R: questo qua non merita di stare qua …incomprensibile…
M: non merita proprio
R: no, a prescindere
…Omissis…
M: perché vuoi fare questo
R: io perché voglio fare questo?
M: bravo
R: prima di tutto perché questo si è comportato male
M: ma con chi?
R: con tutti quanti, anche con noi
…Omissis…
R: perché quello appena è stato nominato è venuto anche a parlare con noi, è venuto a Mondragone, due volte, nel mio studio
M: uh
R: a dire che lui voleva fare la guerra a
S: noi
R: voi, perché voi aaah, e io dissi hai una ragione …incomprensibile… perché questi non si sono comportati bene, gli diedi pure un consiglio, dissi, tu hai l'unico modo, vi dico pure quello che gli ho detto, dissi tu hai un unico modo per comandare là dentro, gli devi togliere il blocchetto d'assegni dalle mani
M: perfetto, non c'è riuscito
…Omissis…
R: il secondo motivo …Omissis… il discorso qual è, il prossimo CDA ovviamente, se le cose vanno come devono andare, prima ***Mario sarà costretto a prendere parte attiva all'approvazione del CDA...non solo con i suoi nomi, ma voglio dire giustamente potrà dare anche qualche indicazione a Nicola, dice Nicola guarda, però....visto che adesso è andata così, visto che i motivi sono questi, visto che dalla Prefettura ci hanno fatto sapere questo e questo, forse sarebbe il caso di fare un nome di alto profilo***
...Omissis...
M: atteso che oggi tu interloquisci direttamente per me e per Sergio e questo devono

essere i fatti che poi lo devono.... spero di non ritornarci più sopra e di fare le cose concrete però.....atteso questa cosa qua, penso che l'intento di Lello, dico Lello in senso generale, no, è quello di avere un ruolo importante nella società, come lo vuoi, Lello non ci può venire qua lui personalmente
R: no
M: giusto? deve mandare uno dei suoi, allora se ti dico Lello, io da oggi in poi, Michele ORSI, ricopro la qualifica la nomina di direttore generale no, eh, sarò il Claudio DE BIASIO del Consorzio
R: sarebbe la meglio cosa questa
…Omissis…
M: bravo, allora io devo prendere un altro cristiano che deve essere amico tuo, che deve rispondere in pieno, io penso che fuori a me e Gianni FUSCO
R: non ce ne stanno
...Omissis..
S (Sergio ORSI): la società dovrebbe chiudere con 6 milioni di euro all'attivo
R: cosa che non può essere
S: non può essere
R: tu devi pagare 3 milioni di euro (le voci si accavallano) non può essere
…Omissis…
R: 1 milione e mezzo va al Consorzio
S: guarda che il milione e mezzo al consorzio è la cosa meno male
R: eh
S: perché alla fine direi tu me ne devi dare 10 me ne dai 8 e mezzo e farei vedere pure che do i soldi al Consorzio, il problema è un altro i soldi, le tasse allo stato

15. Il controllo politico di Nicola Cosentino sulla società mista ECO4 e le sue assidue relazioni con Sergio Orsi

15a. Il dominio delle assunzioni, degli incarichi, delle nomine del c.d.a.

Si è visto quanta importanza annetta Vassallo Gaetano alla ricostruzione dei rapporti tra l'indagato, i fratelli Orsi e, più in generale, la ECO4.
Occorre dar conto delle conferme che i menzionati legami hanno trovato per bocca dei diretti interessati e del riscontro intercettivo.
A tale ultimo riguardo deve premettersi che saranno qui valorizzate (spesso mediante il mero richiamo delle conversazioni riportate nelle richieste cautelari, sì da non appesantire ulteriormente la trattazione) soltanto le conversazioni non coinvolgenti, neppure causalmente, il parlamentare, secondo il dettato dell'articolo 6 della legge 20 giugno 2003 n. 140.
Occorre osservare infatti che la Corte Costituzionale, con la sentenza n. 390 del 23 novembre 2007, ha dichiarato l'illegittimità dei commi 2, 5 e 6 della disposizione "*nella parte in cui stabilisce che la disciplina ivi prevista si applichi anche nei casi in cui le intercettazioni debbano essere utilizzate nei confronti di soggetti diversi dal membro del Parlamento, le cui conversazioni o comunicazioni sono state intercettate*".
Resta invece preclusa l'utilizzazione, senza previa autorizzazione della Camera di appartenenza, delle intercettazioni 'casuali', quando essa sia orientata alla prova di una responsabilità dello stesso parlamentare.

Nell'interrogatorio reso il 15.06.2007 **Michele Orsi** confermava il rapporto politico privilegiato allacciato sin dagli albori della società mista, a suo dire su sollecitazione del presidente Valente, con Nicola Cosentino e Mario Landolfi. Michele Orsi

descriveva i termini essenziali dello scambio instaurato con i detentori del potere politico.
L'accaparramento dei contratti di raccolta degli r.s.u. presso tutti o quasi tutti i Comuni consorziati e la promozione di un ciclo integrato alternativo era l'impegno che i politici assumevano verso gli uomini del Consorzio.
Massicce assunzioni (Orsi parla del 70% delle risorse umane) di personale inutile e talvolta del tutto inoperoso, effettuate in concomitanza con le scadenze elettorali o per conquistare il favore di persone che potevano tornare utili in ragione del ruolo professionale o politico rivestito (un consigliere comunale liternese; un membro della giunta comunale di Trentola Ducenta; un giornalista del maggiore quotidiano della provincia; un ispettore di P.G. in servizio presso la Procura della Repubblica di Santa Maria Capua Vetere; un cardinale) rappresentavano la contropartita che i protettori politici richiedevano e puntualmente ottenevano dagli imprenditori mafiosi della ECO4 s.p.a.
E' interessante notare come il soggetto cui Michele Orsi accredita il ruolo di 'interfaccia' con il mondo politico, sin dal momento della costituzione della società, sia Giuseppe Valente che ampiamente si diffonderà sulla riferibilità a Cosentino di tutte quelle 'decisioni strategiche' della società mista che vedremo convergere con i piani espansivi dei gruppi camorristici descritti da Vassallo.
"*ADR:* ***VALENTE Giuseppe aveva dei rapporti con i politici onorevoli COSENTINO e LANDOLFI e, dopo la costituzione della società mista ECO4 mi disse che "i politici dovevano sostenere questa società" così indicandomi la via che avrei poi dovuto seguire come effettivamente feci****..omissis…L'Ati Flora, grazie al contributo decisivo del VALENTE, si aggiudicò quindi la gara e venne costituita di lì a poco la ECO 4 nell'agosto del 2000.* ***Una volta costituita l'Eco4, fu necessario renderla concretamente operativa, rendendosi necessario ottenere gli affidamenti da parte dei comuni. Intervenne anche qui VALENTE Giuseppe il quale ci consigliò di rivolgersi ai suoi referenti politici On. COSENTINO Nicola e LANDOLFI Mario, affermando che era necessario tale sostegno per gli interessi della società. L'Eco4 si rivelò poi una società che "faceva comodo a tutti". Rappresento che circa il 70% delle assunzioni che vennero poi operate per la Eco4 erano inutili ed erano motivate per lo più da ragioni politico-elettorali, richieste da VALENTE, COSENTINO e LANDOLFI.***
Vi erano poi alcune assunzioni che furono motivate dalla necessità di assecondare gli interessi delle amministrazioni comunali, utili per ottenere gli affidamenti: ricordo ad esempio le assunzioni di PICONE Nicola, vicesindaco di Trentola, e quella di OLIVIERO, consigliere di Villa Literno, entrambe richieste dall'On. COSENTINO. Sempre COSENTINO ci richiese l'assunzione di due nipoti del Cardinale SEPE, da noi regolarmente attuate, così come ricordo anche l'assunzione del fratello di MEROLA Carmine, quale autista richiesta da quest'ultimo, trattandosi di un ispettore di Polizia che lavorava presso la Procura di Santa Maria Capua Vetere. Faccio presente che molte delle assunzioni, quali ad esempio quelle di PICONE Nicola e OLIVIERO, erano non solo inutili ma sostanzialmente fittizie, dato che questi praticamente non svolgevano alcuna attività continuativa.
In questo momento mi sovviene anche l'assunzione di Gianni DI ROSA, il "commercialista" dell'Eco4, assunto su richiesta dell'On. COSENTINO e genero di un giornalista de "il Mattino" di nome DI STASIO".

Nell'interrogatorio del 5.7.2007 il tema delle assunzioni richieste dai referenti politici e, tra questi, da Cosentino è più organicamente trattato da Michele Orsi al quale viene sottoposto un elenco a margine del quale vengono riportati, su indicazione dello stesso

dichiarante, i soggetti politici che li avevano raccomandati. Tra le altre, Orsi Michele commenta l'assunzione di un fratello di D'AGOSTINO Maria effettuata "per dare sostegno al sindaco Conte":

"ADR: ricevendo lettura della conversazione n. 1588 del 06.05.2004 tra DIANA Giuseppe e me, rappresento che la persona di cui DIANA Giuseppe mi chiedeva era un dipendente dell'ECO4 era un dipendente assunto in prova, segnalatomi da SORRENTINO Gennaro e DIANA Giuseppe, ***sicuramente il fratello di D'AGOSTINO Maria; i certificati di cui si parla sono i certificati medici che DIANA mi aveva dato e che custodiva anche presso il suo deposito;*** *evidentemente il fratello della D'AGOSTINO non aveva lavorato nei giorni di cui alle certificazioni ma nego dovesse trattarsi di un rapporto d'impiego fittizio;* ***fu assunto su richiesta di DIANA Giuseppe e SORRENTINO Gennaro, uno dei due, per le ragioni che ho rappresentato ad una necessità di dare sostegno al sindaco CONTE; so che SORRENTINO Gennaro e la D'AGOSTINO Maria stavano insieme "politicamente", non so meglio specificare….omissis….***
…omissis… ADR: ricevendo lettura della conversazione, nelle parti rilevanti, n. 15026, 15030, 15032 e 15034 del 26.04.2004, intercorsa in ambientale tra me, CHIANESE Raffaele e mio fratello Sergio, posso spiegare l'antefatto e fornire alcune delucidazioni.
Come ho già riferito nel corso di precedenti interrogatori noi ci siamo sempre proposi di mantenere i migliori rapporti con i politici dando massima disponibilità nell'assumere i dipendenti anche oltre quelle che erano le reali esigenze della società. Ci si è poi proposti di assecondare i politici "fin dove era possibile", ritenendo che il limite fosse legato ai nostri interessi patrimoniali collegati alle nostre esposizioni personali e patrimoniali con le banche; per questo io e mio fratello non abbiamo mai inteso contribuire finanziariamente alle richieste dei politici.
Ho già riferito che le parti politiche principali che intendemmo soddisfare erano rappresentate da LANDOLFI Mario e COSENTINO Nicola, il primo agendo attraverso CHIANESE Raffaele.
Ovviamente le assunzioni erano legate anche a esigenze di voto dei politici in relazione alle periodiche elezioni.
Con particolare riferimento a CHIANESE Raffaele le sue richieste furono sempre esaudite essendo stato questi nominato consulente dell'Eco4 prima e poi nominato sindaco della GMC, avendo provveduto ad assumere dipendenti su sua richiesta, essendo stato incaricato il LANDI (persona di cui ho già parlato)…Omissis…
…Omissis… ADR: con riferimento alle numerose assunzioni di dipendenti effettuate su richiesta dei politici, all'interno dell'Eco4 e consultando l'elenco messomi a disposizione ora dall'ufficio, sono in grado di fornire le seguenti specificazioni.
Rappresento immediatamente che l'elenco, pur riportando il luogo e la data di nascita, non riporta la residenza delle persone assunte presso l'Eco4, circostanza tale da non rendermi facilmente memorizzabile quelle assunzioni esperite in funzione elettorale, chiaramente connesse al luogo di rispettiva residenza degli assunti.
Indico le seguenti persone, riportando di seguito le persone che mi richiesero l'assunzione…".

Consultato l'elenco ricavato dal libro matricola della società (e riportato a pag. 125 della richiesta presentata dal p.m. in data 18.2.2009), Orsi individuerà in DI ROSA Gianni, FERRARO Rossella, GRAVINA Anna, OLIVIERO Giuseppe, PARISE Donato, PICONE Nicola, SEPE Luigi, ZACCARIELLO Mario le persone assunte su segnalazione di Cosentino. Nel prosieguo dell'interrogatorio aggiungerà altri nomi:

*"**ADR: quanto a DIANA Antonio rappresento che nell'elenco rilevo che vi sono due omonimi uno nato a Napoli e l'altro a Caserta; posso dire con certezza che uno dei due è certamente residente a Casal di Principe e si tratta di colui che venne assunto su richiesta di COSENTINO Nicola; faccio presente che il padre di questi DIANA Aldo fu assunto sempre su richiesta del COSENTINO presso il Consorzio Ce4….omissis…***

E' interessante notare come le assunzioni rappresentassero un grimaldello per scardinare le resistenze dei comuni all'affidamento 'senza gara' del servizio di raccolta alla ECO4 s.p.a.: il primo passaggio della strategia espansiva del gruppo Orsi e del socio criminale. Tra i nomi contenuti nell'elenco Orsi indicherà numerosi soggetti assunti su raccomandazione dei sindaci di Grazzanise, Calvi Risorta, Vitulazio, Cellole: tutti compresi nell'elenco sopra richiamato.

Nell'interrogatorio reso il 12.7.2007 Michele Orsi preciserà che il DIANA Antonio assunto su richiesta di Cosentino s'identificava in DIANA Antonio, nato a Napoli il 16.10.62, residente a Casal di Principe (n. 359 del libro matricola) e aggiungerà all'elenco un altro dipendente assunto su richiesta di Cosentino, tale MARINO Roberto:

"*ADR: **il nome di MARINO che mi fa l'ufficio corrisponde a MARINO Roberto persona che ebbi ad assumere all'Eco /4 su richiesta dell'on. Nicola COSENTINO;** essendo lo stesso, a suo dire, un avvocato, lo impiegammo, io e Sergio, presso l'ufficio legale ove realmente si intratteneva per lavorare; pur avendo disbrigato pratiche per l'ufficio, il MARINO mi disse in un'occasione che non poteva esercitare la professione non essendo "abilitato".*

Il tema dell'assunzione del dipendente Marino su richiesta di Nicola Cosentino trova conferma nella seguente conversazione, avvenuta tra Sergio Orsi e tale Tommaso:

Nr. 1563 – 09.02.2004 - ora: 11.31 dec. 2501/03

Tommaso chiama ORSI Sergio e gli dice di avere la sensazione che SAVOIA Carlo stia per adottare un comportamento poco corretto nei suoi confronti. ORSI gli risponde che SAVOIA non può permettersi di toccarlo altrimenti avrebbe litigato con questi, dandogli un "calcio nel culo". ORSI accenna alla faccenda dell'assunzione di MARINO che è stata motivo di contrasto tra lui e il presidente del CdA Carlo SAVOIA. ORSI spiega che MARINO è stato assunto "*quando NICOLA ha chiamato Michele*", ovvero il fratello ORSI Michele.

S: Sergio ORSI
T: Tommaso

S: Tommaso?

T: *mi hai chiamato?*
S: *eh ti ho chiamato. (parlando con persone a lui vicine) aspetta a Tommaso che dovevamo chiedere? (rivolgendosi a Tommaso) Ah oggi stai qua ha detto Salvatore?*
T: *chi è Salvatore ARGENZIANO?*
S: *eh…*
T: *se non passo stamattina, se non passo oggi domani sto tutta la giornata, anche perché ti devo parlare.*
S: *pure perché… mi senti? A me pure?*
T: *eh…*
S: *e ci vogliamo vedere subito?*
T: *no, vabbuo', io comunque…*
S: *ma mi devi dire cose buone o malamente?*
T: *no, di certe sensazioni. Ieri ti ho chiamato e tu tenevi il telefono spento, poi andai a trovare Michele…*
S: *stavo a casa!*
T: *io ti telefonai alle 5 e mezza, alle 5 e mezza (inc.) (sovrapposizione di voci)*
S: *eh stavo a casa, stavo a casa! Tu quando non mi acchiappi chiamami a casa. A me mi faceva piacere, infatti…*
S: *accennami qualcosa delle sensazioni.*
T: ***no tengo la sensazione che Carlo SAVOIA sta facendo un po' lo scemo, hai capito?***
S: *con te?*
T: *eh…*
S: ***ma Carlo SAVOIA tutto quanto non si può permettere proprio di toccarti. Io gli do un calcio in culo sai dove lo faccio arrivare? Davvero ci uccidiamo qui. Ma non esiste proprio! Eh ma cazzo, noi abbiamo fatto quel bordello per Carlo… per quel MARINO là!***
T: *vabuò…*
S: ***quel MARINO è entrato dentro a lavorare e cose però sai quando? Quando Nicola COSENTINO ha chiamato a Michele.***
T: *vabbuo' ci sentiamo, se non oggi…*
S: ***cioè io, io per Raffaele PICARO, che non è amico, e praticamente ho fatto come dicevo io. Nel senso che ora se se ne manda Raffaele PICARO, si manda perché lo ha stabilito Michele e coso, perché veramente 50.000 lire è troppo. Hai capito? Rispetto agli altri. Ma il resto non si può permettere proprio, lui lo sa bene.***
T: *Sergio ci vediamo o oggi o domani.*
S: *eh…*
T: ***digli a Salvatore 800 euro al giorno va bene?***
S: ***senti, vedi se… diceva, diceva come si chiama?***
T: ***Salvatore?***
S: ***aiutami? No, no quegli altri 3…***
T: ***Franco… Franco… Elio…***
S: ***no, Elio DIELIN (?) e Antonio DE MARCO.***
T: ***va bene Sergio, la trovo io la soluzione, dai!***
S: ***stavano troppo poco, tu puoi vedere con il fatto dei mezzi…***
T: ***Sergio sai che faccio? Sergio sai che facciamo? Facciamo… capziosamente facciamo capire che queste 800.000 lire sono in acconto. Vabuò?***
S: *eh, eh, eh…*
T: *vabbuo'?*
S: *vabuo'.*
T: ***cioè ci lasciamo aperta la porta nel dire guarda…***
S: ***oppure, oppure, ci sta pure un'altra possibilità, il fatto… il fatto della manutenzione. Hai capito?***
T: ***eh… fermi quanto dovuto ancora per la manutenzione, insomma.***
S: *esatto, esatto.*
T: *me lo vedo io.*
S: *che ti volevo dire? non ti scordare che gli dobbiamo mandare quella lettera però al comune, che disse...*

T: *sì, sì, sì… io domani sto tutta la giornata lì.*
S: *stasera fammi sapere che se sta Peppe… a parte gli scherzi. Però io lo facevo domani perché alle volte questo sta sempre fiacco così, e sta così a vuoto a parlare perché non gli devo dire niente… anzi niente di niente.*
T: *no, no ma infatti noi ieri non facemmo, non parlammo niente. Stemmo così.*
S: *e perché non mi chiamasti a casa?*
Nota: *Sergio continua a lamentarsi del fatto che Tommaso non lo chiamò a casa. Poi si salutano.*

Altro soggetto assunto su richiesta di Cosentino, per quanto Michele Orsi ometta di menzionarlo nel suo interrogatorio, è DI IORIO Lorenzo.

Nr. 2636 – 27.02.2004 - ora: 11.10 dec. 2501/03
SAVOIA Carlo chiama ORSI Sergio e parlano della richiesta di assunzione di DI IORIO Lorenzo, pervenuta da NICOLA e da RUSSO Antonio. ORSI chiede conferma dell'interessamento di NICOLA. SAVOIA risponde di non preoccuparsi perché la persona in parola gli è stata 'sollecitata' da diverso tempo.
E' significativo il riferimento di Orsi alle richieste di esponenti dell'amministrazione comunale di Cellole che gli hanno chiesto delle assunzioni come contropartita dell'affidamento dei servizi di raccolta così lucrosi per la ECO4.

S: *vabbuo', ora questo ora iniziamolo (inc.) (sovrapposizione di voci))*
(…)

La connessione delle assunzioni di personale con il conseguimento degli affidamenti comunali dei servizi di raccolta ritorna in una conversazione avvenuta tra Michele Orsi, Giuseppe Valente e un terzo.

N. 325 bis – 23.04.2004 – utenza 335/1215999

La conversazione presenta vari profili d'interesse. Il tema centrale è lo scambio corruttivo tra tale ispettore Diana (che si trova in compagnia di Giuseppe Valente) e Michele Orsi: l'ispettore sollecita alcune assunzioni, promettendo in cambio l'affidamento diretto del contratto di raccolta degli rr.ss.uu. nel comune di Pastorano, con l'estromissione della Ecocampania. Naturalmente la premura dell'ispettore di ottenere le assunzioni si connette ad un'imminente scadenza elettorale.
Uno dei soggetti raccomandati dall'ispettore viene indicato come DI BERNARDO Giuseppe, indicato come un grande elettore per il fatto di appartenere ad una famiglia numerosa.
E' testimoniata l'intensa attività di Michele Orsi nel reperimento di siti di stoccaggio (si fa cenno al caso di Cellole) e di affidamenti (Orsi lamenta di aver perso recentemente quello del Comune di Castel Volturno)
Il colloquio fa poi comprendere come l'intervento di Nicola (COSENTINO) rappresenti un *passaggio* necessario per la stabilizzazione degli equilibri interni della società mista: a lui si è rivolto il consigliere Gambardella per rappresentare lo scarso attivismo clientelare del presidente Savoia, in un momento ritenuto delicato per l'imminenza di alcune scadenze elettorali.
Cosentino sembra decisivo anche per risolvere la questione delle nomine del consiglio di amministrazione dell'ente e l'eventuale sostituzione dell'inviso Savoia. A riprova dell'inaffidabilità di quest'ultimo si cita il caso di due assunzioni di persone di Casal di Principe che il presidente avrebbe operato, millantando un mandato di Cosentino. A ben vedere anche questa millanteria rappresenta una conferma del ruolo decisivo rivestito dall'indagato nella società mista.

LEGENDA
U1.\ M.= MICHELE
U2.\ P.= PEPPINO VALENTE
U3.\ TERZA VOCE UOMO

(…)

P. \ *Senti un po', **io ho qui con me l'ispettore Diana per quella vicenda di quel suo concittadino**, **Di Bernardo, che sai pure tutti i dati**, **Di Bernardo Giuseppe***
M. \ Sì
P.* \ *Come lo dobbiamo risolvere questo problema, dai? **Almeno fino alle elezioni cominciamo a risolvere
M. \ Ah, per…, ho capito
P.* \ *Per un fatto elettorale, questo rischia
M.* \ *Questo è il secondo?
P. \ Eh, eh, eh
M. \ ***Perché uno già lo sistemammo***
P. \ Già l'abbiamo sistemato, (ride)
M. \ (Ride), non te l'ha neanche detto, (ride)
P. \ (Ride), segnati, "Miche' ", segnati un po' questo numero di telefono, dai
M. \ Sì, dammelo
P. \ (Rivolto ad altri: ditemi, ispettore)

- A questo punto si sente un'altra voce maschile dire: no, e ora io non ce l'ho, ora chiamo un attimo l'amico, no? E poi gli facciamo fare subito la telefonata?; subito dopo: -

P. \ Eh, intanto segnati questo nome, "Miche' "
M. \ Sì
P.* \ *Di Bernardo Giuseppe
M. \ Sì
P. \ ***L'ispettore dice quando può venire? Lui viene con questo ragazzo, con questo Di Bernardo, viene da te***
M. \ Ah
P. \ Dimmi tu, pure domani
M. \ No
P. \ No, domani è sabato, forse non
M. \ Domani è sabato, eh, lunedì, dai
P.* \ *Lunedì mattina, verso che ora? Verso le undici li faccio venire alla "Eco quattro"?
M. \ No, fallo venire verso le nove e trenta, perché dopo poi
P. \ Eh, nove e trenta, lunedì alle nove e trenta, senti, ma tu ora dove stai?
M. \ Io ora sto andando a Cellole
P.* \ *Come sta la situazione su Cellole?
M.* \ *E siamo quasi pronti, martedì ci sarà il nulla osta definitivo per il sito
P. \ Ma state lavorando praticamente là?
M. \ Sì, sì, sì, sì
P. \ Ho capito, senti un'altra cosa volevo dire
M. \ Siamo quasi pronti
P. \ ***Ma per il consiglio di amministrazione com'è andata a finire poi la situazione? Come stiamo combinati? Non la Prefettura e cosa, perché quello è un altro problema***
M.* \ *Eh, è rimasta bloccata, "Peppi' "
P.* \ *E che dobbiamo fare?
M.* \ *Cioè è rimasta congelata, l'unica cosa è che Gambardella
P.* \ *Eh, che ha fatto Gambardella? Perché me lo disse…, come si chiama? Mattia Di Lorenzo
M.* \ *Mattia? Eh, quel cretino, praticamente, in questa confusione che noi congelammo la storia, no?
P.* \ *Eh
M.* \ *Per I problemi che tu sai, lui fece un passaggio, andò da Nicola
P.* \ *Ah, e gli svelò tutto praticamente
M. \ ***No, no, no, no, e infatti ho avuto pure la conferma, no, andò lì per lamentarsi di***
P. \ ***Di Carlo Savoia***
M.* \ *Bravo, di Carlo Savoia, disse: ma è mai possibile? Ho due nomi, tengo l'elezione e qua non si fa niente, Carlo Savoia ha pensato lui solo a lui; insomma tutte queste cose

P. \ ***E che disse Nicola?***
M. \ ***E Nicola disse: no, ora vediamo come dobbiamo fare; e quello poi che gli poteva dire, no?***
P. \ ***Eh***
M. \ ***E lo mise in "stand by"***
P. \ Uhm, uhm
M. \ ***Ora dissi: Enzo, e allora hai fatto il passaggio? Tutto a posto? Quindi possiamo andare avanti?***
P. \ Uhm
M. \ ***Dice: "Miche' ", ora insomma aspettiamo un poco per vedere se questo fa qualcosa, no? Ora ho capito che lui praticamente in relazione a – inc. -, poi alla fine disse: "Miche' ", facciamo una cosa, adesso si devono presentare le liste, Nicola mi deve dare una mano per queste liste e mi sta dando una mano, appena si presenta la lista ufficiale il giorno dopo io sono pronto***
P. \ ***Io sto a disposizione, "Miche' ", decidete voi quello che volete fare e io faccio, non ci sono problemi***
M. \ ***Io casomai ti aggiorno, in modo tale che se dobbiamo fare, un giorno prima ti chiamo e ti dico***
P. \ ***Ma – inc. – sta continuamente a creare "casini", eh***
M. \ Madonna, io non ce la faccio più
P. \ Non ti dico quello che combina
M. \ ***Ma non ce la faccio più pure perché sta facendo…, ora mi ha fatto un'altra "cazzata" insomma e io ho parlato pure con Nicola, perché portò due persone del mio paese***
P. \ Uhm
M. \ ***Uno per la sicurezza e un altro per il medico, diciamo, per i lavoratori, eccetera, no?***
P. \ Uhm
M. \ ***La verità, io li conoscevo pure, perché sono del paese***
P. \ Eh
M. \ ***E insomma…, ora che vengo a sapere?***
P. \ ***Che Nicola non sapeva niente***
M. \ ***"Mannaggia la miseria", però dissi: "Nico' ", vediamoci, perché non se ne può più di questo scemo, questo viene qua, viene a nome tuo e viene a fare questo, questo e questo; disse: no, no, vediamoci, congela questa situazione, bloccala; perché tra le altre cose uno di questi due ha fatto pure, diciamo, uno sgambetto a Nicola cinque, sei mesi fa***
P. **\ Scusa, ma Di Fazio si è dimesso?**
M. **\ Chi?**
P. **\ Di Fazio**
M. **\ Sì**
P. \ ***Ah, e allora ne servono tre***
M. \ ***Eh, esatto***
P. \ ***Quelli i consiglieri sono sei, basta che se ne mettono tre***
M. \ ***Sì, sì, l'unica cosa che concordammo tutti quanti, dice: tiriamoci pure Gambardella, perché è sempre buono***
P. \ ***Va beh, aspettiamo altri quindici, venti giorni***
M. \ ***Eh, questi quindici giorni, presenta la lista, se fa, fa, se no andiamo avanti noi, hai capito? Questo è***
P. \ ***Va beh, allora, "Miche' ", "Miche' ", "Miche' ", hai sentito che dice l'ispettore?***
M. \ No, non ho capito
P. \ Ha detto… ora te lo passo, ueh, "Miche' ", io intanto ti saluto, ti passo l'ispettore
M. \ Va bene, "Peppi' "
P. \ E tu per qualsiasi cosa chiamami, anzi, "Miche' ", sarebbe opportuno che ci vedessimo un poco, dai
M. \ Eh, e insomma un giorno di questo vediamoci
P. \ Va bene, va bene
M. \ Eh

- Subito dopo: -
U3.\ Ingegnere
M. \ Ueh, dottore
U3.\ Come state? Tutto a posto?
M. \ Insomma, ce ne hanno mandato da Castelvolturno
U3.\ E lo so, ma ora prendiamo il servizio a Pastorano, dai, è un paese piccolino, però appena saliamo
M. \ Eh, come!
U3.\ Io perciò sto a dire una cosa, che noi ti diamo una mano
M. \ E' centomila volte meglio Pastorano che Castelvolturno
U3.\ No, là sono paesi tranquilli, onesti, hai capito?
M. \ Bravo
U3.\ Sono persone serie
M. \ Bravo, là sono tutti camorristi
U3.\ Sì, sì, ingegnere, loro praticamente hanno fatto la proroga ora fino a giugno, quindi l'hanno data per qualche mese alla "Eco Campania", però non appena andiamo noi capovolgiamo tutta la situazione, avete capito?
M. \ Eh
U3.\ A favore nostro
M. \ Eh
U3.\ E quindi ora per questo mi dovete dare una mano
M. \ Certo
U3.\ Quindi lunedì mattina verso le nove e mezza vengo da voi con questa persona, perché il presidente già l'ha visto e tutto, voi casomai lo prendete subito, vediamo un po', fatemi fare bella figura, avete capito?
M. \ Va bene, è certo
U3. ***Quello poi vi dirà il contratto, non il contratto, voi gli dite…, va beh, a voi non mancano le parole, voi gli dite: senti, per il momento non ti preoccupare; avete capito? Fategli prendere un posto pure vicino insomma***
M. \ Sì, sì, non vi preoccupate, ci vediamo lunedì alle nove e trenta
U3.\ Lunedì alle nove e trenta
M. \ Siate puntuali, perché poi può darsi che
U3. ***No, ingegnere, però, sentite, avete capito? Dobbiamo fare subito, perché siccome io devo mettere il fratello all'interno della ditta, perché questo è un buon…, avete capito? E' una buona famiglia, mi portano parecchi voti, allora prima la facciamo questa cosa e meglio è, quindi dopo qualche giorno mettetelo subito a lavorare, avete capito?***
M. \ Vi aspetto lunedì alle nove e trenta
U3.\ Eh, va bene? Fatemi fare una bella figura, mi raccomando, eh
M. \ Certo, come sempre
U3. ***Poi a disposizione, ingegnere***
M. \ Eh, (ride)
U3.\ Subito vi do il servizio, non vi preoccupate
M. \ No, non vi preoccupate, grazie
U3.\ Va bene?
M. \ Va bene, arrivederci
U3.\ Arrivederci.

Si è riscontrato che il Comune di Pastorano ha affidato il servizio di raccolta, trasporto e smaltimento RR.SS.UU. - per il periodo 28.01.2000-31.10.2005 - alla società "ECOCAMPANIA SRL", aggiudicataria di apposita gara d'appalto. Con Delibera del C.C. n. 44 del 28.10.2005 il servizio integrato gestione rifiuti è stato direttamente affidato, ai sensi dell'art. 113, comma 5 lett. c) del D.Lgs n. 267/2000 e s.m.i., al Consorzio Intercomunale RSU CE/4 – EGEA SPA, di cui il Comune di Pastorano fa parte, e stante le condizioni previste dalla stessa lett. c) del comma, per anni 5 e mesi 2 (e comunque fino al 31.12.2010).

Analogo significato probatorio hanno le comunicazioni nn. 1128, 1139, 1242, 1332, 1333, 1335 (decreto 800/04 r.r.) succedutesi tra il 14.5.04 e il 18.5.04.
Il tema è quello dell'**assunzione di un consigliere comunale di Villa Literno a nome Musto** che, secondo quanto Michele Orsi riferisce al fratello, sarebbe fortemente caldeggiata da Savoia a nome di Nicola Cosentino. Sergio Orsi si riserva di verificare, in un incontro personale che avrà all'indomani con il parlamentare, l'autenticità del mandato speso da Savoia.
Intanto Sergio Orsi appura l'appartenenza politica del consigliere comunale da assumere in una telefonata con il consulente Oliviero che gli assicura trattarsi di un esponente di Forza Italia.
Il 17.5.2004 Sergio Orsi comunica a Savoia gli esiti dell'incontro personale che ha avuto con il parlamentare il quale sembra non aver manifestato particolare interesse per l'assunzione di Musto. Sergio rinfaccia francamente a Savoia di ritenere che il vero artefice dell'operazione sia lui.
La conversazione n. 1251 merita di essere interamente riportata perché rivela un incontro a tre, avvenuto tra il parlamentare e i fratelli Orsi nel quale si era stabilito che, per evitare le petulanti visite di soggetti che mendicavano posti di lavoro, questo genere di rapporti sarebbe stato delegato a Savoia, uomo di Cosentino:

S:Sergio Orsi (33512162433 utenza monit.)
C:Carlo Savoia (33512161680 – chiamato)
C: uhè!
S: gli hai parlato?
C: non risponde al telefono… ma non ti preoccupare
S: sto venendo lì!
C: ma io gli voglio dire: senti…
S: ma il problema è un altro, Carlo, io non mi permetterei mai, no?…
C: ma io mi voglio togliere proprio di mezzo, forse non hai capito, io lo voglio incontrare per dirgli: io mi levo di mezzo a queste cose!… perché anche Sergio ha ragione… perché se è vero che ti ha detto questa cosa e se è vero che è successo questo, dico: tu non mi puoi mettere in mezzo le "tarantelle", mi dai un nome, poi mi fai fare…
S: Nicola, il povero Dio… io ti dico una cosa: lo capisco. Disse: Sergio, ma io tutti questi cazzi di dietro non li conosco… quando io e Nicola concordammo insieme a Michele che certe cose le facevamo passare tramite te per evitare che tutti questi venivano a casa mia e venivano a dire: quello voleva il posto, quello si voleva buttare giù dal palazzo…
C: allora chiariamo una procedura…
S: tanto è vero che quando dissi questo, disse Nicola: mettiti d'accordo, perché non mi deve far esaurire… ed aveva ragione. Diceva: tu mi dici così, poi vieni e mi dici in un altro modo… si può sapere? Dissi: Nicola, ma là il fatto così… disse: io, poi, non lo so questo, perché se lo sapevo, figurati… la casa di cui mi dispiace è che diamo immagine, sempre a Nicola, come se io e te fossimo due partiti diversi
C: perciò voglio evitare
S: se tu ti chiamassi Nicola, no? Carletto, ma a quello non lo hai assunto!? Allora tu mi prendi (inc.), sai perché non ti ho assunto? Perché questo qua credevo fosse un amico ed un uomo… purtroppo là dice che è un uomo di merda, perché mi aveva detto che avevi parlato con me domenica e tu avevi detto questo e questo
C: Sergio, io dico: Nicola, guarda, siccome esistono delle problematiche che a me sfuggono, tu mi dai il nome e cose varie… problematiche di natura personale…
S: il problema è un altro. Se noi abbiamo licenziato due di Villa Literno, lo dovresti sapere di più tu che Nicola… il discorso era questo, si presume, se volgiamo dire come stanno i fatti, che tu dovevi chiamare me e dirmi: ragazzo, ci stanno questi qua che mi stanno rompendo il cazzo, noi abbiamo licenziato due persone là, com'è il fatto? Ti metto in

difficoltà?...
C: il problema fondamentale è che per forza devo dire: Nicola, penso che tu ti sia visto con Sergio e Sergio ti ha spiegato la situazione…
S: eh!
C: quindi, voglio dire: devo tenere in mano?
S: sì, sì!
C: io purtroppo sono costretto a spiegarle, hai capito?
S: al posto tuo sai cosa farei? Lo chiamerei per un altro motivo, poi direi: ah, a proposito Nicola, ieri ti sei visto con Sergio?...

Nota: la conversazione prosegue sull'incontro di Sergio con Nicola nel quale si è parlato della questione di cui sopra.

S: se domani mattina viene qualcuno… dice: sentite, possiamo prendere… se Peppe Sagliocco, per non nominare Nicola o un altro politico, chi vogliamo nominare? Mi chiama e dici: senti, là a Sant'Arpino, così e così. Allora io dico: non mi dite niente voglio chiamare anche Carletto, perché non so i suoi impegni quali sono
C: io su questa persona… sta da tre mesi a smaniare questo cristiano che Nicola mi chiama una volta, mi chiama due volte… allora io penso che sia una persona…
S: e quello c'è Franco Policarpo… e Francuccio Mercurio che buttano da sotto
C: bravo!
S: ma io glielo dissi e lui disse: eh!
C: adesso secondo te, ti faccio un esempio…
S: a questo rimandalo. Gli dici: siamo andati a vedere la pianta organica e deve aspettare un altro poco che stiamo ampliando e ti faccio sapere più in là
C: gli dico: guarda… a Santa Maria la Fossa come lavoro per un camionista…
S: siamo andati a vedere la pianta organica e adesso dobbiamo portare l'ampliamento nel consiglio di amministrazione e ti farò sapere… anche per non far vedere all'esterno. A me quando dicono: là, Carlo Savoia… e qualcuno si fa una risatina. Dico: ragazzi, con Carlo Savoia prima eravamo amici, adesso siamo addirittura soci!... come sarebbe? Eh, quello rappresenta il pubblico…
C: immagina… mi sto facendo nemici gratis su tante cose
S: lo so bene! infatti dico: stiamo litigando su una cosa, sul posto di uno a Villa Literno… se questo era di Sant'Arpino… ed io parlavo, diceva: Sergiolino e che cazzo!... per dirti una stronzata… il parente tuo venne… adesso c'era mia moglie, dissi: Celeste, fammi un piacere… ma lo feci per dare una botta a lui
C: sta lì, aspetta. Sta di fronte a me! Aspetta…

Nella conversazione n. 1332, avvenuta tra Sergio Orsi e l'assessore Franco Mercurio, il ruolo egemone dell'indagato Cosentino nelle faccende della ECO4 emerge da almeno due passaggi: quello nel quale Mercurio prospetta, quasi minacciosamente, l'eventualità di informare Cosentino delle difficoltà che Orsi sta frapponendo all'assunzione del consigliere liternese; quello nel quale lo stesso Orsi comunica a Mercurio di aver detto al giovane raccomandato che impetrava l'assunzione: ***"Nicola Cosentino è il mio padrone!".***
La prospettiva di essere additato a Cosentino come un avversario preoccupa evidentemente Sergio Orsi che, cinque minuti dopo aver sentito Mercurio, chiama OLIVIERO Giuseppe (altro uomo di Cosentino nella società mista) per intrattenere la seguente, emblematica, conversazione:

S:Sergio Orsi (33512162433 utenza monit.)
G:Giuseppe Oliviero (3382820383 – chiamato)

G: pronto?
S: Peppino dove sei, da Francuccio Mercurio?

G: no!
S: sicuro?
G: eh!
S: **perché il padre di quelli là è andato da Francuccio Mercurio… sapeva anche che ci dovevamo vedere domani… ma insomma, stiamo scherzando!**
G: in che senso, Sergio? Fammi capire
S: questo mi ha chiamato, Francuccio Mercurio là, io devo parlare, come dici? Lo devo dire a Nicola? No, perciò sto chiamando te… insomma non ha capito niente questo!
G: c'è andato lui da Mercurio
S: lo so! Dice: no, perché quello va avanti e indietro. Ho detto: ma chi ce lo mette a camminare avanti e indietro?… ho detto: ti faccio sapere io domani. Che poi non gli faccio sapere niente a Mercurio
G: ho capito
S: va bene
G: e vedi tu. Come vogliamo fare?
S: che ne so!… io volevo che… troppo… hai capito?
G: ho capito… troppo…
S: gli ho detto: Francuccio, ma fai che poi per farci un amico ci dobbiamo fare due nemici?… ho detto: questo nemmeno sta bene… dice: ma qua, là, Nicola… io non glielo voglio dire a Nicola. Ho detto: ma diglielo!… Francuccio, ma perché non glielo devi dire!?… dice: no, perché lì c'è il messaggio che Nicola ha dato il via e tu hai bloccato. Ho detto: no, non può essere perché io dissi a quello: Nicola è il padrone nostro, però ci sono certi problemi giuridici e poi, dopo, lo assumiamo. Quindi questo messaggio se si vuole farlo passare proprio per farlo passare…
G: va bene… come dici tu così facciamo!… tu mi dicesti una cosa?
S: eh, ma nell'interesse anche tuo, cioè li vedo poco seri. Questo è rimasto per te?… è vero che un paio di giorni gli abbiamo dato l'appuntamento…
G: **allora questo qua si è trovato intontito, perché questo qua quando parlò con te, poi venne da me la sera… disse: ma quello là non comanda nemmeno il cazzo!**
S: e perché, non è la verità?
G: eh, però…
S: lui credeva che tramite Nicola Cosentino…
G: (inc.) Cosentino e Carlo Savoia… io sto a lavorare… quando ha capito che l'antifona non è così… hai capito? Questo è! E adesso si è rivolto un'altra volta là
(…)

Attestati plurimi di soggezione di Sergio Orsi al parlamentare si leggono poi nella conversazione n. 1335, intercorsa tra Orsi e Franco Mercurio:
(…)
F: questi non sono amici nostri! Gli amici nostri siamo noi, Nicola Cosentino…
S: certo!... noi stiamo sempre agli ordini Francuccio!
F: eeh! Qua non si fa niente senza l'ok tuo!
S: non è vero! E poi non è mia intenzione… ti ho detto il fatto di quel cristiano…
F: quando tu mi hai detto il fatto di Zaccaria, ho capito che non dipende da te…
S: il problema è un altro… al cristiano dissi: aspettate una decina di giorni e vi risolvo il fatto… ***però gli dirò le stesse cose: sentite, dissi al ragazzo, allora, sappi che il mio padrone è Nicola Cosentino e più di quello nessuno ti poteva raccomandare per quanto riguarda noi, fai conto che già sei dentro, solo devi avere pazienza per una decina di giorni… punto!*** *E questo se ne andò contento… poi parlammo di Villa Literno… mi permisi di fare qualche elogio a te, a Corrado Caterino…*
F: a questo, Nicola già lo disse ad ottobre…
S: lo so!
F: poi successe che facendo una riunione tutti noi di Forza Italia, uscì fuori quasi… non aveva fatto il piacere a Musto… e stavano tutti qua: Oliviero, Policarpo, Zaccaria. Dice: allora, questo Musto che fine sta facendo? Dice: io ho parlato con il capo, ha detto che aveva un impegno con te e tu non l'ahi mantenuto… per me! Dissi: vuoi sapere l'impegno per me

qual'era? Che l'ho portato da Nicola! Si doveva assumere a dicembre e poi non è stato fatto niente. Va Oliviero e dice: guarda che qualche assunzione è stata fatta, perché non vediamo di insistere? Dissi: siccome dobbiamo parlare con Nicola Cosentino domani mattina, andiamo tutti e tre e sposiamo tutti e tre la causa di coso… andiamo tutti da Nicola Cosentino… io, Oliviero, Policarpo e Zaccaria e tutti a Nicola: Nicola, vediamo di mettere…
S: ma nessuno di questi mi ha detto…
F: dicemmo a Nicola: vediamo di recupera questo Musto…
S: lo so, me lo disse Nicola. Disse: tutti quelli di Villa Literno mi hanno chiesto questa cortesia. Dissi: Nicola, permetti che io… disse: lo so. Tanto è vero che lui disse: senti Sergio, mi devi far capire, alle volte dici: non mi chiamare davanti agli altri, sennò vengono tutti a casa mia, poi alle volte… dissi: fammi capire anche tu! Disse: no, qua c'è un fatto particolare che lo stesso vado a Roma… ***adesso, il ragazzo quando venne, io gli dissi: non ci sono problemi!… gli dissi: sei andato da Nicola? E vale 100.000 volte che sei venuto da me. Insomma, sei andato da Nicola, basta! Non devi andare più da nessuna parte. Solo per un problema giuridico aspetta una decina di giorni… questo è…***
(…)

La seguente conversazione, avvenuta tra Sergio Orsi e Savoia, chiarisce in termini inequivocabili che il *NICOLA*, segnalatore del DI IORIO, deve identificarsi nell'indagato Nicola COSENTINO. E' significativo anche il fatto che Sergio Orsi, intenzionato a licenziare un dipendente (tale Mosca Roberto) proveniente da Casal di Principe, teme che questi possa rivolgersi a Nicola Cosentino che, una volta di più, emerge come persona alla quale il padrone della ECO4 non può permettersi di opporre un rifiuto. E' rilevante poi il riferimento alla frequenza assillante con la quale Cosentino avanza, direttamente, o tramite i suoi rappresentanti interni (Savoia, Valente, Gambardella), le richieste di assunzione.

Numero intercettato: 3483126450 in uso a Sergio ORSI
Data fonia: 27.02.2004 ora: 13.18.32
Durata: 00.08.06
Interlocutore: Carlo SAVOIA
Chiamata: ENTRATA
Numero:

S: Sergio ORSI
C: Carlo SAVOIA
…
S: ***ho visto a Lorenzo DI IORIO qua****.*
C: eh…
S: stava Nicola, ho detto "No, parla con Antonio RUSSO." Lui ha detto "allora a chi devo ringraziare?" Ho detto "ora te lo dico io: COSENTINO, Carlo SAVOIA, Antonio RUSSO…" E poi dice "e Peppe SAGLIOCCO?" "E Peppe SAGLIOCCO, ho detto, a me no, non ti preoccupare." Ho fatto bene?
C: …(ride)… hai fatto… non ti preoccupare!
S: no dice che ce l'avevi tu là il libretto, cose…
C: eh lo tenevo io.
S: e se me lo davi stamattina!
C: …(ride)… quest'uomo di merda vuoi vedere che sono io il malamente, (parla ridendo) vuoi vedere che sono io il malamente perchè non ti ho dato il libretto, no? Ragazzo sei che cazzo proprio, dai!
S: come?
C: vuoi vedere sono io il malamente che non ti ho dato il libretto?

S: no, no, no.
C: se hai detto così, come l'hai messo tu, lì, quello "perché non me lo hai dato stamattina?" "Come mi ha visto quel fetente di merda non mi ha dato il libretto."
S: no, no…
C: non hai fatto così?
S: no, no, no… no, no. E gli ho detto quello che ti ho detto.
C: e hai fatto bene guarda, senti lasciamo… fai così.
*S: pure un'altra cosa: **ora ci sta MUSCO Roberto di Casale, noi l'abbiamo assunto, lo zio di questo è ex consigliere comunale di Forza Italia**.*
C: eh, eh… che dobbiamo fare con questo?
*S: **ora se io lo licenzio, fai che questo poi va da Nicola**… poi dopo pure se viene BERLUSCONI io… hai capito?*
C: ma tu se sai che non è buono, se sai che non è buono…
S: poi per dentro Casale me ne devo fuggire poi. Hai capito?
C: tu mi senti a me? Se tu sai che non è buono e noi le zavorre ce le dobbiamo togliere da mezzo poi a Nicola ci parlo io, perché Nicola mi ha dato altri due nomi, cose, mi sta uccidendo la salute.
S: devi dire "aspetta Nicola."
C: allora Nicola un po' alla volta…
S: che poi questo non è che non è buono, uno lo fa per cercare di alleggerire. Hai capito?
*C: no ma alleggeriamoci perché… cioè **ma pure questo PICONE, io non ce la faccio più, questo PICONE ed OLIVIERO io non li vedo più, ma questi che cazzo stanno a fare**?*
S: e ma perciò, questo qua…
C: questo ci dobbiamo organizzare, gli diamo i compiti e poi vediamo che succede.
S: però questi qua che teniamo provvisori no, perché non sono effettivi…
C: no questo provvisori stoppiamoli fai bene, stoppiamoli. Teniamo in mano perché poi con Nicola ci mantengo io in mano. Capito? teniamo in mano, teniamo in mano. Poi non ti prendere la colpa tu, cioè…
S: no vabbuo' quello è un fatto aziendale.
C: dici, bravo, "l'organizzazione aziendale per ora mi devo stoppare un attimo, dobbiamo vedere l'organigramma che stiamo facendo perché stiamo caricando troppo… un poco alla volta, poi vediamo…" Comincia a dire ora vediamo, poi…
S: vabbuo'.
…

Tra le assunzioni propugnate da Nicola Cosentino l'indagine intercettiva utilizzabile ha fatto emergere quella di D'AGOSTINO Maria.
La conversazione n. 5257 intercorre, il 1° marzo 2004, tra Sergio Orsi e il presidente Savoia:

"SERGIO: è la verità io mi sono salvato, quando la Commissione d'accesso è andata a Mondragone per -incomprensibile- il Ce4, il bravo -incomprensibile- nostro, invece di mandarlo al CE4 disse mandiamolo all'eco 4, io tutto mi sono salvato per mezzo di questo -incomprensibile-
INTERLOCUTORE: -incomprensibile-
SERGIO: no vabbè io non ho detto niente, allora io gli ho detto senti questi qua sono i dipendenti, si questo è camorrista lo so e però fu raccomandato quando è stato assunto dalla COVIM (le voci si accavallano) anzi, io ho licenziato due persone (le voci si accavallano)
SAVOIA: la Covim la società no -incomprensibile- per camorra
SERGIO: lo arrestarono
SAVOIA: no peggio ancora (le voci si accavallano)
INTERLOCUTORE: -incomprensibile- un passaggio di cantiere -incomprensibile-
SERGIO: allora adesso ti dico una cosa, la D'AGOSTINO la stanno –incomprensibile - D'AGOSTINO e allora mi appiccicai con Peppe Valente, la consigliera comunale di

Mondragone D'AGOSTINO, che il comune di Mondragone rischia di essere sciolto per mezzo di quella dal Prefetto
INTERLOCUTORE: tipo a elezione
SERGIO: no vabbè ma quello -incomprensibile- allora che successe
A.INTERLOCUTORE: attualmente non lo sciolgono perché va -incomprensibile- ad elezione
***SERGIO: Peppe Valente disse assumila** INTERLOCUTORE: -incomprensibile-*
SERGIO: Cosentino, Peppe Valente disse assumila dissi non esiste proprio, dissi non esiste e perché io fortunatamente la conoscevo a questa perché se non la conoscevo -incomprensibile-
INTERLOCUTORE: bravo
SERGIO: dissi Peppe questa qua è stata -incomprensibile- ma chi te l'ha detto disse ma è vero o no -incomprensibile- non me ne fotte e allora mi iniziai ad appiccicare con Peppe Valente, poi lui l'ha fatta assumere da un'altra parte e adesso se ne sono accorti il consiglio della sinistra e cose ed hanno i problemi con il Prefetto, con il coso insomma,
SAVOIA: non lo sapevo questo fatto
SERGIO: e allora io che ho fatto ci stava un altro dipendente che -incomprensibile- di sessa Aurunca che dice che questo è un camorrista
SAVOIA: -incomprensibile-
SERGIO: lo licenziai subito la legge 53 (le voci si accavallano)
SAVOIA: il giudice mi ha fatto la sentenza di reintegro
SERGIO: eh, eh (le voci si accavallano) io ti ho licenziato quando vennero quelli dice che hai fatto ho licenziato a questo, a questo , a questo e a questo e già ho fatto -incomprensibile-
SAVOIA: no, su questo....(le voci si accavallano)
SERGIO: embè è questo, e il giudice sai che ha detto devo reintegrare tu che hai fatto -incomprensibile-
…omissis…

La D'AGOSTINO segnalata da Cosentino e Valente a Sergio Orsi s'identifica con il consigliere comunale di Mondragone, raggiunto da gravi indizi di colpevolezza per corruzione aggravata dall'art. 7 della legge n. 203/91 e concorso esterno in associazione di stampo mafioso in relazione ad una complessa vicenda compendiata nelle pagg. 303 – 322 e 491-512 dell'ordinanza cautelare n. 707/2007 versata nel faldone n. 9 dei primi atti trasmessi.
In buona sostanza l'assunzione della consigliera comunale e di quattro suoi congiunti (D'AGOSTINO Amodio, D'AGOSTINO Pietro, PISCITIELLO Alfredo e PISCITIELLO Claudio) da parte della ECO4 rappresentava la contropartita del voto favorevole che la medesima aveva espresso per la giunta guidata dal sindaco Ugo Conte, giunta fortemente sostenuta dal clan La Torre, come si dimostra nelle pagg. 322 – 331 della stessa ordinanza.
L'assunzione della D'AGOSTINO risulterà peraltro truffaldina dal momento che – come dichiarerà Michele Orsi – ella venne retribuita senza mai essersi presentata al lavoro.
In questa sede corre soltanto l'obbligo di riportare le dichiarazioni rese da **Giuseppe Valente** al P.M. il 17.2.2009 (trasmesse con la nota integrativa del 27.2.2009) in ordine alla successiva riassunzione della D'AGOSTINO presso il superconsorzio IMPREGECO. Oltre a confermare il collegamento di quell'assunzione con la vicenda corruttiva, le dichiarazioni di Valente ribadiscono il ruolo che ebbe in quelle decisioni l'indagato Cosentino:

"*Assunsi la D'Agostino Maria presso l'IMPREGECO con compiti modesti. prendeva la posta e poco altro; l'ho assunta presso l'IMPREGECO dopo le sue dimissioni da ECO4 da cui questa fu licenziata;* ***fu il sindaco Conte a chiedermi di assumerla presso l'IMPREGECO e io lo feci per fare un favore al sindaco. Il mio riferimento diretto era Nicola Cosentino con il quale ho – a partire dal 2000 – avuto rapporti diretti;***

poiché il consorzio CE4 aveva come riferimento politico Nicola Cosentino e Mario Landolfi, nel caso di specie mi sono rivolto ad entrambi i soggetti nel ricevere disposizioni".

Ricorre in numerose conversazioni dei dirigenti, formali e di fatto, della ECO4 il tema dell'inutilità di due dei dipendenti assunti su segnalazione di Cosentino: PICONE e OLIVIERO.
A titolo esemplificativo si riporta il seguente brano di un colloquio intervenuto tra Sergio Orsi e Carlo Savoia:

Nr. 3261 – 05.03.2004 - ora: 21.37 dec. 2501/03

(...)
S: ***eh, senti solo una cosa, se ci vediamo verso le 10 e mezza, le 10?***
C: ***no, io alle 10 mi devo incontrare con NIC.***
S: ***ah… e…***
C: ***alle dieci finisco da NIC e ci vediamo da te.***
S: *e come dici tu, dai.*
C: *tu dove stai?*
S: *meglio ancora.*
C: *eh ci vediamo dopo? Ma io… non ci dovevamo prendere il caffè…*
S: ***e perciò io, se no sai che devi fare? piglia appuntamento per oggi, con Nicola, hai capito?***
(...)
C: ***ma stavo pensando pure a PICONE e OLIVIERO***
C: ***"… Nicola noi abbiamo trovato il posto per altri due, dico, se tu… però dobbiamo fare un'operazione a PICONE e OLIVIERO li dobbiamo (inc. parla ridendo) nel CE 2. Quegli altri due posti in più e mettiamo…"***
S: ***devi dire "questi li diamo a quelli, poi altri due che lavorano (inc.)"***
C: ***eh altri due che lavorano ti accontentiamo, cioè… però scusa…***
S: ***questi qua giacché sono alte professionalità…***
C: ***sono troppo professionisti, devono essere CE 2 perché là…***
S: ***(inc. sovrapposizione di voci)***
C: ***ma anche in ambito loro, Villa Literno, Trentola, coso, loro stanno meglio là.***
S: ***sì, sì… nel bacino loro.***
C: ***nel bacino loro. E quindi voglio dire, facendo questo passaggio di cantiere è tutto…***
S: ***andremmo che cazzi.***
C: ***no ma secondo me guarda, io sto pensando veramente questa cosa, sto da stamattina a pensare questo. Te lo giuro, tu ridi?***
S: ***e glielo dobbiamo dire, perché tu vedesti, io per spostarli involontariamente non sapevo niente, disse…***
C: ***però secondo me, guarda devi dire "ragazzi noi facciamo una cosa buona." Perché lui se ne vuole andare (inc. segnale irregolare) il CE 4, il CE 4, il CE 4. se ne va al CE 2 è la stessa cosa, è meglio scusa!***
S: ***eh questo, vanno che cazzo!***
C: ***perchè noi li mettiamo come amministrativi sopra al cantiere.***
S: ***e certo…***
C: ***sto pensando "sentite ragazzi, io vi mando al CE 2 in grazia di Dio." Amministrativi sopra al cantiere, facciamo un'operazione seria, almeno due di voi***

incominciano ad andare di là …(ride)…
(…)

Una conversazione emblematica della funzione assegnata dai politici, primo fra tutti Cosentino, alla società mista è quella avvenuta tra Enzo Gambardella e Sergio Orsi (decreto 2501/03 r.r. – n. 5353):

Nr. 5353 – 07.04.2004 - ora: 11.02 dec. 2501/03

Il consigliere di amministrazione Enzo GAMBARDELLA chiama Sergio ORSI Sergio e lo informa di un'accesa discussione avuta con SAVOIA, per gli ostacoli frapposti da quest'ultimo ad assunzioni caldeggiate dallo stesso GAMBARDELLA. Gambardella spende una legittimazione autorevole, affermando di avere avuto *carta bianca* da NICOLA, interessato a incrementare le assunzioni in vista di un'imminente scadenza elettorale:
"a me no, dissi "a me non me ne fotte proprio, perché quando è domani, glielo dissi, io domani vado da Nicola e dico come sta la situazione, perché io ho carta bianca da parte di Nicola perché Nicola sa che deve fare la CAMPAGNA… e su questo non si discute".
Savoia è accusato da Gambardella di ipocrisia per avere falsamente frapposto alla richiesta di assunzioni l'ostacolo di un rifiuto opposto da Sergio Orsi, ad altra segnalazione di 'Nicola'. Rifiuto che Sergio Orsi ovviamente smentisce.
GAMBARDELLA non ha alcuna difficoltà ad ammettere che il suo compito nel cda è *ben preciso* ed è quello di *onorare* il referente politico.
Nel prosieguo della conversazione GAMBARDELLA menziona una passata riunione tenuta nell'abitazione di Sergio nella quale si era raggiunto un accordo funzionale – non all'efficienza del servizio o all'economicità della gestione – ma al "***bene dei partiti***": Alleanza Nazionale e Forza Italia. GAMBARDELLA si ripromette di informare Nicola (continuamente evocato durante la conversazione) del fatto che, a causa di Savoia, non possono essere rispettati gli accordi: ***"io non ho problemi perché nel momento in cui noi facemmo un discorso a casa tua, cerca di seguirmi, cioè che tutti eravamo un gruppo e tutti le cose le dovevamo fare in amicizia ….. però poiché le cose non sono state fatte in amicizia, io in qualsiasi momento, pure il discorso, ora a prescindere dalle cose che ci siamo già detto, no? … Però noi in qualsiasi momento questo discorso lo possiamo portare pure avanti a Nicola. Cioè non so se è chiaro, io tu, RUSSO, pure quello di Alleanza Nazionale, dice "senti Nicola noi abbiamo stabilito, abbiamo fatto un patto, noi avevamo detto dove ci stava la necessità, le cose bisognava stabilirle a tavolino, dovevamo fare il bene dei partiti, quello è Alleanza, quello è Forza Italia, però tutto questo non è avvenuto." Questo comunque allora… cioè io sono pronto a fare tutto, cioè non so se è chiaro…" .***
I due continuano a lamentarsi di SAVOIA che ostacola il 'lavoro clientelare' degli altri, mentre svolge indisturbato il proprio (avendo assunto recentemente una consulente con delega al personale 'gradita' a Cosentino):
"***allora a questo punto se noi vogliamo affrontare un'altra volta a lui, vogliamo andare da Nicola, facciamo tutto quello che vogliamo, perché giustamente questa è una società mista di utilità? Noi abbiamo stabilito, gli abbiamo dato una situazione a lui che lui andava trovando (inc.) quella maledetta benedetta che ora sta a fare la consulente del lavoro? …***
ORSI si ripromette di ripagare SAVOIA con la stessa moneta, a partire dall'assunzione di tale DI DONA che è stato segnalato da Nicola attraverso il presidente SAVOIA. Sergio spiega di avere avuto in passato una discussione con Nicola (Cosentino) su

questo argomento. In quell'occasione egli aveva chiesto a NICOLA di rivolgersi direttamente a lui, anziché ricorrere alla mediazione di Savoia: "*perché tu poi non sei stronzo. E io il fesso non lo faccio, non lo faccio. I ragazzi si prendono e si assumono, punto. Però a lui, ti ho detto a te, lo voglio far soffrire. A lui oggi pomeriggio… prima di tutto a DI DONA non lo assumo perché assumo prima i ragazzi e poi assumiamo a DI DONA, questo per principio. E' uno, seconda cosa, seconda cosa…* ***ora dice che l'ha mandato Nicola. All'epoca Nicola non lo aveva mandato, aveva preso impegni con lui, poi mi ha acchiappato Nicola in però io giacché ti dico tutti i cazzi, come sono fatti. Quando poi Nicola ha detto qua e là, andai io e dissi "Nicola scusa e perché non me lo hai detto a me?" "Ma no, io pensavo qua, là…" "Ma no Nicola tu, se non me lo dici a me, la prossima volta succede la stessa cosa. Proprio così, quanto è vero dio. Dice poi là… e accennammo il fatto tuo. Mi sono spiegato?***"

Affiora da numerose conversazioni, avvenute tra gli uomini della ECO4 dopo la nomina di Carlo Savoia quale Presidente del CdA, il fastidio per il comportamento di quest'ultimo.
L'accusa più ricorrente è quella di spendere abusivamente il 'mandato' di Cosentino. A ben vedere questa censura rimarca il potere reale dell'indagato sulla struttura. A titolo esemplificativo riportiamo il brano di una conversazione avvenuta il 23.1.04 tra Sergio e Michele Orsi, titolari indiscussi della gestione:

n. 796 del 23.01.2004 - ora: 19.34 decreto 2501/03
S:Sergio Orsi (3483126450 utenza monit.)
M: Michele (3351215999 – chiamata)
M: pronto?
S: uhé Michele?
M: uhé?
S: dove stai?
M: a Santa Maria.
S: ah mi pensavo a Casale. Vabbuo' dai… io sono stato (inc.)
M: tu stai a casa?
S: mica hai sentito a Nicola?
M: eh…
S: che ti ha detto?
M: e ci dobbiamo vedere. Ha detto "Michele, ha detto, ora sto a Bellona, dopo devo andare a (inc.) e ha detto, appena ho finito ti chiamo e ci incontriamo."
S: ho capito, vuoi che vengo pure io o è la stessa cosa?
M: e come vuoi tu. Io comunque ora mi deve chiamare. Ha detto "pure se si fa sul tardi, ti chiamo e ci vediamo."
S: eh va bene dai…
M: hai capito?
S: tu glielo dici, dici "senti io mi devo marca… quegli altri fetenti di merda di Alleanza Nazionale o che…" Capito? "Ora, devi dire, fa la sponsorizzazione… ora ha fatto una sponsorizzazione, me lo vuoi dire a me?" Devi dire!
S: però li dobbiamo mettere con le spalle al muro. Capito? Va bene dai, mi fai sapere, dai. Poi valuta tu se ritieni che devo venire pure io. Sto a casa, sono arrivato a casa.
Nota: i due si scambiano qualche battuta sull'opportunità che Sergio partecipi a questo incontro con Michele.
S: quel Pasquale non ti ha chiamato?
M: Pasquale? Ci dobbiamo vedere domani.
S: ah, ma ha fatto qualcosa?
M: eh ha parlato con quello, ha detto che vuole fare, ha detto "però domani vieni a vedere questa cosa qua, a Bellona, ha detto, vedi se è grossa, è piccolina se è buona…"! Tutte queste cose, dopodiché… E ora domani ci dobbiamo vedere e dobbiamo andare a vedere.

S: vabbuo'…
Nota: i due continuano a parlare sull'opportunità che Sergio partecipi all'incontro che Michele dovrà avere tra poco con Nicola.
S: ***tu devi dire tutto quello che ti senti di dire, devi dire "questo sta esagerando."***
M: è normale, io tutte queste cose non so se gliele dico.
S: se lui dice qua, là… devi dire "senti allora Nicola mi devi fare un piacere lo devi chiamare, ci dobbiamo vedere io, tu e lui." Perché questo ogni cosa dice "che vuoi da me, io ho il mandato di questo." Capito?
M: io devo dire "se vogliamo continuare su questa strada allora mi devi far fare, perché se no io non posso…"
S: no, ma devi dire…
M: no, bello chiaro e tondo. Hai capito?
S: sì…
M: direttamente all'obiettivo, senza girare attorno, attorno.
S: vedi tu, vedi tu, vedi tu… come dici tu.
M: "vedi che oggi mi sono presentato, mi sono presentato oggi, mi presenterò ancora, tu ora devi dare una mano a quel fratello mio, perché quando è una cosa… (inc.)"
S: no, devi dire "tu dicesti questo fatto qua…"
M: "piglia a questo, fammi il piacere, toglilo da mezzo, perché questo qua non è fatto per noi. Per tanti motivi, per questo, questo, questo…
S: ***si mette a nominare a*** *(inc.)*
M: può scatenare una situazione che… che diventerà pericolosa. (inc.)"
S: vedi tu sì, sì, sì…
M: questo gli devo dire.
S: va bene...
M: poi in base a quello che mi dice lui, quello è.
S: ti regoli tu, hai ragione. Vabbuo', mi fai sapere tu.
Si salutano.

L'assunzione di 'impegni' da parte di Nicola Cosentino verso gli uomini della ECO4 traspare dalla seguente conversazione, intercorsa tra Sergio Orsi, Michele Orsi, Giuseppe Sagliocco e Giuseppe Valente e captata su un'utenza in uso a Sergio Orsi.

N.5790 – 17.04.2004 - ora: 10.40 dec. 800/04

S: Sergio ORSI
M: Michele ORSI
P: Peppe VALENTE
SAG: Peppino SAGLIOCCO

S: pronto?
M: uhe Sergio?
S: dimmi?
M: dove stai?
S: da Peppino, a Mondragone.
M: da chi?
S: da Peppino VALENTE.
M: ah…
S: tu?
M: io sto a Santa Maria, stavo insieme a Peppino. Ho visto una macchina pareva che eri tu.
S: no, no, no. Anzi ora te lo passo che ti vuole salutare.
M: mhm…
S: capito?
M: va buo'… Sergio?

S: uhe dimmi?
M: va buò, passa prima a questo.
S: eh…
P: direttore?
M: uhé, buongiorno.
P: ***come stai? Senti ma tu tieni il presidente che non è buono proprio, eh?***
M: eh…
P: ***ma ieri… poi quando ci incontriamo ti dico quello che mi ha combinato a telefono***
M: ***me lo vuoi dire tu a me? Io te lo venni a dire io a te! vediamo che dobbiamo fare?***
P: ***e ma… perché non facciamo… perché non facciamo un bel discorso?***
M: ***eh…***
P: ***io mi volevo incontrare un poco con te proprio per dirti queste cose e per dire chiudiamo…***
M: ***perché hai capito, è impossibile.***
P: ***no, non è cosa proprio. Non è proprio…***
M: ***ieri mi chiamò, là, "tu vuoi assumere la gente di Peppe VALENTE, non ho capito…"***
P: ***ma per telefono, cose, dissi "ma quando mai! io assumo la gente?" - dissi "ma tu fossi scemo veramente?"- Dissi "e quando mai mi sono permesso di fare una cosa del genere?"- Dissi "ma come una società seria, io…"- Ma per telefono ma non si deve mai parlare!***
M: eh ma io…
P: ***ma proprio mi sembrava un libro aperto. Dissi "ma come ti permetti? Dissi, Carlo mi devi fare un piacere, se mi devi telefonare per queste cose non mi telefonare più."***
M: eh…
P: *"****perché io non mi permetto assolutamente di fare niente, dissi, voi tenete un'amministrazione vostra, io mi permetto di imporre, di fare?" Dice "(inc. segnale irregolare) imposto per il figlio." "Ma come ti permetti?" dissi. "Ma quelli sono di Mondragone." "E che devo fare? ma chi li conosce? Anzi fammi sapere pure chi sono che magari faccio vedere che ho fatto pure io qualcosa, che io non so niente. Dissi, ma a chi conosci?" Ma ti dico una cosa incredibile, eh! Ma poi ma tu hai saputo quello che dovetti combinare io con l'avvocato che si portò appresso?***
M: eh là pure chissà… questo è un uomo di merda proprio.
P: a Santa Maria La Fossa?
M: no ma pare che me lo hai detto.
P: ***ma un avvocato scemo che in presenza del sindaco, in presenza dei consiglieri comunali "io non capisco, questo ostracismo del CE 4 nei confronti dell'Eco Quattro…" Ho detto "avvocato tu non ti devi proprio permettere di dire queste cose, hai capito o no? Dissi, che io se no in 24 ore te ne mando da sopra l'Eco Quattro."***
M: ***no ma il proble… il problema che mi chiamò, dice "Michele ma quello Peppino così, così, dice che tu ti vai vendendo il nome suo, vai assumendo la gente." Dissi "Carlo, innanzitutto vediamoci da vicino…"***
P: io?
M: eh…
P: io ho detto una cosa di questa?
M: ***"dice -quello allora Michele si va vendendo il mio nome…- "***
P: ***io? Ma quando mai! Ma questo è scemo proprio.***
M: ma non mi fecero parlare proprio, io stavo a Napoli ieri…
P: ***a me sai che mi disse? A me sai che mi disse? Disse "Quello mi ha detto Michele che questi nomi sono i tuoi." Dissi "guarda secondo me Michele ha sbagliato, ha capito male, perché non esiste proprio." Cioè questo praticamente va mettendo bacchette tra me, te, Sergio una continuazione.***
M: ***perché quella la consulente, giacché fa capo a lui, allora ogni cosa che passa lo chiama "qua ci sta questo, che devo fare?" Capito?***
P: *ma* ***pure questa consulente si deve togliere da mezzo. Ma chi è questa consulente****? Ma chi è questo consulente?*

M: ah io perciò dissi “Peppino…”
P: no, ma chi è questo consulente?
M: è una donna.
P: allora ora ti dico una cosa Michele, mi devi fare un piacere dobbiamo fare un consiglio… dobbiamo fare un consiglio di amministrazione, bisogna azzerare tutto e tutto quello che ha fatto lui, tutto quello che ha portato lui si deve togliere tutto da mezzo.
M: si deve togliere tutto da mezzo.
P: tutto! perché non si può proprio andare avanti. Insomma non ho capito, qua andiamo fuggendo dalla mattina alla sera, questo cazzo, cazzo, fresco, fresco…
M: eh poi viene…
P: sistema i cazzi suoi e poi va trovando pure chi ha fatto questo e chi ha fatto quello?
M: eh…
P: ma io gli sputo in faccia!
M: ma che uomo di merda!
P: ma veramente… ti devo dire la verità, ti devo dire la verità? L’avvocato è stato poi proprio una cosa incredibile. Disse ”io telefono a chi di dovere.” “Telefoni? Dissi, ma tu hai capito che io comando tutto quanto io lì dentro? Ma a chi devi telefonare, ho detto, ma tu fossi scemo veramente?”
M: ha telefonato, vedi …(ride)…
P: mannaggia, guarda è una cosa incredibile. Senti…
M: questo se ne viene una mattina… dimmi?
P: vediamo di chiudere questa vicenda.
M: eh…
P: ieri mattina è andato tutto quanto bene?
M: sì, sì tutto a posto.
P: speriamo che facciamo qualche cosa.
M: almeno… mannaggia la miseria…
P: e vediamoci un poco tutti e quattro, vediamo di chiudere questa vicenda, non la portiamo troppo a lungo.
M: e infatti questo…
P: ***perché io ho l’impressione che anche Nicola… (inc.) perché quello praticamente rispetto alle aspettative è stato… è stato una truffa.***
M: eh, eh, eh…
P: ***rispetto alle aspettative è stato una truffa.***
M: ***è stato una truffa. Perciò noi dobbiamo andare avanti per i fatti nostri, velocemente. Almeno mettiamo la bandiera.***
P: andiamo avanti per i fatti nostri, andiamo avanti per i fatti nostri.
M: va bene.
P: se ci possiamo organizzare domani, ci vediamo, se no… secondo me <u>è opportuno però che ci vediamo un poco tutti e quattro, facciamo il punto</u>…
M: facciamo un poco il punto, eh…
P: va bene allora ci organizziamo così, domani quando sto con Claudio vi chiamiamo e ci organizziamo. Va buò…
M: passami a Sergio, Peppino.
P: va bene, ora ti passo a Sergio.
M: ciao.
(…)

E’ a questo punto naturale che il coinvolgimento di Cosentino nella ECO4 implichi il sostegno elettorale dell’indagato e del suo partito in occasione delle elezioni politiche del 2001, epoca in cui il progetto lucrativo illecito degli Orsi e del gruppo Bidognetti (abbiamo visto quanto sia stretto e dimostrato il rapporto tra queste due entità) faceva i suoi primi passi. Un sostegno che sarà ribadito alle elezioni provinciali del 2005, prima del passaggio degli Orsi al centrosinistra.

Nell'interrogatorio del 19.06.2007, **Michele Orsi** riferisce:
"*Faccio presente che sia prima che dopo questa riunione ricevemmo una indicazione di sostegno elettorale nei termini sopra stabiliti. Quest'incontro si tenne nel 2005, durante la campagna elettorale.* ***Come accadde in tutti i casi in cui fu necessario sostenere un candidato per le elezioni, ci impegnammo affinché tutte le maestranze della GMC seguissero le nostre indicazioni; posso dire che, attraverso il controllo della GMC, disponevamo di un pacchetto voti pari alle 60 unità impiegate presso la società, in aggiunta ai loro familiari; forse il principale nostro sostegno era legato alla nostra partecipazione attiva durante comizi, cene elettorali od incontri; faccio presente che in quel momento e prima del mio primo arresto io e mio fratello Sergio eravamo persone "importantissime", io mi sentivo talvolta "un Dio".***
Il bacino di voti controllati attraverso la Eco4 era persino superiore a quello della GMC, potendo contare su circa 250 dipendenti e loro familiari.
Tra gli impegni elettorali dei diversi candidati nelle rispettive elezioni ricordo: il sostegno di Forza Italia attraverso l'Onorevole COSENTINO alle politiche del 2001, il sostegno di BRANCACCIO alle regionali del 2005 e quello di COSENTINO alle provinciali del 2005, quello di BRANCACCIO alle ultime comunali di Orta di Atella, quello di Andrea LETTIERI alle ultime comunali di Gricignano. Posso dire che il nostro sostegno come detto si è estrinsecato in assunzioni…omissis…"

Il 05 luglio 2007 **Michele Orsi** precisa che il controllo di Cosentino sulla ECO4 avviene anche attraverso la scelta dei consiglieri di amministrazione di spettanza del partner pubblico della società mista (il consorzio CE4):

"*I politici ebbero altresì a spartirsi il consiglio di amministrazione per quanto concerne le componenti personali pubbliche: ricordo che LANDOLFI scelse quale componente del CDA dell'Eco4 il D'ALONSO e* ***COSENTINO individuò nel sindaco di San Nicola la Strada (persona di cui non ricordo il nome) un altro componente del CDA. L'andamento gestionale della società rimase sostanzialmente nelle mie mani e in quelle di Sergio e di fatto l'Eco4 faceva capo a noi ed era da noi controllata. Con il passar del tempo questi equilibri vennero a mutarsi quando COSENTINO Nicola decise la nomina di Presidente del CDA individuandolo in SAVOIA Carlo che ebbe a succedere a MIRRA Bruno, quest'ultimo avendo ricoperto un ruolo puramente formale".***

Nello stesso interrogatorio Michele Orsi dà conto del fastidio e della diffidenza ingenerati negli Orsi e negli amministratori 'formali' della ECO4 dai comportamenti del presidente Savoia voluto da Cosentino. Sarà perciò organizzata la 'defenestrazione' di Savoia in favore del collaudato Valente, operazione che non potrà prescindere dall'avallo del padrino politico:

"Con il passar del tempo questi equilibri vennero a mutarsi quando COSENTINO Nicola decise la nomina di Presidente del CDA individuandolo in SAVOIA Carlo che ebbe a succedere a MIRRA Bruno, quest'ultimo avendo ricoperto un ruolo puramente formale.
Ricordo che noi controllavamo il CDA soltanto attraverso RAGUCCI Michele, atteso che non disponevamo di investiture formali per parteciparvi.
A partire dalla nomina di SAVOIA Carlo, che ricordo avvenuta nel 2004, cambiò significativamente il comportamento della parte politica.
SAVOIA Carlo intese fin da subito gestire materialmente la società comportandosi in modo inequivoco e palesando l'intenzione di sfruttare la società stessa attingendo i

suoi fondi per finanziare i politici di riferimento; *io compresi chiaramente che questa era la sua prospettiva e anche materialmente si dimostrò autonomo nel gestire alcuni aspetti societari: decise da subito di aumentarsi le spettanze quale Presidente del CDA elevandole fino alla somma di 5 o 6 mila euro mensili; decise autonomamente distinte assunzioni, acquistò per sé una BMW 320 e incrementò significativamente le spese di rappresentanza.*
In realtà non riuscì nella sua palesata intenzione di distrarre fondi dall'Eco4 per finanziare i suoi riferimenti politici – intenzione ribadisco inequivoca – ma il suo atteggiamento era chiaro e riuscimmo a contenerlo esclusivamente perché avevamo in mano i punti nevralgici della società.
Decidemmo poi di porlo in cattiva luce innanzi ai suoi referenti politici, in particolare il COSENTINO, necessariamente in accordo con il LANDOLFI, e la nostra strategia ebbe poi successo quando riuscimmo a "defenestrarlo", allorché venne sostituito da VALENTE Giuseppe.
ADR: il SAVOIA rimase Presidente del CDA, a mia memoria, per circa sei mesi, ma non fu in grado di riuscire a realizzare il suo intento.
Nel corso di incontri separati intercorsi sia con COSENTINO che con LANDOLFI, ricordo che opponemmo loro il comportamento del SAVOIA eccessivamente indipendente e affatto contenuto quanto alle spese, rimostranze che ebbero un loro peso".

Infine Michele Orsi ci dice che il sistema delle assunzioni e degli incarichi rappresentava la contropartita dovuta ai *partners* politici dell'impresa, essendo invece riservata ai mafiosi la tangente in denaro:

"***ADR: prendo atto del fatto che questo ufficio mostra perplessità per il fatto che si decise di distrarre fondi per pagare tangenti ai camorristi mentre diverso comportamento venne seguito per quanto riguarda le tangenti ai politici; rappresento che le tangenti da pagare alla camorra erano ai miei occhi inevitabili, mentre il nostro impegno con i politici poteva essere largamente garantito attraverso le assunzioni nelle società ed incarichi di consulenze oppure ancora nel consentire la scelta dei ruoli amministrativi nella società"***

DIANA Miranda, vedova di Michele Orsi, nel verbale di assunzione di informazioni l'interrogatorio del 2.12.2008 confermerà che la nomina di Savoia fu effettuata proprio su sollecitazione di Cosentino:

"*(...) quando mio marito lo nominò negli interrogatori – come emerse dai giornali –* ***Nicola Cosentino ammise ciò che aveva detto mio marito e in particolare ammise di aver perorato assunzioni proprio a mio marito…Posso dire che Michele mi disse che Cosentino gli 'aveva fatto mettere' un dirigente, tale Savoia, all'interno dell'ECO4; si trattava del fratello del sindaco di Sant'Arpino e aveva degli incarichi elevati e ruoli di rilievo. Michele litigava in continuazione con questa persona, finché riuscì a farlo mandare via".***

V'è infine un colloquio tra i fratelli Orsi, intercettato il 7.5.2004 (n. 699 – decreto n. 800/04) nel quale, discorrendo del buon esito di un affare concluso da Michele con Cosentino, Sergio chiede ***"gli ha fatto piacere a Nicola? Sono sempre voti che ha, no?***", riscuotendo l'ovvio assenso del fratello ("eh!").

15b. La promozione autorevole dell'onorevole Cosentino delle decisioni strategiche

dirette ad aprire 'una breccia' nel sistema fibe – fisia italimpianti

15c. Le dichiarazioni di Giuseppe Valente e il superconsorzio IMPREGECO

Giuseppe Valente - raggiunto dall'ordinanza cautelare n. 45 del 26 gennaio 2009 con addebiti di turbativa d'asta e corruzione aggravate ex art. 7 della legge n. 203/91 in relazione alla gara pubblica che condusse, nell'estate del 2000, alla scelta dell'ATI costituita dai fratelli Orsi quale partner privato del Consorzio CE4 nella società mista ECO4 – **rendeva al GIP (in data 6.2.2009) e al P.M. (in data 17 e 23.2.2009)** interrogatori variamente corroborativi delle dichiarazioni di Vassallo, accreditando inoppugnabilmente il ruolo giocato da Nicola Cosentino nel controllo della società e nella promozione politica dei suoi obiettivi.
Il ruolo di Cosentino, accostato a quello del parlamentare Mario Landolfi, emerge già dall'interrogatorio reso al P.M. il 17 febbraio 2009.
Valente conferma Michele Orsi sul potere di designazione dei membri del CdA di parte pubblica (a Cosentino vengono in particolare ascritti i consiglieri Mirra e Falconetti, oltre che il presidente Savoia, successore dello stesso Mirra in quella carica) e sul tema del sistema di assunzioni, rispondente esclusivamente alle esigenze clientelari di Cosentino e dei colleghi Landolfi e Sagliocco.
Egli individua nell'indagato il suo referente più diretto.
Si tratta di affermazione di non poco conto, ove si consideri l'alto tasso di adesione alle logiche criminali dimostrato da Valente con i comportamenti (concorso nell'estorsione organizzata dal clan La Torre; turbative d'asta e corruzione di fatto funzionali all'affermazione della società patrocinata da Bidognetti) per i quali egli è stato sottoposto a misure cautelari personali.
Era ovvio per Valente consultare Cosentino prima di operare qualsiasi scelta strategica, prima fra tutte quella di entrare nel superconsorzio IMPREGECO che, insieme ad altri obiettivi, consentiva a Landolfi e Cosentino di incrementare il sistema delle assunzioni e dei conferimenti di consulenze a scopo clientelare.
Cosentino è indicato anche come patrocinatore dell'iniziativa di far acquistare dall'IMPREGECO alcune quote della Eco4 detenute dalla società degli Orsi (Flora Ambiente) e dell'affidamento di appalti a imprese dei due fratelli, dei quali si è dimostrata la qualità di soci prima di Bidognetti e quindi degli Schiavone.

"Come già detto i ruoli operativi gestionali, in seno al Consorzio CE4, erano svolti principalmente – se non esclusivamente – da Claudio DE BIASIO; questi fu inizialmente assunto come consulente esterno e poi, dopo un regolare concorso indetto dal Consorzio per la nomina del Direttore Generale, assunse tale ruolo.
In coerenza con tale ruolo DE BIASIO aveva poteri totali che non richiedevano il mio assenso o altro; cumulava anche il ruolo di Direttore Tecnico del Consorzio e dunque responsabile di tutti gli impianti di discarica, gestiti dal Consorzio, quali Parco Saurino e la discarica Bortolotto.
Progressivamente il DE BIASIO si legò a CHIANESE Raffaele e, tramite questi, a LANDOLFI Mario, mantenendo il legame inscindibile con i fratelli ORSI, sicché – a un certo punto, dopo pochi mesi dalla sua nomina, fui praticamente estromesso dalla gestione operativa.
Sapevo ciò che faceva, ma sovente ne venivo a conoscenza soltanto dopo; le cose più importanti le sapevo dopo; DE BIASIO faceva comunque costantemente capo a LANDOLFI, CHIANESE ed ai fratelli ORSI e costoro si erano legati insieme in modo indissolubile.
Il rapporto era ormai tenuto, da loro, in modo diretto e ho sperimentato personalmente

tale loro relazione.
Il Consorzio faceva capo a due referenti politici, l'uno era Mario LANDOLFI, quale espressione del partito AN, l'altro era Nicola COSENTINO, quale espressione del partito FI. Vi era una buona relazione tra i due. Ho infatti assistito a delle telefonate tra i due, trovandomi o con Nicola COSENTINO o con LANDOLFI, colloqui durante i quali i due parlavano di nomine del cda del Consorzio e dell'ECO4 s.p.a., essendo loro due sostanzialmente a decidere le nomine della parte pubblica. In particolare, quanto ai primi componenti del CDA dell'ECO4 spa, ricordo che BENCIVENGA e D'ALONSO erano stati nominati dal LANDOLFI mentre MIRRA e FALCONETTI dal COSENTINO.
Il DE BIASIO aveva ***poteri diretti di assunzione,*** *all'interno del Consorzio, mentre* ***nell'ECO4 i poteri erano di Sergio ORSI.***
Quanto all'ECO4 s.p.a. le assunzioni erano decise su segnalazione di LANDOLFI, COSENTINO e SAGLIOCCO e spesso – nelle occasioni in cui i Comuni affidavano il servizio all'ECO4 per la raccolta degli rsu - erano anche gli amministratori comunali a determinare le nuove assunzioni, in aggiunta al personale che veniva naturalmente assorbito dal nuovo affidatario.
Quanto al Presidente Carlo SAVOIA dell'ECO4, nomina precedente alla mia, questi era stato scelto da Nicola COSENTINO, questi faceva infatti politica con Forza Italia. Suo fratello era, all'epoca, sindaco di un Comune del Bacino del CE2, in particolare del Comune di Sant'Arpino, e ricordo che militava in un partito dei DS.
(…)
ADR: quanto alla società IMPREGECO s.r.l. di cui io sono stato il primo Presidente, si tratta di un ente che accomunava tre Consorzi – in parti uguali - il Consorzio CE4, NA1 ed NA3. *Fu costituito su iniziativa di GERLINI Giacomo e FACCHI Giulio – fu in realtà quest'ultimo a propormi di assumere il ruolo di presidente e comunque di entrare a parteciparne - e* ***attraverso tale Ente si intese gestire gli impianti regionali, non gestiti da FIBE, ossia l'impianto di tritovagliatura di Giffoni Valle Piana e l'impianto di tritovagliatura di Paolisi e l'impianto di tritovagliatura di Giugliano****.*
Vi erano molteplici interessi nella costituzione dell'IMPREGECO: da una parte vi era l'interesse di GERLINI e FACCHI di mantenere un potere di gestione di quegli impianti in relazione al fatto che GERLINI – responsabile allora del Consorzio NA3 o NA1 – aveva perso il controllo del Consorzio per un mutamento degli equilibri politici; correva il rischio di perdere il controllo della società GESEN, società a maggioritaria partecipazione consortile. Attraverso l'IMPREGECO, GERLINI non solo evitava di perdere il controllo della GESEN ma riusciva persino a ***garantirsi il controllo dei tre impianti esistenti su base regionale****.*
Io ho sempre agito su esclusivo mandato dei miei referenti politici, Nicola COSENTINO e Mario LANDOLFI, tant'è che tra i revisori dei conti dell'IMPREGECO, Mario LANDOLFI mi fece inserire proprio Raffaele CHIANESE, ricevendo questi delle retribuzioni non insignificanti – pari a circa 4 mila euro al mese per il relativo impegno (il collegio si riuniva, al più, 6 – 8 volte al mese).
Furono dunque Nicola COSENTINO e Mario LANDOLFI a darmi il via; l'interesse sotteso alla partecipazione del Consorzio nell'IMPREGECO era costituito da quanto scaturiva dalla gestione degli impianti: assunzione di personale e di consulenti. IMPREGECO era alimentato esclusivamente con fondi di provenienza del Commissariato di Governo. (…) ADR: il mio riferimento diretto era Nicola COSENTINO con il quale ho avuto – a partire dal 2000 – rapporti diretti; poiché il Consorzio CE4 aveva, come riferimento politico, Nicola COSENTINO e Mario LANDOLFI, nel caso di specie mi sono rivolto ad entrambi i soggetti, nel ricevere

disposizioni.

Rivestono particolare interesse per la dimostrazione del dominio esercitato dall'indagato sulla strategia diretta alla creazione di un ciclo integrato dei rifiuti alternativo e diretto all'espulsione dell'ATI FISIA ITALIMPIANTI, almeno dalla provincia casertana, le seguenti affermazioni del presidente Valente:

"Rimasi Presidente dell'IMPREGECO per un paio d'anni, a partire dal 2001, fino al 2003-2004.
L'IMPREGECO gestiva anche impianti localizzati fuori dai bacini consortili e ciò non collideva apertamente con lo Statuto dei singoli Consorzi, partecipanti dell'IMPREGECO. Le quote non variarono mai.
A un certo punto vi fu un'intesa volta ad acquistare – per conto dell'IMPREGECO – le azioni dei partner privati delle società che agivano per conto dei Consorzi, l'ECO4 per conto del CE4, la GISEN per conto di NA3 (o NA1) e una terza società, per conto di NA1 (o NA3). Quest'ultimo Consorzio faceva capo inizialmente a Michele CAIAZZO e poi a Mimmo Pinto.
L'IMPREGECO acquistò, in particolare, alcune azioni dell'ECO4 dalla FLORA AMBIENTE degli ORSI e costoro accettarono la vendita allo scopo di entrare nei rapporti lavorativi con IMPREGECO; ricordo, in particolare, che furono stipulati dei contratti di trasporto di rifiuti tra IMPREGECO ed ECO4. Ovviamente tale decisione fu presa dai miei referenti politici, sopra indicati (…)".

L'interrogatorio reso da Valente al P.M. in data 23 febbraio 2009 conteneva la più schietta ammissione del ruolo strategico assegnato all'IMPREGECO da una serie di soggetti istituzionali: il superconsorzio doveva essere il cardine di un Ciclo Integrato dei Rifiuti alternativo a quello assegnato al sistema FIBE – FISIA Italimpianti dalle ordinanze governative della fase emergenziale e dai contratti stipulati dal Commissariato.
Tra i propugnatori di questo sistema (che Vassallo ci rappresenta come perfettamente convergente con gli interessi della criminalità organizzata) Valente non esitava a collocare i suoi padrini politici Cosentino e Landolfi.
Così Valente individuava i momenti attuativi di questa strategia: la gestione di impianti di tritovagliatura, solo apparentemente diversi e *complementari* rispetto a quelli affidati a FISIA Italimpianti, ma nella sostanza perfettamente sovrapponibili ai CDR; la gestione di impianti di stabilizzazione; l'apertura di un impianto di biostabilizzazione in Santa Maria La Fossa; l'obiettivo di realizzare e gestire un termovalorizzatore, tecnologicamente diverso da quelli programmati nel circuito FIBE, ma rispondente alla medesima funzione produttiva; l'apertura della discarica Lo Uttaro Torrione.
Il dichiarante accennava poi a un progetto politico di *provincializzazione* dell'intero ciclo dei rifiuti - totalmente incompatibile con l'assetto normativo e contrattuale dell'epoca, e cionondimeno propugnato dal parlamentare Cosentino.
In tale progetto s'inseriva come momento strategico l'autorizzazione relativa alla discarica Lo Uttaro.
All'onorevole Cosentino infine Valente attribuiva, sulla base di confidenze ricevute da Sergio Orsi, persino la partecipazione attraverso prestanome in una società del gruppo facente capo ai fratelli Orsi (la Enterprais).

"Sponte: nello scorso interrogatorio ho riferito in ordine ai miei rapporti con la società IMPREGECO s.r.l. ma mi sono venute in mente altre circostanze di rilievo che al momento non ricordavo. ***L'IMPREGECO fu costituita nel 2001 e la scelta di***

FACCHI Giulio di far entrare al suo interno i Consorzi CE4, NA1 ed NA3 si legava alla gestione, da parte di quei Consorzi, delle discariche che in quel momento erano le uniche attive nella Regione Campania: le discariche di SAURINO, in Santa Maria La Fossa, gestite dal Consorzio CE4, la discarica di Giugliano, gestita dal Consorzio NA1 e la discarica di Tufino, gestita da NA3. In pratica attraverso l'IMPREGECO, ente consortile di gestione formale, era possibile disporre delle uniche discariche esistenti.

Era poi già stata progettata la possibilità di gestire, attraverso l'IMPREGECO, gli ***impianti di tritovagliatura che non facevano capo alla FIBE****; si trattava di Impianti* ***che facevano sostanzialmente le stesse attività che svolgevano gli impianti di CDR di FIBE****, ma essendo non riferibili a quella società e preesistenti, potevano essere gestiti unitariamente attraverso un ente di gestione creato all'uopo, appunto l'IMPREGECO.*

Poco tempo dopo la sua costituzione ***venne infatti stipulata una convenzione tra IMPREGECO ed il Commissariato di Governo, convenzione firmata da BASSOLINO in persona, attraverso cui la gestione di quegli impianti e degli impianti da realizzare nel futuro, nella Regione, sarebbe passata all'IMPREGECO.***

Attraverso quella convenzione, strumento operativo fondamentale anche per il futuro, ***l'IMPREGECO assunse la gestione formale degli impianti di tritovagliatura di Giffoni Valle Piana, di Paolisi e di Giugliano****.*

Nella sostanza attraverso l'IMPREGECO s'intendeva sostituire la gestione della FIBE; questo era l'obiettivo finale auspicato.

Il progetto di costituire l'IMPREGECO mi fu proposto da FACCHI Giulio in termini meno espliciti e rappresentandomi i vantaggi che avrei potuto ricevere da una posizione di potere di quel tipo. ***Compresi agevolmente nel tempo che l'IMPREGECO serviva quale strumento per sostituire la FIBE;*** *faccio presente che* ***FACCHI esternava continuamente, anche pubblicamente, la sua avversione rispetto a FIBE e lo stesso faceva PAOLUCCI, altro Sub- commissario di Governo.***

Era inoltre facilmente comprensibile, osservando in modo ragionato le competenze di IMPREGECO, che questo Ente rappresentasse un ente analogo alla FIBE, per quel che erano le sue attività.

Anche nel concreto IMPREGECO si dimostrò ente di natura formale; aveva una struttura molto ristretta. Io ero il Presidente, vi erano altri due amministratori delegati; vi erano poi tre Direttori con funzioni amministrative: D'ALTERIO Pina, DE BIASIO Claudio ed ESPOSITO Enzo. Vi fu un automatismo nell'individuazione dei Direttori, essendo gli stessi i medesimi Direttori Generali dei rispettivi Consorzi. ***L'Impregeco era un ente che sostanzialmente agiva sul fronte meramente contabile e negoziale. Io decisi di partecipare ad IMPREGECO dopo essermi consultato con i miei due referenti politici".***

E' interessante notare il dettaglio per il quale, quando Valente lo informò dell'operazione IMPREGECO, l'onorevole Cosentino ne risultava già al corrente e pretese per il consorzio CE4 l'attribuzione di un ruolo apicale, ruolo che di fatto sarà attribuito allo stesso Valente:

"Avvisai Nicola COSENTINO il quale già aveva avuto informazioni – questa fu la mia impressione, avendo questi accennato a un consigliere regionale, credo COZZOLINO – sul progetto di costituire IMPREGECO. Nicola COSENTINO mi disse che era d'accordo ma di condizionare il mio ingresso alla presidenza dell'Ente: essendo gli altri due Consorzi riferiti ad area politica di Centro sinistra, per ragioni di "bilanciamento" sarebbe stato necessario disporre della Presidenza dell'Ente.

Informai anche Mario LANDOLFI e questi assentì anche a lui a questo progetto.

Nessuno dei due si interessò al fatto che il nuovo ente era di natura politica trasversale, trattandosi peraltro di fatto indifferente, nella norma, per i politici.
Io tenni costantemente informato i due di ciò che facevo come IMPREGECO – così come facevo abitualmente da Presidente del Consorzio (da Presidente dell'ECO4 non era invece necessario perché lo facevano stabilmente gli ORSI) – e ho sempre ricevuto le necessarie autorizzazioni o ratifiche relative al mio operato. Il reale scopo dell'IMPREGECO, quello di sostituire la FIBE, era chiaro a tutti coloro che stavano partecipando al progetto, ovviamente comprendendo anche i due miei referenti politici.
L'IMPREGECO fu un ente certamente voluto da BASSOLINO tanto che la stesura del documento di convenzione con il quale si affidava la gestione degli impianti di tritovagliatura all'IMPREGECO fu redatta dallo Studio SOPRANO – quanto meno in modo informale – con la collaborazione di DE LUCA Felicio e D'ALTERIO Pina.
L'Ufficio mi chiede come sia possibile che le stesse persone che si sono impegnate contrattualmente con FIBE abbiano agito parallelamente sostenendo IMPREGECO; rappresento che gli interessi economici erano troppo rilevanti per affidarli ad una società estranea del Nord, quale era la FIBE.
Era nota l'avversione dei vari Commissari per FIBE e, per quel che mi consta, era FACCHI tra i principali antagonisti. Quando si parlava di FIBE si parlava come se si trattasse di un loro "nemico"
Con la convenzione di cui ho accennato l'IMPREGECO avrebbe gestito tutti gli impianti Regionali.
ADR: attraverso IMPREGECO s'intendeva garantire tutto il ciclo dei rifiuti, a livello regionale, e s'intendeva anche garantire la fase terminale, quella della termovalorizzazione, anche se si pensava a un sistema diverso rispetto a quello praticato di FIBE, quale ad es. l'elettropirolisi.
Faccio presente che oltre all'IMPREGECO – che offriva una soluzione alternativa a FIBE a livello regionale - il progetto politico di COSENTINO e VENTRE era anche quello di "provincializzare" i rifiuti, ossia di creare un'autonomia gestionale completa a livello provinciale, coinvolgendo tutti e quattro i Consorzi di Bacino, creando dei Consorzi specializzati in determinate attività della filiera.
Vi erano poi anche gli impianti propri del bacino del Consorzio CE4, disponendo il Consorzio direttamente non solo di una discarica ma anche di un impianto di stabilizzazione e anche di vagliatura.
L'impianto di stabilizzazione fu formalmente imposto da FACCHI con delle ordinanze, nelle quali questi imponeva al Consorzio di acquistare dalla ICOM di Milano – una società di impianti – queste strutture.
La stabilizzazione dei rifiuti, anche provenienti dai Comuni del bacino CE4, fu attuata in questi impianti. FACCHI ci disse che per poter disporre e realizzare un impianto di stabilizzazione era necessario rivolgersi alla ICOM, l'unica società che disponeva di un brevetto – a suo dire – adeguato. Era quello l'unico modo per farci autorizzare alla realizzazione di un impianto di stabilizzazione.

L'interrogatorio si sofferma poi sull'autorizzazione della discarica in località Lo Uttaro – Torrione e sul progetto di 'provincializzazione' del ciclo integrato dei rifiuti, implicante l'espulsione dell'ATI quanto meno dal territorio provinciale casertano:

"ADR: (...) ***nel colloquio con Nicola COSENTINO si parlava del progetto di provincializzazione del ciclo dei rifiuti, tenendo reciprocamente presenti le attività per le quali già si agiva in autonomia; il rifiuto "secco" sarebbe stato destinato alla discarica sita a Lo Uttaro-Torrione, non ancora attiva a quella data e mai entrata in***

esercizio (che io sappia non sono stati neppure acquistati i suoli). Il rifiuto "umido" era già stabilizzato negli impianti di Santa Maria La Fossa, quelli ubicati in Parco Saurino, vicino alla discarica. A quel punto sarebbe stato possibile gestire anche un termovalorizzatore – come espongo nella conversazione – per essere del tutto autonomi. Come si può vedere in questa conversazione, che ne è prova, io comunicavo tutto a COSENTINO e ne ricevevo la sua precisa disposizione.
COSENTINO nel dirmi di "andare avanti così e trattare questa cosa" alludeva al fatto che io avrei dovuto impegnarmi per acquistare i terreni ove doveva sorgere la discarica di Lo Uttaro, discarica "vitale" in quel periodo perché le discariche di parco Saurino erano in via di riempimento.
Avevamo un'autonomia ancora di pochi mesi, con Parco Saurino, laddove i siti fossero stati utilizzati per ricevere rifiuti dell'intera provincia.
La discarica di Lo Uttaro era enorme e, per quel che mi spiegò CUNDARI – il Presidente del CE3 ove insisteva il sito – poteva sostenere per parecchio tempo tutto lo smaltimento della Provincia di Caserta.
Questa cava si trova tra Caserta e il Comune di San Nicola La Strada ed era vicina a un'altra discarica già esaurita.
Il Consorzio CE1 e il Consorzio CE2 mi sembra che disponessero anche di impianto di compostaggio dei rifiuti.
La realizzazione della discarica de Lo Uttaro era funzionale alla provincializzazione dei rifiuti. Il progetto era stato proposto da CUNDARI (presidente del Consorzio C3, n.d.e.) ***e questi ne aveva parlato con COSENTINO, con FACCHI e con me.***
Faccio presente che io non ho mai letto il contratto FIBE e non avevo una precisa idea di ciò che fosse inconciliabile, o meno, con la privativa a quella società; era FACCHI a dare le indicazioni tecniche a DE BIASIO, colui che principalmente frequentava il Commissariato, ma era chiaro comunque – come può rilevarsi nella telefonata – che l'attività che si voleva svolgere era la stessa che svolgeva FIBE e, dunque, impraticabile. ***Il progetto era quello per cui si doveva agire a livello del Commissariato di Governo per sollecitare affinché il contratto con FIBE fosse risolto per inadempimento; io non facevo parte di questo progetto ma era evidente che lo scopo di FACCHI fosse questo".***

Valente chiarisce anche le 'vere ragioni' della documentata (vedi le interrogazioni parlamentari annesse alla memoria difensiva del 12.11.08) avversione di Cosentino per il termovalorizzatore FIBE di Santa Maria La Fossa e del piano di provincializzazione dei rifiuti:

"ADR: (...) ***Nicola COSENTINO questi voleva che "tutto quel che si faceva doveva passare attraverso di lui". Non era pensabile che la FIBE potesse realizzare un termovalorizzatore in Santa Maria La Fossa, così come chiunque che volesse procedere a una rilevante attività economica in quella zona, con carattere pubblico. Nicola COSENTINO insieme a Gennaro CORONELLA incisero sul Sindaco di Santa Maria La Fossa, Bartolo ABBATE, il quale fece delle manifestazioni contro il termovalorizzatore, prendendo posizione diretta a livello comunale, contro FIBE.***
Sia COSENTINO, sia CORONELLA, sia Bartolo ABBATE hanno sempre comunemente affermato che il termovalorizzatore non sarebbe mai stato realizzato lì e il ruolo del sindaco dipendeva necessariamente dal CORONELLA e dal COSENTINO, sicché ABBATE era vincolato a seguire la linea a lui imposta.
Faccio presente che COSENTINO Nicola, per quel che mi disse Sergio ORSI per dimostrarmi la solidità del suo legame con il politico, aveva una quota azionaria all'interno della Enterprais, società acquirente di quote della Flora Ambiente a dire

dell'ORSI, attraverso CATERINO Luigi, titolare di quote societarie. L'ENTERPRAIS era infatti per il 50% partecipata dalla Flora Ambiente degli ORSI e per la restante quota dal COSENTINO, attraverso il fiduciario CATERINO."

Di questa avversione di Cosentino per il termovalorizzatore che doveva completare il ciclo affidato alla FISIA ITALIMPIANTI è traccia anche in una conversazione tra Sergio Orsi e Antonio Russo avvenuta il 18.1.2004 (n. 958 (decreto 2501/03), nella quale Orsi comunica:

"sono venuto a conoscenza che Cosentino ha riunito tutti i consiglieri regionali, tutti quanti questi, nel dire che si deve bloccare Santa Maria La Fossa…pure perché si sente pigliato in giro insomma…ho parlato e gli hanno detto questo: che ci è stata una riunione ieri per tutte queste cose che vogliono organizzare a Santa Maria La Fossa…si sono scocciati, vuol dire che si deve chiudere e si deve andare a fare da un'altra parte. Ora dove cazzo lo vanno a fare, lo fanno, dice, però ci hanno rotto il cazzo perché ci stanno a prendere in giro. Perché una volta dicono che si deve fare Carinola, un'altra volta non si deve fare. E allora se serve per prenderci in giro a noi, noi non vogliamo più sopportare questa cosa…e ieri si sono riuniti Rosario e Gennaro Coronella, Cosentino, qualche consigliere regionale, insomma per…per chiudere Santa Maria La Fossa insomma"

Innanzi al GUP investito del giudizio abbreviato relativo agli addebiti formulati a suo carico nel procedimento n. 49946/03 N.R. (quello nell'ambito del quale furono emesse le ordinanze cautelari personali nn. 215 del 22.3.2007 e 707 del 29.10.2007 versate nel faldone 9 degli atti presentati a sostegno della prima richiesta cautelare) **VALENTE Giuseppe** ribadiva la sua stretta dipendenza dai referenti politici Landolfi e Cosentino, puntualizzando il particolare legame con quest'ultimo, appartenendo il Valente al partito di Forza Italia:

" *GIP: …lei non ha mai pensato di dimettersi? Risposta di Valente: Certo che ho pensato di dimettermi – GIP: perché non l'ha fatto? – Valente: questo purtroppo non è possibile, perché i miei riferimenti politici non mi hanno mai consentito questo, perché io ero incardinato in una struttura politica –* ***GIP: chi erano i suoi referenti politici? – Valente: Io sto nel centro – destra, sono di Forza Italia, quindi erano i rappresentanti sia di Forza Italia che di Alleanza Nazionale, a livello provinciale Forza Italia era rappresentata dall'onorevole Nicola Cosentino*** *– GIP: lei gli diceva questi problemi? – valente: no, assolutamente! Aspetti un attimo. Evidentemente non…io ho esternato diverse volte i miei riferimenti politici che avevo problemi anche di natura professionale, io sono ispettore del lavoro, ispettore dell'INAIL e avevo idea di potermi divincolare da questo, glielo dico un attimo dopo cosa è successo - GIP: no, me lo dica adesso, io le ho fatto adesso la domanda. Mi interessava questo aspetto, se mi vuol rispondere – Valente: sì, come no!* ***Ho esternato parecchie volte l'idea di dimettermi e i miei riferimenti politici mi dicevano: "resta ancora perché successivamente troveremo altre persone che possono stare al posto tuo"(…)*** .

15d. I contratti stipulati dal Commissario Bassolino con l'ATI FISIA ITALIMPIANTI e la strategia di ridimensionamento della clausola di 'esclusiva'

Occorre subito premettere che la strategia di espulsione dalla Campania del sistema FIBE – FISIA ITALIMPIANTI, della quale Valente ammette di essere stato co-esecutore attribuendo ruoli primari all'indagato Cosentino, ma anche a esponenti

della struttura commissariale come Giulio Facchi, contrastava con gli impegni assunti dal Presidente Bassolino nella veste di Commissario Delegato all'emergenza rifiuti in Campania ai sensi dell'O.P.C.M. n. 2425 del 18.3.96.
Il Commissario sottoscriveva infatti, in data 7 giugno 2000, un Contratto per il servizio di smaltimento dei rifiuti solidi urbani a valle della raccolta differenziata, prodotti nella **provincia di Napoli**, mediante la realizzazione di tre impianti per la produzione di combustibile derivato dai rifiuti (CDR) e di un Impianto di termovalorizzazione del CDR, dedicato alla produzione di energia elettrica. *(*Allegato n. 6-A dell'informativa NOE in data 20.4.2009 – faldone 2 degli atti trasmessi il 13.5.09).

In data 5 settembre 2001 lo stesso Commissario stipulava con l'A.T.I. FISIA ITALIMPIANTI S.P.A. un Contratto per il servizio di smaltimento dei rifiuti solidi urbani a valle della raccolta differenziata, prodotti nelle **province di Avellino, Caserta, Benevento e Salerno,** mediante la realizzazione di quattro Impianti per la produzione di CdR e di un impianto di termovalorizzazione del CdR, dedicato alla produzione di energia elettrica (Allegato n.7-A dell'annotazione NOE del 20.4.2009).

I contratti in oggetto contemplavano espressamente (art. 2) l'assegnazione all'ATI FISIA ITALIMPIANTI de*l "servizio, **in regime di esclusiva**, di smaltimento dei rifiuti urbani che residuano dalla raccolta differenziata"*, prodotti nelle province indicate, previa la realizzazione degli impianti per la produzione di combustibile derivato da rifiuti (C.d.R. realizzati in Caivano, Tufino, Giugliano, Santa Maria Capua Vetere, Casalduni, Avellino – Pianodardine, Battipaglia) e degli impianti dedicati alla produzione di energia mediante la termovalorizzazione del CdR (programmati in Acerra e Santa Maria La Fossa).
Il sistema si completava con la previsione di adeguate aree di messa in riserva del CdR e di idonee discariche di servizio, per lo smaltimento dei residui delle ceneri inertizzate e delle scorie prodotte dagli Impianti sopra descritti.
L'art. 24 di entrambi i contratti disciplinava gli "*oneri e obblighi a carico dell'affidatario"* prevedendo l'impegno dell'ATI affidataria a provvedere con mezzi finanziari propri a*:*
lo smaltimento dei residui e scorie e dei reflui liquidi eventualmente prodotti sia dagli Impianti di produzione di CdR che da quello di termovalorizzazione del CdR;
la gestione del servizio di smaltimento dei rifiuti che residuano dalla raccolta differenziata, per il periodo convenuto in Contratto ivi compresa l'utilizzazione del combustibile derivato dai rifiuti

Il Commissario delegato si assumeva l'onere (a***rt. 26),* tra l'altro** di:
" disporre con apposite ordinanze d'obbligo per tutti i Comuni e/o i soggetti che effettuano la gestione di rifiuti urbani, prima della messa in funzione …
*4a) **il conferimento in via esclusiva agli impianti CdR di tutti i rifiuti urbani prodotti che residuano dalla raccolta differenziata** e raccolti sul loro territorio …*
*4b) **divieto assoluto di conferire a terzi o, comunque, di smaltire diversamente, i rifiuti urbani che residuano dalla raccolta differenziata** prodotti e raccolti ….."*

Coerente con gli obblighi contrattuali assunti era l' O.P.C.M. n. 3100 del 22.12.2000 il cui **art. 3** stabiliva che **"***il rilascio delle autorizzazioni alla costruzione ed esercizio degli impianti di smaltimento dei rifiuti **è sospeso***",** ammettendo la possibilità di autorizzare impianti ex artt. 27 e 28 del D. lgs.vo 5 febbraio 1997, n. 22"":
in presenza di "*particolari situazioni*".
con ordinanza sottoscritta dal Commissario Delegato, Presidente della Giunta Regione

Campania.

Il diritto di esercitare in esclusiva le funzioni previste da contratto era stato rivendicato dalla società FIBE, in un momento di acuzie della situazione emergenziale, con la nota del 12/05/2004, che contestava la decisione del Commissariato di Governo di conferire gli r.s.u. prodotti nella regione Campania in Germania, asserendo che detta modalità di smaltimento:
"*viola apertamente gli obblighi contrattuali assunti e le stesse ordinanze Commissariali che impongono ai Comuni ed ai soggetti gestori di smaltire tutti i rifiuti urbani raccolti sul territorio solo ed esclusivamente attraverso il conferimento agli impianti di CDR, con divieto assoluto di conferire a terzi o di smaltire diversamente, tenuto conto che il conferimento dei rifiuti è correlato alla produzione di energia".*

15e. Il ruolo cruciale di IMPREGECO nella strategia descritta da Valente
Rispetto a questo quadro normativo e agli obblighi contrattuali assunti dal Commissariato nel 2000 e nel 2001 (vigenti fino alla risoluzione ex lege dei contratti avvenuta alla fine del 2005) appare decisamente distonica la convenzione stipulata dallo stesso Commissariato di Governo con il superconsorzio I**MPREGECO** presieduto da Giuseppe Valente, autorizzata con ordinanza n. 30 del 29.1.2002 avente ad oggetto lo "***schema di convenzione, relativa alla disciplina della gestione degli impianti che saranno individuati esistenti e/o realizzandi concorrenti il programma di cui al Piano regionale emergenza rifiuti, da stipularsi tra il Commissario delegato e la Società IMP.RE.GE.CO. a r.l.".***

In forza di tale ordinanza, il 12 febbraio 2002, il Commissario di Governo delegato Antonio BASSOLINO e VALENTE Giuseppe stipulavano la Convenzione che all'art. 2 *(*allegato 9-A dell'informativa del NOE di Roma in data 20.4.09*)* stabiliva l'affidamento "***alla Società Consortile a r.l. "IMPREGECO", che accetta, la gestione degli impianti di selezione, trattamento, valorizzazione e riciclaggio dei RSU, di proprietà dei Consorzi di Bacino e di quelli che sono in corso di individuazione da parte del Sub Commissario delegato".***

Con quella convenzione il Commissariato si liberava (almeno transitoriamente) del vincolo di esclusiva contratto con l'ATI del 'Nord' assumendo con IMPREGECO l'impegno di far conferire nei suoi impianti "*i rifiuti ai sensi di legge, ivi compresi i rifiuti provenienti da raccolte differenziate, prodotti sul territorio dei Comuni che saranno individuati con atto del sub commissario delegato".*

Le pagg. 13-22 dell'annotazione di P.G. trasmessa con la memoria integrativa del 13.5.09 riportano i testi integrali dell'ordinanza commissariale n. 30/2002 e della convenzione stipulata tra Bassolino e Valente, mettendo in luce come da detti testi scomparisse qualsiasi riferimento agli impegni assunti con l'ATI FISIA ITALIMPIANTI e si tendesse a integrare in un unico piano regionale quanto già contrattualizzato (nel 2000 per la provincia di Napoli; nel 2001 per le altre province campane) e quanto formava oggetto della nuova convenzione, a dispetto della palese incompatibilità tra le due discipline.
Deve soprattutto osservarsi come l'ordinanza 30/2002 e la convenzione successiva - dietro il paravento di una fase transitoria di impasse addebitata alla chiusura per esaurimento delle discariche in esercizio e ad alcuni provvedimenti giudiziari di sequestro, fase della durata preventivata di 6/9 mesi - nascondessero l'affidamento

all'IMPREGECO presieduta da Valente di un processo di lungo termine come quello di 'valorizzazione' degli R.S.U.
Non può esservi dubbio sulla perfetta identità funzionale del processo di valorizzazione espressamente previsto nell'ordinanza n. 30/02 (confermato da Valente che ha parlato di un processo di elettropirolisi) e quello già affidato alle cure dell'ATI FISIA ITALIMPIANTI.
Dalla consultazione del sito della ditta I.C.O.M. Milano il N.O.E. di Roma ha tratto la definizione del processo di elettropirolisi: "*decomposizione termochimica di materiali organici con applicazione di calore in assenza di ossigeno – (agente ossidante)* ovvero "***Pirolisi o piroscissione indica un processo di*** **dissociazione molecolare** ***generato a*** "bassa temperatura" ***in grado di produrre con l'impiego di rifiuti urbani, rifiuti industriali o biomasse energia termica ed elettrica."***
Il confronto di questa definizione con quella di ***termovalorizzatore*** (***"****impianto moderno, ove il calore sviluppato durante la combustione dei rifiuti ad alta temperatura viene recuperato e utilizzato per produrre vapore, poi utilizzato per la produzione di energia elettrica o come vettore di calore (ad esempio per il teleriscaldamento). Questi impianti con tecnologie per il recupero vengono indicati col nome di inceneritori con recupero energetico, o più comunemente termovalorizzatori")* conferma la conclusione di Valente.

Per comprendere il tipo di complicità che si venne a creare tra il consorzio casertano CE4 (leader nell'ambito dell'IMPREGECO) e la struttura commissariale rappresentata da Facchi al momento dell'adozione dell'ordinanza citata, della stipula della relativa convenzione e di altre ordinanze collegate, occorre poi confrontare: un passaggio dell'ordinanza n. 398 del 14.8.01 (quella che autorizzava l'impianto di stabilizzazione in Santa Maria La Fossa) con un brano delle già riportate dichiarazioni del presidente Valente.

Questo il contenuto dell'ordinanza emessa dal sub commissario Facchi il 14.8.01, per la parte di interesse:
"***considerato il progetto presentato dal Consorzio di Bacino CE4, dopo che lo stesso Consorzio ha svolto un'indagine tecnica e di mercato, per individuare tecnologie in grado di soddisfare le esigenze di economicità, di rapidità di realizzazione, di scarso fabbisogno di volumi e di rapidità del processo di stabilizzazione (…) DISPONE di autorizzare la realizzazione dell'impianto di biostabilizzazione con tecnologia 'Orsttabb sistem" fornite dalla società ICOM Milano s.p.a. presso la discarica in località Parco Saurino, comune di Santa Maria La Fossa"***

Queste le dichiarazioni di **Valente** sull'impianto di stabilizzazione ICOM, rese nell'interrogatorio del 23.02.2009***:***

"l'impianto di stabilizzazione fu formalmente imposto da Facchi con delle ordinanze, nelle quali questi imponeva al Consorzio di acquistare dalla ICOM di Milano – una società di impianti – queste strutture. La stabilizzazione dei rifiuti, anche provenienti dai Comuni del bacino CE4, fu attuata in questi impianti. Facchi ci disse che per poter disporre e realizzare un impianto di stabilizzazione era necessario rivolgersi alla ICOM, l'unica società che disponeva di un brevetto – a suo dire – adeguato. Era quello l'unico modo per farci autorizzare alla realizzazione di un impianto di stabilizzazione."

Può insomma ragionevolmente ritenersi che quella che l'ordinanza definisce come

‘indagine tecnica e di mercato’ fu in realtà una contropartita chiesta da Facchi in cambio dell’assegnazione all’IMPREGECO del potere di realizzare di fatto un C.I.R. concorrenziale.
Il sospetto di un sostrato corruttivo della convenzione si fa ancora più forte se si considera che la società ICOM raccomandata da Facchi forniva all’IMPREGECO non solo l’impianto di “stabilizzazione” di Santa Maria La Fossa, ma anche altri impianti ed accessori; e che la stessa società diveniva, negli anni a seguire, società partecipante nella società GMC Multiservizi Spa, società mista anche questa, facente capo ai fratelli ORSI.

Deve poi osservarsi – a riprova della sostanziale sovrapponibilità delle prestazioni affidate all’IMPREGECO in spregio dell’esclusiva di Fisia Italimpianti – che la *biostabilizzazione* autorizzata da Facchi in Santa Maria La Fossa costituiva già parte dei processi di produzione affidati ‘in esclusiva’ al gruppo d’imprese settentrionale (vedi sul punto la pag. 29 dell’annotazione di P.G. del 20.4.09).

Icastiche riprove di quanto la creazione del superconsorzio IMPREGECO e la stipula della citata convenzione fossero percepite, anche dagli amministratori della FIBE, come momento di una strategia tesa alla loro espulsione dal territorio regionale campano la traiamo dalle seguenti conversazioni, avvenute il 9 e il 16 aprile 2002 tra l’amministratore delegato Cattaneo e tale avvocato Macrì.
Nella conversazione n. 12121, captata sull’utenza in uso a Cattaneo, integralmente trascritta alle pagg. 87-92 della nota integrativa trasmessa dai PP.MM. nel maggio 2009) l’amministratore della FIBE così commenta la bozza di convenzione n. 30 della quale è entrato in possesso:
“quella,in quel..., in questo momento, cioè io dico...io ho la bozza di ordinanza firmata da Bassolino e mandata a Roma (…) …è una lotta qui a Napoli che sappiamo che c'è Facchi che sta tentando in tutti i modi di costituire una società, un super Consorzio un qualche cosa per subentrare, no? (...) quindi non è... E’ chiaro, no? La società l'ha già fatta, si chiama pure Impregeco (…) non so nemmeno se...questo nome, Impre.., l'ha fatto artatamente...omissis…Impregeco è una società, è un... è una società tra i Consorsi di bacino che attualmente avrebbe lo scopo di bilanciare la tariffa tra Comuni in emergenza e Comuni non in emergenza, però è la struttura Facchiana pronta a dire, eccola qua, no? L'ente competente...(inc)...la società dei Consorzi di bacino, a cui probabilmente pensa di mettersi a capo lui personalmente alla fine dell'emergenza, no? (...) e no ma è un problema enorme, io (inc) mi fa una rabbia guarda perché è da settembre che ne stiamo parlando (...) e sì, sì perché poi noi, diciamo che cosa sta succedendo che tutte le nostre ehm... come dire tutte le nostre richieste affannose, ci serve per le banche eccetera, diventano punti di debolezza su cui ci colpiscono perché le sanno anche le pietre no?....omissis……...questo è il problema, quindi quando noi andiamo a... dire disperatamente “ah ci servono le cave, ci servono le discariche se no le banche eccetera” immediatamente le discariche mi costano il doppio, ma dalla sera alla mattina eh, qui c'è proprio una...una catena di gente che approfitta, che corre no? Io non...cioè...è capitato adesso per un terreno per lo stoccaggio, siamo affogati con lo stoccaggio, perché c'hanno non gradito un sito…”

Nella conversazione n. 13410 lo stesso Cattaneo così si sfogava con l’amico Macrì. Significativa è l’esatta percezione da parte di Cattaneo di quella divisione interna alla struttura commissariale sulla quale ci hanno già intrattenuto Vassallo e Valente:

"(…) perché non cada in mano a Consorzi di condi…di bacino, strane…strane strutture…diciamo que…locali legate ai Comuni che sarebbe pernicioso per il bene del progetto, sottolineo, perché quando un progetto di questo tipo mi cade in mano ad una S.p.A. formata da 18 Consorzi di bacino (…) no…è un'ipotesi che…che nemmeno nominiamo alle banche non diciamolo a nessuno (…) e chiaramente un…, delle fazioni di nostri nemici che sono nell'ambito dei rifiuti immaginano di creare un super Consorzio formato da 18 consorzi (…) funzionari dell'emergenza rifiuti (…) parliamoci chiaro dottor Facchi, Giulio Facchi (…) è chiaro! Violentissimi… perché tutto qui c'è una guerra tra Facchi, dottor Giulio Facchi …fa la guerra. In primis la fa a Vanoli e ad Acampora che sono i nostri interlocutori diretti, e indirettamente la fa anche Bassolino che sostiene questa linea e sparge veleni di ogni tipo sul nostro conto ecc…e siccome lui vuole…lui…diciamo questo (…) il professor Vanoli è uno stimatissimo professore universitario, progettista, persona diciamo che ha modo di avere redditi da professione, da università, prestigio tutto quello che vuole, fa questo per spirito di servizio, quando finisce va fare il professore, va a fare il professionista non ha un problema nella vita. Acampora è un funzionario ad alto livello della Regione, la sua poltrona, la sua scrivania non gliela toglie nessuno. Facchi che è un verde, quindi di un partito italo cubano, sì, il giorno che finisce l'emergenza diventa il signor Giulio Facchi da Bergamo, torna a Bergamo e sta seduto ai giardinetti. Allora, cosa c'è? Guerra mortale per cercare di essere colui che gestirà l'ordinario dei rifiuti…"

Ma la riprova più chiara dell'esistenza del progetto di un CIR alternativo e del coinvolgimento in esso degli imprenditori mafiosi si trae dalla seguente conversazione, avvenuta nel periodo caldo dell'agosto 2002.
In quell'epoca l'IMPREGECO stava vivendo l'entusiasmante fase dell'appagamento di tutti i suoi appetiti: pochi giorni prima era stata emessa l'ordinanza che autorizzava la discarica in località Lo Uttaro, attribuendo all'IMPREGECO (e dunque alla ECO4) i compiti più remunerativi. Erano intanto in pieno svolgimento i lavori per l'ampliamento di Parco Saurino, con l'annesso lucroso affare dei suoli.

La conversazione (n. 4487 del 23.8.2002) avviene tra Giuseppe Valente e Sergio Orsi e non ha bisogno di commento:
Sergio: Presidè?
Valente: Oèh!
Sergio: Dimmi!
Valente: Senti nu' poco noi dall…..da settembre
Sergio: Sì
Valente: Ma, ma pure prima di settembre se fosse possibile addirittura da rimane noi ne i comuni nostri amma a' fa a' raccolta differenziata totale
Sergio: Vabbene pure è dovuto
Valente: Sai pe' quale motivo?
Sergio: Si
Valente: Eh!
Sergio: Si
Valente: Pecché no…
Sergio: Lo so i.. io aggi itt' accattateve u' ventiquattrore
Valente: Sa da fa' a raccolta differenziata immediatamente pecché co la raccolta differenziata il… il nostro rifiuto non ha più motivo di andare al CDR
Sergio: Sì
Valente: Pecché è differenziato
Sergio: E certo!
Valente: Quindi lo dobbiamo trattare noi integralmente

Sergio: Esatto
Valente: E guarda che pe fa a raccolta… e gua……
Sergio: *(incomprensibile in quanto le voci si accavallano)* … deciso pero e…
Valente: Come?
Sergio: Questo e…. rientra nel famoso CIR
Valente: Ma nu e… lu lu cir mentre… adesso noi il cir non ce l'abbiamo ma però non significa de…
Sergio: Lo so lo so lo so…
Valente: Noi pe fa' u' cir non facimm chest, incominciamo a fare questo!
Sergio: Certo!
Valente: Che ce ne fotte a noi cioè lu cir è un….
Sergio: So d'accordo con te
Valente: …Il cir deve seguire la sua strada quando è pronto è pronto noi non è che emmo a' fa pe… pe aspettà na' cosa non ne faccimmo n'ata
Sergio: Questo è vero e solo che tu, dicimmo, col cir tieni costi…. cinque senza cir tieni costi mille per esempio se mo te cont naa…. barzelletta no Ilside non vuole ricevere più…..
Valente: Questo lo andiamo a verificare poi no…. questo poi amm a' verè
Sergio: No già già ce l'ha fatto ci ha bloccato i conferimenti
Valente: Va bene, poi qualcuno ci dovrà dire dove dobbiamo andare… o Dio ma voglio dire il problema come lo teniamo noi lo tiene anche…
Sergio: Sì sì
Valente: Eh….il CDR quindi è un problema che deve…
Sergio: E' normale è normale
Valente: E' un probl è un problema che deve essere risolto in altra sede a noi….
Sergio: Sì sì sì !
Valente: … Non ci interessa, cioè Ilside nun si pija a' cosa vabbè significa che lu commerciale du' governo, il governo qualcuno ci dovrà dire dove deve andare a finire sta roba che prima Isside nun se vo' pijà
Sergio: Umh umh!…Vabbene
Valente: Possiamo crearci anche noi Isside
Sergio: Ma noi già stiamo organizzando pure sume, tanto tennimmo 'e buste biodegra….
Valente: Poi ti di… poi ti dico na' cosa che la raccolta differenziata fatta organizzata bene costa… viene a costare di meno della raccolta normale
Sergio: Si! Specialmente si tiene però si tiene gli impianti tua capit….
Valente: Lo so ma noi noi… noi attualmente sient…siente me siente…
Sergio: Noi però nel frattempo che facimme n' facimme niente?
Valente: Ah!.... Noi facimece a raccolt noi facciamoci la raccolta differenziata pecché se…
Sergio: Sì sì …..
Valente: Se noi… se noi per la metà di settembre va in funzione la nostra discarica del secco il differenziato nostro il differenziato nostro da raccolta differenziata il secco….
Sergio: Si si sì…..
Valente: …Noi lo portiamo alla nostra discarica mica ammo a' porta a…. l'impianto di CDR
Sergio: Certo, certo, certo…
Valente: L'umido l'umido ce lo andiamo a gestire noi lo portiamo noi dir.. l'impianto
Sergio: E' normale è normale
Valente: Noi teniamo l'impianto di biostabilizzazione, ce lo biostabilizziamo noi
Sergio: Esatto esatto no ma questo già lo stai facendo tant'è vero non so se Claudio te l'ha detto noi abbiamo or… abbiamo ordinato ci devono arrivare pure i sacchetti, le buste biodegradabili che ce li doveva dare (incomprensibile)
Valente: Tutti questi, tutti questi, tutti sti porter, tutti sti porter che abbiamo acquistato noi li utilizzeremo tutti quanti per la raccolta differenziata
Sergio: Esatto, esatto, esatto
Valente: Pecché kello basta che… noi a' raccolta differenziata vedi è…. noi senza essere senza fare i sofisti no non è che poi c'amme a' nventà niente la raccolta differenziata se noi la facciamo nei comuni di Castel Volturno Mondragone Cellole, Sessa e Teano
Sergio: Sì sì, già basta

Valente: Stamm già già e… già il CDR della provincia di Caserta e…
Sergio: A fatt…
Valente: A… a a non….ha più…. convenienza a stare aperto perché…
Sergio: Si si…
Valente: Lui il dispositivo che ha fatto Facchi oggi prima e poi l'ha revocato in parte, pecché mo' sta arrivanno u dispositivo che riguarda solo Mondragone e Castel Volturno
Sergio: Eh e Sesse e cose
Valente: Sessa niente n'ha voluto fa pecché a ditto che l'impianto di CDR già è troppo che ammo fatto accussì perché hanno protestato che non arriva cchiù mondezza adda loro
Sergio: Ah se…
Valente: Cioè praticamente qua ne o….
Sergio: E kist Sessa e… Cellola però *(incomprensibile in quanto le voci si accavallano)*
Valente: Eh… c'aggio a' fa e che ci pozzo fa i
Sergio: A baia domizia come fa
Valente: E…. non lo so non lo…
Sergio: Facci aggiungere almeno a baia domizia
Valente: E guarda pe ce fa aggiunge Mondragone ce voluta a mano de Dio voleva fa solo Castel Volturno voleva fare solo Castel Volturno
(…)
Valente: E Sessa poi fa quello che cazzo vo Sessa facesse quello…. Sessa a… allora a Sessa, tu gli dovevi dire "telefonate a Facchi e faciteve fà 'o provvedimento pure pe' voi
Sergio: Eh.....
Valente: Tu dici che so stati i sindaci, se è qualcosa dici che so stati i sindaci che hanno… che hanno spinto per fare questo provvedimento
Sergio: Certo, certo
Valente: Oh…..l'impianto di CDR l'impianto di CDR va a regime ed è economicamente vantaggioso per loro se riceve….
Sergio: Se riceve rifiuti
Valente: Se arrivano almeno nove milleduecento tonnellate al giorno ma se da mino…(incomprensibile in quanto le voci si accavallano) Se da milleduecento ce ne arrivano ottocento loro hanno chiudere pecché non tene cchiù interesse…. leee… economicamente non hanno più la laa……
Sergio: Presidè, sai come *(incomprensibile)* te ne accorgi 'e vvote che quando, ogni tanto quando parlo io, nun me sienti…
Valente: Ma chi te a' rit?
Sergio: Si a vo' sto strunz a… *(incomprensibile in quanto le voci si accavallano)*
Valente: Ah' facc du u' caspite, nun te sento…i te… i e Claudio T'hammo fa girà a' capa fa a' raccolta differenziata
Sergio: …..(incomprensibile) So contrarie…però io lo subordinavo al cir questo era il mio errore
Valente: E' chiaro pecché chisto è l'errore tuo, perchè 'u cir quanno sarà fatto, 'u cir sarà fatto
Sergio: (incomprensibile) .. Tornavo al cir per un problema di costi
Valente: No…. ma quale costi
Sergio: Solo per un problema di costi pecché io dicevo… *(incomprensibile in quanto le voci si accavallano)*
Valente: Ma pecché…..non signi….. ma pecch….ma che significa i costi tu tu hai….
Sergio: Eh mo te spiego pecché quando i faccio la raccolta differenziata
Valente: Eh!...
Sergio: Po io ci devo aggiungere il costo di smaltimento se il costo di smaltimento….
Valente: Ma non è vero! Ma non è vero se tu la raccolta differenziata la porti al cinquanta per cento tu hai un vantaggio in entrata pecché tu la roba la vendi tu hai degli incassi
Sergio: No ma….
Valente: Oi' Se…oì Se… eh… la raccolta differenziata na' cosa e…. i comuni già ti pagano a te pe fa a' raccolta differenziata
Sergio: Si però costa cchiù assai 'u progetto mio e questo qua, guarda che ne diede atto ma mo

no ‘a n’anno passato Facchi perché mo ti spiego qual è se no il mio modesto punto di vista…
Valente: Oì Se… il cir è na cosa che s’a da fa, però in attesa del cir noi nun putimmo non fare questo
Sergio: Chisto è n’ato paro ‘e maniche
Valente: E allora parlammo e chisto lu cir se….
Sergio: Se nu po’ ice che pe mezzo che nu tiene a’ machina tu nu puoi i a Napoli….*(espressione dialettale incomprensibile)*
Valente: Sergio allora…. Sergio sono due… sono due sono due amministrazioni diverse na cosa a’ da fa lu cir a da i’ pè fatti suoi, na cosa è chesta. Quindi mo’ stammo a parlà de chesta e parlammo ‘e chesta, poi fra cinque minuti vuo’ parlà de lu cir, parla de lu cir
Sergio: No e vabbuò, io te stongo a dicere per quale motivo io vedevo…. dicimme si me sta calendo no? Per giustificare perché io dicevo quando faccio u’ progetto io u’ fa Isside isso tu u’ fa i cinquanta lire pecchè tiene gli impianti suoi i faccio u’ progetto i cento lire pecché *(incomprensibile in quanto le voci si accavallano)*
Valente: Ah…. Sergio ma vuoi… vogliamo raggiungere l’obiettivo dee…. di essere alternativa a Fisia
Sergio: E certo
Valente: E per essere alternativa amma a’ fa a raccolta differenziata solo co la raccolta differenziata Fisia non ha motivo di esistere
Sergio: E lo so lo so esattamente ma tu nun ce porti niente cchiù a’ roba
Valente: Non ce va cchiù niente là hanno chiuso…
Sergio: Pecchè dumete dumete… cioè demente vando impianto e’ compostaggio…
Valente: Noi intanto siamo obbligati intanto siam….. noo… noi intanto siamo obbligati ad andare da Fisia perché perché noi abbiamo il tal quale, il tal quale non lo possiamo portare da nessuna parte allora siccome ci sta l’impianto di CDR nella provincia tu l’hai a’ portà all’impianto di CDR ma quando tu il prodotto lo hai differenziato umido e secco il prodotto non è più di Fisia
Sergio: Si si si so d’accordo con te
Valente: Quindi ad Fisia non ce di kiù niente
Sergio: Vabbene….
Valente: Mo’ tu immagina nu’ poco se viene meno, se viene meno il consorzio CE4 gli è venuto meno un terzo della provincia di Caserta, da milleduecento scendono a novecento tonnellate, loro è antieconomica la loro raccolta
Sergio: Sì, sì, e se n’anna ì….
Valente: E se n’anna ì, hanno da chiudere l’impianto i CDR
Sergio: Esatto
Valente: chist è!
(…)

Riecheggia soprattutto in queste telefonate e in tutte le notizie finora riportate la strategia accaparratrice programmata dai fratelli Orsi e condivisa da Vassallo nella veste di ‘consulente’ di Bidognetti (**interrogatori di Gaetano Vassallo il 3, il 5 e il 18 giugno 2008)**:

“La previsione, di cui mi parlò ORSI Sergio di una società mista pubblico-privato, costituiva una breccia fondamentale per consentire nuovamente ai privati e, conseguentemente anche ai gruppi organizzati mafiosi, quali quello di BIDOGNETTI, di ingerirsi direttamente nella gestione”.

*”…**il progetto di Sergio ORSI…era volto ad appropriarsi di tutti i consorzi dell’area casertana aggiungendo al CE4, che già sostanzialmente dipendeva da lui, i consorzi CE1, CE2, CE3**…..omissis……”*

Si risente anche la voce di un soggetto di quel progetto fu protagonista, **Giuseppe VALENTE,** già presidente dell’IMPREGECO (interrogatorio del 23/02/2009)**:**

"*…omissi……****il progetto di costituire l'IMPREGECO mi fu proposto da FACCHI Giulio in termini meno espliciti e rappresentandomi i vantaggi che avrei potuto ricevere da una posizione di potere di quel tipo. Compresi agevolmente nel tempo che l'IMPREGECO serviva quale strumento per sostituire la FIBE;* …***faccio presente che FACCHI esternava continuamente, anche pubblicamente, la sua avversione rispetto a FIBE e lo stesso faceva PAOLUCCI, altro Subcommissario di Governo****…****era facilmente comprensibile, osservando in modo ragionato le competenze di IMPREGECO, che questo Ente rappresentasse un ente analogo alla FIBE, per quel che erano le sue attività.** *(…)* **gli interessi economici erano troppo rilevanti per affidarli ad una società estranea del Nord, quale era la FIBE".**

Antonio BASSOLINO, presidente della Regione Campania, escusso come persona informata sui fatti, sull'ordinanza e sulla convenzione, che pure ebbe a firmare, non sapeva fornire ragioni.
In compenso confermava la paternità di Facchi (**Sommarie informazioni del 13 febbraio 2009***):*

"ADR: ***quanto alla società IMPREGECO a responsabilità limitata, società di fusione dei Consorzi CE4, NA1 e NA3, non ricordo tale sigla societaria, anche se rammento che in un certo periodo si realizzò una convergenza tra tali Consorzi per esigenze che in questo momento non rammento specificamente. Il mio ruolo e le plurime mie incombenze non mi consentivano di avere una cognizione tecnica specifica delle vicende; fu per queste ragioni che io nominai PAOLUCCI Massimo quale mio Vicario e, in tempi successivi, mi dimisi – nel 2004 – dall'incarico di Commissario di Governo. .omissis…***R: ***Pur prendendo visione del testo dei due documenti e leggendo il contenuto, non riesco a ricordarmi le ragioni per le quali si giunse a tale convenzione. Faccio presente che l'ordinanza n. 30 del 20 gennaio 2002, reca quattro siqle per la sottoscrizione – firme che non sono in grado di riconoscere – attraverso cui è possibile individuare coloro che hanno formato l'atto o comunque condiviso il relativo contenuto, predisponendola (…) Dalla lettura dell'atto nella quale si individua nel Sub-commissario il ruolo funzionale deputato all'individuazione degli "impianti di selezione, trattamento, valorizzazione e riciclaggio dei RSU" (art. 2 della convenzione) posso dire che certamente fu Giulio FACCHI ad essere tra gli autori principali della convenzione stessa; era infatti lui il Sub-commissario incaricato di tali individuazioni".***

Il profilo politico della faccenda è chiarito - oltre che dalle inequivoche dichiarazioni di Valente dalle quali abbiamo preso le mosse - da una conversazione tra Claudio De Biasio e lo stesso Valente avvenuta il 3.7.2002 (n. 1483 – integralmente riprodotta alle pagg. 99- 102 della nota integrativa 13.5.09). Le parole spese dai due uomini della ECO4 divenuti, rispettivamente, direttore e presidente del superconsorzio che aggrega il Consorzio CE4 e i consorzi NA 1 e NA3 non hanno bisogno di commento.

Così ***Valente: "…. Io mo' devo chiamare pure a Nicola perché devo prendere appuntamento, dobbiamo andare io e Castaldo da Nicola e poi da… da… come si chiama… il coordinatore regionale di Forza Italia, come si chiama…? Martusciello! Anche perché noi dobbiamo mettere nelle loro mani uno strumento di potere, per dire: "Qua la comandiamo noi! Che volete fare, volete fare così o andiamo avanti per fatti nostri?",…tanto la IMPREGECO è formata da tre consorzi, non è che la IMPREGECO ce l' ha fatta la Regione, nel senso che… sia ben chiaro questo eh!***

…noi abbiamo sempre una convenzione…"
De Biasio concordava: ***"…teniamo solo una convenzione ma poi ci sta la massima autonomia dei tre consorzi insomma…."***;
Riprendeva il **Valente**: ***"…ma che stiamo scherzando veramente? …ma quello il dottor Gellini lo sa bene che sta per andare con le "pacche nell'acqua"….inc… (livello di voce bassissimo) l'assemblea, dobbiamo azzerare …inc… la cosa che dobbiamo fare, la prima cosa che dobbiamo fare… io mo' chiamo al volo a Cosentino…".***

Anche De Biasio del resto è uomo di Cosentino, come dimostra la conversazione che segue nella quale, parlando con Sergio Orsi dell'eventualità di una sua candidatura a sindaco di Calvi Risorta, il direttore tecnico della ECO4 riferisce il seguente dialogo con il deputato (conversazione del 30.1.04 n. 1051):

"C: perché lui girava, voltava, ho detto "onorevole vi ho chiamato 3 volte lunedì non mi avete risposto al telefono, ho detto, vi volevo dire di questa questione di Calvi." Lui già come ho detto questo ha sbandato …(ride)… Ho detto "a me se COSENTINO non mi vuole come coso, me lo deve dire guardandomi negli occhi, perché la mia disponibilità io l'ho data perché piaceva a lui e piaceva a Mario LANDOLFI."
S: esatto.
C: ho detto "ma se non fa piacere a nessuno di questi due oppure anche ad uno solo dei due, io sto bene dove sto perché a me questo mi piace fare."
S: e lui che ha detto?
C: "Claudio ma tu stai giocando, ma che stai dicendo?" Ho detto "No, io vi sto dicendo che Gabriella PERROTTA ha detto – ma chi lo ha detto che a COSENTINO va bene il nome di Claudio DE BIASIO?" "Se ha detto questo è una stronza perché non è vero. Ha detto "io quello che non tollero Claudio è il caparchismo galeno." Su questo lui ha ragione. Ha detto "io, Antonio CAPARCO la deve finire di pensare che fa lui, gestisce lui, perché se lui oggi è qualcuno e può usare la parola è perché gliel'ho fatto fare io." Il fatto di… Ho detto "su questo voi avete il mio… il mio sostegno, perchè pure io penso la stessa cosa. Ho detto, a me se Nicola COSENTINO mi avesse fatto fare il direttore generale del Ministero delle Attività Produttive, io starei in orizzontale, a tappetino e invece lui…" Ha detto "ho ragione o non ho ragione, ha detto, e questo e sopra la centrale gli unici che mi contestano sono quelli là che fanno capo al polo e sopra a questo… la vogliamo finire! Ha detto, non si discute proprio, il sindaco di Calvi Risorta sei (inc. segnale irregolare)"

La corrispondenza del progetto IMPREGECO agli interessi degli imprenditori mafiosi Sergio e Michele Orsi si trae, oltre che dal ruolo dominante che in quel superconsorzio ebbe ad assumere il consorzio CE4, da una conversazione avvenuta negli uffici della ECO4 tra Sergio Orsi, la segretaria e un rappresentante di impianti.
La conversazione (n. 15423 del 29.4.04 – decreto n. 2501/03) è interamente riportata nelle pagg. 76-79 dell'annotazione di P.G. e contiene, tra l'altro, le seguenti affermazioni di Sergio Orsi che avvalorano la stretta relazione tra ECO4 e IMPREGECO:

"…***Ve lo dico io perché non è un segreto... insomma, devo dire la verità... lui quando parlavano con me...; perché lui... la società ...(inc)..., è la società Eco4... cioè mista... prevalente capitale pubblico e Consorzio Ce 4; però poi a sua volta è socio della Impregeco, di cui lì ci sta Napoli1, Napoli3 e dovrebbero gestire gli impianti in Campania; quindi noi saremmo dei ...(inc)... di Caserta... attraverso l'Impregeco ...(inc)...; quindi se si dovesse fare ...(inc)... giuridicamente, poi nei fatti; se si dovesse fare ...(inc)... qualche impianto eccetera eccetera, alla fine noi dovremmo...; ecco perchè ne so qualcosa...""***.

Michele Orsi del resto, nell'interrogatorio reso il 5 aprile 2007 al GIP di Santa Maria Capua Vetere, sia pure riduttivamente, ammetteva:

"IMPREGECO era solo…perché la società IMPREGECO si doveva occupare, ripeto, di attività di impianti, impiantistica e noi, giacché siamo imprenditori, dottore, chiaramente laddove si intravede una possibilità di poter lavorare, di poter costruire, noi comunque eravamo felici e contenti di poter entrarne a far parte"

L'esistenza di un progetto di espulsione della ATI FISIA ITALIMPIANTI dal circuito campano, o almeno da quello casertano, è confermata con chiarezza da un protagonista 'occulto' dell'operazione, il sub commissario Giulio Facchi.
In una conversazione avuta con il sindaco di Santa Maria Capua Vetere il 29.8.2002 (captata sull'utenza del Facchi con numero progressivo 1552), a margine di un controllo con esito negativo effettuato dall'ARPAC sul prodotto dell'impianto CDR gestito dall'ATI FISIA in Santa Maria Capua Vetere, Giulio Facchi descrive efficacemente il quadro politico della vicenda, tacendo ovviamente il suo ruolo:

"*...**però oggi c'è in piedi una corrente forte che vorrebbe mandare a casa FISIA per impossessarsi di tutto e li stanno massacrando. Infatti io ieri sera ho cercato di capire come mai Ventre sta forzando. Allora lì c'è una guerra tra lui e Cosentino sulla questione del termo distruttore. Nel senso che Ventre fu uno di quelli che aveva indicato Santa Maria la Fossa (**...) adesso Cosentino e compagnia bella stanno cominciando ad alzare le barricate perché vogliono entrare nel gioco (**...) Sto dicendo: ma se FIBE **sta vendendo le quote…perché non parliamo con aziende pubbliche grosse e non mettiamo in piedi una cordata di aziende pubbliche (…) entriamo, e questo può essere l'alibi poi per rivedere tutto (…) perché lo facciamo con soggetti pubblici, cazzo! perché regaliamo a Ventre e Cosentino e compagnia bella la possibilità di…di scegliere chi compra, chi non compra, se proprio siamo coglioni insomma…"***

15e. L'IMPREGECO come diaframma formale posto tra gli imprenditori camorristi e il Commissariato di Governo

Dalla conversazione tra l'amministratore delegato di FIBE Cattaneo e l'avvocato Macrì che si è sopra riportata è già emerso come la strategia espulsiva passasse attraverso il monopolio delle discariche assegnato alla IMPREGECO che rendeva di fatto costosissima, per l'affidataria del CIR regionale, il disimpegno delle sue funzioni, soprattutto nelle fasi di crisi determinate dalle periodiche chiusure degli sversatoi.
La questione assume particolare rilievo perché gli accordi assunti dal Commissariato con il gruppo d'imprese affidatario e le richiamate ordinanze prevedevano che, al contrario, il Commissariato sospendesse – salve particolari esigenze – l'autorizzazione di discariche diverse da quelle poste al servizio del CIR gestito dall'ATI affidataria.
L'elenco delle 18 ordinanze emesse dalla struttura commissariale in relazione all'area di parco Saurino dice quanto quella zona fosse divenuta cruciale per gli affari della ECO4 e quanto siano riscontrate, fino al dettaglio, le dichiarazioni con le quali Vassallo commentava l'"*eccezionalità del progetto*' di Sergio Orsi per gli interessi della criminalità organizzata.

l'***Ordinanza n. 398***, del *14/8/2001*, autorizzava la realizzazione di un impianto di **"biostabilizzazione"** ;
l'***Ordinanza n. 570***, del *21/11/2001*, per la realizzazione dell'installazione di un **"impianto di**

pressatura ed imballatura" dei rifiuti;

l'***Ordinanza n. 001***, del *14/1/2002*, relativa all'**esproprio dei terreni e realizzazione dell'ampliamento della discarica di "Parco Saurino"**;

l'***Ordinanza n. 004***, del 11/2/2002, autorizzativa dell'**esercizio dell'impianto di "stabilizzazione"**;

l'***Ordinanza n. 009***, del 22/02/2002, autorizzativa dell'esercizio dell'impianto di "tritovagliatura";

l'***Ordinanza n. 019***, del 11/4/2002, autorizzava l'esercizio dell'impianto di "pressatura e rotoimballatura";

l'***Ordinanza n. 051***, del 13/9/2002, di autorizzazione dell'**integrazione dell'impianto di "biostabilizzazione"** ;

l'Ordinanza n. 055*, del 23/10/2002,* autorizzativa della realizzazione delle opere previste per l'allocazione di **due linee di biocelle per la fase di biossidazione della frazione organica proveniente dalla raccolta differenziata***;*

l'***Ordinanza n. 63***, del 17/12/2002, di autorizzazione, ex art. 28 D. lgs.vo 22/97, all'**esercizio provvisorio del bacino di stoccaggio definitivo di "Ampliamento della Parco Saurino2';**

l'***Ordinanza n. 003,*** del 05/2/2003, autorizzativa della realizzazione del "Centro Integrato Recupero rifiuti*" (C.I.R.R.);*

l'***Ordinanza n. 022,*** del 28/03/2003, di **autorizzazione alla redazione di un progetto di Bonifica e Riqualificazione ambientale delle aree di P.co Saurino, con recupero volumetrico degli spazi frapposti tra la discarica di "P.co Saurino 2" e lo stoccaggio definitivo "Ampliamento di P.co Saurino***";*

l'***Ordinanza n. 051***, del 09/6/2003, recante **approvazione del progetto di Bonifica, riqualificazione ambientale e geomorfologia della discarica "P.co Saurino 2" e ampliamento di "P.co Saurino***" ;*

l'***Ordinanza n. 065,*** del 16/7/2003, di autorizzazione, in via provvisoria, l'utilizzo del recupero volumetrico di cui al progetto di "Bonifica, riqualificazione ambientale e geormofologica della discarica di "P.co Saurino", stimati in circa 405.000 mc. *;*

l'***Ordinanza n. 97,*** del 27/10/2003, di **autorizzazione la spesa per l'acquisto del "mescolatore mobile Doppstadt DM215", della ICOM MILANO Spa***;*

l'***Ordinanza n. 85,*** del 19/9/2003, di autorizzazione ex art. 28 D. lgs.vo 22/97, ad utilizzare l'impianto della ditta "Natura Ambiente", sito nel comune di Castelvolturno, da parte del CE/4 per il deposito temporaneo e per la trasferenza dei rifiuti urbani prodotti dai comuni della provincia di Caserta;

l'***Ordinanza n. 100,*** del 05/11/2003, di **approvazione ed autorizzazione il progetto esecutivo presentato dal Consorzio CE/4 relativo al "2° lotto – Ampliamento discarica***;*

l'***Ordinanza n. 001,*** del 09/1/2004, di **autorizzazione all'ulteriore utilizzo per il conferimento delle frazioni provenienti dagli impianti di CDR e di tritovagliatura***;*

l'***Ordinanza n. 027,*** del 20/2/2004, di **autorizzazione ad utilizzare, per la trasferenza dei rifiuti urbani prodotti dai comuni consorziati, l'area già autorizzata e destinata alla rotoimballatura.**

Non si comprenderebbe però pienamente il coinvolgimento dell'impresa mafiosa ECO4 s.p.a. nell'affare Parco Saurino, se si prescindesse da un passaggio delle dichiarazioni di Giuseppe Valente:

*"**Anche nel concreto IMPREGECO si dimostrò ente di natura formale; aveva una struttura molto ristretta. Io ero il Presidente, vi erano altri due amministratori delegati; vi erano poi tre Direttori con funzioni amministrative: D'ALTERIO Pina, DE BIASIO Claudio ed ESPOSITO Enzo.** Vi fu un automatismo nell'individuazione dei Direttori, essendo gli stessi i medesimi Direttori Generali dei rispettivi Consorzi. **L'Impregeco era un ente che sostanzialmente agiva sul fronte meramente contabile e negoziale. Io decisi di partecipare ad IMPREGECO dopo essermi consultato con i miei due referenti politici".***

Il fatto che IMPREGECO fosse nient'altro che un "ente di natura formale" e che nel

contempo fosse interamente finanziata dal Commissariato di Governo implica alcune importanti conseguenze:

per operare l'IMPREGECO doveva rivolgersi a soggetti 'privati' che così recuperavano quel mercato che i contratti regionali stipulati con l'ATI Fisia Italimpianti avevano precluso;

tra questi operatori privati facevano la parte del leone gli imprenditori mafiosi del rifiuto, e in particolare Cipriano Chianese e la ECO4 dei fratelli Orsi;

l'IMPREGECO costituiva di fatto un diaframma di facciata tra l'impresa mafiosa e la struttura commissariale, fungendo talvolta da stanza di compensazione degli interessi dei vari operatori criminali.

La conferma probatoria di questo ruolo della IMPREGECO si ricava dalla cronologia di provvedimenti della struttura commissariale e conversazioni intercettate che può apprezzarsi attraverso la lettura dell'informativa del S.O.C. – R.O. del Comando Carabinieri per la Tutela dell'Ambiente in data 20.11.2007.

I dati più significativi rinvenibili in quell'elenco ragionato sono i seguenti.

Facchi, con l'ordinanza n. 32 del 17.6.2002, autorizzava la RESIT di Cipriano Chianese a sfruttare per lo smaltimento la cava Z e contestualmente imponeva all'IMPREGECO (finanziata dal Commissariato, con espressa previsione di un diritto ad essere rimborsata per i maggiori costi eventualmente sostenuti) di pagare le relative fatture.

L'IMPREGECO aderiva supinamente ai rendiconti presentati dalla RESIT, senza poterne di fatto controllare esaustivamente la gestione per il combinato disposto di più fattori:

la mancanza di strutture idonee ad effettuare tale controllo;

lacune e incongruenze dei provvedimenti autorizzativi emessi in favore della RESIT. L'ordinanza n. 32 del 17.6.2002 ometteva di indicare, ad esempio, il quantitativo massimo di rifiuti conferibili. Le ordinanze relative alla Cava Z della RESIT propiziavano una contabilità confusiva, nel momento in cui autorizzavano contestualmente: lo sfruttamento dell'80% dell'invaso per rispondere alla domanda pubblica e del residuo 20% per lo smaltimento di rifiuti conferiti da privati;

la opaca gestione amministrativa del Chianese e gli artifici documentali descritti nelle informative di P.G. del 5.10.05 e 20.11.2007 (faldone n. 2 punti 1 e 4).

Ciononostante l'IMPREGECO e per essa il suo presidente Valente erano in condizione di percepire almeno alcuni degli artifici posti in essere da Chianese per gonfiare le proprie pretese economiche.

Valente decideva tuttavia di non opporsi al pagamento riservandosi di tirar fuori la cosa "al momento opportuno": "***ma io direi, t'aggio dicere 'a verità, io direi "sta cosa di farla venire fuori al momento opportuno. Io non la evidenzierei nemmeno, io non la evidenzierei proprio, anzi lassa perdere, teniamocela per noi. Poi quando…".***

La scelta di soprassedere si collegava all'aspettativa del rilascio dell'autorizzazione alla realizzazione e gestione della discarica situata in Caserta, località Lo Uttaro - Torrione.

15f. La sponsorizzazione di Nicola Cosentino per l'autorizzazione della discarica Lo Uttaro (2002)

Appurato il rilievo della questione Lo Uttaro per la strategia complessiva dell'impresa mafiosa, passiamo ad evidenziare gli elementi che suffragano la sponsorizzazione

politica offerta dall'indagato a quella operazione.

Il primo ce lo fornisce l'imprenditore **Sergio Orsi,** nell'interrogatorio reso il 25 giugno 2007 alle ore 12.24:

"Sponte: voglio riferire in ordine alla persona di ORRICO Bruno; questi era un vecchio funzionario della cassa del mezzogiorno che fu nominato tecnico dal Commissariato di Governo o dalla Regione o dal Prefetto e che risultava fondamentale in relazione alle sue competenze. Questi mi fu presentato da VALENTE Giuseppe prima che fosse indetta la gara dal Consorzio CE4 e il VALENTE mi indicò l'utilità di rivolgermi a questi per costituire una Ati che fosse attrezzata formalmente per disporre dei requisiti indicati sul bando di gara. Fu proprio attraverso l'ORRICO che ebbi a conoscere BRIGNOLI Ettore, di Cretaro (BG), cui proposi di partecipare alla costituenda Ati.
ADR: dal contenuto dei colloqui tra me, VALENTE e ORRICO era chiaro che quest'ultimo sapesse degli accordi presi con VALENTE per aggiudicarmi la gara.
Faccio presente che io insieme al VALENTE ci rivolgemmo all'avv. ADINOLFI, anche questi conosciuto dall'ORRICO e mi sembra proprio da questi indicato, al fine di stabilire e predisporre il bando di gara in modo da consentire l'aggiudicazione alla Ati-Flora Ambiente.
Il bando fu quindi tecnicamente redatto grazie all'apporto di questo legale. Il legame con ORRICO Bruno si è sviluppato maggiormente nel tempo a seguire; posso dire che ho avuto modo di prestare gratuitamente della manodopera privata per la realizzazione di un manufatto (un muro) ad una signora sua amica in Valle di Maddaloni e dei lavori di imbiancatura della sua abitazione.
Ci adoperammo inoltre per procurare una BMW allo stesso, grazie a un concessionario di Caserta attraverso un rappresentante di nome ISERNIA Fabio; voglio subito dire che l'intenzione era quella di concedere gratuitamente la BMW qualora l'ORRICO si fosse reso disponibile a nostro favore e se ce lo avesse chiesto; di fatto la vettura non fu poi mai consegnata né pagata; l'ORRICO era importantissimo per noi per i suoi rapporti col Commissariato di Governo e per la sua competenza tecnica.
Proprio tramite l'ORRICO vi era un progetto che vedeva il promesso inserimento di una nostra società per l'utilizzo di una discarica che doveva essere autorizzata dal Commissariato, situata in località Lo Uttaro. Si tratta di una vicenda che si colloca verso il 2003, in prossimità dell'esaurimento della discarica Saurino 2. Faccio presente che non so dire se si trattasse di un sito già adibito a discarica oppure una cava ancora inutilizzata; so che in località Lo Uttaro vi erano almeno due invasi, uno dei quali già esaurito e l'altro era quello di cui sto parlando.
ORRICO ci promise lo sfruttamento dei nostri mezzi per le attività di smaltimento da realizzarsi in quella discarica, con indifferenza rispetto alla società che sarebbe stata formalmente incaricata di tale attività: poteva trattarsi indifferentemente della Eco4 o di Ambiente e Territorio; posso dire che recentemente in carcere ho avuto modo di incontrare il proprietario di quella cava il quale mi disse che era stato arrestato per l'omicidio del nipote, comproprietario proprio di quella cava.
Proseguendo nel raccontare della vicenda di Lo Uttaro, faccio presente che fu interessato anche VALENTE Giuseppe della cosa ma non so dire se poi la discarica sia stata o meno autorizzata ma comunque non venne da noi utilizzata.
ADR: faccio presente che conoscevo personalmente FACCHI Giulio, anche se meno di quanto conoscessi BELOSI; gli davo del "tu" ed ebbi modo di chiedere - mostrandomi interessato – se fosse possibile autorizzare la cava di Lo Uttaro e se comunque il sito rientrasse tra i piani del Commissariato.

Non mi ricordo se poi FACCHI ebbe a disporre l'autorizzazione della cava in questione, ma certamente fu ORRICO Bruno l'interlocutore principale tra me e il Commissariato rispetto a questa autorizzazione, unitamente al VALENTE Giuseppe.
ADR: faccio presente che per la vicenda afferente la cava di Lo Uttaro io mi rivolsi anche ad alcuni politici onde comprendere se vi potessero essere ragioni contrarie ad investire il mio tempo e le mie energie in questa direzione; parlai quindi col sindaco di Caserta FALCO, gli onorevoli COSENTINO e LANDOLFI, i quali ci diedero il loro "assenso", dicendo che la zona si poteva prestare.
ADR: rappresento che ebbi personalmente a visionare insieme all'ORRICO il sito di Lo Uttaro, che si presentava come una cava, completamente vuota e con terreno "vergine"; compresi che doveva operarsi con la "messa in sicurezza" di quel sito, da attuarsi in un modo che ignoro.
ADR: quando parlo di messa in sicurezza, mi esprimo intendendo che la cava doveva essere utilizzata come discarica, previo attrezzamento, per poi essere "messa in sicurezza".

Sergio Orsi dunque ammette l'interesse imprenditoriale per la discarica; riconosce il ruolo (acclarato dall'indagine intercettiva) di ORRICO e Valente; individua l'onorevole Cosentino tra gli sponsors politici dell'operazione.

Di questo sostegno v'è chiara traccia in alcune conversazioni anteriori all'emissione dell'ordinanza che autorizzerà la realizzazione della discarica.

Nella **conversazione n. 2645**, del **22 luglio 2002** (registrata sull'utenza n. 335-7580865, in uso a VALENTE Giuseppe) è **Sergio ORSI** a comunciare al presidente della IMPREGECO **Giuseppe VALENTE:**
"mi sono incontrato con Nicola (COSENTINO), di cui gli ho chiarito quell'aspetto …..e issu a itto: "ma quanno mai…" A ittu: "che stai dicennu, ma non può essere…"; ha ditto: comunque, ad ogni buon fine m'o veco io!"…poi issu a ditto: "'uagliò, però tu me fai sempre mortificà, sai pecché? Ma tu non tieni fiducia in me? Io songo leale, io pe te me faccio accidere…".

Non si può fare a meno di sottolineare il patto di lealtà con l'imprenditore mafioso che lo stesso Cosentino, nel resoconto telefonico di Sergio Orsi, orgogliosamente rivendica.

Nella **conversazione n. 2690 del 23/07/2002**, **Valente Giuseppe,** si rivolge a Claudio De Biasio, direttore amministrativo di IMPREGECO, per concertare un incontro con l'ingegner ORRICO, funzionario della struttura commissariale e nel contempo progettista della discarica.
Valente si preoccupa subito di concordare con l'interlocutore un comportamento volto a non far comprendere alle altre persone che parteciperanno alla riunione la posizione di alcuni dei soggetti coinvolti nel progetto. In particolare così si esprime: ***"…O…ma … tu, ma tu non dire niente nemmeno a loro mo de sta questione di Orrico parliamone dopo pecché se no chist subito…."*** e ancora ***"…Eh… e allora ci siamo visti e nun… però io de Cosentino non gli vorrei parlare per la verità.."***. Quindi De Biasio commenta l'atteggiamento del politico sulla questione: ***"…Vuole avere… no, ma lui vuole avere proprio il ruolo di artefice in tutto se ci hai fatto caso…"***

Il 26 luglio 2002, **VALENTE** (conversazioni nn. 2896 e 2892) riferirà ai soggetti coinvolti nel progetto:
"…<u>ieri sera ho parlato con NICOLA</u> …gli ho spiegato come stanno le cose e lui mi

ha detto: andate avanti, non vi preoccupate, se sta qualche problema intervengo io ! Non ci sono problemi, ha ditto, perché lui con PAOLUCCI già c'aveva pure parlato (…) mo' bisogna solamente vedere di fare questo tavolo comune con VANOLI e con (…) tenete conto che politicamente la questione e' superprotetta !".

Nella stessa giornata è ancora Valente (conversazione n. 228 captata sull'utenza n. 335-7825307, in uso a FACCHI Giulio), nel chiedere a tale **Marilena** di essere messo in contatto con **FACCHI**, ad anticiparle:

"…..io, politicamente ho avuto disposizione di fare una certa operazione ….che è stata quella d'incontrarmi con il Presidente CE/3 ….per la questione di Uttaro ……per la realizzazione di questa opera, a UTTARO. Ora mi è stato chiesto di contattare Giulio per poter siglare in tre questa operazione…… I riferimenti politici lui sa chi sono, n'somma, è inutile che …Nicola Cosentino ed altri .."

Il tema della 'superprotezione politica' della questione di LO UTTARO è ribadito da Valente a Orrico nella **conversazione n. 2977**, del **28 luglio 2002 (**registrata sull'utenza n. 335-7580865, in uso a VALENTE Giuseppe):

"…ieri sera ho parlato con NICOLA (Cosentino, ndr) …gli ho spiegato come stanno le cose e lui mi ha detto: ANDATE AVANTI, NON VI PREOCCUPATE, SE STA QUALCHE PROBLEMA INTERVENGO IO…..non ci sono problemi, ha itto, perché lui con PAOLUCCI già c'aveva pure parlato……"".

L'ordinanza n. 48 del 9.8.02 sarà poi aspramente censurata dal Ministro Matteoli con una missiva, datata 18.10.2002, indirizzata al Commissario Bassolino.
La missiva enuncia incisivamente le principali ragioni di illegittimità del provvedimento e merita di essere riportata.

> *Caro Presidente,*
> *mi risulta che il subcommissario per l'emergenza rifiuti della Regione Campania ha autorizzato con ordinanza n. 48 del 9 agosto u.s. la realizzazione di una discarica da utilizzare, in caso di fermo o di altre situazioni d'emergenza degli impianti di produzione ed utilizzazione del CDR.*
> *Tale ordinanza è basata sull'art. 3, comma 3 dell'OPCM 3100/00. Tale disposizione attribuisce al Presidente della Regione – Commissario delegato (e non già al subcommissario), il potere "in presenza di particolari situazioni di fatto di autorizzare impianti ai sensi degli artt. 27 e 28 in coerenza con le finalità e gli obiettivi della gestione integrata di rifiuti in ambito provinciale".*
> ***Si tratta, pertanto, dell'esercizio da parte del subcommissario di un potere che l'ordinanza attribuisce in via esclusiva al Presidente della Regione – Commissario delegato.***
> ***Sempre sotto il profilo della legittimità, va inoltre notato che, a seguito della scadenza del termine del 22 agosto fissato dall'art. 5 del D. lgs.vo 22/97 e succ. int. E modificazioni, su Sua richiesta ho espresso intesa "esclusivamente per quanto attiene all'autorizzazione alla prosecuzione delle attività di smaltimento in discarica dei rifiuti già in corso, fino all'entrata in vigore del decreto legislativo di recepimento della direttiva comunitaria 31/99/CE sulle discariche previsto dall'art. 5, comma 6 del Dlgs 22/97".***
> *Ciò evidentemente contrasta con l'attuazione dell'ordinanza che mira a realizzare una nuova discarica.*

In secondo luogo si osserva che le motivazioni contenute nell'ordinanza del subcommissario, risultano in contrasto con le informazioni contenute nel documento sul piano di rientro nella fase ordinaria, allegato alla nota prot. N. 77763/Gab del 20 settembre u.s., da Lei trasmessa.

Tale documento evidenzia che alla data odierna risultano trattati, negli impianti di produzione del CDR, circa l'85% dei rifiuti urbani prodotti. Dallo stesso documento risulta che entro il prossimo mese di novembre, con l'attivazione dell'ultimo impianto di produzione del CDR, sarà smaltito negli impianti il 100% dei rifiuti prodotti.

Ne consegue che la Regione Campania risulterà pienamente autosufficiente nello smaltimento dei rifiuti urbani a valle della raccolta differenziata.

Pertanto, non sembrano ricorrere le "particolari situazioni di fatto" previste dall'ordinanza ministeriale e citate dall'ordinanza del subcommissario.

In terzo luogo si evidenzia come non venga rispettata la "coerenza con le finalità e gli obiettivi della gestione integrata dei rifiuti a livello provinciale" definita con l'ordinanza n.2774/98 e successive modifiche ed integrazioni. Tale ordinanza dispone all'art. 1, comma 2 che "il commissario delegato …stipula…a seguito di procedure di gare comunitarie, contratti per la durata massima di dieci anni, di conferimento dei rifiuti urbani, a valle della raccolta differenziata, prodotti nei comuni della Regione Campania, con operatori industriali che si impegnino a realizzare impianti per la produzione di combustibile derivato da rifiuti ….. impianti dedicati per la produzione di energia mediante l'impiego di combustibile derivato da rifiuti…" *L'art. 4 dell'ordinanza n. 3060/00 ha aggiunto a tale articolo il comma 6-bis che stabilisce che "il commissario delegato ..dispone l'obbligo, a carico dei comuni, di conferimento dei rifiuti urbani, con esclusione della raccolta differenziata, nei siti di produzione del combustibile derivato dai rifiuti, fermo restando l'onere del conferimento, determinata in base alla tariffa definita dai contratti ….e del trasporto a carico dei comuni stessi".*

In attuazione a tale disposizione è stata esperita una gara comunitaria che ha portato all'individuazione di un operatore industriale al quale è stato affidato l'attuazione e la gestione del sistema di gestione dei rifiuti a valle della raccolta differenziata.

Ai sensi dell'art. 22 del capitolato d'oneri posto a base della gara e dell'art. 24 del contratto stipulato, l'affidatario è obbligato con mezzi finanziari propri, a rendere lo smaltimento dei sovvalli solidi e dei reflui liquidi eventualmente prodotti sia dagli impianti di produzione del CDR, che da quello di termovalorizzazione del CDR.

Ad abundatiam, l'art. 25 del contratto stipulato stabilisce che "il commissario delegato procederà all'approvazione delle discariche di servizio, delle aree di stoccaggio e di messa in riserva, ove ne ricorrano i presupposti, successivamente alla presentazione dei progetti da parte dell'affidataria".

Nel caso di fermo impianto o per qualsiasi altra causa, l'affidatario del servizio dovrà garantire lo smaltimento dei rifiuti e in nessun caso potrà sospendere il servizio di conferimento agli impianti di produzione del CDR (art. 27 del capitolato d'oneri; art. 29 del contratto).

Non emerge, di conseguenza, la necessità da parte del subcommissario di attivarsi per "disporre ….di un idoneo sito di smaltimento dove conferire, in caso di fermo o di altre situazioni di emergenza degli impianti di produzione e utilizzo del CDR …..la frazione secca", come invece il subcommissario evidenzia nelle premesse dell'ordinanza.

Sembra, poi, singolare, il ricorso a un affidamento diretto per progettare,

realizzare e gestire una discarica.
Per quanto sopra esposto, l'unico soggetto che deve provvedere alla gestione dei rifiuti urbani a valle della raccolta differenziata, compresa la realizzazione delle discariche di servizio, è l'affidatario del servizio. Tutto questo deve avvenire dietro il pagamento del solo corrispettivo determinato dal contratti; altri oneri a carico dei comuni ovvero della gestione commissariale configurerebbero un evidente profilo di danno erariale.
Infine, l'ordinanza rischia di accollare alla contabilità speciale gli oneri di realizzazione della discarica, qualora non si realizzasse il "conferimento".
Resto in attesa di conoscere i provvedimenti che riterrà opportuno adottare in regime di autotutela.

Due giorni dopo l'arrivo della lettera del Ministro veniva allertato l'onorevole Cosentino, come apprendiamo dalla conversazione **n. 6013,** del **30 ottobre 2002 (**registrata sull'utenza **n. 335-7825307,** in uso a FACCHI Giulio).
Rivolgendosi al collega sub commissario **Massimo PAOLUCCI, Facchi dice**:
"Massimo ti prego, non sottovalutare la lettera del Ministro, perché gli do' una lettura davvero pesante… adesso su quella lettera lì il primo che fa il cinema è COSENTINO, che m'ha promesso che domani va da MATTEOLI e fa il cinema; però non sottovalutarla perché io purtroppo vedo qualche tendenza interna, non la leggo bene".

Nella conversazione n. 8372 del 31/10/2002 è poi Valente Giuseppe, in una conversazione con Claudio De Biasio, a riferire i contenuti di un colloquio telefonico che ha avuto poco prima con l'onorevole Cosentino.

Trascrizione integrale
Claudio: *Presidè?*
(…)
Valente: Senti, poi stamattina poi so gghiuto addò Nicola, però purtroppo so arrivato dieci minuti di ritardo, lui già era partito per Roma che doveva andare subito. C'ho parlato per telefono, secondo lui l'operazione l'ha fatta Facchi !
Claudio: Secondo lui l'operazione?
Valente: L'ha fatta Facchi
Claudio: Stesso Facchi?
Valente: Sì, e pecché, ma giustamente è così; Facchi venti giorni fa ha fatto un incontro in Prefettura e hanno fatto il protocollo d'intesa erano tutti d'accordo
Claudio: Eh!
Valente: Ha aspettato, perché ha aspettato tutto questo tempo prima di approvare il progetto?
Claudio: Umh… e questo pure è vero!
Valente: Cioè ha fatto in modo che dal Ministero ci arrivasse questa nota
Claudio: Ho capito
Valente: …Quindi, ha ditto Cosentino, ha ditto: "se loro vonno chesto, vuol dire che le facimme a' guerra; 'o termovalorizzatore 'ccà non lo costruiranno mai! Aggio ditto e…Nicò a itt perché poi tutto sommato, io per quale motivo mi devo esporre per fare vedere che io voglio fa la, l'impianto di discarica? A ditto fanno così….aggio itto vabbuò Nicò, mo' noi facimmo già l'assemblea e quando quello disse che era d'accordo con il sindaco
Claudio*: Eh!*
Valente*: E ci a' it tre…ma tre anni fa a' it era d'accordo col lu sindache… a' it tre anni fa parlò con il sindaco e cose, a' it ma mo le cose so cagnate*
Claudio*: Quindi secondo lui l'operazione è partita stesso da là?*
Valente*: Sì, sì, stesso da là*
Claudio*: Concordata?*

Valente: *Sì, ma pure io penso che sia così*
Claudio: *Ma!*
Valente: *Credo che sia la, è… è…probabilmente è…. è…Vanò… è cose, comme se chiama, è Bande… a…..come se chiama chillo du Ministr….si è…*
Claudio*: Matteoli?*
Valente*: Matteoli si è praticamente prestato al gioco*
Claudio: *All'operazione*
Valente: Tanto Matteoli che ce ne fotte, tanto chi ce l'ha fatto firmà qualche capo di gabinetto, qualcuno de chiste…
Claudio: E va a finire che poi è un'operazione per conservare il suo posto là!
Valente*: Può darsi*
Claudio*: .Umh!*
Valente*: Ma! Può darsi che sia questa*
Claudio*: E stamattina comm'è che non ti si fatto senti?*
Valente*: Come?*
Claudio*: Stamattina com'è non ti sei fatto sentire?*
Valente: E pecché stamattina sono andato da Nicola, so' stato fino alle dieci, *poi sono venuto a Mondragone, dovevo vedere alcune cose per il cimitero che domani c'ho i morti a… a tomba là mio suocero le fotografie e cose, poi dovevo andare a Napoli a firmare i mandati per i pagamenti de gli…de i cosi e sono andato a la…all'Impregeco e poi so tornato, s'è fatto tardi e aggio itto vabbuò a sto punto jammoce a'a casa e me n'aggio gghiuto 'a casa*
Claudio*: Mo poi quello c'è stato il terremoto là, tutto nu' casino io dovevo andare a Napoli non ci sono andato più perché (incomprensibile le voci si accavallano)*
(…)
Dopo una consultazione con l'avvocato Soprano – che confermerà le buone ragioni del ministro – Facchi revocherà l'autorizzazione illegittima.
E' interessante notare come l'operazione Lo Uttaro riguardava un'area compresa nel bacino del Consorzio CE3. Eppure la parte del leone fu assegnata da Facchi al Consorzio CE4, e dunque all'impresa mafiosa degli Orsi.
A questo infatti il subcommissario affidò la realizzazione dell'impianto e la gestione della fase di conferimento rifiuti e di riempimento dell'invaso .
Al **Consorzio CE/3**, fu invece demandata la redazione del progetto e l'acquisizione dei suoli.
Può allora affermarsi che, anche con questa operazione, l'IMPREGECO ambì a realizzare il progetto di Sergio Orsi che – dice Vassallo, che ebbe a valutarlo nella veste di consulente di Bidognetti - era "***volto ad "appropriarsi" di tutti i consorzi dell'area casertana aggiungendo al Consorzio CE4 che già sostanzialmente dipendeva da lui, i consorzi CE1, CE2, CE3".*** In quel progetto dunque coerentemente Vassallo ricomprendeva l'indagato Cosentino: ***"Cosentino, all'epoca coordinatore provinciale di Forza Italia, controllava tutti i consorzi e Sergio si rivolse a lui per perorare il suo interesse a espandersi".***

16. Valutazione conclusiva sul patto 'voti contro favori' addebitato da Gaetano Vassallo all'indagato Nicola Cosentino
Le dichiarazioni di Gaetano Vassallo relative al contributo consapevolmente prestato dall'onorevole Cosentino al clan dei Casalesi, attraverso la promozione politica e la sponsorizzazione delle attività e iniziative dei fratelli Orsi hanno finora trovato puntuale riscontro.
Il punto cardinale della verifica ha investito la mafiosità delle iniziative imprenditoriali dei fratelli Orsi nel settore dei rifiuti e su questo aspetto si sono conseguiti esiti conoscitivi che - emancipandosi dallo stesso narrato di Gaetano Vassallo - hanno confermato l'assunto della connessione genetica e funzionale di quell'impresa con la camorra casalese, nelle sue due espressioni fondamentali.

Si è osservata anzi – nelle intercettazioni che monitoravano nell'anno 2000 la pressione esercitata in danno del concorrente Nicola Ferraro – come persino i reparti militari della famiglia bidognettiana (SETOLA Giuseppe, Alessandro Cirillo detto 'o sergente, Nicola Alfiero detto 'capritto) considerassero Flora Ambiente e la costituenda ECO4 come 'cosa loro'; sì da temere e prevenire le iniziative di ECOCAMPANIA con la premura e l'attivismo di chi cura un 'personale' investimento.
Accertato come la ECO4 e la sua espansione incarnassero appieno il paradigma dell'impresa mafiosa, restava da verificare se effettivamente l'indagato vi avesse rivestito il ruolo che Vassallo gli attribuisce: promozione politica delle iniziative, controllo delle strategie, dominio (condiviso) delle assunzioni, delle nomine, degli incarichi.
Le chiarissime dichiarazioni di Giuseppe Valente e dei fratelli Orsi hanno confermato questo quadro.
Le intercettazioni ci hanno mostrato come i momenti cruciali della strategia di creazione di un ciclo integrato dei rifiuti, espulsivo per l'ATI affidataria dei contratti regionali, siano tutti stati patrocinati da Nicola Cosentino. Non può dimenticarsi lo scambio tra Facchi e Paolucci avvenuto dopo l'annullamento ministeriale dell'ordinanza Lo Uttaro, nel quale il primo prefigura e auspica che Cosentino vada dal ministro e faccia 'il cinema'.
Il mondo dei quadri e dirigenti della ECO 4 ci è stato rappresentato come un teatrino di figuranti, animati dalla precipua preoccupazione di non deludere le aspettative del 'capo' Cosentino. Le stesse rivalità tra dirigenti si alimentavano sul terreno di una gara di abilità nel 'fare campagna', nel 'fare voti' per Cosentino (si ricordi la vicenda della *defenestrazione* del presidente Savoia).
Persino il 'padrone' Sergio Orsi ci è parso intimorito dalla sola prospettiva che qualcuno potesse presentarlo a Nicola Cosentino come un ostacolo sul percorso delle assunzioni clientelari e ha sentito il bisogno di ribadire un rapporto di soggezione: "Cosentino è il mio padrone !".

Michele Orsi poi ci ha francamente rappresentato l'inefficienza della struttura, tutta protesa a soddisfare le esigenze elettorali dei padrini politici.
Valente, i fratelli Orsi, le intercettazioni di costoro e dei loro corrispondenti hanno insomma dato corpo a quella frase che Vassallo attribuisce all'indagato e che ci era parsa, alla prima lettura, esagerata: "l'ECO4 è una mia creatura, l'ECO4 song'io!".
Ancora una volta insomma il riscontro – anche quello individualizzante – ha acquistato lo spessore di una prova autosufficiente.
Si potrebbe osservare che né Valente, né gli Orsi ammettono collusioni o intraneità mafiose; che pertanto resterebbe irriscontrata la valenza sintomatica dei rapporti allacciati da Cosentino con loro e con le loro strategie.
Simili perplessità debbono essere superate con una serie di argomenti.
Il primo. La necessità del riscontro esterno individualizzante non significa che questo debba conseguire un livello di autonomia dimostrativa tale da vanificare il valore conoscitivo della chiamata di correo. Le Sezioni Unite (30 maggio 2006 – 31 ottobre 2006, n. 36267, Spennato) - nella stessa sentenza in cui consacravano il principio della massima omogeneità (possibile) tra i parametri valutativi della prova dibattimentale e quelli della prova indiziaria a fini cautelari – non mancavano di puntualizzare che "*l'elemento di riscontro individualizzante deve confermare non necessariamente in via diretta la condotta illecita ascritta all'accusato, ma le dichiarazioni del propalante e quindi la loro attendibilità nella parte di riferimento*".

Il secondo. Il fatto che Valente e gli Orsi neghino collusioni e/o intraneità mafiose non

ci consente di prescindere da quelle evidenze (decine di collaboratori di giustizia provenienti dalla fazione bidognettiana, da quella degli Schiavone, dal clan La Torre, per gli Orsi; i collaboratori di giustizia mondragonesi e le evdienze intercettive, per Valente) che invece dette collusioni e intraneità documentano, in maniera del tutto autonoma rispetto al dictum di Vassallo. Sicché la valenza sintomatica del rapporto allacciato da Cosentino con costoro non può essere negata.

Terzo. Il riscontro logico. La politica di boicottaggio del sistema affidato a FISIA ITALIMPIANTI, la promozione dell'IMPREGECO, la monopolizzazione dei servizi di raccolta dei rifiuti obbediscono obiettivamente ad una strategia convergente con quella del clan dei casalesi e degli operatori criminali campani del settore che dovettero sentirsi penalizzati dall'esclusiva conferita agli imprenditori del Nord.
Lo dicono innanzitutto le massime di esperienza, delle quali da tempo la S.C. avalla l'utilizzo quali regole di copertura del ragionamento probatorio sui temi della criminalità organizzata.
Lo dice la storia giudiziaria del clan in argomento.
Lo dice poi Vassallo, che anche per questo è coerente e attendibile.
Lo dicono infine le pressioni militari che accompagnarono la conquista del monopolio e che indussero una serie di operatori, concorrenti degli Orsi, alla ritirata: pressioni documentate in questo provvedimento, ma anche nelle altre ordinanze cautelari che si sono sopra richiamate con i relativi sostegni probatori (anche questi autonomi rispetto al collaboratore Vassallo).
Possiamo anzi affermare che proprio la coerenza dei comportamenti dell'indagato con questa strategia di interesse della criminalità organizzata insediata sul territorio a costituire il collante che tiene insieme gli elementi indiziari, di ogni natura, che si sono sopra esposti.
La disamina che segue serve ad ogni modo a rafforzare questo tassello del ragionamento. Chi pensasse che l'indagato ha promosso le iniziative sopra enunciate per mera convinzione politica o, al più, per ragioni clientelari scevre da connotazioni camorristiche, apprenderà da Dario De Simone, Carmine Schiavone, Domenico Frascogna, Domenico Bidognetti, Anna Carrino quanto siano risalenti e consolidati i debiti di gratitudine di Nicola Cosentino con la camorra casalese. E quanto dunque sia plausibile la lettura collusiva dei comportamenti finora rappresentati.

17. Dario De Simone
Il tema dell'appoggio elettorale prestato all'indagato dal clan dei Casalesi, con specifico riferimento alle elezioni regionali del '95, è centrale nell'interrogatorio reso il 13 settembre 1996 dal collaboratore di giustizia Dario De Simone.
Nel dettaglio il collaboratore si sofferma sul coinvolgimento di tutti i capizona dell'area aversana nel sostegno al candidato Cosentino, evocando l'impegno profuso da: Biondino Francesco, capozona di Aversa; Costanzo Luigi, controllore della zona di Lusciano; Autiero Andrea detto 'o scusuto, capozona di Gricignano; Verolla Luciano detto 'o trentulese, competente sulla zona di Casaluce; il ragionier Messina Gennaro per la zona di Teverola.
L'*endorsement* è concordato al livello più alto delle gerarchie criminali dell'epoca. Vi concorrono, oltre che DE SIMONE, soggetti apicali del calibro di SCHIAVONE Walter e ZAGARIA Vincenzo, SCHIAVONE Vincenzo**.**
Il dichiarante enuncia elementi significativi di un *tasso di identificazione* più intenso di quel calcolo opportunistico che normalmente caratterizza il 'concorso' esterno' del politico. Cosentino non esita ad incontrare De Simone durante la sua latitanza, trascorsa per una parte in casa di DE CRISTOFARO Gaetano. Nel racconto di DE SIMONE si

legge un rapporto talmente confidenziale dall'avere indotto il collaboratore a "tenere nascosta" nei suoi primi interrogatori la conoscenza dell'allora consigliere regionale.
Il politico sembra condividere, anche ideologicamente, i timori ingenerati dal pentimento di Carmine Schiavone; conviene con il capoclan nella lettura 'politica' dell'offensiva giudiziaria scatenata dalla DDA napoletana nei primi anni '90; suggerisce i nomi dei parlamentari considerati più pericolosi per il mantenimento dello strapotere criminale campano. Caldeggia la ricezione legislativa di una proposta presente nel dibattito socio-politico dell'epoca: quella di estendere alla criminalità mafiosa il regime premiale della 'dissociazione'. Il significato che il collaboratore assegnava all'epoca all'istituto era quello di uno strumento che avrebbe consentito ai camorristi di scontare un periodo di detenzione relativamente breve, di sfuggire ai rigori del '41 bis' e di 'uscirne puliti' per ritornare a curare le loro "attività".

**"*A questo punto ritengo che sia necessario riferire una circostanza che, nonostante una specifica domanda che mi venne fatta, io ho tenuta nascosta. Mi venne chiesto se conoscevo l'onorevole Nicola Cosentino e io risposi di non conoscerlo. Non è così. In realtà ho riflettuto approfonditamente e ho deciso che, benché io abbia ricevuto aiuto e assistenza dalla famiglia del Cosentino, è giusto che parli di questi rapporti per dimostrare che la mia scelta di collaborazione è genuina e non soggetta ad alcuna riserva. L'onorevole Cosentino, consigliere regionale in carica presso la Regione Campania e anche assessore, ha sposato ESPOSITO Marisa, nipote di DE CRISTOFARO Gaetano, cugino della moglie di mio fratello Aldo. A sua volta la moglie di DE CRISTOFARO Gaetano è sorella di LETIZIA Domenico. Ho trascorso una parte della latitanza a casa del DE CRISTOFARO Gaetano in Trentola Ducenta e molto spesso mi sono incontrato in quell'abitazione con l'avv. Cosentino Nicola anche durante il suddetto periodo. In occasione delle elezioni regionali del 1995 COSENTINO Nicola mi chiese espressamente di aiutarlo nell'imminente campagna elettorale. Mi pare che egli fosse candidato del C.C.D. e, a suo dire, puntava a diventare assessore alle finanze. In effetti io mi diedi da fare per aiutarlo nella campagna elettorale e parlai anche con un dentista di Ducenta, del quale non ricordo in questo momento il nome, anzi mi sovviene che si chiami Enselmi di cognome, coordinatore nella zona di Forza Italia. Ciò sempre durante la latitanza. Ho parlato anche con SCHIAVONE Walter e ZAGARIA Vincenzo, SCHIAVONE Vincenzo, tutte persone che peraltro ben conoscevano il Cosentino. Un buon gruppo di noi frequentava il club Napoli sito nel corso Umberto di Casal di Principe, circolo che abitualmente frequentava il Cosentino. Durante la latitanza talvolta io e SCHIAVONE Walterino abbiamo dormito nei locali del suddetto circolo. In realtà, giocando a carte fino a tardi, più che altro aspettavamo che si facesse giorno. Ritornando alla casa del DE CRISTOFARO Gaetano faccio presente che lì ho fatto celebrare il battesimo di mia figlia Maria, alla fine di giugno o all'inizio di luglio del 1995. La madrina di battesimo è stata la fidanzata del figlio di De Cristofaro Gaetano. Solo in Trentola Ducenta Cosentino, in occasione delle elezioni, ha raccolto 700 preferenze. Io stesso ho chiesto a varie persone la cortesia di votare Cosentino Nicola. Certamente quando io chiedevo delle cortesie ai vari amici di Trentola nessuno me le rifiutava. Un po' tutta l'organizzazione si è occupata delle elezioni di Cosentino Nicola. Per la zona di Aversa si è interessato Biondino Francesco; per la zona di Lusciano Costanzo Luigi, per la zona di Gricignano la famiglia di Autiero Andrea detto 'o scusuto, per la zona di Casaluce tale Verolla Luciano detto 'o trentulese, per la zona di Teverola, il ragionier Messina.*
A.D.R. Anche dopo le elezioni di Cosentino Nicola e fino al momento del mio arresto mi sono sempre incontrato con quest'ultimo, sempre nella casa di DE CRISTOFARO

Gaetano. In quelle occasioni con il Cosentino ho avuto vari colloqui nel corso dei quali, tra l'altro, discutevamo della situazione che si era venuta a creare dopo l'ordinanza di custodia cautelare relativa all'operazione "Spartacus". Il Cosentino mi tranquillizzava dicendo che la sola parola di SCHIAVONE Carmine non poteva consentire una mia condanna definitiva e che, pertanto, nell'eventualità di un mio arresto, dopo un periodo di carcerazione preventiva, sarei comunque uscito. Parlavamo anche della situazione politica sempre in riferimento alla nostra vicenda giudiziaria. Il Cosentino mi riferì tra l'altro che la vittoria della coalizione di Forza Italia avrebbe sicuramente comportato un alleggerimento della pressione nei nostri confronti e in particolare si riferiva alle disposizioni di legge sui collaboranti di giustizia. Ricordo che parlavamo anche degli orientamenti politici dei giudici che si occupavano delle nostre vicende in particolare del dottor Greco e del dottor Cafiero che ritenevamo particolarmente agguerriti nei nostri confronti. Arrivammo alla conclusione che l'affermazione di Forza Italia avrebbe potuto mutare la situazione nel senso che i giudici di sinistra sarebbero stati ridimensionati cioè non avrebbero più avuto quel potere che avevano alla Procura di Napoli. Parlammo anche dello sviluppo che doveva avere la dissociazione e dei colloqui avuti tra don Riboldi e il ministro Conso. E' evidente che avevamo interesse che la dissociazione fosse maggiormente valorizzata. In questa maniera avremmo potuto fare sette o otto anni di carcere senza il 41 bis e uscire puliti e continuare a curare le nostre attività. Il Cosentino mi disse che bisognava stare attenti soprattutto in riferimento all'attività politica degli onorevoli Diana e Natale in quanto persone vicine all'onorevole Violante e che facevano pressioni affinché vi fosse un intervento costante nella zona da parte delle Forze dell'Ordine. Non ho mai ricevuto personali favori dall'onorevole Cosentino, non so se altri ne abbiano ottenuti o se li abbiamo richiesti. E' chiaro però che l'onorevole Cosentino il quale aveva avuto espressamente il nostro aiuto per le sue elezioni era a disposizione per qualunque cosa noi gli avessimo potuto richiedere. Se noi gli avessimo chiesto un certo tipo di lavoro pubblico non esisteva che egli potesse rifiutarsi. Egli stesso esplicitamente ci aveva detto di essere a nostra disposizione. L'avv. Cosentino non era il legale di fiducia di nessuno di noi appartenenti all'organizzazione".

18. Domenico Frascogna e Raffaele Ferrara

L'effettività della sponsorizzazione criminale del candidato Cosentino e il livello apicale della decisione trova conferma nel racconto di due collaboratori che rivestivano, durante la militanza criminale, ranghi decisamente meno elevati di quello del DE SIMONE.

Il significato probatorio/indiziario delle dichiarazioni di FRASCOGNA Domenico e FERRARA Raffaele è quello di confermare - dalla prospettiva di soggetti gregari ovvero di capizona preposti ad aree territoriali circoscritte - gli ordini diramati dai 'capi' per l'appoggio della candidatura di Cosentino nelle elezioni regionali del '95.

FRASCOGNA Domenico, militante nel medesimo gruppo di Dario De Simone, nell'interrogatorio reso il **22 dicembre 1997** attribuisce a SCHIAVONE Francesco di Luigi detto 'Cicciariello' l'emanazione dell'ordine di appoggiare il candidato Cosentino e opera una distinzione, sicuramente significativa della caratura politica attribuita al personaggio dai vertici del sodalizio casalese: l'intervento in favore di Cosentino sarà più capillare di quello speso per altro candidato, in ragione della maggiore importanza dell'organo politico nel quale l'indagato ambiva ad entrare.

"*Eravamo sicuri di riuscire a fare eleggere Petrillo Arturo perché già in altre occasioni noi dei Casalesi ci eravamo attivati per altri candidati e sapevamo che, muovendoci*

noi, il risultato elettorale era assicurato. ***Mi riferisco anche a un altro candidato, tale COSENTINO, indicatomi in una elezione precedente a quella di Petrillo dai Casalesi come candidato da appoggiare. Il Cosentino non l'ho conosciuto personalmente, la sua candidatura mi fu sponsorizzata da Schiavone Francesco di Luigi. Mi pare intorno al marzo 1995. C'era anche con me mio cognato Zara Alfredo. Abbiamo sostenuto la candidatura di Cosentino il quale mi pare fosse candidato alla Regione e ciò perché abbiamo mandato nostri emissari anche in altri paesi diversi da Casapesenna.***
Ciò non è avvenuto nel caso di Petrillo Arturo per il quale i miei uomini hanno girato solo in Casapesenna. Non so spiegare la diversità delle due situazioni. Penso che la spiegazione sia nel diverso Organo di elezione e anche nel fatto che negli altri paesi ciascuno portava un suo candidato*".*

Nell'interrogatorio del 26 gennaio 1998 Frascogna arricchisce il profilo di Nicola Cosentino detto *'o mericano* rappresentandolo nell'atto di svolgere compiti agevolatori di natura diversa da quelli classici del 'politico colluso':

"(…) NATALE Sebastiano. Si tratta di un parente degli SCHIAVONE. Questo NATALE fa da "staffetta" tra il gruppo ed il "Sandokan" latitante portando ordini e notizie e lettere di quest'ultimo. In pratica quando "Sandokan" intendeva farci avere notizie utilizzava questo NATALE. Il NATALE peraltro svolgeva questo suo compito unitamente ad un politico originario ed abitante a Casal di Principe. Non ricordo il nome di questo politico ma so che viene soprannominato 'o americano e che svolge l'attività imprenditoriale nel campo del gas G.P.L.. Se non sbaglio questo politico non opera a livello locale di Casal di Principe ma ad un livello superiore. Mi sono incontrato con questo politico almeno un paio di volte a casa di Nicola PANARO a Casal di Principe, fratello del noto Sebastiano. Era insieme al NATALE e si mise a parlare con Sebastiano PANARO al quale i due consegnarono anche la lettera di "Sandokan". La lettera, peraltro accuratamente sigillata con scotch, non fu aperta in quella circostanza in quanto era assolutamente vietato agli affiliati leggere le lettere inviate da capo senza che fossero presenti i rappresentanti di tutti i gruppi. In un'altra circostanza ancora il NATALE insieme al politico in questione vennero alla mia pizzeria di Casapesenna che si trova in Corso Europa ed è l'unica del paese e consegnarono una lettera di "Sandokan" a "Rafilotto" Raffaele DIANA e ZAGARIA Vincenzo, presente in quel momento nel mio locale. Questi due episodi si sono verificati tra la fine del '95 e l'inizio del 1996".

Anche **FERRARA Raffaele**, contendente di FELICIELLO Domenico detto 'Mimì 'e cuglietiello nel comando della zona di Parete**,** nell'interrogatorio del 19 febbraio 1998, rammentava da mero esecutore degli ordini di scuderia l'intervento elettorale in favore di COSENTINO Nicola, all'epoca della sua candidatura per le elezioni regionali del '95.

"Potrò riferire anche di infiltrazioni del mio gruppo camorristico nel comune di Parete e della spartizione dei proventi derivanti dai lavori pubblici gestiti dal comune, nonché sulle nostre possibilità di influenzare le elezioni amministrative e politiche. In proposito già pongo in evidenza che FELICIELLO Domenico attraverso il padre FELICIELLO Raffaele "portava" l'On. DI DONATO. ***Io mi sono interessato, ultimamente, dell'apporto elettorale a favore di COSENTINO Nicola che adesso non ricordo se venne eletto quale Consigliere Regionale. Trattasi di appartenente al partito politico di Forza Italia. - A.D.R. Non posso dire perché si appoggiava un personaggio politico***

anziché un'altro. Gli ordini venivano direttamente dall'alto ossia dai BIDOGNETTI e dagli SCHIAVONE. BIDOGNETTI Aniello mi disse che "la cupola" aveva deciso di appoggiare COSENTINO Nicola, in quanto parente di RUSSO Giuseppe detto "il padrino". In proposito mi sembra che una sorella di quest'ultimo era fidanzata con un fratello di COSENTINO. Il COSENTINO è di Casal di Principe".

19. Carmine Schiavone

Risalgono all'epoca della candidatura di Nicola Cosentino alle elezioni provinciali del 1990 i ricordi del primo importante collaboratore di giustizia proveniente dalle file del clan dei Casalesi.
Carmine Schiavone, nell'interrogatorio reso il 29.10.96, indica Cosentino come il candidato della famiglia Schiavone in quella competizione.
Egli opera un raccordo tra la figura dell'indagato e quella di un imprenditore e politico amico, Sebastiano Corvino, già sindaco democristiano di Casal di Principe, da sempre vicino alla famiglia criminale egemone.
Favorito da Cosentino nell'assegnazione dell'appalto provinciale per un edificio scolastico in Casale, Corvino avrebbe remunerato con una fornitura gratuita di cemento (scaricata poi nella contabilità dell'appalto pubblico) un parroco che, su richiesta dello stesso Carmine Schiavone, aveva sostenuto l'elezione di Cosentino.

"....omissis..... Conosco CORVINO Renato, che è mio parente, in quanto la madre e mia madre erano cugine di primo grado. Sia lui che il fratello sono titolari di imprese edili.
CORVINO Renato ha realizzato l'ampliamento del manicomio di Aversa ed io stesso con la BASCHI gli ho fornito il calcestruzzo nel 1990. CORVINO Renato ed il fratello Tommaso abitano ad Aversa. Hanno mostrato disponibilità verso l'organizzazione, mettendo a disposizione il loro certificato di iscrizione, quando occorreva. In realtà non vi erano imprenditori a Casale che quando occorreva il certificato di iscrizione non lo dessero.
A.D.R. Mi viene chiesto se a CORVINO Renato e Tommaso siano mai stati affidati dall'organizzazione specifici appalti. Posso dire che erano cugini non solo miei ma di SCHIAVONE Francesco SANDOKAN., nonché di SCHIAVONE F.sco di Luigi e pertanto ni loro confronti veniva usato un particolare riguardo.
In origine la casa abitata da SCHIAVONE Francesco di Luigi in via Bologna, apparteneva a CORVINO Renato che gliela vendette a buon mercato. Dopo la vendita mio cugino Francesco di Luigi la ristrutturò totalmente, anzi la ricostruì.
CORVINO Renato è stato favorito dall'organizzazione dei casalesi con l'affidamento di lavori da parte della Provincia, da parte di altre pubbliche amministrazioni e da parte del Consorzio di Bonifica, perché parente degli SCHIAVONE, non perché apparteneva all'organizzazione.....omissis..... A D.R. ***CORVINO Sebastiano è persona a me nota. E' stato sindaco di Casal di Principe prima degli anni '80, è stato segretario della D.C., ha costruito l'edificio scolastico per ragionieri a Casale, è molto amico mio e di SANDOKAN . Posso dire che mi ha cresciuto. Egli era disponibile in favore dell'organizzazione a qualunque richiesta. Fino al 1992 è stato molto vicino al sodalizio dei Casalesi, anche se un episodio costituì motivo di momentaneo raffreddamento nei rapporti suoi con Walter SCHIAVONE.*** *Ricordo che Walter SCHIAVONE, alla fine del 1990 - inizi 1991 gli impose una tangente di 300 milioni con riferimento alla costruzione dell'edificio scolastico di Casale. Intervenni io determinando un accordo sulla misura di L.150.000.000. Corvino era il raccordo con la politica, essendo molto legato ai CAPPELLO, a BOSCO e, in modo profondo, a*

SANTONASTASO. Il CORVINO abita di fronte alla Camera di Commercio di Caserta. E' proprietario di aziende agricole e terreni. Uno di questi terreni, quello di Villa Literno, sito di fronte all'uscita della superstrada, venne messo a disposizione di mio cugino Francesco SANDOKAN e del fratello Antonio, per la gestione di un centro A.I.M.A dagli inizi degli anni 1980.
E' stato beneficiario di lavori da parte del Consorzio di Bonifica e da parte della Provincia di cui divenne Vice Presidente COSENTINO Nicola fin dalla metà degli anni 1980. Il Cosentino favorì Corvino Sebastiano nell'aggiudicazione dell'appalto per la costruzione dell'edificio scolastico di Casal di Principe. Il CORVINO nell'offerta pose un forte ribasso, il 24-25%, e poi secondo gli accordi venne compensato con il sistema della revisione dei prezzi. Ricordo che sempre il CORVINO pagò il cemento che io avevo fornito alla chiesa di San Nicola di Casale per la costruzione della nuova ala dell'edificio adiacente alla chiesa. Alla base della fornitura gratuita a Don Giuseppe DIANA vi era il sostegno che il medesimo Diana aveva dato, su mia richiesta, a COSENTINO Nicola per le elezioni Provinciali nel 1990. Io stesso fornii il cemento per l'ampliamento dell'edificio adiacente alla chiesa di San Nicola e fatturai a CORVINO Sebastiano, che pagò come fosse stata una fornitura eseguita nell'ambito dei lavori di realizzazione dell'edificio scolastico. La madre di COSENTINO Nicola è una SCHIAVONE ed è una larga parente nostra. COSENTINO nel 1991 venne votato dalla famiglia SCHIAVONE, dopo che vennero invalidate le elezioni Provinciali in cui la lista "LA CAMPANA", lista autonoma creata a seguito di scissione interna alla D.C., riuscì vittoriosa con l'elezione di SCHIAVONE Fabio, figlio dell'Avv. Francesco SCHIAVONE".

Di CORVINO Sebastiano - favorito da Nicola Cosentino durante l'espletamento del suo incarico nella Giunta Provinciale di Caserta e coinvolto da Carmine Schiavone in una fornitura di cemento effettuata gratuitamente in favore del parroco che aveva sostenuto in campagna elettorale Nicola Cosentino – Carmine Schiavone aveva già parlato in un interrogatorio reso in data 25 maggio 1993, anche lì designandolo come imprenditore non affiliato ma amico del clan casalese**.**

"*....omissis...Nicola DI MURO iniziò la sua carriera politica nel partito della DC in Santa Maria Capua Vetere e consigliere comunale. La sua collaborazione con i clan camorristici inizia fin dal 1976 quando SANTONASTASO Geppino si candidò al Senato della repubblica nel collegio Aversa (...) Fu allora che, attraverso la segreteria politica DC di Casal di Principe gestita da Sebastiano CORVINO, ci fu data indicazione di votare il SANTONASTASO. Del CORVINO ho già parlato nei miei precedenti interrogatori ed ho chiarito la sua posizione all'interno del nostro gruppo. In particolare il CORVINO non è un nostro affiliato tuttavia ci è sempre stato amico e ci ha sempre favorito, è un imprenditore di gran rilievo nella zona del casertano...omissis...".*

Nell'interrogatorio del 21 marzo 1994 Carmine Schiavone aveva anticipato il tema della fornitura al prete e dell'appoggio politico fornito a Cosentino, in termini sostanzialmente sovrapponibili a quelli utilizzati due anni dopo:

"(...) Nel 1990 ho fornito a Don Peppe il cemento per costruire i fabbricati adiacenti alla chiesa. A tal proposito ricordo che dopo la scissione della D.C. del 1990 facemmo confluire i nostri voti a livello regionale su CAPPELLO Vincenzo, portato da Enzo DE FALCO e Mario IOVINE, e a livello provinciale su Fabio SCHIAVONE, che si era presentato nella lista LA CAMPANA. ***Don Peppe sostenne la campagna elettorale***

dell'avvocato COSENTINO Nicola, Vice presidente della Provincia, che si era presentato nelle liste del P.S.D.I., sia per le provinciali che per le regionali. L'avvocato COSENTINO fu eletto e, avendo assegnato a Sebastiano CORVINO, detto "O Mustacchio", ex segretario della D.C. di Casale un appalto per 3.700.000 di lire per la costruzione dell'Istituto Tecnico di Casale, per ricambiare l'impegno di Don Peppe nella campagna elettorale, chiese allo stesso CORVINO di devolvere una somma per la costruzione dei fabbricati adiacenti alla chiesa. Io stesso fornii circa 9 o 10 milioni di lire di cemento, accontentandomi della somma di 5 milioni corrispostami da CORVINO Sebastiano. La BA.SCHI. emise fattura, tre o quattro mesi dopo, a favore della CORVINO Sebastiano s.n.c. di Corso Trieste e Trento di Caserta con la causale di fornitura di cemento per la costruzione di edificio scolastico. La fornitura del cemento avvenne verso la fine di settembre – ottobre del 1990. Il CORVINO pagò la fornitura di cemento con un assegno bancario a vista mentre, solitamente, effettuava i pagamenti in favore della BA.SCHI. con rimessa bancaria della Cassa rurale ed artigiana di San Marcellino.

….omissis…….

Mi viene chiesto se conosco Pasquale CORVINO. Conosco Pasquale CORVINO detto "Mustecce" figlio di Carlo CORVINO abitante in prossimità della chiesa di S.Nicola. Questi è cognato di mio cugino SCHIAVONE F.sco Paolo Saverio, fratello di Francesco di Luigi.

Riconosco nell'immagine digitalizzata che mi si mostra Pasquale CORVINO di cui ho parlato sopra..

Si dà atto che tale immagine digitalizzata viene allegata al presente verbale, corrispondendo a Pasquale CORVINO, di Carlo, nato a Casal di Principe (CE) il 19.9.1951.

Mi viene chiesto se Pasquale CORVINO sia stato inserito nel nostro gruppo camorrista e rispondo che non mi risulta affiliato. Aveva rapporti di frequentazione con SCHIAVONE F.sco Paolo e F.sco SCHIAVONE di Luigi, nonché con Mario CORVINO, ma non so fino a qual punto si sia spinta la loro amicizia. Nulla mi risulta sul suo conto se non il suo coinvolgimento nelle truffe AIMA, in quanto effettuava cessioni fittizi di frutta ai centri AIMA. Egli è proprietario terriero ed agricoltore.

….omissis…….

I rapporti tra Cosentino e la famiglia Corvino che Carmine Schiavone indica come beneficiata dal politico indagato, all'epoca della sua elezione quale consigliere provinciale di Caserta nei primi anni '90, sono riscontrati da una vicenda relativa all'ampliamento della discarica Parco Saurino degli anni 2002-2003.

Da una conversazione telefonica avvenuta il 13.7.2002 (n. 2050 registrata sull'utenza n. 335/7580865, in uso a Valente Giuseppe) tra Pasquale Corvino e il Presidente dell'IMPREGECO Valente, incaricato dell'esproprio dei terreni da destinare all'ampliamento (ai sensi dell'ordinanza del sub commissario Facchi n. 1 del 14.1.2002) apprendiamo la notizia di un intervento del politico finalizzato a favorire un esponente della famiglia Corvino.

La lettura di altre conversazioni succedutesi nello stesso periodo e l'analisi degli atti della procedura ci rassicura sul fatto che quell'intervento riguarda la questione degli espropri. In data 29.6.2002 infatti il geometra Sebastiano Izzo aveva proceduto alla ricognizione delle particelle interessate dall'esproprio, all'immissione in possesso e al relativo picchettamento.

Il piano particellare poi investiva, tra le altre, le particelle nn. 58 e 71 (mq.3800 e mq. 13140, da espropriare) nella titolarità di Sebastiano Corvino, senz'altro identificabile nel politico e imprenditore menzionato da Schiavone: Sebastiano Corvino, nato a Casal di Principe il 25.10.29, socio accomandatario della Corvino Sebastiano s.n.c. con sede in Caserta, via Roma n. 158, socio di DELLA GATTA Giovanni.

Successive conversazioni tra Valente e Pasquale Corvino (vedi in particolare la n. 2180 del 15.7.02 captata sulla stessa utenza sopra indicata) facevano comprendere il tipo di favore

richiesto dal congiunto di Corvino e sponsorizzato da Cosentino, oltre che la disponibilità di Valente a concederlo: **"*no, quel fatto là, noi lo facciamo eh, non esiste che non lo facciamo, però tutto è legato al progetto generale nel senso che se facciamo l'ampliamento stai tranquillo che tuo zio rientra nella cosa, di questo statti tranquillo, non ci sono proprio problemi. L'unico problema xche abbiamo l'abbiamo con Bartolo Abbate che stiamo vedendo di cercare di smussare un poco gli angoli, che lui ci ha fatto una serie di richieste un poco…lo sa pure Nicola, gliel'ho spiegata…se l'operazione va in porto, va in porto nella sua globalità…se noi facciamo l'operazione anche per un metro…ci sta pure lui, quindi stesse tranquillo".***

In questo contesto si colloca anche la conversazione tra Claudio De Biasio e Giuseppe Valente (n. 2690 del 23.7.02) in cui viene ribadita la centralità di Cosentino nella vicenda: **"*Cosentino…vuole avere, no, ma lui vuole avere proprio il ruolo di artefice di tutto*!".**

Il 23.7.2002 è la data nella quale viene redatto un protocollo di intesa che, a seguito di pressioni del sindaco di Santa Maria La Fossa Abbate, riduce le dimensioni dell'intervento (da un invaso di 49mila600 mq., ripartito in 4 lotti da 12mila mq. cadauno circa, si passa ad un unico invaso di 12mila mq.).

Ebbene quel ridimensionamento non intaccherà le aspettative di Sebastiano Corvino (vedi il verbale del sopralluogo eseguito in data 29.7.2002 nell'allegato 7-B dell'annotazione di P.G. in data 20.4.2009).

Dagli accertamenti compendiati nell'annotazione di P.G. citata risulta che anzi CORVINO Sebastiano cederà al Consorzio CE4, a titolo oneroso, una superficie persino maggiore di quella originariamente prevista (mq. 22mila750 in luogo degli originari 13mila140): il tutto sulla base di un nuovo piano particellare datato 21.2.2003 che non risulta neppur trasmesso al Commissariato di Governo e che dunque non sarebbe giuridicamente ricompreso nell'autorizzazione all'esercizio dell'attività di discarica rilasciata dal Commissario in data 17.12.2002 (ordinanza n. 63).

Oltre a fornirci un riscontro sulla plausibilità del racconto di Carmine Schiavone relativo al sostegno elettorale offerto dalla famiglia Schiavone all'indagato Cosentino in occasione delle elezioni provinciali dei primio anni '90, la vicenda riscontra Gaetano Vassallo quando focalizza l'affare dell'individuazione dei terreni da espropriare come una delle attrattive che la vicenda Parco Saurino esercitava sulla criminalità organizzata.

20. Domenico Bidognetti. La scelta dei candidati e il sistema di organizzazione del consenso praticato dal *clan dei casalesi.* Gaetano Vassallo come procacciatore di voti. Il sostegno elettorale di Nicola Cosentino

L'interrogatorio reso da Domenico Bidognetti il 20 settembre 2008 corrobora in vari modi il racconto di Vassallo Gaetano relativo all'indagato Cosentino.

Innanzitutto il collaboratore di giustizia accredita a Vassallo una posizione di particolare vicinanza al capo indiscusso Francesco Bidognetti, che non esitava a coinvolgerlo nella gestione degli affari del clan, con specifico riferimento al settore del traffico dei rifiuti:

"*VASSALLO Gaetano era uomo di fiducia di Francesco BIDOGNETTI detto Cicciotto 'e mezzanotte. Ho incontrato più volte VASSALLO Gaetano presso l'abitazione di Cicciotto, sita in Casal di Principe in Via Firenze. In queste occasioni ho verificato che si trattava non di riunioni conviviali, ma di incontri finalizzati a pianificare ed a rendicontare gli interessi e gli affari del clan, soprattutto con riferimento al traffico di rifiuti. Ciò è accaduto anche quando Cicciotto era detenuto agli arresti domiciliari, e addirittura quando Cicciotto era latitante. In questi casi gli incontri avvenivano sempre in Casal di Principe, sia alla via Firenze presso l'abitazione di Cicciotto, sia presso la casa di IORIO Pasquale (suocero di CERCI Gaetano), sia presso l'abitazione di CIRILLO Bernardo".*

In secondo luogo BIDOGNETTI Domenico tratteggia la figura di Bernardo Cirillo, in termini tali da rendere non soltanto plausibili le affermazioni di Vassallo sul nipote di Cicciotto, ma anche particolarmente significativo, sul piano della prova di collusione, il fatto che Cosentino sia stato presentato a Vassallo proprio da Cirillo e con questi abbia dimostrato un rapporto confidenziale:

"(...) CIRILLO Bernardo aveva una posizione molto elevata all'interno del gruppo BIDOGNETTI tanto che, quando Cicciotto era latitante, i soldi contanti del gruppo BIDOGNETTI venivano custoditi proprio a casa di CIRILLO Bernardo. Questo lo so con certezza perché, davanti a me, Cicciotto in diverse occasioni ha consegnato alcune buste di plastica del tipo di quelle della spesa, piene di denaro contante, a CIRILLO Bernardo affinché le custodisse per conto di Cicciotto. CIRILLO Bernardo ha sempre curato gli interessi di Cicciotto, ricordo che la sua famiglia aveva come soprannome i Magnarielli.

Quale 'colletto bianco' del gruppo Bidognetti, Vassallo era accomunato dal collaboratore soltanto ad altri tre grossi esperti del traffico di rifiuti: Cipriano Chianese, Gaetano Cerci ed Elio Roma, con una gerarchia che vedeva Vassallo in posizione equiordinata rispetto al Chianese, ma molto più assiduo (o meno prudente) di questi nel frequentare le case abitate da Cicciotto.

"ADR: alle riunioni di cui ho detto, effettuate tra Cicciotto e VASSALLO, partecipavano spesso anche Gaetano CERCI ed Elio ROMA. Per dare idea della frequenza con cui VASSALLO conferiva con Cicciotto, dico semplicemente che, per trovare VASSALLO a Casale, o lo si trovava a casa di Cicciotto o a casa di Gaetano CERCI".

Da buon 'colletto bianco' della cosca Vassallo curava i rapporti corruttivi con le pubbliche amministrazioni
"ADR: come dicevo, VASSALLO Gaetano era uomo di fiducia di Cicciotto; e ciò non per gli affari di sangue, ma soprattutto per affari illeciti legati al traffico di rifiuti nonché per la gestione dei rapporti con le pubbliche amministrazioni e per l'ottenimento dei provvedimenti concessori ed autorizzatori; questo perché era lui ad avere la "chiave giusta" per interloquire con le amministrazioni pubbliche. Con questa espressione intendo dire che si occupava di fare le corruzioni ai pubblici ufficiali e aggiungo anche che, nel fare ciò, era molto capace.
Per quanto io abbia capito, sapendo come funziona il sistema, in questi casi VASSALLO Gaetano diceva di impiegare i suoi soldi per fare le corruzioni, ma, con tutta evidenza, egli poi "scalava" le somme corrisposte per le corruzioni dalla quota che assicurava al clan per gli affari illeciti da lui compiuti.
In poche parole, VASSALLO Gaetano era un "colletto bianco" del gruppo BIDOGNETTI.
L'altro colletto bianco del gruppo BIDOGNETTI era l'Avv. CHIANESE Cipriano.
(...) Alle ore 12,38 si sospendono per una breve pausa il verbale e la fonoregistrazione.
Alle ore 12.45 si riprendono le operazioni di verbalizzazione e fonoregistrazione.
ADR: ***Ho detto che VASSALLO Gaetano era persona di fiducia di BIDOGNETTI Francesco; infatti, per lui "la casa di Cicciotto era sempre aperta" e lo stesso avveniva anche quando Cicciotto era latitante perché essi trovavano il modo di incontrarsi con frequenza, come ho detto, presso le abitazioni di IORIO o CIRILLO.***
Per dare idea della posizione ricoperta da VASSALLO nel gruppo BIDOGNETTI, sottolineo che Cicciotto - quando persone pure appartenenti al clan, ma con un ruolo

minore, tentavano di incontrarlo - "si faceva negare". Al contrario, per VASSALLO, Cicciotto "c'era" sempre.
ADR: so che la famiglia del VASSALLO Gaetano è composta da circa una decina di fratelli.
In alcune occasioni ho visto Gaetano andare a casa di Cicciotto – anche quando questi era latitante - in compagnia di uno dei suoi fratelli che gli assomiglia, di cui però non ricordo il nome.

In qualche occasione il collaboratore poté constatare il genere di attività che Vassallo curava in combutta con Cerci e Roma, le classiche falsificazioni di formulari necessarie per realizzare ogni traffico illecito di rifiuti che si rispetti:

"ADR: in alcune occasioni mi sono personalmente recato sulla discarica di VASSALLO Gaetano sita in località Tre Ponti unitamente a CERCI Gaetano ed Elio ROMA in quanto li accompagnavo quando essi incontravano VASSALLO Gaetano per redigere falsi FIR e false fatture in relazione al traffico di rifiuti che si realizzava lì. Ricordo precisamente che l'ufficio consisteva in un grosso locale posto all'ingresso della discarica. In queste occasioni ho verificato che alla discarica erano presenti un paio dei fratelli del VASSALLO Gaetano, entrambi grassi, di cui però non ricordo il nome.
(...)ADR: Come dicevo, in più occasioni, ho visto che, insieme a VASSALLO Gaetano, partecipavano agli incontri con BIDOGNETTI Francesco detto Cicciotto anche Elio ROMA e Gaetano CERCI, nonché CIRILLO Bernardo.
Ricordo anche che fu regalata a Cicciotto un'autovettura BMW 535 M3 di colore grigio metallizzato, intestata a PAGANO Gaetano (fratello di mia madre), o da ROMA Elio o da VASSALLO Gaetano.
ADR: ho detto che VASSALLO Gaetano era "colletto bianco" di fiducia di Cicciotto, devo ora precisare che in tale settore il VASSALLO aveva un ruolo molto elevato, tanto che si può dire che, per questo settore, "non vi era nessuno sopra di lui".
Prima ho detto che l'altro "colletto bianco" era CHIANESE Cipriano; i due, però, anche se rivestivano la stessa funzione e avevano la stessa importanza, si ponevano diversamente rispetto a Cicciotto in quanto VASSALLO Gaetano faceva continuamente "la spola" con la casa di Cicciotto, mentre invece CHIANESE Cipriano apparentemente si teneva un po' più defilato.

Rientrava tra i compiti di Vassallo quello di organizzare il sostegno elettorale per i candidati prescelti dal clan che, quando si trattava di individuare il politico da sponsorizzare, "si comportava come una sola famiglia". Scomparivano insomma al momento della scelta del referente istituzionale le tradizionali divisioni tra le famiglie Schiavone e Bidognetti. La diffusione dell'ordine era capillare. Il messaggio partiva dalla casa di Cicciotto o dei reggenti per diffondersi tra i capizona dei paesi controllati dal gruppo: Cesa, Parete, Lusciano, Villa Literno. Identica diffusione aveva il messaggio elettorale nei territori controllati dal gruppo Schiavone:

"Con riferimento a VASSALLO Gaetano, specifico che tra i suoi compiti rientrava anche quello di convogliare i voti verso i candidati prescelti dai clan.
(...) ADR: il sistema per l'individuazione del candidato da sostenere era attuato sempre in accordo tra i due gruppi - BIDOGNETTI e SCHIAVONE - che nella gestione di questo affare si comportavano come una sola famiglia. [a rilettura – ADR: Ciò avveniva sia quando essi erano liberi che quando erano detenuti.]
Per quanto riguarda il gruppo BIDOGNETTI, era Cicciotto a inviare emissari del clan a Cesa, Parete, Lusciano e Villa Literno al fine di comunicare ai rispettivi capizona le

sue determinazioni in ordine al candidato da sostenere ed acquisirne il consenso; in verità, più che di consenso, si trattava della comunicazione di una decisione perché essi non avrebbero potuto discostarsi delle scelte fatte a monte da Cicciotto. La stessa cosa accadeva per il gruppo SCHIAVONE. In poche parole, Cicciotto e SCHIAVONE sceglievano insieme il candidato da sostenere".

A questo punto il collaboratore Bidognetti rievoca il sostegno elettorale dell'indagato Cosentino come caso addirittura emblematico del sistema praticato dal clan dei Casalesi per scegliere e promuovere i propri referenti politici. E' significativo il fatto che il collaboratore si preoccupi di precisare come, pur essendo il Cosentino maggiormente vicino per ragioni parentali alla famiglia Schiavone, abbia ricevuto il sostegno dei Casalesi senza distinzioni:

"A titolo esemplificativo, ricordo che questo sistema è stato utilizzato anche nelle candidature di MARTUCCI e COSENTINO; entrambi avevano un legame molto più stretto con la famiglia SCHIAVONE rispetto alla famiglia BIDOGNETTI; e ciò, per il COSENTINO, in ragione di rapporti parentali esistenti con RUSSO Giuseppe appartenente al gruppo SCHIAVONE e, per il MARTUCCI, per il fatto che egli era difensore di SANDOKAN.
(…) ADR: l'accordo tra SANDOKAN e Cicciotto per l'individuazione del candidato da sostenere avveniva, quando gli stessi erano liberi, mediante una riunione tra i due e, quando gli stessi erano detenuti, mediante emissari che portavano "imbasciate"; nel periodo in cui entrambi sono stati detenuti a Carinola, si utilizzava il sistema di far andare a colloquio i parenti di SANDOKAN e quelli di Cicciotto nello stesso giorno, in modo che proprio i parenti (come ad esempio CARRINO Anna) fungevano da tramite per la comunicazione delle "imbasciate".
ADR: ho conosciuto personalmente l'Onorevole COSENTINO in quanto, fin da piccolo, ho frequentato la sua famiglia ed in particolare i fratelli minori (il terzogenito ed il quartogenito).
(…)Ricordo, inoltre, che il padre dell'Onorevole COSENTINO, che conoscevo personalmente, durante una campagna elettorale negli anni 80, aveva regalato buoni di 50 litri di carburante a chi gli assicurava che avrebbe votato il figlio".

Il riferimento del collaboratore di giustizia ai rapporti parentali che avvicinano l'onorevole Nicola Cosentino alla famiglia Schiavone può essere compreso se lo si coordina con le seguenti notizie acquisite dalla DIA di Napoli presso gli uffici comunali di Casal di Principe, Santa Maria Capua Vetere e Formia (vedi l'informativa in data 13 giugno 2008, costituente il punto 3 del faldone 1 allegato alla nota integrativa del 13 maggio 2009).

COSENTINO Aurelio di Silvio e di SCHIAVONE Olga, nato a Casal di Principe il 10.10.1966, ivi residente alla via Corso Umberto nr.472, è il **fratello** di Nicola**. Ha** contratto matrimonio in Napoli, in data 23 ottobre 2000, con DIANA Giuseppina di Emilio e di CANTIELLO Maria, nata a Caserta il 21.04.1975, figlia di **DIANA Emilio** fu Antonio e fu Caprio Giuseppa, nato a S. Cipriano d' Aversa il 19.4.1946, residente a Grazzanise, frazione "**Borgo Appio**", coltivatore diretto, tratto in arresto per il reato di associazione a delinquere di stampo mafioso, nell'ambito dell'operazione denominata "**Spartacus 2 AIMA**".

COSENTINO Giovanni di Silvio e di SCHIAVONE Olga, nato a Casal di Principe il 20.11.1954, ivi residente alla via Corso Umberto I° nr.643, amministratore unico della società Aversana Petroli s.r.l. è il **fratello** di Nicola. Ha contratto matrimonio in Casapesenna (CE), il 10 giugno 1982, con DIANA Maria di Costantino e di PICCOLO Maria Natalina, nata a San Cipriano D'Aversa il 29.06.1959, quest'ultima figlia di **DIANA Costantino** fu Salvatore Nicola e di Cirillo Teresa, nato a S. Cipriano d'Aversa il 12.6.1931, residente a Casapesenna,

via Quasimodo n. 4, imprenditore edile, detto " '**O repezzato** ", deceduto in data 17/02/2005, tratto in arresto per associazione a delinquere di stampo mafioso, nell'ambito dell'operazione denominata "**Spartacus 1**".

COSENTINO Mario di Silvio e di SCHIAVONE Olga, nato a Casal di Principe (CE) il 01.01.1965, residente in Formia alla via G. Paone s.n.c. parco Belevedere (emigrato da Casal di Principe in data 07 agosto 2006) è il **fratello** di Nicola. Ha contratto matrimonio in Gaeta in data 29 ottobre 1992 con RUSSO Mirella di Costantino e di Balbinot Caterina, nata a Isola di Capo Rizzuto (CZ) il 31.10.1967, **sorella di RUSSO Giuseppe di Costantino e di Balbinot Caterina, nato a Casal di Principe il 5/1/1964, ivi residente, via Genova n.51, detto "'O padrino", esponente di rilievo del clan dei casalesi**.

COSENTINO Palmiro Giovanni di Aldo e di Natale Maria nato a Napoli il 17/11/1974, residente in Santa Maria C. Vetere alla via Avezzana parco Lerida nr.84 (emigrato da Casal di Principe in data 19 luglio 2004) è il **cugino** di primo grado di Nicola. Ha contratto matrimonio in Casal di Principe in data 11.04.2003 con **SCHIAVONE Alfonsina,** nata a Napoli 25/5/1979, figlia di **SCHIAVONE Francesco di Luigi**, nato a Casal di Principe il 6.1.1953, residente a Cancello Arnone, via Delle Ginestre, Podere n.695, coniugato, detto "' **Cicciariello**" oppure "**O becchino**", "**ciccillo**", "**junior**".

Sul tema dei rapporti esistenti tra le famiglie Cosentino e Bidognetti, giova richiamare i seguenti accertamenti relativi alla partecipazione di componenti il nucleo familiare di BIDOGNETTI Francesco ai festeggiamenti per il matrimonio di COSENTINO Palmiro Giovanni e SCHIAVONE Alfonsina.

Dal verbale di interrogatorio dell'11 aprile 2008 ore 11.00 in Napoli, reso dalla c.d.g., CARRINO Anna.
Si parte dalla pos. 24.52
In questo passaggio stiamo parlando del fatto che stava per sposarsi SCHIAVONE Alfonsina, la figlia piu' grande di SCHIAVONE Francesco di Luigi inteso "Cicciariello". Ovviamente ci erano arrivati gli inviti per partecipare alla cerimonia e si discuteva su chi dovesse andarci in rappresentanza della famiglia. Mio marito avrebbe voluto mandarci Gianluca che però rifiutò. ***Infine, dopo un mio intervento, mio marito, con alcune riserve acconsente che al matrimonio partecipino mia figlia Katia ed il fidanzato LUBELLO Giovanni. Per quanto riguarda quest'ultimo nel brano ascoltato riportiamo il fatto che il LUBELLO era stato pressantemente sollecitato da Paolo SCHIAVONE a partecipare alla cerimonia ma che lui aveva preso tempo dicendo che la decisione finale spettava al suocero BIDOGNETTI Francesco. Il LUBELLO e SCHIAVONE Paolo si incontravano spesso in quanto quest'ultimo è cugino di PETRILLO Michele il socio di Giovanni….omissis…..***
In occasione del predetto matrimonio, in data 10 aprile 2003, veniva effettuato dallaDIA un servizio di osservazione nei pressi del ristorante "**Villa Lucrezio**", in Napoli. Veniva così rilevata, tra le altre, l'autovettura marca Mercedes, modello serie E 270 targata CG919AD, risultata intestata a LA NOTA s.r.l. con sede in Casal di Principe alla via Genova nr.64. Si trattava, com'è noto, della società di LUBELLO Giovanni sicché risultava altamente probabile che il medesimo si fosse effettivamente portato alla cerimonia.
Dagli ulteriori accertamenti effettuati alla banca dati in uso alle FF.PP. è emerso che LUBELLO Giovanni nato a Casal di Principe (CE) il 24.8.1976, genero di BIDOGNETTI Francesco, risulta essere stato controllato, come di seguito, a bordo della predetta autovettura:
28.01.2004 controllato unitamente a SCHIAVONE Paolo dai militari del Gruppo CC di Aversa in Lusciano alla via Colombo
27.07.2004 controllato dai militari del Comando Provinciale CC di Viterbo, nel piazzale del carcere di VITERBO unitamente a STARACE Rita, CARRINO Anna e BIDOGNETTI Michele.

Infine il collaboratore precisa quali potevano essere i metodi attraverso i quali i camorristi garantivano l'elezione dei propri referenti: metodi differenziati in ragione della condizione economica e della posizione sociale dell'elettore contattato. Ai più

indigenti si somministravano generi alimentari; ai più abbienti si chiedeva di far uso delle proprie influenze:

"ADR: Continuando il discorso sulla gestione dell'elettorato da parte del clan dei Casalesi, specifico che vi era una gestione differente per indirizzare i voti degli elettori indigenti rispetto a quella utilizzata per indirizzare gli elettori più abbienti. Con riferimento agli elettori indigenti, infatti, il clan dei Casalesi - e per esso soprattutto il gruppo SCHIAVONE (nello specifico quantomeno Walter SCHIAVONE, Sebastiano FERRARO, Sebastiano PANARO, Nicola PANARO, Giuseppe MISSO detto Caricalieggi) - reperiva grossi quantitativi di generi alimentari di prima necessità (pasta, pelati, zucchero, latte, ovvero generi voluminosi, ma di basso costo) che poi stoccava a casa del padre di Walter SCHIAVONE ed in un'altra abitazione (che ha all'interno un grosso cortile, ma che adesso non ricordo con precisione a chi appartenga). Walter SCHIAVONE si recava, poi, casa per casa a indicare il nominativo del candidato da votare e nell'occasione precisava "se non vi offendete, passate per casa mia che c'è un po' di spesa per voi". Gli elettori indigenti si recavano, quindi, a prelevare i pacchi regalo a casa di Walter SCHIAVONE assicurando il loro voto. (…)
Certamente per gli elettori più abbienti (quali ad esempio imprenditori, professionisti etc.) non si utilizzava questo sistema, ma vi era una movimentazione generale di tutte le persone del clan per convogliare i voti verso il candidato prescelto dal clan. In questo senso, certamente anche VASSALLO Gaetano, che aveva un grosso bacino elettorale a Cesa anche in forza della consistenza numerica della famiglia di appartenenza e in forza delle sue conoscenze, si è sempre attivamente prodigato per convogliare i voti secondo le indicazioni fornitegli da mio cugino Cicciotto".

21. Le dichiarazioni di Anna Carrino e le intercettazioni eseguite tra l'aprile e il giugno 2004 presso il carcere di Ascoli Piceno

Nel periodo compreso tra l'aprile e il giugno del 2004, nell'ambito del procedimento n. 10402/03 N.R., vennero registrate conversazioni nelle quali il detenuto Francesco BIDOGNETTI chiedeva al genero LUBELLO Giovanni di intervenire presso un soggetto non nominato al fine di procurare vantaggi ad un giovane militare legato alla famiglia di STOLDER Raffaele, all'epoca detenuto in regime di cui all'art. 41/bis O.P. nello stesso carcere di Ascoli Piceno.
Questi i brani intercettati:

Colloquio dell'8 aprile 2004 (all. 2 dell'informativa DIA 9.1.2009) -
Inizio ore 12.31.01
BIDOGNETTI FRANCESCO … il fatto del soldato… no?
LUBELLO GIOVANNI (annuisce)…
BIDOGNETTI FRANCESCO … a posto?
LUBELLO GIOVANNI ci ho parlato un'altra volta… ci ho parlato un'altra volta pure prima…
BIDOGNETTI FRANCESCO a loro? (con il pollice il detenuto indica la postazione alla sua destra occupata da STOLDER Raffaele in quel momento intento al colloquio con la moglie FERRIERO Patrizia)
LUBELLO GIOVANNI sì con la signora …
BIDOGNETTI FRANCESCO ma quando?
LUBELLO GIOVANNI sta a vedere come sta messo, se sta messo che può portare la macchina, se tiene la patente per portare la macchina…

BIDOGNETTI FRANCESCO sì ma perché, non la tiene? Non te l'ha detto? (ancora accenna alla sua destra)
LUBELLO GIOVANNI non la tiene quella per il soldato !…
BIDOGNETTI FRANCESCO non la tiene?
LUBELLO GIOVANNI (cenno di diniego)…
BIDOGNETTI FRANCESCO e come la tiene?
LUBELLO GIOVANNI normale, normale
BIDOGNETTI KATIA normale, come la teniamo noi su…
BIDOGNETTI FRANCESCO e se la tiene normale che ci vuole che si piglia …
LUBELLO GIOVANNI gliel'ho detto, gliel'ho detto!
Cambia discorso….
Inizio ore 12.44.42
BIDOGNETTI FRANCESCO ne Giovà, tutto a posto, ma sta a fà 'e chiacchiere, non tiene la patente, che ci vuole a prendere la patente ! Non tiene la patente fà un'altra cosa!
BIDOGNETTI KATIA papà, tu perché te la compravi la patente…
LUBELLO GIOVANNI _non è semplice, perché ha messo la firma…
BIDOGNETTI FRANCESCO …embè?
LUBELLO GIOVANNI Non è soldato normale, è volontario
BIDOGNETTI FRANCESCO ci hanno fatto mettere pure la firma….
LUBELLO GIOVANNI e non è semplice
BIDOGNETTI FRANCESCO (fa un gesto di scetticismo)
LUBELLO GIOVANNI io ci sto provando…
BIDOGNETTI FRANCESCO prima lo facevano così
BIDOGNETTI KATIA … papà, una volta!
LUBELLO GIOVANNI io a loro l'ho domandato, glielo dissi. Sai come disse? Non conosco nessuno!
BIDOGNETTI FRANCESCO ….Noo! Ma questa, che ne sa quella…(accennando alla sua destra) ma stai perdendo la cervella? Che ne sa? Che glielo dici a fare a lei?
BIDOGNETTI KATIA ….disse che lei ci provava, per vedere se…
BIDOGNETTI FRANCESCO … nooo, devi parlare con …(inc)
CARRINO ANNA (rivolta a BIDOGNETTI KATIA) ma se ci voleva provare già l'avrebbe detto
BIDOGNETTI KATIA va bene papà, ma comunque ci sta provando lui, no?
BIDOGNETTI FRANCESCO sì ma (inc: parla coprendosi la bocca con la mano sinistra)
Cambia discorso

Dal colloquio del 20 maggio 2004 (Allegato 3)

BIDOGNETTI Francesco chiede notizie a BIDOGNETTI Katia sul "fatto del soldato". Katia risponde che è "tutto a posto" e che il soldato verrà trasferito a giorni. Bidognetti chiede se tale circostanza è stata riferita alla madre del soldato, ottenendo risposta affermativa
13,26.55 Bidognetti Francesco (B.F.) si rivolge a Carrino Anna (C.A.)
B.F. dì così a…. che si mettesse a disposizione (con la mano accenna alla postazione adiacente dove è a colloquio STOLDER Raffaele), prendi il numero di telefono, hai capito?
BK lo teniamo papà…
BF il fatto…
BK papà, è tutto risolto… non ti preoccupare…a Napoli…

BF eh?
BK a Napoli!
BF il fatto del soldato…
BK sì, a Napoli
BF a Napoli, a Caserta….
BK no, no, no, è Napoli lui disse… non ti preoccupare.. va bene..
BF… ma hai parlato con quello che dissi io?
BK ***sì papà, tutto a posto. Se non ci andava a parlare lui da solo quando lo faceva? Tuo cugino non ottiene niente da nessuno, quando lo vedono scappano tutti. Non lo può vedere nessuno***
B.F. a chi?
B.K. a Bernardo
B.F. sì ?
B. K. uhhh, quando andava con lui, a Giovanni si negavano sempre. Dice no, dici che non ci sto. Andò una domenica, no? Fece in cinque minuti. Ha detto se lo avessi saputo dal primo giorno almeno mio suocero non mi avrebbe cazziato. E che caspita!
BF no, ma quella è una brava persona…
BK sì, sì…
BF quelli sono bravi, sono meglio questi, perlomeno non si scordano mai …
BK perché non lo sai ?

Dal colloquio del 17 giugno 2004 (Allegato 4)

Nel prosieguo del brano intercettato a partire dalle 12.40.28

Carrino Anna: il fatto del figlio (con la mano accenna alla postazione degli STOLDER)
… del figlio… il fatto del soldato…
Bidognetti Francesco annuisce…
C. A.: ha detto che lascia stare perché non lo vuole fare più…
B.F. il figlio? E così…!
C.A. ha detto lascia stare che non lo vuole fare più, per mezzo del fatto di tutta questa guerra… avanti, indietro, BUSH, ha detto che non lo vuole fare più
B. F. digli che metta la firma e se ne va!

La lettura dei brani delle intercettazioni, coordinata con il rilievo visivo dei gesti degli interlocutori, faceva già emergere che:

prima dell'aprile 2004 Francesco BIDOGNETTI aveva richiesto ai familiari di recarsi da una persona della quale aveva cura di omettere l'indicazione perché raccomandasse il figlio del compagno di detenzione STOLDER Raffaele, militare in ferma di leva "volontaria", che aspirava ad un trasferimento in Napoli o in Caserta. Il giovane disponeva di una patente per veicoli 'normale', a quanto pare insufficiente per essere trasferito in un reparto militare di 'autieri';

i familiari avrebbero dovuto dire alla persona da contattare di "*mettersi a disposizione*", in modo da garantire le istanze del giovane;

CIRILLO Bernardo e LUBELLO Giovanni si erano recati dalla persona indicata da Bidognetti Francesco, della quale avevano evidentemente compreso l'identità;

la *persona* aveva accolto la richiesta, in un incontro intercorso con LUBELLO Giovanni;

il 17 giugno 2004 BIDOGNETTI Francesco aveva reso noto ai familiari l'intenzione del figlio dello STOLDER di lasciar stare tutto, temendo di essere coinvolto in eventi bellici.

Con delega del 23.09.2004 il P.M. delegava l'attività di riscontro sollecitata dalle riportate conversazioni.
Con nota 1708 del 15.10.2004, la P.G. riferiva di aver appurato presso il Distretto Militare di Napoli, che il soggetto interessato al trasferimento s'identificava in STOLDER Alessio di Raffaele e di FERRIERO Patrizia, nato a Napoli l'11.12.1984, ammesso alla ferma volontaria di un anno in qualità di VFA, a partire dal 18.02.2003.
Lo STOLDER, incorporato con il 2° Battaglione VFA 2003 presso il Comando Regionale "Abruzzo" dell'Aquila, risultava poi aggregato al 123° Reggimento "Chieti"; per fare poi rientro all'Aquila, ove prestava servizio nel "plotone supporto" con la qualifica di "conduttore generico di automezzi" (18/A).
Scaduto il periodo di ferma, in data 18.02.2004, STOLDER Alessio presentava domanda quale aspirante volontario in ferma breve. Il successivo 25 maggio 2004 veniva posto in congedo su domanda.
Le acquisizioni documentali ben si armonizzavano le cadenze temporali e i contenuti delle conversazioni intercettate per come sopra interpretati.
Si apprendeva dunque che l'intervento richiesto non aveva sortito effetti in ragione della spontanea rinuncia dello STOLDER Alessio, intimorito dalla prospettiva di essere coinvolto in una missione internazionale.
L'unica circostanza oscura restava l'identificazione del personaggio al quale LUBELLO Giovanni, su indicazione del BIDOGNETTI, aveva rivolto le richieste di intervento in favore del giovane STOLDER.
Un elemento di rilievo era costituito dal fatto che, in almeno un'occasione, nel visitare il soggetto indicato dal BIDOGNETTI, LUBELLO si era accompagnato a "Bernardo" cugino del detenuto, che non può che identificarsi nel noto CIRILLO Bernardo.

Anna CARRINO, convivente per molti anni di BIDOGNETTI Francesco, nell'anno 2007 transitava nelle file dei collaboratori di Giustizia.
Presa visione delle videoregistrazioni effettuate presso la sala colloqui del penitenziario di Ascoli Piceno, la CARRINO individuava l'artefice della segnalazione del "soldato" STOLDER, nell'onorevole Nicola Cosentino.

Interrogatorio del 16.04.2008:
"(...) A questo punto alla CARRINO viene sottoposta in visione la videoregistrazione del colloquio tenuto l'8 aprile 2004 presso il carcere di Ascoli Piceno con il detenuto BIDOGNETTI Francesco. Alla pos. VHS 12.44.50.…omissis…Dopo aver ascoltato il brano in questione la Carrino dichiara di non aver percepito quanto detto dai colloquianti per il sovrapporsi di voci provenienti dai box adiacenti. Chiede pertanto che venga data lettura della trascrizione, a verbale. Avuta lettura del brano in questione, la CARRINO dichiara: "In questo passaggio stiamo parlando del fatto che un figlio di Patrizia STOLDER, che in quel periodo stava prestando servizio militare aveva bisogno di un trasferimento o di qualche altro favore. Di questa vicenda ho già parlato in una precedente occasione.
ADR: mi si chiede quale sia il senso della frase pronunziata dal LUBELLO: "io ci sto provando".
Rispondo di aver saputo dallo stesso Giovanni LUBELLO, che una sera si era ritirato a casa con un certo ritardo, che insieme a CIRILLO Bernardo era stato a casa di Nicola COSENTINO detto "o' mericano", al quale avevano chiesto di intervenire per risolvere la vicenda in questione.
ADR: Nicola COSENTINO è un esponente politico di Casal di Principe, credo sia un onorevole o un senatore.
ADR: Appresi dallo stesso LUBELLO che il COSENTINO aveva promesso che si

sarebbe interessato della vicenda propostagli, dicendo che però non sarebbe stato facile.
ADR: Mi si chiede come potessero il LUBELLO e il CIRILLO avere accesso presso il COSENTINO.
Rispondo che la famiglia del LUBELLO era in rapporti di conoscenza con il COSENTINO che, in particolare era certamente in buoni rapporti con un defunto zio del LUBELLO, Ugo CORONELLA geometra. Mi risulta peraltro che, dopo la morte del CORONELLA, non corresse buon sangue tra il LUBELLO e il COSENTINO. Infatti il LUBELLO, commentando quella sera l'incontro avuto con il COSENTINO, disse una frase del tipo " Deve ringraziare mio suocero… perché altrimenti la mia faccia non l'avrebbe vista né ora né mai". Non conosco i motivi per i quali tra LUBELLO e COSENTINO non corresse buon sangue. D'altra parte mi risulta che invece il CIRILLO Bernardo fosse in buoni rapporti con il COSENTINO. Non conosco la natura di tali rapporti ma credo fossero nell'ambito dei consueti rapporti di conoscenza correnti tra compaesani di un piccolo centro come Casal di Principe.
ADR: Mi si chiede se il ricorso al COSENTINO fosse stato suggerito da mio marito o se invece fosse solamente frutto di un'iniziativa di Giovanni LUBELLO. Rispondo che non lo so.
…omissis….

A questo punto alla CARRINO viene sottoposta in visione la videoregistrazione del colloquio tenuto il 20 maggio 2004 presso il carcere di Ascoli Piceno con il detenuto BIDOGNETTI Francesco.
Alla pos. VHS 13.26.55
In questo passaggio mio marito mi raccomanda di dire a GUIDA Luigi di mettersi a disposizione di STOLDER Raffaele. *In realtà quando per le prime volte mio marito decise di fornire un aiuto agli STOLDER doveva proprio essere il GUIDA a fornire la somma concordata, tuttavia le cose funzionarono così soltanto per poco e infatti, dopo la discussione sorta con il GUIDA, che come ho appena esposto non s'interessava piu' di nulla e voleva fare di testa sua io pagai il mensile alla signora Patrizia prelevando i fondi da quelli a me destinati.*
Nella seconda parte del brano ascoltato mio marito chiede notizie ancora una volta del "fatto del soldato". Mia figlia Katia gli risponde che è tutto sistemato, che il ragazzo è stato trasferito o che sarà trasferito a breve a Napoli. ***Mio marito chiede conferma se abbiano parlato con la persona che lui aveva indicato e ottiene risposta positiva da Katia la quale nella circostanza precisa che con il soggetto indicato ci aveva parlato Giovanni da solo dopo che, per molte volte, presentandosi a casa di questi insieme a CIRILLO Bernardo, si era sentito dire che in casa non c'era nessuno. Katia precisa che l'incontro era avvenuto una domenica. In realtà io so bene che all'incontro di cui io sono a conoscenza parteciparono LUBELLO Giovanni e CIRILLO Bernardo. Mia figlia racconta questa bugia al padre solo per accreditare ulteriormente il marito ed esaltarne i meriti.***
ADR: La persona cui mio marito allude è Nicola COSENTINO.
ADR: Mi si chiede di quanti incontri tra LUBELLO e il COSENTINO io sia al corrente. Io so di un unico incontro, avvenuto di sera e di cui ho già fatto cenno in precedenza. Tuttavia quanto mia figlia racconta al padre mi fa supporre che potrebbe esserci stato un secondo incontro, di cui però non ho alcuna cognizione essendo soltanto una mia illazione.
…omissis…
Alla pos. VHS 12.44.20
In questo passaggio si torna a parlare della vicenda della raccomandazione per il

figlio di Patrizia e Raffaele STOLDER, di cui ho detto sopra. ***Nel colloquio io dicevo a mio marito che il figlio di Patrizia non intendeva più avere quella raccomandazione legata al suo status di soldato, per paura della guerra in corso. Io avevo avuto questa informazione direttamente da Patrizia STOLDER che era venuta a casa mia e ne avevo subito riferito a Giovanni LUBELLO che si era occupato della raccomandazione con Nicola COSENTINO. Giovanni mi disse che se la sarebbe vista lui. Per essere piu' precisa, ricordo che l'incontro con la signora STOLDER in cui si parlò di questo non avvenne in casa mia, ma ci demmo appuntamento telefonico per incontrarci a Capodimonte davanti alla chiesa. Sono sicura di questo perché a quel tempo la STOLDER non frequentava casa mia ma ci sentivamo per telefono. La Stolder ha iniziato a frequentare casa mia dopo il pentimento di Luigi GUIDA.*** *Quando io ho riferito a mio marito, durante il colloquio, di questo fatto, lui già ne era a conoscenza perché lo aveva saputo da STOLDER Raffaele nel carcere".*

Nel verbale del 21.04.2008 e in una serie di interrogatori che qui si passeranno in breve rassegna Anna Carrino, visionate le videoregistrazioni dei colloqui suoi e dei suoi familiari con l'illustre congiunto detenuto, descriveva il rapporto di sovvenzionamento, amicizia e reciproco sostegno che, su disposizione del convivente, si era allacciato per iniziativa di 'Cicciotto' con la famiglia del noto boss napoletano Raffaele Stolder.

"*Si passa al colloquio del 16 settembre 2004 presso il carcere di Ascoli Piceno con il detenuto BIDOGNETTI Francesco.*

…omissis…
Alla pos. VHS 13.28.50
In quest'ultimo brano si fa riferimento alla necessità di far pagare gli avvocati e di dare il denaro ai familiari di STOLDER Raffaele. Il messaggio è per GUIDA Luigi e mio marito soggiunge che quando qualcosa non funziona per il verso giusto il GUIDA deve informarlo attraverso l'Avv. BONANNO indicata con l'espressione "mandarmelo a dire come sa lui". Inoltre, il mio convivente mi riferisce di rappresentare al GUIDA la sua delusione per la vicenda dell'investitura di CIRILLO Alessandro quale responsabile del Clan.…omissis…A questo punto alla CARRINO viene sottoposta la registrazione del colloquio del 25 novembre 2004 presso il Carcere di Ascoli Piceno con il detenuto BIDOGNETTI Francesco
…omissis…
Alla pos. 13.02.00
In questo tratto del colloquio mio marito mi chiede se io avessi risolto la questione dei soldi che erano destinati a STOLDER. Subito dopo si alza e si accosta alla postazione adiacente occupata dallo STOLDER Raffaele e dal suo visitatore, una persona robusta, di alta statura che io conosco con il nome di battesimo Ciro. ***Mio marito chiede a Ciro se sia andato alla Sanità a incontrare la signora CASANOVA, alla quale avrebbe dovuto dire che il marito, GUIDA Luigi, doveva comportarsi bene.***
ADR: Comportarsi bene, nello specifico, significava che GUIDA avrebbe dovuto mandare i soldi allo STOLDER come disposto da mio marito.
ADR: mi si fa notare che nel corso di altri verbali ho dichiarato che le somme destinate allo STOLDER, ritirate dalla moglie Patrizia, erano da me tratte dalla mia quota mensile. Confermo quello che ho detto precisando però che questo è accaduto soltanto a partire dall'arresto del GUIDA, in quanto precedentemente a tale evento le somme

allo STOLDER erano effettivamente versate dal GUIDA.
…omissis….

Alla pos.VHS 13.40.00
In questo brano, Francesco BIDOGNETTI, in considerazione della visita effettuata presso l'abitazione di Annunziata CASANOVA unitamente a Orietta VERSO, si raccomanda di stare attenti. Proseguendo il mio convivente mi chiede se è stato corrisposto il mensile alla famiglia STOLDER ed io confermo di averlo consegnato di persona.

Verbale del 10.03.2008:
Si passa a questo punto alla visione della videoregistrazione del colloquio presso il carcere di Ascoli Piceno intrattenuto con BIDOGNETTI Francesco il 20 ottobre 2005.
Alla pos.: 13.14.15
In questo brano si fa riferimento alle somme di denaro che mensilmente, su richiesta di mio marito, versavo alla moglie di MORELLI Domenico, prima detenuto nello stesso carcere di mio marito. Devo premettere che mio marito mi chiese di versare 1000 euro mensili sia alla moglie del MORELLI che a Patrizia STOLDER le quali venivano a prelevarli direttamente a casa mia a Casale. In quel periodo la signora MORELLI non era venuta e ci domandavamo come mai. Avevamo saputo anche che era l'avvocato ad averle consigliato di non venire a prendere questi soldi, anche in relazione ad un processo che la signora stava affrontando. Inoltre, si era sparsa la voce che il marito della signora MORELLI avesse intenzione di collaborare con la giustizia. Ad ogni modo, la signora si è assentata da questo appuntamento per un paio di mesi circa mentre successivamente è tornata a venire e io ho versato sia a Patrizia STOLDER che a lei la somma prefissata fino al luglio del 2007.

Verbale del 14.03.2008:
Si passa alla pos. 11.56.30 del colloquio del 18/10/2006 (ALL. 11).
Dopo aver preso visione del brano indicato la CARRINO dichiara:
"In questo brano stiamo parlando della signora Patrizia, coniuge di STOLDER, che periodicamente mandava delle cartoline a mio marito. Quando io gli dico che intendo mandargli un libro, faccio riferimento effettivamente a un libro di canzoni napoletane,

che mi aveva inviato Patrizia. Mio marito pensava che gli mandavo il libro "Gomorra" e non voleva ciò, per paura della censura. Il rapporto di mio marito con STOLDER Raffaele nasceva dal fatto che i due erano codetenuti. Fu proprio mio marito, nel corso di un colloquio ad Ascoli Piceno, a incaricarmi di corrispondere uno stipendio alla moglie dello STOLDER. Io mensilmente invitavo presso la mia abitazione Patrizia Stolder per consegnarle lo stipendio che ammontava a mille euro mensili.
…omissis…
Si passa alla pos. 31.25 del colloquio del 15/11/2006 (ALL. 12).
Dopo aver preso visione del brano indicato la CARRINO dichiara:
"Mio cognato Michele, parlando con il fratello, fa riferimento al pentimento di Guida Luigi. Io avevo in quel periodo incaricato Patrizia STOLDER di accertare se la famiglia di Guida si trovasse ancora alla Sanità, ovviamente su mandato di mio marito. Voglio precisare, diversamente da quanto ho detto sopra, che i primi mesi in cui corrispondevo lo stipendio a Patrizia STOLDER mi recavo personalmente a Capodimonte, ove mi incontravo con Patrizia nei pressi del santuario di Capodimonte. Poi, come ho detto, anche per precauzione, dissi a Patrizia STOLDER di venire a casa mia. In una di queste occasioni la STOLDER mi tranquillizzò dicendomi che la signora CASANOVA era sempre presente alla Sanità. Voglio precisare che la madre di Patrizia abita proprio in zona Sanità.

Nell'interrogatorio del 29.04.2008 Anna Carrino sintetizzava tutta la vicenda che aveva riguardato il 'soldato' Alessio STOLDER:

*"…omissis…**ADR: per quanto concerne la questione relativa al "fatto del soldato" di cui si parla nelle intercettazioni, ho sinteticamente già riferito; specifico quanto segue. Seppi dell'incontro tra Giovanni LUBELLO e CIRILLO Bernardo con l'onorevole Nicola COSENTINO lo stesso giorno in cui si tenne. Del contenuto me ne parlò Giovanni LUBELLO che quella sera tornò tardi a casa; ricordo che si doveva trattare del 2004/2005. Mi disse che si era incontrato a casa di Nicola COSENTINO insieme a CIRILLO Bernardo e in quell'occasione avevano chiesto un interessamento del parlamentare a favore di un figlio di STOLDER Raffaele, detenuto presso lo stesso carcere di Ascoli Piceno, insieme a BIDOGNETTI. Questo ragazzo doveva andare a fare il soldato, come volontario e BIDOGNETTI Francesco aveva disposto che i due si rivolgessero a COSENTINO per favorire il ragazzo per un avvicinamento a Caserta o a Napoli. LUBELLO e CIRILLO si erano dunque portati dal parlamentare per chiedergli un intervento. Per quel che mi disse LUBELLO, COSENTINO disse che si sarebbe interessato per questo ragazzo e durante i colloqui si parlò spesso di questa questione, fino a che il ragazzo ebbe timore di poter essere mandato all'estero, e quindi si disinteressò alla cosa. Rappresento che BIDOGNETTI Francesco conosce COSENTINO Nicola da quando erano ragazzi. Non so dare informazioni più specifiche quanto al contenuto dei loro rapporti. Ricordo che LUBELLO Giovanni non aveva piacere a recarsi da COSENTINO ed è per questo che si fece accompagnare da CIRILLO Bernardo che conosceva bene il parlamentare. L'onorevole COSENTINO era soprannominato "O' mericano", tutti lo chiamano così a Casale.** Posso dire che CIRILLO Bernardo andava spesso a Roma per portare le carte o il denaro all'Avv. ARICO' Giovanni – da noi chiamato spesso come "Il professore" – nelle occasioni degli impegni presso la Corte di Cassazione".*

Nell'interrogatorio del 30.04.2008 CARRINO Anna ribadiva:

"A D.R.: Con riferimento alla questione di cui ho parlato nello scorso interrogatorio

riferita alla raccomandazione per un militare, parente di STOLDER Raffaele, richiesta all'onorevole Nicola COSENTINO, faccio presente che – come si rileva in alcuni colloqui – il militare doveva essere trasferito e riavvicinato a casa, a Napoli o a Caserta. Lo arguii dai colloqui, ma non so dire a quale arma appartenesse questa persona…..".

Può in conclusione affermarsi che Anna Carrino attribuisce all'indagato Cosentino un comportamento rivelatore di effettiva disponibilità verso le richieste di uno dei principali capi detenuti del clan dei Casalesi.
Una disponibilità che, inserendosi (e anzi concorrendo ad alimentare) la relazione di reciproco sostegno instaurata da Francesco Bidognetti con uno dei più potenti suoi omologhi campani, non è priva di incidenza sul piano del rafforzamento del prestigio del boss, del quale è documentata la perdurante dedizione alla cura degli interessi criminali (si considerino i messaggi mandati, attraverso i familiari ammessi al colloquio, al sodale GUIDA Luigi, proveniente dal napoletano rione Sanità; il controllo mediato esercitato su costui; l'intervento nella designazione di Cirillo Alessandro quale reggente).
Il valore delle dichiarazioni della collaboratrice Carrino relative al tema della disponibilità manifestata dall'onorevole Cosentino per favorire il soldato Stolder sta pure nella corroborazione dell'assunto relativo al rapporto esistente tra il Cosentino e il criminale Bernardo Cirillo, esponente di rango elevato della fazione bidognettiana del clan dei casalesi, già indicato da Gaetano Vassallo come *trait d'union* tra lui e l'odierno parlamentare.

22. Le notizie 'd'ambiente' riferite da Oreste Spagnuolo e Michele Froncillo
Ben diversa consistenza hanno, rispetto ai contributi finora passati in rassegna, le dichiarazioni di Oreste Spaguolo e Michele Froncillo.
I due collaboratori non riferiscono contatti diretti avuti con l'indagato (come fanno invece Vassallo e De Simone), né specifici mandati di diramazione del messaggio elettorale (come fanno Frascogna e Ferrara Raffaele).
Il loro contributo vale soltanto ad avvalorare la notorietà nell'ambiente criminale casalese del legame del parlamentare con il clan, senza apprezzabili specificazioni.
Per quanto non essenziali alla ricostruzione dell'addebito, le voci di Spagnuolo e Froncillo meritano di essere riportate, sia per ragioni di completezza espositiva, sia perché la S.C. riconosce a questo genere di informazioni un certo valore probatorio, quando afferma: *"Hanno rilievo probatorio le dichiarazioni del collaboratore di giustizia su fatti e circostanze relative alla vita del sodalizio criminoso di appartenenza, se sono corroborate da elementi di verifica in ordine al fatto che* ***le notizie riferite costituiscano oggetto di patrimonio conoscitivo comune, derivante dal flusso circolare di informazioni attinenti a fatti di interesse comune degli associati****, e ciò in aggiunta ai normali riscontri richiesti per le propalazioni dei collaboratori di giustizia".*

Nell'interrogatorio reso il 24 aprile 2009, **Oreste Spagnuolo** ricostruisce l'affiliazione del famigerato Giuseppe Setola al clan Bidognetti e ricorda un commento indicativo, se non altro, di quanto fosse diffusa nel gruppo criminale la fama del rapporto privilegiato dell'indagato con il capo:

"Per quanto concerne i rapporti del clan con i politici posso soltanto dire che ***SETOLA Giuseppe ebbe, in un'occasione, vedendo alla televisione il politico COSENTINO Nicola (non so dire che ruoli istituzionali ricopra, a parte il fatto che***

so essere del PdL) disse che era un "amico di Cicciotto", facendo riferimento ai tempi in cui Francesco BIDOGNETTI era libero*. Vedendolo in televisione "ne parlò bene", anche se non so dire nulla di preciso, né lui fece commenti, né io feci ovviamente domande.* ***Diceva che, testualmente, era una persona "acconcia", ossia "a posto".***

Valore analogo può attribuirsi alla dichiarazione di **Michele Froncillo**, esponente di spicco della camorra marcianisana (clan Belforte) che, nell'interrogatorio reso il 29 gennaio 2008 riferiva:

"GIULIANI inoltre aveva numerosi rapporti nel senso che era pienamente disponibile con gli esponenti di spicco del clan "dei casalesi", quali, nel tempo, ZAGARIA Vincenzo, ZAGARIA Michele, IOVINE Antonio detto "O'NINNO", e ultimamente Peppe il padrino ovvero RUSSO Giuseppe e, dopo il suo arresto avvenuto il 2003 in Germania, è subentrato il fratello Massimo RUSSO, attraverso il cognato COSENTINO Nicola, onorevole di Forza Italia*…Omissis……Ricordo che, ad esempio, nell'anno 2001, mi sono incontrato nel capannone di Orta di Atella gestito da GIULIANI, che posso indicare in sede di sopralluogo, con GIULIANI, Bruno BUTTONE,* ***Lello LETIZIA che è una faccia pulita ma è un affiliato al clan "dei casalesi" per il quale gestisce l'aspetto economico imprenditoriale ed ha rapporti per conto del clan anche con esponenti istituzionali, quali l'onorevole COSENTINO*** *…Omissis…*
…Omissis…Voglio precisare che GIULIANI Raffaele aveva rapporti diretti ed indiretti con gli ***onorevoli COSENTINO*** *e …omissis… attraverso Massimo RUSSO e RUSSO Giuseppe detto "o'padrino".*
In particolare Massimo RUSSO …Omissis…

23. Valutazione conclusiva del quadro indiziario e confronto con il paradigma del concorso esterno del politico

La rassegna di contributi appena esposta (capitoli 17 e ss.) fa registrare convergenze specifiche sulle seguenti, significative, circostanze:

il sostegno offerto dal clan dei Casalesi all'indagato in occasione delle elezioni provinciali casertane del 1990 (Gaetano Vassallo e Carmine Schiavone);

il sostegno offerto in occasione delle elezioni regionali dell'anno 1995 (Dario De Simone, Raffaele Ferrara, Domenico Frascogna);

il sostegno nelle poilitiche del 2001 (Gaetano Vassallo e Michele Orsi);

la disponibilità esplicitata da Cosentino verso i supporters elettorali di estrazione camorrista (Gaetano Vassallo, Dario De Simone, Domenico Frascogna);

il rapporto di protezione e confidenza con Francesco Bidognetti e con il cugino Bernardo Cirillo (Gaetano Vassallo, Anna Carrino, Domenico Bidognetti);

il sistema di individuazione apicale del candidato da sostenere e di diramazione del messaggio ai capizone (Domenico Bidognetti, Dario De Simone, Raffaele Ferrara, Domenico Frascogna).

E' dunque provato – al livello di gravità indiziaria richiesto dall'articolo 273 c.p.p. - anche questo aspetto dello scambio 'voti contro favori'.

I rapporti di affinità familiare, comune estrazione territoriale e acclarata confidenza/gratitudine impediscono, allo stato, di ritenere credibili argomenti difensivi che siano incentrati sul tema dell'inconsapevolezza dell'indagato circa l'estrazione camorristica dei soggetti con i quali venne di volta in volta a relazionarsi, nelle vicende sopra enunciate.

Non può infine dubitarsi che nell'anno 2000, quando iniziò a patrocinare le iniziative

dei fratelli Orsi nel settore dei rifiuti, Cosentino fosse un politico di caratura medio-alta in costante ascesa.
Tale classificazione è suggerita dalla progressione senza inciampi della sua carriera politica, dalla conquista (avvenuta già nell'anno 1996) del ruolo di parlamentare, dal fattivo controllo di molte delle amministrazioni comunali che avrebbero conferito alla società mista gli affidamenti diretti, dalle conclamate relazioni con la struttura commissariale e con altri esponenti politici importanti del territorio.
Così classificato il ruolo politico dell'indagato, la sentenza Mannino del 2005 consentirebbe di riconoscere all'indagato un livello di 'affidabilità' tale, da attribuire rilevanza causale (in termini di rafforzamento del sodalizio) già al solo dato della sua '*promessa di disponibilità*'.
Come si è visto però ricorrono nel compendio indiziario prove di effettiva ed efficace attivazione talmente consistenti, da far ritenere che il contributo offerto da Cosentino alle iniziative imprenditoriali del clan dei casalesi, sarebbe causalmente rilevante, anche se egli fosse un politico di modesta caratura.

24. Le esigenze cautelari

E' pacifico in giurisprudenza che anche il concorso esterno in associazione di tipo mafioso sia assoggettato alle presunzioni sancite dall'art. 275 comma 3 c.p.p.: presunzione relativa di sussistenza dei *pericula libertatis; presunzione juris et de jure* di esclusiva adeguatezza della misura custodiale carceraria.
E' chiara sul punto l'affermazione contenuta nella sentenza della Seconda Sezione della Suprema Corte (Cass., II, 18.11 – 16.12.2004, n. 48444, Cozza) per la quale: "*anche il concorso esterno in associazione di stampo mafioso rientra tra i reati per i quali, in ordine alle esigenze cautelari, l'articolo 275 c.p.p. pone una presunzione di pericolosità: esso invero integra pur sempre nuna partecipazione nel reato associativo e comunque persegue – quanto meno – il fine di agevolarte l'attività di tali sodalizi*".
Il regime presuntivo esimerebbe questo giudice da ulteriori considerazioni sul tema.
Non possono tuttavia sottacersi:
- la peculiarità del ruolo politico rivestito dall'indagato, parlamentare e sottosegretario di governo;
- la datazione delle principali risultanze di prova indiziaria che non supera l'anno 2004.
La prima circostanza induce a ritenere superata la presunzione del 'pericolo di fuga', dal momento che la sottrazione al processo implicherebbe per l'imputato anche uno sradicamento dai territori in cui si esprime la sua personalità politica e istituzionale.
La seconda non è sufficiente invece a ritenere elisa l'esigenza di cui all'articolo 274 lettera c) c.p.p. Ciò per vari ordini di ragioni.
Innanzitutto per il costante insegnamento giurisprudenziale che in materia di criminalità organizzata mafiosa, persino nei casi di sopravvenienza di periodi detentivi, esige la prova effettiva del recesso dal legame criminale per ritenere terminata la condotta.
In secondo luogo, deve considerarsi che il tema dell'attualità' delle esigenze non coincide (neppure nelle materie non governate da presunzioni) con quello dell'attualità del comportamento incriminato.
Nel caso in esame non possono sottacersi gli indici di allarme rappresentati in concreto: dall'aggressività del sodalizio camorristico denominato clan dei Casalesi; dal perdurare della sua operatività, in ragione anche del permanente stato di latitanza di alcuni degli esponenti apicali; del permanere dell'interesse del sodalizio per l'investimento in attività imprenditoriali con vocazione monopolistica (settore

specifico nel quale l'indagato risulta aver rpestato il proprio contributo).
Orientando l'ottica verso indici di allarme maggiormente personalizzati, non può omettersi di considerare: il consolidamento e la continuità dei rapporti criminali che hanno agevolato il Cosentino nella sua carriera politica; la pluralità di competizioni elettorali nelle quali il Cosentino risulta essere stato sostenuto dall'organizzazione criminale; il rilievo strategico e di lungo termine del contributo documentato dalle indagini qui compendiate; la persistenza del debito di gratitudine verso un'organizzazione cui egli deve (almeno in parte) le sue fortune.
Tutti questi dati inducono a ritenere allo stato insussistente la 'prova contraria' capace di vincere la presunzione relativa di cui alla norma citata.
E' per definizione insuperabile la presunzione di esclusiva adeguatezza della misura custodiale carceraria.

Sospensione dell'esecuzione
Essendo accertato in atti lo status di parlamentare rivestito dall'indagato, l'esecuzione della presente ordinanza è subordinata alla condizione che sia rilasciata dalla Camera dei Deputati l'autorizzazione prevista dall'articolo 4 della legge 20 giugno 2003 n. 140.
L'autorizzazione sarà richiesta da questo Giudice ai sensi e nelle forme previste dagli artt. 4 comma 2 e 5 della legge citata.

P.Q.M.

Letti gli artt. 291 e ss. c.p.p.,
applica all'indagato Nicola Cosentino, nato a Casal di Principe il 2 gennaio 1959, ivi residente in Corso Umberto I n. 44, la misura della custodia cautelare in carcere.
Letti gli artt. 4 e 5 della legge 20 giugno 2003 n. 140,
sospende l'esecuzione del presente provvedimento e contestualmente dispone la trasmissione di copia dell'atto al Signor Presidente della Camera dei Deputati con richiesta di apposita autorizzazione.
Si riserva di trasmettere a detta Autorità gli ulteriori atti depositati ai sensi dell'articolo 291 c.p.p., ove ciò risulti necessario ai fini della richiesta autorizzazione.
Trasmette copia della presente ordinanza ai Pubblici Ministeri richiedenti, dottori Alessandro Milita e Giuseppe Narducci.

Australian Workers' Union leader Stacey Schinnerl warned she wasn't safe at building site after CFMEU threats

The Queensland head of the Australian Workers' Union was told to stay away from a project targeted by CFMEU because her safety was at risk.

One of Queensland's most senior union leaders was warned it was not safe for her on a building site because the CFMEU was waging a violent campaign to take control of the project and squeeze out her union.

Australian Workers' Union secretary Stacey Schinnerl was one of several women targeted by the rival Construction, Forestry and Maritime Employees Union when it tried to expand its influence across the state, Queensland Council of Unions head Jacqueline King told an inquiry into the CFMEU Tuesday.

A large construction company that had an agreement with the AWU, BMD Group, tried several times to get the police to intervene when CFMEU officials turned up at BMD building sites, Ms King said in a written statement to the inquiry.

The police refused to get involved because they said it was a matter for the State workplace safety regulator, which the CFMEU had also targeted with a campaign of intimidation against a senior female manager, according to Ms King.

"Ms Schinnerl also told me she had been informed by BMD senior management that they could no longer protect or provide safety to her as the union state secretary to come on to site because they could not control the violence or escalation of incidents that might occur in the future involving the CFMEU," Ms King said.

"I recall Ms Schinnerl had been quite upset about that, because the AWU had an enterprise agreement with BMD and she couldn't access the site with her legal right-of-entry permit."

Turned against

Ms Schinnerl is due to give evidence on Wednesday. Her appearance and Ms King's at an inquiry initiated by the State Liberal-National government suggests the State's top union leaders have turned against the previous leaders of the construction division of the CFMEU, which was placed under the control of an independent lawyer by the federal Labor government last year.

Ms King told the inquiry today the union targeted Kim Bancroft, the deputy director general of the Office of Industrial Relations, who had a been hired from the private sector to improve the safety of building sites.

"The union had a view that they wanted to be able to control her when she went into that job," Ms King said Tuesday morning. "She became almost a captured pawn of just their issues. She was at the union office several times a week, which was unusual.

"When she pulled back from that, the union then adopted what appeared to be a campaign of directly targeting Ms Bancroft. They were texting, emailing and sending phone calls ... and demanding she respond to every compliance mater that the union had within a 24-hour period or else she would be responsible for people dying on work sites.

"She couldn't do her day-to-day job while that was occurring."

Ms Bancroft resigned within 12 months of being appointed.

The CFMEU's previous leaders, Michael Ravbar and Jade Ingham, have not had a chance to respond to any of the allegations in the inquiry although may be called as witnesses next year.

The Nightly does not suggest any wrongdoing on Mr Ravbar or Ms Ingham's part, only that they may be called as witnesses during the inquiry.

Intimidation and violence

So far the inquiry has focused on conflict between the CFMEU and the AWU, which represented many of the workers on large government building sites in Queensland, including railways, train stations and freeways. The inquiry heard the CFMEU wanted to expand from buildings into civil construction and used intimidation and violence to take over sites from the AWU.

In 2023, about a dozen CFMEU members known as the "Youth Crew" surrounded an AWU car and chanted "scab, scab, scab". AWU officials were followed through traffic by men on motorcycles and Ms Schinnerl was verbally abused in front of her young son at a May Day family picnic, the inquiry was told.

In her written statement, which was admitted into evidence at the inquiry under commissioner Stuart Wood KC, Ms King said BMD told her groups of between 30 to 35 men wearing CFMEU clothing gathered daily at the Centenary Bridge project in suburban Brisbane and blocked access to AWU officials.

"They also told me that they had hired a private investigator to investigate who the people were, and that they had been advised that the guys on the picket line were Croatians, most likely associated with John Setka's crew from Melbourne, and that some may have had some connections with bikies," she said in the statement.

"BMD also told me that the investigator had found three trackers on BMD vehicles and that they had concerns for the safety of some of their crew and for the security of the site."

Mr Setka is a former Victoria CFMEU leader who was charged this month with threatening the union's government-appointed administrator, Mark Irving KC.

CFMEU paid $40 million-$50 million into the wrong account, corruption inquiry told

The misdirection of money took place in Queensland, where the union's leaders hadn't faced an election in 15 years, administrator Mark Irving said.

Aaron Patrick

Around $40 million to $50 million of CFMEU members' dues were paid to the wrong part of the union, breaking union rules, industrial relations law and depriving the workers of the right to vote in union elections, CFMEU administrator Mark Irving KC told a corruption inquiry today.

The misdirection of the money may have been designed to protect the leaders of the CFMEU's Queensland construction division from interference by their Federal counterparts, Mr Irving told the inquiry being conducted by barrister Stuart Wood KC in Brisbane today.

After previously watching dramatic footage of violence on Queensland building sites, the inquiry shifted on its third day to financial irregularities in the union, which was placed under the control of Mr Irving in 2024 by the Federal Labor government.

Mr Irving portrayed the CFMEU as Australia's most lawless union, and said it had been found to have broken the law 1163 times between 2019 and 2024, while other unions had few or no convictions. He blamed the union's problems in Queensland on former State secretary Michael Ravbar and deputy Jade Ingham, who he removed from their jobs.

1 MIN READ 20 NOV 2025

'Violence, not organised crime'

Unlike the union's leaders in Victoria, who used criminals and motorcycle gangs to take control of building sites, Mr Irving said, the Queenslanders did not need outside help because they had controlled the division for 15 years "unhindered by the laws of society and the laws of civil society" without facing an election.

"The cancer in Queensland was violence, it wasn't organised crime," Mr Irving told the inquiry. "Ravbar and Ingham ran the Queensland branch as their own fiefdom."

The two men continued to have "effective control" over the division until June, this year, through the loyalty of union representatives known as delegates across hundreds of building sites, Mr Irving said.

Firing the delegates would have triggered "industrial chaos" across the state, he said, but he was able to use a report on union-orchestrated violence that was published in June to wrest control of the division about 10 months after he was legally placed in charge.

The inquiry heard on Wednesday that when a corruption investigator, Geoffrey Watson, conducted interviews for the report, union officials were driven to his interviews by a relative of Mr Ingham later charged with murder.

The union officials recorded the interviews. Those recordings were given to the driver and likely passed on to Mr Ingham, Mr Irving said, a process he agreed was a form of "coercive control".

Mr Irving said he was considering expelling Mr Ravbar and Mr Ingham and recommending legal action against them. Neither has been charged or had an opportunity to defend themselves to the inquiry, although have hired lawyers to attend each day. They are expected to be compelled to give evidence next year in what could be the inquiry's climax.

The inquiry was initiated by Queensland's Liberal-National government to clean out corruption in the building industry before big construction projects start for the 2032 Olympic Games.

Workplace agreements doubt

Under a complicated legal structure that created two Queensland branches, $10m of members' dues each year was paid to an entity out of the control of the national division.

As a consequence the only construction workers considered paid-up members, and entitled to vote in union elections, were 163 members in the Northern Territory, Mr Irving said. The inquiry is considering if this could mean industrial agreements struck on behalf of Queensland members were legally valid.

In the 24 hours before Mr Irving took over, $3m was transferred from the union's accounts, he said. Fearing the money would disappear or be used to campaign against the administration, Mr Irving was able to get the money back.

On Wednesday Mr Watson, the corruption investigator, told the inquiry the union had reached an agreement with the police union that the police would not get involved in workplace disputes, even if they descended into physical intimidation or violence.

The Queensland Police Association vehemently denied signing any such deal. "I find it offensive and outrageous any insinuation suggesting police who have sworn an oath to disrupt and stop criminal behaviour would not act where required by law and jeopardise their own integrity," President Shane Prior said.

Contacted Thursday morning about Mr Prior's statement, Mr Watson declined to comment.

Both Mr Watson and Mr Irving said the union should not be deregistered, or abolished, because it would cause too much disruption to the building industry and hurt workers.

CFMEU inquiry hears rival union boss Stacey Schinnerl held 'significant concerns' for her safety after perceived threat

By Ciara Jones Unions

Wed 3 Dec 2025 at 5:35am

The commission of inquiry into the state division of the CFMEU is holding its second block of public hearings in Brisbane. *(ABC News: Luke Bowden)*

In short:

Australian Workers Union (AWU) Queensland branch boss Stacey Schinnerl has given evidence about the CFMEU's alleged use of violence and intimidation towards the AWU, its main rival.

Ms Schinnerl told the inquiry about receiving what she perceived to be a threat on her life.

What's next?

The commission of inquiry into alleged misconduct and corruption within the state division of the CFMEU continues on Thursday.

A rival union boss has told an inquiry she lives in a "perpetual heightened state of anxiety" amid an "orchestrated" fear campaign against her by the Construction, Forestry and Maritime Employees Union (CFMEU).

Australian Workers Union (AWU) Queensland branch boss Stacey Schinnerl has given evidence at the commission of inquiry into alleged misconduct and corruption within the state's division of the CFMEU.

In an explosive day of testimony, Ms Schinnerl revealed she had received what she perceived to be a death threat amid escalating hostilities between the militant union and the AWU, its main rival.

The inquiry heard she was given a personal message by the CFMEU via an AWU delegate, "to the effect of: 'if I stick my head up, it will get knocked off'".

"I took that to be a threat on my life," Ms Schinnerl said.

She detailed another instance in which she was "followed" from a shopping centre with her 13-year-old son.

Ms Schinnerl told the inquiry the "cumulation" of such incidents had left her in a "perpetual heightened state of anxiety and fear" for herself and her children.

"There were multiple instances that … caused me to believe I was in genuine danger," she said, telling the inquiry she felt "unsafe" in her "own home."

Starting a 'war'

Ms Schinnerl said tensions were heightened after she made a joke during a speech at the 2022 state Labor Party conference, which resulted in ousted

CFMEU state secretary Michael Ravbar "yelling" and staging a walkout with his union's delegation.

She told the inquiry the "quip" related to the CFMEU's "storming" of the Transport and Main Roads building in Brisbane's CBD.

The probe has focused heavily on the CFMEU's alleged use of violence and intimidation towards rivals. *(ABC News: Luke Bowden)*

"I've been told by multiple sources that Mr Ravbar has identified that particular moment as myself starting a war with the CFMEU," Ms Schinnerl said.

"The following week, he called all staff in to Brisbane whereby he discussed plans to, and I quote, take down the AWU.

"I think it's very childish and … very convenient, I think the CFMEU probably always had those plans but I provided an opening and an excuse."

'Orchestrated campaign'

Yesterday, Queensland Council of Unions (QCU) general secretary Jacqueline King took the stand, telling the inquiry that Ms Schinnerl

sought help from the state's top cop and had installed home CCTV and other personal safety measures amid an "orchestrated campaign" of threatening and abusive behaviour.

In her written statement to the inquiry, Ms King recalled an incident in which Ms Schinnerl was "certain she was being followed in … traffic by two intimidating men on large motorcycles".

Jacqueline King told the inquiry Stacey Schinnerl was concerned for her family's safety. *(AAP: Liam Kidston)*

"She could not say whether these persons were CFMEU-affiliated or whether they were 'bikies' but she was clearly shaken," Ms King wrote.

"On the same weekend, one of her organisers had been in a similar incident on the Sunshine Coast motorway while driving with their grandchild in the back seat, where they believed they were followed aggressively by men on large motorcycles.

"Ms Schinnerl was concerned … these incidents were part of an orchestrated campaign against the AWU by the CFMEU."

The inquiry heard Ms King and Ms Schinnerl organised a meeting with Queensland Police Commissioner Steve Gollschewski and his deputy

Cheryl Scanlon in July 2024.

> "You had concerns that were sufficiently serious [enough] that you thought a meeting with the most senior officers of Queensland police was appropriate?" counsel assisting Mark Costello asked Ms King.
>
> "Yes," she replied.

The women never heard back, the inquiry heard.

The inquiry was announced by the Queensland government in July following a scathing report of the state branch released that same month.

In August last year, all state and territory branches of the construction arm of the CFMEU were placed into administration.

Ms Schinnerl will continue giving evidence on Thursday.

Queensland CFMEU member allegedly harassed rival union boss in front of teenage son, inquiry hears

By Ciara Jones Unions

Thu 4 Dec 2025 at 1:10pm

Stacey Schinnerl told an inquiry she was publicly harassed and berated by a CFMEU member.

In short:

A Queensland inquiry has heard a CFMEU leader "watched on" as AWU state branch leader Stacey Schinnerl was publicly harassed and berated by a CFMEU member in 2023.

Ms Schinnerl, the AWU's first female Queensland leader, broke down as she recounted the confrontation.

What's next?

The commission of inquiry into alleged misconduct and corruption continues.

A rival union leader has broken down in tears at a Queensland inquiry while recounting how a CFMEU member allegedly publicly berated and harassed her in front of her 13-year-old son.

The commission of inquiry into alleged union misconduct and criminal links in Queensland is holding its second block of public hearings in Brisbane.

Australian Workers' Union (AWU) state secretary Stacey Schinnerl — the first woman to lead an AWU branch in its nearly 140-year history — has taken the witness stand for a second day.

The Australian Workers Union Queensland branch leader Stacey Schinnerl has given evidence in the Queensland CFMEU inquiry. *(Supplied)*

Ms Schinnerl gave emotional testimony about an incident in which she came "chest to chest" with a CFMEU member at a 2023 Brisbane Labour Day event.

The inquiry heard the man approached Ms Schinnerl in the AWU marquee at the RNA Showgrounds and said: "How do you f***ing like this?" while

gesturing to his face, which was painted with the words: 'Australia's Worst Union'.

Ms Schinnerl said she told him to "just jog on" but he repeatedly called her "weak".

Ms Schinnerl says she told a union member to “just jog on” but he repeatedly called her “weak”. *(Supplied)*

She broke down while describing how her teenage son was watching the incident unfold.

> **"I kept on saying: 'My son is here. Just go. Don't do this here'," she told the inquiry.**

"He [the CFMEU member] then really pushed up against me ... we very much ended up chest to chest."

"It felt like he was trying to get past me to my child and the man said to [my son]: "How does it feel to know your mum's a f***ing grub who sells out workers?" she said.

She told the inquiry she saw former CFMEU Queensland assistant state secretary Jade Ingham "watching on".

"Mr Ingham made no attempt to pull him away," she said.

Ms Schinnerl was then briefly followed by a group of men wearing CFMEU shirts while leaving the event, the inquiry heard.

Some AWU officials 'moved homes' out of fear

Ms Schinnerl told the hearing "prolonged" violence, abuse, harassment and intimidation have taken a significant personal toll on her and her union colleagues.

> **"I've had [AWU] people feel that the risk is so great, they have had to move homes," Ms Schinnerl said.**

"I have not done so, I would never let them win like that over me."

She told the inquiry she believes Mr Ingham and former Queensland CFMEU boss Michael Ravbar know her home address — and that speaking out may make her an even "bigger target".

Ms Schinnerl told the inquiry she believes Michael Ravbar knows her home address *(ABC News: Mark Leonardi)*

> **"I cannot explain to you as a parent ... how vulnerable that makes me feel."**

"But it is the right thing to do because I have not done anything wrong ... and if I am guilty of anything, it is actually standing up to them and I don't think they thought I was going to do that," Ms Schinnerl said.

She added that what "pains me most" is the damage the situation had caused to the union movement.

"Unions exist to improve the lives of working people ... I think workers have been forgotten in this, I think political ... and industrial agendas have taken over," she said.

'Utter pariahs' of the union movement

The inquiry heard the CFMEU plastered anti-AWU stickers and posters on buildings and erected flags on AWU offices amid an "aggressive campaign" to push their rivals from civil construction sites.

The inquiry heard the CFMEU plastered anti-AWU stickers and posters on buildings and erected flags on AWU offices. *(ABC News)*

Ms Schinnerl told the inquiry she was reluctant to report alleged misconduct to police because of a deep-rooted "unwritten code" in the union movement about "not grassing on your mates."

> **"That would be seen as the absolute antithesis of solidarity," she said.**

She became emotional again while telling the inquiry she would "do things very differently" if she had her time again.

"Perhaps if I had followed through with some of those complaints more formally … I could have stopped more of the serious stuff," she said.

"We would have been the complete and utter pariahs of the union movement, had we done so."

On Wednesday, Ms Schinnerl described being subject to a years-long campaign of fear, harassment and intimidation by the CFMEU that included

a perceived threat on her life.

The inquiry heard CFMEU members told her to: "keep her head down or it would be knocked off".

The inquiry was announced by the Queensland government in July following a scathing report of the state branch released that same month.

In August last year, all state and territory branches of the construction arm of the CFMEU were placed into administration.

CFMEU inquiry hears Labor leaders ignored 'repeated' industry warnings

By Ciara Jones Unions

Tue 10 Feb 2026 at 5:02pm

An inquiry is underway in Brisbane into the CFMEU's alleged links to organised crime across Queensland. *(ABC News: Luke Bowden)*

In short:

An ongoing inquiry into alleged misconduct within the CFMEU has heard industry leaders were "ignored" by the former Labor government.

The inquiry heard construction industry bosses expressed concerns about the impact of the controversial BPIC policy, introduced in 2018.

What's next?

The inquiry continues with a final report due to be handed to the Queensland government in July.

The former Queensland premier and senior Labor ministers ignored repeated warnings from several high-ranking industry bosses about a key CFMEU-linked government policy, an inquiry has heard.

Civil Contractors Federation Queensland chief executive Damian Long has fronted a commission of inquiry into alleged union misconduct and criminal links in Queensland, which is holding its third block of public hearings in Brisbane.

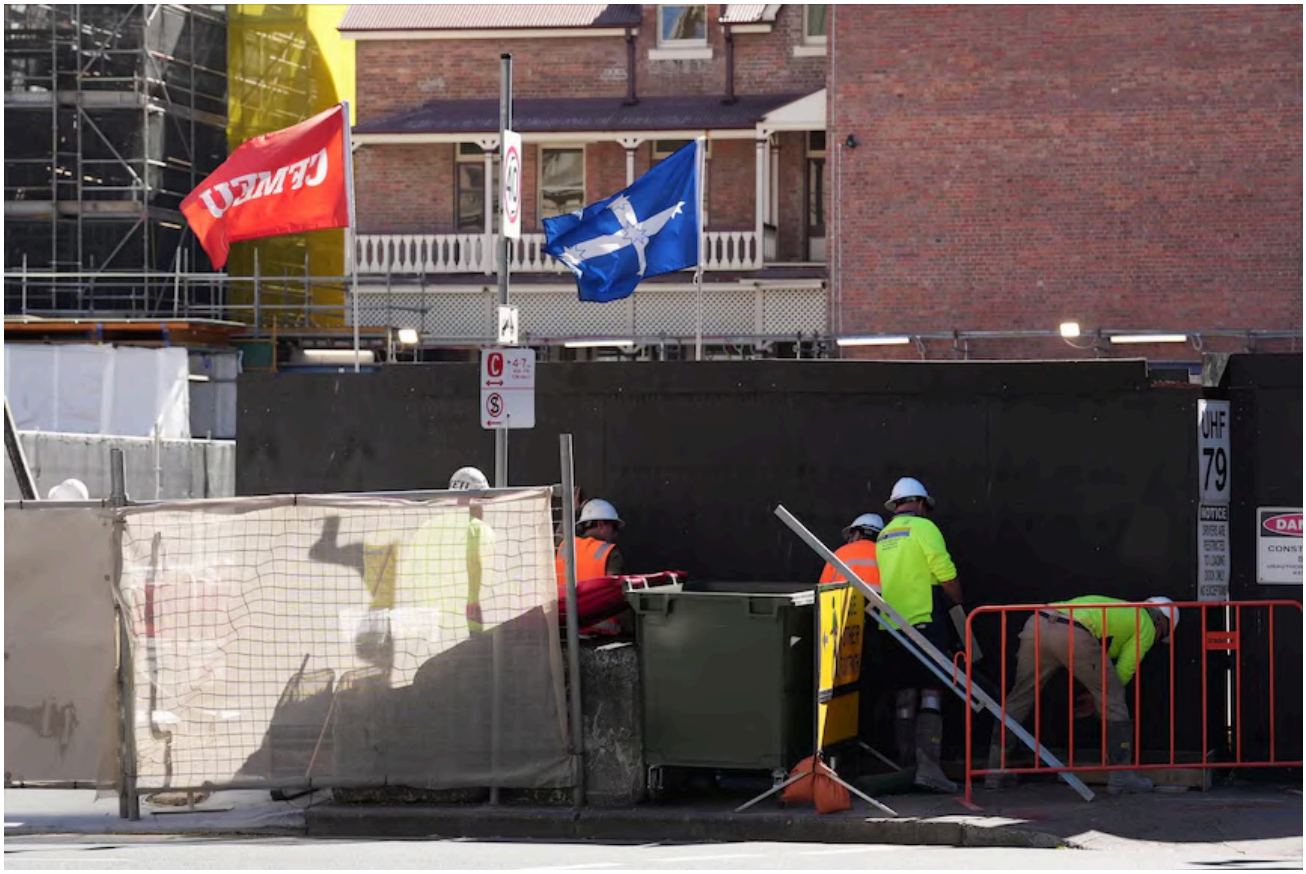
Mr Long's evidence was centred on the development and rollout of the Palaszczuk government's controversial best practice industry conditions (BPIC) policy, which outlined conditions and pay for construction union workers on all major state projects worth more than $100 million.

The former Labor government's best practice industry conditions (BPIC) policy came under fire during the inquiry on Tuesday. *(ABC News: Glenn Mullane)*

The deal, introduced in 2018, included a five per cent pay rise annually, double time for some workers when it rained, a month of rostered days off each year and an allowance of $100 a week for workers using their own mobile phone.

The current LNP government scrapped the conditions, citing cost blow-outs and crippling productivity on state builds.

Mr Long told the inquiry the policy was "essentially a CFMEU enterprise agreement" with union officials reportedly involved in departmental negotiations.



He accused the former government of running a "sham of a collaborative process" and said the militant union ultimately had a "driving hand" in BPIC's implementation.

"The collaborative process and consultation process was nothing more than tabling documents to show where the government was going," Mr Long said.

> **"There was no acceptance of any feedback from industry ... there was no opportunity to give feedback."**

Mr Long cited internal evidence showing the conditions reduced productivity to as little as two days of work per week, contributed to increased labour costs, reduced labour capacity, and caused delays on major projects.

The inquiry heard the policy cost the state between $13.1 billion and $38.6 billion.

Mr Long told the inquiry industry leaders had "no opportunity" to provide the government with feedback. *(ABC News: Brigham Edgar)*

Government 'embarrassingly silent' on industry concerns

The inquiry heard in 2020, Mr Long and several other industry group leaders, including Master Builders and the Infrastructure Association of Queensland, outlined their concerns in a letter to then premier Annastacia Palsazczuk.

"Apart from 'noting' the letter, there was no response verbally or otherwise," Mr Long said.

"We could see the cost increases ... and we couldn't reconcile the government's response that it was 'good for Queenslanders and the Queensland economy' when we could plainly see that it wasn't and we were providing evidence to the contrary.

"I found it quite insulting ... a group of industry heads that represented such a large part of the economy — [weren't given the] courtesy to even pull together a small working group to run through our concerns.

Mr Long said the government was "embarrassingly silent" on industry concerns. *(AAP Image: Darren England)*

"It [the government] was embarrassingly silent," he said.

Mr Long told the hearing BPIC was the "worst" and "most damaging" policy he had seen in his 30-year career.

Anti-corruption barrister Geoffrey Watson SC, who authored a damning report into the union's Queensland branch which triggered the probe, is due to be cross-examined when he takes the witness stand for a third time on Wednesday.

Commissioner Stuart Wood KC is due to deliver his final report to the Queensland government in July.

The inquiry is being run by Commissioner Stuart Wood. *(AAP Image: Liam Kidston)*

New legal action against CFMEU

In a separate matter, the workplace watchdog today launched legal action against the CFMEU and two officials for alleged illegal conduct on a Brisbane work site.

The Fair Work Ombudsman alleges that in November 2024, organisers Cody Budgeon and Dylan Howard entered an exclusion zone at the Woolloongabba Cross River Rail station construction site without authorisation, despite requests to leave.

It is further alleged the men refused to leave the zone for about an hour, delaying work.

The pair could be fined almost $20,000 per contravention, while the CFMEU faces penalties of up to $99,000 per contravention.

The matter will be heard in the Federal Circuit and Family Court in Brisbane on May 25.

The identities linked to corruption at the CFMEU, according to Queensland's Commission of Inquiry

By investigative reporter **Jessica Longbottom**

Thu 12 Feb 2026 at 4:14am

Geoffrey Watson's report named dozens of people who have allegedly benefited from corrupt conduct at the CFMEU. *(Graeme Powell)*

abc.net.au/news/cfmeu-inquiry-report-corruption/106333306 Share

The CFMEU construction union has been under a cloud since Nine newspapers raised serious concerns about corruption in its ranks two years ago.

It forced the federal Labor government to place the union in administration and order an investigation into its operations.

The full depths of criminality that plagued the union have now been revealed in a report by Geoffrey Watson SC, tendered to Queensland's Commission of Inquiry into the CFMEU on Wednesday.

In a colourful and unusually candid report, Watson tears the CFMEU apart — naming dozens of people who have benefited from corrupt conduct.

Among them are convicted and alleged killers employed as CFMEU health and safety officers, to untrained relatives of CFMEU delegates who were hand-picked to work shifts where they made as much as $15,000 a week.

The report also exposed the role Outlaw Motorcycle Gangs (OMCGs) have played, alleging they were so embedded in the CFMEU that they were using government building sites as drug distribution centres.

"The CFMEU was actively employing criminals. During the [John] Setka era, the CFMEU was forcing contractors to employ patched bikies, meth-abusers, violent stand-over men, killers, boxers and cage fighters," the report states.

"The CFMEU succeeded in casting a shadow of fear over the whole building sector."

The losers in all this — alongside the law-abiding construction workers and companies intimidated by the union — were the people of Victoria.

The report estimates $15 billion of taxpayer money was wasted on corrupt payments linked to the CFMEU.

This is because of the union's heavy involvement on building sites associated with Victoria's Big Build. This $100 billion mass public infrastructure project includes the recently completed Metro Tunnel, the North-East Link, and various rail upgrades.

More than 25 people who benefited from or are linked to corrupt behaviour are named in the report.

Who are they?

TOBY MITCHELL

Union delegates who were bikies

It goes without saying that union delegates and health and safety officials should be people of good standing who have the best interests of workers at heart.

"Ordinarily, the position of a delegate is one earned by skill, dedication and long service to the Union. It would usually take years before an ordinary worker could become a delegate," the report says.

However, the report says those appointed included dangerous criminals, killers, drug dealers, and violent bikies.

Few had experience or qualifications in the building industry.

Here are just some that the report says infiltrated the union.

JONNY 'TWO GUNS' WALKER

JOEL LEAVITT

What was going on?

There were several ways the corruption happened, including:

- Contractors and builders were extorted. They would be threatened with industrial disruption — unless they paid money to union officials or associates. Closing worksites is highly costly, so builders would often comply.
- The CFMEU controlled the awarding of Enterprise Bargaining Agreements to companies that wanted to work on government projects. They allegedly would approve them only if a bribe were paid or in exchange for other favours.
- Some workers on Victoria's Big Build projects had to pay union delegates or organisers up-front in cash to get a job.
- There were also notorious 'ghost shifts' where union delegates ensured they got paid twice for the same shift — once from a labour hire company and then from the contractor they were working for. Taxpayers again footed the bill for this double-dip.
- Highly lucrative jobs were given to mates and family members — sometimes, where they did not even need to turn up to get paid. The shift penalties were so huge that they could make $15,000 a week for an unskilled labourer.

Workers protested at a Hawthorn East site after the bashing of a union organiser.
(Queensland's Commission of Inquiry into the CFMEU)

On top of losing money, the fear of actual violence was real. One union organiser lost the use of his eye after being bashed in an attack, the report says, which was 'covered up' by the CFMEU leadership.

Misogyny was also rife, with women strippers allegedly being recruited for Big Build jobs from strip clubs and being paid to perform by male workers.

CFMEU inquiry hears Workplace Health and Safety Queensland 'captured' and 'weaponised' by union

By Tobi Loftus Unions

Tue 10 Mar 2026 at 1:38pm

The inquiry is examining alleged misconduct within the construction union. *(ABC News: Luke Bowden)*

In short:

The fourth round of hearings as part of the inquiry into alleged misconduct within the Queensland branch of the CFMEU began in Brisbane on Tuesday morning.

Senior counsel assisting Patrick Wheelahan alleged Workplace Health and Safety Queensland became "captured" and "weaponised" by the union when Labor was in government.

What's next?

The inquiry continues, with current and former senior WHSQ personnel set to give evidence this week.

Queensland's workplace health and safety regulator was "captured" by the CFMEU when Labor was last in power in the state, a commission of inquiry into the union has heard.

The fourth round of hearings as part of the probe into alleged misconduct within the construction union began in Brisbane this morning.

Senior counsel assisting Patrick Wheelahan in his opening remarks alleged there was "regulatory capture of Workplace Health and Safety Queensland by the CFMEU during the period that ... Grace Grace was the Minister for Industrial Relations".

He said regulatory capture was "a form of institutional corruption".

Senior counsel assisting Patrick Wheelahan delivered his opening remarks in the CFMEU inquiry in Brisbane on Tuesday. *(ABC News)*

"That is, in this case, Workplace Health and Safety Queensland, whose legitimate objectives are to protect the health, safety and welfare of all individuals affected … became improperly dominated by the interest of the CFMEU."

It was then "weaponised" by the CFMEU for "illegitimate industrial control purposes" in the construction industry, Mr Wheelahan said.

He said this took many forms over several years.

"Evidence will be put before the commission of firstly improper external pressure by the CFMEU … by way of example that includes aggressive and intimidatory behaviour towards inspectors while they were performing their duties," he said.

"The alleged outcome of regulatory capture of WHSQ by the CFMEU is that the CFMEU was treated beneficially when compared to other stakeholders."

The fourth round of hearings into the Queensland branch of the CFMEU began on Tuesday. *(AAP Image: Darren England)*

Mr Wheelahan alleged CFMEU officials were allowed to behave towards WHSQ inspectors in ways that would "not be permitted by other industry

participants".

"Evidence ... of a culture of fear within the regulator, that if staff acted in contrary to the CFMEU wishes they would suffer detrimental consequences in their employment, or be targeted, demeaned or ridiculed."

He alleged resources were diverted away from higher priority matters towards areas of interest to the CFMEU.

Former director a 'focus' of inquiry

Mr Wheelahan said a focus for the inquiry was former director of construction, compliance and field services, Helen Burgess.

"Under the leadership of Helen Burgess ... the CFMEU was unduly prioritised and favoured in terms of health and safety notices and site access," he said.

"It will be alleged that Ms Burgess was the primary conduit between the CFMEU and WHSQ."

Patrick Wheelahan alleged the regulator had been captured by the CFMEU. *(ABC News)*

He alleged Ms Burgess improperly directed inspectors to deal with CFMEU issues as a priority and directed inspectors to assist CFMEU officials to enter worksites in circumstances where those CFMEU officials did not have a legal right to enter.

He also alleged she "worked hand in hand" with the CFMEU to use compliance monitoring and enforcement policies to "pressure inspectors to issue infringement notices at the CFMEU's bidding".

"Ms Burgess telephoned an inspector on the way to a right of entry issue to a site, and I quote 'to make sure the CFMEU officials don't get arrested'," Mr Wheelahan said.

Current WHSQ operations manager and former principal inspector Deborah Dargan, and former principal inspectors Noel Hayes and Paul Watts will give evidence this week.

A fourth former principal inspector is expected to give evidence at a later date.

The inquiry heard WHSQ was influenced by the CFMEU while Grace Grace was minister for industrial relations. *(AAP: Darren England)*

Mr Wheelahan said that evidence would show a "culture developed following the election of the Palaszczuk Government and the appointment of Grace Grace [as minister]".

"[Their evidence will show WHSQ] went from a relaxed and effective workplace, to one with a culture of bullying, intimidation and harassment."

Mr Wheelahan told the hearing 14 WHSQ inspectors made a complaint to the Crime and Corruption Commission alleging "systemic bulling, intimidation and abuse" by CFMEU officials to WHSQ inspectors, supported by senior WHSQ staff.

The complaint alleged Ms Grace failed to act on complaints and "allowed... unprecedented influence" over WHSQ by the CFMEU.

In a response to one of those complainants, the CCC said it would "not be taking any action in relation to the complaint about Minister Grace".

Senior counsel assisting Patrick Wheelahan alleged the CFMEU "captured" Workplace Health and Safety Queensland. *(ABC News: Luke Bowden)*

"The CCC takes the view that the performance of the official duty of a person elected to office would not involve corrupt conduct unless the

conduct would if proved amount to a criminal offence," the CCC said in the response read to the inquiry by Mr Wheelahan.

"In the absence of evidence that would support a criminal offence, the CCC is unable to deal with the matter."

Commissioner Stuart Wood KC is due to deliver his final report to the Queensland government in July, but that date could be pushed back.

Speaking in Mackay this morning, Opposition Leader Steven Miles defended the former government and his colleague.

"[Grace Grace's] focus was on ensuring safe workplaces," he said.

"The construction industry can be dangerous work, and we were always motivated to make sure those workers who go to those construction sites go home to their families every day."

Ms Grace said it would be "inappropriate" to comment on the ongoing commission of inquiry.

"Queensland Labor placed the CFMEU into administration and have supported the Commission of Inquiry since its inception," she said.

Union complaints treated as high priority

WHSQ operations manager Deborah Dargan, who was previously a principal inspector, gave evidence to the inquiry on Tuesday afternoon.

She told the inquiry the "appetite for prosecution" into the alleged failure of the union to give 24-hour right of entry notices "had ceased" soon after Labor came to power in 2015.

The 24-hour entry notice rule was subsequently scrapped by the Labor government.

She told the inquiry union complaints were then treated as a high priority, and that escalated further after Ms Burgess became the construction director in 2018.

WHSQ operations manager Deborah Dargan said union complaints were treated as a high priority. *(ABC News)*

"[Inspectors] were expected to leave whatever they were doing to attend a union right of entry request," Ms Dargan told the inquiry.

"Once they got the call, initially they would argue, then they would realise there was no point in arguing.

"It was very seldom there would be a genuine risk present."

She said inspectors would then have to walk around the construction site for "hours and hours" doing a general audit and "following the union around" .

Ms Dargan will continue to give evidence on Wednesday.

Former construction commissioner tells inquiry CFMEU breached Queensland industrial laws 25 times in 14 years

By Tobi Loftus Unions

Tue 14 Apr 2026 at 4:59pm

Former ABCC commissioner Nigel Hodgkiss has given evidence at the Commission of Inquiry into the CFMEU in Queensland. *(ABC News: Glenn Mullane)*

In short:

Former Australian Building and Contruction Commission (ABCC) head Nigel Hadgkiss has told the Commission of Inquiry into the CFMEU in Queensland that the union breached industrial laws 25 times in the past 14 years.

Mr Hadgkiss advocated for a code of conduct and enforcement agency, telling the inquiry less days were lost to industrial action when the ABCC existed.

What's next?

Mr Hadgkiss will return to the witness box at a later hearing when he will be cross examined by lawyers for the CFMEU administrator.

The Construction, Forestry and Maritime Employees Union (CMEU) breached industrial laws in Queensland at least 25 times in 14 years, the former head of Australia's construction watchdog has told an inquiry into misconduct in the union.

Former Australian Building and Construction Commission (ABCC) boss Nigel Hadgkiss addressed the Commission of Inquiry into the CFMEU in Queensland on Tuesday about the need for a code of conduct and enforcement agency.

Mr Hadgkiss told the inquiry a major component of a code — which would apply to builders wanting to work on government projects — would be rules that preserve the integrity of legislated right of entry mechanisms, or the process in which union officials can enter a workplace.

Mr Hodgkiss told the inquiry the CFMEU breached industrial laws in Queensland at least 25 times in the past 14 years. *(AAP Image: Darren England)*

He said the CFMEU had repeatedly entered sites "with a flagrant disregard" for legal requirements, disrupting work and creating safety risks.

The inquiry heard this resulted in at least 25 right of entry and other industrial law breaches, resulting in $4.57 million in fines for the CFMEU and $1.48 million for individuals.

Need for code of conduct, inquiry hears

Mr Hadgkiss cited a 2023 incident in which senior CFMEU officials Michael Ravbar and Andrew Blakely entered Cross River Rail sites at Woolloongabba and Roma Street to host an unauthorised union barbecue.

"[They] refused to complete the site induction, entered the construction sites over the occupier's objection, refused to leave when directed to do so, and set up their union barbecue during work hours," he said.

"Their conduct in doing so disrupted productivity and presented an unnecessary safety risk. The Queensland industry is replete with examples of conduct of this kind."

Mr Hodgkiss says the union's breaches resulted in $4.57 million in fines for the CFMEU and $1.48 million for individuals. *(ABC News: Luke Bowden)*

Mr Ravbar received a $9,320 fine as a result of that incident, Mr Blakeley received a $12,000 fine, while the union as a whole received a $204,000 fine.

Mr Hadgkiss told the inquiry he had been involved in the creation and implementation of several building and construction industry codes across the country.

That included leading the ABCC, which was the statutory authority set up to enforce workplace relations compliance in the building and construction industry.

Nigel Hadgkiss gave evidence at the commission of inquiry into the CFMEU in Queensland on Tuesday. *(ABC News)*

Mr Hadgkiss told the inquiry that when the ABCC existed, there were less days lost to industrial action.

"In every jurisdiction where I have observed an active regulator administering an effect code, there have been corresponding improvements to productivity, safety and freedom of association within the industry," he said.

> **"There is a need for a more robust code in Queensland to deal with the problems the industry is confronting."**

Mr Hadgkiss resigned from the ABCC in 2017 after admitting to breaching the Fair Work Act over right to entry rules.

That resignation was welcomed by groups such as the Australian Council of Trade Unions, whose secretary Sally McManus said Mr Hadgkiss "oversaw a draconian and authoritarian body that breached Australia's

international obligations, persecuted workers and stripped away the right of silence from ordinary hard-working Australians".

Push for limit on flags at worksites

Mr Hadgkiss said right to association, or in effect the right to not associate with the union, was also paramount to any future code — and that could involve limiting the number of flags a union can display on a construction site.

The CFMEU is well known for displaying flags on construction sites.

"Flags in particular are an indication this is a union-run site and woe betide you if you're not a member of the union," he said.

"It emboldens [the union], the flying of flags from cranes, various graffiti, posters that litter building sites ... and when employers tried to remove it, they were in serious trouble," he said.

"In some instances, I can recall harassment, violence being put upon them. They were told to basically put back the posters."

Mr Hodgkiss says a right to associate is critical to a future code, potentially limiting the number of flags a union can display on a worksite. *(ABC News)*

He said employers at times were also "obliged to comply" with requests to put CFMEU-endorsed logos on work uniforms.

"When contractors were more afraid of the enforcement body around than it was of the union, then there would be a change of behaviour," he said.

"But as soon as there was no enforcement body, then they would succumb to the demands of the union.

"They had to... to obtain industrial harmony.... industrial peace."

Mr Hadgkiss will return to the witness box at a later hearing when he will be cross examined by lawyers for the CFMEU administrator.

Inquiry into Queensland CFMEU branch hears of union's impact on construction of Brisbane's Cross River Rail

By Tobi Loftus Unions

Sat 2 May 2026 at 7:56am

Queensland's Commission of Inquiry has this week heard from one of the main companies working on Cross River Rail. *(ABC News: Luke Bowden)*

Brisbane's Cross River Rail has been touted as a game-changing public transport project.

But Queensland's Commission of Inquiry into the Construction, Forestry and Maritime Employees Union (CFMEU) has heard construction was plagued by sabotage, violence, and years of interference.

Michael O'Brien, the former senior industrial relations advisor for CPB Contractors — one of the main companies working on the project — told the inquiry of the time he felt "fearful" on site.

They were constructing the 10.2km underground rail line and associated stations, which will provide a second Brisbane River crossing in the city area.

In June 2023 Australian Workers Union (AWU) delegates visited the Gabba Station construction site to address their members about a new enterprise agreement.

Brisbane's Cross River Rail will include 5.9km of twin tunnels running under the Brisbane River and CBD. *(ABC News: Christopher Gillette)*

The union had for a while, the inquiry has heard, been the target of the CFMEU — who were allegedly trying to push their AWU rivals from civil construction sites.

Mr O'Brien told the inquiry two AWU organisers, who had the correct paperwork, signed in, followed the induction process and had a meeting with their members.

It was what most workplaces would deem an ordinary start to an on-site union meeting. But this was not an ordinary workplace.

"I did notice, on that day, there was no interruption to the meeting," Mr O'Brien said.

"I thought it was unusual as we were expecting trouble."

The meeting concluded and Mr O'Brien said he went to lead the two AWU organisers off the site. But then he checked the front gate.

"There were at least 30 persons in black shirts … they were furious, angry, it was the only time I would say I was fearful on the project," he said.

> **"The language, the ferocity … it was unlike anything I had ever seen."**

Former senior industrial relations advisor for CPB Contractors Michael O'Brien gave evidence at the inquiry this week. *(ABC News)*

The group belonged to the CFMEU's youth crew — and were being led by Richie Atutolu, who worked at the project site. Other CFMEU organisers present allegedly included Brodie Wood, Dean Rielly and Matt Clark.

"I immediately told [the AWU organisers] to stay where they were," Mr O'Brien said.

Police were called and Mr O'Brien escorted the duo to a side exit. Their movements and that of the CFMEU's youth crew were closely monitored on CCTV by site security.

Mr O'Brien said the AWU organisers only got about three metres before "the crowd came tearing around the corner yelling and screaming at them".

"I stayed at the boundary of the fence and told them to 'come back inside'," Mr O'Brien told the inquiry. "They said 'no mate, we'll be fine.'"

But the group managed to catch up with the pair.

"I [had not] seen CFMEU prior to that point get physical," Mr O'Brien said.

"They were shoulder charging them, pushing them, grabbing their backpack and shoving them around."

CFMEU members surrounded two AWU delegates after they visited the Gabba Station construction site. *(Supplied)*

Geoffrey Watson SC's report into the Queensland CFMEU, which was one of the triggers for the inquiry and has been tendered as evidence, further detailed the incident.

He wrote one of the AWU organisers was pushed onto the road into the path of traffic.

> "One of the men told the organiser that he 'knew where he had previously worked'; another said 'we won't stop coming for you — no one can protect you' and another said 'we know where you live'," Mr Watson wrote.
>
> "Then one made an especially chilling remark: 'we know you have two young sons'."

The duo were then followed into a nearby shopping centre before the incident dissipated.

'Strikes everywhere' in bid for deal

While the CFMEU had disputes with the AWU, there was a protracted and ongoing dispute with CPB, often around conditions.

It began before the contractor had even won the program.

In his written statement, Cross River Rail Authority Delivery boss Graeme Newton said the CFMEU had "made clear" their intentions to pursue a single project agreement setting out worker conditions.

They also wanted a say on which contractors would be most suitable for the project.

"The CFMEU's actions and conduct appear to have been undertaken as a means to influence the direction of the procurement process and industrial relations settings in a number of different ways," he said.

In 2019, negotiations began between CPB and various unions, including the CFMEU, to reach a conditions agreement.

CPB Contractors general manager Vince Sanfilippo spent almost two days in the witness box.

He said consultants linked to the Cross River Rail Delivery Authority, with connections to former deputy premier Jackie Trad, who had oversight of the project at the time, pressured the company to sign up to a CFMEU-preferred pay deal.

This would have pushed wages for workers to about $334,000 a year and was an early version of the controversial Best Practice Industry Principles (BPICs) policy.

The company refused to sign on, and Mr Sanfilippo said throughout the project they were subject to "manufactured" safety complaints from the CFMEU and Workplace Health and Safety Queensland, which the inquiry heard had been under "regulatory capture" by the union.

There were safety issues on the project. Serious ones. But union action, Mr Sanfilippo said, led to a massive drop in productivity as there were "strikes everywhere".

In 2024 thousands of union members rallied in Brisbane to protest the Queensland government's decision to suspend a raft of perks for construction workers.

In 2024, Mr Sanfilippo said, there was a "noticeable increase" in sabotage incidents on the project.

"There was also an increase in the number of issues with toilets … being intentionally clogged, locks being removed off female toilets," he said.

"Even concrete slurry being poured into toilets."

Vince Sanfilippo told the inquiry there was an increase in sabotage incidents on the project in 2024. *(ABC News)*

He said CCTV footage captured men in masks spray-painting security cameras, while entry keypads were damaged and graffiti sprayed around sites.

"During rallies, protests and other forms of industrial action … the CFMEU appeared to adopt a strategic and tactical approach to site disruption," Cross River Rail Delivery Authority chief executive Graeme Newton said in his written statement.

"In these instances, the CFMEU appeared to use their knowledge of major construction phases to purposefully disrupt specific works, maximising negative impact on the wider project delivery program.

"The CFMEU appeared to target critical ... works with an aim to disrupt site operations ... force significant rescheduling of works and prevent the project from achieving major milestones."

CFMEU leaders and those with allegations made against them have yet to be called to give evidence at the inquiry. *(AAP Image: Darren England)*

Mr Newton told the inquiry the CFMEU "consistently made unsubstantiated claims" on social media and through media organisations about "poor safety" on worksites, including asbestos exposure and heat stress.

In one incident, where CFMEU members pretended to be climate change protesters to block a concrete pour, works were delayed by 12 days.

In April 2023 a dozen people wearing masks sat in front of the Albert Street Cross River Rail construction site in the Brisbane CBD. *(Supplied)*

Mr Sanfilippo said the timing was "purposeful" to "create maximum havoc".

"But the type of behaviour from the CFMEU ... I guess we had become accustomed to and were trying to deal with it on a day-to-day basis, every day," he said.

The inquiry heard Cross River Rail was five years behind schedule and is now due to open in 2029, though that was not directly attributed to CFMEU action with the COVID-19 pandemic and other global influences impacting the project too.

Costs have ballooned from $5.4 billion, to an estimated $19 billion.

Mr Sanfilippo said the implementation of the Best Practice Industry Conditions policy and associated CFMEU activity impacted productivity by about 55 per cent, costing taxpayers about $580 million.

CFMEU leaders and those with allegations made against them have yet to be called to give evidence at the inquiry, but the ABC understands anyone

who may be subject to adverse findings will be given the opportunity to respond.

The inquiry resumes on May 12.
