Abstract
How do Mafias operate across territories? The paper is an in-depth study of the operations of a Neapolitan Camorra group. It relies on a unique data set of contacts manually extracted from the transcripts of phone conversations wiretapped by the police. The data show that the clan is indeed involved in the production and supply of extra-legal protection, but only in its territory of origin. The expansion abroad followed the lines of a functional diversification: branches were created to carry out specific activities but no large-scale international alliances were forged. The strategies underpinning the group's operations differ greatly across territories. Overall, the clan is still highly dependent on the territory of origin. Finally, the paper argues against the concept of 'transnational organized crime' and proposes a new taxonomy that better accounts for the ways in which Mafia groups choose to operate outside their territories of origin.

Keywords
activities, globalization, Mafias, organized crime, structure

Introduction

'The world is yours, select your country, Tony,' says a character in the Hollywood film *Scarface* (1983), which tells the story of Tony, a fictional Cuban refugee, and his criminal career in the 1980s' cocaine trade in Miami. Apart from novelists and Hollywood producers, the idea that organized crime groups are increasingly taking advantage of the opportunities arising from the globalization process has sparked substantial interest among international and domestic law enforcement agencies as well as scholars, particularly from the end of the Cold War onwards (Woodiwiss, 2003; Woodiwiss and Hobbs,

2009). This paper focuses on a distinctive subset of organized crime groups, namely the 'Mafias', defined as illegal economic enterprises involved in the production, promotion and sale of private protection (Gambetta, 1993: 1). Several studies have established that a small number of criminal organizations active around the world share this specific feature of providing forms of illegal governance: the Sicilian Mafia, the American Cosa Nostra, the Calabrian 'Ndrangheta, the Japanese Yakuza, the Hong Kong Triads and the Russian Mafia (Chu, 2000; Gambetta, 1993; Hill, 2003; Reuter, 1987; Reuter and Gambetta, 1995; Varese, 2001 and 2011). Based on the empirical evidence that I shall discuss later, I argue that the Neapolitan Camorra should be included in this number.

The movement of Mafia groups: Two competing views

Traditionally, there are two views on the movement of Mafia-like organizations and the extent to which they take advantage of globalization.[1]

The first perspective claims that organized crime groups, among them the Mafias, can easily relocate and expand their business, and have thus become increasingly globalized. According to Raine and Cilluffo (1994: ix), criminal groups worldwide have established alliances in every criminal field, posing a threat to Western democracies. Sterling (1994: 2) talks of 'international organized crime', suggesting the existence of a 'planet-wide criminal consortium' composed of the world's biggest crime syndicates, which are 'pooling services and personnel'. This is a view shared by Castells, who maintains that a new phenomenon has emerged, namely 'global crime', described as 'the networking of powerful criminal organizations, and their associates, in shared activities throughout the planet' (2000: 166). Among the criminal organizations in close contact and creating a 'global, diversified network' (2000: 167), Castells includes the Sicilian and American Cosa Nostra, the Camorra, the Yakuza, the Triads and the Russian Mafia.

Other authors go further and maintain that organized crime groups are able not only to forge worldwide alliances but also to easily migrate. Williams (2001: 71) suggests interpreting criminal organizations, including the Mafias, in terms of networks that can easily relocate in new areas, for instance following increased attention from law enforcement agencies. Shelley (2006: 42) claims that criminal groups have dispersed and globalized their activities across continents, seeking attractive labour or raw material markets, or for 'production, marketing, and distribution needs'. In short, the general idea is that organized crime groups, and among them the Mafias, have become a sort of fluid and flexible organization that can easily migrate, relocate their business and seize opportunities across the world.

The competing view argues that Mafia and organized crime groups tend to be highly localized and entrenched in their territory of origin. In his work on the American 'illegal enterprises', terms that also encompass Mafia-type organizations, Reuter (1985: 21) maintains that those enterprises tend to be 'local in scope', a view shared by Gambetta (1993), who argues that the business of Mafia groups is particularly difficult to relocate into new territories ('not unlike mining, it is heavily dependent on the local environment . . . since basic resources are expensive to produce in a void'; 1993: 251). Speaking of the Hong Kong Triads, Chu (2000: 130) notes that they are localized and different from international illegal entrepreneurs that easily migrate to Western countries. Both Reuter (1985) and Gambetta (1993) have identified reasons that may account for the Mafia's

0007

difficulty in relocating or expanding its business, namely the high monitoring cost (the more remote the agent, the higher the cost of monitoring) and the difficulties in building an effective reputation and in collecting reliable information in the new locale.

Yet there is no shortage of newspaper articles claiming that the tentacles of the Mafia octopus have reached this or that region in the world. For instance, the presence of 'Ndrangheta associates in Germany attracted headlines when six Italian nationals linked with the Mafia were shot dead in a pizzeria in Duisburg in 2007,[2] and – more recently – a major crackdown on the Russian Mafia in Western Europe resulted in 69 arrests, mainly in Spain (Tremlett, 2010).

Purpose of the paper

The aim of this paper is to assess analytically how Mafia-like organizations operate in a globalized environment. Relying on a unique data set of phone conversations wiretapped by the Italian police, the paper will empirically reconstruct the activities of a Neapolitan Camorra group that has been described as truly transnational (Saviano, 2007: 262–8). Furthermore, the paper will address the question of whether the clan diversifies its activities across territories or rather expands them all into the new areas; and whether its modus operandi changes across territories. More generally, the paper offers an empirically based critique of the concept of transnational organized crime, and provides a set of new analytical distinctions that can better capture the way Mafia groups choose to operate outside their territories of origin.

The present paper continues as follows. I first discuss the data and the methods used, and then provide some brief background information about the La Torre clan. After empirically reconstructing the activities of the group, I discuss the functional diversification of such activities across territories. Whether the mechanisms underpinning the clan's operations change across territories, and how, will be the focus of the fifth section. The final section contains some conclusions.

Data and methods

The paper relies on a unique data set of 1824 contacts between 202 actors during a seven-month period (from October 1998 to April 1999). I manually extracted each contact from two files that were prepared by the Italian Carabinieri for the Prosecution Office to be used as evidence in the trial against the group. The files contain the transcripts of phone conversations wiretapped by the police. Eight actors were under round-the-clock surveillance, including the head of the group. In order to extract each contact, I applied a two-level systematic content analysis. The first coding level concerns the phone conversations directly wiretapped by the police ($N = 1029$). For each conversation, I coded the actors involved, the date and the place, together with the topic discussed and whether violence or threats were mentioned. Since each phone conversation contains a great deal of additional information about other types of contacts mentioned by the actors but not directly recorded by the police (e.g. face-to-face conversations; letters from/to jail; non-wiretapped phone conversations), I decided to include this information as a second-level coding ($N = 795$).[3] The variables remained the same as for the first level.

0008

The primary unit of the content analysis was the topic or theme (Holsti, 1969: 138; on content analysis more generally see also Berelson, 1952, and Krippendorff, 2004). The overall number of topics extracted amounted to 38. When more than one topic was discussed, I assigned to each contact a main topic, based on the number of words the actors spent discussing it. The topics were then merged into five broader tasks,[4] according to the coding scheme proposed by Varese (2011): protection activities; other illegal business; legal business; resource acquisition; and group management.[5] I supplemented and double-checked the information extracted from the conversations with other court files (arrest warrants and other investigative materials). I also carried out interviews with prosecutors, entrepreneurs, policemen and journalists. A second data matrix containing information about the members of the clan was also built: the variables included were gender, nationality, age, place of birth, place of residence, criminal record and degree of kinship with the boss (if any).

Natarajan (2000, 2006) pioneered the use of wiretapped phone conversations as a quantitative source of information for the study of criminal groups. Despite its many advantages, this approach has not received much attention so far (with a few exceptions, e.g. Morselli, 2009). The database of contacts and topics that I was able to construct merges relational data with information about the content of the relations. It is the first data set of its kind to encompass the entire spectrum of activities carried out by a Mafia-like organization across all the territories of operation; furthermore, it comprises the key members of the group, including the boss (a quite rare instance for Mafia organizations), and it covers a fairly long period of time (seven months).

Moreover, the wiretapped phone conversations constitute a rich source of data that do not expose the researcher to risk and yet unveil the day-to-day business of a criminal organization. Limitations and drawbacks do exist, as I have discussed elsewhere (Campana and Varese, under review). In this specific case, the level of self-censorship is strikingly low: the actors talked openly on the phone or used a fairly easy-to-decrypt code that the police were eventually able to crack; and the speakers also mentioned crimes that, if discovered, could result in long sentences (e.g. murders). Finally, the overall number of contacts extracted (1824) provides an adequate level of robustness, given the type of statistical analyses that I carried out.

The La Torre clan

The La Torre clan is a Camorra group based in Mondragone, a town of around 27,000 inhabitants located about 50 kilometres from Naples. The clan, named after the founder, has been active since the 1970s (Interview 1, see Appendix A). Over the years, some of its members left Mondragone and moved abroad. According to the Italian police (RCC, 1999, 2000[6]), in the early 1980s the son of the founder moved to Aberdeen (Scotland); he was then followed by his cousin, together with his cousin's wife. Another cousin moved first to Milan and then to Amsterdam. Occasionally, fugitives from Mondragone were hosted in both Amsterdam and Aberdeen, sometimes for significant periods of time.[7] Abroad, the La Torre group even managed to recruit a UK citizen (without any Italian descent: RCC, 2000: 175; see also Saviano, 2007: 266–7). In 1996, the two brothers Augusto and Antonio La Torre were arrested at Amsterdam's Schiphol Airport.

0009

Augusto, at that time the boss of the group, was handed a 22-year sentence, but Antonio was released shortly afterwards on condition that he resides outside the Naples region. He then decided to temporarily leave Aberdeen and resettle in Terni, a quiet town not far from Rome, and assume the reins of the group (according to the authorities: RCC, 1999, 2000; TrNa, 2002[8]). Because of the ban on travelling to Campania, he carried out most of his activities on the phone, mistakenly thinking that a simple encrypted code and a fast turnover of the mobile telephone cards used were sufficient precautions to ensure the secrecy of his conversations. For the police it was a fortunate circumstance that resulted in a rather unique set of wiretapped conversations.

The network of contacts

The network of contacts extracted from the set of wiretapped conversations comprised 202 actors, mostly men (90 percent) and Italian nationals (93 percent).[9] It encompassed both members and non-members: among the latter are individuals who willingly or unwillingly purchased some goods or services from the clan (customers), and also individuals from whom the clan purchased goods or services. Occasionally, members may become customers of their own group; however, they are different in nature from the other actors, and they should be classified accordingly. When it comes to illegal organizations, operationalizing the membership is not an easy task.

Unlike the Sicilian Mafia and the Calabrian 'Ndrangheta (Gambetta, 1993; Paoli, 2003), initiation rituals are no longer performed among the Camorra clans (Interview 1); in addition, Camorra groups seem to adopt more relaxed rules about the recruitment and withdrawal of members than, for instance, the Sicilian Cosa Nostra (Interview 2). The La Torre clan is no exception in this sense, since no specific admission rules or rituals are in place (Interview 1). How, then, do we distinguish between members and non-members? One (pragmatic) method involves looking at the criminal record of each actor, and classifying as members only those individuals who have been charged with a Mafia-associated criminal offence[10] in this or in previous trials related to the La Torre clan.[11]

When classified in this way, the members of the clan number 51. The overwhelming majority are men (90 percent) and Italian nationals (98 percent). Moreover, the recruitment appears to be highly regionalized: 96 percent of the associates were born in Campania.[12] At the time of the investigation, the median age of the members was 40. As regards their place of residence, six members were living and conducting business outside Italy (in the UK and the Netherlands). The clan may therefore be labelled as 'transnational', but some questions still remain. How did this international expansion take place, and why? To answer these questions, we must first take a closer look at the activities of the clan.

The activities of the group

A systematic content analysis of the wiretapped conversations offers a way to reconstruct empirically the activities of informal organizations such as criminal groups. Given the quantitative nature of the data collection strategy, it is also possible to assess

0010

Table 1. Activities of a Camorra clan (contacts by task)

Task	*N*	Percent
M (management)	683	37.6
PA (protection activities)	559	30.7
E (business in the legal and illegal economy)	325	17.9
RA (resource acquisition)	251	13.8
Total valid	1818	100.0
Unknown	16	
Total	1834	

the relevance of each activity (task), based on the assumption that the greater the number of contacts devoted to a specific task, the more relevant the task is for the group. There is no unique way of assessing such relevance; for instance, it can be argued that the more profit a task generates, the more relevant it is to the organization. Making profits is certainly the main goal of the clan, but there are a number of activities that do not directly generate any profit but that are nevertheless crucial for the survival of the group. Examples of this kind are dispute settlement among the associates; the monitoring of members' behaviour (in order to avoid cheating); and the acquisition of instrumental goods (e.g. fake passports or 'clean' bank accounts). A coding based on the content of wiretapped conversations can capture all these aspects, thus offering a far more detailed and comprehensive picture about how a Mafia organization works. Table 1 shows the tasks undertaken by the La Torre clan and their relative frequency.

The economic activities *stricto sensu*, that is to say, the ones that directly generate profits (Task PA – protection activities – and Task E – other legal and illegal businesses), account for almost half of the contacts. It is perhaps more surprising that almost 52 percent of the contacts do not fall in this category: the relevance of tasks such as group management (almost 38 percent of the contacts) and to a lesser extent the acquisition of resources (around 14 percent) is hardly recognized in the literature. The effort and the time that the clan spends in specific activities subsumed in the management task, such as settling conflicts and disputes among the members, monitoring their behaviour and dealing with the effects of law enforcement pressure (arrests, members on the run, potential evidence provided by witnesses and turncoats), are often underestimated, ultimately leaving a reader with the impression that Mafia groups are a sort of monolithic organization. The evidence shows quite the opposite.[13]

Among the 'strictly economic' activities, the protection racket remains the most prominent one, accounting for more than 6 out of 10 'economic' contacts. The clan provides several kinds of illegal protection, including protection against competitors and against thieves, protection of the labour market (e.g. hiring and firing employees on behalf of legitimate firms), protection of economic exchanges (violent brokerage), dispute settlement and debt recovery (RCC, 2000). Ultimately, producing and selling extralegal protection is the chief characteristic of Mafia organizations, and the La Torre clan can therefore be included in this distinctive subset of organized crime groups.

0011

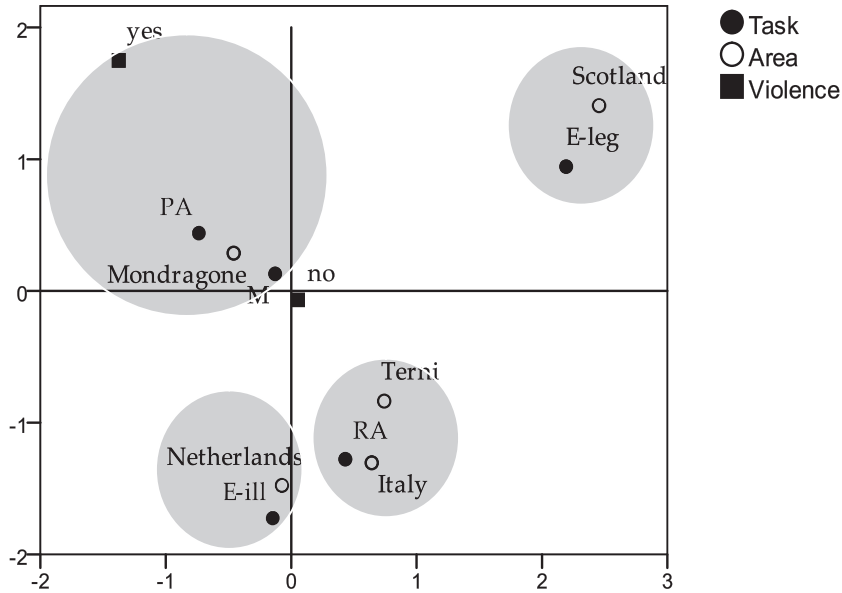

Figure 1. Functional specialization across locales
Notes: M: management tasks; PA: protection activities; RA: resource acquisition; E-leg: legal business; E-ill: illegal business (other than protection).

Functional diversification across territories

The La Torre clan can certainly be classified as 'transnational': it has outposts in Scotland and the Netherlands, and some of its members have been living and operating abroad for a fairly long period of time. How did the expansion towards new territories take place and why?

Figure 1 shows the results of a multiple correspondence analysis of tasks and areas.[14] Correspondence analysis is a family of techniques that allows two or more categorical variables to be represented in the same geometrical space and detects patterns of association between them (Greenacre, 1984). The procedure adopted for this analysis is Homals (Homogeneity analysis: Gifi, 1990), which allows comparisons both within categories of the same variable and between categories of different variables.[15]

Four distinctive clusters emerge from Figure 1. Mondragone, namely the territory of origin of the clan, is the place where the protection racket – the core business of the group – is run. There is no evidence of protection activities carried out in any of the other areas.[16] Aberdeen and Amsterdam, on the other hand, may be seen as branches, opened by the clan for the purpose of carrying out business other than protection. Terni and other Italian cities outside Campania are the places to which the clan turns when looking for resources such as 'clean' bank accounts, cheques and credit cards.[17] (The use of violence is discussed in the next section.)

In Scotland, the clan has set up legal companies in the food and catering sector, in the construction industry and in real estate. Members of the group own two restaurants in the

0012

most prestigious area of the city and various other companies. According to the *Sunday Herald*, Antonio and his cousin have been at the head of seven different legal companies for 10 years, many of them short-term ventures (McDougall and Willian, 2006). Several examples of economic activities carried out in Aberdeen emerge from the content of the conversations that have been wiretapped: La Torre and his cousin were about to start building new flats in various locations across Aberdeen (RCC, 2000: 98, 778); they were trying to buy some land from the city council to redevelop as a parking lot (RCC, 2000: 756); and they were negotiating the acquisition of 54 percent of shares in a Scottish real estate company (RCC, 2000: 745). The clan took also part in a public auction for a building that they intended to convert into new flats (RCC, 2000: 785); however, they never managed to raise the £128,000 needed for the purchase, and were unsuccessful at the auction (a local bank had previously turned down a request for a loan). At the same time, talks were under way with a legitimate entrepreneur, the owner of three shoe stores, for a possible partnership in the Scottish market (RCC, 2000: 777). According to the conversations, the payments to the legal suppliers in Italy would have been made in cash: an easy way to make the source of the money less traceable (RCC, 2000: 790).

Aberdeen, with a vibrant economy driven by the oil and gas industry operating offshore, was the place where the clan laundered part of its money and made some profit. In addition, the city was also a safe place for a Mafia member to live: the lack of anti-Mafia legislation, and therefore the powerlessness of the Italian authorities to extradite any suspect charged with a Mafia-association criminal offence, made Scotland a perfect place to conduct such legal business.[18]

Amsterdam emerges as the hub of the illegal economy. A cousin of Antonio and Augusto was living in Amsterdam at the time of the investigation and was in charge of the negotiations with drug dealers in various countries, including the Netherlands, Belgium, Spain and Venezuela (RCC, 2000: 838, 871, 872). The drugs bought by the clan were then sold to other drug dealers both in Italy and abroad (RCC, 2000: 855, 842–6). Another cousin, a prominent clan member, was also hiding in Amsterdam, on the run from Mondragone.

The clan's members tend not to be personally involved in street-level dealing, an activity that is considered to be both dangerous and damaging to the group's image. The revenues from the activities related to narcotics were carefully registered in internal documents without using words such as 'drugs', 'cocaine' and the like at the request of Augusto La Torre (Interview 1). In Amsterdam, the clan was also planning to sell counterfeit money: the forged banknotes should have been bought from counterfeiters active in Campania and then smuggled into the Netherlands for sale to other local criminal groups (RCC, 2000: 879).

Although the protection racket is run exclusively in Mondragone, and there is no evidence of any protection activity in the other locales, the same does not apply to the other legal and illegal businesses. The fact that Aberdeen is devoted to investments in the legal sector does not imply that all legal investments are carried out there. For instance, when Antonio La Torre was forced to resettle in Terni, he tried to take advantage of the expertise acquired in Aberdeen by setting up a mozzarella trade from Mondragone (RCC, 2000: 588). He also opened a pub, but the venture lasted for less than a year, making a loss on the initial investment (RCC, 2000: 500). Yet the analysis shows that each branch, and by

0013

extension each locale, has a clear function, and it is devoted to a set of specific activities. Instead of expanding all its activities everywhere, the clan operates along the lines of *functional diversification*. The La Torres did not expand or move their core business outside their territory of origin, but rather looked abroad for new investment opportunities, both in the legal and in the illegal markets. Moreover, despite its 'transnational' character, the clan is still highly dependent on Mondragone: not only is it the place where the core business is carried out, but it is also the place where 82 percent of the members live and operate, compared with 8 percent for the UK and 4 percent each for the Netherlands and Terni.[19]

Mode of operation, territories and internal structure

Mondragone and the branches differ with regard to not only the type of task performed but also the mechanisms underpinning the group's operations. In this section, I address three specific aspects: the use of violence, the relationship with other competitors, and the remuneration of the workforce.

Violence

In 1862, Monnier characterized the Camorra as a 'violent industry' (*industria violenta*: Monnier, [1862] 1998: 53), a definition very close to the one that Leopoldo Franchetti would offer 15 years later for the Sicilian Mafia (*industria della violenza*: Franchetti, [1876] 1974: 90). Violence is a constitutive element of Mafia organizations, and the ability to resort to it ensures their survival. An effective reputation for being violent may decrease the need for the actual use of violence (Gambetta, 1993: 43–6; Reuter, 1983: 137–8) but does not eliminate it altogether. This is the case for the La Torres: the group resorts to actual violence and threats, although in a rather small number of instances (only 4.1 percent of all the contacts). The recourse to violence changes according to the task and area. Figure 1 shows that force tends to be used in relation to two specific tasks: management of the group and the protection racket (violence lies in the upper left-hand quadrant of the figure, meaning that it is associated only with protection and management). Violence appears to be a costly resource and, according to the wiretapped conversations, it seems to be possible for the clan to modulate punishments. It is no accident that violence and threats occur in Mondragone, the area where the clan's legal counterpart (the state) is weaker and the group is stronger. It can be argued that the expected costs of a violent action in Mondragone are lower than in Aberdeen or Amsterdam, and the returns higher, since Mondragone is the area where the clan cannot tolerate any competition (see below). It is significant that, when the clan lost the auction for the building in Aberdeen, they did not manipulate the auction in any way or make any threats to the bank (RCC, 2000: 785). Had the auction taken place in Mondragone, the story would probably have been rather different.

Territorial monopoly

According to Thomas Schelling (1971: 73), organized crime groups share a distinctive feature: they constantly seek to monopolize the markets in which they operate. As a

0014

subset of organized crime groups, Mafias aspire to be the sole supplier of protection in a given area (Varese, 2010: 17). This is the case for the La Torre clan. They hold strict control over their territory of origin, where they acted as the sole supplier of extra-legal protection (the only other competitor being the state): in Mondragone, they brook no competition from the neighbouring Camorra groups (Interviews 1, 2, 3 and 4). A strict division of the territories is in place within the Naples region. As regards the La Torre clan, 18 percent of the members operate outside Mondragone but not in other areas of the region (occasional activities may be carried out with the permission of the Camorra group that controls the area). According to a former member now turned state witness, in one case the clan acted as a broker in the sale of a garbage dump in Castelvolturno, a town that borders Mondragone. Despite the fact that one of the entrepreneurs involved was from Mondragone and protected by the group, the La Torres had to give the whole protection fee to the local clan ('reluctantly, we had to accept that situation', TrNa, 2009: 104).

It is only in Mondragone that the clan controls and governs markets; the same does not apply to Aberdeen or Amsterdam. When it operates through its branches abroad, the group acts just like every other actor, whether legal or illegal. Organized crime groups, and among them the Mafias, do aspire to monopolize their core business market but they may nevertheless expand outside their territory of origin without reproducing the same model in the locales.

Remuneration of the 'workforce'

Members of the clan receive a monthly salary. At the time of the investigation it ranged from 10 million Italian *lire* for the boss (around €5100) to 500,000 *lire* for the bottom level (about €250: TrNa, 2002: 42–67, Interview 1). Monthly salaries are paid for services rendered in the protection racket only. The member entrusted with managing the collection of the protection payments is also the person in charge of paying the salaries (RCC, 2000). A completely different set of rules applies to economic activities other than protection. Participation in these other ventures appears to be on a voluntary basis. If this is true, we should expect that not all members will be involved in the legal or illegal ventures carried out by the clan. The data confirm this prediction: only 15 members (29 percent) are involved in legal business, and 12 of them participate in illegal ventures other than protection (24 percent). The same actors unwittingly confirmed on the telephone that different mechanisms underlie the protection racket compared with all the other business. In one call, Antonio La Torre is trying to sell a consignment of whisky that the police suspect is illegal. When asked by his interlocutor about the ownership of the consignment, La Torre categorically says 'that's mine!', adding that none of the other associates was involved in that specific trade (RCC, 2000: 837).

The events related to the purchase of a major drug shipment provide an even clearer picture of the mechanism underpinning the economic activities other than protection. When a Venezuelan drug dealer active in both the Netherlands and northern Italy suggested a new business opportunity to the clan, some of its members initiated a whirlwind of phone calls to raise the amount needed (250 million Italian *lire*). Among the individuals who were asked to invest their money in the shipment were the aunt of the boss's sister-in-law and other family members of the associates, with little or no success. They

0015

then turned to other Camorra clans, offering them the opportunity to set up a joint venture for the purchase; the clans eventually declined the offer, noting cashflow problems (RCC, 2000: 862). Besides the anecdotal evidence, a longitudinal analysis of the topics confirms that the topic 'payment of salaries' is statistically correlated only with the 'collection of protection fees' ($r = .957$, $p = .003$).[20] Conversely, there is no statistical relationship between the segments of conversations about salaries and those related to the activities carried out in the other illegal or legal markets.

Unlike the protection racket, which is remunerated centrally and whose proceeds go into the common funds, the other economic activities follow different rules and they may thus be interpreted as 'investments'. When carried out in the illegal market, they tend to be short-term investments, unlike investments in legal markets, which may have a longer time horizon. Since members can decide on a voluntary basis whether or not to participate in a given venture, the profits of such ventures are not deposited in the common fund but held by the investors.

Governing vs. trading

When involved in investment activities, members have more freedom of action than in the protection racket. In the latter case, activities are centrally monitored and coordinated. These organizational arrangements have an impact on the internal structure of the group. The index of network centralization (Hanneman and Riddle, 2005) drastically decreases when moving from the protection racket to investments in both the legal and the illegal economy. When calculated based on the degree centrality (Scott, 2000: 85), the index drops from 6.18 percent (protection activities) to 3.77 percent (investment in the legal economy) and 3.38 percent (investment in the illegal economy). The trend becomes even more marked when measured by the betweenness centrality (a measure of brokerage; see Scott, 2000: 86–7): the index falls from 19.59 percent (protection) to 5.43 percent (legal economy) and 3.27 percent (illegal economy).[21]

The type of market and the way in which the group operates in such a market seem to have an impact on the internal structure of the group. The protection racket, carried out in a monopolistic way, requires a high level of centralization. The same group may relax its structure when it comes to trading other commodities: trading in a given market as opposed to governing a market requires a much less hierarchical structure.

Conclusions

The paper has empirically reconstructed the activities of a Camorra group based on the content analysis of phone conversations wiretapped by the police. It has shown that Camorra groups are involved in the production and sale of illegal protection, and may well be included in that specific subset of organized crime groups named Mafias (Gambetta, 1993; Varese, 2010). They act as monopolist in the territory of origin, where they brook no competition in the protection racket (except for the state, the legitimate provider) – a finding consistent with the definition of organized crime groups given by Schelling (1971).

The paper has shown that the protection racket is still a difficult business to move or expand, a finding that is consistent with the predictions of Reuter (1983, 1985) and

0016

Gambetta (1993). The La Torre clan not only did not expand its core business but is still highly dependent on its territory of origin, where around 82 percent of the members live. Yet the group did expand abroad, mainly to seek new investment opportunities. The idea that criminal groups may globalize because of attractive labour or raw material markets (Shelley, 2006) is not confirmed; conversely, the recruitment of members is still highly regionalized (96 percent of the associates were born in the Naples region). Contrary to what Sterling (1994) and Castells (2000) maintain, there was no evidence of international alliances with other criminal groups, but rather a few one-off agreements on specific ventures. Instead of forging alliances, the clan opened up branches abroad devoted to a specific set of activities. We may call this expansion strategy *functional diversification*.

Mafia groups may change their modus operandi across territories. The La Torre clan brooks no competition in its territory of origin, whereas it acts just like every other actor in Aberdeen or Amsterdam. It seeks to control and govern markets exclusively in the territory of origin, where it enters into direct competition with the state as a supplier of protection. This is therefore the area where Mafia groups pose the greatest threat to the state, because it is here that they aim to govern markets (as opposed to simply trade on them). It is also the place where violence and threats are most likely to be employed.

Activities related to the protection market are centrally managed, monitored and remunerated, in contrast to participation in other economic ventures, which takes place on a personal and voluntary basis. The different organizational arrangements have an impact on the internal structure of the group, which appears to be much more centralized and hierarchical when the clan deals with the protection racket than with other business. In more general terms, trading in a given market as opposed to governing a market requires a much less hierarchical structure.

Recognizing the functional diversification of Mafia activities across territories has relevant policy implications. For instance, reinvestments of criminal revenues may take place in areas far away from where the crimes had happened, and – most importantly – criminal groups may act like any other legitimate actor when operating these seemingly 'fully legal' outposts. The Scottish authorities took more than a decade to realize that the Aberdeen hub was actually part of a bigger criminal conspiracy and eventually to agree to extradite some clan members back to Italy. Furthermore, since Mafia groups may diversify their activities across territories, law enforcement agencies and policymakers should also elaborate a diversified response to employ alongside 'traditional' police intervention. Implementing a tight discipline against money laundering – e.g. closely tracking the flow of money – may have an impact in tackling the investments in the legal economy of a given group. Yet this measure will have little impact on the same group where it aims to govern markets, e.g. where it effectively reduces competition among legal economic actors. In the latter case, a swift intervention by anti-trust authorities will be much more effective. More generally, cracking down on the outposts devoted to investments in both the legal and the illegal economy can cause losses, but it is unlikely that it will threaten the survival of a Mafia group. Conversely, it is the core business that guarantees an (almost) uninterrupted stream of criminal revenues, which in turn supports the skeleton of the organization: illegal protection and the associated extra-legal governance still remain the essential traits of Mafia-like organizations.

0017

These findings also speak to a broader theoretical question, namely the analytical power of the concept of transnational organized crime in explaining the way in which Mafia groups operate in a globalized world. The La Torre clan deals with truly transnational criminal activities (including international money laundering, drug trafficking and trafficking of counterfeit money), but these activities are not the core business of the group. In addition, the clan has never expanded its protection activities outside its territory of origin. This is not always the case: as Varese (2011) has shown, Mafia groups may indeed manage to move their core business abroad in specific circumstances.[22] The failure to determine whether the clan managed to move the protection racket abroad or not is a major drawback that may lead to misleading interpretations. Instead of the broad category of transnational organized crime, the following taxonomy better expresses the real nature of the movement: (i) 'transplantation', when a Mafia group manages to move or expand the core business into the new locale (Varese, 2011); (ii) 'diversification', when a Mafia group expands its activities outside its territory of origin but does not move its core business and the common fund. Whether and under which specific conditions a locale may shift from diversification to a fully fledged transplantation is an issue that deserves further research.

Notes

1 The theoretical framework presented in this paper follows on from Varese (2011: Ch. 2).
2 Six Italians shot dead in Germany, *BBC News*, 15 August 2007.
3 The number of phone conversations mentioned by the actors and not wiretapped by the police may be interpreted as an indicator of the value of the wiretapping activity. In the La Torre case, the number of non-wiretapped phone conversations amounts to 6.3 percent of the overall contacts.
4 Moving from detailed categories to more general ones also improves the reliability of a coding procedure, as pointed out by Berelson (1952: 173).
5 In the Varese's coding scheme (2011: 75–6), resource acquisition refers to 'the acquisition of specific input resources to run the group, such as information, equipment or labour'; protection activities refers to 'efforts to control markets and offer criminal protection'; group management refers to the day-to-day management of the group, including the remuneration of the workforce and 'the activities of monitoring, intimidation, and punishment' of the group's members. In the original version developed by Varese, no distinction is made between business carried out in the legal and the illegal economy, both coming under the label 'investment in the economy'.
6 RCC refers to Regione Carabinieri Campania court files listed in Appendix A.
7 Before the European Arrest Warrant came into force (from 2004 onwards), membership of a Mafia-type organization was not considered to be a criminal offence under Scottish criminal law and therefore defendants could not be extradited to Italy.
8 TrNa refers to Tribunale di Napoli court files listed in Appendix A.
9 Among the non-Italian nationals there are seven British, two Dutch and an unspecified African national.
10 Article 416-bis of the Italian Penal Code.
11 Membership may also be operationalized according to whether an actor receives a salary from the clan / acts as a franchisee; unfortunately, I do not have complete and reliable evidence on this.
12 I included in the count the case of an individual born in Germany to Italian migrants who moved back to Campania during his childhood.
13 The same goes for the acquisition of resources. The clan shows a constant need for resources such as bank accounts, credit cards and cheques registered using the credentials of some straw men. Other valuable resources for the clan are forged passports and identity cards, fake medical certificates, mobile phone cards and firearms.
14 Eigenvalues: 0.491 and 0.425. Contacts that occurred in Terni simply as a consequence of the 'special' status of Antonio La Torre are not included in the analysis.
15 Given the procedure adopted, the distance between two points in Figure 1 is expressed through a scalar product.
16 With one exception: an offer made by Antonio La Torre to one of his associates to help him recover a debt from an entrepreneur located in the Terni region. The offer was declined by the associate and apparently no further action was undertaken.
17 At the time of the investigation, Terni was not a hub for the group, at least not to the extent that Aberdeen and Amsterdam were. Yet, as a 'potential' hub, it might have developed into something more crucial for the clan had the authorities not intervened.
18 See note 7.
19 Another member lives in a spa town located around 100 km north of Mondragone.
20 $N = 6$. The month of April has been excluded from the analysis because of the small number of contacts recorded.
21 Measures calculated on equi-dimensional matrices.
22 On this, see also Sciarrone, 1998.

ORGANIZED CRIME IN THE UNITED KINGDOM: ILLEGAL GOVERNANCE OF MARKETS AND COMMUNITIES

Paolo Campana* and Federico Varese

This article focuses on governance-type organized crime (OC). First, it explores two cases of illegal governance in Salford (Greater Manchester) and Derbyshire by relying on a wide range of qualitative data. Next, it presents a novel instrument measuring the strength of governance-type OC, the 'Illegal Governance (i-Gov) Index'. This instrument is then included in a survey we conducted with Derbyshire Constabulary. This is the first systematic attempt to measure such crime in the United Kingdom. The article shows that the governance dimension of OC is present in the United Kingdom, although with varying degrees of sophistication and development. While comparatively rare, this form of OC is pernicious and highly destructive of communities. This article therefore calls for a systematic evaluation of such phenomenon across the United Kingdom, based on the i-Gov Index.

Key Words: illegal governance, communities, organized crime, Salford, Derbyshire

Introduction

Over the years, the concept of organized crime (OC) has been increasingly broadened to the extent that it now covers any criminal conspiracy that is active for an unspecified period of time.[1] The UN defines OC as:

> A group of three or more persons, existing for a period of time, acting in concert with the aim of committing at least one crime punishable by at least four years' incarceration in order to obtain, directly or indirectly, a financial or other material benefit (UN 2004: art. 2).

The definition used by the British National Crime Agency is equally broad: 'OC can be defined as serious crime planned, coordinated and conducted by people working together on a continuing basis. Their motivation is often, but not always, financial gain'.[2]

On the basis of these definitions, one would understand OC as 'crime that is planned', yet we would be none the wiser on the kinds of activities undertaken or how long the organization should last. Consequently, some authors have concluded that it is not possible to define OC cogently, and have opted for other concepts (van Duyne 1996: 53; Levi 1998: 335; von Lampe 2001: 113). While the broadening of the concept has the operational merit of allowing law enforcement to choose its targets freely, scholars and analysts intent on salvaging the concept need to develop some analytical sub-categories to differentiate between different forms of OC. Such forms in turn will require different sets of policies and strategies to fight different phenomena.

0023

A view that gained traction in the 1960s in the United States was that the essence of OC is to provide illegal goods and services. For instance, the report of the Task Force on Organized Crime of the 1967 President's Commission asserted on its first page that, 'the core of organized crime activity is the supplying of illegal goods and services—gambling, loan sharking, narcotics, and other forms of vice—to countless numbers of citizen customers' (Task Force Report 1967: 1). Even a critic of the Task Force such as D. C. Smith (1975) concurred that OC should refer to 'illicit enterprises'. While it might be controversial to exclude 'organized theft' and 'organized fraud' from the definition of OC, this perspective allows us to think of OC as a productive activity of sorts, involving the manufacture and trade of goods and services. Such a perspective remains fruitful today. Columns 1 and 2 of Table 1 list a number of activities traditionally associated with OC that can be considered forms of production and trade of illicit goods.

The production of illegal commodities includes coca production and transformation in Latin America (Zaitch 2002; Thoumi 2003) and heroin production in Afghanistan and Burma (Paoli *et al.* 2009; Chin and Zhang 2015). Such activities do not occur only in developing economies; the United Kingdom, for instance, has seen the emergence of a local production of cannabis, which now accounts for between 50 and 65 per cent of domestic consumption (Silverstone and Savage 2010; Decorte *et al.* 2011; Kirby and Peal 2015: 3).

Besides production, OC groups are involved in a separate set of activities related to the exchange of illegal commodities. Illegal trades include human trafficking (Campana 2016; Campana and Varese 2016), human smuggling (Zhang and Chin 2002; Soudijn and Kleemans 2009; Campana forthcoming 2018), drug trafficking (Ruggiero and Khan 2006; Paoli and Reuter 2008; Chin and Zhang 2015), trafficking in animal parts (Wong 2015) and stolen data (Lusthaus 2012). Commodities are traded in marketplaces that can be either physical or virtual. As licit Internet-based transactions are gaining increasing prominence in our everyday lives, illicit virtual trade has also appeared. A virtual marketplace populated by illegal traders was the now defunct Silk Road, a website on which sellers and buyers could meet remotely and trade a host of illegal commodities, including drugs (Barratt 2012). Specialized forums on which offenders can trade information have also been established; a commodity that is often traded on these forums is stolen credit card details (Lusthaus 2012).

Some scholars have focused their attention on a third aspect of OC, namely governance (see Column 3 of Table 1). The concept of 'governance' has been used widely in business studies, economics, politics, sociology and criminology since the 1980s. As

Table 1 *Production, trade and governance: some illustrative examples*

Production	Trade	Governance
Cocaine	Drug trafficking	Dispute settlement
Cannabis	Human trafficking	Restriction of competition
Methamphetamine	Human smuggling	Protection against thieves
Counterfeit goods	Cigarette smuggling	Labour racketeering
	Trafficking in stolen antiquities	Intimidation of lawful right-holders
	Animal parts trafficking	Debt recovery
	Buying and selling on cybercrime forums	Enforcement of cartel agreements

0024

with any other concept, it has been deployed to refer to a variety of objects. One analytical way to understand governance is to refer to the rules and norms that regulate production and exchange (Williamson 2005: 1; see also Dixit 2008). Ordering of exchange may be achieved in a number of ways: it can emerge spontaneously, through market-based repeated interactions, or it can be supplied by a variety of sources such as informal institutions, formal private organizations or the state (Varese 2010; Skarbek 2011). Scholars have noted a change in how legal governance has been supplied since the 1970s, with the increasing prominence of private actors and civil society (van Waarden 2012). The emergence of pluri-centric forms of governance, for example in the shape of multi-organizational partnerships, has also been observed—particularly in the Anglo-Saxon world (see, e.g., Goodwin and Painter 1995; Jessop 1995; Lowndes and Skelcher 1998). However, there is no consensus on the extent to which the centrality of the state has been eroded (cf. Majone 1997 and Rhodes 2012).

Criminologists have mostly been interested in how governance is provided in relation to crime control (Crawford 1997; 2006). However, as with other social arrangements, there is a dark side to governance. Property rights can be protected for some at the expense of others, and resources can be mobilized to secure benefits for a select few, even at the expense of overall long-term economic efficiency. Thus, the study of governance should also include less-than-good arrangements. Furthermore, governance can be supplied not only by actors from the state, market and civil society (van Waarden 2012: 355) but also by actors operating outside the scope of the law. The latter are of particular relevance to criminologists, and the study of the governance supplied by these illegal actors is the focus of this article.

A focus on governance allows scholars to retain the crucial distinction between producers of goods and services on the one hand, and suppliers of forms of regulation on the other. In this view, OC attempts to regulate and control the production and distribution of a given commodity or service unlawfully. In other words, it seeks to *govern* the underworld (Schelling 1971). Such an aspiration requires investments in a special set of resources, which are not necessarily available to illegal producers and traders. The most crucial resource is violence. A governance-type OC group is bound to clash with others who also wish to regulate the sale and distribution of a given illegal commodity (or of a legal commodity illegally). Thus, such a group must be stronger than the individuals who operate in its area of influence. Only those who possess force can guarantee that their decisions will be respected and their punishments executed. In turn, a reputation for violence will enable the group to economize on the actual use of threats (Gambetta 1993; Campana and Varese 2013). In practice, authority is exercised through the threat of violence, rather than its actual use. Indeed, a reputation for the ability to deliver credible threats and a variety of other forms of coercion—economic and symbolic—are part of a mafia group's armour. Information is also a crucial resource, as the group needs to know who deals in what in a given market, to prevent them from doing so. The above characterization does not imply any particular organizational structure or duration. However, for governance-type OC to be effective, one would expect the presence of a rudimentary structure, a system for issuing orders, and someone who benefits from such governance—all features that have been mentioned over the past century as being part of OC. In addition, one would expect that such groups are not ephemeral, yet their length of existence would differ. Empirically, we can take gang wars and truces, and market sharing arrangements, to suggest the presence of a governance-form of OC.

In this article, we focus on illegal governance in the United Kingdom. The first goal of the article is to explore the existence of governance-type OC in the United Kingdom. To this end, we have investigated two cases of illegal governance in Salford, Greater Manchester, and Derbyshire. After having established the existence of the forms of governance-type OC in the United Kingdom, we conducted a survey in Derbyshire to identify which groups exhibit these characteristics. On the basis of the survey, we developed an instrument that aims to identify and capture the strength of governance-type OC: the i-Gov Index (the Illegal Governance Index). While police officers and analysts might be aware that such forms of OC exist in their jurisdiction, they still lack the tools to incorporate this knowledge in their operational definition of OC. This article offers a solution to this problem.

The article proceeds as follows: Section 1 outlines the basic forms of governance-type OC; Section 2 discusses the methods of data collection; Sections 3 and 4 present two UK case studies, while Section 5 introduces the Illegal Governance Index and discusses the results of the survey. Section 6 offers a conclusion.

Illegal Governance of Markets and Communities

The illegal governance of communities is a phenomenon traditionally associated with regions of the world with a high density of Mafia presence, such as Western Sicily. For instance, at the turn of the nineteenth century, a small village named Villalba saw the rise of an alternative source of protection—amid distrust towards a central authority regarded as ineffective and lacking legitimacy (Sabetti 1984: ch. 6). At the centre of this newly established (illegal) protective agency was Calogero Vizzini, who would go on to become one of the most powerful bosses in the Sicilian Mafia. According to Sabetti (1984: 103), Vizzini started his group to provide protection against banditry to peasants by taking their wheat to a mill in a nearby village. At first, he had only two armed guards. Soon, the venture proved to be so successful that 'villagers began to go to [Vizzini] with other problems' (Sabetti 1984: 104). The mafia in Villalba was originally 'an expression of local self-government' based on some degree of consent among the population (Sabetti 1984: 104).

Illegal governance includes protection against competition, enforcement of cartel agreements, settlement of disputes, labour racketeering, intimidation of workers and trade unionists for the benefit of employers, intimidation of lawful right-holders, protection against theft and police harassment, protection in relation to informally obtained credit and debt recovery, and protection against extortionists (for a review, see Varese 2014). Illegal governance has been extensively documented in relation to the traditional Mafia organizations, such as the Sicilian Mafia (Sabetti 1984; Gambetta 1993; Santino 1994; Paoli 2003); the Italian-American Mafia (Reuter 1983); the Russian Mafia (Varese 2001); the Hong Kong Triads (Chu 2000); the Japanese Yakuza (Hill 2003); the Calabrian 'Ndrangheta (Paoli 2003; Varese 2011) and the Neapolitan Camorra (Campana 2011). More recently, several studies have been devoted to documenting this form of OC in Latin America (Brophy 2008; Locks 2014).

Yet the governance dimension of OC is not just a feature of mafias and Latin American 'cartels'; it is also undertaken by criminal groups in territories outside the conventional settings. Skinnari *et al.* (2012), for example, detail the workings of protection rackets

0026

in areas of Stockholm, Sweden. Instances of governance-related activities have also been identified among some of the gangs operating in London. Levi's (1981) landmark study of long firm fraud documents how the Kray and the Richardson gangs in London aspired to 'gain a monopoly on extortion and on criminal activities generally' (Levi 2008: 62). According to Densley (2013: 265), some of these groups 'protect community residents from violence and exploitation, provide them with financial sustenance, organize recreational activities and otherwise "serve" the community, much like certain larger US gangs'. In his work on Chinese OC in the United Kingdom, Dees (2012) cites evidence from the Metropolitan Police Chinese Unit indicating the presence of protection rackets among the Fujianese communities in Britain (for the case of Northern Ireland, see Clarke 1989; Maguire 1993; Hamill 2010; Cfr Fraser and Hobbs 2017: 600). This article aims to add to this small body of literature and to offer a way to map governance-type OC in the United Kingdom. Before exploring in depth two cases of criminal governance in the United Kingdom, we shall briefly describe our methods of data collection.

Data and Methods

For the study of illegal governance in Salford, Greater Manchester, and Derbyshire, we collected a wide range of qualitative data. In relation to Salford, we conducted semi-structured, in-depth interviews with individuals who have extensive knowledge of the case, as well as a systematic search in the online archives of local and national newspapers (*The Guardian*, *Manchester Evening News*) using as keywords the names of the key individuals involved. For the second case study, we were granted full access to the police files prepared for the case against the Lowther brothers. Although we read and analysed a variety of different documents produced during the investigation, we have only included in this article the evidence presented in court. In addition, we conducted interviews with police officers with considerable knowledge of the case and OC in the area, as well as having searched the online archives of the local newspapers (*Derby Telegraph*, *Nottingham Post*) using as keywords the names of the key individuals involved. We also travelled to Salford and Derbyshire to conduct interviews and become familiar with the local situation (details of the interviews are presented in the References).

To assess the extent of illegal governance in UK communities, we have devised a new survey instrument. A discussion of the survey items is included in Section 5. Thanks to the crucial assistance of Derbyshire Constabulary, we were able to circulate the survey among all the police officers tasked with monitoring and coordinating operations against all OC groups active in the area. All officers replied to the survey ($N = 13$; 100% response rate). Before circulating it among the respondents, the questionnaire was validated by police analysts with knowledge of OC. The choice of Derbyshire Constabulary for this study was driven by the opportunity to gain access to documents and police officers that the Force granted to us. Derbyshire Constabulary is one of the 43 territorial police forces operating in England and Wales with jurisdiction over a population of just above a million.[3] The main city in the area is Derby, with a population of 248,700 (2011 census). As for the OC presence, Derbyshire Constabulary ranks

[3]Data from the Office of National Statistics: https://www.ons.gov.uk/peoplepopulationandcommunity/crimeandjustice/datasets/policeforceareadatatables.

0027

ninth (of 43 forces) when measured on the number of OC groups identified per million people (as of July 2016; HMIC 2017: 98). According to this metric, the presence of OC (broadly conceived) is just above the overall average for England and Wales. Derbyshire Constabulary was ranked as 'outstanding' by Her Majesty's Inspectorate of Constabulary in its latest assessment of the Force's effectiveness in measuring and tackling OC (HMIC 2017: 127).

Illegal Governance in Practice: The Case of Salford

In 2016, in the town of Salford, Greater Manchester, a man was attacked with a machete, and another had a grenade thrown at his house. Furthermore, a nine-year-old boy was shot as he opened the front door of his house: the killer was looking for his father. In this town, which has a population of 234,000, the police have recorded 25 OC groups, and the number of shootings in 2015 was 19. 'Police don't control the street', a gang member told the BBC in 2016 (BBC Panorama 2016).

Salford is not only the site of serious violence; it also offers a prime example of the illegal governance function of OC. The town, which is adjacent to the city of Manchester, is home to the Salford 'Firm'. Predominantly white, it is composed of different kin-based crime Families, occasionally in conflict with each other. In the 1970s and early 1980s, these Families were involved in armed robberies (Int-1 and Int-2), a crime that requires the use of effective violence and courage; thus, these Families grew in criminal reputation. When the banks improved their security and reduced the amount of cash held in local branches, the number of armed robberies declined (Int-1 and Int-2). At that very time, the consumption of drugs exploded, and the Salford Families started to establish the market for heroin, cocaine and ecstasy. As most drugs were sold in dance clubs, gangs found a way to control the doors, often through legitimate security companies (Int-1 and Int-2; for a general study of the night economy, see Hobbs *et al.* 2003). The Haçienda, arguably the most important club in Europe in the 1980s, hired one Salford Family, the Noonans, to guard the doors in 1991 (Hook 2010: 214–5). Damien Noonan was in charge of the bouncers. One of his brothers had been charged and acquitted of murder, while another had more than 40 convictions for armed robbery and assaulting the police. The Noonans were so menacing that, when they were pulled over, the police would let them go, no matter what they had done (Hook 2010: 214–5). Damien introduced a degree of order at the Haçienda. Gangs were allowed in, but each sat in its own corner to avoid bloody fights. They received their drinks at cost, so they would not steal them outright and harass the staff along the way. Peter Hook, a founding member of Joy Division and co-owner of the Haçienda, recalls that hiring gangsters offered additional benefits: some of the staff took interest-free loans rather than going through banks. Moreover, an association with a strong gang carried prestige: 'Our bouncers were so powerful and so bloody violent that anywhere we went we had the cachet of being associated with them' (Hook 2010: 257).

Another prominent Salford gangster, initially involved in armed robbery and then drugs distribution, was Paul 'Mr Big' Massey.[4] In the 1980s, he started to exercise

[4]Massey was named as 'Salford's Mr Big' by councillor Joe Burrows during a 1992 council meeting discussing the Salford Riots (Williams 2015).

0028

his influence in the legal economy, creating a company officially named Personal Management Security, PMS for short, while another notorious local family also involved in armed robberies, the Pollard Family, created Marpol (Int-2). Over time, the Salford gangsters began to impose their services of protection upon construction sites, shops and malls and even obtained a contract (later rescinded) to provide security to Metrolink (Int-1 and Int-2). As one of our interviewees stated, 'these security firms are in effect protection rackets' (Int-1). Reputation played a key role. According to one interviewee, 'everybody knew that PMS stood for Paul Massey Security. That name, PMS, was a form of deterrence; people knew who was behind the company and would not rob sites protected by them' (Int-2). According to a second interviewee, the company had people listed as employees on its books who were serving jail sentences. Allegedly, this was a way for the group to pay associates who were in prison (Int-1).[5] In an exposé of the Mancunian underworld, journalist Peter Walsh noted that shopkeepers and tenants in the area were asked to pay protection money to avoid being robbed or burgled (Walsh 2006: 132).

The 'Salford Firm' ran a parallel justice system. In their ethnographic study of Ordsall—a ward of some 6,500 inhabitants within Salford—Walklate and Evans (1999: 95) found evidence of 'a locally well-known criminal gang' influencing community life and acting as 'a quasi-political network'. A local police officer they interviewed maintained that the neighbourhood 'has always been a self-policing community' (Walklate and Evans 1999: 86; also Evans *et al.* 1996). In one instance, the gang even set the amount of monetary damages that a joy-rider had to pay to a 13-year-old girl who had been knocked down during a public display of handbrake turns (Walklate and Evans 1999: 86).

Reporting crime to the legitimate authorities was punished. Members of this crime group would 'put themselves forward as alternative authority figures, meting out their own summary justice to transgressors and spraying the names of alleged "grasses" on the estate in prominent positions' (Walsh 2006: 130). Direct intimidation or a public 'naming and shaming' in the main shopping area of the estate was also reported by Walklate and Evans (1999: 90–2), who further observed that 'whilst people living in this area were intimidated by the presence of the criminal gang and its activities, they also believed that the same presence afforded them a level of protection from criminal victimization not provided by official agencies' (Walklate and Evans 1999: 95. Indeed, the Salford Riots of 1992 were a week-long attack on the police and the fire services: see Newburn 2015). This code of silence is still in existence. In 2012, a man was shot in front of 30 people in a local pub. After the murder, the killer pointed his gun at the witnesses and warned them not to talk. As in other similar incidents, the CCTV footage went missing. No one was prepared to give evidence. The former Chief Crown Prosecutor for Greater Manchester concluded in 2016 that, 'the impression will be that people are

[5]The creation of security companies as a way to facilitate the collection of protection money has been also identified in Belfast, Northern Ireland where, according to Clarke (1989: 33–35), building sites and taxi companies have been subject to protection rackets. Maguire (1993: 280) maintains that all the extra-legal organizations in both Loyalist and Republican communities 'collected protection money on their own estates', particularly from shopkeepers. These groups set up security companies as a way to facilitate collection. Companies run by racketeers could save on the actual provision of the service as they 'did not have to provide patrols to ensure that their customers were not harmed. They simply had to make their desires known in the community as to what the punishment would be for any freelance criminal' (Maguire 1993: 283).

All use subject to https://about.jstor.org/terms

above the law…some individuals will feel that they can get away with murder'. He further admitted that 'there is a trust deficit in the police' (BBC Panorama 2016).

The next step is when the gangster himself becomes a community leader. In 2015, Paul Massey brokered a truce between four Manchester gangs that were waging a deadly war. *The Guardian* reported that Massey had been asked by police to intervene as mediator following violent incidents in the town, including a grenade and machete attack (Pidd 2015). He also acted as a mediator in several gang conflicts across the United Kingdom (Walsh 2006: 172–5; Pidd 2015; BBC Panorama 2016).

As in other contexts, entrenched OC is able to intimidate politicians. In May 1990, the Liberal Democrats decided not to contest the local ward due to safety concerns, and the Conservatives were unable to find anyone willing to run for that seat (Walsh 2006: 131). In 2010, Paul 'Mr Big' Massey unsuccessfully ran for mayor of Salford. Yet he managed to collect 1,995 votes (4.5 per cent of the total votes), just below the Liberal Democrats (2,148) and more than the Greens (1,273).[6]

In July 2015, Paul Massey was shot dead by a masked gunman. Apparently, he did not quite manage to convince a faction of a new, up-and-coming gang known as the A-Team to dispose of their weapons (Int-1; Int-2; Britton 2016). His funeral was a grand affair, and a mass was held in the Church of St Paul the Apostle. Hundreds turned up to pay their respects on the day of his funeral (Allison *et al.* 2015; Pidd 2015). Unsurprisingly, armed police were on standby to ensure that no further violence took place on such a solemn occasion. As we visited the Church in 2016, we struck up a conversation with a church volunteer. She told us that the church takes in no fewer than 19 homeless people every night and, as we spoke to her, a jumble sale was being organized: 'We have our problems, but people are very nice, they help me if I need something'. The area is also undergoing significant gentrification. She was, however, scathing about the effects of such developments: 'They are pushing local people out, towards the dead-end part of the town. They are building new flats, but not social housing' (Int-3). Quickly, the conversation turned to crime: 'There is crime in this area. During the day it is fine, but I would be careful of walking here during the night' (Int-3). She continued:

> We also have our own mafia. They murdered one of our own. There are two sides to each person. He [Paul Massey] has done some bad things, but also some good things for the community. He had helped people (Int-3).

Myth-making is not far off. Racketeers are portrayed as benevolent figures and their actions are romanticized. A story from the 1990s was related to us in Salford. The story goes that an old lady from the community had her house broken into, and her pension money stolen. Paul Massey managed to track down the person responsible for the burglary and made sure that the money was returned to the lady (Int-2). Massey, according to our interviewees, also claimed that he was responsible for stopping the introduction of heroin in Salford (Int-1 and Int-2).

The case of Salford shows that protection rackets and illegal governance can emerge in countries that possess an overall high level of trust and legitimacy in the police and other institutions of authority. A high level of trust and legitimacy at the macro level may not be evenly reflected among all communities. Indeed, British police forces and

[6]Data on the 2010 local elections are at https://www.salford.gov.uk/elections-2012.htm.

This content downloaded from

All use subject to https://about.jstor.org/terms
0030

other institutions of authority show a relatively high level of trust and legitimacy at the macro level (Jackson *et al.* 2012). However, in 2014, the Chief Inspector of Constabulary, Tom Winsor, maintained that some communities in Britain rarely, if ever, call the police to report a serious crime and stated that residents 'administer their own form of justice…It could be anything from low-level crime right up to murder…' (Sylvester and Thomson 2014; Guardian 2014). When certain communities have a low level of trust in the police and the institutions of authority, they may turn to local stakeholders to settle disputes, including minor conflicts. This equilibrium is conducive to the rise of figures that might have less-than-civic intentions.

Illegal Governance in Practice: The Case of Derby

Forms of illegal governance are not only a long-standing feature of some large urban centres, such as Greater Manchester. Under certain circumstances, they may emerge even in rural areas, yet effective early police intervention can stop the phenomenon from reaching the proportion of that in Salford. This is the case of the three Lowther brothers, based in the rural Amber Valley of Derbyshire, who teamed up with at least eight people to harass and extort legitimate business in the area, mainly operating in the transport and recycle sectors. Over time, they were able to offer some genuine services of protection to their business associates, by recovering debts and reducing competition for the benefit of some operators. Both activities are typical of mafias, as outlined above. The group operated between 2009 and 2017; the Derbyshire police investigation eventually led to successful convictions in 2017 for conspiracy to blackmail, to conceal criminal cash and to pervert justice as well as the intimidation of witnesses (EMSOU 2016).

David Lowther, who received a nine-year prison term, appears to have played the leading role in the gang. Formally employed as a car washer and a ground worker, living in a caravan and uneducated, he and his brothers are reported to have been involved in the production of marijuana. Over time, they began to engage in the petty extortion of local business people, stealing their trucks and then offering to return them for a fee. In some cases, they would continue to harass the victim, even if he had paid. Their demands ranged between £1,500 and £20,000. When asked by police if he had paid the ransom to get his truck back, one victim replied: 'I have, yeah. I've got no choice' (EMSOU 2016: 11; see also Malcolm 2017; Slater 2017). Their early foray into illegal governance was rudimentary and predatory.

Yet over time, they proved to be able, in some key instances, to offer a genuine service of protection. In one case, a businessperson turned to David and John Lowther asking them to recover a debt of £5,000 from a customer who had not paid for his cranes. It took one day for David Lowther to deliver the money in cash, although he kept £2,700 for payment (EMSOU 2016: 19). Finally, the Lowthers teamed up with the owner of a substantial transport and recycling business. They helped him to intimidate his competitors, a 'service' typical of the mafias in places such as Sicily, Russia and the United States. The Court heard how one of the victims had been harassed since early 2015. The victim worked for a grab lorry business in the Amber Valley area. The threats were made in the form of demands 'to stop working in the area where the Lowthers had money invested in a local company and competitor' (EMSOU 2016: 27). The victim

This content downloaded from
162.10.217.184 on Sun, 14 Jun 2026 23:23:45 UTC
All use subject to https://about.jstor.org/terms

recalls that, on 1 January 2015, he received a phone call from Luke Lowther. He was told: 'Listen here, you're not trading around here, I am going to burn your fucking lorry' (EMSOU 2016: 28). As the conversation continues, another brother makes clear that the businessman should not trade in the local area and should move to Yorkshire. Eventually, the victims agreed not to trade in the 'patch' in which the business protected by the gang operated (EMSOU 2016: 27–9 and 33–6. See also Slater 2017).

Quite early on in the history of the gang, the Lowther brothers developed a reputation for serious violence. When the owner of a lorry reported a theft of his vehicle to the police, he called back saying that he had retrieved it thanks to the gang, and he added: 'I can't say too much, cos of the circles they move in, you know what I mean' (EMSOU 2016: 11). The same victim later elaborated: 'the reason why I am so afraid of all the Lowthers is due to their *reputation for violence* and also their apparent disregard for the law' (EMSOU 2016: 18; emphasis added). Other victims were scared: 'they go around terrorizing everybody', said a businessperson forced to stop trading in the Lowther's 'patch' (EMSOU 2016: 29). The brothers got into fights at local pubs for futile motives. While it might have appeared as irrational behaviour, it actually served to strengthen their reputation. Although banned from the pub, they kept coming back, asserting their power of intimidation in a public place, where everybody could see for themselves what these people were capable of. Such displays helped them to be more credible when they asked for protection money or intimidated others.

The Derbyshire police took the decision to prioritize this particular group and assigned to it a dedicated team of officers. While the brothers accumulated considerable sums of money and a property portfolio (EMSOU 2016: 59–61), the police understood that the harm caused by this gang was only partially quantifiable in financial profits. Ultimately, the Lowthers were trying to set themselves up as figures of authority, controlling parts of the local economy through terror and violence. Some businesspeople understood the power of intimidation of the gang and decided either to yield to their demands or to team up with them to increase market shares. It is a testament of the police judgement that they decided to intervene early enough to prevent such control from escalating and becoming rooted in the community. Yet it is appropriate for police forces to develop standardized instruments to identify this form of OC and to prioritize it across the country.

Assessing the Scale of Illegal Governance: The i-Gov Index

The two case studies discussed above have shown that instances of illegal governance of markets and communities are present in Britain and are comparable with what has been documented in territories traditionally associated with mafia activities. But how prominent is illegal governance in the United Kingdom? The data collection strategy currently adopted by British law enforcement makes it extremely difficult to tease out instances of governance from the broader OC activities (remember that OC is defined by the British National Crime Agency in broad terms 'as serious crime planned, coordinated and conducted by people working together on a continuing basis').[7] Rather than

[7]See http://www.nationalcrimeagency.gov.uk/crime-threats/organised-crime-groups (accessed on 8 June 2017).

This content downloaded from
162.10.217.184 on Sun, 14 Jun 2026 23:23:45 UTC
All use subject to https://about.jstor.org/terms
0032

relying on the official definition, in this section we pursue a different strategy based on using a survey to elicit information from officials with thorough knowledge of the workings of specific OC groups.

British police forces normally compile a list of OC groups that are active in their jurisdiction. Individual forces may adopt a slightly different definition of what constitutes an OC group, but ultimately this would be in line with the definition set by the National Crime Agency.[8] These criminal activities normally fall within the definition of 'serious crime', namely 'crime that involves the use of violence, results in substantial financial gain or is conducted by a large number of persons in pursuit of a common purpose, or crime for which a person aged 21 or over on first conviction could reasonably expect to be imprisoned for three or more years' (OCGM Manual 2010: 15). Crime types currently classified by the National Crime Agency as serious and organized crime include the production of counterfeit goods, trafficking in drugs, trafficking in human beings and modern slavery, fraud, identity crime, intellectual property crime, kidnapping, organized theft and child sexual exploitation (NCA 2014). This serves our purpose well as it provides a rather broad starting point for our attempt to quantify the extent of illegal governance.

In light of the evidence discussed above, we decided to operationalize illegal governance based on three (indirect) measures: (1) the ability of an OC group to generate fear in a community; (2) its ability to coerce legal businesses; and (3) its ability to influence official figures. Next, we asked the police officers in charge of coordinating the investigations into OC in Derbyshire Constabulary to place each of the groups they have been monitoring on a scale from zero to four—with zero indicating 'no fear/coercion/influence' and four indicating 'very strong fear/coercion/influence' (see Appendix for the full questionnaire). We have modelled our scales on those included in the British Crime Survey and subsequently the England and Wales Crime Survey to assess fear of crime (see Gray *et al.* 2008). We have decided to adopt a five-level scale to increase granularity in our measurement. The use of scales allows us to identify the presence of OC groups engaging in each of the three dimensions of illegal governance while at the same time assessing the strength of their (governance) activities. As illegal governance requires a different—more specialized—set of skills (see above), our expectation was that the number of groups that engage in such activities would be a fraction of the overall number of OC groups broadly identified. Figure 1 shows the number of groups engaging in each of the three dimensions of illegal governance, and the strength of their governance activities.

As expected, the number of OC groups involved in illegal governance is a fraction of the overall number of groups. Nonetheless, this fraction is far from negligible. Of the 55 OC groups identified by Derbyshire Constabulary, 22 groups generate some level of fear in the community with three groups generating a level of fear deemed 'strong' or 'very strong'. Thirteen groups have coerced legal businesses, with two groups able to exert 'strong' coercion on those businesses. Finally, 22 groups have exerted some influence on official figures, but none has been reported to exert 'strong' or 'very strong' influence (the level of influence is mostly 'very limited' or 'moderate').

[8]'Organised criminals working together for a particular criminal activity or activities are called an organised crime group': see http://www.nationalcrimeagency.gov.uk/crime-threats/organised-crime-groups (accessed on 8 June 2017).

0033

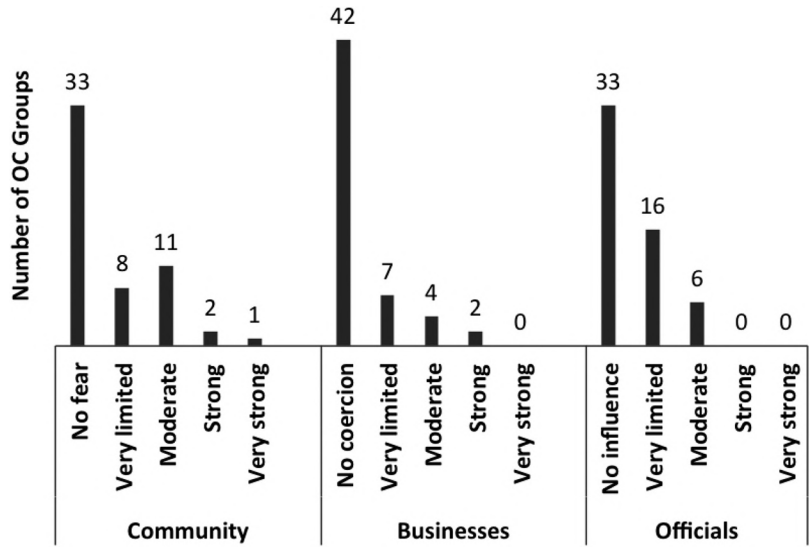

FIG. 1 Organized crime and its impact on communities, businesses and officials (Derbyshire Constabulary, $N = 55$).

Next, we combined the three dimensions of communities, businesses and officials to generate an index of illegal governance ('i-Gov Index').[9] By definition, the Index ranges from 0 to 12 (a group with a score of zero has not engaged in any of the three dimensions of illegal governance; a group with a score of twelve has a 'very strong' engagement in all three dimensions). Figure 2 shows the distribution of the i-Gov Index for Derbyshire Constabulary.

The evidence shows that gaining a multi-faceted governance of community and markets is a difficult task for OC groups; currently, there are no groups in Derbyshire that occupy the 'high' level in the i-Gov Index (i.e. a score between 9 and 12). Nevertheless, three groups have managed to reach the 'medium' level (one of them is the case study discussed above, Section 4). This constitutes roughly five per cent of the OC groups active in the area. Finally, 32 groups are currently in the 'low' bracket of the Index.[10]

The Index we developed captures a feature of OC that is currently underexplored in the United Kingdom, and it offers several advantages. The Index taps into the extensive knowledge of police officers tasked to investigate a particular group. The use of expert opinion is a standard method in the social sciences (see, e.g., Dorussen *et al.* 2005). A common validation technique is the use of the Delphi Method, which involves sending a questionnaire to a panel of experts several times. The responses are then aggregated

[9]We have explored more sophisticated ways to combine the three dimensions, including a principal component analysis (PCA). As the correlation between the additive index and the first component of the PCA was 0.973 ($p < 0.001$), we opted for the additive index (superior in terms of readability).

[10]The i-Gov positively correlates with two measures of risk assessment currently adopted by law enforcement in Derbyshire: Tier ($r = 0.426$, $p < 0.001$) and Score ($r = 0.368$, $p = 0.006$). This is an indication of the validity of our strategy; at the same time, our Index adds to the current measures of risk assessment (note that the correlations are both below 0.5). 'Score' is a measure calculated on the type of activities carried out by an OC group as well as the level of capabilities/resources possessed (OCGM Manual 2010: 27–31). 'Tier' is a measure reflecting the nature and complexity of the response required as assessed by the police (OCGM Manual 2010: 39–40).

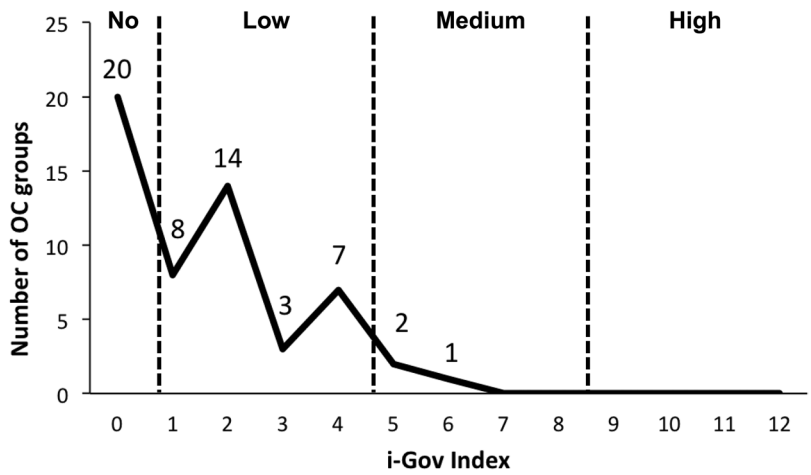

FIG. 2 i-Gov Index (Derbyshire Constabulary).

and shared with the group. Experts can adjust their answers until a 'correct' response is reached through consensus (Clayton 1997). At this stage, we opted against such a strategy, as there is a single expert on each group, and the involvement of superior officers (who are not experts on the group) might bias the overall results. The Index is based on extremely easy-to-collect information: it takes only a few minutes for an officer to answer the questions. In the context of limited resources and time constraints, it is unrealistic to expect that hundreds of analysts would spend hours compiling a long survey. The likelihood of low-response rates would therefore be high. The survey is easy to roll out to several forces and would produce a map of governance-type OC in the United Kingdom within a reasonably short time. The results from Derbyshire are encouraging; variation by place and case supports the conclusion that officers were not expressing some folk wisdom or common self-serving mythology.[11]

Yet issues related to the validity of the officers' assessments remain. As noted above, Derbyshire Constabulary has been ranked as 'outstanding' in the assessment of the Force's effectiveness in tackling OC (HMIC 2017: 127); hence, we can have a high degree of confidence in the analysts' opinions. Nonetheless, greater care must be taken when the Index is applied to areas in which the local Force is less effective. It should also be noted that this is a preliminary stage of mapping. On the basis of interviews with police analysts (Int-5 and Int-6), we have identified several recorded offences that should form the basis of an additional quantitative component. Such offences include 'Arson with Intent to Endanger Life', 'Arson Threat', 'Possessing Anything with Intent to Destroy or Damage Property', 'Perverting the Course Of Justice' and 'Intimidation of Witnesses'.[12] Scholars should then team up with local forces to further validate the Index with additional, qualitative studies of specific communities, using the kind of data employed in the first part of this article (field interviews and trips, systematic analysis of local newspapers, and police and court data).

[11]We are grateful to a Referee for pointing this out.
[12]For a description of these offences, see http://www.cps.gov.uk/legal/index.html.

Conclusions

This article has focused on one particular aspect of OC, namely its ability to govern territories and communities. It has shown that the governance dimension of OC is present even in England, although with varying degrees of sophistication and development. In Salford, local gangs fight over shares of the drugs market, striking transient agreements and occasionally resorting to turf wars. Bosses such as Noonan, Pollard and Massey have also been able to enter the legal economy and impose their protection on legitimate businesses. A parallel justice system and what appears to be a degree of community consensus has emerged. Massey even stood for mayoral election and cultivated the image of a local leader, protecting people against petty theft and hard drugs. His funeral—which bore a striking resemblance to mafia funerals in Italy[13]—was held in the local church and attended by hundreds of mourners. The case of Salford displays a more advanced and entrenched governance-type of OC than that of the Amber Valley in Derbyshire. Yet even in this rural part of the country, the police were able to prove that the Lowther brothers terrorized the local community, extorted businesses, and were even able to engage in debt recovery and intimidation of competition for the benefit of their business associates. All these activities are typical of traditional mafias, such as Cosa Nostra in Sicily.

A key challenge for scholars and analysts alike is to map the extent of this type of OC in the United Kingdom. Thanks to the collaboration with Derbyshire Constabulary, we have begun this process. We asked officers in Derbyshire whether OC groups have the ability to generate fear in the community, coerce businesses and influence public officials. The results show that the majority of OC groups are not generating fear in the community (33 out of 55), coercing legal businesses (42) or influencing official figures (33). This highlights the importance of adopting a tool to re-classify the broader set of OC groups. Yet, instances of illegal governance do take place. Of the 55 groups being monitored by the police, 40 per cent of them are generating some level of fear in the community, 40 per cent exert some level of influence on official figures and 24 per cent are able to coerce illegal businesses. While the strength of these activities is 'very limited' or 'moderate' for the vast majority of the groups engaged in these three dimensions of illegal governance, three groups were nonetheless deemed to generate 'strong' or 'very strong' fear in the community and two groups exert a 'strong' level of coercion on legal businesses (influence of public figures was 'moderate' at the maximum).

On the basis of the survey results, we have created an index of governance, the i-Gov Index, by adding up the score that each group obtained in each dimension (community; businesses; officials). This procedure, which could easily be adopted by other police forces in the United Kingdom (and elsewhere), shows that there are no groups in Derbyshire that occupy the top level in the i-Gov Index ('high'). However, three groups have managed to reach the 'medium' level (one of them is the case study discussed in Section 4). This constitutes roughly five per cent of the OC groups active in the area. We believe that while governance-type OC is comparatively rare, it is pernicious and highly destructive of communities, and its existence cannot be measured solely

[13]Compare the video of the Casamonica boss's funeral in Rome (Tuscolano neighbourhood) (https://www.youtube.com/watch?v=L-Dzw4CJvH8) with Paul Massey's funeral in Salford (http://www.manchestereveningnews.co.uk/news/greater-manchester-news/police-raid-home-murdered-salford-12493435).

through an analysis of crime profits. This article calls for a systematic evaluation of this form of OC across the United Kingdom.

This study has shown that there is a high degree of variation in the forms of OC and that the governance-type form is likely to be less widespread than the other two (production and trade). Within Derbyshire, we found that most OC activities are conducted in the absence of governance-type OC. How does the absence of this type of criminality shape illegal markets? Most generally, governance is less likely to emerge when it is harder to control the territory in which transactions take place: if there is only one spot in which the purchasing of a 'good', for example, can take place (such as at a port, or in a covered market), this type of control will emerge more easily. If, on the other hand, trading and production can move easily, customers can find suppliers through the internet and mobile phones, and the 'good' can be consumed in a variety of places. We would therefore expect governance to be more likely to emerge.

Illegal governance may well be limited, but it exists in the United Kingdom and it is likely to be clustered in less affluent, deprived areas and neighbourhoods with recent large migration. This phenomenon therefore goes well beyond simple crime; it is the result of social issues affecting a community, e.g. the lack of trust in legitimate institutions (as noted by Walklate and Evans 1999: 97 in relation to Salford). This calls for a response that goes beyond simple police intervention, requiring multi-organizational policy networks designed to bring together state and non-state actors, including the civil society (van Waarden 2012; see Crawford 1997: Chapters 2 and 4 and Walklate and Evans 1999: 112–3 for a discussion of community policing and inter-agency partnerships). Placing illegal governance within the broader governance framework helps devise more effective strategies aimed at eradicating it from communities. Where decisions are taken is indeed crucial, and striking the right balance between the local (community) level and the national level may not always be straightforward (Crawford 1997; Walklate and Evans 1999). For instance, as more decisions are devolved to a local level, the risk of corruptive practices increases, and the potential for inadequate oversight is higher. This is a vulnerability that should be considered—and addressed—when setting up mechanisms to devolve powers from central to local authorities.[14] We believe that recognizing the risks posed by illegal governance is a first step in the right direction. This article proposes a method to identify and measure the strength of this phenomenon and calls for a significant reorientation of thinking about OC in the United Kingdom. Future lines of enquiry include the study of the determinants of variation in governance-type OC across communities in the United Kingdom.

Acknowledgements

The authors are listed in alphabetic order. We are very grateful to our interviewees for their most valuable insights. Mick Creedon, Derbyshire Chief Constable, has supported this project from the beginning and facilitated the collection of evidence. David Kirby, also of Derbyshire Constabulary, discussed with us several aspects of the study and pointed us in the direction of relevant data. He was also instrumental in administering

[14]Transparency International issued a report warning of the 'mounting risks' of corruption in local government in the United Kingdom (Transparency International UK 2013).

Abstract

This study explores criminal governance among urban gangs operating in a large European city. It does so by introducing the Crim-Gov questionnaire, a novel survey tool purposely designed to systematically capture key governance-related dimensions of criminal groups' activities, and applying it to the case of London. It identifies instances of criminal governance among gangs operating in the city and shows that governance activities are only carried out by a subset of groups, thus suggesting that a more complex set of skills is required to provide criminal governance, particularly beyond illegal markets. Governance-type gangs are spatially clustered and impact 4.7% of all London communities. Next, the paper explores the neighbourhood structural conditions associated with governance and non-governance gang presence. It shows that, while socioeconomic disadvantage increases *all* types of gang presence, barriers to local services, including affordable housing, only increase the probability of governance-type gangs. Criminal governance is more likely to emerge when services provided by local and central authorities are of lesser quality. Results also indicate a negative association between residential mobility and criminal governance, suggesting that a certain degree of residential stability is needed for criminal governance to emerge. These findings point to the importance of separating different types of gang activities, lending support for a broader theory that situates (some) urban gangs within the spectrum of organised crime governance. It is also crucial for law enforcement and local stakeholders to

identify governance-type gangs and treat them separately from non-governance ones. When developing interventions to tackle the emergence and persistence of governance-type gangs, particular emphasis should be placed on improving access to and quality of public services.

Keywords
Access to services, communities, gangs, governance, residential stability, socioeconomic disadvantage

Introduction

Criminal groups operating in illegal markets are often lumped together under broad labels such as 'organised crime' or 'gang'. And yet such groups engage in a variety of activities. Some *produce* illegal goods and services, such as cocaine in Colombia or cyber fraud online. Others specialise in *trading* goods from one place to another, such as drug traffickers. It is now well accepted that a third type of group goes beyond production and trade and attempts to *govern* communities by playing a role in their life, as well as extort/protect legal businesses and influence the decisions of politicians and public officials (Campana and Varese, 2018).

Criminal governance should be thought of as a continuum. Some groups have taken over state functions, such as imposing restrictions on people's behaviour, enforcing agreements, solving disputes, and enforcing a rough kind of justice. Others have made only limited inroads into these areas of social life, yet display signs that their activities go beyond ordinary crime (Varese, 2010). Starting with the pioneering work of Landesco (1929), notable studies have documented how traditional mafias, Latin American 'cartels' and insurgencies take over key state functions (Gambetta, 1993; Varese, 2001; Chu, 2000; Hill, 2003; Uribe et al., 2022; Arjona et al., 2015). At the other end of the governance spectrum, scholars have shown that gangs are able to influence communities in settings such as Medellin (Gordon, 2020), London and Nottingham (Densley, 2013: 61–62; Fellstrom, 2008), while they have not become an alternative government. Despite variations in degree, criminal groups across a wide geographical spectrum can go beyond illegal production and trade and involve themselves in imposing a degree of order on the communities where they nest.

The aim of this paper is twofold: first, to explore the extent to which urban gangs in a large European city are involved in more than just selling illegal products such as drugs; and second, to investigate the neighbourhood structural conditions associated with such gang presence. To do so, we first need to establish whether gangs engage in racketeering, influence business decisions, have a degree of control over local officials, and are involved in community activities. If the answer to such question is positive, we define such gangs as 'governance-type', while acknowledging that their behaviour is not quite on a par with traditional mafias. To identify such gangs, we introduce a novel instrument, the Crim-Gov questionnaire. We submit the instrument to police officers tasked with policing gangs in London.

We then leverage the data collected through the expert survey to explore the following questions: What are the structural conditions under which governance (and non-governance)

0044

gangs are present in communities? And are there differences between governance and non-governance gangs?

Theoretically, this paper builds on two separate strands of research. First, it expands on authors who have examined the governance dimension of urban gangs in the United States and the Global South, especially in Latin America and the Caribbean. Such studies are rare in Europe, and they tend to be qualitative. While qualitative studies are most insightful in offering deep accounts of local dynamics, our approach in this paper is best suited to explain why governance-type gangs are present in some neighbourhoods and not in others. In short, this paper contends that it is imperative to distinguish governance from other gangs' activities. Second, it connects the study of governance-type gangs with the broader gang literature exploring the *structural* conditions that might lead to the emergence and persistence of gangs in local communities (see Decker et al., 2022: 36–66 for a review and a most useful taxonomy of theories; due to the nature of our data, in this work we leave aside any consideration on 'culture' and focus exclusively on elements of 'structure'). We expand on US-based works by offering novel insights from a large urban city in Europe. In addition, by integrating such insights with our criminal governance perspective, we will explore whether we can identify any difference in structural characteristics that lead to the presence of the two distinct types of gangs: governance and non-governance.

The text continues as follows. The second section discusses criminal governance, while the third section offers a theoretically informed discussion of the neighbourhood-level structural factors potentially conducive to the presence of (governance and non-governance) gangs in a local area. The fourth section then introduces the data and methods we use. The fifth section presents the results of our expert survey on the presence/absence of criminal governance in London based on the purposely developed Crim-Gov questionnaire. The sixth section tests the factors conducive to the presence of gangs in London neighbourhoods, separating those involved in criminal governance from non-criminal governance ones. The seventh section concludes.

Criminal governance

Criminal governance can impact both legal and illegal markets, as well as communities more broadly. In illegal markets, criminal governance often involves protection against competition, enforcement of cartel agreements, dispute resolution, labour racketeering, intimidation of lawful right-holders, protection against theft and police harassment, informal credit and debt recovery, and defence against extortionists (see Varese, 2014 for a review; Schelling, 1971 more generally on criminal governance). This form of governance has been documented in various traditional Mafia organisations, such as the Sicilian Mafia (Sabetti, 1984; Gambetta, 1993), the Italian-American Mafia (Reuter, 1983), the Russian Mafia (Varese, 2001), the Hong Kong Triads (Chu, 2000), the Japanese Yakuza (Hill, 2003), the Calabrian `Ndrangheta (Paoli, 2003; Varese, 2011), and the Neapolitan Camorra (Campana, 2011). Additionally, this phenomenon is increasingly observed in Latin America (Brophy, 2008; Locks, 2014; Lessing, 2021). Criminal governance of markets has also been identified in urban areas like Stockholm, Sweden (Skinnari et al., 2012), London, England (Levi, 1981), and Salford, England (Campana

0045

and Varese, 2018). Levi (2008: 62) notes that the Kray and Richardson gangs in London sought to monopolise extortion and other criminal activities.

Criminal governance can go beyond the control over markets and extend to broader community governance. An example is a small Sicilian village studied by Sabetti (1984), where distrust of ineffective central authority led to the rise of a criminal group headed by Calogero Vizzini. Vizzini provided protection to peasants against banditry and soon became one of the most powerful bosses of the Sicilian Mafia in the twentieth century. His success led villagers to approach him with other issues, transforming the mafia into a form of local self-government based on some degree of consent (Sabetti, 1984: 104). This type of community involvement is not restricted to traditional mafia territories. Lessing (2022: 11) observes that in urban peripheries worldwide, local criminal organisations often govern as much as, if not more than, the state. When asked, 'Who is in charge here?' the answer often points to a local gang, mara, militia, faction, collective, or cartel. Residents, police, politicians, and researchers recognise this reality (Lessing, 2022: 11). The 2020 Latino barometer survey found that in Latin America, 14% of respondents reported governance by a criminal or armed group in their neighbourhood, affecting between 77 and 101 million citizens (Uribe et al., 2022). This phenomenon is also relevant in prisons (Skarbek, 2014) and in urban peripheries in the Global North.

In conclusion, mafias and gangs can control illegal markets such as drugs and sexual services, but their influence can also extend into legal markets and community life. This phenomenon should be viewed as a continuum: in some settings, mafias take over state functions while, in others, their control over the legal economy and community is limited. Studying both ends of this spectrum is important, as one can evolve into the other. The first goal of this paper is to identify elements of criminal governance among urban gangs operating in London using a novel instrument, and separate such gangs from the non-governance ones.

Explaining gang presence

The second goal of this paper is to explore which local area characteristics make a neighbourhood more vulnerable to governance (and non-governance) gang presence. The importance of structural conditions in understanding the emergence and persistence of gangs has a long history that can be traced back to the early works of Thrasher (1927) and Shaw and McKay (1942). Works in this tradition of gang studies have highlighted the role of a number of socio-economic factors that are associated with higher levels of gang presence: socio-economic disadvantage, immigrant concentration and residential mobility (Katz and Schnebly, 2011: 379; Pyrooz et al., 2010). While operationalisations vary across authors, this school of thought stemming from the Chicago School has interpreted such factors as indicators of social disorganisation within a community, with the idea that 'these forms of structural disadvantage erode the foundations of normative authority and hinder the development of social cohesion and mutual trust' (Katz and Schnebly, 2011: 379; see also Sampson and Groves, 1989; Bursik and Grasmick, 1993; Decker et al., 2022: 46–50 for a broader discussion). A competing theoretical explanation based on the idea of strain/anomie (Merton, 1938; Cloward and Ohlin,

0046

1960; see Pyrooz et al., 2010: 869–871 and Decker et al., 2022: 55–58 for a broader discussion) also emphasises the key role of economic disadvantage in explaining gang presence at the neighbourhood level. The hypothesised mechanism, however, differs from social disorganisation and rests on the idea that people in 'economically deprived areas experience more strains than those with high economic status' (Pyrooz et al., 2010: 870). In line with Pyrooz et al. (2010: 874), our goal in this paper is not to test which competing theoretical approach best explains the case of gangs in London, but to offer a theoretically informed examination of gang presence in London neighbourhoods. We thus retain from both approaches the emphasis on neighbourhood-level socio-economic disadvantage, which we operationalise in our work using four different measures: income deprivation, household income, educational disadvantage and health deprivation. Poverty, income deprivation, low or no educational qualification and health deprivation are all part of what Sampson and Bean (2006) called 'hard facts of life'. Empirical studies have indeed found a positive association between a community's socioeconomic disadvantage and gang presence (e.g., Curry and Spergel, 1988, focusing on gang homicides; Tita et al., 2005; Papachristos and Kirk, 2006; Katz and Schnebly, 2011; see also Decker et al., 2022: Ch. 2 for a broader discussion). Yet, none of these studies considered the differential impact that socioeconomic disadvantage might have on the *type* of gangs that are active in a community.

Social disorganisation theorists have also highlighted the role of migrants' concentration on gang formation, as high levels of migrants' concentration are considered to weaken social ties and hinder patterns of communication (Papachristos and Kirk, 2006; Sampson et al., 1997; Sampson and Groves, 1989; Shaw and McKay, 1942; see also Curry and Spergel, 1988). Additionally, migrant populations might feel marginalised and lack trust in official institutions, such as the police. In our work, we operationalise migrants' concentration based on the proportion of residents not born in the United Kingdom.

Social disorganisation theorists have also suggested that (high) residential mobility can weaken social ties and mechanisms of control, thus leading to greater gang presence (Thrasher, 1927; see also Sampson et al., 1997; Sampson and Groves, 1989; Shaw and McKay, 1942). The evidence on this point, however, is far from conclusive. Studies from the United States have found a negative relationship between residential mobility and gangs (Wells and Weisheit, 2001; Katz and Schnebly, 2011; cf. Curry and Spergel, 1988, showing that high levels of gang *violence* are associated with unstable communities). Katz and Schnebly (2011: 377) found that gang membership (and not activity) 'is less likely in social contexts characterized by either a residentially unstable population or rapidly changing structural conditions' (it should be noted that they link gang members to neighbourhoods based on the residential address of members and not the area in which the gang operates; the two might not perfectly overlap). A certain degree of neighbourhood stability may thus be required for gangs to successfully operate, for example, by allowing them to gather information on the community (on the importance of information, see Reuter, 1983; Gambetta, 1993). The transmission of gang culture might also be hindered in neighbourhoods characterised by a rapidly changing residential composition (Katz and Schnebly, 2011). Studies so far have looked at the impact of residential mobility on gang presence, regardless of whether

0047

they were involved in criminal governance. For instance, residential instability might facilitate the presence of purely predatory gangs due to weakened social ties, but governance-type gangs might require some degree of community stability to exert their criminal rule. In this work, we consider a measure capturing the 5-year residential mobility in London neighbourhoods.

Additional factors explored in the gang literature relate to population density and population age structure. A higher population density is postulated to be associated with increased anonymity among community members, therefore conducive to lower informal social control (Katz and Schnebly, 2011: 380). A larger proportion of youth residents is associated with higher gang presence through various mechanisms. Social control theorists argue that a higher proportion of young people means a lower proportion of the adult population capable of exerting effective social control (Tita et al., 2005: 277; Katz and Schnebly, 2011). At the same time, age-crime curve analyses show that young people are more prone to crime in general (Farrington, 1986), and they can also constitute a larger reservoir for recruitment (Decker et al., 2022). We include both factors – population density and population age structure – in our analysis.

A separate strand of the literature has looked at the factors that might account for the emergence of criminal governance. Generally speaking, criminal governance is thought to emerge in a setting characterised by a weak state presence (Sabetti, 1984; Gambetta, 1993; Varese, 2001). Varese (2011) has documented how the emergence of new, unregulated markets generates incentives among entrepreneurs to create cartels, even with the use of criminal groups. Looking at neighbourhoods in Medellín, Colombia, Blattman et al. (2021) show that gangs fill the vacuum of state order yet do not completely crowd out state presence. In his ethnographic work on a housing estate in a large American city, Venkatesh (1997) illustrates how a local street gang started to provide services to the community, filling in the gap left by formal institutions, including the housing authority. In sum, a key factor highlighted in the criminal governance literature is the role played by the efficiency and effectiveness of the state (and other local authorities) *beyond* law enforcement activity (Campana and Varese, 2018). Such efficiency and effectiveness can be conceptualised in multiple ways. At the local (neighbourhood) level in a large city in the Global North, we proxy the efficiency and effectiveness of states (and local institutions) based on the accessibility to local services in a given area.

In conclusion, an influential stream of literature stemming from the early works of sociologists from the Chicago School has emphasised the importance of neighbourhoods – and their structural characteristics – in understanding gang presence. Scholars have highlighted the role of socio-economic disadvantage, migrants' concentration and residential mobility. Yet, studies so far have mostly looked at the US context and they haven't separated different types of gangs based on their activities. A separate stream of literature has emphasised the importance of criminal governance and the need to consider criminal groups, including gangs, involved in governance activities separately from the others. Such literature has also suggested that an ineffective state presence might be linked to the emergence of criminal governance. This paper brings together these two strands by first identifying whether criminal governance-type gangs exist in the case of London, and then testing whether the factors highlighted in both gang and criminal

0048

governance literature play a role in explaining the presence of both governance and non-governance gangs in London.

Data and methods

The Crim-Gov questionnaire

To identify instances of criminal governance at the group level, we employ a novel survey instrument purposely developed for this study: the Crim-Gov questionnaire (see Appendix 1 for the full questionnaire). It captures five dimensions of group activities: the ability (i) to generate fear in a community; (ii) to coerce legal businesses; (iii) to influence public officials; (iv) to control illegal market(s), but also (v) the group's involvement in community activities. The questionnaire has been widely discussed with practitioners across the United Kingdom and trialled in one police area before being rolled out in the entire jurisdiction of the London Metropolitan Police.

Each dimension of group activities is measured on a five-point scale, where 0 indicates that a group does not engage in that activity, and 4 indicates that a group is strongly involved in the activity.[1] Examples are given for each dimension to provide police officers and analysts with an operational definition of the activities and place them in the London context. The level of fear generated by a group is assessed by considering how much 'the group engages in disrespectful behaviour, threatens members of the public, resorts to violence, generates a "no grass" culture in the community' (quote from the questionnaire). The coercion of legal businesses is exemplified as the ability to 'threaten business owners, engage in extortion, influence business decisions'. The ability to influence public officials considers, for example, the extent to which 'the group influences probation officers and other officials involved in its case file, influences local officials' decisions, influences local councillors and politicians'. Illegal market(s)' control is exemplified as the extent to which 'the members sell illegal products, they decide who is allowed to sell illegal products, they successfully keep rival groups away from their territory'. Finally, a group's involvement in community activities considers to what extent the group 'offers assistance to neighbourhood residents' and 'settles disputes between community members'.

As this paper focuses on the criminal governance dimension of gangs operating in London, we have decided to ask police officers/analysts assigned to a local gang unit to fill out the Crim-Gov questionnaire (this is akin to the strategy that Miller devised for the first National Youth Gang Survey using police as experts: Miller, 1992 [1982]: 10–16). Officers were asked to score the gang(s) for which they have close knowledge. We have not supplied officers with any pre-set definition of gang, but left it to their professional knowledge to identify the list of relevant groups based on intelligence and other police records.[2]

In the case of London, we adopted a multistage approach leveraging the institutional architecture of the London Metropolitan Police. Greater London is divided into 12 basic command units, which represent our first stage. The questionnaire was then trickled down to 32 specialist gang officers, one for each London Borough. These specialist gang officers were then tasked with filling in a questionnaire for each gang operating in their area

0049

in consultation with local specialist officers/analysts as well as available intelligence. Questionnaires were then gathered in an electronic format by our point of contact who cross-checked (unlikely) duplicate records, sanitised the data and then forwarded them in a fully anonymised form; neither gangs' names nor any other information besides the responses to our questionnaire was shared with us. The identity of respondents was also kept confidential. The survey was administered between April and November 2019.

While it is possible to collect information directly from gang members, we opted for an alternative method based on a specific type of expert survey. This method allows us to systematically build a comprehensive picture of the presence and *absence* of gangs across a very large urban area, that is, Greater London, in a cost-effective and limited time-consuming manner. It comes, however, with its own limitations. Police officers might not be the best placed to provide the most accurate picture when it comes to communities' attitudes, for example the level of fear generated by a gang; they might underestimate the impact of threats and coercion of legal business and community members, as these might be underreported due to the fear of reprisals; and they might be reluctant to report on the influence on public officials (some of whom might be fellow police officers; the fact that we only ask for a score and not further evidence might limit the impact of this bias but not eliminate it completely). Furthermore, there is always the possibility that a gang has not been identified by the police at the time of the survey. Additionally, our method is not able to elicit any evidence of cultural meanings associated with life in a gang or internal mechanisms. We acknowledge that specialised police officers are only one potential source of information on gangs (and criminal groups more generally) and that our instrument would provide a more comprehensive picture if the set of respondents is expanded in future works by adding other (non-police) officials and local stakeholders. In Table A1 in Appendix 2, we offer an external validity control of our survey instrument leveraging data from the Public Attitude Survey conducted by the Mayor of London, Office for Policing and Crime; survey data corroborate our instrument's ability to identify gang presence and also show that our instrument is not significantly correlated with residents' general fear of crime or their view of general crime and violence.

To explore the mechanisms underpinning the emergence of criminal governance in a large urban setting, we move the analysis from the gang level to the community level. For the purposes of this work, we define a community using the Middle layer Super Output Areas (MSOAs) created by the UK Office for National Statistics (ONS). Greater London can be subdivided into 982 MSOAs, and each of these census units includes an average of 8316 individuals. MSOAs have two desirable properties: (a) they have a geographical component, that is, they are designed taking into account geographical barriers, for example, a river, rail tracks or main roads; hence, they can approximate spatialised community-level social interactions; and (b) they show stability over time (contrary to, e.g., electoral wards). We asked the questionnaire respondents to place each gang within a spatially defined area based on the postcode of the 'centre of gravity' of a gang's activity and then linked each postcode to the corresponding MSOA (UK postcodes are perfectly nested within MSOAs). In this work, we use the terms community, neighbourhood and MSOA interchangeably.

We now turn to discuss the dependent variable and the set of independent and control variables included in our analysis.

0050

Dependent variable

Our *dependent variable* is a categorical variable capturing the type of gang presence in a community (MSOA). Based on the responses to the Crim-Gov questionnaire, we identified three types of communities: (a) those with no gang presence; (b) those with gang presence but no criminal governance; and (c) those with criminal governance.[3]

As mentioned above, gangs can control illegal markets only, such as drugs, or be involved in legal markets and community activities too. In this paper, we are most interested in identifying gangs that are able to make their presence felt in legal markets and in the community at large. Such criminal groups pose the greatest threat to the legitimacy of authorities, hence deserve special attention. For this reason, we adopt a strict definition of criminal governance, including only those gangs able to exert some degree of governance beyond just illegal markets, that is, impacting legal businesses, public officials and broader community activities. Thus, we define gangs as involved in criminal governance activities if they engage in at least one of the following activities: coercion of legitimate businesses; influence of public officials; involvement in community activities. While such questions do not imply that gangs have total control over such spheres of life, they do indicate the gangs' ability to reach there. The next decision we took relates to scoring. Although the questionnaire includes five values (from 0 to 4) and thus allows us to capture the intensity of an activity, we decided to dichotomise the data for the models developed below due to statistical reasons; however, future studies might wish to go beyond such a limitation. The distribution of scores for each dimension is presented in Figure 1. In conclusion, we consider as 'governance-type' those gangs that have received a score of 1 or higher in at least one among questions 2 (coercion of legitimate businesses), 3 (influence of public officials) and 5 (involvement in community activities) of the Crim-Gov questionnaire.

Independent variables

To explore the emergence of governance, we consider several *independent variables*, measuring the social, demographic, and economic characteristics of 982 communities (MSOAs) across Greater London. The variables are drawn from a variety of ONS sources (see Table A2 in Appendix 3) and measured at the MSOA level. We consider values for the year closer to the Crim-Gov survey (2019). While most variables were measured in 2019 or the years shortly before (see Table A2 in Appendix 3), variables based on the UK census are the exception: as results from the 2021 census were not yet available at the time of data collection and analysis, we had to rely on data from the 2011 census. However, we believe that this has a limited impact on the analysis as such variables tend to refer to structural features of a community that are normally slow-changing, such as educational levels or age structure.

The independent variables included in our econometric model are socioeconomic disadvantage, accessibility to local services, residential mobility, and migrant concentration (Table 1 reports summary statistics for such variables). To measure *socioeconomic disadvantage* of a community, we consider four alternative measures: (1) an index of income deprivation based on the proportion of population in a given community

0051

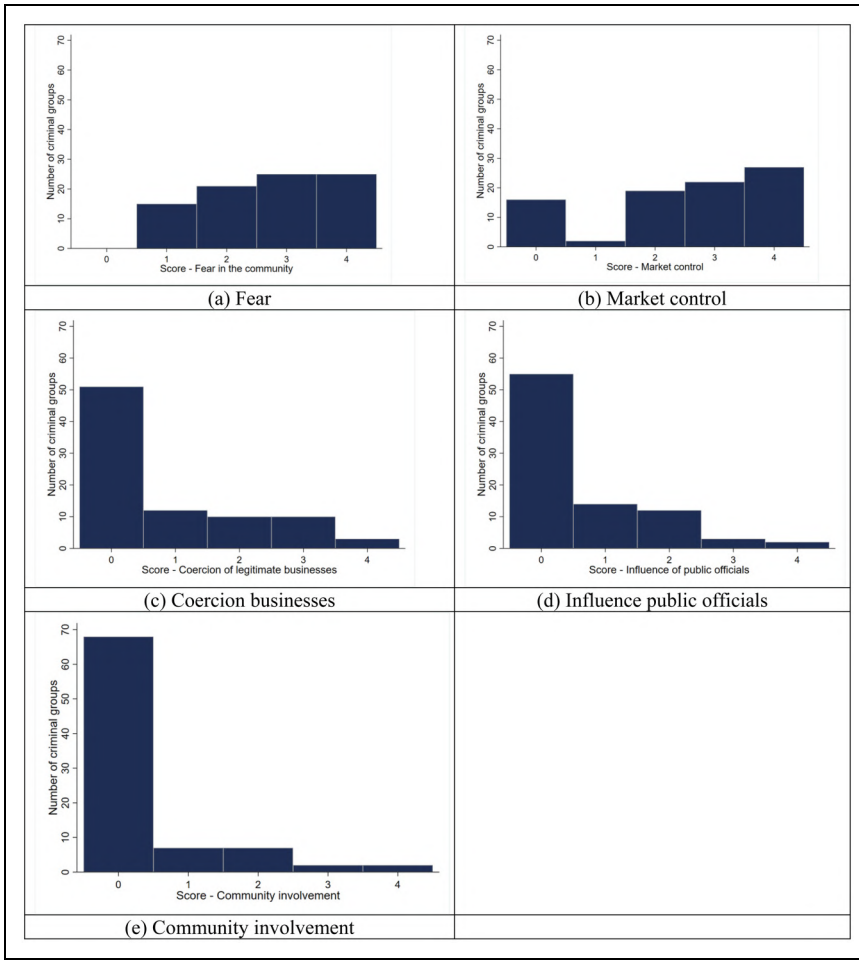

Figure 1. Crim-Gov questionnaire: distribution of gangs' scores by activity ($N = 86$).

experiencing deprivation due to low income as the result of either unemployment or low earnings; (2) household income, measuring the average annual income of households in a given community; (3) a variable measuring the proportion of residents aged 16 and over with no educational qualifications to account for disadvantage in the educational domain; (4) an index of health deprivation, which measures the risk of premature death and impairment to the quality of life due to poor physical and mental health. We consider these multiple measures of socioeconomic disadvantage in separate model specifications to avoid issues of multicollinearity.[4]

As a measure of *accessibility to local services*, we consider an index developed by the ONS and included in the 'Barriers to housing and services' domain of the Index of Multiple Deprivation. This index measures the physical and financial accessibility of

0052

Table 1. Summary statistics of independent variables included in the MSOA econometric model.

Variable	Mean	Std. Dev.	Min	Max	N
Population density	83.48	47.99	2.90	247.20	982
Population aged 15–24 (%)	13.44	3.39	6.10	41.60	982
Income deprivation (%)	13.62	6.20	0.94	33.49	982
Household income (£; scaled/1000)	53.53	8.57	36.00	85.20	982
Lack of education qualifications (%)	17.79	6.36	3.60	37.70	982
Health deprivation (score)	26.62	5.99	0.00	40.04	982
Barriers to housing/services (score)	31.74	8.63	9.52	59.92	982
5-year residential mobility (%)	17.18	5.30	5.55	45.26	982
% born outside the United Kingdom	36.21	13.84	4.39	69.23	982

Note: MSOA: Middle layer Super Output Area; Std. Dev.: standard deviation; Min: minimum; Max: maximum.

local services and housing. It is computed by combining (with equal weights) indicators pertaining to two sub-domains: the 'geographical barriers' sub-domain, which relate to the physical proximity of local services, and the 'wider barriers' sub-domain, which includes issues relating to access to housing, including social housing (McLennan et al., 2019). The geographical barriers sub-domain includes indicators measuring the average geographical proximity of a range of local services (e.g., post office, primary school, general practitioner (GP) surgery). The indicators included in the wider barriers sub-domain measure household overcrowding, the homelessness rate, and housing affordability. We consider the barriers to services and housing as a proxy for the level (and to some extent effectiveness) of services provided by local and central authorities.

Residential mobility is calculated as the proportion of resident households that have changed within a specific time period (5 years in our analysis). *Migrants' concentration* is measured by the proportion of community residents not born in the United Kingdom. Finally, all model specifications include the *population density* and the *proportion of population aged 15–24*. The latter captures the (relative) size of the more crime-prone segment of the population.

Analytic strategy

We first present results on the distribution of gangs and criminal governance across London communities. We then rely on a multinomial logistic regression model to examine the factors underpinning the emergence of gang-related governance in a given community. This modelling approach is particularly suitable when predicting more than two outcomes given a set of independent variables and with unordered outcome categories (Britt and Weisburd, 2010; Tabachnick and Fidell, 2013). This model is an extension of a binary logistic regression model that simultaneously accounts for changes in the odds of multiple outcomes following changes in the value of the independent variables (Britt and Weisburd, 2010). The model estimated in this paper is defined as follows:

$$\log\left(\frac{\pi_m(\boldsymbol{x})}{\pi_M(\boldsymbol{x})}\right) = \alpha_m + \boldsymbol{\beta}'_m\boldsymbol{x}, \qquad m = 1, \ldots, M-1$$

0053

where $\boldsymbol{x}$ is the set of independent variables included in the analysis and $\pi_m(\boldsymbol{x}) = P(Y = m|\boldsymbol{x})$. In our case, $M = 3$ since the dependent variable has three outcome categories: 'no gang presence', 'gang presence with no criminal governance', and 'gang presence with criminal governance'. We consider the absence of gangs as the reference category: the set of coefficients predicting each outcome can thus be interpreted as the log of the odds (odds ratio) comparing the likelihood of that specific outcome (e.g., gang presence with no criminal governance) relative to observing no gang presence in the community.

We run a set of models with different specifications aiming to understand how different measures of deprivation, accessibility to local services, migrants' concentration, 5-year residential mobility, population density and the share of the population aged 15–24 impact the presence of gangs, separating those involved in criminal governance from those not inolvolved in criminal governance.

When presenting and discussing our results, we are careful to avoid the use of causal language. In other words, we cannot completely exclude reverse causality for a number of variables we input as independent in the multinomial logistic regression (see Table 3). Yet it is hard to imagine that the presence of a gang would have a causal effect, for example, on barriers to housing and services or the percentage of individuals born outside the United Kingdom. Interestingly, Booth's (1889) London maps from 1889 contain information on income indicators: London areas' income strongly correlates with current data, although Booth's maps only cover Inner London (analysis available on request). However, as our econometric setup does not allow us to exclude that some of the variables we analyse are affected by a gang's presence, our results should be interpreted as showing the existence (or absence) of a relation between relevant factors and gangs.

Criminal governance in London communities

The Crim-Gov survey has identified 86 gangs operating across London. Their level of involvement in criminal governance-related activities varies, as shown in Figure 1(a–e).

Two findings are of particular interest. Firstly, while all gangs generate fear in the communities in which they operate – and 58% of them generate strong fear, that is, a score of 3 or 4 – not all are involved in the three key dimensions of governance: coercion of legal businesses, influence of public officials and involvement in community activities. In fact, only 51 gangs (60%) are involved in at least one of these three activities; this number goes down to 16 (19%) if we consider gangs that have a strong involvement in at least one of these activities. This suggests that moving from just being a fear-generating gang to a more complex organisation involved in criminal governance is not an easy task – and is a step that only a fraction of gangs is able to make.

Secondly, 81% of gangs are able to exert some degree of control over the criminal market in which they operate – most likely a drug market, although we have no first-hand evidence – and 57% are able to exert strong control. These are a much larger proportion than the gangs able to provide governance impacting legitimate businesses, public officials and the broader community. This suggests that providing criminal governance

0054

beyond illegal markets requires a more complex set of resources and skills that fewer gangs actually possess.

When placing gangs within spatially defined communities, we observe gang presence in 79 communities (out of 982; i.e., 8.75% of all MSOAs): 33 communities are affected by non-governance gangs, while 46 experience some degree of criminal governance (4.7% of all MSOAs; Table 2). In 20 communities (around 25% of those with gang presence), gangs engage in minor to moderate attempts of coercion of illegal businesses (e.g., threats and extortion directed to business owners), while in 13 communities (roughly 16%) coercion is reported to be either strong or very strong. In 28 communities across London, gangs are able to exert some degree of influence on public officials, and in five communities, gangs' influence has been qualified by police officers as strong. Involvement of criminal groups in community activities – ranging from the offer of assistance to residents to dispute settlement – has been reported in 17 areas, and in four it is considered either strong or very strong.

There are four communities across London in which gangs are reported to engage in all three key criminal governance dimensions of coercion of legitimate businesses, influence of public officials, and involvement in community activities. In roughly half of communities with criminal governance (24 out of 46), gangs present two of these three sets of activities; in 18 communities, they are reported to engage in one set only.

Gangs providing forms of criminal governance in their community generate on average a higher level of fear in the same community and have a higher level of control of the markets they are involved in (both differences in means are statistically significant at .01 level; see Table 2). Overall, average scores for governance activities are smaller than those for fear and market control, thus pointing to a more complex criminal endeavour.

Figure 2 presents the geographic distribution of the three sets of communities identified in this analysis. Gang presence is recorded across the whole city, and in most boroughs, there is at least one gang operating. Criminal governance appears to be relatively more clustered, affecting particularly the North Eastern and North Western communities. The boroughs of Brent, Islington, Newham, and Waltham Forest are particularly impacted, with more than 10% of their MSOAs recording the presence of a

Table 2. Gang presence and criminal governance in London communities: mean component scores.

	No gang presence	Gang presence	Gang presence and criminal governance
Fear in the community	0	2.27 (1.10)	3.09 (0.86)
Market control	0	1.61 (1.46)	3.20 (0.93)
Coercion of legitimate businesses	0	0	1.54 (1.29)
Influence of public officials	0	0	1.09 (1.13)
Community involvement	0	0	0.72 (1.13)

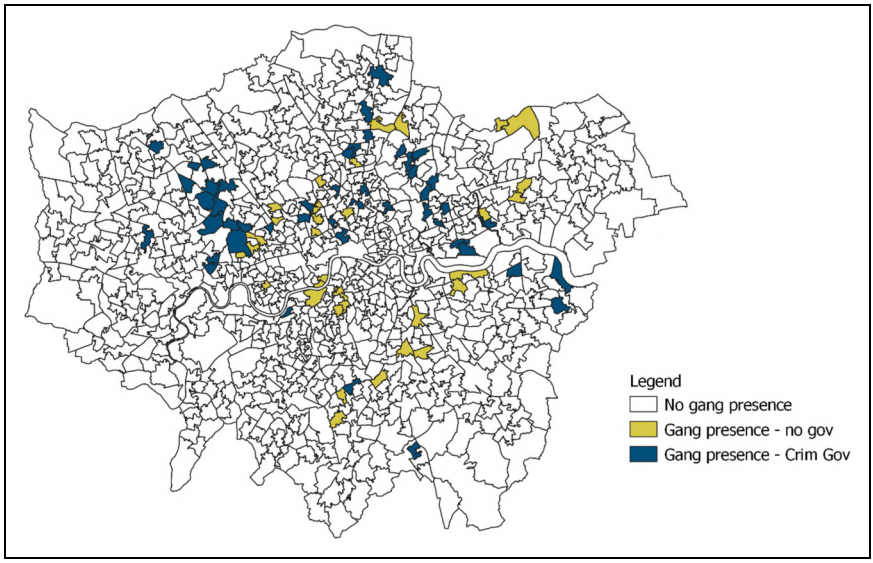

Figure 2. Spatial distribution of gangs and criminal governance.

gang providing some form of governance. Brent emerges as the borough most affected, with almost 30% of communities (10 out of 24 MSOAs) registering the presence of gang-related governance.

In sum, criminal governance appears to be highly concentrated in a few areas – and not all areas with a gang presence also experience criminal governance. What makes a community more vulnerable to criminal governance, then? We now turn to this question.

The emergence of criminal governance

To explore the factors underpinning criminal governance in communities, we test several multinomial logistic regression models. As a reminder, in this work we define a community as affected by criminal governance if the gang(s) operating in the area engage in at least one of the following three activities: coercion of legitimate businesses, influence of public officials or involvement in community activities. We separate these communities from those in which gangs are present but do not engage in criminal governance and from communities where no gang presence has been identified through our survey.

Table 3 presents the results of the first set of models exploring the impact of different measures of deprivation on the probability of criminal governance. In all models, an increase in the level of deprivation is related to an increase in the odds of gang presence; all other variables held constant – a result also found in other studies (e.g., Kirchmaier, Machin, Villa-Llera, 2020: 9–10). This finding is robust to different deprivation measures: income deprivation index, total household income, education deprivation, and health deprivation index. For example, an increase of one percentage point in the proportion of residents experiencing low-income deprivation is associated with an increase by a

factor of 1.22 in the relative risk of a community recording a non-governance gang compared to an increase of 1.15 for a governance gang. Similarly, an increase of £1000 in the average annual income of households residing in the community decreases the relative risk of non-governance gang by a factor of 0.85 and of 0.88 for a criminal governance gang. While the coefficients for deprivation are higher for non-governance gangs compared to criminal governance ones across all models, the difference in magnitude is not statistically significant in any of the models (results from a Wald test for the equality of coefficients).

The level of existing barriers to services and housing is positively associated with the odds of criminal governance (compared to no gang presence), while it is unrelated to the odds of gang presence with no governance. This is a key result which indicates that, controlling for all the other variables, communities where residents face greater difficulties in access to services see a higher probability of criminal governance in their territory. This variable can be interpreted as a proxy for the level (and to some extent the effectiveness) of services provided by local and central authorities; our result thus suggests that criminal governance is more likely to emerge where legal governance is of lesser quality. Crucially, this does not extend to gang presence in general, suggesting a profound difference in the nature of criminal governance vis-à-vis other gang activities.

Furthermore, an increase in the proportion of community residents born outside the United Kingdom is related to increased odds of criminal governance in the community (compared to no gang presence). Holding all the other variables constant, results show an increase by a factor of 1.03–1.07 in the relative risk of criminal governance for a one percentage point increase in the proportion of residents born outside the United Kingdom. This result is robust to the inclusion of different deprivation measures in the models. Conversely, the concentration of migrants tends not to be significantly associated with the odds of gang presence with no criminal governance (with the exception of model specification 4). The proportion of the population aged 15–24 is unrelated to both gang presence and criminal governance.

Finally, as for the residential mobility of an area, we find that the 5-year residential mobility is negatively associated with criminal governance. Holding the other variables constant, more stable communities, that is, those with a lower turnover of resident households over a 5-year time, face higher odds of gang-related criminal governance. Therefore, it is not the areas with the highest turnover of residents, and perhaps the weakest social fabric, that experience the most serious type of gang presence.

Discussion and conclusions

This study makes three significant contributions. The first is methodological in nature. We introduce a novel survey instrument – the Crim-Gov questionnaire – that allows us to identify key defining dimensions of a criminal group: its ability to generate fear in the community, coerce legitimate businesses, influence public officials, control markets and be involved in community activities. The questionnaire does not require a long time to complete; hence, it can be administered to busy officials and experts in a highly cost-effective manner. Rather than relying on non-systematic newspaper reports

0058

and web stories (cf. Kirchmaier et al., 2020), we have used a systematic method of data collection.

The second contribution is descriptive. We have been able to identify instances of governance-related activities among the gangs operating in London. We show that providing criminal governance, particularly beyond illegal markets, is a complex task requiring a set of resources and skills that fewer gangs possess. When looking at communities, criminal governance appears to be highly concentrated in a few areas – and not all areas with a gang presence also experience criminal governance. We document that 46 communities (out of 79 with gang presence) experience some degree of criminal governance; in 17 communities, gangs are involved in community activities, while in four communities gangs engage in all three dimensions of governance (coercion of legitimate businesses/influence of public officials/community involvement).

Third, we test several models that explore the relationship between socioeconomic disadvantage, accessibility to local services, residential mobility, migrant concentration, and gangs. In line with results from large US cities (Curry and Spergel, 1988; Papachristos and Kirk, 2006; Pyrooz et al., 2010; Katz and Schnebly, 2011; see also Decker et al., 2022: Ch. 2), also in the case of London we find that the level of deprivation is related to an increase in the odds of gang presence. Furthermore, we find that this effect holds across *all* types of gang presence, governance and non-governance ones. On the other hand, we find a differential impact of access to services on governance and non-governance gangs. Crucially, greater difficulties in accessing local services and housing are *only* related to a higher probability of criminal governance (the same does not hold for non-governance gangs). We conclude that such a phenomenon is more likely to emerge where the legal provision of services is of lesser quality. We have pointed out above that criminal governance should be thought of as a continuum: in some settings, criminal groups can substitute key state functions, as documented in traditional mafia areas (see e.g., Sabetti, 1984; Gambetta, 1993; Varese, 2011). Our work shows that explanations invoked for such cases also apply to instances where criminal governance is less pervasive. These findings suggest the need for a unified theory of criminal governance that encompasses mafias and 'cartels' at one end and urban gangs at the other.

We further find that the 5-year residential mobility is negatively associated with criminal governance, suggesting that it is not the areas with the weakest social fabric that experience the most serious type of gang presence, but those with a more stable residential population. A certain degree of stability is needed for criminal governance to emerge, for example to allow gangs to collect and circulate information more efficiently within the community. These results contribute to previous findings on the negative association between residential mobility and gang presence (Wells and Weisheit, 2001; Katz and Schnebly, 2011) by pinpointing how this association might be driven by governance activities. Finally, an increase in the proportion of residents born outside the United Kingdom is consistently associated with higher odds of criminal governance in the community across all models (while the relationship with non-governance gangs is more ambiguous).

Quantitative work on gangs and organised crime is difficult and subject to limitations; our study is no exception. While we are reassured by the level of external validity shown by our survey instrument (see Appendix 2), limitations stemming from the nature of

0059

police evidence remain, and future works might wish to apply our instrument to non-police officials and local stakeholders to get a more comprehensive view of the phenomenon. In addition, our work is based on one snapshot of the London gang landscape; however, such landscape is likely to change over time, and future works might benefit from including a longitudinal design.

Finally, our work suggests two main policy implications. Firstly, it is crucial for law enforcement – and local stakeholders – to not only collect data on gangs but also on the type of activity such groups are involved in. We strongly recommend that particular attention is devoted to identifying instances of criminal governance and to treating such gangs separately from the non-governance ones. While more concentrated in space and less prevalent in scale, criminal governance generates *systemic* harm to cities and countries, creating lasting damages to the institutional and social environments of places and communities alike. It is arguably more difficult to eradicate if left unchecked. Secondly, our work has shown that interventions targeting socio-economic factors might not be sufficient either. When tackling the emergence and presence of governance-type gangs, policy-makers should also improve access to and quality of public services. This is a mechanism that does not always receive the attention it deserves.

Acknowledgements

We are extremely grateful to Detective Chief Superintendent Simon Rose for his invaluable support of this project and for facilitating the administration of the survey. Without his help, this project would simply not have been possible. We are also grateful to Alyssa Knisley for her assistance with administering the survey and the data collection. Ben Bradford, Colin Mills and Julian Roberts gave us very helpful suggestions on the survey structure. We are also very grateful to the two anonymous referees and the editor for their most helpful comments.

Declaration of conflicting interests

The author(s) declared no potential conflicts of interest with respect to the research, authorship, and/or publication of this article.

Funding

The author(s) disclosed receipt of the following financial support for the research, authorship, and/or publication of this article: This work was supported by the Leverhulme Trust through the Research Grant RPG-2018-119 (principal investigator: Paolo Campana) and the European Research Council (ERC) under the European Union's Horizon 2020 Research and Innovation Programme (grant agreement No. 101020598 – CRIMGOV; principal investigator: Federico Varese).

Notes

1. The questionnaire expands on the three-item Crim-Gov questionnaire first presented in Campana and Varese (2018). This novel iteration of the instrument adds the two dimensions

of market control (question 4) and community involvement (question 5) besides a relabelling of the scales. Such changes enable us to capture dimensions suggested by Lessing (2021) who unpacks the phenomenon into five different categories: (1) policing, (2) judicial, (3) fiscal, (4) regulatory, and (5) political. The practices captured by Lessing (2021) include surveillance, enforcement of property rights, dispute resolution, the fulfilment of contractual agreements, tax collection, the provision of credits and involvement in community or electoral politics.

2. As a reference, the Metropolitan Police defines a gang as a 'relatively durable, predominantly street-based group of young people who (1) see themselves (and are seen by others) as a discernible group and (2) engage in a range of criminal activity and violence. They might also have any or all of the following features: identify with or lay claim over territory; have some form of identifying structure feature; are in conflict with other, similar gangs' (see: https://www.met.police.uk/police-forces/metropolitan-police/areas/about-us/about-the-met/gangs-violence-matrix/).
3. In most communities with gang presence, there is only one active gang. Only six MSOAs register more than one gang; in these cases, we assigned to the MSOA the highest score recorded among the gangs active in the area.
4. As expected, these measures show a relatively high level of correlation: minimum pairwise correlation $|r|=.52$, maximum $|r|=.81$.
5. This source of data has already been utilised by criminologists to explore crime and police-related attitudes. See Bradford et al. (2009).

Appendix 1. Crim-Gov questionnaire

Q1: On a scale from 0 to 4, how much fear does this group generate in the community? (e.g., the group engages in disrespectful behaviour, threatens members of the public, resorts to violence, and generates a 'no grass' culture in the community)

○	○	○	○	○
0	1	2	3	4
No Fear				Very strong fear

Q2: On a scale from 0 to 4, to what extent does this group coerce legitimate businesses? (e.g., the group threatens business owners, engages in extortion, and influences business decisions)

○	○	○	○	○
0	1	2	3	4
No Coercion				Very strong coercion

0063

Q3: On a scale from 0 to 4, to what extent does this group influence public officials? (e.g., the group influences probation officers and other officials involved in its case file, influences local officials' decisions, influences local councillors and politicians)

○	○	○	○	○
0	1	2	3	4
No Influence				Very strong influence

Q4: On a scale from 0 to 4, to what extent does this group control the market(s) it is involved in? (e.g., the members sell illegal products, they decide who is allowed to sell illegal products, they successfully keep rival groups away from their territory)

○	○	○	○	○
0	1	2	3	4
No Control				Very strong control

Q5: On a scale from 0 to 4, to what extent is the group involved in community activities? (e.g., the group offers assistance to neighbourhood residents and settles disputes between community members)

○	○	○	○	○
0	1	2	3	4
No Involvement				Very strong involvement

Q6: Please provide a full postcode for the best-estimated centre of the group's territory.

Appendix 2. External validity of Crim-Gov questionnaire

To assess the external validity of our survey instrument (Crim-Gov questionnaire), we leverage data from the 2016–17 MOPAC (Mayor of London – Office for Policing and Crime) Public Attitudes Survey (ORS, 2017). The survey was conducted between October 2016 and September 2017 on a total of 12,800 respondents and is based on a random sample stratified by BCU with a target of 400 individuals per borough (further information is included in ORS, 2017). Due to limited sample size and unavailability of personal information on the MSOA of respondents, the analysis could only be conducted at the electoral ward level, which is a slightly larger spatial unit than the MSOA (average population of 13,171 in Greater London).[5]

In Table A1, we compare residents' answers on gang presence ('gangs are a problem') with our results on the strength of gang presence (measured as the sum of the scores of all five survey dimensions) at the ward level. The two variables are positively and significantly correlated, thus corroborating our instrument's ability to identify gang presence. Crim-Gov then goes a step further in sorting gangs based on their ability to provide criminal governance. Moreover, our instrument is not significantly correlated with residents' general fear of crime or their view of general crime and violence as major issues in the community. This further points to the ability of our survey instrument to identify gang presence and not general crime.

0064

Table A1. Attitudes to local crime problems and Crim-Gov survey variables: correlation table.

	1	2	3	4	5
1. Worried about crime	1				
2. General crime is a problem	0.60*	1			
3. Violence is a problem	0.44*	0.56*	1		
4. Gangs are a problem	0.45*	0.30*	0.45*	1	
5. Gang presence (total gang score from Crim-Gov survey)	0.04	−0.03	0.07	0.19*	1

Note: The symbol * indicates that the correlation is statistically significant (at 0.05 level).

0065

Appendix 3

Table A2. Independent variables included in the econometric analysis.

Variable label	Description	Source (year)
Population density	Number of resident population per hectare.	Census for England and Wales (2011)
Population aged 15–24 (%)	Proportion of the total population aged between 15 and 24.	Census for England and Wales (2011)
Income deprivation	Score of the 'Income deprivation' domain of the Index of Multiple Deprivation (higher score corresponds to higher deprivation); measures the proportion of the population experiencing deprivation related to low income.	Index of Multiple Deprivation, ONS (2019)
Household income (scaled /1000)	Average annual household income (£), financial year ending 2018. In the models, it has been scaled by dividing it by 1,000 to ease coefficient comparability.	ONS (2018)
Lack of education qualifications	Proportion of residents aged 16 and over with no education qualifications.	Census for England and Wales (2011)
Health deprivation	Score of the 'Health deprivation' domain of the Index of Multiple Deprivation (higher score corresponds to higher deprivation); measures the risk of premature death and the impairment of quality of life through poor physical or mental health.	Index of Multiple Deprivation, ONS (2019)
Barriers to housing/services	Score of the 'Barriers to housing and services' domain of the Index of Multiple Deprivation (higher score corresponds to higher deprivation); measures the physical and financial accessibility of housing and local services (physical proximity of local services and issues relating to access to housing such as affordability and homelessness).	Index of Multiple Deprivation, ONS (2019)
5-year residential mobility	Estimate of the 'churn' of the residential population: the proportion of households that have changed between the end of 2020 and five years prior.	CDRC Residential Mobility Index (2020)
% born outside the UK	Proportion of the resident population not born in the UK.	Census for England and Wales (2011)

James B. Jacobs and Ellen Peters

Labor Racketeering: The Mafia and the Unions

ABSTRACT

The labor movement and its members have long suffered from extortion, thievery, and fraud. Corrupt labor officials have used union power to extort money from businesses. Labor racketeering has been a major source of the Cosa Nostra crime families' power and wealth since the 1930s. Nonetheless, combating labor racketeering did not become a federal law enforcement priority until Jimmy Hoffa's assassination in 1975. The U.S. Department of Justice, beginning in the early 1980s, brought or threatened civil racketeering lawsuits against numerous mobbed-up locals and four international unions. These lawsuits led to an unprecedented effort by court-appointed monitors and trustees to purge the corrupted unions of racketeers and racketeering and to reform the unions.

When John L. Lewis, former president of the United Mine Workers (1920–60), observed that "Labor, like Israel, has many sorrows" (*United States v. Local 560, IBT*, 581 F. Supp. 279 [1984], p. 279), he was referring to the long history (even then) of corruption and racketeering that has plagued the American labor movement. Likewise, the labor leader David Dubinsky called labor racketeering "a cancer that almost destroyed the American labor movement" (Dubinsky and Raskin 1977, p. 145). Robert F. Kennedy, who served as general counsel (1957–60) to the Senate Select Committee on Improper Activities in the Labor Management Field (McClellan Committee), warned that labor racketeering was a threat to society generally, and he made labor

0068

racketeering (especially Jimmy Hoffa) a top Justice Department priority when he became attorney general in 1961 (Kennedy 1960). No other country has a history of union-related criminality approaching what has been exposed in a century-long litany of scandals, articles by investigative journalists, governmental hearings, prosecutions, and lawsuits.[1]

"Labor corruption" refers to the misuse of union office and authority for unlawful personal gain. The immediate victim may be an employer or the union itself, but the ultimate victim is always the union rank and file. "Labor racketeering" refers to labor corruption committed by, in alliance with, or under the auspices of organized crime groups.[2] Labor racketeers include members or associates of organized crime groups, some of whom hold union offices, as well as union officials who work on behalf of organized crime. Common criminal offenses subsumed by the term "labor racketeering" include extortion of employers by threatening unlawful strikes, work stoppages, picketing, and workplace sabotage; soliciting and receiving bribes from employers in exchange for allowing the employer to ignore the terms of the collective bargaining agreement ("sweetheart deal") or for a guarantee just to be left alone ("labor peace"); thefts and embezzlements from the union and its pension and welfare funds; violence against rank-and-file "dissidents"; and the maintenance of illegal employer cartels by threatening to strike or sabotage businesses that are not cartel members (New York State Organized Crime Task Force 1990, pp. 131–43).

There has been sporadic recognition of labor racketeering as a crime problem and a social problem since the beginning of the twentieth century. Congressional hearings gave the matter unprecedented publicity in the late 1950s, but there was no concerted political or law enforcement commitment to attacking the problem until the late 1970s and well into the 1980s. By then, the Federal Bureau of Investigation (FBI) and the U.S. Department of Justice (DOJ) had come to see the

[1] It need hardly be added that focusing on labor racketeering as a crime problem is no more an indictment of the vast majority of union officials and members than focusing on corporate crime is an indictment of the vast majority of businessmen.

[2] In his classic *Organized Crime in Chicago* (1968), first published in 1929 (by the Illinois Association for Criminal Justice), John Landesco provided a great deal of information and commentary on labor racketeering. One of the earliest studies of labor racketeering is Harold Seidman's (1938) *Labor Czars: A History of Labor Racketeering*. Probably the most famous early study was Daniel Bell's classic, "The Racket-Ridden Longshoremen," originally published in *Fortune Magazine* (1951) and then reprinted in *The End of Ideology: On the Exhaustion of Political Ideas in the Fifties* (1962). See also Taft 1970; Hutchinson 1970.

eradication of labor racketeering as the centerpiece of a comprehensive organized crime control strategy. The FBI devoted massive resources to investigating Cosa Nostra's control over a score of local unions and a number of major national/international unions.[3] The federal organized crime strike forces and the U.S. attorneys began bringing civil racketeering lawsuits against labor racketeers with the goal of having federal courts issue injunctions requiring wide-ranging union reforms, including the purge of racketeers and the restoration of union democracy (Goldberg 1989).

The most successful of these civil Racketeer Influenced and Corrupt Organizations Act (RICO) lawsuits have demonstrated the capacity of federal courts, when supported by courageous and creative former prosecutors serving as court-appointed trustees, to effectuate impressive institutional reform in thoroughly racketeer-dominated unions. Hundreds of criminals have been purged from union positions, fair election procedures have been instituted, and fundamental changes in union governance and operations have been adopted. But the path to reform has not been easy, and it has not been unidirectional. Many civil racketeering suits have failed to root out racketeering and to achieve fundamental union reform. Each lawsuit, and especially each trusteeship, has approached its challenge afresh. There has yet to emerge any systematic body of knowledge about what works and what does not work for trustees and monitors, operating under court auspices, charged with the task of rehabilitating unions that have been corrupted and devastated by decades of mob dominance. Thus, there is a crying need to document and analyze the efforts that have so far taken place in order to refine and improve anti-labor-racketeering and union reform strategies for the future.

This article has three goals. First, it seeks to make a case for taking labor racketeering seriously, indeed as an important form of systematic criminality that festers in one of society's key sociopolitical institutions. Second, this article begins to document and analyze the federal government's remedial efforts to purge organized crime from the four most corrupted international unions. Third, it attempts to find a theoretical place for labor racketeering in academic criminology.

[3] An international union has affiliated locals in Canada as well as the United States. National and international unions differ with respect to how centralized they are. Some unions permit their local affiliates wide-ranging independence while others seek to monitor and manage their locals. Most national and international unions are members of the AFL-CIO, a labor federation that lobbies on behalf of the labor movement.

Section I of this essay sketches the history of labor racketeering up until the early 1980s, when the President's Commission on Organized Crime (PCOC) took stock of the problem. Sections II–V present PCOC's assessment of labor racketeering in the International Brotherhood of Teamsters (IBT), International Longshoremen's Association (ILA), Hotel Employees and Restaurant Employees International Union (HEREIU), and Laborers International Union of North America (LIUNA) as of the early 1980s and then, in each case, document the extraordinary steps taken by the U.S. Department of Justice's Organized Crime and Racketeering Section (OCRS) and the U.S. attorneys to purge those unions and their locals of organized crime racketeering. Section VI begins to sketch out a criminology of labor racketeering.

I. History of Labor Racketeering

In the labor wars from the 1860s through the 1930s, both employers and unions reached out to gangsters to counteract the violence directed at them (Landesco 1968, pp. 132–47). Gangsters also served as a counterweight to communists and leftist elements in the labor movement (Kimeldorf 1988); the gangsters were simply less threatening than communists to some government officials, businessmen, and union leaders. In some cases, once the gangsters gained a foothold, they consolidated their power through intimidation and patronage.[4] Control over a union was immensely valuable to the organized crime bosses, who could steal from the union coffers and extort money from employers. In addition, they could barter union support to politicians in exchange for immunity from investigation and prosecution. Some labor racketeers wielded influence with local political party machines. With ties to the underworld and influence in legitimate society, the labor racketeers became major power brokers at the local level and even at the state and national levels.

In the 1920s and 1930s Arnold Rothstein, Louis Buchalter (aka Louis Lepke), and Jacob "Gurrah" Shapiro were the most powerful labor racketeers in New York City, where they dominated crucial union locals in the garment industry. Through his control of the Tailors and Cutters Union, Lepke extracted millions of dollars from the garment industry. Thomas Dewey, New York City's special prosecutor

[4] The best study of how organized crime achieved a foothold in a union is Howard Kimeldorf's (1988) *Reds or Rackets? The Making of Radical and Conservative Unions on the Waterfront.* See also Philip S. Foner's (1950) *The Fur and Leather Workers Union.*

for racketeering (and later Manhattan district attorney, New York governor, and twice Republican Party presidential candidate) referred to Lepke as "the foremost labor czar in the U.S." (Sifakis 1987, p. 186). Dewey concentrated a great deal of his prosecutorial attention on labor racketeering, especially in the restaurant sector where an organized-crime dominated union systematically extorted the restaurateurs (Hughes 1940; Dewey 1974; Stolberg 1995, chap. 8). A similar situation existed in Chicago, where Al Capone was the leading labor racketeer of the 1930s (Vaira and Roller 1978).

The repeal of national alcohol prohibition (1933) ended organized crime's monopoly over alcohol and thus made the labor unions more important as a source of revenue for organized crime groups. As early as 1933, the U.S. Senate (Copeland Committee) held hearings on "racketeering," including the role of mobsters within international and local labor organizations (United States Congress 1933). The committee heard testimony about workers who were forced to pay kickbacks to corrupt union officials. The attorney for the American Federation of Labor (AFL) Building Trade Unions Anti-Racketeering Committee explained that the committee had been formed two years earlier by union members concerned "that most of the unions in New York were saturated with rackets" (United States Congress 1933, p. 798). Employers recounted extortion by labor racketeers.

In January 1940, journalist Westbrook Pegler exposed the connection of organized crime figures, especially Dutch Schultz, to George Scalise, president of the Building Services Employees International Union (Witwer 2001). According to historian David Witwer, Scalise

> used his connections with Arthur Flegenheimer, better known as Dutch Schultz, to gain a charter for a Brooklyn branch of Teamsters Local 272, a union of parking garage workers. Unions of parking garage employees attracted gangsters, because organization could most quickly be achieved through selective acts of violence. Damage to cars parked in non-union garages—ice pick punctures to the tires or slashed upholstery—could quickly force an employer to sign his employees into the union. And union organization in turn provided a cover for corralling the businessmen into an employers' organization, whose dues could be tapped by organized crime. In spite of the use of force against employers in such an organizing campaign, this was not a case of out and out extortion; employers enjoyed real benefits. This kind of collusive arrangement between a union and an employers'

> organization offered owners a way to manage competition. Employers' associations could set uniform rates and limit the entrance of new competitors. (Witwer 2001, p. 1)

Daniel Bell's article, "The Racket-Ridden Longshoremen" (first published in *Fortune Magazine* in 1951 and later as a chapter in *The End of Ideology*, 1962) provided a detailed picture and penetrating explanation of racketeering in the International Longshoremen's Association (ILA), where union bosses forced longshoremen to make payoffs in order to work, and shippers had to pay to have their cargo unloaded. This was brilliantly dramatized in Elia Kazan's classic 1954 film *On the Waterfront* (starring Marlon Brando, Eva Marie Saint, Karl Malden, Lee J. Cobb, and Rod Steiger), based on Budd Schulberg's screenplay and on Malcolm Johnson's 1949 Pulitzer Prize–winning *New York Sun* series, "Crime on the Labor Front" (Johnson 1950). In 1953, the AFL expelled the east coast ILA, citing organized crime domination, and formed a competing union, the International Brotherhood of Longshoremen. The effort failed. The AFL and the Congress of Industrial Organizations (CIO), which combined in 1955, admitted the ILA to membership in 1959. Also in 1953, Congress enacted an interstate compact that permitted New York and New Jersey to establish the Waterfront Commission of New York Harbor, which was authorized to regulate waterfront business activity and labor relations.[5] The Waterfront Commission replaced the infamous "shape up" (whereby the union bosses picked out who would work that day from the men assembled on the pier) with a hiring system that licensed longshoremen, assigned them to jobs, and guaranteed them an annual wage. It also ended the "public loading" racket, by which the ILA required truckers to make payoffs in order to have cargo loaded or unloaded from their vehicles at the piers, even if the service was not needed (Jensen 1974).

Since the 1940s, Italian-American Cosa Nostra organized crime families have dominated in labor racketeering and organized crime generally (Sifakis 1987; Fox 1989; Abadinsky 1990). Some Cosa Nostra labor racketeers achieved enormous local, regional, and even national prominence, including economic power and political clout—for example, Joseph "Socks" Lanza, Albert Anastasia, Anthony "Tony Pro"

[5] The Supreme Court upheld the constitutionality of the legislation creating the Waterfront Commission in De Veau v. Braisted, 363 U.S. 144 (1960).

Provenzano, Johnny (Dio) Dioguardi, Al Pilotto, Anthony Scotto, Ralph Scopo, and Vincent DiNapoli. The close links between some of the nation's most powerful labor leaders and the organized crime families are by now well documented through the prosecutions of labor officials like IBT's Bernard Adelstein, Frank Fitzsimmons, Roy Williams, and Jackie Presser; by prosecutions of mob figures who also held positions in labor unions like Vincent DiNapoli (United Brotherhood of Carpenters and Joiners), Ralph Scopo (LIUNA), and Thomas "Teddy" Gleason (ILA); and by prosecutions of organized crime bosses like Tony Salerno, Mathew Ianniello, and Carmine Romano of New York; Tony Accardo, Joseph Lombardo, Joseph Aiuppa, and Paul Ricca in Chicago; Nick Civella in Kansas City; Raymond Patriarcha in Boston; and Nicodemo Scarfo in Philadelphia.

Labor racketeering received national political attention in the U.S. Senate's 1950–51 Kefauver hearings. These nationally televised hearings introduced the citizenry to Frank Costello, Albert Anastasia, and other top mafia bosses (Kefauver 1951). Senator John McClellan, chairman of the Senate Select Committee on Improper Activities in the Labor or Management Field, held comprehensive hearings from 1957 to 1959 (Kennedy 1960; United States Congress 1960; McClellan 1962). (The creation of the committee was at least partly a result of the journalist Victor Reisel having been blinded with acid after publishing articles exposing labor racketeering; authorities believed Johnny Dio was behind the attack.) While the committee was frustrated by inadequate resources and the refusal of many witnesses to answer questions on Fifth Amendment grounds, its hearings illuminated and dramatized extensive labor corruption and racketeering and led directly to passage of the Labor Management Reporting and Disclosure (Landrum-Griffin) Act in 1959.

Landrum-Griffin sought to protect unions from organized crime penetration by banning persons with criminal records from union office, making embezzlement from a union a federal crime, prohibiting unions from issuing loans to their officers or paying their fines, strengthening the democratic rights of rank-and-file members (including fair elections), imposing reporting and disclosure requirements on unions and criminal penalties for false reporting, and providing union members access to federal courts to enforce their rights (29 USCA sec. 401, et seq.; Summers, Raub, and Benson 1986). Unfortunately, the law failed to achieve its aims because of weaknesses in the enforcement mechanisms, the hostility of the mainstream labor movement, and the

All use subject to https://about.jstor.org/terms

U.S. Department of Labor's (DOL) inability or unwillingness to enforce the law vigorously (Rauh 1971; Nelson 2000).

During the presidency of George Meany (1955–79), the AFL-CIO attempted to oppose racketeering in some of its affiliated unions. For example, the first AFL-CIO convention (1956) established a Committee for Ethical Practices to assist the executive council in keeping the federation free of corruption (Taft 1964, p. 696). The committee ultimately drafted six codes of ethical practices. The AFL-CIO was given the authority to investigate its affiliates' internal activities and to expel a union for failing to abide by the codes. In 1957, the federation expelled the Teamsters, and during the late 1950s it demanded reforms in several other unions, temporarily suspending their memberships until blatant corruption was addressed.[6] After the early 1960s, the ethical practices committee never met, and the AFL-CIO ceased playing any significant role in opposing corruption and racketeering in its affiliated unions.

When Robert F. Kennedy became U.S. attorney general in 1961, he made the prosecution of IBT president Jimmy Hoffa his number one priority (Kennedy 1960; Navasky 1971). He expanded the Department of Justice's Organized Crime and Racketeering Section and turned a spotlight on labor racketeering (Goldfarb 1995).

Hoffa was convicted of union pension fund fraud and jury tampering (1964) and was sent to prison in 1967, but he managed to obtain a pardon from President Richard Nixon in December 1971 (Brill 1978; Moldea 1978; Crowe 1993). Although the pardon banned him from union politics for fifteen years, Hoffa immediately began litigating and campaigning to reclaim the Teamsters' general presidency from his former protégé, Frank Fitzsimmons, whom Hoffa had selected as a caretaker. Cosa Nostra had become comfortable with Fitzsimmons and distrusted Hoffa, who now denounced Fitzsimmons as a mob puppet. On July 30, 1975, Hoffa disappeared. A mob "hit" was immediately presumed (and is now believed to have been orchestrated by Anthony Giacalone, a leader of the Detroit Cosa Nostra family, and Tony Provenzano, boss of the IBT Local 560 and a member of the Genovese crime family in New Jersey).

Hoffa's assassination mobilized government action against both organized crime and labor racketeering. Within three years, labor racke-

[6] The AFL-CIO took action against the Distillery Workers, United Textile Workers, Bakery and Confectionery Workers, the International Jewelry Workers, and the Laundry Workers International.

teering became the centerpiece of the FBI's organized crime control strategy (Jacobs, Panarella, and Worthington 1994). The most significant FBI investigations were "PENDORF," which focused on Cosa Nostra control over the IBT Central States Pension Fund and resulted in the conviction of IBT president Roy Williams (who succeeded Fitzsimmons), Joe Lombardo (member of the Chicago Outfit), and Allen Dorfman (the financial associate of the Chicago Outfit) for attempting to bribe U.S. Senator Howard Canon to vote against trucking deregulation; "STRAWMAN," which focused on a conspiracy by four Cosa Nostra families to use the IBT's Central States Pension Fund to secure interests in Las Vegas casinos and to skim profits from those businesses—and resulted in convictions of Joey Aiuppa and Jackie Cerone (boss and underboss of the Chicago Outfit), Angelo La Pietra and Joe Lombardo (Outfit capos), Frank Balistrieri (boss of the Milwaukee family), and Thomas and Milton Rockman (associates of the Cleveland family); "LILREX," which targeted racketeering in New York City's construction industry; and "LIUNA," which focused on Cosa Nostra racketeering in the Laborers International Union of North America. These FBI investigations led to a steady stream of prosecutions of labor racketeers, both organized crime figures and labor officials (Lynch 1987*a*, 1987*b*). Nevertheless, at a Senate hearing in 1978, Assistant U.S. Attorney General Benjamin Civiletti testified that more than 300 union locals remained controlled or heavily influenced by organized crime (United States Congress 1978, p. 77).

The Teamsters' Central States Pension Fund had been the target of allegations of mismanagement and organized crime influence since its establishment in 1955. In 1956 Senator Paul Douglas issued "The Douglas Report," which disclosed the results of congressional investigations that found numerous conflict-of-interest situations in which "insiders" had charged exorbitant fees and profited at the expense of benefit plans and their beneficiaries. Payments from individual union members were routinely skimmed off by plan administrators, and union employees secured positions as employees of the benefit plans while doing little work for high fees. Union officials also received kickbacks from persons or institutions to whom high-risk loans had been granted. In 1958 Congress passed the Welfare and Pension Plan Disclosure Act (WPPDA) in response to the abuses it uncovered. The WPPDA attempted to curb abuses of benefit plans by requiring publication of financial information by benefit plans. Congress believed that disclosure of benefit plan financial information would curb abuses and

This content downloaded from
162.10.217.184 on Sun, 14 Jun 2026 23:32:55 UTC
All use subject to https://about.jstor.org/terms

that plan beneficiaries could police the plans themselves. But later investigations found that widespread abuses continued unabated. In 1962 Congress strengthened the WPPDA by adding criminal provisions to address kickbacks and conflicts of interest, and gave the Department of Labor investigatory powers (Coleman 1989).

The 1964 prosecution of Jimmy Hoffa partly involved his receipt of kickbacks in exchange for making benefit fund loans. Organized crime associate Allen Dorfman (an employee of and later a service provider to the fund) was convicted in 1972 of conspiring to receive a kickback for influencing a fund loan. In his 1972 book, *The Fall and Rise of Jimmy Hoffa*, former Kennedy assistant Walter Sheridan charged that "there has been no meaningful monitoring of the Pension Fund by the federal government since Hoffa's conviction in Chicago. . . . Neither the Department of Justice nor the Labor Department followed up in an effective way to determine whether the plundering of the Fund continued" (p. 110).

Organized crime's plundering of union benefit funds was one of the factors leading Congress to pass ERISA (Employee Retirement Income Security Act) in 1974; ERISA gave the Department of Labor authority to investigate pension and welfare funds. A joint Labor and Justice Department investigation of the IBT Central States Fund began in the fall of 1975. The fund, more than 70 percent invested in (mostly Las Vegas) real estate and casinos, was notorious for lending money to organized crime figures and their associates. The IRS sought to revoke the fund's tax-exempt status, leading to a settlement in which twelve of the fund's sixteen trustees resigned, and the fund agreed to hire an independent fiduciary (Equitable Life Insurance Society) to handle investments (United States Congress 1977). While this was an improvement, the corruption and racketeering did not end.

In 1978 Congress established a system of independent inspectors general in all major federal agencies. The inspector general's mission was to combat fraud, waste, and abuse. The Office of Inspector General in the Department of Labor was charged with investigating labor racketeering; this office would play a key role in many of the most important investigations in the next two decades.

In 1980, the Senate Permanent Subcommittee on Investigations, now under the leadership of Senator Sam Nunn, held hearings on the Teamsters (IBT), Longshoremen (ILA), Laborers (LIUNA), and the Hotel and Restaurant Workers (HEREIU) (Nunn 1986). These hearings revealed widespread looting of pension and welfare funds by

This content downloaded from

All use subject to https://about.jstor.org/terms

labor racketeers connected to organized crime. The subcommittee criticized the Department of Labor for having failed to investigate vigorously and prosecute this wrongdoing. It also proposed "The Labor-Management Racketeering Act," which required that pension and welfare plan officials be removed immediately from office on conviction of certain felonies rather than remaining in office until the exhaustion of appeals; the bill, which finally passed in 1984, authorized DOL to investigate and refer evidence of criminal activity to DOJ.

Although investment decisions had been taken out of the hands of the trustees of the IBT Central States Pension Fund by the 1975 settlement agreement, the trustees were still permitted to purchase goods and services for the fund, to administer pension benefits, and to handle money from the time it was paid into the fund each month to the time (approximately thirty days later) it was deposited with the institutional fiduciary. In 1982, DOL filed a lawsuit against all current and former trustees of the IBT Central States Pension Fund, alleging violations of fiduciary obligations imposed by ERISA. This lawsuit resulted in a consent decree that provided for a court-appointed fiduciary to manage the IBT's Central States Pension Fund and the IBT's Health and Welfare Fund (*Donovan v. Fitzsimmons*, consent decree, 90 F.R.D. 583 [N.D. Ill. 1981]). The funds were prohibited from employing or doing business with any person who had been convicted of a felony or misdemeanor involving a breach of fiduciary responsibility. The consent decree also required the appointment of independent special counsel to monitor the fund's operations. The agreement provided that this oversight would sunset in ten years, but it was later amended, so that the oversight extended until September 22, 2002. Today (mid 2002), virtually every Teamster-related pension and welfare fund is managed by professional money managers.

The famous Racketeer Influenced and Corrupt Organizations Act (RICO) (18 U.S.C. sec. 1961 et seq.) was enacted in 1970 as part of the Organized Crime Control Act. Not only did RICO make it a serious federal offense to participate in the affairs of an enterprise (e.g., a labor union) through a pattern of racketeering activity (defined as at least two of a long list of federal and state criminal offenses), it also gave the Department of Justice authority to sue civilly to enjoin a person's or organization's future RICO violations. By the early 1980s, some federal prosecutors realized that they could use such civil suits to purge the racketeering influence from mobbed-up unions.

The groundbreaking case, *United States v. Local 560, IBT*, filed in

March 1982, charged that the largest Teamsters local in New Jersey had been run by Tony Provenzano, a captain in the Gambino crime family, and his henchmen for more than a quarter century (Jacobs, Panarella, and Worthington 1994). Even while serving time for murder, "Tony Pro" ran the union through his brothers and other members of his clique for the benefit of organized crime. The government's suit asked for the removal of all union officers and the appointment of a trustee to run the union and purge it of organized crime influence so that it could be returned to the control of its rank and file. After a long trial, Judge Harold Ackerman granted the requested relief. The trusteeship would last for thirteen years (Goldberg 1989; Summers 1991; Jacobs and Santore 2001). Ackerman observed:

> This is not a pretty story. Beneath the relatively sterile language of a dry legal opinion is a harrowing tale of how evil men, sponsored by and part of organized criminal elements, infiltrated and ultimately captured Local 560 of the International Brotherhood of Teamsters, one of the largest local unions in the largest union in this country.
>
> This group of gangsters, aided and abetted by their relatives and sycophants, engaged in a multifaceted orgy of criminal activity. For those that enthusiastically followed these arrogant mobsters in their morally debased activity there were material rewards. For those who accepted the side benefits of this perverted interpretation of business unionism, there was presumably the rationalization of "I've got mine, why shouldn't he get his." For those who attempted to fight, the message was clear. Murder and other forms of intimidation would be utilized to insure silence. To get along, one had to go along, or else. (*United States v. Local 560, IBT*, p. 279)

In March 1983, Donald Wheeler, a Department of Labor investigator, told the Senate Permanent Subcommittee on Investigations that "it is estimated that within the jurisdiction of the Chicago Strike Force there are approximately eighty-five labor organizations affiliated with twenty separate international, national, or independent parent unions that are suspected of being associated with, influenced or controlled by organized crime and racketeering elements" (United States Congress 1983, p. 212). In July 1983, President Ronald Reagan (by Executive Orders 12435 and 12507) appointed a President's Commission on Or-

ganized Crime (PCOC) and charged it with making "a full and complete national and region-by-region analysis of organized crime as well as emerging organized crime groups . . . and mak[ing] recommendations concerning appropriate administrative and legislative improvement and improvements in the administration of justice" (E.O. 12435, 1983). The commission produced a number of reports, including *The Edge: Organized Crime, Business and Labor Unions* (President's Commission on Organized Crime 1986), which reviewed a half century of labor racketeering, highlighted governmental failures and missed opportunities, and recommended more effective countermeasures. *The Edge* provides a point of departure for assessing change in the state of labor racketeering since the early 1980s.

Sections II–V use the PCOC findings as a basis for assessing the state of labor racketeering circa the early 1980s in the four most notoriously racketeer-influenced international unions. The commission's focus on the IBT, LIUNA, ILA, and HEREIU is not surprising. For decades, these unions have been the subject of congressional hearings, public scandals, and occasional prosecutions. The PCOC volume, *The Edge* (1986), brought together information and allegations that had been in the public domain for many years. Each of the next four sections summarizes the findings for each of these unions and then analyzes the government's subsequent remedial efforts.

II. The Teamsters

The PCOC charged that "corruption and the Teamsters [are] synonymous," and that since the 1950s the Teamsters had been "firmly under the influence of organized crime" (PCOC 1986, pp. 89–90). John "Johnny Dio" Dioguardi, a capo in the Lucchese crime family, and a power broker with influence in many unions, was one of Jimmy Hoffa's key supporters in his quest for the IBT presidency. Dioguardi gave Hoffa several New York City IBT "paper locals" (i.e., a local without rank-and-file members), which allowed Hoffa to control the important New York area IBT Joint Council and thereby secure the presidency of the international union.[7] According to the PCOC, "organized crime has continued to maintain a firm grip on the IBT long after Hoffa's reign" (PCOC 1986, p. 92). Organized crime used threats

[7] The McClellan Committee focused on Johnny Dio, especially on his role in establishing the IBT local that had jurisdiction over trucking cargo into and out of JFK airport.

and occasional acts of violence "to quell all forms of dissent, criticism, and opposition" (PCOC 1986, p. 114).

According to the PCOC, the organized crime families converted their influence in the IBT into wealth, status, and power. Control over the IBT provided organized crime leverage over tens of thousands of businesses dependent upon truck deliveries; this leverage could be exercised through extortion, solicitation of bribes, and demands for no-show jobs (PCOC 1986, pp. 91–92). The mobsters enriched themselves by siphoning money directly from union coffers and by taking kickbacks for sweetheart service contracts and "loans" from IBT pension and benefit funds.

The PCOC traced organized crime's control over the Teamsters' international union to its control over key IBT locals. The commission found a documented relationship between Cosa Nostra families and thirty-six IBT locals, one joint council, and a conference (a regional association of joint councils) (PCOC 1986, p. 123).

According to the PCOC, general IBT presidents "[Jimmy] Hoffa and [Roy] Williams were indisputably direct instruments of organized crime," and [Frank] Fitzsimmons held his office by "establish[ing] a measure of détente whereby he was allowed to head the union, while organized crime stole the workers' benefit funds and used the union for numerous criminal ventures" (PCOC 1986, pp. 90–91). At the time of the commission's work, Williams was a federal cooperating witness, having been convicted of attempting to bribe Senator Howard Cannon. He testified that "every big [Teamster] local union . . . had some connection with organized crime" (PCOC 1986, p. 89). Williams admitted that he himself had been controlled by Kansas City Cosa Nostra boss Nick Civella who had quarterbacked Williams's campaign for the IBT presidency by obtaining necessary support from organized crime bosses around the country. The PCOC asserted that Jackie Presser (whose father, "Big Bill" Presser, was a major Cleveland organized crime figure and, until forced to resign in 1976, an IBT Central States Pension Fund Trustee), general president at the time of the PCOC report, depended upon organized crime support for his election to the IBT presidency (PCOC 1986, p. 90). This charge was later confirmed by government prosecutors (Neff 1989).

Mob-controlled locals elected mob-controlled officers, who chose mob-controlled convention delegates, who ratified the choice of mob-controlled international presidents, vice presidents, and general executive board (GEB) members. Because the rank and file did not vote di-

rectly for international officers, PCOC judged it "unlikely . . . that a reform-minded Teamster president can be elected in the near future" (PCOC 1986, p. 104).

The PCOC reviewed organized crime's longtime influence over the Teamsters' huge Central States Pension Fund. Organized crime associates like Allen Dorfman and Bill Presser managed the fund's investments, loans, and operations. While a typical pension fund invested 5–10 percent of its assets in real estate, the Central States Pension Fund invested more than 70 percent in real estate, much of it mob-sponsored ventures (mostly casinos) in Las Vegas. Despite the 1976 agreement that put control over fund investments in the hands of an institutional fiduciary, organized crime continued to "plunder the Central States Pension Fund" (PCOC 1986, p. 99). Moreover, Dorfman continued to draw substantial fees for handling the fund's insurance business (PCOC 1986, p. 100). (Dorfman was murdered in 1983 while awaiting trial on charges arising out of the STRAWMAN investigation.)

The PCOC report concluded pessimistically that "no single remedy is likely to restore even a measure of true union democracy and independent leadership to the IBT" (PCOC 1986, p. 138). It urged the Department of Justice to make a commitment to purge corruption and racketeering from the IBT through criminal prosecutions, civil actions, administrative proceedings, and trusteeships. Even then, PCOC foresaw only a "modest hope of success" in wresting the IBT from the grip of organized crime (PCOC 1986, p. 120).

A. DOJ's Civil RICO Suit and the IBT Trusteeship

Almost immediately following the release of *The Edge* (PCOC 1986), rumors began to circulate that Rudy Giuliani, U.S. attorney for the Southern District of New York, was preparing a civil RICO complaint against the IBT general executive board. As a preemptive measure, IBT general president Jackie Presser launched an extensive lobbying and public relations campaign. More than two hundred senators and representatives were persuaded to petition the Justice Department not to file such a suit (Jacobs, Panarella, and Worthington 1994). Such an unprecedented intervention on behalf of a potential racketeering defendant illustrates the enormous political power of the nation's largest union, which provides politicians with endorsements, financial support, and even campaign manpower. Members of the U.S. House of Representatives have to face reelection every two years; few of them can af-

This content downloaded from
162.10.217.184 on Sun, 14 Jun 2026 23:32:55 UTC
All use subject to https://about.jstor.org/terms

ford to be indifferent to the support or opposition of a large Teamsters local in their district. Senatorial candidates, who seek to represent whole states, are less vulnerable to a particular union's opposition than House candidates. (It is not surprising that most congressional investigations into labor racketeering occurred in the Senate and that the chairmen of these investigating committees came from southern states where unions are not strong.)

On June 28, 1988, Giuliani filed a civil RICO complaint against the International Brotherhood of Teamsters, the Cosa Nostra "commission," twenty-six Cosa Nostra members and associates, the IBT's general executive board, and eighteen present and former members of IBT's general executive board (including president Jackie Presser and general secretary-treasurer Weldon Mathis) (*United States v. International Brotherhood of Teamsters*, complaint, 88 Civ. 4486 [S.D.N.Y. 1988]). The complaint charged that the organized crime defendants, aided and abetted by the union defendants, acquired and maintained control of the Teamsters through a pattern of racketeering activity; the defendants violated the members' rights to control over and information concerning the governance of their own union by creating a climate of intimidation and fear and by creating or tolerating pervasive corruption. Giuliani asked the court to remove the IBT general executive board members and to appoint a trustee to oversee the union's affairs and a monitor to supervise a fair election for international union officers (*United States v. International Brotherhood of Teamsters*, complaint, pp. 104–15).

On March 14, 1989, the IBT and the government settled the case with a consent decree (*United States v. International Brotherhood of Teamsters*, consent decree, 808 F. Supp. 279 [S.D.N.Y. 1988]). The union acknowledged "that there have been allegations, sworn testimony and judicial findings of past problems with La Cosa Nostra corruption of various elements of the IBT" and agreed that the IBT should be free of any criminal element and governed democratically "for the sole benefit of its membership without unlawful outside influence" (*United States v. International Brotherhood of Teamsters*, consent decree, p. 2; Lacey 1992, p. 1).

The consent decree provided for a permanent injunction barring the union defendants from any future involvement with the IBT, various changes to the IBT constitution, democratic elections for international officers, and, most important, the selection of three court-appointed officers—independent administrator, investigations officer,

This content downloaded from

All use subject to https://about.jstor.org/terms

and elections officer—to oversee the union's reform. The independent administrator was given authority to remove or discipline any member or officer of the union and to impose trusteeships on locals. The consent decree empowered the independent administrator to veto any IBT decision that would further the interests of organized crime or labor racketeers.[8] The investigations officer was charged with investigating corruption at all levels of the Teamsters hierarchy and recommending disciplinary action to the independent administrator against individuals found to have violated the IBT constitution. The elections officer's role was to promote democracy in union locals and internationals, and to oversee direct rank-and-file secret-ballot elections for the union's top officers in 1991 and 1996. United States District Court (S.D.N.Y.) Judge David Edelstein appointed former federal judge Frederick Lacey as independent administrator, former Assistant United States Attorney Charles Carberry as investigations officer, and labor lawyer Michael Holland as elections officer.[9]

Initially, the consent decree was greeted by a great deal of IBT resistance. William McCarthy, who became general president following Jackie Presser's death in July 1988, encouraged IBT locals around the country to file lawsuits in order to paralyze the court-appointed officers (Lacey 1992, pp. 5–6). Judge Edelstein thwarted this strategy by combining all IBT/consent decree litigation in his court (*United States v. International Brotherhood of Teamsters*, 728 F. Supp. 1032, aff'd 907 F.2d 277 [2d Cir. 1990]).

The IBT refused, in violation of the consent decree, to reimburse many of the court-appointed officers' expenses. At its 1991 convention, the IBT refused to enact constitutional amendments to which it had committed itself by signing the consent decree. The IBT also resisted the court-appointed officers' efforts to inform the rank and file of the independent administrator's findings and sanctions against corrupt IBT officials. Ultimately, Judge Edelstein obtained compliance in all these matters.

Independent Administrator Lacey served as the trier of fact and sentencing authority on charges brought by the investigations officer

[8] Although the independent administrator had substantial authority over union management and discipline, he did not have the authority to make collective bargaining agreements—that power remained in the hands of the IBT general president and the general executive board.

[9] Over the following ten years, Judge Edelstein issued approximately 200 decisions and orders related to the remedial phase of the case.

This content downloaded from
162.10.217.184 on Sun, 14 Jun 2026 23:32:55 UTC
All use subject to https://about.jstor.org/terms

against Teamsters members and officials. Typical charges included association with and membership in Cosa Nostra (*Investigations Officer v. Senese, et al.*, Decision of the Independent Administrator [July 12, 1990], aff'd *United States v. IBT*, 745 F. Supp. 908 [S.D.N.Y. 1990], aff'd 941 F.2d 1292 [2d Cir. 1991], cert. denied, *Senese v. United States*, 112 S.Ct. 1161 [1992]), failure to investigate corruption and refusal to testify at a disciplinary hearing (*Investigations Officer v. Calagna, Sr., et al.*, Decision of the Independent Administrator [June 14, 1991], aff'd *United States v. IBT*, 1991 WL 161084 [S.D.N.Y. 1991]), embezzlement (*Investigations Officer v. Salvatore*, Decision of the Independent Administrator [October 2, 1990], aff'd *United States v. IBT*, 754 F. Supp. 333 [S.D.N.Y. 1990]), and assault (*Investigations Officer v. Wilson, et al.*, Decision of the Independent Administrator [December 23, 1991], aff'd *United States v. IBT*, 787 F. Supp. 345 [S.D.N.Y. 1992], aff'd in part, vacated in part, 978 F.2d 68 [2d Cir. 1992]). Sentences ranged from reprimand to expulsion from the union. Judge Edelstein consistently upheld Independent Administrator Lacey's decisions.

Investigations Officer Carberry exercised broad authority to investigate corruption and racketeering by union members and officers. Carberry and his staff audited locals and interviewed their officers and members. He reviewed old criminal cases against IBT members and officials for leads on current corruption and racketeering (*United States v. International Brotherhood of Teamsters*, 803 F. Supp. 767 [S.D.N.Y. 1992], aff'd in part, rev'd in part, 998 F.2d 1101 [2d Cir. 1993]). The FBI provided a constant flow of information. Carberry set up a toll-free telephone number for IBT members to report wrongdoing in their locals. When he found sufficient evidence, he filed disciplinary charges.

Elections Officer Holland created a three-step process for the election of the IBT general president, general secretary, and general executive board. First, the IBT locals would hold secret-ballot elections for delegates to the IBT convention. Second, the delegates would nominate candidates for office. Third, the rank and file would vote in a secret-ballot election supervised by independent monitors. The IBT opposed these election reforms, arguing that the consent decree gave Holland authority only to monitor the electoral process for fraud and not to create new election rules. Ultimately, the court supported Holland's interpretation (*United States v. International Brotherhood of Teamsters*, 803 F. Supp. 267 [1992], p. 770).

The first direct election of international IBT officers took place in 1991. The election by mail-in ballots resulted in victory for Ron Carey who, as a candidate independent of the clique that had dominated the IBT for decades, enjoyed the support of the reformist group Teamsters for a Democratic Union (see La Botz 1990; Crowe 1993). Carey promised to eradicate all remnants of mob influence in the Teamsters. Upon assuming office, he eliminated many multiple salaries, trimmed the IBT budget, sold some of the union's more extravagant possessions, created an Ethical Practices Committee, and imposed trusteeships on a number of mob-controlled locals.

Pursuant to the 1989 consent decree, following the 1991 election, the independent administrator and investigations officer were replaced by a three-member Independent Review Board (IRB) that was responsible for continuing to investigate and purge corrupt influences. The U.S. attorney general appointed Lacey to the IRB, and the IBT appointed E. Harold Burke. When Lacey and Burke were unable to agree on the third member, the court appointed former FBI director William Webster. Between 1992 and 1998, the IRB recommended charges against 229 individuals. As of fall 2001, more than 120 individuals had been expelled from the union; a large number of others were suspended or retired. The IRB placed twenty-one corrupt locals and one joint council under trusteeship.

The 1996 election was vigorously contested. Carey, though benefited by his incumbency, was hampered by the rank and file's perception that the Teamsters' bargaining power was declining. Carey's opponent was James P. Hoffa, son of the hugely popular Jimmy R. Hoffa who was IBT president from 1957 to 1971. (Despite having been sent to prison in 1967 [pardoned in 1971] for jury tampering and corruption, the senior Hoffa's reputation only grew larger over the years, perhaps in part because of his spectacular disappearance in 1975.)

James P. Hoffa, a lawyer, had to contend with his own set of troubles. Lacey had ruled him ineligible to run for general president in 1991 because he was not a Teamster. To qualify for the 1996 election, Hoffa signed on as an assistant to an IBT local president.

The 1996 election was even closer than the 1991 election. Carey won a slim majority of votes, but the elections officer refused to certify the election because of campaign finance violations. Carey's campaign was found to have illegally funneled $885,000 to political action groups, which in turn arranged donations to the Carey campaign from wealthy individuals (*United States v. International Brotherhood of Team-*

sters, 988 F. Supp. 759 [S.D.N.Y. 1997]). In November 1997, the IRB barred Carey from the rerun election; it later expelled him from the union. Carey was then prosecuted for corruption but acquitted (October 12, 2001). Without a significant challenger, Hoffa won the 1998 rerun election by a wide margin, and, in 2001, he and the Hoffa Unity slate of candidates for the general executive board overwhelmingly won a five-year term. Also in 2001, former U.S. attorney Joseph Di Genova replaced Harold Burke as the IBT's representative on the IRB, and former U.S. Attorney General Benjamin Civiletti replaced Judge Lacey as the government's representative; William Webster continued to serve.

B. Project RISE

Immediately following the election, Hoffa announced the formation of a new unit to cleanse the IBT of any remaining taint of corruption and to persuade the court that it was time to terminate the IRB. To head the initiative, named Project RISE (Respect, Integrity, Strength, Ethics), Hoffa appointed Ed Stier, the ex-prosecutor who served for thirteen years as the court-appointed trustee in the IBT Local 560 case (Goldberg 1989; Summers 1991; Jacobs and Santore 2001).[10]

Stier appointed a former justice of the New Mexico Supreme Court to lead an effort to draft an Ethical Practices Code. The code-drafting committee consisted of a diverse group of rank-and-file members and local officers from around the United States and Canada. The group met over a period of eighteen months and produced an impressive product that, if carried out, would be a model for the labor movement. The code includes rules and procedures, and establishes several new enforcement roles. It was endorsed at the 2001 IBT convention in Phoenix, Arizona, but its implementation depends upon the termination or at least modification of the IRB.

The second Project RISE component was an investigation of organized crime influence in the IBT. For this job, Stier chose Jim Kossler, the former organized crime coordinator in the New York City FBI office. Kossler, in turn, hired as consultants a number of former FBI colleagues from around the country. The Kossler team produced a comprehensive report on the current state of every IBT local that had ever been proved or alleged to have been organized crime infiltrated or in-

[10] Stier also appointed an advisory board to monitor Project RISE's progress and to make suggestions where appropriate. One of the authors of this article, Jacobs, served as a member of that board.

This content downloaded from
162.10.217.184 on Sun, 14 Jun 2026 23:32:55 UTC
All use subject to https://about.jstor.org/terms

fluenced. It found no indication of organized crime influence in the vast majority of these previously tainted locals. In several locals, where questionable influences still existed, investigations and disciplinary proceedings were already under way.

Project RISE also carried out a comprehensive history of corruption in the IBT. The principal writer was Howard Anderson, one of Ed Stier's law partners and a former congressional staffer. This history, released in October 2002, provides the most comprehensive study to date of labor racketeering in the IBT.[11] Since this document is an authorized self-study it may well force many Teamsters who never encountered racketeers to confront the truth of the government's allegations about the mob's role in the union's affairs.

C. Conclusions

For decades, the IBT, the nation's largest and most powerful union, was controlled by organized crime. Indeed, from the 1950s on, Cosa Nostra bosses chose the union's general president. Organized crime used its influence to loot the pension and welfare funds, extort employers, and place its own members and associates in high-paying jobs. Through their influence in the IBT, the organized crime families were able to exert political and economic influence at the local, state, and national levels. Whereas businessmen and politicians cannot justify meeting, working with, and befriending organized crime bosses, they can easily justify, indeed hardly refuse, meeting with the heads of international and local unions, even leaders reputedly connected to organized crime families. Likewise, positions as labor officials provide organized crime bosses with a legitimate public identity and a reason to function as political and economic power brokers.

In 1986, PCOC considered the situation nearly hopeless. But that prediction proved unduly pessimistic. The federal civil RICO suit against the IBT international and the court-imposed trusteeship that it produced, along with the government's relentless campaign against Cosa Nostra, has led to a major transformation of the IBT. None of the 1989 defendants are in positions of authority. The trusteeship and Independent Review Board have purged over 120 organized crime figures and associates from the union and produced three fair and com-

[11] See Stier, Anderson, and Malone (2002). Additional histories of Teamster corruption include Witwer (1994) and Crowe (1993).

162.10.217.184 on Sun, 14 Jun 2026 23:32:55 UTC
All use subject to https://about.jstor.org/terms

petitive elections at the international level.[12] Separate court-appointed trusteeships in some of the most mobbed-up locals have also led to impressive results. The James P. Hoffa administration seems committed to routing out any vestiges of organized crime in order to persuade the government and the court to dissolve the trusteeship and return the union to its officials and members. Where they were once vilified, former FBI agents and federal prosecutors now have easy access to IBT headquarters, president Hoffa, and his top staff.

III. Hotel Employees and Restaurant Employees International Union

At least since Prohibition (1920–33), according to the PCOC, the Hotel Employees and Restaurant Employees International Union had been plagued by criminal infiltration and exploitation. The murder of a union member at HEREIU's 1936 national convention precipitated an investigation by Thomas Dewey's Special Commission on Crime. The commission found "a flourishing restaurant racketeering business in New York City"; subsequent prosecutions resulted in the criminal conviction of three union officials, the suspension of a local union, and the expulsion of several union members on account of their ties to organized crime (PCOC 1986, p. 72). The McClellan Committee's hearings (1957–59) revealed pervasive organized crime influence in Chicago's restaurant industry through control of three HEREIU locals. The PCOC charged that HEREIU has "a documented relationship with the Chicago 'Outfit' of La Cosa Nostra at the international level and [is] subject to the influence of the Gambino, Colombo, and Philadelphia La Cosa Nostra families at the local level" (PCOC 1986, p. 71).

Shortly before PCOC's investigation, the Senate Permanent Subcommittee on Investigations held hearings (1981–84) on HEREIU. Its final report concluded that "many of the officers of HEREIU have consistently accorded a higher priority to their own personal and financial interests than to the interests of the rank and file membership" (United States Congress 1984*a*, p. 9).

The PCOC described HEREIU as corrupt to the core. It charged that Tony "Joe Batters" Accardo, boss of the Chicago Outfit, handpicked Edward Hanley as HEREIU's international president (PCOC

[12] There are some critics of the independent review board's continuing role (see Dean 2000).

This content downloaded from
162.10.217.184 on Sun, 14 Jun 2026 23:32:55 UTC
All use subject to https://about.jstor.org/terms

1986, p. 73). Control over Hanley assured Cosa Nostra control over union affairs because HEREIU's centralized governance empowered the international officers to dictate policy and personnel decisions to the locals. Under Hanley's regime, mob figures obtained union loans and jobs, and otherwise feasted on the union's assets. In short, "the union's assets have been used to enrich the top officers of HEREIU's hierarchy" through high salaries, expense accounts, allowances, and lifetime employment contracts (PCOC 1986, pp. 74–75). When asked by the Senate's Permanent Subcommittee on Investigations about HEREIU's ties to organized crime, Hanley asserted his Fifth Amendment right not to incriminate himself (PCOC 1986, p. 75).

The PCOC identified several HEREIU locals controlled or heavily influenced by the Chicago Outfit and other organized crime families. For example, since 1978, Local 54 (Atlantic City, New Jersey) had been dominated by different factions of Philadelphia's Bruno/Scarfo crime family.[13] Several of Local 54's officers had criminal records for murder, arson, extortion, drugs, bribes, kickbacks, and racketeering. The local's dental and welfare funds were controlled by organized crime (PCOC 1986, pp. 78–79). The local's corrupt influence infected both business and government in Atlantic City.[14] In 1982, the New Jersey Casino Control Commission prohibited Local 54 from collecting dues from casino employees because the influence of organized crime made the local unfit to represent the casino workers' interests (PCOC 1986, p. 80). Ultimately, this decision was upheld by the U.S. Supreme Court (*Brown v. HEREIU Local 54*, 468 U.S. 491 [1984]).

The PCOC found that HEREIU Locals 6 and 100 (New York City) had been chartered and governed in furtherance of the interests of the Colombo and Gambino families. What appeared to be a jurisdictional split between these two HEREIU locals in fact represented the division of New York's restaurant workers between the Colombo and Gambino crime families (PCOC 1986, p. 84). In an intercepted conversation, Paul Castellano, boss of the Gambino crime family, explained that the Chicago Outfit "own[ed] the international" and that

[13] The struggle for control of Local 54 led to a murder in 1980, when a leader of a rival union sought to take the bartenders away from Local 54 (PCOC 1986, pp. 76–77).

[14] The PCOC reported that Atlantic City mayor Michael Matthews solicited illegal campaign contributions from Local 54 officials. Matthews admitted that he approached Local 54 leaders in order to obtain money from Philadelphia's Bruno/Scarfo crime family. In return for the donation, Matthews agreed to assist the Scarfo family in its effort to obtain a piece of land owned by the city on which the Scarfo family wanted to build a casino.

All use subject to https://about.jstor.org/terms

the Colombo crime family controlled the other local (PCOC 1986, p. 83). The PCOC reported that "legitimate trade unionists are aware of the mob ties to HEREIU and await government action to oust the mob from the union" (PCOC 1986, p. 85).

A. Civil RICO Suit against Local 54

In December 1990, the United States filed a civil RICO suit against HEREIU Local 54 (Atlantic City) alleging a twenty-year pattern of racketeering orchestrated by the Philadelphia (Scarfo) organized crime family (*United States v. Hanley*, complaint, Civ. No. 90-5017 [D.N.J. 1990]). The complaint charged that Ralph Natale and other members of the Philadelphia Cosa Nostra crime family had prevented democratic elections within Local 54 by threatening to kill union members who challenged mob-backed candidates. In April 1991, Local 54 agreed to a consent decree in which eight officers and employees of the local were removed from office because of ties to organized crime (*United States v. Hanley*, 1992 U.S. Dist. LEXIS 22192 [D.N.J. 1992]). The U.S. District Court for the District of New Jersey in Trenton appointed James F. Flanagan (former deputy director of the New Jersey Division of Gaming Enforcement) to monitor the affairs of the local, and postponed Local 54's election until Flanagan could establish democratic procedures for the nomination and election of non-organized-crime-influenced candidates (*United States v. Hanley*). Under Flanagan's monitorship, Local 54 began holding quarterly membership meetings, providing education and training to union members, and revitalizing its handling of members' grievances (Seal 1997).

Local 54's 1993 election demonstrated increasing democracy and a decreasing organized crime influence; eight candidates were disqualified on account of their organized crime ties. In the 1996 election, 33 percent of Local 54's membership voted. None of the ninety candidates investigated by the monitor was found to be associated with organized crime. The election produced wholly new leadership. In February 1997, the monitorship was dissolved (Seal 1997).

B. Civil RICO Suit against HEREIU International

On September 5, 1995, the Department of Justice filed a civil RICO complaint against the HEREIU international union, alleging that members of its executive board had conspired with organized crime figures since the 1970s to accept illegal payments from employers, embezzle union assets, and control the union membership through intim-

This content downloaded from
162.10.217.184 on Sun, 14 Jun 2026 23:32:55 UTC
All use subject to https://about.jstor.org/terms

idation. Along with the complaint, HEREIU and DOJ filed a consensual settlement decree (*United States v. HEREIU*, Civ. No. 95-4569 [D.N.J. 1995]) whose object was to make "HEREIU and all its locals be free from the direct or indirect influence of organized crime, now and in the future" (Muellenberg 1998, p. 2). Toward that end, the defendants agreed to be enjoined from committing any crimes listed in Title 18 U.S.C. 1961 (1) (RICO), associating with organized crime members and associates, permitting a barred person from exercising any control or influence in HEREIU affairs, and obstructing efforts to implement the consent decree.

Judge Garrett E. Brown appointed Kurt Muellenberg (former head of DOJ's Organized Crime and Racketeering Section) as monitor over HEREIU for a term of at least eighteen months. The monitorship was later extended until March 5, 1998. The consent decree gave Muellenberg authority to remove union officials at all levels for violating any provision of the settlement, committing any crime involving running a union or overseeing an employee benefit plan, or furthering the influence of any organized crime group. Muellenberg's authority also extended to disapproving collective bargaining agreements and to appointing or discharging union employees and candidates for union office. Additionally, the court ordered that at its 1996 convention HEREIU adopt an Ethical Practices Code that would define and prohibit conflicts of interest by union officers. Muellenberg appointed Daniel F. Sullivan as chief investigator and former New York City Police Department commissioner Howard E. O'Leary as investigations officer. Rank-and-file HEREIU members were encouraged to use a toll-free telephone number to report corruption and racketeering in the union (Muellenberg 1998, pp. 2–5).

Muellenberg found that many HEREIU locals with a history of organized crime infiltration did not obey their own bylaws; gave inadequate notice of membership meetings; failed to document expenses, bonuses, and raises to the membership for approval; failed to train officers, business agents, and organizers; and failed to promulgate or maintain standards for personnel, pay scales, job descriptions, and performance (Muellenberg 1998, pp. 5–6). According to Muellenberg, the international union "suffered from a management deficit and did not subscribe to generally accepted business practices" (Muellenberg 1998, p. 14). He described HEREIU's international union as an agglomeration of employees and officers without any clear rules or procedures. "There is no budget, no organizational chart, no job descriptions for

All use subject to https://about.jstor.org/terms

employees, and no manual" (Muellenberg 1998, p. 15). General President Hanley hired friends and family members to union positions and consultancies, remunerated them generously, and ran the union as his personal fiefdom. There was a pattern of highly questionable union donations to charitable organizations and events.[15] Officials' business expenses were reimbursed without submission of receipts and explanations and without prior approval.[16]

Muellenberg lifted trusteeships that had been imposed on eleven locals for no good reason or, worse, to provide jobs to organized crime friends and relatives. He placed five locals under trusteeship because federal prosecutors had charged those locals' leaders with organized crime associations, embezzlement, and filing false reports to the Department of Labor.[17]

During the course of his monitorship, Muellenberg permanently barred twenty-three individuals from participating in union affairs because of organized crime associations or failure to cooperate with the monitor, barred two individuals from participation in union affairs for thirteen years, and barred two individuals from holding a position of trust in the union for three years.[18]

Muellenberg devoted much time to investigating Edward T. Hanley, who served as general president from 1973 to 1998. Muellenberg charged Hanley with using HEREIU automobiles and an airplane for personal purposes, receiving unearned salary and pension contributions, associating with organized crime members, and setting up a paper local near his Wisconsin vacation home so that the local's presi-

[15] The HEREIU donated $94,000 to the Catholic Church, $25,000 to the All-American Collegiate Golf Foundation, and $450,000 to the Irish American Sports Foundation. Each of these organizations, while having little if anything to do with the hotel and restaurant business, was valued by HEREIU's general president Edward Hanley (Muellenberg 1998, p. 31).

[16] In one particularly egregious example, a union official left an $80 tip for a meal costing $5.80. The same official commonly left tips in amounts substantially greater than the cost of the meal (Muellenberg 1998, p. 18).

[17] The five locals placed in trusteeship by Muellenberg were Local 122 in Milwaukee, Wisconsin; Local 69 in Secaucus, New Jersey; Local 4 in Buffalo, New York; Local 57 in Pittsburgh, Pennsylvania; and AFL-CIO Nursing Home Council in Buffalo, New York. Two (Local 122 and Local 69) held elections and were removed from trusteeship by the end of Muellenberg's term as monitor (Muellenberg 1998, pp. 52–53). These actions in tabular form can be found at http://www.ipsn.org/HEREIU_Table.htm.

[18] Daniel Rostenkowski, a consultant, and Robert L. Hickman, Sr., a consultant and business agent for Chicago Local 1, were barred for thirteen years. Nancy Ross (secretary-treasurer of Local 57 and international vice-president) and Vince Fera (executive board member) were prohibited from holding positions of trust for three years beginning April 23, 1998 (Muellenberg 1998, p. 58).

All use subject to https://about.jstor.org/terms

dent could do favors for Hanley and his friends. On February 19, 1998, the Office of the Monitor and Hanley entered into an agreement. Hanley agreed to retire, pay HEREIU $13,944 relating to his purchase of HEREIU-leased automobiles, and assume payment of life insurance premiums on a policy purchased for him by the union (Muellenberg 1998, p. 59). In return, Muellenberg agreed to terminate his investigation of Hanley's actions during his tenure as HEREIU's general president; Hanley was permitted to retain a $350,000 a year salary for life (Hanley's son, Thomas W., agreed to resign for one year and to reimburse HEREIU $25,000 in order to end an investigation into his abuse of expense accounts) (Muellenberg 1998, p. 60).

Muellenberg released his final report on August 25, 1998. On September 1, 1998, HEREIU's general executive board voted to implement all of his many recommendations on structure, governance, and operations of the international and locals (United States Congress 1999).

When the monitorship expired, it was replaced by a public review board (PRB) responsible for overseeing implementation of the Ethical Practices Code. In addition, the PRB has authority to review member complaints and to conduct hearings to insure ethical standards in the union's operations. The PRB has power to suspend or expel members found to have violated the code. Muellenberg, Archbishop James P. Keleher of Kansas City, and former Illinois governor James R. Thompson were appointed to this board. Hanley was replaced as general president by John W. Wilhelm, a longtime union official (who graduated from and then represented workers at Yale University and who has never been alleged to be associated with or influenced by organized crime).

C. Conclusions

General President Edward Hanley ran HEREIU in dictatorial fashion and in cooperation with organized crime, especially the Chicago Outfit. Many union locals were also controlled by organized crime. The 1995 civil RICO suit and settlement established a monitorship that expelled some of the most notorious members from the union and finally managed to secure Hanley's resignation. While the deal with Ed Hanley might seem to some like letting a labor racketeer off too easily, it is well to remember that it is one thing to allege organizational criminality and another thing to prove it. Corruption by high-level officials is almost always difficult to prove because powerful officials have the

All use subject to https://about.jstor.org/terms

resources and capacity to cover their tracks and give colorable legitimacy to their exploitative conduct. Furthermore, it might take the government years to prosecute successfully a corrupt labor official. Thus, on balance, prosecutors and court-appointed trustees have sometimes concluded that a settlement that allows union reform to proceed expeditiously justifies forgoing a possible prosecution. A further obstacle to punishing wrongdoing is posed by ERISA, which prevents pension forfeiture, even against an official who has stolen money from his union (see Jacobs, Friel, and O'Callaghan 1997).

The monitor's recommendations for improving the union's management were adopted by the new administration, untainted by the long history of organized crime influence in the union. The union adopted a progressive Ethical Practices Code to its constitution and a public review board to enforce it. Hanley's successor has not been tied to organized crime, but neither has he been a sharp Hanley critic. The extent and depth of HEREIU's commitment to reform remains to be seen.

Reform of an international union is a necessary, but not necessarily sufficient, condition for reform of its racketeer-influenced locals. The HEREIU monitor, whose office lasted only two-and-a-half years, expressed concern about locals operating without accountability. Some of these locals have had a long history of organized crime domination. In April 2002, for example, the New Jersey U.S. attorney's office brought a civil RICO suit against HEREIU Local 69 charging that associates of the Genovese crime family had used fear and extortion to control Local 69 for the previous fifteen years. The federal prosecutors alleged that the local, among other things, had made $524,000 in "severance payments" to a former official who had been removed on account of organized crime ties. The district court appointed Kurt Muellenberg to serve as monitor over the local.

IV. Laborer's International Union of North America

The PCOC found that "organized crime has a documented relationship with at least twenty-six Laborer's International Union of North America (LIUNA) locals, three district councils, as well as the International Union" (PCOC 1986, p. 146). The mob profited from this relationship by defrauding the union's benefits funds, extracting no-show jobs from LIUNA employers, drawing reimbursement for fictitious and padded business expenses, manipulating the construction industry, and obtaining access to powerful government officials (PCOC 1986,

This content downloaded from
162.10.217.184 on Sun, 14 Jun 2026 23:32:55 UTC
All use subject to https://about.jstor.org/terms

p. 153). The commission complained that the federal government had not seriously addressed this situation (PCOC 1986, p. 160).

According to the PCOC, "organized crime exerts its influence [in LIUNA] principally through top officers who are associates of organized crime" (PCOC 1986, p. 146). General President Angelo Fosco (whose father, Peter Fosco, was LIUNA general president from 1968 to 1975 and an associate of Al Capone) was closely associated with members of the Chicago Outfit. The PCOC charged that Fosco owed his presidency to his willingness to award jobs to organized crime members and associates, and to authorize whatever expenditures his organized crime associates requested (PCOC 1986, pp. 146–47). In 1982, he and Tony Accardo, boss of the Outfit, were tried (and acquitted) of labor racketeering charges.

The PCOC asserted that Vice President John Serpico was also controlled by organized crime. "Serpico admitted that he is a friend or personal acquaintance of virtually every important organized crime leader in Chicago" (PCOC 1986, p. 147). According to the PCOC, the Outfit used LIUNA's international officers to gain access to important political figures like Chicago Mayors Daley and Byrne and Illinois Governors Walker and Thompson (PCOC 1986, pp. 148–49). For example, Vice President John Serpico received successive gubernatorial appointments to serve as chairman of the Illinois International Port District.

Questioned about John Fecarotta's duties as a LIUNA business agent and organizer, Vice President Serpico could not specify a single contribution by Fecarotta to Local 8. For his part, Fecarotta could not remember having done anything for the union at any time, did not know any of the terms of the union's collective bargaining agreements or of its pension plans, did not know what information was on union membership cards he supposedly distributed, and did not know the names of management employees or union officers with whom he supposedly worked. The PCOC branded Fecarotta a ghost employee who used his union position as a legitimate cover for his criminal career (PCOC 1986, p. 148).

The PCOC charged that organized crime thoroughly controlled LIUNA's Chicago Locals 1, 5, and 8. Local 1's president, Vincent Solano, territorial boss for the Outfit's north side clique, used union headquarters as a "contact point for his criminal organization" (PCOC 1986, p. 150). Local 5's president was also an Outfit boss (PCOC 1986, p. 151). The PCOC called Local 8, Vice President John Serpico's

This content downloaded from

home local, "ground zero for an organized crime-led LIUNA benefit plan scam" (PCOC 1986, pp. 153–55). Organized crime members and their associates siphoned money from LIUNA's Central States Joint Board Health and Welfare Trust Fund. The dental plan was egregiously corrupt; 68 percent of its budget went to "administrative costs" rather than to services (PCOC 1986, pp. 153–55).[19] The LIUNA's treasury paid lawyers' fees on behalf of officials charged with looting the union as well as fees to private investigators for monitoring the federal government's investigation of LIUNA (PCOC 1986, pp. 156–57).

According to the PCOC, LIUNA's organization and procedures reinforced its relationship with organized crime. It was nearly impossible for an opposition candidate to be elected to a union office because LIUNA's executive board members were elected as a unified at-large slate (PCOC 1986, p. 157). The executive board filled union vacancies (PCOC 1986, p. 158).

The PCOC found that organized crime used violence and intimidation to keep union members from running for office in opposition to the ruling clique. It charged General President Angelo Fosco with personally threatening to kill a potential challenger for his office (PCOC 1986, p. 158). In an intercepted conversation, LIUNA's International Secretary-Treasurer Arthur E. Coia told a colleague that LIUNA was controlled by the "Italians" (i.e., organized crime families) who would never relinquish their power (PCOC 1986, pp. 158–59). At the 1981 LIUNA convention, when a candidate opposing the incumbent regime tried to speak, he was beaten up on the spot (PCOC 1986, pp. 159–60). The PCOC pessimistically concluded that there was "little chance that the LIUNA membership will be able to eliminate organized crime's influence, or control over their union, if the current leadership or governance structure remains intact. The commission believes that federal law enforcement agencies should give high priority to investigations of LIUNA and its locals" (PCOC 1986, pp. 162–63).

The decade after the PCOC report provided little reason to be optimistic about reform in LIUNA. For example, in 1989, Arthur A. Coia, son of longtime mob-affiliated LIUNA General Secretary-Treasurer Arthur E. Coia (who retired in 1987), reportedly made pilgrimages to

[19] These grossly inflated service fees were shocking even to the Teamsters Central States Pension Fund officials, who were embarrassed to admit that their administrative costs had in the past gone as high as 8 percent. George Lehr, executive director of the Teamsters Central States Pension Fund, described the 68 percent rate as "outrageous" and "a ripoff on its face" (United States Congress 1985, p. 600).

Chicago to request permission from the Chicago Outfit to run for LIUNA general secretary-treasurer (Mulligan and Starkman 1996). Having obtained the mob's approval, he served as secretary-treasurer until 1993, when Angelo Fosco died. With mob approval, Coia was elected general president. During this period, LIUNA made substantial political contributions to the Democratic Party and to President Clinton with whom Coia enjoyed a personal relationship. Critics charged that, on account of these political ties, the Clinton administration backed off in its investigation and reform efforts (Mulligan and Starkman 1996; United States Congress 1997; Isaac 1998; Mencimer 1998; Methvin 1998).

A. DOJ Takes Action against LIUNA

In late 1994, the DOJ presented LIUNA officials with a draft civil RICO complaint, alleging that organized crime dominated the international union and many locals.[20] The complaint named as defendants twenty-five individuals plus the individual members of the LIUNA general executive board, General President Arthur A. Coia, General Secretary-Treasurer Rollin P. "Bud" Vinall, all ten of the union's vice presidents, and the union's general counsel. The complaint alleged that the defendants violated the rights of union members through intimidation, violence, and economic coercion, and violated their fiduciary duty to the membership by corrupting the union and by refusing and failing to prevent or remedy the corruption.[21]

As a remedy, the government sought the expulsion of Coia and other union leaders. It requested the appointment of one or more court liaison officers to carry out the duties of the general president and general executive board and to prevent any GEB action that would violate union members' rights or perpetuate criminal influence. The draft complaint also demanded that the union's constitution be amended to reform discriminatory hiring-hall procedures and to pro-

[20] The draft complaint, although never filed, is available on-line at http://www.laborers.org/complaint.html.

[21] The 1990 New York State (NYS) Organized Crime Task Force's final report, "Corruption and Racketeering in the NYC Construction Industry," identified ten New York City LIUNA locals that were controlled or heavily influenced by organized crime. For example, the report charged that "Housewreckers Union Local 95 is controlled by Vincent 'Chin' Gigante, boss of the Genovese Crime Family" (New York State Organized Crime Task Force 1990, p. 81), and that Cement and Concrete Workers Local 6A "had for years been controlled by Ralph Scopo, a soldier in the Colombo Crime Family" (New York State Organized Crime Task Force 1990, p. 79).

All use subject to https://about.jstor.org/terms

vide for direct rank-and-file election of officers. The court was also asked to appoint an elections officer.

After three months of negotiations, LIUNA and the DOJ announced a unique settlement. The DOJ agreed to forgo filing the civil RICO complaint if LIUNA established its own internal anticorruption program and signed a consent decree stipulating to the requested relief. The settlement provided that the consent decree could be filed at DOJ's option until February 1, 1998, if the DOJ found that LIUNA failed to clean up the union. The agreement was later extended to 2001 and then, with certain election reforms added, to 2006.

B. The LIUNA's Internal Reform Program

The LIUNA instituted radical changes in its governing structure and constitution and adopted an Ethical Practices Code. To enforce the provisions of the Ethical Practices Code, LIUNA adopted a set of Ethics and Disciplinary Procedures and established four new positions: GEB attorney, filled by Robert Luskin, formerly a member of DOJ's Organized Crime and Racketeering Section, to investigate and prosecute violations of the Ethical Practices Code; inspector general, filled by Douglas Gow, retired FBI agent, to investigate violations of the Ethical Practices Code; independent hearing officer, Peter Vaira, former chief of the Chicago Organized Crime Strike Force and former U.S. attorney in Philadelphia, to serve as judge and arbitrator in all disciplinary actions; and appellate officer, Neil Eggleston, former federal prosecutor, to hear appeals of disciplinary cases.

These newly appointed officers initiated an aggressive program of corruption control. They established a confidential toll-free telephone number and a confidential post office box to solicit complaints from the LIUNA membership. By mid-1996, the reform officers had begun over 345 investigations, removed twenty-five union officers and members for violations of the Ethical Practices Code, removed all of Buffalo Local 210's officers on account of corruption, placed Chicago Local 8 under emergency trusteeship, actively assisted the United States government with its efforts to clean up the New York City Mason Tenders by hiring the former chief of the organized crime unit in the Southern District of New York to investigate the Mason Tenders, and announced an investigation of Arthur A. Coia (United States Congress 1996).

The LIUNA's election procedures were also reformed. Direct rank-and-file secret-ballot election of general president and general secretary-treasurer was added to the constitution. Additionally, LIUNA expanded its general executive board from ten to thirteen members and

This content downloaded from
162.10.217.184 on Sun, 14 Jun 2026 23:32:55 UTC
All use subject to https://about.jstor.org/terms

required that nine of the thirteen be elected by nine regions, making the GEB less accountable to the general president and more accountable to the membership. The LIUNA modified its procedures for the selection of delegates to union conventions and merged several locals that appeared to exist only to provide convention votes to organized crime. The LIUNA also hired an independent elections officer and two deputy election officers—jointly selected by the government and union—to monitor union elections. The union adopted a uniform set of job referral rules to prevent discriminatory hiring-hall practices. An independent accounting firm was hired to audit LIUNA's finances (United States Congress 1996).

In November 1997, GEB attorney Robert Luskin filed disciplinary charges against Arthur A. Coia, alleging that Coia associated with organized crime, permitted organized crime to influence union affairs from 1986 to 1993, and accepted illegal payoffs from a LIUNA service provider. The hearing, which lasted from April 14, 1998, until June 23, 1998, included over 500 exhibits and testimony that filled thousands of transcript pages. Independent Hearing Officer Vaira found that GEB attorney Luskin failed to prove the allegations of organized crime association and influence but did prove that Coia had violated the Ethical Practices Code by accepting illegal benefits from a LIUNA service provider. Vaira fined Coia $100,000 but permitted him to retain his office (Office of the Independent Hearing Officer 1999).

In December 1999, Coia retired as general president, acceding to the position of general president emeritus for life at an annual salary of $335,516 (Mulligan 1999). The GEB appointed Terrence O'Sullivan, Coia's chief of staff, to succeed Coia. The union agreed to continue to support the internal reform program and, until the completion of its 2006 general election, not to make any material changes to its governing structure without the government's prior approval. The DOJ officially ended its oversight. In January 2000, Arthur A. Coia pled guilty to defrauding the State of Rhode Island and the Town of Barrington, Rhode Island, of approximately $100,000 in taxes. In addition to restitution and a $10,000 fine, he agreed to be barred from any future role in LIUNA or its subordinate entities.

C. Conclusions

Historically, LIUNA, at the international and local levels, especially in Chicago and New York City, has been closely tied to Cosa Nostra crime families. Tony Accardo, one of the leading organized crime figures of this half century, exercised a great deal of influence in the union

This content downloaded from
162.10.217.184 on Sun, 14 Jun 2026 23:32:55 UTC
All use subject to https://about.jstor.org/terms

for many years. Accardo, his henchmen, and their successors controlled LIUNA's general president and the officers of many locals.

In 1994 the DOJ prepared the first major attack on LIUNA labor racketeering at the national level. The looming RICO suit led to a creative settlement between the government and the union. The monitors whom LIUNA hired to enforce its new code of ethics, all former federal law enforcement figures, appear to have made headway in cleaning up the international union. Nevertheless, the extent of the international union's commitment to reform remains to be seen. Clearly, a great deal of labor racketeering remains in the locals. Indeed, a number of the most notorious locals have themselves been put under court-ordered trusteeship (United States Department of Justice 2000).

The international union suspended John Serpico, labor racketeer and political power broker, from his union positions in 1995. Serpico then became a consultant for another union, a local of the International Union of Allied Novelty and Production Workers. He also served as president emeritus of the Central States Joint Board, which provides administrative services to Chicago-area locals. In the summer of 2001, Serpico and two associates were convicted of fraud and taking kickbacks in connection with steering union business to certain companies.

V. The International Longshoremen's Association

Drawing on labor leaders' statements, FBI investigations, prosecutions, and legislative hearings, PCOC called the International Longshoremen's Association "virtually a synonym for organized crime in the labor movement" (PCOC 1986, p. 33).[22] Ships entering harbors, day or night, need to be unloaded and reloaded quickly. Delay is expensive, even ruinous. This gave the longshoremen enormous leverage over shippers who were extorted for labor peace payoffs. (Admittedly, the containerization of seaborne cargo since the late 1950s undermined this leverage.) Labor racketeers also corrupted port employees to facilitate cargo theft, solicited illegal labor payoffs, and extorted stevedores (companies that load and unload seaborne cargo) (PCOC 1986, p. 35). "Throughout its history, the international has done little, if anything, to disturb *La Cosa Nostra* influence in its locals" (PCOC 1986, p. 37).

According to the PCOC, Cosa Nostra became the primary power

[22] David Dubinsky, president of the International Ladies Garment Workers Union, and a well-respected labor leader and reformer, proclaimed that the ILA was "a nest for waterfront pirates—a racket, not a union" (Dubinsky and Raskin 1977, p. 164).

This content downloaded from
162.10.217.184 on Sun, 14 Jun 2026 23:32:55 UTC
All use subject to https://about.jstor.org/terms

on the New York Harbor waterfront in 1937, when Anthony "Tough Tony" Anastasio (aka Anastasia) took control of the six New York harbor locals. (His brother Albert Anastasia was head of the infamous Murder Incorporated and boss of the crime group that later came to be known as the Gambino crime family.) "Under Anastasio, organized pilferage, strike insurance, kickbacks, and loansharking on the piers reached unprecedented levels" (PCOC 1986, p. 36). Anastasio delegated control of these locals to various organized crime members.

In 1953, the New York State Crime Commission issued a blistering report on labor racketeering in New York harbor. By the 1960s, organized crime exerted power and influence in ports all along the eastern and gulf coasts (PCOC 1986, pp. 39–40). The PCOC charged that Cosa Nostra completely controlled Thomas (Teddy) Gleason, who had succeeded the infamous Joseph Ryan as ILA international president (PCOC 1986, p. 39). The Gambino crime family controlled the ILA international union.[23] The Gambinos mostly controlled the New York side and the Genovese the New Jersey side of the New York/New Jersey harbor. After Anastasio died in 1963, control of ILA Local 1814 passed to Anthony Scotto, a son-in-law, who (from 1963 to 1979) flourished in the union, in organized crime as a capo in the Gambino crime family, and in New York City political circles.

In 1972, a Florida investigator told the Senate Permanent Subcommittee on Government Operations that "our information established that virtually every commodity affecting the transportation industry on the Dodge Island Seaport was under the control and domination of a small group of highly sophisticated and organized criminals" (United States Congress 1984*b*). In 1975, the FBI launched UNIRAC, an investigation of ILA racketeering in the ports of New York City, Miami, Wilmington, Charleston, and Mobile. Using undercover agents, electronic intercepts, and consensual recordings, UNIRAC uncovered systematic criminality and labor racketeering in every port. Ultimately, UNIRAC led to the conviction of over 100 persons, including twenty ILA leaders, among them Michael Clemente and Anthony Scotto, who held positions in both the ILA and Cosa Nostra. In 1979, Scotto was convicted of taking more than $200,000 in cash payoffs from employers (*United States v. Clemente et al.*, 494 F. Supp. 1310 [1980 U.S. Dist.]). New York's governor Hugh Carey, and two former New York

[23] The PCOC report found that the Genovese crime family controlled the Manhattan locals and the union's international. This is likely a typographical error. The Gambino family was known to control these locals and the international.

All use subject to https://about.jstor.org/terms

City mayors, John Lindsay and Robert Wagner, testified in his behalf at the sentencing hearing. (Scotto, a prominent Democratic Party fund-raiser, raised $1 million for Governor Hugh Carey's 1974 campaign and $50,000 for Mario Cuomo.)

The PCOC complained that, while UNIRAC was "a very successful operation demonstrating law enforcement skill and tenacity," there had been only sporadic subsequent investigations and prosecutions, leaving organized crime's influence intact all along the eastern seaboard (PCOC 1986, p. 43). In February 1981, the Senate Permanent Subcommittee on Investigations held hearings on waterfront corruption. The subcommittee's report summarized its findings:

> Witnesses testified that payoffs were a part of virtually every aspect of the commercial life of a port. Payoffs insured the award of work contracts and continued contracts already awarded. Payoffs were made to insure labor peace and allow management to avoid future strikes. Payoffs were made to control a racket in workmen's compensation claims. Payoffs were made to expand business activity into new ports and to enable companies to circumvent ILA work requirements.
>
> Organized crime was found to have great influence in the operation of the ILA and many shipping companies. Some shipping firms, because of fear or a willingness to participate in highly profitable schemes, have learned how to prosper in the corrupt waterfront environment. They treat payoffs as a cost of doing business.
>
> The free enterprise system has been thrown off balance. Contracts were not awarded on the basis of merit. The low bid did not beat the competition. Profitability was not based on efficiency and hard work but rather on bribery, extortion and questionable connections. The combination of these corrupt practices was a recipe for inflationary costs and economic decline.
>
> Much of the corruption on the waterfront stemmed from the control organized crime exercises over the ILA, a condition that has existed for at least 30 years. (United States Congress 1984*b*)

Quoting the 1984 Senate Permanent Subcommittee on Investigations' findings, PCOC concluded that, despite its successes, UNIRAC had not purged organized crime from the ports. "Corrupt practices . . . already have begun to return to the Atlantic and Gulf Coast docks. What is needed, then, is continued scrutiny of the maritime industry by government agencies" (PCOC 1986, p. 65). In 1987, Teddy Glea-

son retired as general president of the international union and was succeeded by his vice president, John Bowers, who has held the presidency ever since (Gleason died in 1992).

A. Civil RICO Suit against Six ILA Locals

On February 14, 1990, the U.S. Department of Justice filed a civil RICO suit (*United States v. Local 1804-1 et al., International Longshoremen's Association,* complaint, No. 90 Civ. 0963 [LBS] [S.D.N.Y. 1990]) against six New York harbor ILA locals, their executive boards and officers, the Genovese and Gambino crime families, the Westies, an Irish organized crime group allied with the Gambino family, and five waterfront employers.[24] The 125-page complaint charged that the waterfront had "been the setting for corruption, violence, and abuse of waterfront labor and business by New York La Cosa Nostra Families" for more than fifty years (*United States v. Local 1804-1 et al.*, complaint, p. 4). It further alleged that Cosa Nostra controlled the waterfront labor unions, that is, that the Genovese and Gambino crime families had exploited the locals, the shipping industry, and the longshoremen (*United States v. Local 1804-1 et al.*, complaint, p. 38). According to the government, despite the UNIRAC investigation and convictions, the Genovese and Gambino crime families, by means of their control of the ILA, continued to dominate many ports (*United States v. Local 1804-1 et al.*, complaint, p. 44). The complaint quoted the Senate Permanent Subcommittee on Investigations' 1988 report: "Organized crime continues to exercise control over the International and New York-New Jersey ILA locals" (*United States v. Local 1804-1 et al.*, complaint, p. 45). The civil RICO complaint compiled allegations of embezzlement, solicitation of bribes, benefit fund fraud, extortion of employers, and violation of the rank and file's rights through force and violence.

The U.S. Department of Justice asked the court to enjoin the organized crime defendants from participating in ILA affairs, from having any dealings with union officers and employees (*United States v. Local 1804-1 et al.*, complaint, p. 118), and from committing any acts of racketeering; DOJ sought to enjoin the defendant labor officials from associating with Cosa Nostra members or associates (pp. 118–19). The complaint sought a court-appointed liaison officer for each of the ILA

[24] The complaint did not include the ILA's international organization. However, International President John Bowers was named individually, as president of three of the six locals.

locals to "discharge those duties of the Executive Board[s]" and to "review the proposed actions of the Executive Board[s]" (*United States v. Local 1804-1 et al.*, complaint, p. 119), general elections to be run by a court-appointed trustee (*United States v. Local 1804-1 et al.*, complaint, p. 122), appointment of administrators to oversee the clean-up of the unions (*United States v. Local 1804-1 et al.*, complaint, p. 123), and the defendants' disgorgement of the proceeds of their labor racketeering (*United States v. Local 1804-1 et al.*, complaint, pp. 123–24). Rather than go to trial, the defendants entered into consent agreements.

B. Local 1804-1 (Bergen, N.J.)

On March 25, 1991, ILA Local 1804-1, and its executive board and officers entered into a consent judgment with the DOJ. Local 1804-1's current and future executive board and officers agreed to be enjoined from committing any acts of racketeering activity and from knowingly associating with members or associates of organized crime (*United States v. Local 1804-1 et al.*, consent judgment for Local 1804-1, p. 3). The consent judgment provided for the appointment of a monitor to oversee the local's operations until the 1997 election. The monitor would have blanket access to all union documents or information, authority to discipline union officers, agents, employees, and members, power to investigate corruption or abuse of union funds, and supervisory authority over the union's 1994 and 1997 elections (*United States v. Local 1804-1 et al.*, consent judgment for Local 1804-1, pp. 4–5). In addition, the monitor would have authority to review and veto union expenditures, union contracts, personnel decisions, and changes to the union's constitution and bylaws (*United States v. Local 1804-1 et al.*, consent judgment for Local 1804-1, pp. 5–6).

Local 1804-1 agreed to pay the monitor's salary and operating expenses, and not to oppose or interfere with the monitor's duties in any way (*United States v. Local 1804-1 et al.*, consent judgment for Local 1804-1, pp. 3–6). The consent judgment also provided for amendments of Local 1804-1's constitution, including salary limits for union officers, election of shop stewards, and discontinuation of union loans to union officers and members (*United States v. Local 1804-1 et al.*, consent judgment for Local 1804-1, pp. 7–8). The consent judgment permitted Local 1804-1's executive board to remain in office but required several board members to pay $100,000 to Local 1804-1's treasury (*United States v. Local 1804-1 et al.*, consent judgment for Local 1804-1, p. 11).

James Gill was appointed as 1804-1's monitor. The union's strategy was to strike a deal: if it expelled certain people, the union would be permitted to reform itself. This appears to have been exactly what happened; ten years after the settlement, very little appears to have changed.

C. Local 824, Local 1809, and Local 1909 (West Side Locals)

On March 26, 1991, Locals 824, 1809, and 1909 (collectively known as the West Side Locals), and their executive boards and officers entered into a consent judgment. The defendant union officials, without admitting wrongdoing or violation of law, agreed that persons holding office in the West Side Locals would be enjoined from knowingly associating with any member or associate of organized crime (*United States v. Local 1804-1 et al.*, consent judgment for the West Side Locals, p. 8). The consent judgment provided for the resignation of executive board members John Potter and Thomas Ryan, and enjoined both men from holding ILA office in the future (*United States v. Local 1804-1 et al.*, consent judgment for the West Side Locals, p. 2). ILA international president John Bowers (also president of the three West Side Locals) and executive board member Robert Gleason agreed to resign their memberships in an employer association, the NYSA (New York Shipping Association)–ILA Contract Board (*United States v. Local 1804-1 et al.*, consent judgment for the West Side Locals, p. 4). The consent judgment stipulated Department of Labor supervision over the 1991 and 1994 elections in the three locals and gave the DOL full access to union records and information necessary to carry this out (*United States v. Local 1804-1 et al.*, consent judgment for the West Side Locals, pp. 3–4).

Local 1909 agreed to a court-appointed employment practices officer to develop and implement rules and procedures to assure fair hiring, to discontinue no-show jobs, and to discipline those who violate hiring or employment procedures (*United States v. Local 1804-1 et al.*, consent judgment for the West Side Locals, pp. 4–6). The employment practices officer was granted full access to union records necessary to fulfill his duties, was to report at least every six months to the court, was to be paid by the union, and was to continue in office until the certification of the 1994 union election (*United States v. Local 1804-1 et al.*, consent judgment for the West Side Locals, pp. 6–7). The West Side Locals agreed not to obstruct, oppose, or otherwise interfere with the work of the DOL or the employment practices offi-

cer (*United States v. Local 1804-1 et al.*, consent judgment for the West Side Locals, p. 9). John Bowers and the ILA proclaimed the consent judgment a complete victory, saying it was just short of the judge throwing the case out, and claiming that nothing exceptional had been granted to the government in exchange for the settlement.

D. The Civil RICO Suit's Individual Defendants

The remaining defendants went to trial in spring 1991, but only four defendants persisted to judgment; the rest settled. On June 1, 1991, Anthony Scotto, one of the most powerful labor racketeers in U.S. history because of his high rank in both the Cosa Nostra and the union, settled with the government attorneys, agreeing to pay $50,000 and to be permanently banned from union office or any activity that would associate him with the union or any of the union's employers. On account of ERISA's antiforfeiture provision, Scotto would still receive his pension.

E. Local 1814 Consent Decree

On December 17, 1991, ILA Local 1814, its executive board and officers entered into a consent decree with the DOJ. The individual defendants and officers, without admitting wrongdoing, acknowledged past allegations, testimony, public findings, and criminal prosecutions. They agreed to be enjoined from knowingly associating with any member of organized crime (*United States v. Local 1804-1 et al.*, consent decree for Local 1814, pp. 2–3).

The consent decree provided for a court-appointed monitor with full access to the union's books, records, and other information, disciplinary authority, and supervisory authority over the 1993 and 1996 elections (*United States v. Local 1804-1 et al.*, consent decree for Local 1814, pp. 3–7). The monitor, who would be paid by the union, was authorized to review and veto union expenditures, contracts, appointments, and proposed amendments to the constitution and bylaws (*United States v. Local 1804-1 et al.*, consent decree for Local 1814, pp. 8–9). The monitor had authority to hire legal counsel, accountants, consultants, investigators, and any other personnel necessary to assist in his duties (*United States v. Local 1804-1 et al.*, consent decree for Local 1814, p. 10).

The consent decree included amendments to Local 1814's constitution providing for secret-ballot rank-and-file elections of shop stewards, and limitations on officers' compensation (*United States v. Local*

All use subject to https://about.jstor.org/terms

1804-1 et al., consent decree for Local 1814, p. 14). Moreover, executive board members Anthony Pimpinella and Joseph Colozza had to resign from their Local 1814 positions and agree never to hold ILA employment again (*United States v. Local 1804-1 et al.*, consent decree for Local 1814, p. 16). Anthony Ciccone had to resign but was permitted to remain a union member and continued to receive union benefits (*United States v. Local 1804-1 et al.*, consent decree for Local 1814, p. 16). The other members of the executive board were permitted to keep their positions. Local 1814 is no longer the influential local it once was because there are few functioning docks left in Brooklyn, but the Gambino crime family's influence remains strong.

F. Local 1588 (Bayonne, N.J.)

On January 3, 1992, the last of the six locals named in the 1990 civil RICO suit, Local 1588 and its executive board, entered into a consent agreement with the government.[25] The consent agreement created the office of ombudsman, which would exist until the 1993 election, and extend beyond at the option of the union's executive board or membership (*United States v. Local 1804-1 et al.*, consent order for Local 1588, p. 7). This ombudsman's office was to be staffed by two individuals, one appointed by the court and one by the union (*United States v. Local 1804-1 et al.*, consent order for Local 1588, pp. 3–4). The ombudsman was charged with enforcing the union's constitution and bylaws (*United States v. Local 1804-1 et al.*, consent order for Local 1588, p. 3). The ombudsman's office had power to file disciplinary charges, but only after consulting with the union's executive board (*United States v. Local 1804-1 et al.*, consent order for Local 1588, p. 4). Rank-and-file union members were encouraged to file confidential complaints with the ombudsman's office.

The consent agreement provided for election of stewards and constitutional changes to disciplinary procedures (*United States v. Local 1804-1 et al.*, consent order for Local 1588, pp. 10–11), Department of Labor supervision of the local's 1993 election (p. 8), and an injunction

[25] Local 1588's secretary-treasurer, Donald Carson, was convicted in 1988 of RICO conspiracy and extortion involving Local 1588 (United States v. DiGilio, 86 Cr. 340 [D.N.J.][DRD], aff'd mem., 870 F.2d 652 [3d Cir. 1989], vacated and remanded, 110 S. Ct. 2162 [1990]). Following his conviction and incarceration, Local 1588's president and secretary-treasurer declined to run for office in 1990. The consent order acknowledged that "the new executive board already has taken steps to return Local 1588 to fiscal soundness and to remove the taint of organized crime corruption" (United States v. Local 1804-1 et al., consent order for Local 1588, p. 2).

preventing George Weingartner and Robert Lake from serving as shop stewards or in any other ILA office or position (pp. 9–10). Robert Gaffey was appointed as Local 1588's ombudsman. (He had formerly served as an assistant U.S. attorney and as chief counsel to the investigations officer in the IBT International case.) During his time in office, Gaffey's main contribution to the cleanup of Local 1588 was to assist in the creation of a slate of reform candidates to oppose Donald Carson's Genovese-controlled slate. The leader of the "reform" slate was convicted of stealing union funds and was removed from office. Allegedly, the Genovese crime family continues to exercise substantial influence in Local 1588.

G. Conclusions

Recent legal developments demonstrate that the government's efforts to reform the ILA since the PCOC report have not fundamentally changed the structure and personnel of the ILA international union. In January 2002, the U.S. attorney's office (Brooklyn) announced an indictment against eight leaders and members of the Genovese crime family, alleging extortion from waterfront employers and businesses in the New York metropolitan area, northern New Jersey, and Miami (*United States v. Liborio "Barney" Bellomo et al.*, Cr. No. 01-416 (S-8) ILG [2002]). The indictment accuses the mob defendants of violating ILA members' Landrum-Griffin rights and of defrauding the ILA's pension and welfare fund.

In May 2002, a major investigation by the New York–New Jersey Waterfront Commission resulted in the indictment of eight persons connected to the Genovese crime family or ILA Local 1588, including the local's president, John Timpanaro. The indictment charges that through extortion and the withholding of premium job assignments, the defendants demanded kickbacks and cash payments from dozens of Local 1588 members. Some defendants were also charged with participating in a scheme to bill the marine terminal for truck chassis parts that were never delivered. On June 3, 2002, the U.S. attorney (E.D.N.Y.), the New York state attorney general, and the FBI announced the arrests and indictments of seventeen members and associates of the Gambino crime family or officials of ILA Local 1814 and Local 1 involved with waterfront racketeering. The defendants, including Local 1814 president and ILA vice president, Frank Scollo, are charged with extortion, wire fraud, loan sharking, operating illegal gambling businesses, money laundering, witness tampering, and other

This content downloaded from

All use subject to https://about.jstor.org/terms

related crimes. Among other things, the indictment charges the defendants with placing mob members and associates in top union jobs, carrying out day-to-day extortion, loan sharking, and a scheme to defraud the ILA health fund. In late June 2002, the *New York Times* reported that the government is considering a RICO suit against the ILA international union.

VI. Perspectives on Labor Racketeering

Labor racketeering has been a major form of crime throughout the twentieth century. It has involved tens of thousands of individual crimes, some of which have been perpetrated by some of the nation's most powerful criminals and crime families. It has victimized tens of thousands of workers who have had their rights trampled on, their contracts sold out, and their pension funds looted. It has undermined the labor movement, one of the most powerful and important sociopolitical institutions in American society. While the problem has attracted enormous law enforcement, political, and media attention, especially in the last two decades, it has attracted practically no criminological attention.[26]

A. Criminology and Labor Racketeering

Labor racketeering could be studied as a form of organizational crime; from this perspective a comparative analysis of corporate crime and union crime would be especially fruitful. What kinds of criminal opportunities do both types of organizations generate? What potential and limits do corporate stakeholders and rank-and-file union members, respectively, have for preventing and remediating racketeering? Do other stakeholders in either type of organization play a role in preventing or facilitating corruption?

Labor racketeering could also be approached from the standpoint of the criminal offenses that it spawns: extortion, embezzlement, fraud, violence, hijacking, restraint of trade (enforcing cartels), and denial of intangible rights of union members to a democratically run union. Yet another option is to approach labor racketeering from the standpoint of the offender, either as a subcategory of white-collar crime or as a subcategory of organized crime. This essay approaches the topic from the latter perspective. Our thesis is that the twentieth-century history

[26] Likewise, it has attracted practically no interest among labor law scholars. But see Goldberg 1989; Summers 1991.

All use subject to https://about.jstor.org/terms

of American organized (some say "syndicate") crime could not be properly written without paying a great deal of attention to the influence, power, and wealth that the Cosa Nostra crime families derived from their association with international and local unions.

The Italian-American organized crime families obtained their foothold in the unions in the 1920s and 1930s when management and labor both called on gangsters for protection and as a counterforce to communist and socialist elements. During this period, the crime groups were able to take advantage of an immigrant culture of which they were a part. With the repeal of national alcohol prohibition in 1933, labor racketeering became an even more important source of revenue and power for organized crime. After a brief effort in the mid-1950s to oppose organized crime infiltration, the AFL-CIO apparently concluded that the labor movement would suffer more from opposing organized crime than from accommodating it (Hutchinson 1970).[27]

Unions have proved highly vulnerable to corruption and racketeering. Once the dues checkoff privilege was recognized, unions became the recipients of a steady stream of money deducted from workers' paychecks. Corrupt union officers easily diverted funds into their own pockets, sometimes by theft but sometimes via extravagant salaries and perks. The emergence of huge union pension and welfare funds in the 1950s made unions even more attractive to organized crime. As Lipset, Trow, and Coleman (1956) recognized nearly a half century ago, most union members are apathetic. They have certainly not been able to successfully oppose organized crime groups.

The sociopolitical status and economic strength of the Cosa Nostra organized crime families throughout the twentieth century have been significantly augmented by their influence in local and international

[27] An excellent example of the AFL-CIO attitude toward corruption and racketeering in unions is David Elbaor and Larry Gold's (1985) monograph, *The Criminalization of Labor Activity: Federal Criminal Enforcement against Unions, Union Officials and Employees.* This short monograph (by the chief counsel of the AFL-CIO) denies the existence of any significant organized crime problem in the labor movement and attributes investigations and prosecutions to a sinister plan by big business and big government to undermine the labor movement. The following excerpt provides a flavor: "The government continues to seek a substantial increase in money and personnel to carry out its prosecutorial campaign against organized labor, peddling sensational recitations of union crime and preying on public willingness to equate labor with corruption. Ironically, the motley assortment of prosecutions in recent years suggests not that the government's substantial investigatory resources have produced great results, or proven organized crime's permeation of the labor movement, but that most union crime is isolated, unconnected with larger criminal networks, involves relatively small sums of money, and is of a technical nature" (p. 66).

All use subject to https://about.jstor.org/terms

unions. Unions have provided organized crime with jobs, patronage, money, and power. Businesses and government agencies have to deal with organized crime figures who hold union office. Corrupt businessmen have allied themselves with corrupt union bosses, bribing them for sweetheart contracts and for ignoring or circumventing terms of collective bargaining agreements. The status that the labor racketeers derived from their positions or associations with unions translated into political power, especially in the heyday of the urban political machines. Unions provided endorsements, workers, and campaign contributions to political candidates. In return, the politicians looked the other way when the union bosses lined their own pockets.

There are many reasons why the American labor movement has declined over the twentieth century, but one factor worth considering is the negative impact of racketeering. To an extent, perhaps, some unions at some time, under some leaders, benefited from being allied with organized criminals; such alliances may have increased their leverage at the bargaining table. But labor racketeers are out for themselves and their organized crime cronies, not for the rank and file. They promote themselves and their cronies to leadership positions within the unions, draw excessive salaries, sell out the members' contractual rights, and loot the pension and welfare funds. They show no interest in organizing and no interest, of course, in union democracy. Labor idealists who wish to democratize and strengthen their unions cannot succeed in unions penetrated by organized crime. Indeed, the taint of organized crime may partly explain the failure of the labor movement in the second half of the twentieth century to attract the energy and idealism of the younger generations.

B. Criminal Justice and Labor Racketeering

As late as the 1980s members of Congress, labor officials, businessmen, politicians, and scholars considered the Italian-American Cosa Nostra crime families invincible. The 1986 President's Commission on Organized Crime was highly pessimistic about the prospects for purging the labor movement of Cosa Nostra racketeers.

Less than two decades later, the prospects for change look much brighter. The Cosa Nostra crime families, under constant legal attack for almost two decades, have been significantly weakened, in some cities practically eliminated (Jacobs and Gouldin 1999). The boss of every Cosa Nostra crime family has been imprisoned; in many cases their successors and their successors' successors have followed them to

This content downloaded from
162.10.217.184 on Sun, 14 Jun 2026 23:32:55 UTC
All use subject to https://about.jstor.org/terms

jail. Dozens of high-level Cosa Nostra members have become cooperating witnesses, assisting in the investigation and prosecution of their former colleagues, their rackets, and corrupted unions and businesses. This unprecedented attack on "traditional organized crime" has had repercussions for labor racketeering. For one thing, the organized crime families are much weaker than they were a generation ago; they have fewer and weaker resources to bring to bear in support of labor racketeering activities. For another thing, the federal government has attacked Cosa Nostra by powerfully attacking its base in labor unions.

Civil RICO has been the great engine of the government's onslaught. Beginning with the 1982 suit against IBT Local 560, government lawyers have brought one major labor racketeering case after another against local unions and international unions, including the IBT, HEREIU, ILA, and LIUNA (complaint prepared but not filed). Civil RICO allows the government to address an entire crime problem, like a mobbed-up union. There have been approximately twenty trusteeships resulting from DOJ civil RICO suits brought against unions (see app. table A1); unfortunately, there has never been a comprehensive accounting.

The civil RICO suits have been advantageous for the government because they have led to court-appointed trustees, almost always former prosecutors with major experience investigating and prosecuting organized crime cases. There is no uniform role or set of powers for these court-appointed trustees. Each judge or each consent agreement provides the trustee or trustees with case-specific authority. Moreover, each court or consent decree provides for how the trusteeship will be funded and for how long; funding has varied from generous to inadequate.

The continued interest and support of the presiding judge is critical to the court-appointed trustee's success. If the judge makes it clear that reform of the union is a nonnegotiable goal that the court will see through until victory, rank-and-file members will be more willing to step forward to work with the trustee and to challenge the racketeers for union office. But as long as a feeling persists in the union that the judge will lose interest, the trusteeship run out of funds, and the trustee become distracted with other work, the rank and file will remain intimidated, demoralized, and disorganized, anticipating the return of mob dominance.

The FBI, DOL, OCRS, and the U.S. attorney's office also play key roles in determining the success of the trusteeship. If they stay involved, they can help the trustee identify union members who continue

This content downloaded from
162.10.217.184 on Sun, 14 Jun 2026 23:32:55 UTC
All use subject to https://about.jstor.org/terms

to associate with organized crime, and they can assist in putting together disciplinary cases seeking a corrupt member's expulsion from the union. Continued investigations can also lead to a new round of criminal charges and civil RICOs. The FBI, DOL, and U.S. attorney can also keep the pressure on the trustee to be aggressive and creative in his reform efforts. The trustee's success depends upon his authority and resources, whether he can appoint paid assistants, and whether the union members are persuaded that he will be on the job until the racketeers are purged and union democracy restored. Perhaps even more important are the skills, creativity, determination, and competency of the trustee. Most of the trustees are former prosecutors. This facilitates coordination with the Department of Justice and equips the trustee to investigate racketeering and other wrongdoing. But it does not facilitate the fostering of union democracy and the energizing of a plundered and demoralized union. Those tasks can best be carried out by knowledgeable, skilled, and charismatic trade unionists. Some trusteeships have been fortunate to have had both types of trustees, but many have not.

A court-appointed trusteeship is not a panacea. Many trustees have not been successful. While there has never been a study of the successes and failures of RICO suits against mobbed-up international and local unions, our impression is that less than half could be called successful and only a few, at least to this point, could be called completely successful. If the court-appointed trusteeships are to fulfill their potential as an organized crime control strategy, much research needs to be done on how to achieve success. To date, only the IBT Local 560 trusteeship has attracted scholarly attention (Goldberg 1989; Summers 1991; Jacobs and Santore 2001).

The dozens of trustees who have been appointed to clean up corrupt unions have never been brought together for a conference.[28] Their numerous reports to their respective judges have not been assembled and therefore are not available to new trustees. After almost twenty years of such initiatives, there are neither "how to" manuals nor any materials whatsoever on how a trustee can maximize the chances of success. Here there are surely roles for the National Institute of Justice, private foundations, and university-based criminologists, among others.

It is hard for someone interested in labor racketeering to understand

[28] In 1989, some of the court-appointed trustees testified regarding the successes and failures of their trusteeship (see United States Congress 1989).

This content downloaded from
162.10.217.184 on Sun, 14 Jun 2026 23:32:55 UTC
All use subject to https://about.jstor.org/terms

why the National Institute of Justice has shown no interest in sponsoring research on labor racketeering or its remediation; such research would undoubtedly be valuable to scholars and law enforcement officials in other countries that face serious organized crime problems. Perhaps the "blame" lies with the academic research community that, for one reason or another, has not focused much attention on organized crime, much less on labor racketeering. The subject, of course, is somewhat politically sensitive. But if political sensitivity has not prevented DOJ's prosecutorial wing from exposing and attacking labor racketeering, it makes no sense for DOJ's research wing to avoid studying the subject in aid of the department's future remedial efforts.

This is not the place to present a full-scale research agenda on the subject of labor racketeering. Suffice it to say that we need case studies on each of the major initiatives against labor racketeering. We need to carefully document and analyze the strategies used to purge corrupt elements from the unions and to rebuild the unions' democratic structures and processes. Such case studies, carefully coordinated and analyzed, and supplemented by joint meetings with the individuals who carried out these remedial efforts, would yield policy recommendations of great assistance to future initiatives in the United States and in other countries facing similar or analogous organized crime problems.

A final note. While organized crime controlled labor racketeering may be fading, that does not mean that labor corruption will die out as well. Dishonest officials, unconnected to organized crime, will always be in a position to embezzle money, defraud their unions, and extract excessive fees and reimbursements. The government cannot (and should not) try to monitor and regulate all the union locals and internationals in the country. In the final analysis, only an energized and watchful rank and file can assure that dishonest union officials will be swiftly exposed and deposed.

Conceptualizing Criminal Governance

Benjamin Lessing

In informal urban areas throughout the developing world, and even in some US and UK neighborhoods, tens if not hundreds of millions of people live under some form of criminal governance. For them, states' claims of a monopoly on the use of force ring hollow; for many issues, a local criminal organization is the relevant authority. Yet the state is far from absent: residents may pay taxes, vote, and even inform on gangs as punishment for abusive behavior. Criminal governance flourishes in pockets of low state presence, but ones that states can generally enter at will, if not always without violence. It thus differs from state, corporate, and rebel governance because it is embedded within larger domains of state power. I develop a conceptual framework centered around the who, what, and how of criminal governance, organizing extant research and proposing a novel dimension: charismatic versus rational-bureaucratic forms of criminal authority. I then delineate the logics that may drive criminal organizations to provide governance for non-members, establishing building blocks for future theory-building and -testing. Finally, I explore how criminal governance intersects with the state, refining the concept of crime–state "symbiosis" and distinguishing it from neighboring concepts in organized-crime and drug-violence scholarship.

Lurking behind a well-known fact—rapid urbanization has left huge populations living in informal areas—lies a startling truth: tens if not hundreds of millions of people live under some form of criminal governance. Who, what, and how criminal organizations govern all vary enormously. In the favelas of Rio de Janeiro, Brazil, heavily armed drug syndicates provide everyday order, while police enter almost exclusively in lethal raids that send residents scrambling for cover (Arias and Barnes 2017). In São Paulo's periphery, a hegemonic prison gang bans unauthorized homicides and resolves disputes via juries of imprisoned members, but maintains a light territorial presence; police enter at will but do not challenge the gang's authority, and a peaceful, low-homicide "symbiosis" (Denyer Willis 2009) obtains. In Medellín, Colombia, hundreds of neighborhood gangs enforce property rights, tax local businesses, provide high-interest loans, and even produce and sell food staples; in nearby Cali, gangs take little interest in governing civilians (Arias 2017; Blattman et al. 2020). Even in the United States and the UK, criminal governance at the local level can be intense, if largely off the radar (Campana and Varese 2018; Jankowski 1991).

What unites these cases is that, for those governed, states' claims of a monopoly on the legitimate use of force ring hollow; for many quotidian issues, a local criminal organization is the relevant authority. Yet the state is far from absent: residents may pay taxes, vote, and call the police for problems beyond gangs' purview—or even to

A list of permanent links to Supplemental Materials provided by the authors precedes the References section.

Benjamin Lessing is Associate Professor of Political Science at the University of Chicago and is a 2019 Andrew Carnegie Fellow (blessing@uchicago.edu). His first book, Making Peace In Drug Wars *(Cambridge University Press, 2017), examines armed conflict between drug cartels and the state in Colombia, Mexico, and Brazil. His second book, under contract at Cambridge University Press, is tentatively titled* Criminal Leviathans: How Gangs Govern, Organize Crime, and Challenge the State from Behind Bars; *a co-authored article from this project appeared in the* American Political Science Review *in 2019. Lessing has also founded the Criminal Governance in the Americas project, which is measuring the extent and intensity of gang rule over civilian populations throughout Latin America. Prior to his PhD at UC Berkeley, Lessing lived in Rio de Janeiro for five years, first as a Fulbright scholar, later conducting field research on arms trafficking in Latin America and the Caribbean for non-governmental organizations including Amnesty International, Oxfam, and Viva Rio, Brazil's largest NGO.*

He graciously acknowledges support from: the Harry Frank Guggenheim Foundation, the Social Science Research Council, the National Science Foundation, the Center for International Social Science Research, and the Pearson Institute for the Study and Resolution of Global Conflict at the University of Chicago, and award W911-NF-1710044 from the US Department of Defense and US Army Army/Army Research Laboratory under the Minerva Research Initiative. inform on gangs as punishment for abusive behavior (e.g., Barnes 2018). States may actively contest criminal authority, but just as often they ignore, deny, or even collaborate with it. The results are distinctly non-Weberian: states and the criminal groups they are purportedly trying to eliminate form a "duopoly of violence" (Skaperdas and Syropoulos 1997, 61), one that can be competitive or collusive (Arias 2017; Barnes 2017), turbulent or stable.

This duopoly of violence distinguishes criminal governance from both state governance and common forms of non-state governance. In our workplaces, civic organizations, and even families we are subject to the rules, impositions, and decisions of those vested with authority. But in all these cases, as Weber (1946) pointed out, the state is the final enforcer and enabler of such authority. No such backstop underlies governance by non-state armed groups: their authority rests on their own coercive capacity, in at least nominal opposition to the state's. In this, criminal governance resembles rebel governance. Yet rebels' opposition is starker, and rebel governance—generally understood as part of a larger "competitive state-building" strategy (Kalyvas 2006)—typically occurs in "liberated zones" of near-exclusive control (e.g., Arjona 2016; Weinstein 2006). Criminal groups' opposition is subtler; they rarely establish strong territorial control, confront state forces, or seek to supplant state governance entirely. Consequently, criminal governance often hides in plain sight. It can thrive in backwaters and bustling metropoles alike, persisting through economic booms and busts, its relationship to shifting rates of crime or violence largely unexplored.

Indeed, what most distinguishes criminal governance from both state and rebel governance is its *embeddedness.* It flourishes in pockets of state weakness that are nonetheless surrounded and intermittently penetrated by strong state power, like prisons and low-income neighborhoods. To lump criminal governance in with other forms of non-state governance elides its most intriguing characteristics: simultaneously born of, shaped by, in opposition to—but in subtle ways complementing—state power. "Born of" because legislating, and hence outlawing, is a primordial state function (Koivu 2018); states may fight crime, but they create "the criminal." "Shaped by" because virtually all state actions, from policing to zoning, from infrastructure provision to welfare policy, have substantial effects on criminal groups' incentives and capacity to provide governance. "In opposition but complementary to" because criminal governance, while it seeks to keep some parts of the state out, may allow others in. For example, after the Okaida prison gang conquered and pacified a violent favela neighborhood in João Pessoa, Brazil, it specifically prohibited crimes against state social-service providers so that they would feel safe enough to resume their visits, to residents' great relief.[1]

As this example suggests, the embeddedness of criminal governance can produce unexpected and paradoxical crime–state dynamics (e.g., Arias and Barnes 2017). State repression itself—especially mass incarceration and drug prohibition—can inadvertently furnish the human and financial resources criminal groups use to govern (Cruz 2011; Dias 2009; Lessing 2017; Skarbek 2011). Conversely, criminal governance can lead to reduced state repression, in part by being *useful* to states. Recent scholarship has identified cooperative crime–state arrangements based on corruption, alliance against other armed threats, or outright crime–state integration (Barnes 2017; Koivu 2018; Snyder and Durán-Martínez 2009). Criminal governance points to distinct, "symbiotic" relationships (Adorno and Dias 2016; Denyer Willis 2009). Criminal organizations can bring order to spaces—especially urban peripheries and prison systems—that states perennially find difficult to govern. As these spaces expand, criminal governance may become increasingly important to social stability, and contribute, however perversely, to state-building itself.

Historically, state formation often depended crucially on collaboration with, and absorption of, criminal groups (e.g., Andreas 2013; Barkey 1994; Koivu 2018). In the modern era, and particularly in the context of a global war on drugs, the criminal domain has been cordoned off in important ways from the state. The same governments that openly seek out and strike peace deals with armed rebels systematically rule out negotiation with criminal groups—or even alternative policies that might reduce violence—as morally corrupt and politically toxic (e.g., Cruz and Durán-Martínez 2016). Yet criminal governance persists. Given its prevalence in developing countries, and its presence even in wealthy ones, it is likely the most common form of oppositional non-state governance, affecting millions of citizens across political, social, and economic contexts.

Political science has yet to adequately grapple with this reality. Empirically, the extent and range of variation of criminal governance remain largely unmeasured. Analytically, cognate literatures on state formation and non-state governance offer some traction but also obscure key aspects of how and why gangs actually govern. To be sure, scholars have provided rich ethnographies of criminal governance (e.g., Blok 1974; Feltran 2010; Jankowski 1991; Zaluar); warned of its potentially disastrous effects on democratization, citizenship, and the rule of law (e.g., Arias 2006; Córdova 2019; Leeds 1996; O'Donnell 1993); explored its causes (e.g,. Barnes 2018; Duncan 2015; Ley, Mattiace, and Trejo 2019; Yashar 2018); and developed typologies (e.g., Arias 2017; Barnes 2017). Building on these contributions, this article develops a generalizable conceptual framework that delimits criminal governance, its key dimensions of variation, and its underlying logics.

I make four contributions. First, I define criminal governance and situate it with respect to corporate, state, and rebel governance. I argue for a broad definition that encompasses not only governance over non-criminal "civilians"[2] but also over both members and non-member

0123

criminal actors and markets. Second, I develop a set of dimensions centered around straightforward questions—the who, what, and how of criminal governance—drawing on extant research to illustrate ranges of variation. Most novel is a Weberian dimension, contrasting charismatic and rational-bureaucratic forms of criminal authority. Third, I discuss the "why?" of governance, distinguishing several logics or motives that may lead criminal organizations to provide (or not) governance for non-members. Finally, I explore how criminal governance intersects with the state, refining the concept of crime–state "symbiosis" (Lupsha 1996) and distinguishing it from neighboring concepts. I conclude with a key implication: just as criminal governance cannot be understood in isolation from the state, state governance can no longer be fully understood apart from criminal governance (e.g., Arias 2006; Barnes 2017; Varese 2010).

What Is Criminal Governance?

Definitions, Scope Conditions, and Sources

I propose a simple, broad definition of criminal governance: the imposition of rules or restriction on behavior by a criminal organization. This includes governance over members, non-member criminal actors, and non-criminal civilians. Throughout, I use "criminal organization" (CO) as an atheoretical, inclusive descriptor to refer to any group engaged in criminal activity. I thus avoid the perennially contested question of what is, and is not, "organized crime" (e.g., Schelling 1971; Varese 2010). While governance is rightly seen as a key characteristic of organized crime (e.g., Campana and Varese 2018), it is practiced by a wide variety of groups, including local street gangs and diffuse prison-based organizations. Whether the type, size, or sophistication of COs correlate with their governance practices are empirical questions about which a conceptual framework should remain agnostic.

These definitions hinge on the word "criminal", which is contentious not only analytically but politically. A simple legal definition—say, "in violation of one or more laws"—is both overly inclusive, because rebels also violate laws, and naive to the ways that states sometimes criminalize broader populations and spaces (e.g., Simon 2007; Soss and Weaver 2017). Moreover, states are generally far more willing to negotiate with "political" than "criminal" armed groups, based on the perceived moral superiority of ideological motives over purely economic ones. This makes criminal status itself a field of real-world contention, with states undisposed to negotiation labeling insurgencies as "narco-terrorists" on the one hand and drug-cartel PR campaigns avowing political objectives on the other.[3] Scholars too, of course, find distinguishing between "greed and grievance" theoretically and empirically difficult. Focusing on armed groups' stated objectives offers some traction—since COs rarely seek formal state power—but nonetheless produces borderline cases, such as "lapsed" insurgent groups primarily engaged in illicit economic activities.

Scholars of criminal governance need not settle these thorny questions; they should, however, remain attuned to the politics surrounding "criminal status" in their cases. Many COs do not contest, and may even embrace, their status: Brazil's PCC, for example, calls itself the "Party of Crime." Murkier are armed groups like vigilantes, *autodefensas*, and paramilitaries that position themselves, and may be seen by segments of the population, as "lesser evils". Whether groups that blur the line govern differently than clear-cut COs, and how the politics of "criminal status" plays into such differences, are important avenues for research.

Another important scope condition concerns "governance." Provision of public order and enforcement of property rights undoubtedly constitute governance, but other common CO activities, on their own, may not. Can a criminal group that extorts residents without providing *any* services or imposing any rules be said to govern? Or a drug gang that occupies a street corner but otherwise imposes no rules on other traffickers or residents? One reason to exclude such cases is that stretching the concept to include them dilutes the puzzles of governance. It is not surprising that gangs predate, control the physical space where they conduct illegal transactions, or regulate those transactions. What *is* puzzling is that they also provide public goods and impose rules on additional actors.

As such, I adopt the following criterion: governance occurs when the lives, routines, and activities of those governed are impinged on by rules or codes imposed by a CO. Pure extortion, where the only rule is "pay," does not count. Conversely, and less plausibly, providing public goods while imposing no rules at all is closer to philanthropy than governance. These are theoretical limit cases; few COs, I suspect, engage in either pure extortion or philanthropy. Still, scholars may end up revising these scope conditions if real-world cases need to be accommodated.

To illustrate the concepts developed here, I draw empirical examples from multiple sources, including extant scholarship, journalistic accounts, and my own research in Latin America. The latter spans multiple projects—some collaborative—including hundreds of interviews, fieldwork in dozens of informal urban communities, and visits to more than twenty prisons in Brazil, Colombia, and El Salvador.[4] From these combined sources, I chose examples that illustrate the empirical range of governance activities, institutions, styles, and functions; in general, I make no claims of examples' novelty or representativeness.

Situating Criminal Governance

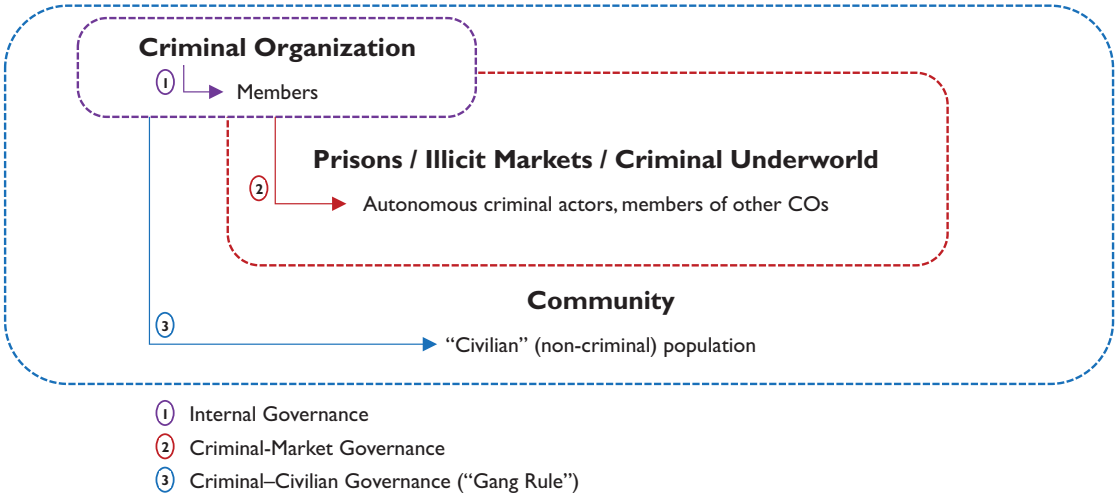
Criminal governance resembles, but differs critically from, other forms of governance. COs' elaborate bookkeeping, recruitment, and internal management practices draw

0124

parallels to corporate governance. When gangs provide public security and dispute resolution, while imposing rules on and sometimes taxing residents, it is tempting to treat them as "mini-states" (e.g. Skaperdas and Syropoulos 1997). Alternatively, we might note the lack of legal property rights and trust in illicit markets (Gambetta 1993), and conceive of criminal groups as spontaneous, non-state sources of governance (e.g., Skarbek 2011). Finally, state violence against COs, who in turn often frame their governance over marginalized civilians as a "struggle" against oppression (e.g., Lima 1991), suggests criminal governance as a diminished subtype of rebel governance. These approaches each yield some insight, but are misleading or incomplete in important respects.

First, criminal governance is more than corporate governance. Of course, COs generally seek to earn illicit profits, and states often invoke COs' allegedly "economic" interests to distinguish them from "political" or ideological armed groups. The most sophisticated COs have complex internal structures, management praxes, recruitment strategies, and "corporate cultures" that resemble those of licit firms. Moreover, the relationship among COs can be analogized to licit firms competing for market share: we can usefully distinguish criminal monopoly from oligopolies both competitive (violent) and collusive (pacted or peaceful). Yet unlike most licit firms, COs' governance extends beyond employees to wider criminal networks and often large civilian populations.[5] It cannot be assumed that such governance is undertaken purely as a means of maximizing profits, at least not in any immediate sense.

Organized crime is not exactly state making either. Scholars have long compared formal state governance with organized criminal activity (e.g., Blok 1974; Hobsbawm 1969; Tilly 1985), illuminating key aspects of state formation. Yet these now-familiar metaphors can impede a clear understanding of criminal governance by tempting scholars to simply reverse their direction. If states are essentially protection rackets, one might argue, then protection rackets must essentially be states. If the logic of stationary banditry drives autocrats' approach to taxation (Olson 1993), then autocratic extraction must be the goal of bandit rule (Skarbek 2011). If gangs are "primitive states" (Skaperdas and Syropoulos 1997) then we might expect warfare among them to produce "gang-building" and evolution toward more legitimate, less coercive forms of rule.



Such assertions may be accurate in specific cases, but they overlook a central fact: criminal governance occurs in settings where states—often quite powerful states—already exist. Indeed, states determine what is criminal, a precondition for the rise of COs (Koivu 2018). By definition, COs face *some* degree of state repression, repression which often structures the very spaces they govern: illicit markets and prisons are prime examples. Above all, and unlike Tilly's proto-states, criminal groups rarely challenge existing state authority wholesale. Rather, they govern in the interstices of state power (Yashar 2018), pockets of low state penetration typically surrounded by areas of firmer state presence, and which state forces can enter at will, though not always without violence. Thus, the view of COs as "mini-states" within their area of influence is often overblown, concealing as much as it reveals (Gambetta 1993).[6] Criminal governance cannot be understood apart from the state, its policies, its coercive apparatus, and its relation to citizens.

Criminal organizations' opposition to the state parallels that of insurgencies, and rebel governance is perhaps the closest cognate phenomenon to criminal governance. Kasfir's characterization of the study of rebel governance is equally true of criminal governance: "[It] analyzes the behavior of governments formed and operating under armed threat without benefit of sovereignty" (2015, 24). For both insurgent and criminal groups, Manichean antagonism with the state is just one endpoint along spectra of "wartime political orders" (Staniland 2012) and "crime–state relations" (Barnes 2017) that include mutual toleration and even active collaboration. Indeed, for both fields of study, paramilitaries and pro-government militias lie in a grey zone precisely because the state seems to outsource its core governance function to them (Kalyvas and Arjona 2005). Another key similarity is negative cases: some rebel and criminal groups *could* govern civilians, but do not. This makes the question "Why govern?" more relevant for rebel and criminal governance than for corporate or state governance.

Yet criminal and rebel governance differ in key respects. First, COs generally lack rebels' overarching goal of "competitive state-building," which renders insurgency "fundamentally distinct from . . . banditry, mafias, or social movements" (Kalyvas 2006, 218). Rebels, even when they govern in order to extract rents, "differ from criminal gangs engaged in similar activities because rebels hold territory with the political intention of taking over the state, seceding, or reforming it" (Kasfir 2015, 23). Indeed, these "political intentions" critically influence how states categorize and treat armed groups. Murky limit cases aside, countless COs govern civilians without hope or intention of obtaining formal state power. Relatedly, rebel governance occurs amidst civil war, typically—and for many scholars, necessarily—in "liberated zones" of strong territorial control (e.g., Kalyvas 2006; Kas r 2015; Weinstein 2006). Criminal groups rarely establish exclusive control. Their authority usually overlaps, often quietly, with the state's; COs may even welcome state governance in domains like health and education. Such complementarity, I will argue, permits "symbiotic" relationships between criminal and state governance; these seem quite unlikely for rebel governance. Finally, scholarship on rebel governance emphatically limits its scope to rule over civilians (Arjona 2016; Kasfir 2015), while that on criminal governance has—rightly, I argue—included governance over

0125

Figure 1
Who is governed? Subtypes of criminal governance

COs' own members and over non-member criminal actors and markets.

These are differences of degree. Not all insurgents truly hope to win state power, while some COs, perhaps, do (Pablo Escobar was famously elected to Colombia's congress in 1982). "Rebel governance," Huang's (2016, 52) systematic review shows, "can emerge very rapidly with only tenuous territorial control," while some COs do achieve strong territorial control, such as urban "no-go zones" that state forces can only enter via militarized offensives. Finally, for both rebel groups and COs, distinguishing between true members, affiliates and sympathizers, and uninvolved "civilians" can be theoretically and empirically difficult. At the limits, rebel governance might well approximate criminal governance in key respects.

Nonetheless, the modal cases of rebel and criminal governance look quite different. Precisely because criminals so often govern without state-building aims, overtly political ideologies, or strong territorial control, its study may yield new perspectives on the more established field of rebel governance. For example, Weinstein (2006) argued that insurgent groups that formed with "economic" rather than "social endowments" (and hence whose early joiners were more "opportunistic" than "activist") ultimately use more violence against civilians. By this argument, COs, whose endowments are presumably primarily economic, should be systematically violent toward civilians. This does not seem to be the case.

Dimensions of Criminal Governance

Who Is Governed?

Scholarship on "criminal governance" has adopted a wide purview, including COs' surprisingly sophisticated internal governance over members (e.g., Leeson and Skarbek 2010), as well as over a wider populations of non-member criminal actors, often within a specific illicit market, ethnic group, or territory (e.g., Feltran 2010; Skarbek 2011). Still, studies of "criminal governance" usually focus on CO rule over civilians (e.g., Arias 2006; Leeds 1996; Ley, Mattiace, and Trejo 2019). Since this phenomenon so tightly parallels the concept of "rebel governance," and is of such normative and substantive importance, it is tempting to restrict the scope of "criminal governance" to governance over civilians. This would be a mistake.

Instead, I distinguish three levels of criminal governance based on who is governed: CO members, non-member criminal actors, or non-criminal civilians (figure 1). There are two reasons for this capacious definition. First, the boundaries between levels in figure 1 are empirically and conceptually porous. Second, the mechanisms of governance at one level often spill over or are deliberately extended to other levels. Jointly studying governance at all three levels, while remaining sensitive to their differences, can illuminate key dynamics. In particular, COs that govern at only some levels constitute important negative cases of governance at other levels.

For *internal governance* by COs over their own members, the interesting question is not "why govern?" but "how?" COs face organizational challenges due to their illegality and have developed a rich variety of internal-governance mechanisms in response. Moreover, when COs come to govern non-members and civilians, it is often by extending or adapting their internal governance mechanisms. Even scholars primarily interested in CO governance over civilians can gain insight by studying how COs are internally organized, and why some do *not* govern civilians.

COs may also govern non-member criminal actors; these may be autonomous actors in a specific illicit market (say, retail drug dealers), non-member inmates housed in a gang-controlled prison, local street gangs subjected to the

0126

rules and taxation of a prison-gang, or even the criminal underworld writ large. I refer to this as *criminal-market governance*, although the object of governance need not be a market in the strict sense. Here both the why and the how of governance are puzzling: COs must have both motives and means for governing autonomous actors and groups that are, by definition, not law-abiding. Such governance is central to influential definitions of organized crime, flowing from Schelling's seminal insight that "organized crime is usually monopolized crime" (1971, 74). Campana and Varese, following Schelling, argue that a defining characteristic of organized crime is the attempt "to *govern* the underworld" (2018, 1383).

Finally, *criminal–civilian governance* denotes CO rule over people not directly involved in criminal activity. I propose "gang rule" as a handy (albeit imprecise) label, useful given its prominence. Millions of citizens live under some form of gang rule, with untold implications for state formation, democratic consolidation, economic development, and more. Were criminal governance limited to internal or criminal-market levels, it would still matter, but it would not be of first-order political and ethical importance. Moreover, gang rule is fundamentally puzzling: why do supposedly profit-driven COs with no claims on formal state power get into the business of governing civilians?

In practice, distinguishing CO members from other criminal actors and civilians can be difficult, Gang induction, for example, often involves intermediate phases of "hanging out" and provisional status, and informal neighborhoods almost by definition involve residents in economies and living arrangements of ambiguous legality. Family members—particularly spouses—of CO members often fall between levels, subject to more rules than average civilians, but less than members or criminal affiliates (e.g., Godoi 2015). CO governance at one level can thus easily spill over into others. For example, the PCC's prohibition of *talaricagem* (sleeping with a member's partner) necessarily extends beyond members to broader communities.

More importantly, governance mechanisms and institutions developed at one level can be deliberately adapted and extended to others, as the PCC's tradition of *debates* (tribunals) illustrates. *Debates* began as part of the PCC's internal governance within prison; they fostered collective decision-making through argumentation rather than rank-pulling. The practice extended beyond baptized members to the larger inmate population, as a means not only of resolving specific conflicts, but of embodying and inculcating collective norms (e.g., Biondi 2016; Marques 2010). When the PCC began prohibiting unauthorized violence in the urban periphery, *debates* became a critical governance institution, requiring consensus among a jury of imprisoned PCC leaders to decide which executions would be allowed (Feltran 2010, 65). But residents may also ask street-level PCC *disciplinas* (disciplinarians) to convoke *debates* over more quotidian disputes. Indeed, a police detective complained that "cases of neighborhood squabbles and even domestic disputes . . . are clogging up our wiretaps, which are capturing fewer conversations about major PCC actions" (*Redação Terra* 2008).[7] Studying institutions like *debates* at all levels of governance can thus illuminate their origins and effects.

What Is Governed?

Unlike insurgents engaged in competitive state-building, COs need not contest *all* aspects of state governance. Instead, CO rule over civilians is often narrow and discontinuous, regulating (say) property crime and contact with police but leaving other domains like interpersonal violence or electoral politics untouched. Similarly, criminal-market governance often covers some illicit activities but not others. In short, COs can govern a lot or a little, along a host of dimensions.

Figure 2 groups some widely observed dimensions by broad governance function—policing, judicial, etc.—and suggests empirical ranges of variation for each, from low to high levels of governance. I summarize these here, and provide further details based on extant research in the online appendix. While some dimensions seem logically related—for example, effectively prohibiting interpersonal violence likely entails providing dispute resolution—whether and how they are correlated remain empirical questions. Similarly, observing low levels of governance does not imply that COs lack the capacity to govern more vigorously; they may simply choose not to.

Future research should add to and reorganize this list as appropriate. Building and refining a collective compendium of criminal-governance activities is critical to the evolution of this research agenda, because it helps researchers know what to ask about. For example, interviews in Medellín revealed the ubiquity of loansharking by local gangs (Blattman et al. 2020), leading me to ask about, and learn of, similar though rarer moneylending in Brazil. Even when we find no evidence of an item from the list, it is good to have asked. A confirmed zero is different than missing data, and researchers, by identifying what their cases are negative cases *of*, can better situate them in the broader universe of criminal governance. "Asking anyway" is particularly important where gang rule appears weak and constrained: verifying that gangs are *not* engaged in certain forms of governance is an empirical finding in itself.

Policing and enforcement functions. COs prohibit and, to differing degrees, punish and prevent a series of behaviors. Prohibiting theft and robbery within and sometimes near the communities that COs operate in is quite common, reflecting the Lockean centrality of securing property to governance in general. Perhaps more unique to criminal governance, many gangs assume responsibility for preventing and punishing rape and sexual abuse, especially of children. Indeed, residents seem to demand that local

0127

Figure 2
What is governed? Dimensions of criminal governance, by function.

Function / Dimension	Degree of Governance: Low	Medium	High
Policing and Enforcement			
Prohibit theft / enforce property rights	Posted prohibition but weak enforcement	Effective prohibition; sense that property is secure	Ban theft in vicinity, storage of stolen goods in community; provide security for local firms
Prohibit sexual, domestic violence	Ban rape and pedophilia but weak enforcement	Effective ban on rape and pedophilia, perpetrators punished	Bans on domestic violence, sexual harassment, catcalling
Regulate homicide, interpersonal violence	Require notification	Require permission	Ban all unauthorized homicide
Law of silence (*omertá*)	Weakly enforced ban on going to police	Residents rarely go to police; general fear of being seen with police	Residents expected to actively protect gang members during police incursions
Control entrance, exit, and movement	Passive monitoring	Require identification on entry. Impose curfews.	Control outside movement; expel untrustworthy residents
Arms control	Only internal control	Civilian "registration" of arms	Regulate who may possess; requisition in times of war
Other public behavior	Regulate externality-producing behavior	Regulate clothes, colors, music referencing rivals	Regulate religious practice, sexual behavior, etc.
Judicial			
Dispute resolution	Only major or gang-related disputes; arbitrary process	Community disputes; two-person juries or institutionalized process	Multi-juror trials, "legal" precedents, public norms, appeals.
Trial & punishment; restorative justice	Only when directly gang-related	Limited involvement with civilians	Active investigation, recordkeeping
Debt collection and contract enforcement	Only gang-related	Enforce 3rd party debts and contracts	Elaborate record-keeping; "credit scores"
Fiscal			
Tax collection / extortion	Arbitrary, unpredictable	Regular payment schedule; fee-for-service	Receipts; mutual sense of what is being provided in exchange
Public goods and welfare provision	"Free": Coordination problems	"Cheap" services: e.g. clean streets, prune trees	"Expensive" goods: infrastructure, welfare, etc.
Micro-credit	Members	Non-member criminals	Civilians
Regulatory			
Illicit markets	Regulate drug consumption	Ban certain drugs or other activities	Tax criminal activity in area
Licit markets	Sell some legal goods	Tax some legal goods	Produce and monopolize legal goods; tax informal transport
Political:			
Electoral politics	Passively endorse candidates	Sell access to candidates; keep others out	Coerce voters, long-term relationship with candidates
Community politics	Participate	Try to coopt/penetrate	Actively destroy or dominate

Note: Examples of governance activities are cumulative, e.g., High levels include activities at Low and Medium levels.

0128

governing groups deliver swift and often brutal punishment for sex crimes (Gutiérrez-Sanín 2015), giving COs an inherent advantage over states (Caramante 2008). COs may also regulate domestic violence to varying degrees, and some enforce broader rules around sexual behavior and harassment. A trafficker in Recife, Brazil, for example, reported that among the "laws" his gang posted in his community was "Don't look at someone else's woman, even if she's not a gang member's, just a resident's."[8] Female residents in Natal, Brazil reported that after a prison gang had subsumed local street gangs under its banner, rules against catcalling were imposed, making it much easier to transit freely.[9]

COs also commonly regulate interpersonal violence, particularly homicide; ban contact with authorities (sometimes known as the "law of silence" or *omertá*); and restrict movement in, out, and beyond a community, including curfews, checkpoints, and bans on visiting rivals' territory. COs may also regulate firearm possession and use, especially among their own members. COs frequently impose rules around externality-producing behaviors such as loud music, motorcycle use, trash dumping, and other bugbears of community life: in one CO-controlled favela in Fortaleza, Brazil, a hand-painted warning read "each group of gossipers = 10 beatings."[10] Some COs ban colors, hairstyles, music, slang, and hand signs that reference rivals, including on social media. Many COs ban homosexuality among members, and some may regulate civilian sexual behavior. Though rare, COs have been known to regulate religious practices. In Rio, for example, the Terceiro Comando Puro CO prohibited Afro-Brazilian religions like Ubanda and Candomblé, with violent attacks on priests and houses of worship filmed and circulated online as warnings (*O Dia* 2017).

Judicial functions. Resolving disputes is a basic attribute of authority (Paluck and Green 2009), and a common dimension of criminal governance. COs' judicial mechanisms vary widely in sophistication and institutionalization. At one extreme, a single local boss (or designated subordinate) may hand down arbitrary decisions. At the other, exemplified by the PCC, institutionalized jury trials apply standardized norms, graded punishments, and even "legal" precedents (e.g., Telles and Hirata 2009, 54), with past infractions and punishments meticulously recorded in detailed personnel files and duly taken into account (Lessing and Denyer Willis 2019). COs may also offer contract enforcement and debt collection services to third parties.

Because they often begin as part of internal CO governance, judicial institutions represent a key domain for studying all three levels of governance conjointly. How far COs extend these functions to non-member criminal actors and civilians varies considerably, even among those with significant capacity. For example, in a favela stronghold of the powerful Família do Norte (FDN) prison gang in Manaus, Brazil, residents told me that the FDN only gets involved in "very serious fights, or if it involves somebody from the drug trade," and that in general, "People resolve things on their own, or go to the police. The [FDN] doesn't care."[11] Even the PCC has sought to restrict its sophisticated dispute-resolution services to "those who identify as being from the world of crime", provoking—incredibly—controversy among residents (Feltran 2018, 175).

In some cases, sentences have a "restorative" quality: recovering stolen items, forcing infractors to pay damages or "make things right" with the community. For example, one Medellín resident reported that "you see people , , , picking up trash and sweeping the streets, it's because they screwed up . . . when [gang members] don't give them a beating, they make them do community service."[12] Some COs allow or compel victims to carry out physical punishments against their aggressors; the PCC, for example, authorizes vengeance killings by successful plaintiffs (Feltran 2010, 67-8). How commonly COs—who are often deeply embedded in tight-knit communities—implement restorative forms of justice is a fascinating question for future research.

Fiscal functions. Taxation is so central to state-formation (e.g., Levi 1989; Olson 1993) that many scholars treat it as a proxy, "the next best thing" to a "perfect barometer of state power" (Slater 2010, 35). Among COs, taxation varies more widely. Protection rackets charge for "protection", hence their similarity to states (Tilly 1985); but many governing COs are not protection rackets. In general, the more COs earn from illicit market transactions (especially drug trafficking), the less they rely on taxation.[13] Taxation further varies in who must pay—more commonly local businesses than residents—and whether COs charge flat fees or attempt to price-discriminate based on income or profits.

On the flip side of taxation, many COs provide public goods beyond basic social order and property rights. COs can—essentially for "free"—solve coordination problems like deciding where to locate a trash dump or a moto-taxi stand. At higher levels of governance, they may provide "cheap" goods that mostly require labor, like street-cleaning and tree-cutting,[14] or more resource-intensive goods, like recreational facilities, drainage, and public illumination. Many COs also provide welfare benefits for the needy, often in the form of food staples and medication.

COs may also provide financial services at all three levels of figure 1. In Brazil, the PCC's drug business operates on consignment: thousands of members and non-member affiliates obtain merchandise on credit, with strict repayment schedules. However, the PCC appears not to charge interest, and loansharking to civilians (known as *agiotagem*) is widely frowned upon as usury by Brazilian COs. In Medellín, by contrast, loansharking (known as *gota a gota* or *paga-diario*) is very common among local gangs (Blattman et al. 2020).

Regulatory functions. COs governance over non-member criminal actors often involves regulating illicit markets, especially drugs: determining who can work where,

0129

sometimes setting prices, and—spilling over into civilian governance—deciding which drugs can be consumed where. COs may also regulate criminal activities beyond those they engage in. For example, Rio's drug syndicates often prohibit bringing stolen vehicles into their territory for disassembly. Legal markets may also fall under CO regulation, taxation, or even direct provision, especially for "universal" goods like food staples and utilities. In Medellín, COs are increasingly involved in the distribution and sale of *arepas* (tortillas), eggs, dairy products, and even livestock: in 2018 police seized an *arepa* factory built by the sophisticated Los Triana CO. In Rio, police-linked *milícias* frequently operate forced monopolies on cooking gas and cable TV, and tax informal transportation (Freixo 2008).

Political functions. Even among COs capable of coercing voters or candidates, involvement in electoral politics and community governance institutions varies widely (e.g. Arias 2006, 2017; Córdova 2019; Leeds 1996). Some simply ignore elections, or endorse a candidate; others act as brokers, selling physical access to voters in areas they control; and some actively coerce voters and even run their own members as candidates. Arias (2017) documents immense variation across multiple settings, finding that CO proximity to officials predicts more direct political involvement, consistent with studies of voter coercion by pro-state militias and paramilitaries (e.g., Acemoglu, Robinson, and Santos 2013).

Emergency Response. While this article was in press, the COVID-19 pandemic hit. States everywhere took unprecedented governance actions like imposing lockdowns and regulating economic activity. Though COs' responses have varied, some with strong governing authority relative to the state appear to be "stepping into the breach". In Rio, for example, COs have prohibited visits by high-risk foreigners, policed price gouging by supermarkets and pharmacies, provided hygiene supplies to residents, closed businesses (while reducing protection fees where charged), and enforced lockdowns and curfews. These measures constitute sharp increases along some of the dimensions presented here: regulation of licit markets, control over movement, public-goods provision, and so on. Whether they ultimately complement or undermine official emergency-response efforts, and whether emergencies ultimately entrench or erode COs' governing authority, are both critical avenues for research.

Who Governs, and How? Styles and Structures of Criminal Governance

Different types of organizations are likely to be interested in or capable of different sorts of governance, at different levels. While typologies of COs abound, researchers need not settle thorny questions like whether street gangs are organized crime in order to think about how governance differs systematically across COs. Rather, they should seek to link attributes of the COs they study to the criminal governance patterns they observe (e.g., Arias 2017; Skarbek 2011).

A few examples bear mentioning. Drug cartels appear to exercise governance in the areas where they exert territorial control, often along trafficking routes and cultivation zones (Duncan 2015; Ley, Mattiace, and Trejo 2019). Traditional mafias also tend to govern their "home" towns and neighborhoods (Blok 1974; Gambetta 1993) and have had difficulty penetrating areas dominated by other ethnic and racial groups (Reuter 1995). Street gangs are inherently local, their governance activities often tied, and limited, to a specific community (e.g., Hagedorn 1994; Jankowski 1991). Prison gangs, in contrast, have learned to govern at a distance; they organize retail drug markets at city- and even state-wide scales, through criminal-market governance over street gangs (Skarbek 2011) or by subsuming them into larger "corporate" structures (e.g., Cruz 2011; Hirata 2018). Relatedly, state repression may affect the governance capacities of different COs differently; for example, policies that favor mass incarceration may strengthen or weaken COs depending on whether their locus of power lies within prison or on the street (Lessing 2017). Racial and ethnic composition of COs also matters: US prison gangs are organized along racial and ethnic lines, limiting their street-level governance to co-ethnic neighborhoods, while Brazil's prison gangs are multiracial, permitting city-wide hegemony. COs' sources of income are also likely to affect governance.

Styles and quality of governance—of any kind—can be analyzed along many dimensions: how effective, how democratic, and so on. Here, I propose two dimensions as particularly relevant for criminal governance, both flowing from a Weberian perspective: the structure and basis of authority, and its legitimation.

Structure and basis of authority: Personalistic versus rational-bureaucratic. CO internal governance varies in how authority is structured and exercised, with potentially critical downstream effects on governance over non-member criminals and civilians. COs vary widely in their organizational structures, but as with all organizations, these can be arrayed along a Weberian spectrum from personalistic-charismatic to rational-bureaucratic.

Brazil's two largest COs, Rio's Comando Vermelho (CV) and São Paulo's PCC, approximate these ideal types. In the CV, power is concentrated in and flows from individual bosses (*donos*, literally "owners"), well-known charismatic leaders with strong, hierarchical control over the favela communities they are from or associated with. Each sits atop, and is a residual claimant on the profits from, a vertically integrated "firm" (*firma*) that holds a local monopoly on drug retailing. Most *donos* are incarcerated at any given time, and they appoint trusted lieutenants to run day-

0130

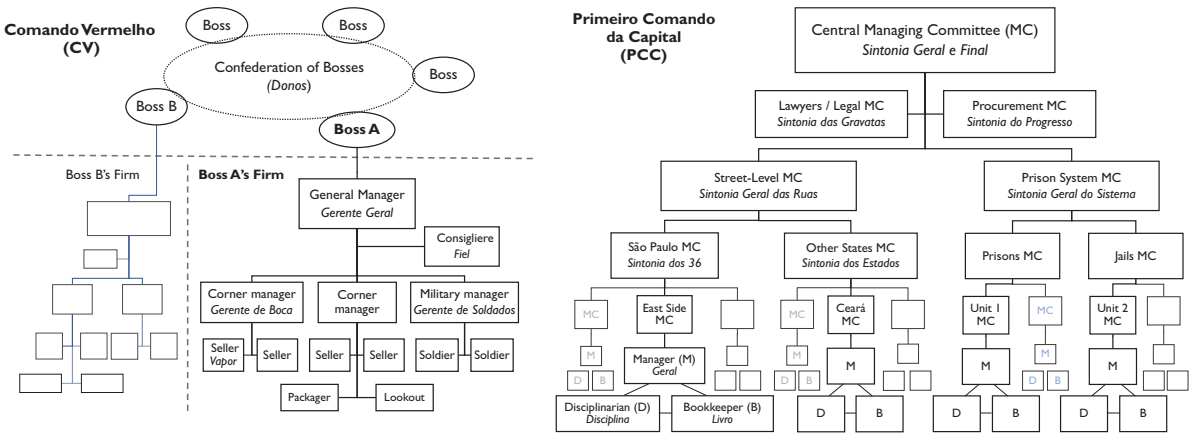
to-day operations and remit profits. They ensure loyalty "in the old style of Brazilian patronage, making employees and neighbors dependent on the gifts and benefits they distribute according to their whims and interests" (Zaluar 2004, 400).

There is no strict hierarchy among *donos*; rather, they form a deliberative council and "horizontal mutual-protection network" (Misse 2003). This confraternity wields a certain moral authority, laying down codes of behavior, resolving disputes, and ratifying *donos*' "right" to control and profit from illegal activities in their respective territories (Grillo 2013, 78). Yet the CV collective can make only limited claims on *donos*; it can suggest, but not demand, contributions of financial and military resources to collective causes, for example. Such confraternities of charismatic authority figures may be the modal form of organized crime: Mexico's "cartels" and the Sicilian Mafia's *Comissione* function similarly (Grillo 2011; Paoli 2002).

The PCC is both more and less hierarchical. A deliberative body, the *sintonia geral e final*, has ultimate authority over a cascade of lower-level *sintonias* (committees) replicated at each level of management (e.g., neighborhood, municipality, state). The PCC maintains centralized personnel and financial records for its more than 30,000 members, most of whom are located outside its home state of São Paulo (Paes Manso and Dias 2018). In these ways, the PCC resembles a large corporation with branch offices spread across state and even national lines. But the PCC deliberately flattens its hierarchy and depersonalizes authority within it. Each decision-making node has at least two leadership positions, guaranteeing that individuals cannot make "isolated decisions" that might adversely affect the "collective" (Biondi 2016, 83). Most decisions are made by consensus: *debates* usually involving PCC leaders and those governed, are guided by norms of not "exercising power over others" but rather making one's case on the merits (Biondi 2016, 82-5).

This contrast in structure and style of authority manifests in markedly different approaches to key institutions like drug-firm ownership and job posts (known in both COs as *responsas*) (Hirata and Grillo 2017). CV *donos* cannot sell or easily transfer ownership of their firms and the territory they are tied to; as with medieval land tenure, *donos*' property rights are not alienable, since they inhere in the personal, charismatic qualities of the *donos* themselves (Grillo 2013, 70-80). In the PCC, firm ownership does not confer authority over surrounding territory; as such, firms may be owned by non-members (as long as they follow PCC rules), and can be bought and sold freely. In the CV, *responsas* are managerial or operational jobs within a drug firm's hierarchy, bestowed by *donos* on the personalistic basis of *consideração* (esteem or gratitude). The "gift" of a *responsa* ties its occupant to the *dono* and confers a responsibility to protect and expand the *dono*'s patrimony (Grillo 2013, 72). In the PCC, *responsas* are essentially political postings, conferring responsibility for ensuring that PCC rules and norms are observed in specific domains; they are assigned by committees, based on individuals' perceived ability to act effectively in the collective interest (Biondi 2016). Members rotate rapidly through *responsas*, often taking up postings in neighborhoods, municipalities, and even states that they are not from. Besides guaranteeing continuity amidst frequent imprisonment, transfer, release, and death of members, this system was deliberately designed to depersonalize authority, as revealed by both ethnographic evidence (Biondi 2016) and the sworn Congressional testimony of Marcola, the PCC leader who instituted it (Marques 2010).

Adapting Weber's (1946) classic distinction, I characterize the CV's model as "charismatic-personalistic" and the PCC's as "rational-bureaucratic." Figure 3 illustrates the distinction and summarizes key characteristics of each type. As with most concepts, real-world cases only approximate ideal types. The PCC certainly has its charismatic leaders—including Marcola, his own self-effacing discourse notwithstanding (Marques 2010)—many with their own *quadrilhas* ("crews") whose internal structure may resemble CV clans.[15] More broadly, PCC behavior may fall short of its ideals, especially outside of its core territory; as one affiliate in a state the PCC dominates only partially put it, "lots of theory, little practice."[16] Conversely, the CV may be selectively emulating PCC centralization: its central council is reported to have begun demanding—not just eliciting—contributions.[17]



While the PCC may be a rational-bureaucratic outlier, careful observation of multiple COs within specific contexts can reveal important, if compressed, variation. Medellín's shifting panorama of flexible governance hierarchies among armed groups—including neighborhood-level *combo* gangs, larger mafia organizations known as *bandas* or *razones*, insurgent militias, and full-blown paramilitary armies—provides many examples (e.g., Arias 2017; Giraldo, Alonso, and Sierra 2007). To take one, Blattman et al. (2020) report variation in the structure and style of *bandas'* governance over *combos*. Typically, *combos* are led by a "coordinator" (*coordenador*), a charismatic leader who, like Rio's *donos*, is tied to his neighborhood and a residual claimant on his *combo*'s rents. Under many *bandas*, *combos* retain their local identity and proper names; *bandas* may appoint or fire specific coordinators, but replacements are usually drawn from within each community. However, the Los Triana *banda* subsumes its *combos* into a vertically integrated structure. *Combos*' names, local identity, and autonomy are effaced, and coordinators are rotated among neighborhoods by Triana leadership as needed. Thus, although Los Triana may be less rational-bureaucratic than the PCC (as suggested by the fact that "Triana" is a family name), it is probably more rational-bureaucratic than the average *banda* in Medellín. Identifying such within-

0131

Figure 3
Structure and basis of criminal authority: Charismatic-personalistic versus rational-bureaucratic

Charismatic-Personalistic:
- Confederal structure among bosses
- Clan-like substructures under bosses
- Non-alienable property rights
- Arbitrary punishments
- Rhetorical emphasis on identity, loyalty
- Leaders' personalities are prominent

Rational-Bureaucratic:
- Unified, hierarchical structure
- Standardized, replicated, rotating job posts
- Alienable property rights
- Graded, institutionalized punishments
- Rhetorical emphasis on universal norms
- Few well-known leaders or figures

Note: Charts adapted from Misse 2003 and Dowdney 2003 [CV]; and Godoy 2013 [PCC].

context variation among COs may be more fruitful than seeking universal criteria for comparison across contexts. Moreover, by holding multiple factors constant, subnational and submunicipal research designs can help identify CO-level factors that might explain such variation.

Legitimacy. If "legitimacy"—with its heavy normative connotations—is a perennially contested concept with respect to states, then "legitimacy in criminal governance" may seem downright oxymoronic. Nonetheless, how COs' authority is viewed, and by whom, are critically important questions. I distinguish two dimensions of legitimacy—"bottom-up" and "top-down"—along which CO governance may vary. The former understands legitimacy as flowing from the consent of the governed, the latter as "officially sanctioned" by other power-holders, such as states in the international system. Top-down views that discount the agency of the governed can be deeply, and to some tastes, "agreeably cynical" (Tilly 1985, 171), but these two approaches need not be mutually exclusive. For example, states' decisions to confer legitimacy on one another might depend on whether each has the consent of those it governs.

Both forms of legitimacy matter to criminal governance. COs are, by definition, de-legitimated by states, who outlaw and presumably combat them. This dearth of top-down legitimacy—even more severe than that faced by insurgencies—generally forecloses not only open negotiation with states but virtually all direct engagement in politics. Instead, COs may rely on more (top-down) legitimate social actors like community leaders or NGOs for mediation (Arias 2006), or simply turn to corruption and anti-state violence to keep law-enforcement at bay. Yet important variation in top-down legitimacy of COs within settings may be detected. Arias (2017), for example, finds that the relative legitimacy enjoyed by groups like Rio's police-linked *milícias* (who portray themselves as a "lesser evil" than drug traffickers) leads them to engage more actively in electoral politics, striking long-term agreements with allied candidates.

Weber characterized bottom-up legitimacy as "voluntary submission" (1947, 324) in hopes of making it empirically observable, but oppressed people may hide their true feelings. Trying to assess whether civilians meaningfully consent to their armed domination by criminal organizations may seem particularly perverse. If, as Wedeen argues, "conflation of legitimacy with acceptance, acquiescence, consent, and/or obedience is problematic for *any* political regime" (2015, *xiv*), then it is surely more so for a *criminal* authority.

Still, the pragmatic question of how willingly subjects comply with the rules and restrictions imposed is of even greater importance to COs than states. Like states, COs reap standard benefits from "voluntary submission", including less need for costly punishment of transgressors

0132

(Skaperdas and Syropoulos 1997). But unlike states, COs face an immediate threat *from* states if disgruntled subjects inform on them to police. True, residents risk severe punishment for openly violating *omertá*, and accountability may be weaker the greater COs' coercive and territorial control. Nevertheless, residents may possess important "weapons of the weak": they can often call anonymous tip lines, refuse to hide CO members during police raids, or make normative appeals, particularly via community elders or religious figures. Even in favelas dominated by Rio's most powerful drug syndicate, residents regularly use tip-line denouncements to sanction poor gang governance (Barnes 2018). This suggests that virtually all governing COs have strong incentives to keep their subjects minimally satisfied, and that failure to do so may manifest in observable ways.

While establishing absolute measures of legitimacy is daunting, detecting variation among COs from the same setting, or within COs over time, is often feasible. In Rio, for example, Dowdney (2003) reports residents' complaints of increasingly cruel and coercive governance, as rival prison-gang invasions left non-locals as governing authorities. Conversely, favela residents in Natal, Brazil, told me that the takeover of their community by a single prison gang, subsuming myriad incumbent street gangs, led to significant improvement in the quality of governance: "Now there is peace and respect; our only problem is the police".[18] While subject to severe selection biases, since the most disgruntled may be the most terrified to speak, anecdotal data can still stake out a range of variation. For example, enumerators for a business-extortion census in Medellín told me that respondents in the community we visited were far more positively disposed to paying the *vacuna* (protection fee, literally "vaccine") than in the previously visited community, where business owners "vented" deep frustration at high fees and inadequate protection.[19]

All things equal, bottom-up legitimacy is likely reduced by any taxes (i.e., protection fees) charged to residents and businesses, and by COs' use of violence to resolve disputes and achieve their desired outcomes (Arias 2006; Barnes 2018), though residents may tolerate or even support high levels of both if overall CO governance meets shared expectations of behavior and performance (e.g., Gordon 2019). For example, a Natal resident expressed opprobrium at the local prison gang's lethal punishments of infractors, but recognized this as a "necessarily evil" to produce the security, orderliness, and respect for women that the gang's takeover had brought.[20]

For Weber, these shared expectations—the basis on which authority is accepted as appropriate by the dominated—vary with the structure of authority: charismatic rulers are legitimated by virtue of their unique, personal characteristics; bureaucrats by virtue of adherence to universal rules and norms and efficacy in carrying out assigned duties. An intriguing question is whether those subject to criminal governance judge governing COs on different bases depending on their structure of authority. Recent work on the PCC suggests that people under rational-bureaucratic governance indeed judge local leaders against universal normative standards (Biondi 2016; Feltran 2018).

Why Govern?

COs' reasons for internal governance are similar to any organization's: to efficiently organize activities, avoid schisms, create operational capacity, and so on. CO governance of criminal markets and underworlds is more puzzling, since many COs never make the attempt. More puzzling still, why do COs govern civilians, to differing degrees, along differing dimensions? Given the impact of gang rule on civilians' lives, these are preeminent questions for the criminal-governance research agenda. As raw material for theory-building and -testing, this section distinguishes some plausible logics motivating criminal governance, of both non-member criminal actors and civilians. Real-world cases are likely to involve multiple logics, possibly ones not anticipated here.

Why Govern Other Criminals?

The conventional wisdom in organized crime scholarship is that COs govern non-member criminal actors in order to tax them. While compelling, this explanation is not exhaustive. Some prison gangs, for example, do not tax the prison masses, suggesting alternative motives like self-protection. Beyond this, many COs claim to govern the criminal underworld (or parts of it) for ethical, political, or ideological reasons. Of course, such motives may ultimately serve COs' interests, and so could be lumped into an all-encompassing conception of "rent-seeking." Instead, I disaggregate these logics, since the conditions under which they come into play are likely to vary.

Rent extraction/extortion. Schelling famously identified organized crime with the extraction of tribute from other, presumably *un*organized, criminal actors: "*Organized crime* does have a victim . . . the man who sells illicit services to the public. And the crime of which he is the victim is the crime of extortion" (1971, 76). Schelling focused on protection from police as the source of COs' extortionary power, but the same logic applies when COs govern, pacify, and streamline illicit markets like the retail drug trade, creating a taxable economic surplus (e.g., Skarbek 2011). This logic predicts that variation in criminal governance tracks the tradeoff between COs' costs of provision and their potential gains from taxation.

Self-protection. Many prison gangs arise as self-protection pacts, to ward off predation by other inmates and abuse by officials. Even if establishing social order among the prison masses yields additional benefits for gang members, they enjoy physical security as much as the larger inmate

0133

population. This motive helps explain governance in the absence of taxation or extortion. For example, whereas California prison gangs reportedly tax all inmates in the wings they control (Skarbek 2011), Brazilian prison gangs generally do not. The PCC, known for charging a monthly membership fee, exempts unbaptized "affiliates" and other inmates (Paes Manso and Dias 2018). Similarly, mafia neighborhoods are notoriously safe, since bosses prohibit robbery and violent crime where they live; since this leaves no criminal rents to tax, the primary motive is likely protection of members and their families.

Political leverage. COs may govern criminal populations in part to win loyalty and build political constituencies, ultimately amassing leverage against the state. This logic is pronounced among prison gangs. For example, Brazil's CV, after establishing hegemony within its home prison, quickly mobilized the inmate population in hunger strikes against guard abuse—a strategy gleaned from the leftist militants with whom its founders were imprisoned (Lima 1991). American prison gangs have also effectively organized hunger strikes to protest overcrowding and solitary confinement (Reiter 2014). A more aggressive tactic is instigating strategic prison rebellions, often involving hostage-taking, to force official concessions. While not all rebellions are planned, some clearly are: the PCC's 2006 "mega-rebellions" occurred simultaneously in ninety-six different prisons scattered across multiple states, coordinated by cell phone.

COs with street-level governance capacity may also orchestrate public protests, violence-reducing truces, or chaos-causing attacks by criminal actors as part of "violent lobbying" strategies. The state of Ceará, Brazil offers examples of all three. In 2016, prison gangs announced a "Union of Gangs," consolidating power over myriad street gangs, and ordered previously warring members to join in a peaceful "Crime March" (Alessi 2016). The truce was short-lived, but Ceará's prison gangs came together again in 2019, launching a months-long wave of bombings and bus-burnings—mostly carried out by non-member youths—to protest the government's plan to end segregation of prisons by gang.

Normative reasons. COs often espouse ethical or even ideological reasons for governance. Prison-gang prohibition of rape, for example, is generally presented as a moral victory over an execrable practice. Virtually all Brazilian prison gangs have adopted a version of the CV's motto "Peace, Justice, and Liberty", and regularly frame their actions as part of a "struggle" (*luta*) against official injustice and depraved rivals. Gang leaders in Medellín, with long-standing ties to the country's anti-communist paramilitaries, often present their governance activities as high-minded efforts to rid poor neighborhoods of "subversion."[21]

Whether normative concerns truly motivate costly governance activities or are post-hoc justifications is often unclear, in part because governance may also yield economic, political, and strategic advantages. For example, some scholars argue that the PCC's ban on killing was a normatively motivated response to a vicious cycle of homicides among young men (e.g., Feltran 2018); the resulting collapse in violence nonetheless gives the PCC critical bargaining leverage. Indeed, this intermingling of normative and strategic concerns informs its slogan "Peace among thieves; war on the state." Despite such ambiguity, empirical variation in the sorts of normative appeals COs make may offer clues to the extent of their sincerity.

Why Govern Civilians?

Taxation/extortion. If states provide order, security, and governance with the ultimate aim of maximizing revenue-extraction from subjects (e.g., Levi 1989; Olson 1993; Tilly 1985), perhaps COs do as well. Many COs indeed function as protection rackets, whose customers often include civilians (Gambetta 1993). However, COs with other income sources—especially drug trafficking—often abstain from taxing civilians, suggesting additional motives.

Reduce exposure to policing and repression. Another common explanation of gang rule is that it minimizes police incursions and patrolling in CO territory. This logic obviously underlies *omertá* (the "law of silence"), as well as prohibitions on crimes that draw police attention, such as homicide, sexual violence, and brawls. COs may also regulate activities that could lead residents to call the police, such as theft, domestic violence, and public drug consumption. Supplying dispute resolution, restorative justice, and enforcing community norms offers residents convenient alternatives to state authorities for quotidian problems. COs broader "hearts-and-minds" efforts to foster loyalty, sympathy, or even partisanship among residents may also flow partially from this logic, if loyal residents are more willing to hide CO members and merchandise, or facilitate their flight, during police raids.

Political leverage. Instilling loyalty may also help COs mobilize residents to engage in protest activities, such as when Rio traffickers order residents to "go down the hill" en masse to protest police killings, or when Mexico's Família Michoacana drug cartel organized highway blockades to protest the deployment of army troops to the state (*Reforma* 2009). Such civilian-backed protest activities, even if partially coerced, can help COs extract policy concessions from leaders, and complement more violent lobbying.

Increase profits. For COs engaging in illicit economic activity, especially retail drug trafficking, governance is likely good for business. Beyond preventing loss to police repression, COs have incentives to make customers feel

0134

safe enough from property and violent crime to approach points of sale. Some public-goods provision requires outlays but may nonetheless increase CO profits: in Rio, drug syndicates commonly throw weekly *bailes*, dance parties with DJs or live bands—an important source of entertainment in neighborhoods bereft of cultural options—at which they socialize and sell drugs (Grillo 2013).

Crowd out or deter potential competitors. This logic may help explain situations where COs govern but do not seem to earn large rents in return. Just as community support for the local CO may reduce that CO's exposure to police, it may, by the same token, make it harder for a rival CO to invade or infiltrate. Similarly, CO leaders might fear that disgruntled civilians could abet an internal coup.

Other non-material benefits. COs may also be motivated by status concerns, especially access to women. While generally understudied, anecdotal evidence indicates that sex plays an important role in gang recruitment and CO activity. A key empirical question, though, is whether status accrues only or more to COs and members when they govern. If simply being a flush drug trafficker wins one status, then this logic cannot explain why COs govern.

Some COs also express a sense of duty to the community, especially if members are locals. Failing to prevent or punish certain crimes—especially rape and pedophilia—may bring a sense of shame or impotence to local COs, though these may overlap with strategic factors: Gutiérrez-Sanín (2015), for example, argues that Medellín gangs' failure to punish sexual violence in the 1980s led to widespread civilian disaffection, facilitating their replacement by disciplined guerrilla cadres.

Complementary to internal governance. Governing civilians may facilitate CO internal governance by providing leaders with opportunities to train and evaluate mid-level managers. For example, a high-ranking Medellín *banda* leader portrayed governance as a useful barometer of neighborhood *combo* leaders' skill, because "you can always see if the neighborhood is organized or not."[22] Governing civilians well might also signal COs' broader capacity to non-members, whether potential recruits or rivals.

Criminal Governance and the State

Criminal governance inescapably undermines the state's monopoly on the use of force, but is not necessarily diametrically opposed to states' interests. True, a key motive for criminal governance is keeping the state at bay, sometimes through debilitating anti-state protest and violence. States, in turn, may find criminal governance sufficiently embarrassing and problematic to combat it through muscular interventions that, often enough, fail or backfire. Yet criminal governance can also be inoffensive or even useful to states, whose relationship to COs may blend violence and repression at one level with detente or even cooperation at another. Criminal governance thus enriches the broader study of crime–state relations by illuminating both novel mechanisms of counterproductive state repression and undertheorized, "symbiotic" forms of crime–state cooperation, distinct from the cooperative arrangements most widely discussed in the literature.

Among prominent conceptual frameworks of crime–state relations (e.g., Arias 2017; Barnes 2017; Koivu 2018; Lupsha 1996; Magaloni, Franco-Vivanco and Melo 2020) Snyder and Durán-Martínez 2009), we can discern three broad types of cooperative arrangements. In the first, what Barnes (2017) calls "Integration," COs so penetrate the state that they can use its resources for their own criminal ends. In the other two types, the state remains autonomous from COs, but tolerates their illicit activity in exchange for key benefits (Koivu 2018). In the first, vividly characterized by Snyder and Durán-Martínez (2009) as "State-Sponsored Protection," the key benefit is illicit rents, often from drug trafficking.[23] In the second, what Barnes (2017) calls "Alliance," states rely on COs' coercive force to neutralize third-party threats; this too has obvious state-building benefits (Koivu 2018). These forms can blend together, as when leftist rebels are "bought off" by allowing them to participate in drug trafficking (e.g., Snyder and Durán-Martínez 2009, 270).

Criminal governance does not fit easily into these forms of state-crime cooperation. Governing COs are often highly marginalized or even demonized; this lack of top-down legitimacy makes Integration basically unthinkable. Criminal governance also seems unlikely to sustain State-Sponsored Protection, since many governance activities, such as public-goods provision and dispute-resolution, neither generate rents nor constitute crimes, while others such as extortion are difficult for police to observe, and hence to target for bribe-collection. Finally, criminal governance differs from Alliance in that COs' coercive capacity—though it may help keep order—does not counter an organized threat to the state.

A more apt concept is crime–state "Symbiosis." First, however, the term must be clarified. Lupsha (1996) introduced it to describe the "evolution" of organized crime's relation to the state, from predatory to parasitic to symbiotic, emphasizing mutual benefits and dependence. Unfortunately, it has since become a catch-all for virtually any "linkage between [COs] and the state apparatus" (Mingardi 2007, 57); indeed, Integration, Alliance, and State-Sponsored Protection all fit within this overstretched definition.[24] Recently, though, scholars of São Paulo have used the term more precisely, to capture a self-reinforcing cycle of mass incarceration and PCC expansion, and the mutually beneficial "pacification" of prisons and periphery that followed (e.g., Adorno and Dias 2016; Denyer Willis 2009).

0135

Building on these ideas, I propose a narrower definition of Symbiosis. First, it implies coexistence of separate entities, and so differs fundamentally from Integration. Second, mutual benefits constitute a necessary but not sufficient condition for Symbiosis, since they also play a key role in Alliance and State-Sponsored Protection. Symbiosis differs in that it need not involve strategic, deliberate, or even conscious cooperation. Rather, it evokes distinct organisms each of whose life functions and survival strategies produce things—possibly useless or even harmful to the producer—that are useful or "nutritive" to the other. In blunt biological terms, one creature's waste may be another's food. As such, Symbiosis does not require affinity, aligned preferences, or a division of mutually desired resources; it does, however, imply entanglement, a growing together, and mutual dependence that may deepen over time—traits Lupsha (1996) emphasized.

Symbiosis thus defined encompasses state actions and policies that inadvertently strengthen COs and fuel criminal governance in particular. Of course, state repression directly generates some of the incentives for criminal governance, as discussed earlier. In addition, anti-crime and mass-incarceration measures can provide resources for CO governance, including recruitment and networking opportunities, incentives for collective action, and even coercive power over those governed (Skarbek 2011). Cruz (2011), for example, argues that Central American *mano dura* policies helped prison-based *mara* gangs extend governance over street-based cliques and, ultimately, civilians; one reason is that mass arrests and harsher sentences increase street-level actors' incentives for obeying imprisoned gang leaders (Lessing 2017). Even policies designed to weaken prison gangs can be counterproductive: transferring leaders to far-flung prisons can facilitate gang propagation, while harsh solitary-confinement regimes can become badges of honor for leaders (Salla 2006, 298) and push COs to develop rational-bureaucratic structures like rotating leadership posts (Dias 2009, 138). In all these cases, state policy "worked" in an immediate sense, but *in so doing* inadvertently fostered criminal governance.

Conversely, criminal governance may, from COs' perspective, inadvertently facilitate undesirable state actions, policies, or neglect. Most vividly, CO governance over sprawling, overcrowded, and ever-expanding prison systems helps keep mass incarceration itself viable. Such governance clearly benefits imprisoned gang leaders and governed inmates by constraining prison violence. But *in so doing*, it allows states to maintain large inmate populations while skimping on infrastructure, guards, food and medical services, and so on. In urban peripheries, providing public order and stable property rights may help keep police out—likely one of COs' prime motives—but it also reduces the costs to states of broader, ongoing neglect of marginalized areas and populations. What are, for COs, unintended consequences of criminal governance can be very valuable to developing states. "Symbiosis" captures this sense of inadvertently—or even unconsciously—mutual benefits.

Conclusion

Despite key contributions across disciplines (e.g., Arias 2017; Blok 1974; Feltran 2010; Hobsbawm1969), criminal governance remains understudied in political science. More common yet less salient than rebel governance, it structures the lives of tens of millions of people in Latin America alone (Lessing, Block, and Stecher 2019), without triggering domestic states of exception, international interventions, or even significant media attention. Its ubiquity, variation in intensity and style, and paradoxical relationship to state governance all merit increased engagement. To paraphrase a similar realization of how much disciplinary blinders can hide from view, criminal governance "is no mere outlying peninsula but rather an entire intellectual continent on the map" of governance activity (Hirshleifer 1994).

Mapping this "hidden continent" requires a solid conceptual foundation attuned to criminal governance's defining characteristic: its embeddedness in a larger domain of state power. I suggested capacious scope conditions for criminal governance, to illuminate common mechanisms of CO-governance over members, non-member criminal actors, and non-criminal civilians alike. I then proposed a series of dimensions based on the who, what, and how of criminal governance, and described their ranges of variation. I proposed hypothetical logics that may help future scholars explain why criminal organizations go to the trouble and expense of providing governance, and to such differing degrees. Finally, I refined the concept of "Symbiosis" to capture a form of crime–state cooperation uniquely relevant to criminal governance.

The embedded quality of criminal governance has two central implications for future research. First, we cannot understand either the causes or consequences of criminal governance in isolation from the state. In some cases—like prison populations and illicit drug markets—muscular state action *creates* the objects of criminal governance. In other cases, like informal neighborhoods, the state may be sufficiently weak or negligent to allow criminal groups to establish local authority over civilians, yet present enough—just a tip-line call away—to serve as a useful check on criminal authority. The consequences of criminal governance are also bound up with its embeddedness, not only because COs may hobble (Córdova 2019) or distort (Arias 2006) civilians' political participation, but because of the deeper, politically schizophrenic experience of living under a duopoly of violence. Slum residents and inmates alike must navigate a treacherous and shifting landscape of overlapping yet antagonistic authorities (e.g., Arias 2017; Biondi 2016; Hirata 2018). Knowing which quotidian problems are the gang's to solve and which are the state's can be a matter of

0136

life or death. This is a novel form of "low-intensity citizenship" (O'Donnell 1993) whose effects on democracy, development, and the rule of law deserve focused study.

The second implication is more controversial: we can no longer truly understand *state* governance in isolation from criminal governance (Arias 2006; Koivu 2018; Leeds 1996). State policies like drug prohibition, mass incarceration, non-incorporation of informal settlements into the formal city, and "criminalization" of immigration and welfare policy (Hinton 2016) have vastly expanded the criminal domain; yet effectively governing spaces within this domain is perennially challenging for states. That the resulting social orders—however unjust—are stable at all is partially due to capacity of criminal organizations to govern themselves, criminal markets, and marginalized civilian populations. Precisely because criminal governance does not constitute a direct, existential threat to state authority, states can tolerate and benefit from it.

São Paulo provides a stark example. The PCC's homicide ban almost certainly contributed to the city's radical transformation from one of Brazil's most violent state capitals into its safest (Biderman et al. 2019; Feltran 2010).[25] To be sure, São Paulo is high-capacity relative to other Brazilian states, and it directs this capacity at fighting crime in general and the PCC in particular—building nearly 200 prisons, with maximum-security units designed to neutralize PCC leaders. Yet whatever direct effect on crime these efforts had, they also seem to have strengthened the PCC, which swelled to over 7,000 members in São Paulo and spread throughout Brazil and in neighboring countries (Paes Manso and Dias 2018). To treat the PCC as a mere "moderator" of the causal impact of state policy on violence (Freire 2018) seems deeply misguided, obscuring a central fact: if São Paulo is well-governed, it is *because of*, not despite, the PCC. But is it well governed? The normative and substantive implications of COs' contribution to overall governance remain to be thoroughly investigated.

This view complements US scholars' claims that mass-incarceration policies have not only built up a physical and administrative "carceral state" (e.g., Gottschalk 2008; Lerman and Weaver 2016), but fostered an entire penal mode of politics that spills into areas like immigration, education, and social policy. If in the US "the prison has been a privileged location for framing a larger [official] political order" (Simon 2007, 473), in much of Latin America, it has become a physical and ideological locus for promulgating *criminal* political orders. Critically, these criminal orders can stand in ambiguous relationships to state order, simultaneously undermining and undergirding it. The typical biological metaphors applied to criminal groups—viruses, parasites, or cancers on the official body politic—are not only normatively suspect, often invoked to justify a politics of quarantine and extermination; they may be fundamentally misleading. Symbiotic relationships are possible, and perhaps more common than we realize.

If true, the consequences for political science are difficult to overstate. In the modern era, states' leeway to negotiate with and even incorporate criminal groups has shrunk dramatically, while increasingly militarized policing and mass incarceration have failed to curb crime—especially the drug trade. The result is "hurting stalemates" that never produce "ripeness" for negotiation (Zartman 2001); in the worst cases, violent criminal conflicts grind on for decades, transforming urban peripheries and drug routes into active war zones. Explaining criminal resilience to and violence against state repression are worthy goals for research. But the Symbiosis metaphor suggests a deeper, epistemological issue. To the extent that states rely on criminal governance, we cannot understand why state repression has not eliminated crime any more than we can "understand" why humans' immune systems have not eliminated the microorganisms we need to survive.

Notes

1 Interview, president of Resident's Association, August 1, 2019. "Okaida" is a Brazilianization of "Al-Qaeda," though the two groups have no affinity or connection. Shortly after Okaida's founding, a rival gang arose called "Estados Unidos" (United States).

2 Strictly speaking, criminal actors remain civilians; for convenience, I use "civilians" as shorthand for "people not involved in criminal activity".

3 Colombia's 2017 peace accord illustrates both dynamics. Responding to popular opposition to amnesty for insurgents' drug trafficking, the final agrement empowered a judge to decide whether specific criminal acts were part of a political struggle or simply for profit. Meanwhile, Colombian COs sought similar demobilization deals by emphasizing their political nature. For example, the Clan del Golfo, a group of drug-trafficking ex-paramilitaries, refers to itself as the more political-sounding "Autodefensas Gaitanistas de Colombia," while the Oficina de Envigado, a confederacy of Medellín mafias, signs its communiqués to the government as "Collegiate Directory Board of Extra-legal Urban Armed Groups." An example can be found at https://www.insightcrime.org/images/2016/March_2016/oficina_envigado_carta.pdf.

WHAT IS THE BUSINESS OF ORGANIZED CRIME?

Thomas C. Schelling†

IT IS BECOMING WIDELY ACCEPTED THAT THE BUSINESS OF ORGANIZED CRIME is to provide the public with illicit goods and services like bets, narcotics, sex out of wedlock, and unregulated loans. As Messrs. Lynch and Phillips indicate at the opening of their paper, federal law even *defines* organized crime as those unlawful activities in which a highly organized, disciplined association supplies illegal goods and services. The appendix on organized crime in the Staff Report to the Commission on Violence states, "It is well known that organized crime exists and thrives because it provides services the public demands," and "Organized crime depends not on victims, but on customers."[1] The Task Force on Organized Crime of the 1967 President's Commission opened its report with the assertion, "The core of organized crime activity is the supplying of illegal goods and services—gambling, loansharking, narcotics, and other forms of vice—to countless numbers of citizen customers."[2]

And indeed this conception of organized crime corresponds to part of the image, though only a part, of the gangs that thrived when liquor was nationally prohibited in the 1920's and early 1930's. (Supplying liquor was the quieter part; suppressing rival supply was the part that made Chicago famous.)

At first glance, this is in some contrast to a quite different line of business that, at different times and particularly in the later 1930's, appeared to characterize the organized racketeers. This business was extortion, based on the threat of damage, together with occasional efforts to monopolize "legitimate" lines of business by physically destroying or intimidating competition.

The Task Force Report in 1967 gave lesser emphasis—nevertheless some emphasis—to the use by organized crime of "illegitimate methods" in connection with legitimate business and labor unions. These illegitimate methods were identified as "monopolization, terrorism, extortion, tax evasion."[3] The contrast seems to be that in the "core" activities the

[2]THE PRESIDENT'S COMMISSION ON LAW ENFORCEMENT AND ADMINISTRATION OF JUSTICE, TASK FORCE REPORT: ORGANIZED CRIME 1 (1967).

[3]*Id.* at 1.

racketeers are busy providing illicit goods and services whereas, when they turn to legitimate business, they terrorize, blackmail, and monopolize.

In his appendix to that Task Force Report, Donald Cressey, one of the outstanding academic investigators of this subject, draws a "basic distinction" between ordinary criminals and "organized criminals," the former being wholly predatory while the latter "offers a return to the respectable members of society." Hardly anybody will miss the burglars if they suddenly disappear, "But if the confederation of men employed in illicit businesses were suddenly abolished, it would be sorely missed because it performs services for which there is a great public demand."[4]

And all are agreed that, as the Task Force stated, "To carry on its many activities secure from governmental interference, organized crime corrupts public officials."[5] Indeed some, like the Kefauver committee, found that corruption procured not only immunity from the law but employment of the police as enforcers of the mob's authority.[6]

The purpose of my paper is to dissent from this widespread interpretation of what it is that *organized crime* is engaged in. Mine will not be a disagreement with the facts, fragmentary as they are, from which most of the authors and commissions and lawmakers and law enforcers start. The difference will be one of analysis, of interpretation of what it is that is going on. But before dissenting let me try to state in a purely descriptive, not analytical, way, what it is we all seem to be talking about when we speak of *organized crime*.

Evidently we do not merely mean "crime that is organized." The term, *organized crime*, is not composed merely of two words in the English language that keep their ordinary meanings when joined. Donald Cressey does not mean, I am sure, that burglars are never organized. If it should suit their purpose to work in small gangs; to share the take as a partnership; to vote new members into the club; to insure each other against accident or arrest and to maintain a common retirement fund; to have exclusive contracts with merchants who dispose of their goods, and to regularize their relations with the police; to have a research staff, a retained lawyer, and a technological consultant; and to divide the labor among scouts, lookouts, breakers and enterers, and disposers of merchandise, they indeed deserve to be called "organized" in the ordinary English-language sense of the word.

0145

But they are a different kind of "organized crime" from what this symposium is discussing, which is *organized crime*.

But exactly what is the difference? Messrs. Lynch and Phillips describe it not only in the definitional language of the law, as being highly organized and disciplined—there may be highly organized and well-disciplined groups of burglars, or counterfeiters, or bank robbers, or embezzlers, or charlatans, or agitators—but as "a society that seeks to operate outside the control of the American people and their governments." Burglars may be *in* the underworld, but they apparently do not seek to govern it; they are not captains of underworld industry; they are not robber barons or monopolists; and they are not associated with ideas of power, control, and underworld "society."

Still, while it may be easy to say what we do not mean by *organized crime*, it is not easy to tell from the professional literature exactly what we should mean. There is no problem, of course, if we can simply point to a unique organization. There is no problem in defining what we mean by a "religious organization" if there is only one church, or by a "political party" if there is only one party. If there is a single "Mafia" that either governs and operates everywhere or has no counterpart in those places where it has no operations, we can give *organized crime* a proper name and call it "Mafia" with a capital M, "La Cosa Nostra" with capital letters, or "The Organization," just as some people refer to "The Establishment" in relation to overworld society, and need not define the species because it has but a single member. But if we take that route we are committed to a particular hypothesis, one that is limited to a particular time and place, and one that precludes comparative analysis because the definition precludes comparison.

There is, I believe, a characteristic of *organized crime* that is consistent with all of these definitions and characterizations (even the one that treats *organized crime* as a proper noun), and that is consistent with most of the prevailing images of racketeers, whether based on stories of Chicago in the 1920's, New York in the 1930's, Miami in the 1940's, or any of these places in the 1960's. This key characteristic is suggested by the term, "society," that Messrs. Lynch and Phillips use. But "society" is too broad and too loose for my purpose. "Government" would come closer to what I have in mind. The characteristic is *exclusivity*, or, to use a more focused term, *monopoly*. From all accounts, organized crime does not merely extend itself broadly, but brooks no competition. It seeks not merely influence, but exclusive influence. In the overworld its counterpart would be not just organized business, but monopoly. And we can apply to it some of the adjectives that are often associated with monopoly—ruthless, unscrupulous, greedy, exploitative, unprincipled.

0146

Now, it is clear that governments have to have an element of monopoly. We cannot all be obeying two conflicting sets of laws, two competing sets of traffic lights, or two contradictory building codes, and paying taxes to maintain duplicate street systems or armies. If there are several governments they must work out jurisdictional or territorial arrangements, the way towns and counties and states and port authorities and the federal government do. So if an organization seeks governing authority in the underworld we should expect it to seek exclusive authority, or at least to seek stable jurisdictional sharing with other authorities and, all together, to constitute a hierarchy without competition. That is what we should expect them to seek. We should not be surprised when civil war breaks out.

We now have a hint of what to look for when we ask about the business that organized crime is in. Part of my argument will be that organized crime is usually monopolized crime. What distinguishes the burglars from the loan sharks or the gamblers is not only that one steals what we have and the other sells what we want. It is also that burglars are never reported to be fighting each other in gangs for exclusive control over their hunting grounds. Burglars are busy about their burglary, not staking claims and fighting off other burglars. It is when a gang of burglars begins to police their territory against the invasion of other gangs of burglars, and makes interloping burglars join up and share their loot or get out of town, and collectively negotiates with the police not only for their own security but to enlist the police in the war against rival burglar gangs or nonjoining mavericks, that we should, I believe, begin to identify the burglary gang as *organized crime*. Until then we should use a different term, like "organized burglary."

We can ask, at this point, the question why burglars are not *organized* in the more ambitious way I just described. More generally, why are some kinds of crime apparently *organized* in exclusivist monopoly fashion, and characterized by occasional gang wars and truces and market-sharing arrangements, while other kinds of crime are more like competitive business, the individual criminal or the criminal organization going about its business without a major effort to destroy or intimidate competition and obtain exclusive control?

There is probably no simple answer. The same question can be asked about business enterprise in the overworld. And there we find that some businesses lend themselves more than others to monopolization. And if we examine the businesses that seem rarely to be monopolized, or rarely to stay monopolized, and those that show a universal tendency to become monopolized, we may discover characteristics of the technology, the market, the consumer demand, the personnel requirements, or the financial and legal requirements that determine whether a business is ineluctably monopolized,

sometimes monopolized, or hardly susceptible to monopolization. We can then turn to the underworld and see whether some corresponding principles apply.

In a purely descriptive sense this tendency toward monopolization surely seems to characterize *organized crime*. We have to keep in mind that rival claimants to monopoly position sometimes find it cheaper to merge than to make war, or cheaper to stabilize their boundaries than to fight over them, and that even war may lead to surrender and empire rather than to total destruction or massive retaliation. Where there is no governmental authority that can exert itself, or where a government is sympathetic or subservient to business, broad cartel arrangements may provide a framework for comparatively nonviolent resolution of competitive conflict.

It is worthwhile remembering that the Chicago gangster deaths of the 1920's, like the alleged Boston gangster deaths of the 1960's, were usually characterized, if not identified, as arising out of gang rivalry. Pickpockets, burglars, car thieves, embezzlers, people who cheat on their income taxes, shoplifters, muggers and bank robbers usually don't go around killing each other. There's nothing in it for them. Two bank robbers who pick the same day for the same bank may have to fight for the privilege if they arrive at the same time, and two purse snatchers who grab the same purse may fight for possession; but these are rare instances, and the man who embezzles the bank he works for has neither the knowledge nor the interest that would motivate him to make war on other embezzlers at other banks. But evidently the people in what the Crime Commission Task Force called "the core of organized crime"—the people in illegal gambling and loansharking—like the people who delivered illegal beer and gin in the days of the Untouchables, fought like the devil for the market, and patched up truces, and imposed hierarchical empires that were continually susceptible to breakdown, defection, and challenge.

One could of course give a particularist explanation of this. The big gangs have power and are greedy for more; the urge to exclusivity is natural, and when they get around to taking over burglary as they may have taken over the protection rackets and loansharking, we'll find burglary displaying these monopolistic tendencies. But I think that would be wrong. An alternative hypothesis is that we find *organized crime* in the lines of business that lend themselves to monopoly. The reason they are not in burglary may be that burglary is hard to monopolize.

It may be useful to remind ourselves of how many illegal goods and services are provided competitively, rather than by monopoly organizations of the underworld. An ideal example for my purpose is the sale of cigarettes

0148

below the legal age. Why is this market not monopolized? If it could be, there might be a few hundred million dollars in it of monopoly profits. But obviously it can't be. Nobody can keep a nineteen-year-old from buying a pack of cigarettes for a seventeen-year-old; the competition is everywhere. There is just no room for a black market differential, because the law itself is virtually impossible to enforce. If you can't control the market and police it against competition, excluding competitors or making them pay for the franchise, you cannot do any more than sell cigarettes to minors, and that's not an occupation in which a criminal, organized or not, could make a living.

Monopolize shoplifting? Try it: if you succeed, department stores may hire you as security guards, because you can presumably spot your competition better than the store detectives, and you may have a competitive advantage on the side of law and order.

At this point it might appear that we've reached the question, why does illegal gambling so readily lend itself to monopolization? Why is it that it not only occurs, as burglary and shoplifing occur, but is the object of monopolistic enterprise as those other criminal trades are not? But I'm going to ask a different question instead, a question that may help to answer the first question. What is the relation of organized crime to illegal gambling, at least as it shows up in such investigations as those of Senator Kefauver's committee?

The interpretation that I want to suggest is that *organized crime* does indeed have a victim. The victim is the bookmaker—the man who sells illicit services to the public. And the crime of which he is the victim is the crime of extortion. He pays to stay in business. Nominally he may seem to procure a "wire service" or occasionally to borrow money or to use the clearing-house facilities of the extortionate monopoly organization. But basically he is in a very simple business, one that needs no such organization; and he could do without The Organization. He might find organization useful, as many small businessmen find trade associations and lobbies and even public relations offices useful. But he does not need The Organization. It needs him. It lives off him. It lives off him the way it lives off anyone else, who, either in the underworld or the overworld, buys "protection."

And it is easier to see why extortion has to be monopolized than why gambling itself would have to be monopolized. Large-scale systematic extortion cannot really stand competition any more than a local taxing authority; I cannot take half the bookie's earnings if you took it before I got there. We can divide the bookies between us, territorially or otherwise, but if nine other mobs are demanding half his earnings, all ten are in trouble. "Protection" is primarily against the one who offers it, but it has to include protection against rival taxing authorities.

0149

And if the nominal basis for the extortion is the sale of a wire service or something of the sort, then evidently there will be an apparent monopoly of wire service in the underworld, but as a by-product of the monopolization of the protection racket.

We come now to the central question in this whole line of investigation. If the business of organized crime is extortion, in the underworld as well as in the overworld, why is the "core" of organized crime activity in the underworld itself? That is, why is the biggest victim of organized crime an illegal business rather than some legal business? (It may not be, but the traditional estimates as published, say, by the President's Commission in 1967, use figures between 5 and 10 billion dollars as the gross earnings of the illegal gambling business, and impute the larger part of it to the profits of "organized crime.")[7]

It is worthwhile to pause a moment and notice a certain anomaly. Making book is indeed a "crime without a victim," to use the name that Edwin Schur gave these activities,[8] but is itself victimized by organized crime. The victims of most crimes are not in the underworld. A department store may violate some laws and regulations, cheat its customers or the taxing authorities, or otherwise commit occasional crimes, but basically a department store is a "legitimate activity," and is the target of shoplifters. Shoplifters and pickpockets and burglars and embezzlers do not typically pick their victims in the underworld. Even if their victims are not altogether pure, they nevertheless do not usually have underworld careers. But what is generally referred to as the primary target of organized crime is itself an underworld activity. It is criminals who are victimized, if we accept my interpretation of the business of organized crime as that of extortion.

Should we be surprised? Can we identify characteristics of illegal bookmaking that make it a prime target for organized extortion? Can we possibly then look at other activities, legitimate activities and underworld activities, and infer which among them may be easy targets for organized extortion?

My first candidate, as a criterion for target selection by organized extortionists, is that the victims should be poor at protecting themselves. In particular, one would like victims who have no ready access to the law. Criminals would therefore usually be ideal victims. The attractiveness of underworld victims is even greater if the police can actually be used as an instrument; if harassment can take the form of vigorous law enforcement by

---

[7] TASK FORCE REPORT: ORGANIZED CRIME, *supra* note 2, at 3.

[8] Schur used the term in relation to the consumer as well as to the purveyor, and did not limit it to market place activities but let it include private deviance, like homosexuality as well. *See* E. SCHUR, CRIMES WITHOUT VICTIMS (1965).

0150

the police, the extortionists may not even need to engage in illegal violence to keep their victims in line.

Second, the extortionist wants a victim who cannot hide from him. Burglary is a very private affair, and the burglar has no need to advertise himself and his business and his location. A bookmaker or prostitute who were as hard to locate and to identify as a burglar might well escape the racketeer, but he would lose his customers. If a customer can find a bookie when he wants to place a bet, the racketeer can find him. Those who sell illicit services to the public are therefore more visible, more easily located and identified, than embezzlers, pickpockets, shoplifters, car thieves, and people who cheat on their income tax. All criminals may be susceptible to blackmail, but those who cannot hide without losing their business are especially vulnerable.

Third, it is probably important to be able to monitor the victim's activity and his earnings. Those who operate in the open, dealing with a standard commodity, one that has a face value in money and few complicated costs, are probably those with whom an extortionist can reach an enforceable contract. Even if one can find and recognize an embezzler or jewel thief, one would have a hard time going shares with him, because the embezzler can fool the extortionist if he can fool the firm he embezzles from, and the jewel thief needn't put his best prizes on display. A bookmaker may get away with some business on the side, and avoid taxation by the extortionist organization, but his business is basically simpler and more public than most criminal activities.

Fourth, it helps if the victim has a regular business that he cannot carry away in an attempt to escape extortion. A bookmaker or prostitute or loan shark has to have a place of business; much of his business assets consists of goodwill, personal acquaintance, knowledge of the customers and their credit ratings, trust, access to a grapevine communication system, and perhaps personal relations with the police. A bookmaker or prostitute can probably always escape, but not and still do business within the jurisdiction of The Organization.

Fifth, all of this may work best if it works smoothly and regularly. The victim has to be treated "fairly." He has to know that he is treated like other victims. The business has to be depersonalized. Rules of the game are needed so that the victim knows where he stands. He has to compare his situation with that of others in the same business. There probably has to be a set of simple and fairly uniform arrangements. The bookmaker has the choice of paying or not paying; it might burden the system too much if each had to negotiate his own unique arrangement with The Organization, and renegotiate it month by month.

Consider for example the sharing arrangement that Senator Kefauver's committee turned up in Miami. The "syndicate" took 50 per cent of the bookmaker's proceeds. This was a standardized percentage. Furthermore, it was not 40 per cent or 55 per cent or 29 per cent or 83 per cent. It was a nice round number, the nicest and roundest there is, an even 50-50. Oil-producing countries in the Middle East tend to converge on standard royalty arrangements with the Western companies they deal with. A king or a shah or a sultan or a sheik cannot explain to himself or to his constituents a lesser percentage share than the country next door receives, and he cannot persuasively hold out for a much more favorable share. So it may be that the very standardized nature and visibility of bookmaking lends itself to standardized, visible, and institutionalized arrangements, known to all and applied without much discrimination. Bookmakers probably can compare notes and tell whether they are receiving equal treatment far more readily than my neighbor and I can compare assessed valuations on our houses.

Perhaps another characteristic is that bookmaking, like prostitution, is a fairly petty activity, especially when it is illegal. That is, it can be a one-man or one-person job, or at least the retail organizations can be pretty small and decentralized. The bookmaker is probably his own bookkeeper, and he cannot readily plead inability when asked to pay. An officer of a bank would have to be a first-rate embezzler to pay large and regular amounts of blackmail out of the bank's resources without its becoming known to anybody else in the bank. In large organizations, too many people have to sign the checks, initial the vouchers, audit the books, scrutinize budgets, take inventory, and otherwise tangle things up in red tape. The small independent entrepreneur, whether in the underworld or the overworld, may be more able to meet the demands than a complex organization would be.

These are only suggestions. There may be other characteristics of illegal bookmaking that I have missed, that are even more important in determining why it is such an attractive target for extortion. If we knew more about these activities in cities of different sizes, on the insides of large organizations as well as on the streets, and in different parts of the country, and particularly if we compared them with comparable activities in other countries, we could learn more. My conjectures may at least help to alert investigators to what they should be looking for; unless one raises the right questions, no amount of hearings and inquiries and investigations will turn up the pertinent answers.

It may be equally useful to look at the many black markets that are immune to organized crime. There have been elaborate black markets in foreign currency and gold, but while those engaged may occasionally have been subject to blackmail, there is no sign that it has been at the hands of

0152

large extortionate organizations. There is apparently an enormous black market in drugs, if one is willing to construe all the abuses of prescriptioning procedures as part of the black market, and apparently Organized Crime gets its hands on at most a small portion of it. If firearms should ever be banned in the United States, there will probably be an extensive black market, but the chances are overwhelmingly against its ever being monopolized by a criminal organization. (I leave it to the reader to make his own list of the reasons why.)

When we turn to the overworld we can similarly ask, what characteristics of a business would tend to make it an attractive target for organized extortion? An equally interesting and important question may be, what forms should we expect the tribute to take? It is of some interest that even in dealing with the petty bookmaker, The Organization sometimes goes through the motion of providing a wire service, or otherwise pretending that it offers something more than sheer brutal "protection." That may explain why *organized crime* is so widely alleged to have been engaged in businesses like the provision of laundry service. The reason for selecting laundry may not lie so much with the laundry business as with the nature of the customer. Restaurants may be comparatively easy targets for racketeers. They are so easily harrassed, because their business is really rather fragile. Noises and bad odors and startling events can spoil the clientele, and even physical damage cannot be guarded against. Furthermore, restaurants do a great deal of business in cash, are often small proprietorships or partnerships, and are therefore financially capable of meeting the demands for tribute. But why not demand cash, then, rather than take it as a monopoly profit on a high-priced laundry service?

Or, to take another familiar example, why is it so often alleged that vending machines as well as pinball machines and slot machines are often "organized" by *organized crime*? Maybe *organized crime* likes gambling, and pinball machines are a little like slot machines, and then once you're in the machine business you may as well deal in cigarettes, too. Or maybe the machines are attractive for some other reason.

My conjecture is that the machines, like the laundry service, meet certain criteria that make them attractive means both of exacting tribute and of paying it. Again, if we were attempting organized extortion against restaurateurs in a city, planning to hit them all and to protect them all from rival extortionists, in what medium would we want them to pay us?

One criterion is that it should be tax deductible. There is no sense imposing a cost that is greater than what we get, when we could find a form in which we get everything that the victim loses. The high-priced laundry service is a

deductible expense; profits from the cigarette machine are excludable income, as long as the concessionaire receives them, not the restaurateur.

Second, the victim wants to be able to keep books without showing that he pays tribute. He does not want creditors, revenue agents, or grand juries to be able to identify the tribute he pays, especially if it is illegal.

Third, the victim may want a manner of payment that minimizes embarrassment and the loss of self-respect. He may prefer to feel himself the victim of a monopoly linen service, and to complain to his wife and his employees about how the linen industry has been victimized and he is indirectly suffering, rather than to remind himself periodically that he is simply paying cash for protection. He may even be able to feel that the vending machines are monopolized, not that he is providing rent-free space for somebody else's vending machine in return for "protection."

Indeed, from most accounts, gambling machines were used for this purpose in the 1930's and perhaps were still so used in the 1960's. A gambling machine in a neighborhood store may represent two kinds of criminal activity. One is illicit gambling, the other is extortion. It tends to get listed under the heading of gambling; but the more brutal crime is that some poor store owner is being shaken down by a protection racketeer. And his tribute takes the form of having machines put in his store. He may despise the machines and make nothing off them; but that's the price he pays. If the laws against gambling were properly enforced, the "crime without a victim" might disappear, but the extortion might continue with payment taking another guise. It may hurt the extortionist somewhat to be denied his favorite medium of tribute; but we miss the point if we suppose that the only crime we're dealing with is gambling.

The machines and the laundry services and the other ostensible businesses that are used by the racketeers may also meet another need. That's the need for as institutionalized practices, uniform arrangements, nondiscrimination, etc. If each victim privately pays cash he has no way of knowing how his treatment compares with that of other victims; but if they all get their linen or beer or meat from the same monopolistic provider, or all provide their vestibules for similar kinds of machinery concessions, they know they're getting standard treatment.

Incidentally, if news vendors, neighborhood store owners, or barbershops became universal victims of organized extortion, perhaps sharing their earnings and nominally receiving some service in return, perhaps paying extortionate prices for supplies or rent on the building, we would probably not describe haircuts and magazines and chewing gum as the businesses that organized crime were engaged in. We'd describe them as the victimized

trades. We would distinguish the barbers and the news vendors from the personnel of *organized crime*. Even if The Organization helped to enforce union membership, uniform prices and uniform closing days; lobbied for legislation favorable to barbers; occasionally intervened on their behalf with their landlords, lent them money, and occasionally got them barbershop space in new hotels, we still wouldn't consider the barber a criminal nor consider organized crime to be in the business of providing haircuts. We would not be afraid that a successful crackdown on organized crime would close up the barbershops and leave us no place to get our hair trimmed. We'd expect instead that prices might fall, just as if a heavy tax on haircuts had just been repealed.

This thought may put illegal gambling back into better perspective. It is undoubtedly true that, as Donald Cressey said in the passage quoted earlier, "if the confederation of men employed in illicit businesses were suddenly abolished, it would be sorely missed because it performs services for which there is a great public demand." But it is only true if we take the "confederation" to include the bookmakers as well as the racketeers who prey on them. Even then it is true only if we permit no newcomers to enter the business in replacement of the abolished "confederation." Even if the customer wants his bookie, he has no use for the organization that restricts competition in the betting industry.

I must at this point offer two qualifications, one substantive and the other a matter of point of view. The substantive one is this. Maybe bookmakers, prostitutes, loan sharks, and drug peddlers would, if left alone by the racketeers, be unable to come to proper terms with the police and unable to engage in their business. Maybe corruption is best handled collectively, and an illicit trade consisting only of individualist competitors could not buy off the public officials. Perhaps they would be unable to form their own organization: nobody likes to pay dues, people may drift in and out of the business, some may have satisfactory arrangements and no need for the union. In that case it might be worth a fairly high price to have discipline and organization imposed from outside. The Organization may levy a high tax once it imposes its own governance on the gambling business; but a high tax may be better than no governance at all.

Conceivably, then, bookmakers gain by being victims of a predatory organization; without it they would have no organization. Furthermore, much of the tax, perhaps most of it, may be passed along to the customer. Gasoline stations do not suffer enormously when gasoline taxes go up a nickel; they suffer only to the extent that motorists reduce their driving because of the higher price of gasoline, and on the whole the tax gets passed along to the buyer. Thus the direct victim of extortion is the bookmaker, or

the prostitute, or the barber, or the restaurateur; but if the tax is uniformly levied on all bookmakers or restaurateurs, and if it is a tax on transactions and not on residual profits, it probably is passed along so that the one who "pays" the tribute is the customer, not the nominal taxpayer. Just as the tenants in apartment houses "pay" the property tax, though the landlord forwards the check to the tax collector, the person who places the bet receives less favorable odds than if bookmaking were a purely competitive and "untaxed" consumer service.

The second qualification is that any organization can be viewed in different ways. It is possible to say with some truth that General Motors does not produce automobiles; the Chevrolet and Pontiac divisions do. Many businesses, small and large, are decentralized; General Motors may deliberately allow the Chevrolet division a good deal of autonomy, just as Chevrolet grants its sales agents so much autonomy that they are considered to be "authorized dealers," dealing in their own names, rather than branches of Chevrolet. Many firms let their salesmen work on commission; farm owners often prefer going shares with a tenant rather than hiring him for a wage. Many hotel and restaurant chains lay down architectural and other standards, but do not directly manage the individual establishments that bear their name.

By analogy, one could say that *organized crime* is indeed in the gambling business but finds it expedient to run that business by licensing individual bookmakers rather than hiring them as employees. It may even do it on an "open shop" basis, according to which anybody can get into the business as long as he pays the franchise tax. A specific test might be whether The Organization could move into a locale where there was no off-track betting and establish a bookmaking business, and if so whether it would own and operate the business or instead set it up in the familiar pattern, inviting independent operators to operate under the "protection" of the racketeering organization, which would protect them from molestation either by police or by rival organizations. If it did the latter, we'd have to admit that though the arrangement has all the characteristics of extortion, and may often arise directly out of extortion, it can be construed as well as a monopolized business in which independent operators are allowed on condition that they pay standardized tribute to the licensing organization.

All of this has some bearing on the question, if gambling were made legal would it continue to attract racketeers? It is often alleged that organized crime is so skilled and experienced in the gambling business that it would have an edge over "legitimate" entrepreneurs, and would not only entrench itself in legitimized gambling but would enjoy the greater profits that would go with enlarged business. One suggestion of this paper is that The

0156

Organization is not really skilled and experienced in the provision of gambling services. It is skilled and experienced in the *suppression* of rival gambling services, especially in suppressing rival *illegal* gambling by collusion with the police. Its success, with or without the police, is appreciably due to the inability of the bookmaker to seek the protection of the law. It is also due to the inability of the bookmaker to protect himself through corporate organization, trade association, and all the other ways that modern business protects itself from crude and petty interlopers, chiselers, and even racketeers.

Thus the important question is not whether the *bookmakers* would show up as the sellers of legal bets if off-track betting were made legal. The question is whether The Organization could get a monopolized extortionist grip on the industry. That may not be an easy question to answer, but it is at least clear that some of the characteristics of off-track betting that presently make it an ideal target for monopolized extortion would not be present if it were made as legal to bet in front of a television screen as it is to bet in the presence of the horses themselves. The history of prohibition and its aftermath in the liquor business strongly suggests that *organized crime* may not thrive or survive in the face of legal competition.

In any event, those among us who are so hypocritical as to want off-track betting illegal, prostitution abolished, and the credit laws enforced, but still want to place their bets, visit the bawdy houses, and borrow on the side to preserve their credit ratings, needn't be afraid of a crackdown on organized crime. They may suffer, as Donald Cressey suggests they will, from a crackdown on gambling, prostitution and loansharking; they can benefit, though, from a crackdown on *organized crime*, just as the consumer always hopes to benefit from trustbusting.

The purpose of monopoly has always been to suppress, not to enlarge supply. People who like monopoly prices and punitive taxes on the naughty activities may be pleased that the long arm of organized crime reaches out and levies a tax on the retailer that is passed along to the consumer. The consumers will prefer to see the activities become more freely competitive, whether by being released from illegality, or released from the grip of *organized crime*; so will those who dislike corruption, especially when it is centralized and regularized by large monopoly organizations that can build corruption directly into our institutions, rather than leave it to gnaw away at the edges.

FEDERICO VARESE

Introduction to Special Issue Production, Trade and Governance: A New Definition of Organized Crime

Abstract

This introduction presents a novel framework that distinguishes three activities of organized crime (OC): production (creating goods and services), trade (moving products and people), and governance (regulating markets and controlling communities). These activities require different skills and give rise to three different types of OC groups. To illustrate some of the points, I make references to the papers published in this Special Issue, on erotic fiction in China by Wang and Evelyn; on falsified medicines production and trade between Asia and Europe by Hamill; on drugs retail and gang control of a neighbourhood in Marseilles by Rodgers and Jensen; and the cocaine international distribution chain by Feltran.

Keywords: Organized Crime; Definition; Production; Trade; Governance.

THIS SPECIAL ISSUE presents four original papers, which examine illegal erotic fiction in China (Wang and Evelyn); the production of counterfeit medicines and their distribution from China to Europe (Hamill); the emergence of criminal governance in a neighbourhood of Marseille (Rodgers and Jensen); and the complex drug distribution system that conveys the product from Latin America to Europe (Feltran). While the topics are diverse, the papers share a common analytical approach: they examine the activities associated with organized crime and recognize the differences among these activities. In this introduction, I seek to explore these differences. I do this by presenting the key propositions of a novel

Note: In this paper, I draw upon the work to ideas I published in Varese [(2010) 2017]; Shortland and Varese [2016]; Campana and Varese [2013; 2018]; Breuer and Varese [2023]; Varese and Zeng [2024]; Campana et al. [2025]; and the B1 and B2 forms compiled for a ERC project, grant no. 101020598-CRIMGOV, PI Federico Varese. Over the years, I have often discussed the issues raised in this paper with Paolo Campana.

definition of organized crime (OC). Rather than focusing on the ethnicity of the perpetrators, or the supposedly elaborate structure and longevity of the group, I consider the activities OC offenders engage in. I further argue that different kinds of activities require different skills and resources, and thus distinguish between the production of goods and services, the trade of such goods across (physical and virtual) territories, and the governance of territories and markets. Each activity has a counterpart in the legal world: firms, traders, and governments. This approach to the study of OC will establish firm foundations for the field and allow scholars to test a variety of theories. For illustration, I refer to the evidence presented in the papers for this special issue. This introduction proceeds as follows: Section 1 outlines the logical elements of a definition of OC and briefly covers the history of the concept, and Sections 2–4 introduce the three building blocks of the approach I propose. Section 5 concludes.

Towards a Concept of Organized Crime

Ambiguity, confusion, and disputes about the status of concepts are rife in the social sciences. Giovanni Sartori's taxonomical model, proposed in the 1970s, suggests that concepts should be organized using a hierarchy of categories defined by their extension (the set of entities they apply to) and intension (the attributes defining them). Moving down the hierarchy, categories become more specific; moving up, they become more general.[1] Following Sartori's precepts, at its most general the concept of "crime" is usually defined as "an intentional act in violation of the criminal law, committed without defence or excuse, and penalized by the state" [Tappan 1947: 100]. As we move down the generality ladder, we inevitably construct classifications. Corruption, fraud, and theft come to mind as more specific types of crime. OC is another such example. As will become clear below, I define OC as a set of three activities that actors engage in: namely, illegal production, trade and/or governance.

In developing this concept, I will be guided by three principles. First, OC should not be just an attribute of other concepts but rather stand alongside equally general constructs, such as theft. Second, the concept

[1] Giovanni Sartori emphasizes that expanding a concept's extension without reducing its intension leads to conceptual stretching [Sartori 1970].

0160

https://doi.org/10.1017/S0003975625100143 Published online by Cambridge University Press

should be used to test competing theories, rather than being tied to a single one. In other words, and contrary to the view of Carl G. Hempel [1965: 113], concept formation is distinct from theory formation. However, this exercise involves the creation of classifications that are inevitably an interpretation of the world, so it is not entirely neutral or a-theoretical. Third, concepts should be relatively easy to operationalize effectively, and a broad consensus should be reached on this process. One solution would be to incorporate elements into the concept that are well established and have already been operationalized in other fields of study. Keeping these questions in mind, the first decision we need to take when trying to develop a definition of OC is whether we consider it as an attribute of an ethnic group, as an organization, or as particular activities defined as illegal by the state. All three perspectives exist in the literature [for a discussion, see Paoli 2002]. The "alien conspiracy theory" appeared after World War II and was prevalent in US debates from the 1940s to the 1960s. Originating within the Federal Bureau of Narcotics, it alleged that the majority of narcotics dealers in the USA were "Italian speaking people" [cit. in Smith 2016: 63]. Endorsed by the FBI after the so-called Apalachin meeting of Italian mobsters in November 1957, it quickly developed into a widely accepted position. The theory was predicated on the assumption that OC was a foreign import from Italy that threatened American values, and it equated it with La Cosa Nostra [Smith 2016: 63; Kleemans 2014: 33–34; Potter 1994]. Clearly, this position had xenophobic connotations, which underlines the point that definitions are not neutral. This view ignored the role of local conditions and structural factors in the emergence of OC in the USA.[2] Although deeply flawed, this approach has never entirely disappeared from American public discourse. At the same time, the target group has changed, shifting from Italian to Turkish, Chinese, or Russian immigrant communities [Kleemans 2014: 34]. Latin American cartels seem to be today's equivalent on the basis of recent US policy decisions. Ultimately, the "alien conspiracy theory" considers OC an attribute of the ethnicity of the offender: thus a foreign-born person committing a given crime would qualify as engaging in organized crime, while a "native" committing the same act would not.

A second position found in the literature is that OC is an attribute of an organization. The view that this particular type of offence is structured as

[2] Earlier scholars, such as Fredrick Thrasher [1927] and John Landesco [(1929) 1968], emphasized local structural conditions, as opposed to ethnic origins, as the cause for the emergence of OC in the USA.

0161

https://doi.org/10.1017/S0003975625100143 Published online by Cambridge University Press

a hierarchical set of relations with an internal division of labour dates back at least to the early twentieth century, yet it was the US Committees investigation of La Cosa Nostra in the 1950s and 1960s that cemented the interpretation of OC as a highly organized conspiracy.[3] In 1963, Joe Valachi, a "soldier" in the Genovese Mafia "family," gave a televised testimony to the Permanent Subcommittee on Investigations of the US Senate Committee on Government Operations. The authorities used charts of Mafia "families" to present Joe Valachi's evidence. In this rendering, the Mafia had a hierarchical structure, with clearly defined roles and a boss at the top. Rather than specific crimes, OC was about a set of top-down interactions. A consultant on the 1967 US President's Commission on Organized Crime, distinguished criminologist Donald Cressey, built on Valachi's evidence and methods, namely the organizational charts. He described OC as relating to an organization that is "rationally designed to maximise profits by performing illegal services and providing goods that [are] demanded by society" [cit. in Varese (2010) 2017: 31]. Again, OC was interpreted not as a type of offence, but as an attribute of the organization committing the offence.

Almost immediately, this view came under criticism from scholars who argued that Cosa Nostra families had a degree of informality that did not quite fit the strict hierarchy model; they had no fixed roles, and no overarching coordinating body such as the Commission.[4] Rather than a rationally designed organization resembling the Bell Telephone Company, the Mafia was a traditional social system, the product of culture rather than design [Ianni 1973: 133–134]. Over the years, this position was enriched by novel concepts emphasizing that OC is "socially embedded" [Kleemans and van de Bunt 1999] and "networked" [Morselli 2005]. According to this view, family ties and geographical position are what help explain patterns in international crime, rather than the presence of a top-down structure. More generally, these scholars do not assume the existence of a predefined structure but derive it from empirical observation. This perspective is a significant improvement on previous models and opens up the possibility that the structure is a function of other variables, such as family ties, geographical position, money and, more generally, the overall context. Still, the

[3] The "Alien Conspiracy Theory" and the "OC-as-a-bureaucracy" approach both adopted the same view of the organizational model of mafias, as noted by Potter 1994.

[4] Among the critics, see Albini 1971; Ianni and Reuss-Ianni 1972; Smith 1975. It turned out that Valachi's testimony was quite accurate, and the American Cosa Nostra did conform to this top-down structure with a coordinating Commission. For a critique of the critique, see Critchley 2009; Varese [2010] 2017, and Varese 2021.

0162

https://doi.org/10.1017/S0003975625100143 Published online by Cambridge University Press

focus remains on the structure (however this is defined) as the essential feature of OC.

Should OC be seen through the lens of its structure? Organizations are normally described as instruments used to achieve goals that would be difficult or impossible to obtain by individuals acting on their own [Handel 2003: 2]. Classic definitions of OC, such as Cressey's, are predicated on Weber's rational-bureaucratic model of organization. Weber defines this model as an "established impersonal order," founded on the idea of "domination" *[Herrschaft]* [Weber (1924) 1978: 215 and 212]. This type of domination establishes a hierarchy enforced by formal legality and which is responsible for the efficient delivery of the product to be supplied. Legal-rational authority is a form of domination that is superior to other kinds, namely traditional and charismatic domination. Charismatic authority is unique and non-replicable and therefore cannot be structured. Traditional authority evokes habit and convention and is considered to be less efficient than a more rational mode of organization. For instance, it does not adapt when circumstances change.[5] When adopting the rational organization model, offenders' crimes are more harmful and/or extensive than when a less structured model is used. The relaxation of the principles of stringent division of labour, hierarchy, and clearly defined roles within OC overstretches the concept. It ends up covering almost any form of co-offending, from one-time partnerships to membership of a secret cabal. Most crucially, such relaxation does away with the Weberian assumption that an intentional decision has been made to create an organization in order to efficiently achieve clearly defined goals. Although this was not openly stated, Donald Cressey's definition was predicated on the existence of a form of domination that was not only rational and superior to any other, but also considered legitimate by the actors involved (hence the original emphasis on their being both Italian and alienated from mainstream society). If OC can take any form, its structure cannot be its defining feature.

An alternative way to think about OC is to focus on activities. In 1977, US Attorney General Griffin Bell remarked that OC investigations by the Justice Department "would in the future concentrate on *activities* in a particular industry or enterprise and would move away from the practice of picking syndicate families or individuals as targets" [cit. in Smith 1980: 360] [emphasis added]. In his book *The Mafia Mystique*, D. C. Smith

[5] Max Weber was deeply conflicted over the rise of the modern bureaucracy and explored the unintended consequences of rationalization. Moreover, he did not subscribe to the view that progress was simple and linear [WEBER (1924) 1978].

0163

https://doi.org/10.1017/S0003975625100143 Published online by Cambridge University Press

elaborated the view that OC is a business activity operating in conditions of illegality. This "enterprise model" suggests that OC groups are illicit firms producing goods and services, such as gambling, loan sharking, narcotics, and sexual services [Smith 1975]. First, this perspective does away with the focus on the organization, which is now a function of the activity. Second, it excludes criminal behaviours that do not involve the creation of a product or provision of a service. Domestic violence, theft, and the purchase of stolen goods do not add production value to the objects (or persons) concerned. Finally, OC is not an attribute of other crimes, of an ethnic group, or of a particular organizational structure.

The "enterprise model" is a marked improvement on previous views of OC. And yet, the concept it introduces covers activities that are extremely diverse. It fails to distinguish actors engaged in production activities—such as processing coca leaves, illegal gambling, and running brothels— from those tasked with transporting the product from one location to another, i.e. the trafficker. Human trafficking, human smuggling, drug trafficking, and trafficking in animal parts or stolen data are best understood as forms of trading and can occur in physical or virtual marketplaces. The skills required —and hence the profiles of offenders—are very different from those of the actors involved in production. For instance, *Financial Times* journalist Mads Nissen travelled to the village of Pueblo Nuevo in Antioquia, Colombia, to meet Ariel Albeiro Muñoz, 19, who picked coca leaves as a day labourer: "Muñoz said he didn't use cocaine or care much about politics; he just wanted to earn enough money to buy a motorbike."[6] Workers like Muñoz begin work at 5 a.m., each one collecting about 70 kg of coca leaves, for which they are paid about $10. However, Muñoz has hardly anything in common with those who receive the drugs and ship them across the world.

There is a third activity that needs special attention: the illegal governance of the production and trade of goods and services [Varese (2010) 2017: 41]. In essence, individuals involved in governance OC perform a function that is normally reserved to the state in legal markets. In order to govern, they need to invest in a special set of resources which are not necessarily available to the illegal producers and traders, such as violence. Here lies the main challenge to the state as the only legitimate user of force [Bates 2008].

Obviously, any discussion of OC is predicated on the fact that the state defines what is legal and what is illegal. For instance, paying for organs is legal in Iran and outlawed everywhere else in the world [Steiner 2010]. As pointed out by Beckert and Dewey [2017], the illegality may comprise every

[6] Mads Nissen, 2022 (December 12). "Colombia, cocaine and the lost war," *Financial Times* [https://www.ft.com/content/71343aa2-f7e7-44f3-b053-2c5379302640].

0164

https://doi.org/10.1017/S0003975625100143 Published online by Cambridge University Press

element of the chain—from production to exchange to consumption—or only certain aspects of it. What is legal or illegal, and what counts as OC, is deeply contextual and a function of state decisions [Beckert and Dewey 2017: 6]. In addition, police enforcement differs greatly depending on the product and the country. For instance, under US federal law, the production and sale of marijuana are prosecuted less severely than the production and sale of cocaine. The level of enforcement might also be related to the social acceptance of the illegal act in question [Mayntz 2017: 39–40]. And yet the fact that a given product is defined as illegal has an effect regardless of the level of enforcement: it allows state actors to apply the law selectively.[7]

Keeping these background points in mind, in the following sections I discuss each of the activities mentioned above, namely production, trade, and governance, with specific references to the papers submitted for this special issue.

Production OC

A viable definition of OC might be based on its three distinct parts: production, trade, and governance. Each requires dedicated attention. By production, I mean *transforming raw materials into finished illegal products and/or performing illegal services, and offering these on a market*. While, in principle, actors engaged in production could work alone, in most cases of interest they are employed in a *criminal firm*, which in turn is based on a set of agency relationships of authority: superiors order employees to perform a certain task. Some goods and services will be bought on the market while others internally produced. In any case, "wage employment" and "self-employment" are both covered by this definition. Even a lone producer must, at some point, put the product in an arena where goods and services are exchanged, namely a market. While "trade" and "governance" can also be thought of as products and services, the skills and the resources required for these activities are very different from those needed for the production of, say, drugs, counterfeit medicines, or malware, and this gives rise to different kinds of OC groups.

An example of criminal production at its most basic is erotic fiction writing in China, studied here by Wang and Evelyn. The producers, in

[7] This is most obvious in the case of corruption. While Russia and China are very corrupt, anti-corruption drives tend to target officials or politicians that have fallen out of favour [Varese 2000; Zaloznaya and Reisinger 2025]. Racism also leads to selective enforcement. *Ceteris paribus*, Black and Hispanic individuals are more likely to be targeted than White individuals by police in the USA [e.g., Fryer 2019].

0165

https://doi.org/10.1017/S0003975625100143 Published online by Cambridge University Press

this case, are authors of books that are illegal to sell under Chinese law. One crucial element emerges from the work of Wang and Evelyn: the producer may act as the seller of their own product. Thus, in effect, the author has two roles, although the main one is that of writing erotic fiction. Since trading erotic fiction online is relatively simple, it makes sense to internalize this function. And yet even in such a simple case of criminal production, many authors engage agents and promoters to sell online. Division of labour sets in quickly.

Hamill studies a production facility in Tianjin, China, that was used by a small group of producers of counterfeit medicines, which they claimed could treat cancer, psychosis, and heart disease. Some 200,000 boxes of counterfeit medicines were manufactured in five days, claims Kevin Xu, a manager at the firm [Hamill]. Through qualitative social network analysis, Hamill finds that the producers have a clear chain of command and that their network is hierarchical, displaying a high degree of homophily. Given the needs of production in a firm, its organizational structure is, unsurprisingly, a by-product of the activity.

The counterfeit products studied by Hamill entered the same market in which the authentic medicines were being sold, and were falsely advertised as genuine. Between 5 and 7% of the global pharmaceutical market is made up of such medicines, with some countries, such as Ghana, having rates as high as 37% [Beckert and Dewey 2017; Hamill:8]. Illegality poses a problem for producers, who find it hard to build a reputation for quality. Producers must avoid attracting too much attention while at the same time striving to promote their product. Other things being equal, this constraint leads operations to be smaller in size and scope [Reuter 1983]. In order to increase product visibility, some producers try to get around the difficulties of advertising, for example by branding their products, as in the case of cocaine producers who stamp a symbol on the drug package or "brick" [Curcio 2003]. Authors of erotic fiction use online nicknames to maintain their professional reputation [Wang and Evelyn]. Sometimes, however, people engaging in illegal activities online are forced to change their nickname to avoid being identified by the authorities, and therefore risks losing the reputational capital accumulated by their brand name. One cybercriminal was so upset at the prospect of changing his moniker that he wrote in a forum: "Here my name is solv3nt, but in other forums I am known by the name of dentrino" [Lusthaus 2012: 81]. He was trying to preserve the credibility he had accumulated in the past. In the case studied by Wang and Evelyn, buyers and sellers try to send credible (hard-to-fake) signals that help the market to function, albeit not perfectly.

0166

https://doi.org/10.1017/S0003975625100143 Published online by Cambridge University Press

By focusing on production as a separate activity, scholars can explore the roles of two key variables: namely, level of enforcement and technology. It is likely that both affect prices, location decisions, distribution chain (long/short), share of total revenues, the labour force (who is hired), the size of capital markets, the financial arrangements, size of inventories, specialization (a single product vs more products) and, as mentioned above, advertisement. Most crucially, *ceteris paribus* the size of the firm depends on the level of enforcement. In addition, the interplay of production and governance (see below) varies depending on local circumstances. In conclusion, the standard tools used by economic and political sociologists to study the context of legal production can be fruitfully applied in this field too.

Trade OC

The second building block of a viable definition of OC is trade. When I refer to trade OC, I mean *moving goods or people from one location to another illegally*. As mentioned above, it is most likely that these individuals will be part of a group. Trade OC covers, for instance, drug trafficking, smuggling and trafficking of people and/or endangered species, smuggling of arms or stolen vehicles, money laundering, and a great deal of the illegal buying and selling that takes place online. Groups involved in such activities do not aim to control economic sectors or territories. For instance, different gangs involved in human smuggling share the same routes [Campana 2020]. They operate the equivalent of flexible supply chains [Zhang and Chin 2003].

Since the actors involved in trade OC do not try to exclude others from a particular market, we would expect the potential for competition to be great, although high levels of investment and some structural advantages might be necessary to enter the market. For instance, the trader must be able to forge contacts with both producers and buyers: having the necessary background helps. Moreover, the use of violence will be minimal, as there should be no conflict over territory [for a recent study that supports this view, see Baradel and Breuer 2024]. In another recent paper, Baker and Duncan [2025: 2] state that transnational drug-trafficking organizations—such as those that have been operating in Medellín, Colombia since the 1970s—"are not inherently political actors", as their aim is to move drugs, yet in order to carry out their operations they seek either state or criminal protection. To the extent that they seek the former, they influence electoral politics through massive cash payments which in turn

0167

https://doi.org/10.1017/S0003975625100143 Published online by Cambridge University Press

can influence electoral outcomes; if they seek the latter, they strengthen criminal governance [Baker and Duncan 2025].

Thus, the organizational structure of trade OC is expected to differ from that of the groups involved in production or governance (see below). While production OC has a tendency to display a high degree of hierarchy, with a top-down chain of command and homophily ties, trade OC exhibits low levels of demographic homophily, namely a tendency for nodes with different characteristics to form ties with one another and for the network to be quite centralized around key players who connect the others [Breuer and Varese 2023: 870]. The central actors are nodes connecting parts of the network that would otherwise be separate, allowing for the flow of information and resources. As noted by several criminologists [e.g., Morselli 2005; Kleemans 2007], these actors operate as a bridge between "structural holes" [Burt 1992]. In a study of OC in the city of Liverpool, the authors argue that drug trafficking (the activity) drives the patterns of interactions *among* groups as well as outside them [Campana and Giovannetti 2025].

Indeed, Hamill finds that in Operation Singapore, "medicines are passed along in a sequence of exchanges" [20] and the network is constituted by "temporary alliances crafted to accomplish certain objectives" [21]. The trade network is "adaptable, temporary, and transactional" [21]. This dense, clustered network structure allows for more effective, short-term coordination; the paths between nodes are short in order to make information transmission easier. Rapid and effective communication between the main players is essential: thus we expect a high volume of electronic communication across significant distances, where in-person meetings are not possible.

Arguably, there is a lot of money in trade—more than there is in production. During his trial in France, the main organizer of the distribution network of counterfeit medicines studied by Hamill, a man called Arnaud Bellavoine, declared in court: "I was hungry for money. I had big financial problems… I had the idea of Plavix and Zyprexa. They were very fashionable things and large volumes were prescribed in Europe" [Hamill: 18]. The medicines smuggled into the UK from November 2006 to May 2007 netted the criminals some £7 million. Such high profits (and margins) for trade are to be found in other illegal markets too. For instance, the wholesale price for cocaine in the Netherlands is ten times that in Colombia [Kleemans 2007: 177].[8] Similarly, high profits

[8] According to 2019 data cited in Baker and Duncan [2025: 4], a kilo of cocaine costs $1,500 in Colombia and $69,000 in the USA.

0168

https://doi.org/10.1017/S0003975625100143 Published online by Cambridge University Press

can be made by those who smuggle either arms, animals, and people, or synthetic drugs. As noted by Peter Reuter, the entire cocaine supply chain resembles an hourglass: a few intermediaries make the most money, while the many who produce and retail the product make relatively little [Reuter 2003; see also Feltran: 4].

Promises are normally not enforced by third parties. Thus, references to the binding power of one's word and invocations of mutual respect are a regular feature of the conversations wiretapped by the police, as in Xu's chats with Bellavoine, a manager of offshore companies and a pivotal actor in his trade network [Hamill: 22]. Since mafia-style third-party enforcement is hard to implement when transactions are complex and take place across different continents, referring to moral obligations is a crucial mechanism [Hamill *et al*. 2019]. Words are not always cheap.

The mechanisms that eventually cause the functions of production and trade to separate are growth in an organization's size, complexity, and profits. The more complex the production process, the more specialized the skill set needed; the more complex the distribution chain, the harder it is for producers to oversee the shipment of goods from one part of the world to another. Hamill shows that the distribution network for counterfeit medicines in Operation Singapore is clearly separate from its production network. Trading across continents, from China to the UK, requires skills that individuals working in a plant in Northern China do not have. As expected, those involved in distribution are middle-aged British and French businesspeople who have vast competence in international trade and travel, with connections to Singapore, Mauritius, Tunisia, France, and Luxembourg, and who are proficient in more than one language. Conversely, the producers are all from the same location and speak the same language [Hamill: 18]. Some countries, such as the Netherlands, appear to have become hubs for trade OC; in the case of the Netherlands, this may possibly be due to its geographical location, population diversity, and good infrastructures. As Kleemans points out: "Criminal groups [in the Netherlands] are primarily involved in international illegal trade, using the same opportunity structure that facilitates legal economic activities" [Kleemans 2007: 176]; the Netherlands' legitimate economy is also specialized in transportation.

A focus on trade OC opens up new areas for research. Scholars might study how long-distance as opposed to short-distance trade affects the opportunity to govern. While in the former case it is almost impossible to envisage a third-party enforcer operating between, e.g., Colombia and Calabria, within a region where there is a strong governance OC, trade might be managed by a traditional mafia. In this case, the activity affects

0169

https://doi.org/10.1017/S0003975625100143 Published online by Cambridge University Press

not only the internal organization but the interrelations among groups. In addition, trade OC appears to be the area in which the interplay between the legal and illegal spheres is greatest.

Governance OC

The third building block of a viable definition of OC is governance. Here, governance OC means *the unlawful regulation and control of the production and trade of goods and services*. This type of OC seeks to control who is allowed to produce or trade. The entities can take at least two forms. Some might limit themselves to governing the production and sale of a particular commodity, like drugs or sexual services. Others aspire to protect several markets. Thus, governance can be limited or extensive.[9]

Governance OC covers activities such as dispute settlement, protection against competition, protection against thieves, labour racketeering, intimidation of lawful right holders, debt recovery, enforcement of cartel agreements, and governance of prisoners. With the development of cybercrime, some of these functions have been taken up by the administrators of electronic platforms on which buyers and sellers interact, the punishment normally being exclusion from future transactions [Odabaş *et al*. 2017; Lin and Wang 2024]. A group may engage in a combination of such activities. When it engages in most of them in a certain territory, it aspires to enforce a mafia order, and thus acquires a political dimension too. When the ability of the state to govern vanishes or is absent, criminal governance becomes a form of rebel rule and eventually takes the place of the state [for a relevant example, see Winn 2024; for academic studies, see Arjona et al. 2015]. Thus, the two phenomena—of OC and of rebel activities leading to civil war—are related, but should not be conflated [Kalyvas 2015].

Governance-based OC structures are likely to exhibit decentralized networks with low clustering, long path lengths, and high homophily based on demographic attributes. We expect this type of OC to take time to emerge and stabilize; thus it operates with a longer time horizon, as its participants are likely to wait patiently for the right moment to act rather than to require immediate rewards [Breuer and Varese 2023].

[9] See, e.g. Lessing's definition of criminal governance as "the imposition of rules or restrictions on behaviour by a criminal organisation" [Lessing 2021].

0170

https://doi.org/10.1017/S0003975625100143 Published online by Cambridge University Press

There is a tendency to confuse governance OC with corruption. It should be made clear that governance OC is autonomous from the state. When state agents ensure market stability illegally, they engage in corruption, breaching their contract with their official employer [Varese 2000]. Similarly, the phenomenon observed in China of thugs hired by businesspeople colluding with state officials to remove peasants from profitable land is not a form of governance OC [Varese and Wong 2018]. Unlike cases of corrupt officials or paid thugs, the youths known as "les petits" who operate in the Félix-Pyat neighbourhood of Marseille are an example of a rudimentary form of governance OC. They first attempted to regulate only drug distribution, and then evolved into a group imposing social order on the neighbourhood at large; a compelling mosaic of their relations emerges in Rodgers and Jensen's account.

The drug market in Félix-Pyat has been dominated by Comorians since the mid-2010s. At first it was controlled by a group known as "les grands" (the big ones). When key members of this group were sent to prison, the youngsters took over [Rodgers and Jensen: 11]. In order to build up their reputation, they initially engaged in behaviour which caused them to come across as "unpredictable and dangerous", as an informant told Rodgers and Jensen [*Ibid*.: 11]. This strategy is used by many in governance OC, in stark contrast to the practice in trade OC [for the deployment of "sadism as an instrument of cartel warfare" by Los Zetas in Mexico, see Grayson 2014]. In 2019, when a runaway youth from Northern France tried to sell drugs as a freelancer in Félix-Pyat, he was kidnapped and tortured by "les petits": they burned his genitals with a blowtorch, almost killing him [*Ibid*.: 12]. Their actions were intended to send a clear message to anyone who might think of challenging the group's prerogative over who could sell drugs in Félix-Pyat. The episode shocked the neighbourhood and led to a high-profile trial. Arguably, this was the intended outcome.

Criminal governance was not always present in Félix-Pyat. It appeared only at the very beginning of the twenty-first century. In the mid-l 990s, independent dealers were still able to trade: for example, the man known as Disco, who had arrived in Félix-Pyat as a young man in the early 1980s. Disco sold drugs from his first-floor apartment, having bought his supplies from corrupt policemen. Somebody informed on him to honest police officers, and he was jailed in 1999. This example also suggests a lack of order and predictability in the market: anybody can rat on their competitors. The appearance of a rudimentary form of governance

0171

https://doi.org/10.1017/S0003975625100143 Published online by Cambridge University Press

makes the market more predictable, ensuring that no one informs the authorities about the activities of protected dealers.

Rodgers and Jensen returned to Félix-Pyat in 2023, some eleven months after their first trip, and noticed that a transformation had taken place. "Les petits" were more friendly, they displayed sartorial uniformity, and most significantly, they had written a letter to the people of Félix-Pyat. In the text, they apologized for past misunderstandings, pleaded with the residents not to go to the police, threatened those who did, and promised to take care of the neighbourhood and help the community [Rodgers and Jensen: 12]. Many saw the letter in a positive light. Shortly afterwards, youths dressed in the gang's outfits were seen cleaning the streets. The group even intervened to settle a brawl between two families, calming everybody down. This parallels the case Zeng and I documented recently of a neighbourhood gang in the city of Nottingham [Varese and Zeng 2024]; as in Félix-Pyat, here too the young gang members had initially only been involved in one market (drugs), but over time they had taken on the role of community governance (for similar dynamics in the case of London, see Campana *et al*. 2025]. "Les petits" were connected to larger groups and became the target of citywide conflicts. While criminal governance can bring a degree of order, this may also be accompanied by more violence.

Governance should be thought of as a continuum of complexity. It can be *ad hoc*, informal, precarious, and small-scale, nesting in deprived neighbourhoods within relatively well-functioning states where policing is generally effective. At the other end of the spectrum are the complex and far-reaching forms seen in parts of Latin America [Lessing 2021; Feltran 2020], the Caribbean, and in traditional mafia territories [Gambetta 1993; Varese 2001]. These groups might be able to provide infrastructural services, jobs, loans, and even healthcare [Rodgers and Jensen: 14]. Yet they all belong to the same category; the differences are in degree and not in kind. This is why the classification of OC into three types of functions suggested here is valuable.

Feltran's study focuses on an extraordinary governance system that ensures more efficient delivery of drugs across the world. The Brazilian Primeiro Comando da Capital (PCC) has developed a system—known as the Agência—that connects independent producers in Colombia, Bolivia, and Peru, cocaine traffickers in Latin America, and buyers in various parts of the world [Feltran: 5]. Entry into the system is voluntary, and the driving motives for all those involved are higher profits and greater certainty. The PCC's rise to prominence generated a conflict with a competing criminal governance structure—the Comando Vermelho

0172

https://doi.org/10.1017/S0003975625100143 Published online by Cambridge University Press

(Red Command) [Feltran: 20]. While many criminologists have endorsed Reuter's [1983] finding that criminal firms remain small and eventually fragment, they failed to take into account that this result was predicated on a high degree of state repression. When the state proves unable or unwilling to control significant sectors of society (including its prisons), governance OC grows in complexity and sophistication, as was the case with the PCC or, further afield, the Japanese mafia [Baradel 2025]. The effects of the PCC's system are that the market for cocaine runs more smoothly, prices are low, and supply is high, as noted by several recent official reports cited in Feltran [*Ibid*.: 1]. In a nutshell, the PCC ensures stability and governance in the cocaine market, from production to distribution (trade), ultimately backed by the ability to use violence.

As a result of his extraordinary level of access to participants, Feltran can confirm that the "myriad of individual or collective entrepreneurs" (known as *companheiros*) remain autonomous. The PCC would not be able to take over them all. Instead, its system provides them with infrastructure, access to ports, secure routes, and reliable payment methods. The PCC is able to make this system work because it retains a degree of territorial power, for instance on the Bolivian border (Caceres), at the Port of Santos, and at "many other Brazilian, Argentinian, and Uruguayan ports" [Feltran: 6]. Its logistical hubs extend to French Guiana and the port of Le Havre. The key innovation of the system is that participants keep their profits and do not pay a fee to join. Instead, they agree to produce or deliver drugs that are "owned" by the PCC. Thus, institutional revenues are clearly distinct from individual ventures. In return, independent traders get a better deal on their own drugs. Everybody wins, if they stick to the plan. If disputes arise, adjudication is carried out by the PCC's internal justice system [Feltran: 11].

The modern study of governance OC has a long tradition in the social sciences, starting with the insightful essays by Frederic C. Lane [1958], Thomas C. Schelling [1967; 1971], Robert Nozick [1974], Mansur Olson [1993], and the empirical research agenda on protection inaugurated by Diego Gambetta [1993], which built on studies by Landesco [(1929) 1968] and Reuter [1983]. Researchers in empirical economics have refined the theory and conducted extensive empirical tests, creating a rich body of work [see Porreca and Thompson forthcoming]. For instance, the claim that governance OC tends to emerge during periods of sudden market expansion in the absence effective state regulation is supported by a wide range of cases, including nineteenth-century Sicily, Russia in the 1990s, and the northern Italy in the 1970s [Gambetta 1993;

0173

https://doi.org/10.1017/S0003975625100143 Published online by Cambridge University Press

Bandiera 2003; Buonanno *et al*. 2015; Dimico *et al*. 2017; Varese 2011]. And yet there are still two crucial areas in which scholars could make additional and original contributions.

First, most studies tend to focus on Latin America and traditional mafia territories. The assumption, either explicit or implicit, is that such groups operate in a context where the state is "infrastructurally weak" [Centeno 2002: 10; see also Feldmann and Luna 2022]. However, a few recent investigations have shown that governance OC can nest within strong states and affects immigrant communities that cannot turn to legitimate institutions [e.g. Densley 2013]. Is it possible that factors other than recent immigration—such as barriers to accessing local services, affordable housing, public facilities, or social clubs and venues for recreation, in a setting where drug profits and unemployment are high—might give rise to this form of OC [Campana *et al*. 2025; Varese and Zeng 2024]? Additional research on governance OC in non-immigrant communities in strong states in the Global North is likely to be extremely fruitful.

Opposition to existing oppressive power structures and adherence to principles of equality are part of the ideology of the PCC, which points to the fact that governance OC can be a political actor. Indeed, states are also in the business of governing markets and territories. Once a criminal group has dominated a market (e.g. for drug trafficking), it often succeeds in expanding its control to neighbouring markets. If this logic is extended, OC groups can evolve into fully developed mafias and, if unchecked, into states. In other words, governance OC—including mafias—and states belong to the same category, the key difference being that the latter are not illegal.

The two studies on governance OC by Rodgers and Jensen and by Feltran capture the phenomenon at almost opposite ends of the spectrum. While in Félix-Pyat the governance of the neighbourhood by "les petits" is rudimentary and fragile, the PCC has developed what might be the most complex and efficient system for the regulation of drug production and trade in existence today. Yet, some key commonalities confirm that governance OC differs from trade-based OC in terms of its structure, skill requirements, and activities. Unlike trade-based groups, which seek quick financial returns, governance-oriented groups operate with long-term goals in mind, investing heavily in violence. Although that violence is rarely used, the credible threat it poses helps to establish control and minimize challenges. These groups also gather extensive intelligence on their territories (not just on a specific product or market), enhancing their ability to govern effectively. The presence of

0174

https://doi.org/10.1017/S0003975625100143 Published online by Cambridge University Press

governance OC improves the functioning of the market, offering a degree of protection to dealers. However, we cannot subscribe to a simplistic demand-and-supply model. Governance might not emerge even if there is a demand for it, or, when it does, it might be imposed on traders (as state governance is often imposed on communities), or it might benefit only a minority. In the case narrated by Feltran, the Agência's platform structure enables "the extreme exploitation of low-level independent operators, who are often from impoverished and marginalised communities" [23].

The framework proposed here also calls for further research on a second area of interest: the intersection of the three factors we have examined, production, trade, and governance. For instance, the `Ndrangheta appears to be involved in both trade of drugs and local governance of territories and markets in the region of Calabria. And yet its ability to dominate the trade of cocaine into Southern Europe is predicated on its control (governance) of the port of Gioia Tauro. The framework I propose allows us to ask questions such as the following: what are the conditions that enable a mafia to govern trade? Can a trade OC group evolve into governance OC, as appears to have been the case with some Mexican "cartels" and the Medellín organization led by Pablo Escobar [for the case of Colombia, see Baker and Duncan 2025]? Does the nature of the product traded—including humans—affect the chain's governability? How does cybercrime production intersect with online trade and governance? Answers to such questions could shed more light on the ongoing transformation of OC.

Conclusions

The concept of organized crime (OC) can be placed on Sartori's hierarchy of generality at a level comparable to corruption, fraud, and theft, below the broader notion of "crime". In this paper, I have defined OC as a set of three activities that actors (most often organized into groups) engage in: namely, illegal production, trade, and/or governance.

These activities differ in terms of the skills required to carry them out, and give rise to different organizational structures. For example, production OC is often structured around firms with clear hierarchies, as seen in the counterfeit medicine operation studied by Hamill. Trade OC, as illustrated by the distribution networks in Operation Singapore, tends to be decentralized and dynamic, emphasizing connectivity over control.

TABLE 1
Conceptualizing Organized Crime Activities

Activities	Action	Definition	Structure	Skills
Production	creating goods and services[(a)]	*transforming raw materials into finished illegal products and/or performing illegal services, and offering them on a market* [(i)]	Hierarchical	Collecting raw material and transforming them
Trade	moving products and people[(b)]	*moving goods or people from one location to another* [(ii)]	Decentralized	Moving and hiding
Governance	Regulating markets and controlling communities[(c)]	*the regulation and control of the production and trade of goods and services*[(iii)]	Hierarchical	Violence and extraction

[(a)] Examples of actors: Peasants, victims of modern slavery, cybercriminals, sex workers.
[(b)] Examples of actors: Traffickers and smugglers.
[(c)] Examples of actors: Gangs, mafia, insurgencies.
[(i)] Examples of production: production of cocaine, cannabis, methamphetamine, counterfeit goods, sex services, cyber services.
[(ii)] Examples of trade: Human smuggling, drug trafficking, money laundering, lots of cybercrime, informal banking
[(iii)] Examples of governance: Dispute settlement, protection against competition, protection against thieves, labour racketeering, intimidation of lawful right-holders, debt recovery, enforcement of cartel agreements, governance of prisoners.

Governance OC, exemplified by "les petits" in Félix-Pyat or the PCC system in Latin America, introduces mechanisms of authority, conflict resolution, and territorial control, taking over functions that are typically carried out by the state (see Table 1).

This framework allows a variety of competing theories to be tested, and it is relatively easy to operationalize. Most crucially, it envisions OC as a concept that is independent of other constructs rather than as an attribution of ethnicity or organization. In developing this framework, I build on an existing tradition within the literature on OC, emphasizing that "organized crime" is not simply "crime that is organized" [Schelling 1971]. The organization is a by-product of the activity rather than a prime mover. In addition, this approach helps us to ask new questions. For instance, can OC groups engage in multiple activities, as with the "Ndrangheta"s involvement in both international drug trafficking and local governance? Under which conditions does the governance of a market extend to the governance of several markets and even of non-criminal actors and communities? Do we ever observe vertical integration of the three activities? How analytically different is legal from illegal governance, and which instruments can be used to reduce illegal governance in complex modern cities [see Le Galès 2011]? In sum, this

0176

https://doi.org/10.1017/S0003975625100143 Published online by Cambridge University Press

framework builds on an existing tradition in the literature, namely the "enterprise model"; yet it also unpacks the diverse activities OC groups engage in. Ultimately, this approach highlights how the underworld mirrors the overworld of legal production, trade, and governance.

Acknowledgements

I am grateful to Patrick Le Galès, who encouraged me to edit this special issue of the *European Journal of Sociology* and offered generous and insightful comments on the papers submitted. Jens Beckert, editor at *EJS*, provided several invaluable suggestions on my introduction and, together with François Bonnet, helped guide the publication process with care and precision. I would also like to thank the members of the CrimGov research group at the University of Oxford—Martina Baradel, Niles Breuer, Elena Racheva, Jack Warburton, Fanqi Zeng, and Emilia Ziosi—for their thoughtful feedback on earlier drafts of this paper, and Andrea Ruggeri for equally insightful comments, especially on Table 1. Special thanks go to the authors of the essays, the anonymous referees, and to the Centre d'études europeennes et de politique comparée at Sciences Po for hosting a one-day seminar (25.03.2024) that gave us the opportunity to discuss our work in progress.

Federico Varese[1,2] & Fanqi Zeng[3]

Studies of organized crime in cities have traditionally concentrated on the global south or ethnic enclaves and traditional mafia territories within the global north. Here this study turns its attention to governance-type organized crime in the English city of Nottingham, where the main protagonists are white and British born. It investigates whether such a gang can govern communities by reducing ordinary crimes. We conduct in-depth interviews with local officials and analyze a novel dataset of the public's phone calls to the Nottingham police from 2012 to 2019, encompassing spatio-temporal information and police-labeled crime types. We identify Nottingham's ward of Bestwood as the site of an entrenched, governance-type organized crime group, whereas its most similar ward, Bulwell, is not. Further comparative analyses indicate that certain ordinary crime rates are significantly lower in Bestwood than in Bulwell. We conclude that governance-type organized crime can emerge in a country with a high capacity to police and in a nonimmigrant, less affluent community. Our findings suggest that traditional explanations of the emergence of criminal governance in cities need to be revisited.

Organized crime groups (OCGs) can engage in a variety of activities in cities and beyond, such as producing illegal goods and services and trading across localities[1]. For instance, cocaine is produced in Colombia and shipped to Europe[2]. However, some OCGs do more: they exercise a degree of governance over communities by imposing restrictions on people's behavior, enforcing agreements, solving disputes and imposing a rough kind of justice, taking over state functions[3–5]. Research on such governance-type organized crime dates back to the work of Landesco[6], and notable contributions include studies on traditional mafias[7–12], urban gangs in the USA[3–19] and cartels and 'combos' in Latin America[20–30], as well as recent work in the UK[31,32]. In all cases studied in the literature, criminal governance, to some extent, coexists with state governance, a feature that sets it apart from governance by rebel groups. However, most literature focuses on Latin America, traditional mafia territories or immigrant communities in urban settings. The two assumptions, either explicit or implicit, are that such groups operate in a context of states that are 'infrastructurally weak'[29] or in immigrant communities that cannot turn to legitimate institutions.

In this study, we focus on an English city in the global north, that is, Nottingham. The core aim of this paper is to establish whether a local criminal group has been able to govern one community by reducing the level of ordinary crime and punish social deviants[8,9]. In doing so, we also map crime in the city. We exploit a novel dataset comprising the public's phone call records to the police in Nottingham from 2012 to 2019. This dataset includes time, location details and crime types (CTs) labeled by law enforcement, enabling us to undertake a macro-level spatial analysis of eight major crimes over time. Initially, we placed postcode-level phone call data into the smallest output area (lower-layer super output areas (LSOAs)) made available by the census in England and Wales[33], and then we aggregated the data into Nottingham's 20 wards. We used spatial and correspondence analysis techniques to unveil associations between wards and crime categories. Our findings underscore an uneven distribution of specific crimes within Nottingham, with particular offenses being concentrated in specific areas of the city. Furthermore, our macro-level analysis suggests the persistence of certain crimes in Nottingham over time.

Alongside the quantitative analysis, we conducted field interviews with local police officers. We also analyzed books and news items related to crimes in Nottingham and undertook field trips to evaluate the neighborhoods' urban buildup. The ward of Bestwood, a

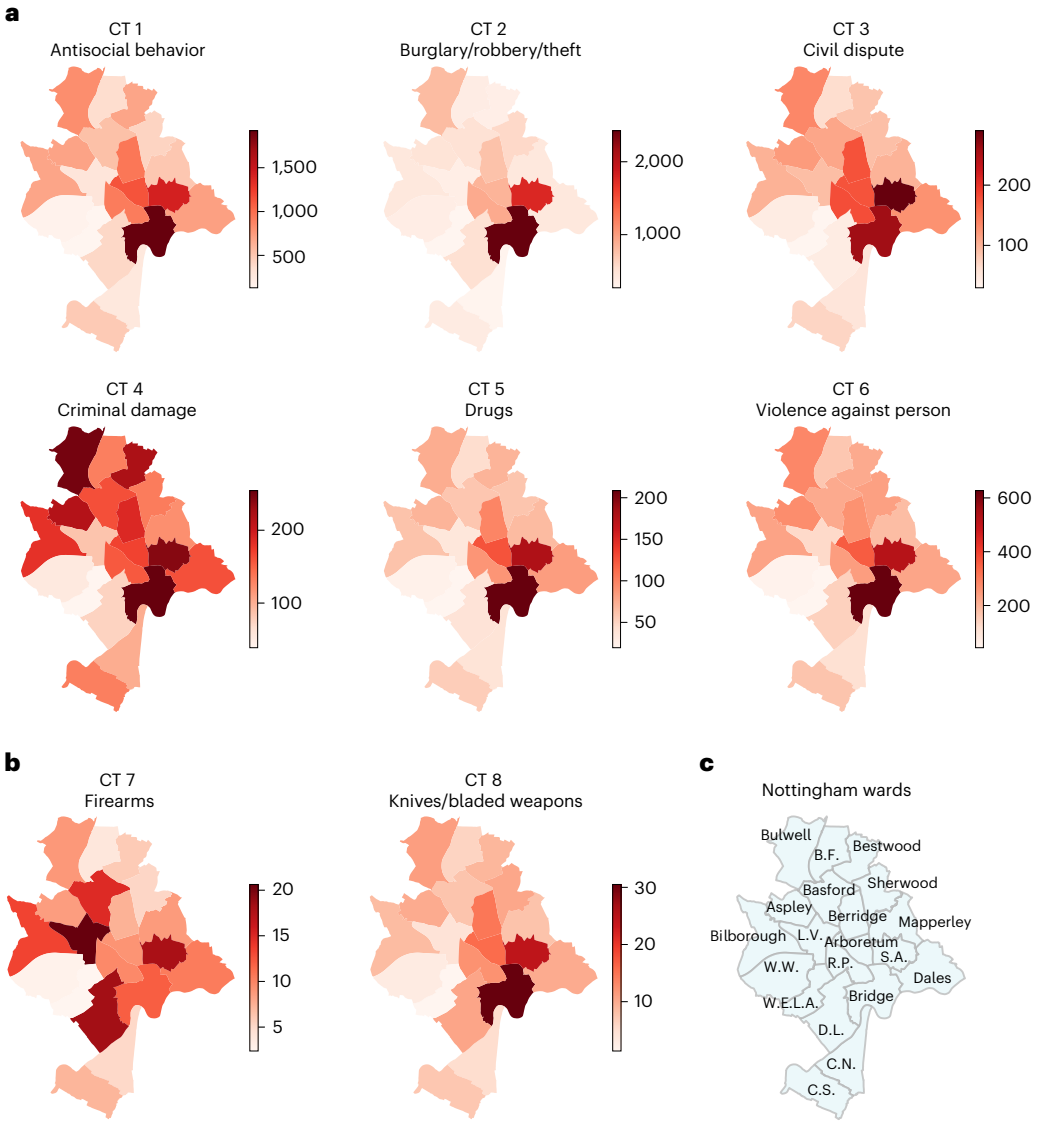

Fig. 1 | Maps of the average crime counts in the 20 wards of Nottingham (2012–2019). Each ward is colored based on its average crime count during the period. Deep red represents a high crime volume, and the color bars indicate the average counts of associated CTs. **a**, Maps showing the six CTs (CT 1–CT 6) that are mainly against people. **b**, Maps showing the two CTs (CT 7 and CT 8) that are mainly associated with the possession of tools involved in criminal activities. These are notably less than the six crimes in **a** in terms of volume. **c**, The annotated wards map of Nottingham City. Here, we use the pre-2019 Nottingham City Ward map[54] for the mapping. Some names of wards are abbreviated, that is, Bulwell Forest (B.F.), Clifton North (C.N.), Clifton South (C.S.), Dunkirk and Lenton (D.L.), Lean Valley (L.V.), Radford and Park (R.P.), St Ann's (S.A.), Wollaton West (W.W.) and Wollaton East and Lenton Abbey (W.E.L.A.). Large Nottingham wards map can also be found in ref. 54.

working-class community without many immigrants[33–35], emerges as the area where a governance-type OCG, led by its boss, Colin Gunn, has been active for decades[34]. Through a matching comparison analysis, we identified Bulwell as a ward sharing comparable socioeconomic and demographic profiles with Bestwood, yet diverging concerning the presence of a governance-type OCG. We then show that where the governance OCG is present, certain crime rates are lower. Thus, Bulwell can be considered a reasonable counterfactual for what Bestwood would have looked like without Gunn's gang.

This study combines qualitative insights and quantitative analyses, setting it apart from most works on organized crime in cities. Many of the classic studies are qualitative, while others analyze large-scale data. Our study follows in the footsteps of a small but growing set of papers that combines ethnographic insights with large-scale data collection and analysis (for example, refs. 27,28,30,36). In our study, the field interviews helped us identify the wards to study with large data. Ultimately, we show that a governance-type OCG exists in a nonimmigrant and relatively poor community in an English city, where the state is neither weak nor emerging from many years of civil war or in the proximity of global drug cartels[28,37]. While further research is needed to identify local causes of the emergence of criminal governance, traditional explanations do not suffice.

Results

Yearly criminal patterns were similar in the same ward

We first investigated the average crime counts of eight CTs in the 20 wards of Nottingham city during 2012–2019, as mapped in Fig. 1 (see Supplementary Table 1 for details). Some macro patterns emerge. For instance, Bridge and St Ann's—in the center of the city—attract high levels of all types of crime. This is where shopping centers, restaurants and malls are predominantly located. As we shall see below, this an area of 'disorganized' and highly violent crime. Neighborhoods in the periphery of the city, both south and north, generally experience lower levels of crime, yet there are differences. Lean Valley has a high level of

firearms crime, whereas Bulwell, not Bestwood, in the north of the city, ranks higher for criminal damage. The overall crime trends in the 182 LSOAs of Nottingham City did not change greatly during the 2012–2019 period (Supplementary Fig. 1).

Field interviews: the Bestwood governance-type OCG

Our analysis of news items, a book-length journalistic account of criminality in the city and 13 interviews with police officers uncovered the existence of a governance-type OCG entrenched in the neighborhood of Bestwood, in the northeast of the city. Its leader is convicted murderer Colin Gunn who, together with his 'Bestwood Cartel' gang, is linked to several murders, police corruption and large-scale drugs trafficking in the Nottingham area[38,39]. Together with his brother David and others, he has been active in Bestwood since the 1980s[39,40]. The gang "by the late nineties, [was] running protection rackets all over Bestwood",[34] in a context where there was deep distrust of the police and notable drugs distribution (officers 10 and 11). Colin even positioned people watching cars coming in and out of the Bestwood police car park (officer 10). The gang was perceived to be "the real authority in the community", to which residents would turn to have a wrong redressed, as detailed in a book-length investigation[34]. "In Bestwood, [Colin] was God-like", officer 2 told us, a view shared by Pat Chambers, manager of the community center on the Bestwood Estate, who said "He was the boss, the mafia boss. If you have a problem, you did not go to the police, you went to Colin, and Colin sorted it. […] Colin helped people and people loved him."[41]. When Colin's nephew died, he expected residents to put obituaries in the local paper to the point that the newspaper had to hire extra staff. Bestwood came to a standstill to allow a horse-drawn cart to go through the town center (officer 10). Colin's house was "almost like a castle on the hill, in the middle of the estate", for all to see (officer 10) and he cultivated an image of a local Robin Hood. "I think he probably enjoyed that [role] more than supplying drugs, he loved being that local governance within the community, the person that people looked up to and feared," (officer 10 and see also ref. 34). Colin and his peers were capable of acts of generosity toward members of the community who were struggling financially and paid for firework displays and raffle prizes for the local schools (officer 10 and ref. 34, "he also lent money"). In return for his generosity, Colin demanded loyalty and asked for favors.

The gang policed ordinary crime. An officer who has worked in Bestwood in the 1990s and 2000s recalls that, in his time on the estate, "you didn't commit burglaries or car thefts or the like on the Bestwood Estate because Colin would police that himself and he was more effective in dealing with it than the police," (officer 10). For instance, "a local teacher got her car broken into and, by the time the police got there, it's been resolved by Colin, 'no, I've got my property. Colin sorted that out I don't need you', she told me," (officer 10). A particular type of crime committed by the gang, according to our informants, is 'criminal damage.' "This is a warning sent by the OCG to a person who is out of line. Criminal damage includes arson attacks, although arson is not very common. It would be more common to smash a window or damaging a car, and it is a form of intimidation." (officer 10).

Colin Gunn was arrested in 2006[40]. Does he still manage to to exert control over the neighborhood? While the arrest surely reduces his power, his gang continues to be a presence and his reputation still mattered according to interviews. Petty criminals still use his name to increase their standing in a dispute. "You still get people saying 'well, I'm—you know, Colin Gunn's second cousin's, fourth removed former roommate'" (officer 2, see also officers 3, 8 and 10). Colin still manages to communicate from prison with his lieutenants (officers 10 and 11) and to punish those who disrespect him or his family (officer 11 and see also ref. 42). After the arrest, "he absolutely still has got influence" (officer 11 and see also ref. 40).

Police patrolling City Central and City South report high level of crime, but the gangs there are not long lived, often do not have a name and do not engage in the kind of community involvement seen in Bestwood, nor do they have the ability to corrupt public officials, reduce antisocial behavior, settle business disputes or run protection rackets (officers 1–9, 12 and 13). "There is no Robin Hood," officer 3 told us. In neighborhoods such as St Ann's and Meadows (Bridge) officers encounter "urban street gangs", dealing in drugs and engaging in robberies (officers 1 and 2). Prostitution is linked to consumption of illegal substance. Corrupting police officers and local officials is "an echelon too high for them" (officer 2). Officers also note that, in community meetings, local urban gangs are not discussed as a major concern, suggesting that their impact is low (for example, officer 1).

Correspondence analysis on wards and crimes

Multiple correspondence analysis (MCA) is a model-free technique used to establish the strength between categorical variables and represent them in a geometrical space[43,44]. We apply this method to represent the relationships between CTs and neighborhoods. It transforms rows and columns of a data matrix into points of a two-dimensional Euclidean space[45] and places categories that are associated close to each other. No pre-existing model is needed, but rather patterns emerge inductively. The existence and the strength of a relationship between two categorical variables can be established by drawing a line from the points of interest to the origin of the principal axes. For instance, in Fig. 2, an imaginary line can be drawn from the point representing Bestwood and the origin, and another imaginary line between CT 4 (criminal damage) and the origin. The angle between the two lines is acute, thus the relationship between the two variables is positive (the scalar product is positive). We can then report that criminal damage is present markedly in Bestwood, relative to all other crimes and places in the same space. If the angle is a right angle, it would mean that there is no relationship (the scalar product between the two vectors is zero) and if the angle is obtuse, the relationship would be negative (the scalar product is negative). The longer the line between the point and the origin, the stronger the relationship[44,45].

Figure 2 also shows that a large number of neighborhoods are clustered in the center of the plot, together with most crimes, which means these CTs and wards are associated or similar. At the extreme right in Fig. 2 are the suburbs, that is, Wollanton West and Wollanton East and Lenton Abbey, staying far away from most CTs, which indicates that they are similar to each other regarding eight CTs and have low level of crime (this can also be found from their average crime patterns shown in Fig. 1 or yearly crime patterns shown in Supplementary Fig. 2). In sum, Fig. 2 illustrates the relationship between eight CTs and 20 neighborhoods in Nottingham, as well as individual relationships within the same category.

Matching Bestwood

The MCA helps to place Bestwood in relation to other wards' crimes at a macro level and, along with the interviews, it raises a further question of what makes Bestwood so special. To answer this question, we select critical socioeconomic features (Table 1) from the 2011 Census for England and Wales[33] and the English Indices of Deprivation 2015[35], which have been used in a previous study[46]. We identify the ward most similar to Bestwood and then compare the crime patterns from that ward with Bestwood.

By applying a nonparametric supervised learning method called *k*-nearest neighbors (*k*-NN), we find Bulwell to be the nearest ward to Bestwood in relation to these socioeconomic features. Figure 3 shows that Bestwood has a lower level of crime than Bulwell on all CTs when measuring by the average crime counts over local population densities. Furthermore, we conducted Welch's *t*-tests on each CT (Supplementary Fig. 3) for the observed measurements from the two wards over 8 years with 10,000 bootstraps. The statistical analyses, using the crime counts per population density, indicate that Bestwood is significantly lower than its matched ward of Bulwell on every CT.

https://doi.org/10.1038/s44284-024-00161-2

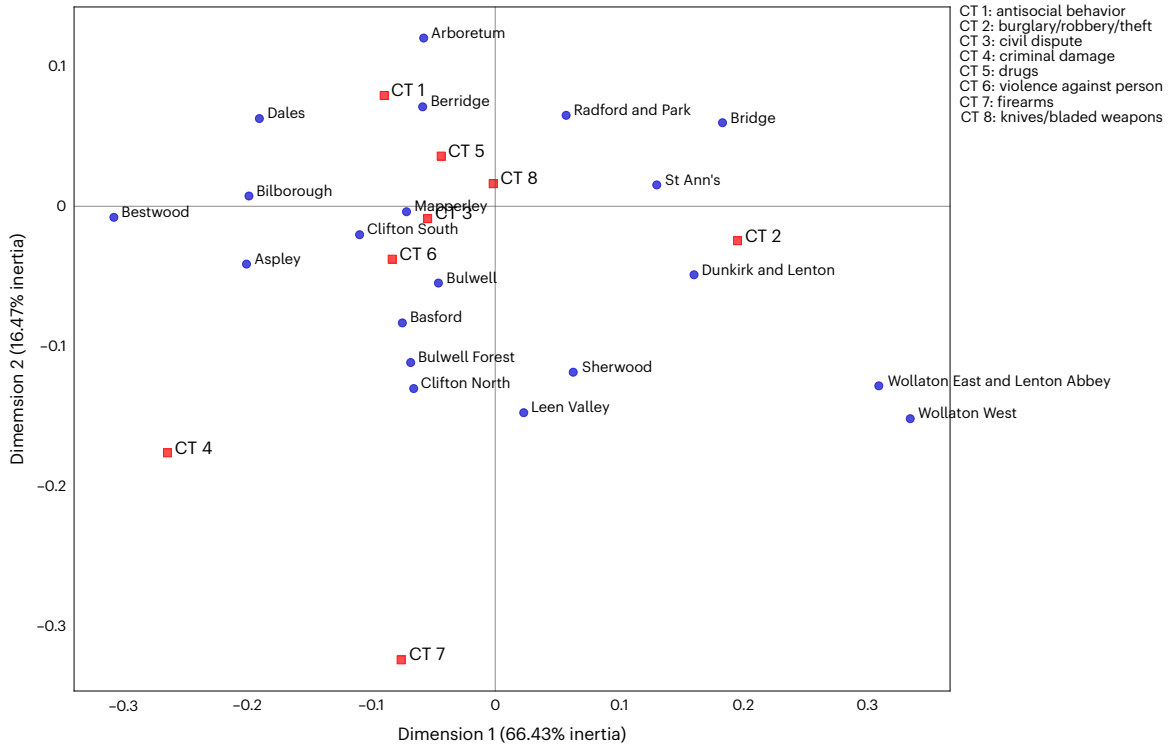

Fig. 2 | Correspondence analysis of CTs and neighborhoods in Nottingham. The relationships between the two categorical data, that is, 20 wards (blue dots) and 8 CTs (red squares) in two-dimensional space. The associations between variables are illustrated by their closeness in the plot. Dimensions 1 and 2 of the biplot correspondence graph account for 82.9% of the explained inertia, which indicates that the two principal dimensions together can cover the majority association of the categorical data[67].

These quantitative results resonate with the interviews, that is, Colin's governance-type OCG has major impacts on local crimes. In particular, policing antisocial behavior (CT 1) and burglary/robbery/theft (CT 2) appears to be a notable activity of the gang, which in some sense is in striking parallel to the same activity undertaken by republican armed groups in Northern Ireland[3]. Furthermore, crimes related to the protection of businesses (who are likely to pay protection money), such as burglary/robbery/theft (CT 2), civil dispute (CT 3) and criminal damage (CT 4) are significantly lower in Bestwood than in Bulwell. Crime related to personal safety, such as violence against person (CT 6), is also significantly lower in Bestwood. Crimes, such as drugs (CT 5), firearms (CT 7) and knives/bladed weapons (CT 8), are at approximately the same levels, suggesting that the Bestwood gang does not prevent such activities, which are a form of business and is likely to generate revenues for the gang. However, Fig. 3 shows Bestwood still has significantly lower levels than Bulwell of these three CTs.

On the basis of the yearly measurements in Supplementary Fig. 3, we can see than the ability of the gang in policing crime did not decrease following the arrest of Colin Gunn. As also suggested by the interviews, the grip of the Bestwood gang on the ward does not change much over the years, with the values for Bestwood remaining well below Bulwell, even in later years.

Discussion

This work applies a mixed-methods approach that contextualizes a large dataset of calls to the police by the public and official census and deprivation index data, as well as qualitative data collected from interviews with local police officers in Nottingham. We first show that crime patterns in the city differ: in the south and central neighborhoods, crimes are quite high, especially in St Ann's and Bridge, where the main shopping area is located. Gangs converge there to supply drugs and commit robberies. Neighborhoods in the west of the city are suburbs; hence, we see lower crime. The north of the city is the location of less affluent areas, and we observe a lower level of crime than in the center but higher than in the suburbs, and yet there is variation within the north of the city.

Through a series of in-depth interviews, analysis of written documents and field trips, we identify Bestwood as a part of the city where a governance-type OCG operates. Although after the arrest of the main boss, Colin Gunn, the power of the gang has been reduced, the OCG is still exercising governance over the neighborhood. By conducting a matched comparison, we identified Bulwell as the most similar area to Bestwood in the city in terms of several key sociodemographic variables. When examining the distribution of the crime counts per population density, we saw that all eight selected crimes are significantly lower in Bestwood than in Bulwell. Other forms of crime are very similar (drugs, firearms and knives/blades weapons), but very low in volume. Despite the presence of a serious OCG in Bestwood, no serious violence takes place. The quantitative findings resonate with the information we obtained from interviews. We conclude that the gang in Bestwood can reduce expressive crime and crimes that affect the business community, such as antisocial behavior, burglary/robbery/theft, civil disputes, criminal damage and violence against the person. As Bestwood is most similar to Bulwell except for the presence of Gunn's gang, our findings are consistent with the theory[36,47] that the gang's governance activities have reduced crime rates.

Actual crime occurrences may differ from the data documented in official crime statistics, which, in turn, differ from calls reported to police. Local populations might perceive governance-type OCG as trustworthy mediators adept at resolving conflicts and rectifying injustices. Consequently, individuals may reach out to the gang rather than the police. This implication would be that while calls to the police in Bestwood are lower, the actual crime occurrences might not be. Yet scholars should not dismiss anonymous phone lines where crimes can be reported. Such a method has been successfully adopted by several cities, including Ciudad Juárez[48], one of the most violent cities

in Mexico, as well as Rio de Janeiro[49,50] in Brazil and cities in Guatemala[51]. It should also be noted that the CTs selected for this study do not occur behind closed doors, such as domestic abuse, and often trigger the involvement of insurance companies or even medical attention. Hence, they are more visible and are more likely to generate a response. In addition, we find that reports that are very likely to trigger a call, such as drugs, firearms and knives/bladed weapons, are almost identical in both Bestwood and Bulwell. We interpret this finding as suggesting that individuals in both areas are not deterred from calling the police as these calls are anonymous, such that what we find is a genuine ability of the gang to reduce ordinary crime. It is highly unlikely that the gang has the ability to generate such fear in the community to scare off reporting to the police phone line.

While it is hard to establish causality with observational phone call data, we believe that the matched comparison goes in that direction. As for the risk of reverse causality, there are no specific reasons why this OCG would emerge within communities with low-volume crime or why it would migrate there. Indeed, Colin Gunn grew up in Bestwood[39].

The key contribution of this work is to extend the study of criminal governance to a city in the global north that is not associated with traditional mafias, drug production or immigrant communities. Bestwood has only 11.4% of residents born outside the UK (Table 1), among the lowest figure in the city (cf. the value for St Ann's of 46.8%). The ward also has a relatively high level of income and employment deprivation, and residents experience high barriers to reaching social services, are poorly educated and suffer poor health (Table 1). However, Bestwood is not the only ward with such a low income and difficulty accessing social services. Our findings present an urgent call to improve the traditional explanations of criminal governance in cities.

A powerful gang led by a charismatic leader[34] thrived in a less affluent neighborhood with low immigration. Residents suggested to

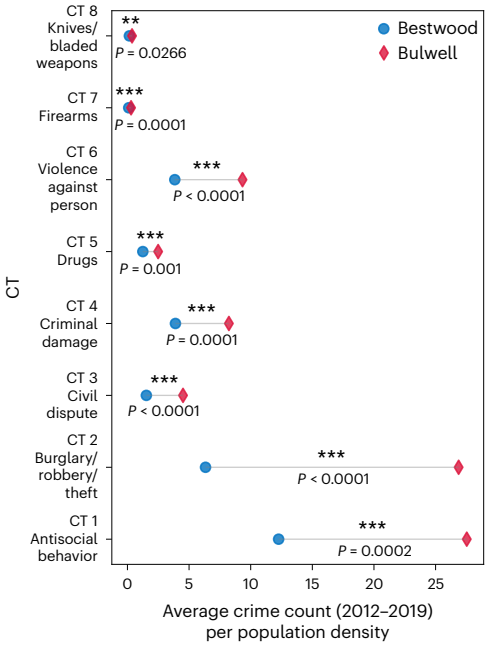

Fig. 3 | Matching comparison between Bestwood and Bulwell on eight CTs measuring by average crime counts over local population densities. The gray bars illustrate the differences in average crime rates for each CT between the two wards. Overall, Bestwood demonstrates lower average crime counts per population density than Bulwell across all eight CTs, with minimal discrepancies observed for firearms (CT 7) and knives/bladed weapons (CT 8). The *P* values under each bar indicate that, according to two-sided Welch's *t*-tests (Supplementary Fig. 3), Bestwood's crime counts per population density are significantly lower than those of Bulwell for each CT over the period. ***$P < 0.01$ and **$P < 0.05$.

us that a lack of public facilities, such as parks, social clubs and venues for recreation, fostered the rise of gang culture in a local context where drug profits were high[34] and state policing wanting. High population density is also a feature that makes Bestwood special. Recent developments in the neighborhood indicate that local authorities have increased social services and engaged in community policing through 'Operation Reacher', leading to a reduction of the gang's activity[52].

Methods

Ethic approval

This research follows all relevant ethical regulations. Approval for the study was granted by the Central University Research Ethics Committee, University of Oxford (R70851/RE004). We have obtained informed consent from all interviewees before the interviews.

Materials

Crime data and socioeconomic data. We use an anonymous dataset of the public's phone calls to the police in the city of Nottingham from 2012 to 2019 containing call time, postcode-level location and police-labeled CTs. Since the crime data are distributed at the postcode level, we first aggregate every year's data into LSOAs, which are officially designed areas in England and Wales comprising between 400 and 1,200 households and usually have a resident population between 1,000 and 3,000 (ref. 53). There are 182 LSOAs in Nottingham, making up to 20 wards. We then compute the crime counts in the 20 wards. Notably, from May 2019, Nottingham City Council adjusted the boundaries of several wards except for Bestwood, Bulwell, Bulwell Forest and Wollaton West[54]. Furthermore, the names of a few wards in Nottingham city central and south have been changed since then. For example, the majority area of ward Bridge is now in ward Meadows. Here, considering the crime data we examined, we use the prechange geographic areas and wards map to conduct the analysis. We recognize that these adjustments of ward boundaries would not substantially impact the main results in this work.

We also use the 2011 UK Census data[33] and the English indices of deprivation data[35] for Nottingham to characterize the socioeconomic features of neighborhoods. The census and deprivation data are formatted at the LSOA level. Hence we aggregate them into ward level when we make the matching comparison. We select the critical socioeconomic variables, which have been used in a recent criminology study in London, as drivers in analyzing the causes of urban crime[46].

Interviews. To identify the wards with the presence of organized crime in Nottingham, we conducted 13 interviews with senior police officers tasked with the fight against organized crime in the city now and in the recent past. The interviews took place in 2022 and 2023 (see Supplementary Information for more information on the interview times and key points).

Analyses

Selecting eight CTs. Protection theory has been used extensively to study governance-type OCGs. It posits that such groups impose protection payments to businesses in exchange for a safer environment to conduct commercial activities (enforcement of agreements/recovery of debts/protection against theft)[8,36,47,55]. Hence, we expect that civil disputes and burglary-robbery/theft should be lower in areas controlled by such groups as opposed to areas where such groups do not operate. The same theory also posits that governance-type OCGs enforce protection against expressive violent crimes to increase a process of social consensus[36], hence we expect crimes such as battery and antisocial behavior to be lower. Thus, based on this theory, we selected eight CTs. Some speak to the protection of businesses (burglary/robbery/theft, civil dispute and criminal damage), while other capture the protection against expressive violent crimes (antisocial behavior and violence against person). In addition, we select drugs, a crime that refers to a business activity that might be protected by the governance-type OCG and is very prevalent in the city. Finally, we selected crimes that speak to the means of committing the offense (firearms and knives/bladed weapons). Owing to their nature, these are crimes that are more likely to be reported accurately, hence we can have a sense of whether there is variation in propensity to report depending on the neighborhood (that in turn might be caused by fear).

Correspondence analysis. MCA is a multivariate statistical technique[43,44], conceptually akin to principal component analysis, providing a summary of categorical data in a two-dimensional space. Given two groups of variables, the method can reveal the relative relationships between and within them. In a biplot correspondence graph, variables from different categories are associated when their positions are close to each other in the plot, while variables from the same category are said to be similar if they are nearby. We explore the relative relationships between 20 wards of Nottingham city and eight CTs. We use the two dimensions with the highest variances captured for visualization, as illustrated in Fig. 2. Here, we used the Python library Prince (version 0.13.0)[56] to conduct the correspondence analysis.

Matching comparison. Matching comparison is a statistical method employed in observational and experimental studies to compare two or more groups that are matched or paired based on certain features. The general process is to identify subjects with similar features and then form pairs, wherein one individual from each pair gets one treatment while the other gets a different treatment or acts as a control. We applied the k-NN matching approach, thus we can isolate the effects of treatment or intervention being studied while controlling for the impacts of other variables, which enhances the validity of the comparison analysis and the conclusions drawn.

To conduct the comparison, we include nine socioeconomic features on 'population density (number of persons per hectare)', 'population aged 15–24 years (%)', 'highest level of qualification: level 4 qualifications and above', 'born outside the UK (%)' and 'social rented (%)', which are extracted from the UK Census 2011 data, and 'income deprivation domain', 'employment deprivation domain', 'health deprivation and disability domain' and 'barriers to housing and services domain', which are extracted from the Index of Multiple Deprivation. A detailed description of these features can be found in Supplementary Table 2.

We used the matching comparison formula to investigate the role of OCG's governance in crime concentration. On the basis of our interviews, we know that the ward of Bestwood has a governance-type OCG existing from at least the 1980s. We wanted to establish whether any other ward in Nottingham with similar socioeconomic status to Bestwood but without a similar type of OCG displays different crime patterns.

***k*-NN.** The k-NN algorithm is a nonparametric supervised learning method that is widely used in classification or regression[57,58]. Here, we use the Python library Scikit-learn (version 1.3.2)[59] to find the nearest neighbor in terms of socioeconomic features for Bestwood. We first scaled the socioeconomic features by the maximum values in each feature respectively to ensure all features are on roughly the same scale of (−1, 1). Then, we use the Minkowski metric $d(x,y) = (\sum_{i=1}^{n} |x_i - y_i|^p)^{1/p}$ to compute the similarity distance $d(x, y)$ between ward x and ward y, wherein x_i (here $i = 1, \ldots, 9$) represents the socioeconomic features of ward x and p is the parameter for the Minkowski metric in the Scikit-learn package. When $p = 1$, the k-NN algorithm in the Scikit-learn package is equivalent to using the Manhattan distance $L^1 = \sum_{i=1}^{n} |x_i - y_i|$, and $p = 2$ for the Euclidean distance $L^2 = \sqrt{\sum_{i=1}^{n} (x_i - y_i)^2}$. We check both $p = 1$ and $p = 2$, and it turns out that Bulwell is the nearest ward to Bestwood in both situations (Supplementary Table 4). Therefore, we conclude that Bulwell is the most similar ward to Bestwood in terms of the critical socioeconomic status that has a relationship with crime.

Statistical significance and robustness check. When finding the nearest ward to Bestwood, we used the above-mentioned two similarity metrics as a robustness check, which both indicate Bulwell is the most similar neighborhood to Bestwood. After obtaining the matched pair of Bestwood and Bulwell, we conducted a Welch's *t*-test (two sided)[60], along with bootstrapping (10,000 times per individual CT) to check whether the two wards are significantly different on individual CTs.

When using the measurement of crime count per population density for the Welch's *t*-tests, Bestwood was significantly lower than Bulwell on all eight CT measurements (Supplementary Fig. 3). We choose this measurement for two main reasons: first, Bestwood's population density is almost double that of Bulwell's and second, population density is often considered to have an impact on crime volume[61,62]. Therefore, a scaled comparison of crime, based on local population densities between two wards, may increase the robustness of the result.

Meanwhile, we used the measurement of crime count to conduct similar statistical analyses. We perform a Chi-squared test using the average crime counts, which shows that Bestwood and Bulwell are significantly different regarding the eight CTs (Supplementary Fig. 4). Furthermore, Supplementary Figs. 4 and 5 show that Bestwood is still significantly lower than Bulwell on CT 2, CT 3, CT 6 and CT 7 when using the measurement of crime count, while Bestwood is lower than Bulwell regarding average crime count on CT 1, CT 4, CT 5 and CT 8, as indicated in Supplementary Fig. 4.

Additionally, we conducted a comparison between Bestwood and its second-most similar neighbor, Bilborough (Supplementary Table 4). As shown in Supplementary Fig. 6, Bestwood is significantly lower than Bilborough on almost every CT except for CT 8 when measured by population density. Additionally, we compared Bestwood with its three neighbors, that is, Basford, Bulwell Forest and Sherwood, which are not very similar to Bestwood regarding socioeconomic features (Supplementary Table 4) and have lower population densities than Bestwood (Table 1). The additional comparisons (see Supplementary Information for details) show that Bestwood is still significantly lower than its neighbors on certain crimes, such as CT 2 and CT 3.

Built environment in Bestwood and Bulwell. We visited Nottingham several times to conduct the interviews, collect data from the police and observe the built environment, especially the matched wards of Bestwood and Bulwell. We also visited Clifton South and Nottingham City Center (see photos in Supplementary Information). The neighborhoods of Bestwood and Bulwell are very similar. They have similar detached and semi-detached homes and some basic shops, and the streets are well lit at night. Bulwell has no particular high-profile venues that could attract robbers. Public street touring-style videos from Bestwood[63,64] and Bulwell[65,66] also resonate with our observation. We conclude that the built environment of Bestwood and Bulwell could not account for the differences in crime rates.

Reporting summary

Further information on research design is available in the Nature Portfolio Reporting Summary linked to this article.

Data availability

The Shapefile we used to produce the wards map of Nottingham in Fig. 1 was published by the Office for National Statistics as an open data file, that is, Wards (December 2018) Full Extent Boundaries UK (https://www.data.gov.uk/dataset/8b829024-b053-4bdd-8133-d91d6e812008/wards-december-2018-full-extent-boundaries-uk). The UK Census 2011 data are publicly available at https://www.ons.gov.uk/census/2011census. The English indices of deprivation data are also publicly available at https://opendatacommunities.org/data/societal-wellbeing/imd/indices. We have no right to share the anonymous phone call data used in the study. We are happy to share the contact of the data officer at Nottingham Police, who has the authority to share the data. We can share the interview data upon reasonable request.

Code availability

Custom code was created using Python (version 3.8.8). We also used the Python libraries: csv (version 1.0), geopandas (version 0.13.2), matplotlib (version 3.7.1), numpy (version 1.21.6), pandas (version 1.5.3), Prince (version 0.13.0), seaborn (version 0.11.1), scipy (version 1.11.4) and Scikit-learn (version 1.3.2) for essential analysis. The sample code for bootstrap statistical analysis is provided in Supplementary Code.

Acknowledgements

This project received support from the European Research Council under the European Union's Horizon 2020 research and innovation program (grant no. 101020598-CRIMGOV, to F.V. and F.Z.) and the Wellcome Trust (grant no. 222506/Z/21/Z to F.Z.). The funders had no role in study design, data collection and analysis, decision to publish or preparation of the manuscript. We are incredibly grateful to the Nottingham Police Department for sharing the data and assisting with the research. In particular, we wish to express our sincere gratitude to Detective Inspectors M. Oldroyd and L. Davies, Performance Analyst C. Rowberry and the interviewees for their crucial support throughout the project. We sincerely thank the research assistant, E. Gibbs-Pearce, for conducting some of the interviews. We thank P. Campana, A. Flamini, H. Hamill, A. LeBas, T. Vitale and J. Warburton for their valuable comments on an earlier version of this paper; and the CRIMGOV weekly seminar at the Department of Sociology at

the University of Oxford. We also thank the three reviewers whose comments have helped improve and clarify this manuscript.

Reporting Summary

Nature Portfolio wishes to improve the reproducibility of the work that we publish. This form provides structure for consistency and transparency in reporting. For further information on Nature Portfolio policies, see our Editorial Policies and the Editorial Policy Checklist.

Statistics

For all statistical analyses, confirm that the following items are present in the figure legend, table legend, main text, or Methods section.

n/a	Confirmed	
☐	☒	The exact sample size (*n*) for each experimental group/condition, given as a discrete number and unit of measurement
☐	☒	A statement on whether measurements were taken from distinct samples or whether the same sample was measured repeatedly
☐	☒	The statistical test(s) used AND whether they are one- or two-sided *Only common tests should be described solely by name; describe more complex techniques in the Methods section.*
☒	☐	A description of all covariates tested
☐	☒	A description of any assumptions or corrections, such as tests of normality and adjustment for multiple comparisons
☐	☒	A full description of the statistical parameters including central tendency (e.g. means) or other basic estimates (e.g. regression coefficient) AND variation (e.g. standard deviation) or associated estimates of uncertainty (e.g. confidence intervals)
☐	☒	For null hypothesis testing, the test statistic (e.g. *F*, *t*, *r*) with confidence intervals, effect sizes, degrees of freedom and *P* value noted *Give P values as exact values whenever suitable.*
☒	☐	For Bayesian analysis, information on the choice of priors and Markov chain Monte Carlo settings
☒	☐	For hierarchical and complex designs, identification of the appropriate level for tests and full reporting of outcomes
☒	☐	Estimates of effect sizes (e.g. Cohen's *d*, Pearson's *r*), indicating how they were calculated

Our web collection on statistics for biologists contains articles on many of the points above.

Software and code

Policy information about availability of computer code

Data collection	No custom code was used for data collection.
Data analysis	Custom code was created using Python (version 3.8.8). We also used the Python libraries: csv (version 1.0), geopandas (version 0.13.2), matplotlib ((version 3.7.1), numpy (version 1.21.6), pandas (version 1.5.3), Prince (version 0.13.0), seaborn (version 0.11.1), scipy (version 1.11.4), and Scikit-learn (version 1.3.2) for essential analysis. We provide the sample code for bootstrap analysis in the Supplementary Code.

For manuscripts utilizing custom algorithms or software that are central to the research but not yet described in published literature, software must be made available to editors and reviewers. We strongly encourage code deposition in a community repository (e.g. GitHub). See the Nature Portfolio guidelines for submitting code & software for further information.

Data

Policy information about availability of data

All manuscripts must include a data availability statement. This statement should provide the following information, where applicable:

- Accession codes, unique identifiers, or web links for publicly available datasets
- A description of any restrictions on data availability
- For clinical datasets or third party data, please ensure that the statement adheres to our policy

The Shapefile we used to produce the wards map of Nottingham in Figure 1 was published by the Office for National Statistics as open data, i.e., Wards (December 2018) Full Extent Boundaries UK (https://www.data.gov.uk/dataset/8b829024-b053-4bdd-8133-d91d6e812008/wards-december-2018-full-extent-boundaries-uk).

The UK Census 2011 data are publicly available at https://www.ons.gov.uk/census/2011census. The English indices of deprivation data are also publicly available at https://opendatacommunities.org/data/societal-wellbeing/imd/indices. We have no right to share the anonymous phone call data used in the study. We are happy to share the contact of the data officer at Nottingham Police, who has the authority to share the data. We can share the interview data upon reasonable request.

Research involving human participants, their data, or biological material

Policy information about studies with human participants or human data. See also policy information about sex, gender (identity/presentation), and sexual orientation and race, ethnicity and racism.

Reporting on sex and gender	We do not report on the sex and gender of the participants. This work does not analyze any sex or gender information. Regarding the official census and deprivation data, there is no such information on individual human beings. Regarding the anonymized phone call data, there is no such information on individuals either. For the interview participants, we do not consider sex and gender.
Reporting on race, ethnicity, or other socially relevant groupings	We use the socioeconomic variables provided in the official census and deprivation data, which include variables such as the population aged 15-24 (%) and the percentage of individuals born outside the UK. These variables were aggregated at geographic levels and contained no individual information on race or ethnicity. There is no information on race, ethnicity, or other socially relevant groupings in the anonymized phone call data. For the interview participants, we did not consider any variables related to race, ethnicity, or other socially relevant groupings.
Population characteristics	See above.
Recruitment	For the interviews, we first contacted the Nottingham Police Department, which then selected the police officers as interviewees based on their working experience and policing areas in the city. Although the Nottingham Police Department recommended these senior officers, selection bias may exist. For example, some officers might only be familiar with the same area. To reduce this bias, we made every effort to get as many interviewees from different areas as possible. During the interviews, we also asked the interviewees about crime in other city areas, as a cross-check.
Ethics oversight	Approval for the study was granted by the Central University Research Ethics Committee, University of Oxford (R70851/RE004).

Note that full information on the approval of the study protocol must also be provided in the manuscript.

Field-specific reporting

Please select the one below that is the best fit for your research. If you are not sure, read the appropriate sections before making your selection.

☐ Life sciences ☒ Behavioural & social sciences ☐ Ecological, evolutionary & environmental sciences

For a reference copy of the document with all sections, see nature.com/documents/nr-reporting-summary-flat.pdf

Behavioural & social sciences study design

All studies must disclose on these points even when the disclosure is negative.

Study description	This work is a mixed-method case study using quantitative large-scale data analysis and qualitative interviews.
Research sample	Based on official census data, we selected 20 wards (182 LSOAs) of Nottingham City as the research samples to investigate criminal governance in the city. We used police-labeled public phone calls from 2012 to 2019, along with official socio-economic data for these regions, to conduct the study. These datasets cover the entire city of Nottingham, making them representative of the area. In our analysis, we used the aggregated variables of the population aged 15-24 (%) and the % born outside the UK as provided in the census data. There is no demographic information in the anonymized phone call data. Additionally, we conducted 13 interviews with police officers who patrol Nottingham. The Nottingham Police Department selected these 13 interviewees based on their work experience and areas of responsibility, and they recommended the interviewees to us.
Sampling strategy	We analyzed data from the entire city of Nottingham during the observation period (2012-2019) using official sources. We also interviewed 13 senior police officers from different areas of the city who had extensive knowledge of local crime. The Nottingham Police Department selected the interviewees based on their work experience and patrolling areas within the city.
Data collection	The UK Census 2011 and the English indices of deprivation data (2015) were obtained from official public websites, as cited in the work. We received the anonymized phone call data from the Nottingham police department. For the qualitative interview data, we conducted 13 interviews with police officers in Nottingham. The Nottingham Police Department recommended the interviewees.
Timing	The UK Census 2011 and the English indices of deprivation data (2015) were collected and publicly released by the UK government in 2012 and 2015, respectively. We downloaded these data from the official website when we conducted the work in 2022. The phone call data were collected by the Nottingham police from 2012 to 2019. We received the anonymized data in 2022. We interviewed 13 police officers in Nottingham from 2022 to 2023.
Data exclusions	For the crime data we received from the Nottingham Police Department, we selected 8 main crime types and merged the police-labeled types that were closely related to these 8 main categories. We excluded 9 categories of police-labeled data that were

	irrelevant to the 8 main crime types.
Non-participation	No participant dropped out the study.
Randomization	For the qualitative interviews, the interviewees were recommended by the Nottingham Police Department based on the interviewee's working experience and patrolling area, which was not a randomization.

Reporting for specific materials, systems and methods

We require information from authors about some types of materials, experimental systems and methods used in many studies. Here, indicate whether each material, system or method listed is relevant to your study. If you are not sure if a list item applies to your research, read the appropriate section before selecting a response.

Materials & experimental systems

n/a	Involved in the study
☒	☐ Antibodies
☒	☐ Eukaryotic cell lines
☒	☐ Palaeontology and archaeology
☒	☐ Animals and other organisms
☒	☐ Clinical data
☒	☐ Dual use research of concern
☒	☐ Plants

Methods

n/a	Involved in the study
☒	☐ ChIP-seq
☒	☐ Flow cytometry
☒	☐ MRI-based neuroimaging

Plants

Seed stocks	*Report on the source of all seed stocks or other plant material used. If applicable, state the seed stock centre and catalogue number. If plant specimens were collected from the field, describe the collection location, date and sampling procedures.*
Novel plant genotypes	*Describe the methods by which all novel plant genotypes were produced. This includes those generated by transgenic approaches, gene editing, chemical/radiation-based mutagenesis and hybridization. For transgenic lines, describe the transformation method, the number of independent lines analyzed and the generation upon which experiments were performed. For gene-edited lines, describe the editor used, the endogenous sequence targeted for editing, the targeting guide RNA sequence (if applicable) and how the editor was applied.*
Authentication	*Describe any authentication procedures for each seed stock used or novel genotype generated. Describe any experiments used to assess the effect of a mutation and, where applicable, how potential secondary effects (e.g. second site T-DNA insertions, mosiacism, off-target gene editing) were examined.*

The Triads as Business

see title verso for ISBN details

The Triads as Business

There is no doubt that the triads have become recognised as a sophisticated international criminal force. Their very name conjures up images of intrigue, mystery, brutality and violence and, following the handover of Hong Kong to China on 1 July 1997, there have been increasing fears that the influence of the triad societies will spread through emigration. This book investigates the reality behind the myth. Yiu Kong Chu here looks at the triads in Hong Kong, generally regarded as the headquarters of triad societies throughout the world. He describes their origins, their organisation, their involvement in legitimate businesses from the entertainment and construction industries to street hawking and the wholesale fish markets of Hong Kong and, finally, their part in illegal activities around drugs, gambling, prostitution and human smuggling.

Based on interviews with ex-triad members and victims of the triads and with police from Hong Kong, mainland China and Europe, as well as on documentary evidence, *The Triads as Business* gives a vivid and compelling picture of the triads as part of a wider society.

Yiu Kong Chu is Visiting Assistant Professor in the Department of Sociology at The University of Hong Kong. He is also the Hong Kong Representative of the Institute of Criminal Justice Studies, University of Portsmouth, UK.

Foreword

For reasons the reader should easily grasp, original research on organised crime is in general rather scanty, and on triads in particular is almost non-existent. The only predecessor to Yiu Kong Chu's book this century, W.P. Morgan's *Triad Societies in Hong Kong,* is 40 years old.

Thus, *The Triads as Business* stands virtually alone in its field. But it can claim more than mere uniqueness. Unlike many writings on organised crime, there is nothing speculative or conspiratorial about it. Based on a wide-ranging empirical research carried out by its author with unparalleled determination over several years, this book does not just contain a rich crop of descriptive information on this phenomenon. It also tests some hypotheses derived from the economic theory of organised crime originally developed with reference to the Sicilian mafia. Written in an unassuming and succinct style, *The Triads as Business* aims to illuminate and to inform rather than to impress. And what it does illuminate often turns out to be interesting and unexpected.

For example, the link between organised crime and purely extortionate activities is shown to be largely a misconception, albeit a widespread one. More often than not, triad groups, just like the mafia, provide effective protection services to economic agents in several markets of both legal and illegal commodities. Rather than being victimised, dealers and entrepreneurs themselves often call on and bargain with triad members for various forms of assistance, especially if legal or self-managed options are either unavailable or inefficient. They occasionally end up not liking very much the services they get or how much they are asked to pay for them, but still prefer to have them of poor quality rather than not having them at all. To be sure, triad activities do have their victims - such as unprotected competitors, consumers and rival gangs – but also many beneficiaries. Triads are indeed an integral rather than a mere predatory element of many sectors of the economy.

Contrary to another misconception, triads are not an all-powerful organisation, equally and firmly in control of every sector, legal or illegal, upon which they set

their eyes. There are conditions that prevent or lead to their involvement in any one sector, which are governed by powerful economic mechanisms. In the markets of legal goods, for instance, Chu's research confirms the evidence, found both in Sicily and in the United States, that mafia-like groups are particularly apt to provide the 'muscle' that makes cartels viable, by both discouraging new entrants and ensuring that cartel members comply with their collusive agreements. It also bears out the finding that the sectors liable to this type of triads intervention have low product differentiation, low technology and low barriers to entry; and are those in which labour is unskilled, demand is inelastic and firms are many and of small size (Gambetta and Reuter 1995).

In the markets of illegal commodities too, triad involvement varies greatly by type and extent. It generally grows as the exposure of agents to the risk of robbery, cheating or extortion grows. At the same time, it diminishes if the markets involved operate in more than one territory at once, for this makes it harder to match the dynamics of these markets with triads' territorial structure. In some cases, such as wholesale and retail markets in narcotics, in which the weight of the protection services required is large relative to other assets or skills, triads tend to become more heavily involved and at times to run the business themselves rather than to act as mere protectors. By contrast, in international drug trafficking, in which the financial skills and technologies required as well as the chains of exchange are complex, triads often are, contrary to a common view, ill-equipped to play a major part.

One of the striking results of *The Triads as Business* is to reveal that many features of organised crime groups are not culturally or ethnically determined, and shows that the same economic framework can successfully explain how these groups operate and organise themselves in different parts of the world. Triads share with the mafia essential traits. Similarities are not just confined to the markets that they penetrate and to their organisational structure, which is not centralised but rather fragmented and localised. Nor do they concern only the fact that in both groups affiliation is not based on kin – contrary to what viewers of *The Godfather* are led to believe. The parallels extend even to the use of an initiation ritual and to their foundation myth: mafia and triads both claim as their founders a secret sect of seventeenth-century rebels and avengers, *I Beati Paoli*, and the monks of the Shaolin Temple respectively.

But Chu's research also gives us the opportunity to search for interesting organisational differences. For instance, the mafia, especially in Sicily, seems to have been relatively more successful in preventing the formation of competing groups. Mafia 'families' enjoy a degree of independence and occasionally engage

0203

in warfare with one another, but operate under the same ‘trademark’, sharing both a common reputation and initiation ritual. Triad groups, by contrast, comprise several ‘trademarks’ with a common initiation ritual but varying reputations and distinct origins. Furthermore, the rules that govern affiliation seem more lax in triad groups, to which even a few women have been initiated, than they are in the mafia. These and other differences, which the interested reader will no doubt detect, suggest the presence of group-specific processes. The realistic picture of triad operations and make-up that Chu provides offers us the right kind of cumulative knowledge that makes further comparative investigations possible.

Preface

In Hong Kong, triads are known to have been long involved in the illegal businesses of drugs, gambling, prostitution, loan sharking, debt collecting, and smuggling. Triads are also notorious for organised extortion from legitimate businesses, such as the entertainment industry, street hawking, wholesale markets, minibus services, interior decoration businesses, the trading of properties, and the film industry. Since Hong Kong triads are believed to be increasingly active in drug trafficking, human smuggling, and economic organised crime such as credit card fraud, counterfeiting, and money laundering, Western police predict that these triads will replace the Italian mafia as the most powerful criminal organisation in the world in the next century. Are these contentions correct? To elucidate what exactly triads do in different kinds of organised crime, this book, inspired by Gambetta's economic theory of protection, aims to critically analyse the role of Hong Kong triads in legal, illegal, and international markets in simple economic terms.

The first part of the book deals with the origin and organisation of Hong Kong triads, discussing whether the triads were imported from Qing China to facilitate the patriotic movement against the alien ruler or emerged spontaneously to respond to the conflict among different migratory dialect groups for job opportunities in labour markets at the turn of the century, and whether triad societies are centrally structured or highly unorganised. The second part examines whether triad members are mere extortionists or are able to provide real services to the business community. Triad involvement in entertainment businesses, the construction industry, outdoor filming, street hawking, minibus services, wholesale fish markets, interior decoration businesses, the selling of new flats, and the film industry are discussed. The third part deals with triad involvement in illegal markets. Using the examples of drug dealing, gambling, and prostitution, this research tests whether Hong Kong triad members directly operate illegal businesses or simply sell protection to entrepreneurs in the illegal industry. The fourth part concerns whether all international Chinese organised crime is committed by Hong Kong triads. Triad involvement in drug

trafficking and human smuggling is selected for discussion. The final part reflects whether Hong Kong triads are extortionists, entrepreneurs, or protectors and indicates international movement of triads and new directions in the study of triads.

This is a qualitative study based on a literature review and in-depth interviews. The documentary sources include newspaper and magazine articles, official reports from law enforcement agencies, and published documents on Chinese secret societies and organised crime. The main targets of interviews were Hong Kong anti-triad police officers. Interviews were also conducted with ex-triad members, social workers, reporters, teachers, and triad victims (see Appendix 1: Data sources). Law enforcers from Europe and China dealing with Chinese organised crime were consulted.

Acknowledgements

This book was largely based on my PhD thesis on Hong Kong triads carried out at the University of Exeter from 1992 to 1997. The study could not have been completed without generous help from many people. I am particularly indebted to Dr Diego Gambetta, University of Oxford, who gave me tremendous support throughout my research and whose economic theory of protection enlightened me on how to study the role of Hong Kong triads in different markets. I also wish to offer my special thanks to Mr Bill Tupman, Mrs Alison Tupman, Professor Stephen Wilks, Dr Jon Vagg, Dr Mak Lau Fong, and Dr Maggy Lee, who read through an earlier draft and suggested numerous valuable improvements. In addition, I would like to thank my good friends Mr T.W. Yue and Dr Federico Varese, who spent considerable time with me discussing organised crime.

The most difficult part of this study was the fieldwork. It could not have been done without the generous assistance of the Hong Kong Police. I owe a particular debt to Chief Inspector Peter P.F. Ip and his colleagues in the Research Unit of the Criminal Intelligence Bureau. I also wish to thank the police officers from China, the UK and other European countries for agreeing to be interviewed. My special thanks also go to the police students at the University of Exeter, who shared their valuable experiences in dealing with organised criminals.

A number of other people and friends provided me with much assistance during my research. Among them, I particularly thank Dr Paul Kwong, Dr T.L. Lui, Mr G. Fung, Mr D. Tsui, Mr T. Chan, Mr H. Koo, Mr C. Wong, Mr A. Wong, Mr J. Chik, Mr S.T. Tam, Dr D.E.M. Mihas, Dr Li Lan, and Dr Che Wai-kin. I also thank the Sir Edward Youde Memorial Fund Council for offering me a fellowship to study Hong Kong triads in the UK. I am particularly indebted to Lady Youde, Mrs M. Chan, and Mr N.C. Ng of the Council for their continuous support and encouragement. Finally, I would like to dedicate this book to my parents. Although they may not understand what this book says and even have no idea I am doing research on triads, their patience and concern have made me strong so that I was able to overcome the many difficulties which arose in the course of this study.

Chapter 1

Triads, business, and markets

Triads are a menace

It is claimed that triad members existed among the indigenous inhabitants of Hong Kong Island even before the British ceded it to be their colony in 1842. On 8 January 1845, the first Ordinance to pass the Legislative Council was to deal with the suppression of triads and other secret societies. After 150 years, to date, triad societies still exist in Hong Kong, which is now a Special Administrative Region of the People's Republic of China.

It has long been believed that Hong Kong triads possess a central organisation with a 'godfather' at the top directing their local and overseas branches to organise a variety of criminal activities. The influence of the triads seems to have reached every corner of Hong Kong society – from school bullying gangs to drug rackets, illegal gambling, loan sharking, prostitution, illegal immigration, and extortion through to bona fide business operations like restaurants, clubs, and transport companies. Hong Kong triads are also believed to pose a serious threat to the law and order of Western societies. As Black (1991) asserts:

> Before Communist China takes over Hong Kong in 1997, the world's most ruthless criminal cartel will be stepping up its bid to take control of the underworld of Western society, and to spread within our culture like a criminal cancer. This cartel is the Chinese Triads – the yellow peril of the East, and now the West.

Are the above contentions correct? Ironically, in the 1960s and 1970s official US agencies held a similar conspiracy view that there was a nationwide syndicate known as mafia or Cosa Nostra which was alien to American society. It was organised by Italian immigrants who were of Sicilian origin. This alien organisation was so rigidly structured and highly centralised that it was able to control the whole American underworld. Hong Kong triads – the Chinese mafia – are now perceived as a giant criminal organisation with an omnipotent power controlling local and overseas branches for various criminal activities.

0209

The study of Hong Kong triads

While contemporary Hong Kong triads have attracted much media attention locally and internationally, very little research has been done on this subject. The only comprehensive study on Hong Kong triads is Morgan's *Triad Societies in Hong Kong* published in 1960. This was a police report describing triad activities and practices in Hong Kong from 1945 to 1958. There are also many short articles written by Hong Kong and Western police officers who have dealt with triad criminals in the last twenty years (Ellithorpe 1974; Straten 1977a,b; Winterton 1981; Donnelly 1986; Roache 1988; Andrae 1989; Boocock 1991; Main 1991; Merritt 1991a,b; Ball 1994; Williams 1994). In addition, several journalistic books about contemporary triads have been published (Robertson 1977; Posner 1988; Booth 1990; Black 1991). Although these publications provide some valuable information about triads in Hong Kong or in overseas Chinese communities, they are investigative reports rather than academic works.

Since the 1980s, several Hong Kong scholars have carried out research on some aspects of triad societies. Lo (1984) discusses the relationship between juvenile gangs and triad societies. Chan (1987) examines the process of becoming a triad member. Che (1990) deals with the causes of delinquent youths' participation in triad activities. Huque (1994) discusses the Triad Renunciation Scheme which allowed triad members a chance to sever ties with their organisations in the early 1990s. Bolton, Hutton and Ip (1996) give a detailed account of many of the issues relating to the use of triad language. Since the research papers above are short reports or articles, they do not provide a sound theoretical approach for the study of Hong Kong triads.

Two outstanding pieces of research on Chinese secret societies or criminal gangs in overseas Chinese communities have been published. Mak's book on *The Sociology of Secret Societies* (1981) argues that there are three conditions which gave rise to the emergence and persistence of Chinese secret societies in Singapore and Malaysia: (1) the inadequacy of legal protection given to the Chinese immigrants in the early Straits Settlements; (2) the adaptability of secret societies to change, for example the shift in their activities from occupational monopolisation in the early Straits Settlements to territorial demarcation in contemporary society and the reduction in hierarchical positions; and (3) the symbiotic relationship between local Chinese secret societies and the larger society. Although Mak's research gives unique insights into the emergence of Chinese secret societies, there is little discussion of organised crime committed by secret society members in Malaysia and Singapore.

Chin's book on *Chinese Subculture and Criminality* (1990) represents the first systematic academic research on Chinese organised criminality. Chin adopts a subculture theory to investigate the relationship between triad subculture and gang delinquency in New York's Chinatown. He observes that in the development of

0210

Chinese crime groups, the values and norms of triad subculture have been paramount. Initially, triad subculture stressed patriotism and righteousness. Later, loyalty to the triad groups replaced these and brotherhood became the core value. However, when the manifest and latent functions of these self-help groups became less important, the groups gradually replaced their patriotic or benevolent causes with criminal activities. Thus, Chin claims that the degeneration of patriotic triad societies into criminal gangs is due to the change of triad values and norms over the past two centuries.

Although there is no doubt that Chin's study has produced enormously valuable data about contemporary Chinese gang activities in the USA, his subcultural explanation does not seem to match very well with historical facts. According to recent historical findings, the Tiandihui, the original name of the triad society, did not appear to be an anti-government organisation. It was originally a mutual-aid association which emerged to resolve the conflict among various migratory dialect groups in the southern regions of Fujian province in mid-eighteenth-century China. More importantly, members of Tiandihui, or triads, at their earliest stage, were involved in different kinds of organised crime, especially selling protection to the people who needed to travel frequently for a living (Murray and Qin 1994).

In addition, the basic elements of triad subculture or norms are surprisingly similar to codes of conduct of other well-established criminal organisations, such as the Sicilian mafia. For instance, both organisations emphasise 'Do not disclose the secrets of the organisation', 'Do not become police informants', 'Do not betray your fellow members', 'Do not become involved with the wives of your colleagues', and so on (Morgan 1960; Gambetta 1993). Thus, it seems more interesting to study why different ethnic crime groups adopt a set of similar rules than use these 'cultural characteristics' to explain the behaviour of triad members (Diego Gambetta, personal communication, 21 May 1996). Since academic studies, theoretical writings in particular, on Hong Kong triads are extremely limited, we are still not sure what exactly Hong Kong triads do in different kinds of organised crime.

Organised criminals: entrepreneurs, extortionists, or protectors?

Over the years, organised crime has been a subject of controversy in criminology. There is no consistent definition of organised crime. 'Organised crime' has been used interchangeably with 'syndicate crime', 'professional crime', 'organisational crime', 'illegal enterprise', 'underground empire', 'gang', 'secret society', or simply 'mafia'. Related to the definitional debates are controversies about the origin and organisation of organised crime. Is organised crime an imported product or an integrated part of the society? Is organised crime centrally structured or highly unorganised? In recent years, some scholars have tried to focus on the core activities of organised crime. Do organised criminals mainly supply illegal goods and

0211

services, or do they practise extortion or sell private protection?

Since traditional US authorities see organised crime as a conspiracy, organised crime groups are believed to participate in all kinds of illegal activity. In 1966, Hoover, the FBI director, said: 'La Cosa Nostra is the largest organization of the criminal underworld in this country, very closely organized and strictly disciplined. They have committed almost every crime under the sun …' (President's Commission on Law Enforcement and Administration of Justice 1967: 19).

Smith (1978, 1980) and Haller (1990) do not agree that there is a giant criminal organisation, such as mafia, which is able to monopolise illegal industry. They claim that organised crime is a set of small and ephemeral illegal enterprises which emerge to respond to market needs. In this context, organised criminals are entrepreneurs who provide the goods and services which are proscribed by law. However, Schelling (1984) argues that 'organised crime' is not directly involved in running illegal businesses. He claims that the core activity of a 'criminal organisation' (e.g. mafia) is 'extortion' and its major victims are illegal entrepreneurs who supply illegal goods and services to the public. Illegal entrepreneurs are weak at protecting themselves because they are deprived of legal protection and this gives the criminal organisation the opportunity to extort money from them.

Gambetta (1993) has developed an economic theory of protection and has applied it to the Sicilian mafia. His theory gives unique insights into the origin, organisation, and role of the Sicilian mafia in the markets of both legal and illegal commodities. Protection, he argues, is a key resource in transactions in which there is a high risk of cheating and in which state protection is either unavailable or inefficient. Private and essentially illegal agencies, such as the Sicilian mafia, may emerge to provide protection to entrepreneurs operating in these markets.

The mafia was originally a southern Italian phenomenon – particularly virulent in western Sicily (Gambetta 1993: 75–99). Its geographic distribution was the result of the distrust endemic to the area, which became particularly marked after feudalism was officially abolished in 1812. The main effect of the demise of feudalism – the transformation of land into a market commodity subject to legally defined individual property rights – created a new demand for protection by property owners. Nevertheless, the new Italian state – which has never completely succeeded in acquiring legitimacy in the south – was not very effective in enforcing private property rights and in settling disputes. The lack of public trust thus turned that demand into one for *private* protection. Gambetta claims that the existence of this demand does not imply that someone able to meet it will necessarily emerge. In Sicily, however, many men versed in the use of violence – private armies, disbanded soldiers, and bandits – became unemployed after the break-up of feudalism and began to sell private protection to whoever wanted to buy it. It was from these groups, Gambetta argues, that the mafia originated.

0212

Gambetta (1993: 100–26) asserts that the Sicilian mafia as a protection firm is neither a tight-knit secret sect nor a totally disorganised entity. The internal organisation of an individual family is hierarchical. The reason is that in the protection market the use of violence is essential and the efficient deployment of force requires a military type of organisation. However, the relationship among mafia families is not centralised, but rather takes the form of a cartel. There is not even a single cartel embracing all Sicilian families, but a number of cartels. The 'commission', by creating a coalition of bosses, is mainly aimed at disciplining the members of each family. Gambetta maintains that, nevertheless, the arbitration role of the commission has proved far from infallible. Families, especially the larger ones, have retained their independence.

Although the mafiosi use violence, Gambetta (1993: 40–3) does not agree that the mafia is a non-rational force. He finds that the use of violence is crucial for a mafioso to establish his reputation as a reliable protector. In order to reassure his clients that he can supply credible protection, the protector must be able to show that he can successfully punish 'misbehaviour'. Gambetta notes that competition among protectors is perhaps the most common reason for its use. While cars compete on the basis of speed, safety, durability, and comfort, protectors compete in terms of toughness. The mafioso who hits hardest not only eliminates his vanquished competitors but also advertises himself to customers as a reliably tough character and the most reliable protector.

Gambetta (1993: 127–55) observes that the word 'mafia' has become a trademark in the protection market. This brand name evokes an entity with a seriously threatening reputation, and anyone who can convincingly claim to be part of it is likely to be considered a reliable protector and reap the benefit of this belief. Mafia families share an interest in protecting their trademark from abusers of various sorts, including those pretending to be members of the mafia, who, if caught, are violently punished. The only way in which someone can truthfully claim to be a member of the mafia is by having undergone the initiation ritual and by this being known with certainty to other mafiosi. The initiation ritual serves several functions, including acting as a fragile barrier against impersonators.

Gambetta (1993) opposes the view that mafiosi are illegal entrepreneurs primarily involved in the supply of illegal goods and services to the public. He also disagrees with Schelling's view that the mafia do not supply a real service but merely practise extortion at the expense of illegal dealers. He maintains that the mafia is a set of firms specialising in the supply of private protection. The primary beneficiaries are the entrepreneurs, legal and illegal alike, who are protected by the mafia. In Sicily, the mafiosi often intervene to collect debts or delay repayments. In addition, the mafia is able to protect business entrepreneurs against other criminals, such as thieves, extortionists, and kidnappers.

0213

Perhaps the most important service provided by mafiosi is to assist business entrepreneurs in monopolising the market. According to Gambetta and Reuter (1995: 128), some markets have certain characteristics that make the formation of cartels both attractive and difficult to sustain. These markets are characterised by poor product differentiation, low technology, unskilled labour, inelastic demand, trade unions, and small size of firms; however, the barriers to entry are low. In order to avoid competition, the mafia is 'invited' by business entrepreneurs to keep out new entrants and enforce the agreements among cartel members.

Gambetta (1993: 33) explains that 'time horizon' crucially affects whether protection will turn into extortion. If the mafiosi see a long future in their business, they are less likely to harass customers or provide low-quality services for fear of lowering their future income. If the time horizon shortens because of instability among mafia families, the temptation to prey grows. Furthermore, if potential customers know that the mafioso's 'life expectancy' is short, they will be more reluctant to pay protection, and a greater degree of coercion will be required to make them do so. The overall degree of stability of the protection industry is an important factor in predicting mafiosi's behaviour.

Gambetta (1993: 227) asserts that the mafia supplies, first and foremost, the organising force. Mafiosi and illegal dealers are not one and the same. The latter are usually independent economic agents licensed and protected by the former. Gambetta (1993: 226–8) claims that illegal entrepreneurs are the major customers of the protection industry because all illegal markets are both unprotected and subject to legal action. The mafia is particularly interested in supplying its protection services to the entrepreneur in certain illegal markets. For instance, as Schelling (1984) suggests, the entrepreneur who relies on high visibility to attract customers and compete for attractive locations is an ideal customer of protection. These markets encourage collusion among entrepreneurs, and this makes protection both feasible and worthwhile. By contrast, the mafia may find burglars and car thieves unattractive for protection because any territorial sharing among them is very difficult to police.

Gambetta (1993: 234–44) claims that the Sicilian mafia as a protection agency is less likely than often believed to have participated in drug trafficking because guaranteeing transactions in the heroin market is arduous. Owing to the complex nature of drug trafficking, each operation – importing from sources, refining, exporting, and selling to consumer markets – is performed by independent groups. Although some mafiosi are involved in drug trafficking, they do not supply guarantees for the whole sequence of drug transactions. Therefore, in this capacity, they should be seen as illegal entrepreneurs rather than as protectors. In addition, Gambetta finds evidence that investment in the drug market tends to be a private business among individual members. Seldom does a mafia family deal in drugs; only individual mafiosi do.

0214

In conclusion, Gambetta (1993: 155) defines the mafia as a set of firms active in the protection industry under a common trademark with recognisable features. These firms acknowledge one another as the legitimate suppliers of authentic mafioso protection and they are able to prevent the unauthorised use of their trademark by pirate firms. His economic theory of protection can be summarised as follows. First, protection firms such as the Sicilian mafia may emerge to meet a high potential demand for private protection. Second, while the internal organisation of a protection firm is hierarchical, the relationship among protection firms takes the form of cartels. Third, violence is used to build up and maintain a protector's reputation as a credible protector, and initiation ceremonies are used to define membership and thus to protect the protector's trademark from impersonators. Fourth, protectors are not extortionists but are able to provide real services to entrepreneurs. The more uncertain the prospect of remaining in business for a long time, the more likely that protection will drift towards extortion. Finally, if a protector invests in illegal industries, it is a strictly private business.

Triads, business, and markets

There is little doubt that triads are a menace in both Hong Kong and the international community. The word 'triad' conjures up many things to people: fear, intrigue, mystery, brutality, and violence. As a Hong Kong journalist puts it: 'Its use of arcane signs and symbols strikes a responsive chord in the young. It is this same "mystery" that threatens the more mature. We fear what we don't know.' (*HKS* 7 May 1986). The most direct and effective way to raise their mysterious veil is to see Hong Kong triads as business firms and investigate what exactly they do in legal, illegal, and international markets. Inspired by Gambetta's economic theory of protection, this research is specifically designed to test whether Hong Kong triads mainly supply illegal goods and services, practise extortion or sell private protection. In other words, are Hong Kong triads entrepreneurs, extortionists, or protectors in legal, illegal, and international markets?

In Hong Kong, triads are notorious for organised extortion from legitimate businesses, such as the entertainment industry, street hawking, wholesale markets, and minibus services. The recent extension of their reach to interior decoration businesses and the trading of properties, alongside the use of intimidation of famous film stars to make them perform in particular films, has aroused great public concern. According to popular belief, triad members are mere extortionists and the business community is virtually helpless to resist their demands. The results of the research reported in this book will argue that triad societies may also be able to provide real protection services. Triads can be employed by entrepreneurs to protect their businesses against attack by other gangs, manipulate a market by suppressing competitors, or recover stolen property or debts.

0215

Triads are also known to have long been involved in the illegal businesses of drugs, gambling, prostitution, loan sharking, debt collecting, and smuggling. It is generally believed that the Hong Kong illegal market is monopolised by triad societies. This book will argue that triad societies are not likely to be dominant in every aspect of illegal trade. Their participation varies from one business to another, or even within a business. Their primary role is to provide strong-arm services to illegal entrepreneurs so that they are able to run their businesses smoothly in a risky environment. Although they may get directly involved in the operation of illegal businesses, triad members are mainly responsible for security.

Since Hong Kong triads are believed to be increasingly active in drug trafficking, human smuggling, and economic organised crime such as credit card fraud, counterfeiting, and money laundering, Western police predict that these triads will replace the Italian mafia as the most powerful criminal organisation in the world in the next century. This book will discuss whether all international Chinese organised crime is committed by Hong Kong triads. Other ethnic Chinese crime groups, such as the Singapore and Malaysian gangs, Taiwanese gangs, and Mainland Chinese gangs, may have emerged as powerful crime groups in Western societies. More importantly, even if the crimes are committed by the Hong Kong Chinese, they may not be triad members. As international criminal projects usually involve a large sum of capital, extensive business connections, and high managerial skills, triad members may gain no particular advantages from running these businesses.

Although a wide range of issues about Hong Kong triads are covered in this study, the main focus of the book is to investigate what exactly Hong Kong triads do in legal, illegal, and international markets. The book tries to show that Hong Kong triads, like any other business firms, are not likely to be involved in all types of businesses. They have competitive advantages in some markets but not in others. They may lose their market share if they fail to adjust themselves in a changing environment. Therefore, the business community in particular, and the society in general, are not helpless in dealing with triads. If their protection market could be made unprofitable, most triad societies would disappear sooner or later.

CONSPIRACY AMONG THE MANY:
THE MAFIA IN LEGITIMATE INDUSTRIES

Diego Gambetta (*)
Peter Reuter (**)

This paper considers the modes by which the mafia exercises its influence on a number of legitimate industries in both Sicily and the United States. In particular, it discusses the kind of service the mafia provides, the economic consequences of its influence, the conditions which induce the entry of the mafia in specific industries, and the conditions and policies which make it disappear. The authors share the view that mafia protection in legitimate industries, although occasionally rapacious and unreliable, is frequently neither bogus nor limited to intimidating new entrants. Under some (perhaps most) circumstances, the primary beneficiaries are the owners of the firms being coerced.

This view is based both on theoretical arguments and empirical evidence. The paper relies on a series of case studies which were autonomously developed by the authors and presented elsewhere (Reuter, 1987, 1993; Gambetta 1993). The most important type of protection supplied by racketeers to legitimate industries, which is found in most industries we studied, is the enforcement of a variety of allocation agreements among independently owned firms, with racketeer income being payment for service. This runs counter to two widespread conceptions of the involvement of the mafia in legitimate industries. One sees the racketeers's role as mere intimidation: the mafioso approach to "regulated" competition would amount to thugs resorting to muscular persuasion at the expense of an innocent competitor on behalf of either a single

monopolist or the mafia's own enterprise. The other sees racketeers as extortionists imposing their presence upon harmless dealers who would rather do without. Let us consider them in turn.

When the mafia looks after the interests of a monopolist, it is clearly useless as a cartel enforcer and protection is limited to the intimidation of new entrants. This, however, is seldom the case: although protectors have an interest in not expanding indefinitely the number of protected firms, they are subject to an opposite drive to increase it. First, the larger the number of firms the higher is the mafia's autonomy from and barganing power over any single one of them (Gambetta 1993: 22-23, 85). Second, supporting a small number of firms is risky because it provides disappointed competitors with an incentive to seek protection from police or rival racketeers (Reuter 1987: 6). Third, larger collusive agreements hold competition in check more effectively both because the cartel acts as a discouraging signal of determination and stability reducing the need to

threaten potential competitors, and because the option to exit the cartel becomes less attractive for the participants (Fiorentini 1994).

Although in particular circumstances collusion is self-enforcing (Friedman 1983: 65; 132ff.), whenever cartels rely on agreements, defection is a potential hazard and a genuine demand for protection may develop: each partner must feel confident that all other partners will comply with the pact, otherwise the cartel collapses and competition creeps back in. Furthermore even though anti-competitive outcomes can emerge without cooperation among

firms - a large firm may independently decide to exclude new entrants even if rival firms share the advantages but not the cost

- whenever restrictive practices require the contribution of all firms, an enforcing agency may be necessary to deter members from free-riding. There is therefore no theoretical reason to expect that the role of the mafia will be one of extortion rather than authentic protection (whether the price of protection is "extortionate" is a separate question to which we return later in sec.7).

Our argument is that the mafia solves a problem of potential cartels. It may be invited in by entrepreneurs themselves looking to organize some agreement or may initiate the activity itself; we have examples of both. Its comparative advantage is likely to be in organizing cartel agreements for large number industries, as well as make cartels more stable; however, success requires a number of other conditions, that we spell out in the course of the paper. Moreover, the mafia has a unique asset in this capacity, namely its reputation for effective execution of threats of violence; this creates a reputational barrier to entry.

We do not, however, claim that large number cartel organizing is the exclusive role of the mafia in legitimate industries. The garment trucking and waterfront industries in the United States (Reuter, 1987: ch.3) provide instances of other kinds of predation. However, cartel organization is an important and distinctive activity of the mafia,([1]) and not just in legitimate industries. Although illicit markets do not concern us here, there are signs that the mafia can act as cartel organizer, for instance, in bookmaking in the United States and in tobacco smuggling and purse snatchers in Southern Italy (Reuter 1983: 42-44; Gambetta 1993: 227-235).

1. The form of cartel agreements

The central problem for cartels is to design agreements which can be maintained over time. Three aspects of agreements, which are relevant to human cooperation generally, are also relevant for establishing cartels: the rules to be followed by members, the means of detecting rule violators, and the sanctions to be imposed against violators.

0225

Weakness in any of the three is likely to lead to defections and breakdown of the cartel (Stigler, 1964).

The rule. There are at least three dimensions to the rule itself which affect cartel members's willingness to enter and remain in association. First, the rule must produce results that, over time, are perceived as equitable, so as to lower risk of defection and complaint. Second, the agreement must be compatible with continued entrepreneurial autonomy. Loss of autonomy - as might arise if the cartel decided that production facilities must be centralized to maximize joint profits - transforms the bargaining positions of members and those who lose production facilities become dependent on others's willingness to honour the original commitment. This may increase the demand on trust to breaking point. Third, because of illegality, there is likely to be a strong inclination to avoid rules which require "side payments" among members that could provide valuable evidence for a prosecutor. More generally, illegal agreements are likely to minimize the number of transactions necessary for their effective execution.

Detection. The second important issue is the speed and cost of detecting violation. The longer it takes to detect it, the greater the return to violation and the lower the expected lifetime of the cartel (Stigler 1964). Similarly, the profitability of the cartel will be lowered by high costs of monitoring. More generally, the higher the cost of policing agreements the lower the likelihood that cooperation will emerge.

Sanctions. The final consideration is the nature of available sanctions. Members will doubt a cartel's potential stability if violation of rules cannot be punished without ending the cartel. A classic difficulty of price fixing agreements is that efforts to punish price cutters lead to price reductions for all customers. The possibility of selective and cheap sanctions will increase stability.(2)

A limited number of rules can sustain collusive agreements. These are price fixing, output quotas and sharing markets. Market sharing seems generally easier to enforce than, and logically prior to, the other two alternatives. In the New York carting industry,(3) for instance, in which individual customers are allocated on the basis of who first served them, cartel members have complete price autonomy. Being fixed in location, customers have little choice if other carters accept the basic rule. By contrast, if price fixing is practised - assuming that the product is homogeneous - firms usually need further allocative measures. Price fixing creates an incentive to resort to covert inducements, such as advertizing, gifts, special offers, guarantees, sponsorship etc. in order to attain higher market shares. Thus, unless firms also have market-sharing rules, price fixing is likely to be unstable, even ignoring potential entry.

0226

2. A Comparison of the Sicilian and New York mafias

The differences between the mafia in Sicily and New York are several. For example, in Sicily there is a clear geographic division; individual families have specific areas in which they have sole operating authority. Members of other families can operate there only with permission. Within New York the nature of the division is harder to determine. It certainly is not territorial, perhaps reflecting the lack of effective small area local government that would permit the use of corrupt government authority for establishing a monopolistic criminal enterprise. Above all, in a highly diversified and complex urban situation such as that of New York, a monopoly of protection on all transactions is hardly conceivable, even in a relatively small area. By contrast, in a village or district of Sicily, with limited inhabitants any one mafia family can still take care of its clients in most of their businesses; but as the number of exchanges multiplies it becomes increasingly laborious to supply territorially based protection and protection itself tends to become functionally specialized. Historic roles certainly have an influence in determining where (functionally) a family operates in New York. The Lucchese and Gambino families are the only ones of the five New York families that have a presence in the carting industry, just as it is the Genovese that are most active on the docks in Manhattan. That seems to have been the case for over forty years in the case of carting and nearly seventy years for the docks.

The capacity of the mafia to play a role in cartel organization is probably affected by this general organizational characteristic. Sicilian industry agreements may have territorial limits because the families cannot operate outside those areas. Indeed, it appears that some sharing agreements are cumbersome to execute because of the territorial division of the mafia families; the queuing for contract bids, discussed below, is an instance where arrangements have to be worked out among different families. Also, in New York there is much more of an explicit market in property rights. Carters buy and sell customers at prices that seem to represent the capitalized value of the customer allocation agreement; it is unclear whether mafiosi levy a tax on these sales. In Sicily there is no evidence of markets in such rights.

Another difference is one of scale of individual families. The mafia of Sicily are approximately 3,000, in a total of nearly 100 families. In contrast there are an estimated 5,000 mafia in New York, but grouped into only five families. Entry is more restricted in New York and the rewards of membership correspondingly greater. Few seem to enter American mafia families before their late 30's, while in Sicily members enter in their 20s.

A further important difference for our purposes is the role of the labor union. In the United States it has been the central instrument by which the mafia has acquired power in particular industries. The union provides an ideal means to dress up extortion or the suppression of competition as the expression of concern for the rights of individual

0227

workers. Interestingly, the union is critical for the initiation of a customer allocation agreement but appears not to be so central for its continuation; expectation and reputation may suffice at that point. In Sicily on the other hand the union is not a major institution. The mafia has much more direct ties to the political system and, as argued at length in Gambetta (1993), serves to provide quasi-governmental services that the elected government fails to deliver.

One final difference is worth mentioning. Illegal markets have traditionally been an important source of income more to the New York mafia than to the Sicilian mafia. In markets for horse betting, certain kinds of lottery, loansharking and (in earlier eras) prostitution and bootlegging, the mafia has served both as a provider of the goods themselves and as guarantors of contracts and dispute settlers. In recent decades, it is the latter role that has been most significant (Reuter 1983). There are thus parallels between the mafia's current role in legal and illegal markets. For the Sicilian mafia, although the role of protection has been salient for a long time, markets of illegal commodities have until recently been played a less important role. The growth of the heroin market since 1970 has changed that, but the Sicilian mafia in this case has played a direct role in provision of credit and part of the service too (Gambetta 1993: 234-244).

3. Instances of mafia cartels

With only a modest number of case studies available, even including what has appeared in historical studies, we make modest claims as to the generality of the following summary of the prevalence of different kinds of mafia cartels rules.

We know of few settings in which the mafia has enforced price fixing agreements over long periods of time. In the wholesale fruit and vegetable market in Palermo, for example, the dramatic increase in numbers of authorized market middlemen, known as commissionari, made it impossible to continue to fix prices. Until 1955 only twelve commissionari were operating and price fixing and quotas control were feasible because easy to police. A "man of respect", himself a commissionario, acted as guarantor of these arrangements and controlled the largest share of the transactions. Now that the commissionari are seventy seven,([4]) they say that it would no longer be profitable to pay someone who, like "Don Peppe" in bygone days, enforces collusion; there are simply too many commissionari and, given the large number of customers which use the market everyday, someone somewhere would always breach the deal. In section 6 we provide an analysis of why the numbers grew so substantially and broke the cartel.

Output quotas are another important alternative. The little available evidence suggests that quota agreements require extensive and intrusive inspection for their maintenance, and these are not attractive for an illegal market. The only known case of regulating output quotas involving the mafia dates back to the 19th century. Franchetti, an

0228

early and insightful scholar of the phenomenon, reports the existence of two "societies" based near Palermo: one of millers - la società Mulini - which we would call a cartel, and the other - la società della Posa - a union of cart-drivers and apprentice-millers. Both these societies are said by Franchetti to have been under the protection of "powerful mafiosi". Members paid a fee to the society and agreed not to compete. They maintained the price of flour high by regulating output, taking it in turns to restrict production and receiving appropriate compensation (notice that current EEC agricultural policies are not too dissimilar). The capo-mafia ensured that everybody paid their dues, that the miller whose turn it was to under-produce did not free-ride on his fellows by producing more than he was supposed to; and that the others did not free-ride on him, by failing either to pay the agreed compensation or to restrict production when their turn came (Franchetti [1876] 1974: p.6-7 and 96).

The remaining collusive rule, namely market sharing, can follow any one of three bases: locations, customers or queues. Which of them is adopted depends on the general conditions of the market - physical and technological constraints, size of units of demand and supply, frequency of transactions - and on which proves more suitable to monitor defectors. In what follows we assume for simplicity of exposition that agents sharing the market are sellers, but the same arguments applies to buyers. For instance, in the wholesale fish market in Palermo, middlemen share suppliers, i.e. fishermen.

Location or territory. A gets the north side, B the south side; A runs on route X and B on route Y. Trading within territorial boundaries is often found in a variety of industries, such as bus companies, airlines, telephone lines suppliers, estate agents and many more. When firms are few, and monitoring each other presents no great problem, firms can easily agree with no need of "muscle". The three top Italian producers of lead and amianthus pipes, for instance, are said to share territories - north, south and center - when it comes to large orders. These firms do not seem to need any special agency to enforce their understanding. When it comes to small contracts, which are too arduous to police, they simply prefer to compete.

But other sectors - as diverse as construction, transport and street hawkers - have been territorially controlled by mafiosi in Sicily. Enforcing the territorial allocation when markets are both visible and immobile (or at least well-defined as bus routes are) is relatively simple. Territoriality has a logical basis that makes it the dominant alternative. In Naples and Palermo mafia enforcement has also helped prevent conflict among unofficial parking attendants, whereas in a similar market in Rome, that for clearning windscreens at traffic lights, the mafia has not been available. In 1989 this business was lucrative: each man (mostly Polish immigrants) made between 100,000 and 300,000 lire a day (50 to 150 pounds) and, according to the Carabinieri, this led to violent fights over the

0229

allocation of the most profitable road junctions. The cleaners were unable to cooperate and thus attracted the attention of the authorities (la Repubblica, 2 July 1989).

Customers. Not all markets are efficiently allocated by territory: for instance, when dealers congregate in one location as in wholesale markets or when agents are highly mobile and unpredictable, as, for example, taxi drivers and, as noted by Schelling, burglars, who are both mobile and, as a matter of trade, invisible (Gambetta 1993: 220-235). Furthermore, geographical divisions are not always satisfactory because profits may be unevenly and unpredictably distributed (e.g. because of differences in regional patterns of development), that some cartel members perceive the continuation of the agreement as inequitable. An alternative solution consists in sharing customers: cartel members, in other words, agree not to accept or seek business from customers who are currently served by another member of the cartel. Where feasible, customer allocation dominates the other rules. Violations are easily detected within a short period of time and almost automatically because if a cartel member provides service to the customer of another member, that member will be aware of the loss of business of that customer. Moreover, selective sanctions can be applied by aggressive solicitation of the violator's customers.

The rule is also equitable and simple to apply. It gives to each participant what he thinks of as his already, namely his existing customers. It does not require other forms of cooperation which leave paper trails for investigators. Members can charge different prices and provide different quality of products, though there may be limits on the variation depending on the ease of comparison by customers. This type of sharing is particularly successful if customers are "fixed in location and the service or good is delivered to [them]" (Reuter 1987: 7) for policing is simpler. More generally, it is successful if the conditions permit an easy way to identify customers and keep track of their movements. When customers are big, for instance, they are easily shared between suppliers: A works for the electric company, B for the water company and so on.

This applies to the wholesale fruit and vegetable market too in Palermo. In fact, although most daily transactions now take place competitively, there is an exception which still provides mafiosi with an opportunity to exert their influence. A group of 6-7 commissionari - those said to be of "greater respect" - collude over the contracts taken out by institutions, such as schools, hospitals, barracks, and old people's homes. Each commissionario supplies specific institutions and the problem of competition is eliminated radically: by common agreement only one commissionario shows up at each tender. Relative to private customers, public institutions are fewer, take out long-term contracts, buy fixed quantities, are generally slack about quality, careless about price, and corruptible. In short, they are easy to share. The small number of participants as well as the availability of sanctions - they share the same crowded market area and could easily

0230

make life difficult for each other - are such that this agreement could in principle do without outside assistance, although some evidence suggests that this is not the case (Gambetta 1993: 206-214).

Under customer allocation arrangements, customers effectively become part of the supplier's assets, they are internalized and are in some instance traded like any other form of property. Carters in the New York metropolitan area (Long Island, New York City and New Jersey) buy and sell customers both individually and in groups. The prices of those customers, roughly 40 times their monthly gross billings in the early 1980s, provide the basis for estimating the capitalized value of the allocation agreement (Reuter 1987: 48-51).

Queues. Sharing customers, however, can prove arduous. There may simply be too many of them around, or they may be too occasional or too mobile. In short, they can be difficult to identify: how could, say, restaurants share tourists or petrol stations share motorway drivers? Until the mid-fifties when commissionari were very few at the fruit and vegetable market in Palermo, some ordinary customer sharing went on. But since both customers and sources of supply have increased these arrangements have been abandoned. One strategy for dealing with these problematic markets involves taking turns. Provided customers can be funneled through particular locations, queueing can help. The obvious case is that of taxis who line up at stations and airports.

Sharing customers is also meaningless if there is only one buyer, or, more generally, if there are fewer buyers than sellers. If there is just one buyer, queueing can work if purchases are repeated: sellers can then enter a (metaphorical) line and share the market on this basis. One common method of collusion found among building contractors in Sicily runs as follows: firms A1, A2, A3,... agree that, say, A2 should obtain the contract; the others bid artificially high prices so that A2's offer is certain to be the lowest. There are certain prerequisites for a deal of this kind to work: first, only firms in the cartel can participate while free- riders must be excluded. Next, A2 must be confident that the other firms will not submit a competitive bid at the last minute. In turn, A1, A3... require guarantees that A2 will return the favour on a future occasion and entrepreneurs therefore keep careful records of who obtained which contract. Where a contract is publicly bid on a repeat basis, the cartel may instead allocate a contract to one firm, with others designated to provide "courtesy" bids as camoflage for the arrangement. That behavior has been observed among the carters in both New Jersey and Long Island. These rights can be permanent enough that the contracts are sold from one carter to another.

4. Conditions of emergence

The ideal strategy from the entrepreneurs's point of view is to collude without paying protection money to the mafia, but this works only so long as everybody behaves

0231

and everybody believes it. Sometimes, racketeers can be called in simply ex-post facto to provide a one time service: once, in the late 70s, according to a Sicilian building contractor, two firms suddenly defected and went after a forbidden contract so that "the man of respect was called in and persuaded them to withdraw". But, generally, not much is known about the conditions which foster the continued presence of the mafia in legitimate industries. In the United States the phenomenon of racketeer-influenced industries, despite a substantial journalistic interest, has attracted little scholarly attention. As for Sicily, research on this topic is virtually non- existent.

There seems to be just one known case, the waterfront industry in New York, in which the presence of racketeers qualifies as "pure extortion"; and, even so, employers take advantage of their presence to control union members (Reuter 1987: vii; Bell 1960). But the existing studies - Landesco (1929), Block (1982), Reuter (et al. 1982, 1987) and Gambetta (1993) - found evidence that competitors seeking a collusive solution to market problems provide racketeers with the opportunity to acquire a role in their industry. Racketeers can enter "by invitation" rather than of their own initiative. Recent evidence from Sicily illustrates this case. Baldassare di Maggio, a mafioso who turned state witness in 1992, said that Angelo Siino, a building contractor, <<came to me and said that if (...) we, that is Cosa Nostra, were capable of coordinating the bids we could get much bigger profits (...). In that first stage, Cosa Nostra's problem was that of making [Siino] credible in the eyes of other contractors>> (Panorama, 11 April 1993). In order for collusion to succeed, the organizational force of the cartel must be credible: every participants must respect the agreement and in turn confidently expect that his moment to bid will come and others will respect it. Cosa Nostra supplies these guarantees. A surveyor, involved in the same enquiry said that the mafia intervenes as <<an organization which takes care of the way in which the various jobs are equitably distributed among the interested firms>> (la Repubblica, 28 October 1992). In the interrogation which originally started this enquiry in 1990, the former mayor of Baucina, near Palermo, summing up the role of the mafia, said that the local mafiosi "oversaw the fair distribution of contracts among firms participating in bids" (la Repubblica, 14 April 1990).

There is a parallel with New York: federal prosecutors in the case United States vs Salerno in 1985 proved that "the Cosa Nostra families established a club of concrete contractors who decided which contractor would submit the lowest bid on each project; other cartel members prepared their complementary bids accordingly. The 'lowest bid' was far higher than the price that fair competition would have produced" (New York Organized Crime Task Force [OCTF] 1988: 11, fn 17).

In general, racketeers offer the prospect that the conspiracy will work, simply because they provide credible enforcement. Large number cartels appear generally to have a short life because there is always an incentive for a member to leave the

0232

agreement and take advantage of the restrictions imposed on the remaining members (Scherer 1970: ch.6). Potential conspirators are aware of this and may be reluctant to enter into an arrangement that is probably short-lived as well as illegal. Racketeers by promising to take illegal but effective actions against defectors, provide potential members with credible assurance that it is likely to be of lasting benefit.

But the racketeer involvement has another benefit, once it becomes known. It reduces the willingness of customers to protest the high prices charged under the agreement or to solicit competing bids from other dealers, tempting violation. Note that the customers in the commercial sector of the carting industry in New York include major corporations competent at understanding and exercising their rights. The unspoken threat, perhaps occasionally articulated in a vague way, that aggressive action may be punished by mafia interventions, smooths customer relations for the cartel members. Given the small share of total costs associated with garbage collection, and the fact that rivals are also believed to be extorted, risky resistance is unlikely to be an attractive option. The New Jersey State Commission of Investigation (1989) noted that one carter told a reporter that a story about racketeer involvement in the industry would only help his business.

Finally, racketeers provide a reputational barrier to entry. Entrants must be concerned that they will be the target of retaliation by racketeers. Their trucks and stores may be destroyed and their customers threatened or actually subject to violence. This was certainly the case when the Brooklyn District Attorney's Office started a carting firm in 1972, as part of an undercover investigation of the industry.

Collusion alone, however, is not in itself a sufficent cause. There is no evidence of mafia control among large corporations - steel, automobiles, chemicals, rubber (Bell 1960: 176; Reuter 1987: 7): entrepreneurs of this caliber can probably count on political collusions and, more generally, grander means than the mafia (e.g. Friedman 1988). Nor does it develop in high-tech industries. For markets to be vulnerable to the mafia, collusion must be both highly desirable and difficult to bring about. The former condition depends on inelastic demand and little product differentiation, whereas the latter is due to impediments such as numerous firms and low barriers to entry (Reuter 1987: 6).

Figure 1. Conditions favouring the emergence of mafia controlled cartels

---

product differentiation	low
barriers to entry	low
technology	low
labour	unskilled

0233

demand	inelastic
number of firms	large
size of firms	small
unionization	present

But even when all the right conditions obtain, a triggering event seems often necessary to attract racketeers. Slumps in the economy, for instance, can provide the activating force: in the United States during the Depression an extraordinarily deep and rapid decline in demand intensified the incentive for collusive action and related services. The need for cash becomes an important factor: Lucky Luciano, a leading mafioso during the Depression claimed

we gave the companies that worked with us the money to help them buyin' goods and all the stuff they needed to operate with. Then, if one of our manufacturers got into us for dough that he could not pay back, and the guy had what looked like a good business, then we would become his partner (...) we actually kept a whole bunch of garment manufacturers alive, and we helped all them unions, the Ladies' Garments Workers and the Amalgamated, organize the place (Gosch & Hammer ,1975: 77-8).

Racketeers's intervention can be sparked off also by the sudden greed of one of the cartel participants. Funeral homes in Naples, for instance, shared for many years hospitals without outside intervention: firm A was responsible for the deceased in hospital X, B in hospital Y and so on. They managed to keep the number of firms surprisingly low: while in Turin there are fifty firms for one million residents and in Rome seventy for 2.8 million, in Naples a population of 1.2 million is supplied by only thirteen firms. The cartel achieved these impressive results with the assistance of corrupt local politicians and administrators who rejected new applicants. But collusive arrangements remain exposed to the risk of foundering and hence to the temptation to call in the mafiosi. At the end of the 1970s one firm tried to increase its share by enlisting the protection of an aggressive gang, La Nuova Camorra Organizzata. The other funeral homes attempted first to repel the move "politically", then called in rival racketeers, who did not limit themselves to provide a one time service but decided to continue levying a protection fee even after the triggering event had been sorted out. A similar case is found in the New Jersey garbage collection industry; there, however, the aggressive carter was not backed by outside racketeers and the other carters successfully opposed his attempts to expand by "political" means alone.

According to one Sicilian contractor, mafioso intervention is much favoured by submissive expectations and can therefore be avoided; he himself had coordinated queues, ostensibly without being a mafioso. By yielding too quickly to the mafia - he

0234

claimed - one loses the respect which may otherwise be sufficient to control collusion: "a lot of entrepreneurs end up in the arms of the mafia simply because they believe it is inevitable". In New York the OCTF also found, in its investigation of the building industry, that "sometimes contractors claim not to know exactly why they pay; experience tells them that payoffs are necessary to assure that 'things run smoothly'" (1988: 17). The higher the rumour that mafia services are indispensable in a certain market or area, the higher seems the likelihood that they will be requested or accepted without question.([5]) In addition, institutions looking for builders may themselves feel lost without an outsider to choose for them for no one wants to take the responsibility of the allocation: in at least one case the contracting agent in Sicily actively sought the intervention of an external fixer when the latter was slow in coming forward autonomously.

5. Consequences

Although it is difficult to establish ex-post facto whether a given collusive arrangement could have emerged without the involvement of mafiosi, the availability of mafia services generally makes collusion more likely, more elaborate and more enduring. Thus, not only do collusive arrangements sustain the mafia, but also, the availability of mafia protection provides an incentive to seek collusive solutions.

Agreements supervised by mafiosi can embrace larger numbers of both dealers and customers: in the New York carting industry, for instance, in which racketeers played a continuing role in the operation of the allocation agreement, primarily through the constant need to mediate disputes, the industry involved the allocation of over 100,000 customers to as many as 300 carters (Reuter 1987: 11). The greater the number of firms the harder it becomes to ensure that they all keep their word. An Italian building contractor spoke of a "queue" of as many as 160 firms. It took a great deal of patience and manouvering before he eventually succeeded, as he put it, in "buying" a contract: "it is obvious that to safeguard agreements of this size one needs the threat of violence". This threat was not supplied by an entrepreneur belonging to the cartel; at most "he owns a few caterpillars". Without such a threat, as the OCTF in New York also found, "bid-rigging conspiracies may founder because the conspirators are unable to police their cartels effectively" (1988: 38).

Irrespective of the method adopted, the general consequences of restrictive practices, as Reuter argued, are threefold:

less efficient production, higher prices, and smaller firms. Less efficient production is engendered by the reduced incentive for lowering production costs; a firm cannot obtain an increase in market share by lowering costs, since all existing customers are allocated. (...) The agreement also permits inefficient firms to stay in the market and prevents efficient firms from growing. The higher prices result directly from the imposition of

0235

restraints of trade. (...) In each dimension, the effect is likely to be greater for a racket-run cartel than for other cartels. (Reuter, 1988: 7)

The first victims of collusion are consumers who end up purchasing lower-quality goods for higher prices. Potential competitors come next: successful collusion makes it almost impossible for outsiders to even contemplate entering an industry, and overt intimidation becomes redundant. This is why the enforcement of internal agreements is much more important than the brutal discouragement of rivals, even though the lack of entrepreneurial energy in the south of Italy makes the function less important there. Finally, since racketeers increase the confidence of participating entrepreneurs that the cartel will endure, incentives for efficient production are even more sharply reduced than they would be in a conventional cartel, where certainty about future success is always limited and the probability of imminent competition never vanishes.

The depressing effect on quality caused by mafia involvement can go further, especially in Sicily where inter-mafia conflicts have been more common than in the United States. The operation of the mafia is based on reputation for effective contingent violence but that does not mean that actual violence is unknown. Both in New York and Sicily an occasional killing or act of violence has been required to discipline a cartel member. Though these acts are situation specific, they also serve to enhance the reputation of the mafia and augment the reputational barrier. However, when such acts of violence become "too" frequent because of internicine wars - in Sicily during the 1980s several entrepreneurs died in the crossfire (Gambetta 1993: 191-194) - the barrier becomes so strong that those very few who venture to take up entrepreneurial activities must be selected among risk-prone individuals who both have little chance of an alternative (and less dangerous) career and are already tightly connected with a mafia family. Even discounting for the lack of incentives for efficient production enjoyed by mafia protected cartels, this group is most unlikely to contain characters versed in proper entrepreneurial tasks.

6. Conditions of disappearance

Again we note that our set of case studies is too small and diverse for the development of general propositions. However the examples are interesting in themselves as pointing to the variety of circumstances that can lead to the demise of mafia control. The fruit and vegetable market in Palermo is now largely competitive. Agents appear more concerned with quality than with establishing or violating collusive deals. The threat of violence seems remote as in any normal business environment. Local authorities can take none of the credit for the market evolution: "The contacts which our group had with the present mayor and the assessore all'Annona", concluded the Antimafia Parliamentary Commission in 1969, "gave us the impression, increasingly so, of lack of both interest and

0236

information, often coupled with open irritation towards those trying to unsettle a status quo which was not altogether disliked".[6]

For years local authorities tolerated unfair dealing: for instance, an area of the market designated for use by producers selling without the intervention of middlemen, was invaded by the most powerful commissionari who then cheekily levied 10% charge from farmers wanting to share it. In 1969 the Commission asked the mayor why an area adjacent to the market was left unused instead of being developed into further stands. The mayor replied that it was the site of a church that could not be demolished because of its artistic value. A letter of inquiry to the Soprintendenza delle Belle Arti of Palermo went unanswered. The members of the Commission went to see for themselves: they found a small chapel of no aesthetic merit being used as a garbage dump. In the same period, beautiful buildings, such as late 19th century villas by Basile, were ruthlessly demolished in Palermo to make room for urban speculators (Chubb 1982: ch. 6).

It was thanks to the central authorities, the Prefects and the Antimafia Commission, that the process of expansion, already to some extent "naturally" underway, was accelerated. The present director of the market concedes that the Palermo Prefect's policy of increasing the availability of permits was crucial in alleviating the troubles of the market. Permits rose particularly during the 1970s until the last increment, in 1981, brought the number of licences to seventy seven.

Yet, if the action of public authorities were the sole factor which brought competition about why has the same process not occurred at the fish market? The answer lies in the diverse nature of the commodities involved. The supply of fresh fish is constrained both by limited natural resources - which are either unaffected or depleted by technological development - and by the fact that it is channelled through a limited number of clearly identified ports. Fishing firms, furthermore, are fewer and easier to control than farmers. In the fruit and vegetable trade the sources of supply are both many and widely scattered, and transport routes and delivery points outside the wholesale market can multiply unnoticed.

The rapid increase in agricultural productivity and conservation techniques after the war, as well as the improved efficiency of transport, accentuated these differences and made it virtually impossible to monopolize produce. The only example of collusion mentioned by the Commission involving commissionari and their emissaries concerns a case in which distribution is forced through a bottleneck: by controlling the boats linking the small island of Pantelleria to the main island, a group known as L'Associazione made sure that the local cooperative sold the zibibbo grape exclusively to them. But in general, monopolies were already being eroded in the 1960s because, according to the Parliamentary Commission, "wealthy wholesale and retail dealers collect directly from Northern Italy and introduce ever- increasing quantities of good fruit for consumption".

0237

A further bottleneck has also been broken. Before the rural Casse di Risparmio started to function properly, credit was in the hands of the man of respect. Producers who wanted credit were obliged to sell their goods to him. As sources multiplied credit no longer had the same kind of strings attached. It is now granted sparingly to customers rather than producers and is a means of fostering competition rather than enforcing collusion. Creditors are less inclined to resort to violence against insolvent debtors lest other clients are diverted to more benign rivals.

There are also instances of the New York mafia losing its influence in industries. The trucking industry, in which the mafia notoriously had acquired influence throughout much of the nation through the instrumentality of the Teamsters Union (three of whose presidents were convicted of corruption), now seems to be much less subject to that influence. Two factors may have been significant here; deregulation of the industry (which reduced the power the union) and aggressive and imaginative prosecution of the Teamster leadership, which resulted in a reform leadership being installed at the beginning of the 1990s.

However, most targeted efforts to remove the mafia from specific industries in the United States have been generally unsuccessful. In response to concerns about the role of the mafia (and lack of competition) in the carting industry in New Jersey and New York City, the industry has been subject to regulation (since 1956 in New York City and 1968 in New Jersey). A flow of cases show that the regulation has been utterly ineffective in New York City; the evidence concerning New Jersey is less clear but anti-competitive agreements, perhaps with mafia involvement, have been alleged as late as 1988. The regulatory apparatus had indeed become one of the tools for the operation of the customer allocation agreement. The regulators allowed the sale of customers and, through inflexible price rules in New Jersey, provided the basis for contesting new entry.

7. Prices and profits

The returns to participants in these cartels are difficult to determine. The available data are best for the carting industry, where customers are treated as assets and frequently bought and sold by the participants (Reuter, 1987)

The little we know of the charges by mafia members for their services suggest that, at least where the relationship with the industry is stable, those charges are surprisingly modest, indeed well below extortionate levels. In the Long Island carting industry in the mid-1980s it appeared that the mafia took no more than $400,000 annually in tribute, though the estimated profits accruing to the carters was over $10 million. The mafia run concrete cartel in New York City levied only 2 percent of the contract price for its services in fixing prices. As for Sicily we have the followign evidence: Baldassare di Maggio, a pentito we encountered already, says about the mafia role in organizing bid-

0238

rigging in construction that <<we kept 5%...3% was for the mafioso organization and 2% was given to Siino to pay the politicians>>, that were paid as part of the overall agreement.

The fact that customers of carters are sold at such high prices in inter-carter transactions provided evidence that the primary beneficiaries of the agreement in that industry were the carters themselves. If the mafia taxed away all the returns from the agreement, then customers would have no greater value than they would in a competitive industry; in fact they sold for a very substantial mark-up over the competitive price.

We can offer no convincing explanation for these observations. If the mafia were marketing its cartel organizing services, then these might be seen as prices intended to maximize their profits over the entire market for such services. However, the peculiar lack of mafia entrepreneurialism - no new industries have been identified as being subject to mafia control over the last decades - weakens this supposition. Nor does it seem that the mafia lacks information about the profits generated to other actors in this business. Access to accounts of member enterprises is certainly not a problem in the New York markets in which the organization is active. Finally, we do not believe that these prices are set so as to minimize the risk of aggressive informing by other participants.

8. Conclusions

We make no claim to have identified all the relationships between the mafia and legitimate enterprises. The casino industry in Nevada, where the mafia interest was confined to tax fraud, debt collection from bettors, and some bankruptcy scams involving capital from the Central States Teamsters pension fund, represents a very different situation. On the waterfront in New York and Florida the mafia seems to have used its power, again through the instrumentality of a union, to extort shippers, carriers and those providing services on the docks. In neither of these industries has it acted to suppress competition on a continuing basis.

Yet, we believe that the phenomenon described in this paper is one that has received too little attention. The suppression of competition is a near universal dream of established entrepreneurs. The mafia is one of the few non-governmental institutions that can help accomplish this goal. Our impression, based on a limited set of examples, is that once the mafia has entered, its success in meeting the needs of its customers, as well as its unique reputational asset, makes the reintroduction of competition extremely difficult. The phenomenon observed here may be just a generalized form of the Stigler-Peltzman theory of state regulation (Stigler, 1971; Peltzman, 1976). The state is unable or unwilling to meet the demand of entrepreneurs for profit enhancing and risk reducing regulation; the mafia provides the service instead.

0239

The phenomenon is perhaps of more analytic than policy interest, since thre are signs that it is now receding mainly because the mafia itself appears to be diminished in power in both countries. In the United States, the result of a continued federal campaign that has led to the conviction and long-term imprisonment of much of the leadership. In Sicily too the mafia never had it so bad and is now under unprecedented state pressure: virtually all mafiosi who sat in the mafia "governing body", known as La Commissione, are now in jail. Mafioso assets worth 3,500 billion lire were seized by custom police in 1992 alone. At the same time, a new crop of mafiosi turning state witnesses has been growing and their revelations are leading to further arrests and repressive actions.([7]) Mafia reputation may be, initially at least, little diminished by these imprisonments, but its ability to venture into new fields is probably limited by the inexperience of, and instability in, the new leadership. Furthermore, the current dramatic political changes in Italy are likely to decrease the opportunities of political corruption and bid-rigging which use to provide the major outlet for mafia regulated cartels of building contractors. Finally, some of the market conditions that (jointly) facilitate mafia entry as a cartel organizer - such low technology, unskilled labor, and unioniziation - occur less frequently now than when it acquired its influence over industries, mostly between 1920 and 1950.

The prospects for increasing our understanding of the phenomenon are being enhanced by the very forces that are diminishing the mafia's powers. Certainly the trials of the major families in both Sicily and various American cities (including Boston, Chicago, Kansas City and New York) have provided a wealth of detailed information on the relationship between the mafia and their legitimate clients which awaits to be analysed.

[1]Here we prudently use the term mafia as referring to the Sicilian mafia, also known as Cosa Nostra, both in Italy and the United States. Whether other broad and enduring criminal organizations supply the same service is a matter for empirical analysis to establish.

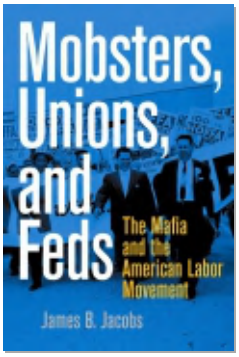
[2]A curious case of failure of cooperation due to difficulties of both policing and sanctioning is represented by radio taxis in Palermo, see Gambetta (1993: 220-225).

[3]Carting is the term used to describe the collection of solid waste,whether from households or commercial establishments. It does not include the collection of hazardous waste, where different possibilities exist for collusion and fraud.

[4]"Up to perhaps six firms one has oligopoly, and with fifty or more firms of roughly similar size one has competition; however, for sizes in between it may be difficult to say". This is the rule of thumb offered by James Friedman's textbook (1983: 8).

[5]This is analogous to the argument which holds that widespread corruption is self-generating: the expectation suffices to produce more of the thing itself, Andvig & Moene 1990

[6] The case of this market is illustrated in full in Gambetta 1993: 206-214.



[7]For a full assessment of mafia prospects in Sicily see the new introduction to the second Italian edition of Gambetta's The Sicilian mafia, published by Einaudi (Turin) in 1994.

To Herman Benson

Racketeering is the cancer that almost destroyed the American trade-union movement.

—DAVID DUBINSKY, president of the International Ladies Garment Workers (1932–1966), David Dubinsky and A. Raskin, *David Dubinsky: A Life with Labor* (New York: Simon and Schuster, 1977), 145

American labor had better roll up its sleeves, it had better get the stiffest broom and brush it can find, and the strongest soap and disinfectant, and it had better take on the job of cleaning its own house from top to bottom and drive out every crook and gangster and racketeer we find, because if we don't clean our own house, then the reactionaries will clean it for us. But they won't use a broom, they'll use an ax, and they'll try to destroy the labor movement in the process.

—WALTER REUTHER, president of the United Automobile Workers (1946–1970), opening address of the sixteenth constitutional convention of the United Automobile, Aircraft and Agricultural Implement Workers of America, Atlantic City, NJ (April 7, 1957), reprinted in Henry Christman, ed., *Walter P. Reuther: Selected Papers* (New York: Macmillan, 1961), 192

Preface

Labor racketeering is an important example of American exceptionalism. No other country has a history of significant organized crime infiltration of its labor movement, and no other country has an organized crime syndicate with a power base in labor unions. The interrelationship, over most of the twentieth century, between organized crime and organized labor has political, social, and economic consequences that have hardly begun to be explored.

This book is not an exposé. From the early twentieth century, labor racketeering has been an important source of organized crime's power, prestige, and wealth. By "labor racketeering," I mean the exploitation of unions and union power by organized crime. By "labor racketeers," I mean Cosa Nostra* (mafia) bosses who wield influence over union officeholders and treasuries, Cosa Nostra *capos, soldiers,* and *associates* who hold union offices, and union officials who are closely allied to, and do the bidding for organized crime members. Labor racketeers treat unions like cash cows that generate money via salaries, perks, embezzlement, extortion, bribes, and fraud. They regularly use union power to establish and enforce employer cartels that fix prices, allocate contracts, and suppress competition. For these services they extract payoffs ("dues") from employer associations. Moreover, they routinely

* Joseph Valachi, an organized crime member who became a cooperating witness in the 1960s, first reported that members of the Italian-American organized crime families referred to their organization as "Cosa Nostra," which translates as "Our Thing." This was consistent with the usage of organized crime members themselves, as revealed in conversations intercepted during the 1950s. Somehow, the FBI and the media came to use the term "La Cosa Nostra" ("The Our Thing"), often abbreviated as "LCN." That name makes no grammatical sense and is not used by organized crime members. Nevertheless, because it is so widely used in journalistic and scholarly writings, I sometimes refer to Cosa Nostra as LCN.

0255

take full or partial ownership in one or more of the firms that constitute the cartel.

In their exploitation of unions, labor racketeers commit numerous criminal offenses, e.g., *extortion* of employers by threatening unlawful strikes, work stoppages, picketing, and sabotage (labor peace extortion); *soliciting and receiving bribes* (labor bribery) from employers in exchange for advantageous contract terms and for allowing the employer to ignore the terms of a collective bargaining agreement ("sweetheart deal"); *thefts and embezzlements* from the union and its pension and welfare funds; *murder, assault and battery, arson,* and other violent crimes against rank-and-file "dissidents" and uncooperative employers; and *antitrust* violations by means of price fixing, contract allocations, and preventing competitors from entering a market.[1]

Despite the fact that labor racketeering has often been exposed by congressional and other hearings, investigative journalists, and in criminal and civil racketeering cases, it has not attracted much interest from university-based scholars. Students of crime, law and society, American history, and even American labor history have largely ignored this disturbing story.

While there is a large subfield in criminology devoted to corporate crime, there is no corresponding subfield of *union crime.* Even though Edwin Sutherland invented the field of *white-collar crime,* Sutherland's and Cressey's best-selling general criminology text does not even mention labor corruption or labor racketeering. Even organized crime scholars, of whom there are very few, fail to recognize that the Mafia's unique political and economic position in American society derives from its base in the labor movement.

Academic labor lawyers do not view labor racketeering as part of their bailiwick. Their courses give short shrift to the 1957–1959 U.S. Senate (McClellan Committee) labor racketeering hearings, the most extensive congressional investigation in U.S. history.* Most law students finish their labor law course unaware that the 1959 Landrum-Griffin Act

* The McClellan Committee (Senate Select Committee on Improper Activities in the Labor or Management Field) hearings lasted almost three years, 1957–1959. They gave labor racketeering unprecedented attention. Following the hearings, Senator John L. McClellan (D.-Ark.) published *Crime Without Punishment* and the committee's chief counsel, Robert F. Kennedy, published *The Enemy Within.* Both books warned that the misuse of union power constituted a threat to the nation.

0256

was passed to remedy the labor racketeering problems exposed by the McClellan Committee. Students of employment rights and benefits are unaware that ERISA (Employee Retirement Insurance Security Act) was in part a legislative response to revelations of organized crime's infiltration and misuse of union pension and welfare funds.

No labor law casebook mentions *United States v. International Brotherhood of Teamsters*, perhaps the most ambitious organizational reform case in American history. The Department of Justice filed its civil racketeering complaint in the IBT International case in 1988. The case was settled in 1989, but the remedial phase of the litigation, i.e., the enforcement of the settlement, continues to this day (fall 2005) with no end in sight.[*2]

While there has been much academic writing about the decline of the American labor movement since approximately 1960, I don't know any scholarly article or book that even suggests that the corrosive impact of labor racketeers on union organizing and administration might have undermined the labor movement's attractiveness and strength. Rather than attributing labor's decline to internal factors like bad tactical decisions and the mechanization of the workplace or to external factors like globalization or governmental policy, this book offers organized crime penetration and exploitation as both an external and internal contributor to organized labor's dwindling power.

With just one or two exceptions, labor historians have not sought to document or explain how organized crime elements took over union locals, regional or area-wide councils, and even international unions,

[*] Despite the fact that most casebooks provide brief 75–100-page histories of the labor movement, they do not mention the long, deep, and complex twentieth-century relationship between organized labor and organized crime. For example, in Michael Harper and Samuel Estreicher's *Labor Law: Cases, Materials and Problems* (4th ed., 1996) there is no mention of the McClellan Committee hearings or the federal government's twenty civil RICO suits and resulting court-appointed trusteeships over international, regional, and local labor unions. Many labor law casebooks devote a chapter to the Landrum-Griffin Act, but without mentioning that Landrum-Griffin embodies an anti-racketeering strategy based on a belief that racketeering can best be opposed by an informed rank and file that can speak out against, organize to overthrow, and vote to oust labor racketeers. Clyde Summers et al.'s *Labor Law, Cases and Materials* (2d ed., 1998) is one of the few casebooks to provide a thorough discussion of union democracy, but the authors do not relate union democracy to organized crime exploitation. In fact, they do not mention organized crime.

looted their pension and welfare funds, sold out union members' interests, and made a mockery of union democracy.* No labor historian has sought to document and analyze the government's efforts to punish and prevent labor racketeering.

Perhaps scholars of American labor wear ideological blinders. A number of people have suggested to me that it is *antilabor* to focus on labor racketeering.** Perhaps lack of attention is explained by a general loss of interest in unions. Contemporary labor scholars seem to have turned their attention to the social and economic history of workers and the working class and away from labor organizations.

Despite the dearth of scholarship on labor racketeering, I am hardly writing on a blank slate. I owe a debt to many journalists and few scholars who have created a small but strong edifice of labor racketeering studies on which this book can build. One of the best scholars of labor racketeering was one of the first, Chicago sociologist John Landesco. In his classic *Organized Crime in Chicago*[3] (prepared as part of the massive 1929 Illinois Crime Survey), Landesco provided a great deal of description and commentary on labor racketeering before the emergence of LCN. Landesco recognized the importance of labor racketeering to organized crime. He described the connection between labor racketeering and what he called "industrial racketeering." According to Landesco, gangsters parlayed their control of unions into control over businesses and whole industries.

> In "racketeering," the gunman and the ex-convict have seized control of business associations and have organized mushroom labor unions and have maintained or raised price and wage standards by violence,

* Irving Bernstein's two-volume *History of the American Worker* (1970 and 1983) devotes only three pages per volume to labor racketeering. Melvyn Dubofsky's *The State and Labor in Modern America* (1994) and Christopher Tomlins's *The State and the Unions* (1960) do not contain an index entry for labor racketeering or organized crime. See Irving Bernstein, *The Lean Years: A History of the American Worker, 1920–1933* (Perseus Book Group, 1983), 338–41; Irving Bernstein, *Turbulent Years: A History of the American Worker, 1933–1941* (Houghton Mifflin, 1970), 123–24, 710–12. Melvyn Dubofsky, *The State and Labor in Modern America* (Chapel Hill: University of North Carolina Press, 1994); Christopher Tomlins, *The State and the Unions* (New York: Cambridge University Press, 1960).

** I strongly disagree. There is nothing prolabor about organized crime penetration and exploitation of the labor movement. Moreover, studying racketeering in the labor movement is no more antilabor than studying family violence is antifamily.

0258

> and have exploited these organizations for personal profit. . . . The gunman and gangster are, at the present time, actually in control of the destinies of over ninety necessary economic activities. Al Capone, overlord of organized crime in the Chicago region, now a stockholder in a business enterprise, ensures it "the best protection in the world."[4]

Landesco identified twenty-three racketeer-controlled trades including window cleaning, machinery moving, paper stock, cleaning and dyeing, laundries, candy jobbers, dental laboratories, ash and rubbish hauling, grocery and delicatessen stores, garage owners, physicians, drugstores, milk dealers, glaziers, photographers, florists, bootblacks, restaurants, shoe repairers, fish and poultry, butchers, bakers, and window shade men.[5] He observed that, in some "cut-throat industries," gangsters provided businessmen important assistance by organizing and enforcing profitable employer cartels that fixed prices, allocated contracts, and generally stifled competition. Racketeers used the union's monopoly over labor to force businesses to join employer associations. The employers paid "dues" that were passed along to the crime bosses. In exchange they obtained protection from business competitors and from union problems. They also obtained relief from enforcement of collective bargaining agreements and sometimes immunity from union organizing in the first place. Landesco's insight into the functional role that labor racketeers played in curbing business competition presaged the more systemic analysis of law professors G. Robert Blakey and Ronald Goldstock in the 1970s,[6] economist Peter Reuter in the 1980s,[7] and the New York State Organized Crime Task Force (led by Goldstock) in the 1990s.

Harold Seidman's *Labor Czars: A History of Labor Racketeering* (1938) appeared a decade after Landesco's book. Seidman, then a journalist and later an academic, chronicled the careers of late nineteenth- and early twentieth-century gangster-type *labor czars,* like Joey Fay (Chicago) and Robert Brindell (New York). Brindell dominated and exploited the New York City building trades for years, frequently enlisting gangsters to intimidate and extort employers and workers. Brindell and Fay treated union members' rights as commodities, which, in exchange for bribes, they sold to employers. Seidman's book clearly showed that labor racketeering preceded the dominance of Italian-American organized crime and that gangsters gained control of union

0259

locals at a time when law enforcement was weak or corrupt or both. Like Landesco, Seidman argued that (usually small) employers preferred to deal with gangsters than with politically and socially radical labor officials.

In 1931, Louis Adamic, a Chicago-based journalist, novelist, and political activist, published *Dynamite: The Story of Class Violence in America* and devoted several chapters to racketeering. He provided examples of how labor unions recruited gangsters (even "dynamiters") to help them fend off employer repression. Adamic, who was a contemporary of Al Capone's in Chicago, saw that once organized crime had its foot in the union's door, it often sought to take over. He wrote:

> We need not be shocked when we realize how close the relationship is between organized labor and organized crime. Nor need we be shocked by the thought that organized labor was a vital factor in the early history of modern racketeering, that, indeed, organized labor, perhaps more than any other economic group, started the professional criminals whose names now shriek in the headlines of their amazing careers. One should bear in mind that gangsterism was a vital factor early in the American class struggle, first on the capitalist side and then on the side of labor; and that its history is inextricably bound up with the history of organized labor.[8]

In January 1940, conservative journalist Westbrook Pegler (*Chicago Daily News* and the *Washington Post*) exposed the connection of organized crime figures, especially Arthur Flegenheimer ("Dutch Schultz") to George Scalise, president of the Building Services Employees International Union (BSEIU).[9] Early in his career, Scalise moved from union to union. He used his connections with Dutch Schultz to obtain a Teamsters charter for a union of parking garage workers.[10] David Witwer, an historian writing many decades later explained:

> Scalise, and others of his type, went into the labor movement to make money; they came from outside the ranks of the workers in the industry, with whom they did not really identify. Nor did they depend upon those workers to organize the union through mass picketing and long strikes. Instead, they used selective acts of violence committed by a few individuals, probably with links to organized crime. Free from

> having to depend on a mobilized, united membership, the Union's leadership could safely ignore the members' needs, or sacrifice them to the interests of the employers. As a result, unskilled workers scattered across a wide area and labored in small shops, [they] had little knowledge of their union, and often no say in its affairs.[11]

Later, with the backing of Chicago's organized crime syndicate, Scalise took over a Chicago BSEIU local.[12] Then via a rigged election, Al Capone assured Scalise's victory for BSEIU eastern vice-president. Eventually, Scalise became the BSEIU's international president.[13]

After World War II, investigative journalists continued to outperform university-based scholars in documenting and analyzing labor racketeering. In 1949, a *New York Sun* reporter, Malcolm Johnson, wrote a Pulitzer Prize–winning series of articles on "gangsterism" in the International Longshoremen's Association (ILA). A year later he published *Crime on the Labor Front,* a book that provided a wealth of detail about labor racketeering in the ILA, the Building Services Employees, the Waiters Union, the Cafeteria Workers Union, the International Alliance of Theatrical and Stage Employees, the International Brotherhood of Teamsters, and several construction unions. Johnson explained how mobsters take over unions and establish employer cartels.

> [A] gangster can break into a union by threats and violence or he can "fix" an election so that one of his stooges becomes a key official. Once in power, he can bribe his opposition into cooperation, or he can sew them in sacks and drop them into the river. As for carrying away the loot, almost every gangster resorts to the same tried-and-true rackets to swindle the members and coerce the company.[14]

Johnson provided many examples of how labor racketeers violate the rights and subvert the interests of union members in order to line their own pockets and the pockets of their organized crime partners. However, he insisted that employers were not just the labor racketeers' victims but, in many cases, their coconspirators: "In permitting themselves to become extortion victims they [the employers] nearly always were seeking some advantage for themselves, usually at the expense of the workers."[15] Johnson's articles and book later provided the basis for

0261

Budd Schulberg's screenplay for Elia Kazan's Academy award–winning film *On the Waterfront.*

In 1951, Daniel Bell (then a journalist, later a renowned Harvard sociologist) published his classic article "Last of the Business Rackets"* in *Fortune Magazine.* Bell provided a rich description and trenchant analysis, incorporating geographical, economic, political, ethnic, and other sociological variables to account for rampant racketeering on the New York City docks. In part, Bell attributed waterfront corruption and racketeering to geographic and economic variables. New York City was the nation's most important port. Yet, there were no railroad connections to the docks; everything had to be loaded onto and unloaded from trucks. New York City's narrow streets ensured constant bottlenecks and long queues of truckers trying to pick up or set down ship cargo. Because delay was so expensive to shippers, racketeers could manipulate the loading and unloading process to extort and/or solicit bribes.

The abundance of casual laborers in the port suited both the union bosses and the shippers. The union bosses controlled the longshoremen through their power to hire and blacklist. The stevedoring companies did not maintain a permanent workforce. Gangsters, who controlled each pier, decided who would work when ships needed loading and unloading. Men who cooperated with the racketeers were rewarded with work. Those who complained were blacklisted.[16] The racketeers also controlled all sorts of criminal enterprises that flourished on the docks, including thievery and usury.

Abused and exploited workers had no place to turn for assistance except to Father John M. Corridan, the heroic "waterfront priest." Joseph Ryan, the ILA's boss for decades, delivered votes to local politicians; in exchange the politicians turned a deaf ear to reformers' demands for improving conditions on the docks. Ryan was closely allied with William J. McCormick, business mogul, czar of the port, and one of the silent powers in New York's Democratic Party.

Bell's sophisticated analysis explained why labor unions exerted so much power over workers and so much leverage over shippers; why control of the ILA was so attractive to professional criminals; how a corrupt relationship between business and labor enriched the labor rack-

* Bell reworked the article and retitled it "Racket-Ridden Longshoremen" for his book, *The End of Ideology* (1960).

0262

eteers at the expense of the workers; and how politicians and law enforcement officials were corrupted Ethnic politics were also important. Ryan and most longshoremen were Irish. However, Italian-American gangsters like Albert Anastasia and his brother, Anthony Anastasio, controlled some ILA locals and eventually took the union away from Ryan. In 1954, the brutal exploitation of ordinary ILA members was brilliantly dramatized in the movie *On the Waterfront*, starring Marlon Brando, Eva Marie Saint, Karl Malden, Lee J. Cobb, and Rod Steiger. A spectacular success, the movie generated public and political sentiment for reforming the dockworkers' plight.

Despite at least a half century of journalistic exposés of labor racketeering, no mainstream labor historian addressed the subject until 1958, when Professor Philip Taft (Brown University) published a small (sixty-page) monograph, *Corruption and Racketeering in the Labor Movement* based on three lectures delivered at Cornell University.[18] Despite the title, Taft was not familiar with organized crime's role in the labor movement or, if he was, he chose not to write about it. Instead, he offered some vague bromides. For example, he attributed union corruption to "the avaricious creed of the larger society." He observed that "[r]acketeering in labor unions appears to flow from a general slackness in American society, an emphasis upon material gain, and practices prevalent in many areas of the business community."[19] Many labor scholars who followed Taft defended or opposed "business unionism" as the nonideological basis for the American labor movement without noting that, in some unions, so-called business unionism was essentially organized crime exploitation of workers.

In 1959, Sidney Lens, a left-wing peace and labor activist, socialist, director of CIO Local 329, occasional political candidate, and a leading American radical intellectual from the 1930s to the 1960s,* published *The Crisis of American Labor,* a remarkable book that seems to have been almost completely ignored. (Lens, like many left-wing intellectuals, got his start as a labor organizer. When his union career was stymied for political reasons, he gravitated into journalism.) Drawing on his personal experience, Lens documented and analyzed the methods by which

* In his autobiography *Unrepentant Radical* (Boston: Beacon Press, 1980), Lens said that his "true occupation was full-time revolutionary." A one-time Trotskyite, he served as secretary of Branch 26 of the Workers Alliance, Department Store Employees Union Local 291, and later as full-time director of Local 329 (the only staff member).

organized crime figures obtained influence in the labor movement. Although he didn't cite Louis Adamic, his conclusions echo Adamic's:

> [Once the employers took to hiring thugs as strike breakers,] the unions . . . took to hiring their own muscle men, men like "Big Jack" Zelig, "Joe the Greaser" Rosensweig, "Dopey Bennie" Fein. . . . [By] 1920 the gangsters had learned that it was possible to pursue the racket further. The men who came to dinner decided to stay on. They muscled themselves into a few local unions as partners. The next stage in labor racketeering was a broader effort not only to take over key local unions but international unions as well. In New York, the gambler Arnold Rothstein not only supplied thugs to the furriers and garment unions but bribed police not to molest pickets. His successors . . . Louis "Lepke" Buchalter and "Jacob the Gurrah" Shapiro built this business into a fortune.[20]

Although Lens was a labor activist, not a criminologist, he fully grasped the importance of labor racketeering for the empowerment of organized crime. "Labor racketeering is not only a source of income for the syndicate but a means of rounding out its empire; it is a not-too-hidden persuader, an integral part of a criminal trust that stretches across many fields."[21]

A decade passed before the appearance of another book on U.S. labor racketeering, but it was worth the wait. UCLA historian John Hutchinson's 1972 book, *The Imperfect Union: A History of Corruption in American Trade Unions*,[22] was the first professional history of U.S. labor corruption and racketeering. Drawing heavily on the U.S. Senate's 1957–1959 McClellan Committee hearings, it covered the period from the early twentieth century up to 1960. Hutchinson presented descriptive chapters on the "building trades," "the racketeers" and "the intervention of Congress." However, like Philip Taft, he did not distinguish ordinary corruption from Cosa Nostra labor racketeering.* In other words, despite the McClellan Committee's revelations, he did not identify organized crime's penetration of and influence over union lo-

* In addition to the small number of works on labor corruption and racketeering, there are a number of studies that touch tangentially on labor racketeering. Among these, Virgil Peterson's *100 Years of Organized Crime in New York City* is particularly useful, as is Mary Stolberg's *Fighting Organized Crime: Politics, Justice and the Legacy of Thomas E. Dewey.*

0264

cals, regional unions, and national/international unions as a special sociopolitical problem. However, the wealth of information about the influence of criminal elements in the labor movement that he unearthed must be the starting place for any subsequent study of labor racketeering.

The next important building block in the creation of the scholarly corpus on American labor racketeering was the 1990 New York State Organized Crime Task Force (OCTF)'s *Final Report on Corruption & Racketeering in the NYC Construction Industry,* published by New York University Press.[23] (I was principal draftsman.) Utilizing informants, grand juries, cooperating witnesses, union dissidents, and brainstorming sessions with various industry participants, the OCTF documented the persistence and pervasiveness of organized crime racketeering in New York City's construction unions from the early twentieth century through the late 1980s. Among other things, the report explained how the organized crime families converted their control over construction unions into a large revenue stream.

Expanding on an analysis first developed by G. Robert Blakey, Ronald Goldstock, and Gerard Bradley,[24] the OCTF investigation elaborated the concepts of *racketeering susceptibility* and *racketeering potential.* The former referred to the strategic importance of a union for an entire industry; the latter referred to the potential revenue and other advantages that could be derived from a particular union's exploitation. The OCTF report hypothesized that labor racketeers target or at least are successful in penetrating unions where both racketeering susceptibility and racketeering potential are high. It also made clear that in the past successful criminal prosecutions had little, if any, impact on LCN's influence over labor unions because other LCN members and associates simply assumed the authority and responsibilities of their incarcerated comrades. The report offered a number of recommendations, including new criminal laws, a construction industry–specific regulatory agency, and a new institute for union democracy.

There are many authors whose work, though not focusing directly on labor racketeering, does touch on the subject. For example, Stephen Fox's *Blood and Power* (1989), a history of organized crime, devotes a chapter to "gangsters, unions and employers"; Virgil Peterson's *The Mob* (1983) includes the chapters on "The Rise of Jimmy Hoffa" and "The New York State Waterfront hearings";[25] and Howard Abadinsky's *Organized Crime* text has a chapter on labor racketeering. Professor

0265

Abadinsky points out that "[a]lthough labor-related business racketeering can be conducted by anyone, the history of the labor movement shows that the most substantial corruption of unions is conducted by organized crime"[26] and that "[l]abor and business racketeering distinguish traditional organized crime from other forms, making traditional OC more influential than the others."[27] Gus Russo's recently published history of Chicago organized crime, *The Outfit: The Role of Chicago's Underworld in the Shaping of Modern America,* provides extremely useful information about the Capone gang's labor racketeering activities in the 1920s and 1930s.[28] Peter Reuter's *Racketeering in Legitimate Industries* (1987) provides important insight into organized crime's methods of creating employer cartels.[29] He explains how Cosa Nostra used Teamsters Local 813 to establish and police a cartel in New York City's commercial waste hauling industry.

As for biographies, while we do not yet have a biography of an organized crime figure who specialized in labor racketeering, such as Johnny Dioguardi, Anthony Scotto, Tony Provenzano, and Ralph Scopo, there are various biographies of criminals, labor leaders, and law enforcement officials that shed some light on labor racketeering. Among these are John Kobler's biography of the Chicago organized crime boss Al Capone; Peter Maas's biography of New York City's Gambino crime family underboss Sammy "the Bull" Gravano; James Neff's biography of Teamsters General President Jackie Presser (who was simultaneously an ally of Cosa Nostra and an FBI informant!); Mary Stolberg's biography of New York City prosecutor (later governor and Republican presidential candidate) Thomas E. Dewey, and several biographies of Teamsters President Jimmy Hoffa.[30]

The International Brotherhood of Teamsters (IBT) has attracted far more journalistic and scholarly attention than any other U.S. union.[31] Two recent books on the Teamsters are among the best: historian David Witwer's *Corruption and Reform in the Teamsters Union* (2003) and Stier, Anderson & Malone's *The Teamsters: Perception and Reality* (2002).

Although academic scholarship on labor racketeering is thin, there is an enormous amount of information to be mined from congressional hearings and reports, and more recently, from court decisions and the reports of court-appointed trustees. Throughout this book, I draw on the work of the Senate Select Committee on Improper Activities in the Labor or Management Field (the McClellan Committee) and on a number of hearings and reports by the U.S. Senate Subcommittee on Inves-

0266

tigations. Two hearings—(1) Federal Government's Use of Trusteeships under the RICO Statute (April 4, 6, & 12, 1989), and (2) Federal Government's Use of the RICO Statute and Other Efforts Against Organized Crime (August 1, 1990)—are especially valuable because they are devoted to the propriety and usefulness of civil RICO union trusteeships for combating labor racketeering. The 1986 President's Commission on Organized Crime's volume *The Edge: Organized Crime, Business and Labor Unions* synthesizes many congressional reports and adds new material.[32] Admittedly, these governmental sources reflect a certain perspective (e.g., labor racketeering is a serious problem), but they provide a great deal of information. The hearings provide a forum for law enforcement officials, union leaders, and union democracy proponents to express their views on the problem and its strategies for remediation.

With a few exceptions, the efforts of rank-and-file union members to oust racketeers from their unions have gone undocumented. The most important exception is the tiny but dogged Association for Union Democracy's (AUD) newsletters, *Union Democracy in Action* (1959–1972) and *The Union Democracy Review* (1972–present), which provide valuable information and commentary on "dissidents'" and rank-and-file insurgents' struggles for justice.[33]

So far we have been surveying what has been written about the history and dynamics of labor racketeering. But what of academic work and journalism on governmental, judicial, and labor *responses* to labor racketeering? On this, there is even less scholarship. Remarkably, although the litigative efforts of the U.S. Department of Justice (DOJ) over the past twenty years to purge organized crime from the labor movement constitute one of the most ambitious attempts at court-ordered and -supervised organizational reform in our history,* it generated little legal scholarship. There are no books and just a few law review articles.

* I don't mean to slight the ambition of court-supervised school desegregation and prison reform but, as hard as those goals were to achieve, they did involve geographically fixed institutions run by state and local employees. In the labor racketeering context, we are dealing with massive unions (Teamsters has 1.4 million members) organized into hundreds of locals spread across North America. Some of the officials of these unions wield political influence at the very highest level of American society. Some of the organized crime figures involved are among the most ruthless and influential power brokers in American history.

0267

In 1980, building on previous work by their Cornell Institute of Organized Crime, Professors G. Robert Blakey and Ronald Goldstock published "On the Waterfront: RICO and Labor Racketeering,"[34] advocating use of the federal civil racketeering statute, Racketeer Influenced and Corrupt Organizations Act of 1970 (RICO), to combat labor racketeering. In addition to its draconian criminal provisions, RICO provided the federal courts with authority to use injunctions and other "equitable remedies" to *prevent* racketeering. Blakey and Goldstock argued that "control of syndicate crime and labor racketeering will not be achieved by standard law enforcement practices," and that "RICO provides the flexibility required to implement a comprehensive strategy in the labor racketeering area. To the extent that it is used appropriately and with discretion, it offers significant potential to affect what is clearly a national problem."[35] This book shows the prescience of their prediction and also how difficult it is to purge organized crime from and reform the governance and administration of heretofore "captive" labor organizations.

From the standpoint of the union democracy movement, Professor Michael Goldberg (Widener Law School) published the most important law review article in 1989. Unfortunately, the article was published too soon to take account of the government's pathbreaking civil RICO suit against the IBT's general executive board and the Mafia's "commission" of organized crime bosses.[36] Goldberg was able to draw on the complaints and settlements (and in one case the trial transcript) from three RICO suits against union locals. However, his main goal was normative: to argue that civil RICO suits and resulting court-ordered or court-supervised trusteeships are justified because they are the only way to liberate racketeer-ridden unions. He is joined in this conclusion by Herman Benson, the founder and driving force of the Association for Union Democracy, a shoestring nongovernmental organization that has fought valiantly since 1969 to protect the rights of union members against labor racketeers.

My own (with student coauthors Christopher Panarella and Jay Worthington III) 1994 book *Busting the Mob: United States v. Cosa Nostra* sought to document and analyze the DOJ's all-out attack on organized crime triggered by the murder of Jimmy Hoffa in 1975. Toward that end, Part II of that book consists of five chapters, each a case study of an important 1980s organized crime case. One chapter is devoted to the DOJ's (federal Newark, New Jersey, Organized Crime Strike Force) 1982 civil

RICO suit against Teamsters Local 560 and another chapter to the DOJ's (Southern District of New York, headed by U.S. Attorney Rudy Giuliani) 1989 suit against the IBT's general executive board. My coauthors and I drew on the formal legal complaints, the trial and decree (in the Local 560 case), the consent decree (in the IBT case), and numerous court opinions and trustee reports. Nevertheless, when we were writing the book, the remedial phases of both cases were in their early days. At that time, it was unclear how long court monitoring would last or whether, ultimately, either trusteeship would be successful. A decade has passed; the Local 560 trusteeship has been declared successful and terminated, but the Independent Review Board in the IBT case continues, with no end in sight, to bring disciplinary actions against organized crime–connected union officials.

As the 1990s progressed, a nascent law review literature began to grow around the question of whether it is justifiable and desirable for the government to seek to reform mobbed-up unions through court-appointed and -supervised trusteeships established by civil RICO suits. Critics of the DOJ/FBI offensive against labor racketeering pointed to the unsavory history of governmental and judicial interventions in nineteenth and early twentieth century labor disputes. The critics emphasized that even well-intentioned government initiatives threatened the labor movement's independence. On the other side, Professor Michael Goldberg and University of Pennsylvania Law Professor Clyde Summers, the nation's leading legal scholar of union democracy, argued that although RICO-triggered union trusteeships carry certain dangers, there is no other way to purge organized crime from racketeer-ridden unions.

In the 2000s, my students and I published two case studies of union trusteeships and one overview of DOJ's effort to purge organized crime from the labor movement. The first case study focused on the IBT Local 560 case, which was terminated in 1999, after the DOJ and the court were persuaded that the trustee's remedial efforts had successfully purged organized crime, produced fair elections, and established a viable union democracy.[37] The second case study focused on a regional union, the New York City District Council of Carpenters, which comprised some twenty-two Carpenter union locals.[38] That trusteeship began in 1994 and was terminated in 1999, the judge declaring success and folding the trusteeship's tent. However, upon closer inspection, and in light of events that occurred after the trusteeship ended, we

could not call that trusteeship a success. Finally, in a 2004 article, two law students and I attempted to bring together what is known about all twenty civil RICO-generated union trusteeships up to that time.[39] We found only three trusteeships that could unequivocally be declared successes. Since the 2004 article, no new civil RICO union lawsuits have been filed, but it is likely that, in the years to come, there will be many more.* Certainly, criminal indictments involving organized crime and labor racketeering continue to be handed down. The on-going investigations of LIUNA, IBT, ILA, and other union locals also continue to expose corruption and racketeering.

The twenty civil RICO union lawsuits and resulting trusteeships constitute an extraordinarily important chapter in both American labor history and American law enforcement history. They inform our understanding of why the U.S. labor movement evolved the way it did and what its possible future might look like. They also inform our understanding of the potential and limits of organized crime control, and of purging organized crime from organizations dominated by intimidation and patronage. Moreover, a close look at these lawsuits and trusteeships ought to interest students who study the capacity of courts to reform corrupted or unconstitutional organizations and institutions.

* In the summer of 2005, while this book was in press, DOJ (Eastern District of New York) filed a civil RICO complaint against the leaders of the International Longshoremen's Association and several organized crime figures.

Acknowledgments

The origins of this book date back to the mid-1980s when I served as principal draftsman of the New York State Organized Crime Task Force's (OCTF) investigation and analysis of corruption and racketeering in the New York City construction industry. Our Final Report focused on labor racketeering as the basis of Cosa Nostra's immense power and influence in the construction industry. Indeed, we identified several dozen local construction unions that were strongly influenced, even controlled, by Cosa Nostra. I am indebted to the then-OCTF Director, and longtime friend, Ronald Goldstock and his excellent staff for educating me about organized crime generally and labor racketeering specifically. All the members of the OCTF were my teachers, but I want to take this opportunity to again especially thank Martin Marcus, Thomas Thacher III, Robert Mass, and Wilda Hess.

During my stint with OCTF, I came to know Herman Benson, Executive Director of the Association for Union Democracy, editor of its journal *Union Democracy Review,* and a lifetime crusader for union members' democratic rights (to speak, vote, run for office, have fair hiring halls, and fair grievance procedures). Herman, who is nearly ninety years old as this book goes to press, is a force of nature. He has encyclopedic knowledge of the struggle for union democracy. Over the many years that I have known him, he has never hesitated to share his knowledge and insights with me. His own memoir, *Rebels, Reformers, and Racketeers: How Insurgents Transformed the Labor Movement* (2004), is required reading for anyone interested in union democracy and the efforts of union members to achieve basic political rights.

When several academic publishers shied away from publishing OCTF's *Final Report on Corruption & Racketeering in the NYC Construction Industry* because of fear of displeasing some union officials (and those who claimed to speak on behalf of organized labor) who did not wish to have labor racketeering discussed in public, NYU Press agreed to

[162.10.217.184] Project MUSE (2026-06-15 01:41 GMT) University of Queensland

publish the report as an academic book. For that I thank Colin Jones and Niko Pfund, then president and editor in chief.

My next step on the road to this current volume was *Busting the Mob: U.S. v. Cosa Nostra* (NYU Press, 1994) (*BTM*), a volume documenting the government's attack on organized crime in the 1970s and 1980s. Two cases highlighted in *BTM* were the 1982 civil RICO cases against IBT Local 560 and the 1988 civil RICO suit against the IBT's general executive board. For helping me to bring that work to completion, I acknowledge the excellent assistance of two NYU student coauthors, Christopher Panarella and Jay Worthington III.

In the course of researching and writing *BTM,* I got to know two remarkable public servants: Robert Stewart, the career federal prosecutor who brought the IBT Local 560 suit and steadfastly enforced the court's decree during more than ten years of litigation, and Edwin Stier, the court-appointed trustee who ultimately succeeded in reforming Local 560 and later went on to play an historic role in the effort to reform the International Brotherhood of Teamsters. Our country and its labor movement owe a great debt of gratitude to these two men. So do I.

In 1998, NYU Press published my third volume on the government's campaign against organized crime. *Gotham Unbound: How New York City Was Liberated from the Grip of Organized Crime* focused on how NYC's five Cosa Nostra organized crime families came to play such an important role in the city's economic power structure, especially in construction, the garment center, the Fulton Fish market, cargo operations at JFK airport, and the Jacob Javits Exhibition Center. Labor racketeering was not the whole story in Cosa Nostra's infiltration and exploitation of these economic sectors, but it was the most important part. Again, I was ably assisted by two NYU law student coauthors, Coleen Friel and Robert Radick, now both assistant U.S. attorneys, and by a number of research assistants including Alex Hortis, with whom I coauthored a case study of the IBT Local 560 trusteeship.

By the time we finished *Gotham Unbound,* it was clear to me that labor racketeering warranted a book in its own right. I was familiar enough with the scholarly literature to know that criminal law professors and criminologists had written very little about labor racketeering and that labor historians and legal scholars had written practically nothing about it. I began the current project. My strategy included organizing and teaching an NYU School of Law seminar (Labor Racketeering and Union Democracy) in fall 2002 and fall 2003. It was tremen-

0272

dously valuable for me to have Bob Stewart as coprofessor of the seminar in 2002. The students and I were enriched in so many ways by his unique experiences and encyclopedic knowledge. But that wasn't my only good fortune. Carl Biers, Executive Director of the Association for Union Democracy, sat in on and participated in the seminar. What's more, a number of key players in the struggle to reform "mobbed-up unions" came to the seminar as guest speakers and submitted to our relentless questioning. All of them deserve my thanks: Herman Benson, Susan Jennick, Robert Luskin, Kurt Muellenberg, Edwin Stier, and Patrick Syzmanski. Of course, thanks are also due to my students, whose participation and papers were a very important part of my education.

Over two academic years, from 2000 to 2002, I was fortunate to have NYU law student Ellen Peters working with me on a wide-ranging review of labor racketeering as a crime problem. Our article, "Labor Racketeering: The Mafia and the Unions," appeared in *Crime and Justice: A Review of Research* (2003). In summer 2002, two law student research assistants, Eileen Cunningham and Kimberly Friday, worked with me on assessing all of DOJ's civil RICO labor racketeering cases. They kept hammering away on drafts until they graduated in May 2004. Our research was published in the *Labor Lawyer* (spring 2004). I want to thank Syracuse University's Professor Robert Rabin and Jeff Philp, respectively faculty and student editor of that journal, for their patience and assistance. Several other research assistants also deserve my heartfelt thanks. Stephanie Greene provided outstanding assistance on the AFL-CIO's response to labor racketeering. Kristin Stohner did a great job on a case study of the NYC District Council of Carpenters litigation, which was published in the *California Criminal Law Review.* Sarah Marcus was an enormous help as my full-time research assistant over the 2003 summer; and likewise Adam Dressner over the 2004 summer.

In October 2004, David Garland convened an all-day workshop on the first draft of my manuscript. The participants gave me penetrating and comprehensive critiques and suggestions. This was the epitome of collegiality. In addition to David, my deep thanks to Rachel Barkow, Ron Goldstock, Susan Jennick, Bill Kornblum, John Monahan, Peter Schuck, Jerry Skolnick, Bob Stewart, and Joe Viteritti.

The final revision of the manuscript began on October 16, the day after the workshop. For the next four months Dave Sacks, working under the auspices of an NYU Center for Research in Crime & Justice

0273

fellowship served as full-time research assistant. He was simply invaluable. I could not have met the March 1, 2005 deadline without him; indeed, I almost didn't make it with him. Finally, I want to thank Bill Nelson and the NYU Legal History Colloquium for giving me an opportunity in January 2005 to workshop the revised manuscript; I benefited from many astute comments.

Throughout this project, my secretarial assistant, Marni Brand, has been a splendid right hand. She has assisted me with the preparation and logistics of the manuscript and with the multitude of administrative details of running a research project and administering a small research center. All this she does with intelligence, good humor, and professionalism. Cristina Alger provided excellent proofreading assistance at the final stage. I also received very helpful suggestions from Oscar Chase, Brandon Garrett, Deborah Malamud, and NYU Press editor Deborah Gershenowitz.

The NYU School of Law has been my professional home for more than twenty years. If there is a better place to work in academia, I haven't heard about it. I have flourished under three splendid deans—Norman Redlich, John Sexton, and Ricky Revesz—who have done more than their part in supporting and encouraging this work. I am stimulated and sustained every day by David Garland, Jerry Skolnick, and a terrific group of criminal law colleagues.

1

Introduction

> The public must not be allowed to believe that organized labor is represented by those few unions in which union delegates have become criminals, or criminals have been made into union delegates. Unless they are purged, labor unions which have been thus taken over by criminals will, just as certainly as night follows day, wreck the cause of organized labor in this country and set back its progress many years. The officers of these unions are all too frequently the willing tools of professional criminals who direct their activities and keep them in office by means of force and fear.
>
> —Special NYC Prosecutor Thomas E. Dewey, July 30, 1935, radio address, quoted in Dewey's autobiography, *Twenty against the Underworld*

> We thought we knew a few things about trade union corruption, but we didn't know the half of it, one-tenth of it, or the one-hundredth of it. We didn't know, for instance, that we had unions where a criminal record was almost a prerequisite to holding office under the national union. . . .
>
> —AFL-CIO President George Meany reacting to the McClellan Committee hearings, as reported by the New York Times on November 2, 1957

Labor racketeering, the exploitation of unions and union power by organized crime, has been an unpleasant fact of life since the late nineteenth century. It thrived practically unopposed until the last quarter of the twentieth century and continues, albeit under relentless government attack, into the twenty-first century.

The racketeers' basic *modus operandi* includes looting union treasuries and pension funds by theft, fraud, and bloated salaries; selling out union members' rights and interests in exchange for employers'

0277

bribes and kickbacks; exploiting union power to extort employers, and conspiring with employers to operate employer cartels that allocate contracts and set prices. Labor racketeering serves the organized crime families as a bridge to the power structure in many American cities. For much of the early and mid-twentieth century, corrupt politicians provided labor racketeers protection from the criminal justice system in exchange for campaign contributions, campaign workers, votes, manipulation of elections and corrupt opportunities for personal enrichment.[1]

In the late 1950s, the Senate McClellan Committee made labor racketeering a national issue. Over the next two decades, Congress created some special labor racketeering offenses and the Senate Permanent Subcommittee on Investigations held periodic hearings and issued reports criticizing the Department of Justice and the Department of Labor for failing to attack labor racketeering. Not until the mid-1970s, after the death of longtime FBI Director J. Edgar Hoover, did federal law enforcement make organized crime control a priority. When Teamsters president Jimmy Hoffa disappeared in 1975, apparently the victim of an organized crime assassination, the FBI made labor racketeering an important target in its campaign against organized crime. By contrast, the U.S. Department of Labor and the organized labor movement essentially ignored complaints by rank-and-file union "dissidents" about organized crime intimidation, fraud, mistreatment, and exploitation.

In the 1980s the FBI, the U.S. Department of Justice, and the U.S. Department of Labor launched investigations, criminal prosecutions, and civil racketeering lawsuits against racketeer-ridden union locals, regional councils, and even national/international unions. (*International unions* have local affiliates in Canada as well as the United States.) This campaign produced hundreds of prosecutions and at least 20 court-monitored trusteeships imposed on organized crime–dominated labor unions. Some of those trusteeships have been brought to conclusion, having achieved varying degrees of success, but as of late 2005, most of them remain works in progress. New organized crime and labor racketeering cases (criminal, civil, and administrative) continue to percolate.

This chapter previews the rest of the book. Chapters 2–4 provide background on the nature and extent of the problem. Beyond that, they seek to establish two fundamental points: first, that labor racketeering has been a central and defining activity of the Cosa Nostra (LCN) or-

0278

ganized crime families; second, that labor racketeers have been a significant problem for the U.S. labor movement throughout the twentieth century. More specifically, Chapter 2 documents and explains the extent of LCN exploitation of labor unions and how that exploitation turned organized crime figures into economic and political power brokers. Chapters 3 and 4 document and explain the nature and extent of labor racketeering in the labor movement circa 1980 (Chapter 3) and in New York City in the post–World War II period (Chapter 4).

Chapters 5–7 deal with the response to labor racketeering by the American Federation of Labor (AFL), the Congress of Industrial Organizers (CIO), and the combined AFL-CIO (Chapter 5), by rank-and-file union members (Chapter 6) and by local, state, and federal law enforcement agencies (Chapter 7). Chapter 5 explains that the AFL-CIO, the U.S. umbrella labor federation, took some halting steps against labor racketeering in the 1950s, during and after the U.S. Senate's McClellan Committee hearings. However, since then, the AFL-CIO has more or less ignored the problem, apparently fearing that an attack on labor racketeering would divide and weaken the labor movement. In Chapter 6, we will see that although labor racketeers used intimidation, violence, and economic power to thoroughly repress workers and rank-and-file union members, reformers, often called "dissidents," have courageously challenged this domination with protests, election challenges, and litigation. Sadly, these struggles almost always failed, frequently costing the reformers their economic livelihood, physical security, and sometimes even their lives. Chapter 7 argues that for most of the twentieth century, local law enforcement was either too corrupt or too weak to take on organized crime although, to be sure, there were some important exceptions. Federal law enforcement remained aloof from organized crime control. When federal law enforcement finally took action, the labor racketeers suffered major defeats and momentum passed into the hands of reformers.

Utilizing in-depth case studies, chapters 8–13 begin the monumental task of documenting and analyzing the federal government's campaign against labor racketeering. The campaign began in 1982 with the filing of the first civil RICO (Racketeering and Corrupt Organizations Act) lawsuit against the racketeer-ridden Teamsters Local 560 and continues to the present (fall 2005). Chapter 8 explains the way the RICO law works in labor racketeering cases and provides an overview of twenty years of antilabor racketeering investigations and litigation.

0279

Chapter 9 presents a case study of the IBT Local 560 case, a remarkable success story. After twelve years of effort by the Department of Justice, the Department of Labor, a federal district court judge, a court-appointed trustee, and members of Local 560 purged the mobsters and voted a reform regime into office. The same cannot be said of the New York City District Council of Carpenters (Chapter 10), which, though subject to vigorous criminal and civil litigation and despite the best efforts of a savvy court-appointed trustee, has not been successfully liberated. In Chapter 11, we examine the RICO-spawned remediation of the four international unions that, for decades, have been most influenced by organized crime. Because of the immense size (geographically and numerically) of these unions, it is difficult to evaluate the RICO litigation, but we will identify some of the most important features of the reform efforts. Chapter 12 will draw some conclusions about the successes and failures of more than twenty years of anti–labor racketeering initiatives and suggest future strategies. The concluding chapter will attempt to place labor racketeering and its remediation in conceptual and theoretical perspective.

Having previewed the book's organization, we now turn to introducing the "characters."

COSA NOSTRA

The Italian-American organized crime groups that became Cosa Nostra did not invent labor racketeering. Members of Jewish and Irish organized crime groups were the earliest labor racketeers and established the basic patterns of labor racketeering.[2] The Italian-American organized crime groups became extraordinarily powerful during the period of national alcohol prohibition (1920–1933). By the 1940s, these crime "families" had more or less achieved their present-day form.[*] There were twenty-four crime families operating in twenty cities; five

[*] The history of Cosa Nostra has been often told. The bloody Castellamarese war of the late 1920s pitted two organized crime factions against each other. Salvatore Maranzano emerged the victor. But when he attempted to further consolidate his power, he was assassinated by Charles ("Lucky") Luciano, Vito Genovese, Meyer Lansky, and several other organized crime figures. Luciano assigned the major crime families territories and established a commission to mediate interfamily conflicts. See Thomas E. Repetto, *American Mafia: A History of Its Rise to Power* (New York: Henry Holt, 2004).

0280

families coexisted in New York City. All were organized along the following lines: the boss was assisted by an underboss and a *consigliere* (counselor) chosen by the "capos" as a kind of ombudsman to whom they could bring problems that arose with other capos or even with the boss. The "made members" or "soldiers" who had gone through an initiation ritual and sworn fealty to Cosa Nostra were organized into "crews," each led by a "capo" or captain. Moreover, each crew included "associates" who worked with the capo and soldiers but who were not themselves "made members." Scholars disagree as to whether the twenty-four families were "ruled" or "coordinated" by a "commission" of large family bosses. My view is that there is little evidence of the existence of a Mafia commission that *ruled* in any meaningful sense of the word. No doubt crime family bosses met from time to time, and in different configurations, to "adjudicate" or negotiate interfamily disputes and discuss matters of mutual concern. The famous 1957 mass meeting at Apalachin, New York, is an example of a convention-type get-together.[3] From time to time there may have been a group (committee) of bosses who met as a kind of court, as occasions arose, to settle interfamily disputes. But there was never anything resembling national government of organized crime families that made "law" or issued and enforced policy. The crime families have always operated autonomously.

THE UNIONS

The history of the American labor movement can be traced back to the eighteenth century.[4] Nascent labor unions proliferated by the late nineteenth century with the growth and industrialization of the U.S. economy. Indeed, that period was marked by some extraordinarily bloody clashes between labor organizers and businesses determined to prevent their workers from organizing. Most often the police and the courts sided with the employers. Many union organizers were prosecuted in state courts for conspiracy and other offenses.[5] Many courts issued injunctions ordering union leaders and members to cease and desist from strikes and other disruptions of business.* This era of violence brought

* The Norris-LaGuardia Act (1932), 29 U.S.C. § 101, prohibited federal courts from enjoining most strikes.

0281

gangsters into labor/management conflicts on both sides and laid the ground for permanent organized crime infiltration of the labor movement. Intervention by the police, prosecutors, and courts on the side of business established a legacy of suspicion and distrust of government involvement in labor matters that persists to this day throughout the labor movement.

The 1935 Wagner Act[6] recognized the right of private-sector workers to bargain collectively with their employers. The act established a National Labor Relations Board to administer a complex web of regulations governing union jurisdiction, recognition or election of the union that would serve as a given group of workers' exclusive bargaining agent, and the duties of both management and labor in negotiating in good faith with each other. Union membership soared, increasing from 3.8 million in 1935 to 12.6 million in 1945.[7]

By 1947, business leaders, Republicans and some Democrats in Congress, and some elements of the citizenry had become convinced that organized labor was too powerful. Over fierce opposition from the labor movement, Congress passed the Taft-Hartley Act,[8] which aimed to cut back labor's power by prohibiting secondary boycotts, allowing the president to temporarily halt certain strikes, prohibiting political contributions by unions, and prohibiting the closed shop. The act also included a provision outlawing labor bribery; it became a crime for an employer to give anything of value to a labor official and for a labor official to accept anything of value from an employer. President Harry Truman vetoed the law, but Congress overrode the veto with a two-thirds vote.

Labor unions were organized at the local, regional, and national/international levels. National unions granted charters to individuals to organize local chapters of their union among workers in a particular bargaining unit. Local unions typically included workers employed by a number of different businesses, usually but not always in the same industry. Thus, a local's membership could range from the low hundreds to more than ten thousand. The local's officers bargained with each of their members' employers to achieve collective bargaining agreements that governed the terms and conditions of employment. Beginning in the 1940s, union negotiators regularly sought to obtain employer contributions to worker pension and welfare funds. By the 1950s and 1960s some of these funds held immense deposits, thereby posing an irresistible target for organized crime.[9]

0282

The constitutions of some national unions provided for regional councils comprising all the local unions in that council's geographical area. The officers of the councils were chosen by the leaders of the union locals that made up the council. The powers of the councils differed, but in many cases the councils engaged in collective bargaining with the various locals' members' employers. They also provided a level of insulation for the officers who were accountable to the locals' representatives, not to the rank and file.

LABOR RACKETEERING

The penetration of labor unions by professional criminals dates back to the late nineteenth century.[10] Not all unions were equally susceptible to being taken over by organized crime elements. The most susceptible unions were those whose members worked for numerous small employers in geographically dispersed locations. Such workers were unable to organize themselves to oppose gangsterism. Working alone or in small groups, they could be easily intimidated and subdued. Therefore, it is not surprising to find that some of the first unions to be captured by organized crime were made up of restaurant workers, coach and truck drivers, and construction workers. Other unions susceptible to takeover included construction and longshoring (loading and unloading seaborne cargo), where work was seasonal or sporadic and employers relied on union hiring halls to send them workers when needed. Racketeering susceptibility was very high when union officials could punish opponents and reward supporters by denying or awarding jobs. The craft unions, those with the highest susceptibility to racketeering, were mostly affiliated with the American Federation of Labor (AFL).

The racketeering susceptibility of so-called "industrial" unions composed of factory workers was much lower. Factory workers were organized much later than "craft" workers, in part because the large employers could resist more effectively. When factory workers were organized, it was along the lines of the whole plant, that is, in industrial unions. Workers who belonged to large industrial unions were more closely tied to their employers than were craft workers who often moved from job to job, and employer to employer. Therefore it was much more difficult for labor racketeers to intimidate and dominate them. The industrial unions also tended to be more ideological than the

0283

craft unions; socialist and even communist ideology commanded a great deal of support. The more ideologically minded labor officials were less attracted to corrupt opportunities for personal enrichment. The unions that represented the factory and mine workers were mostly affiliated with the Congress of Industrial Organizations (CIO). There have been very few examples of organized crime groups making any headway in these unions.

In 1955, the American Federation of Labor (AFL) and the Congress of Industrial Organizations (CIO) combined to form the AFL-CIO. In the late 1950s, the newly combined AFL-CIO took steps against labor racketeering in its affiliated unions, but by the 1960s these initiatives had completely dissipated. Thereafter, the AFL-CIO almost always excoriated congressional and law enforcement anti–labor racketeering hearings, legislation, and campaigns as sinister attacks on the labor movement.

EMPLOYERS

Up until passage of the Wagner Act in 1935, many employers, especially large employers, fought hard to prevent the unionization of their employees. When unionization proved inevitable, these employers sometimes sought to sign representational agreements with gangster-controlled unions, which they much preferred to left-wing labor organizations because the former were susceptible to bribes in exchange for sweetheart contracts.[11] Both the employers and the labor racketeers themselves used "red-baiting" (calling opponents communists) to smear dissidents who criticized or challenged them.[12] (Echoes of such tactics can be found right up to the present day.)* The gangsters who controlled these unions could be bribed—indeed, they were in the business of soliciting bribes—to make concessions in collective bargaining agreements and/or not to enforce the terms of the agreements.

Small employers in competitive industries had another reason for preferring to deal with unions controlled by racketeers. Where there are

* In his case study of the efforts of rank-and-file Teamsters reformers to take back their local from mobsters and their cronies, Professor Robert Bruno explains how the incumbents branded the reformist group, Teamsters for a Democratic Union (TDU), "socialist and slanderous." *Reforming the Chicago Teamsters: The Story of Local 705* (De Kalb: Northern Illinois University Press, 2003), 34.

0284

large numbers of small employers in a competitive industry (for example, restaurants, laundry, trucking), the employers have a greater reason to accept, indeed to reach out to gangsters to "stabilize" cutthroat competition, neutralize labor unrest and opposition,[13] and not enforce collective bargaining agreements.[14] In addition, a strong gangster-controlled union could establish and enforce an employers' cartel that would restrict the number of employers, fix prices, and allocate contracts and customers to the cartel's members.[*] The union was in a position to do this because it could "discipline," even put out of business, an employer who refused to cooperate with the cartel.

POLITICIANS, POLICE, AND PROSECUTORS

For much of the twentieth century, urban law enforcement was laced with political influence and corruption. In most big cities, the police department, and often the prosecutor's office, was subservient to the party political machine, which, in turn, was frequently allied to organized crime. (This was dramatically illustrated by the 1951–1952 U.S. Senate hearings presided over by Senator Estes Kefauver.) By the 1940s, the local power structure in many cities was a quadripartite alliance of organized crime, elements of organized labor, elements of the business community and the Democratic Party political machine, including district attorneys and top police brass.[**15] For example, Frank Costello, New York City organized crime boss, was a power in Tammany Hall, and Tom Pendergast, the Kansas City political powerhouse, was closely allied to organized crime in Chicago and New York.

Even when they were not corrupted, local police departments and county district attorneys' offices did not have the resources to conduct the lengthy and sophisticated investigations required in organized

[*] Under the 1935 National Labor Relations Act, 29 U.S.C. § 151 et seq., an employer can voluntarily agree to recognize an organization as the exclusive bargaining representative for the employer's workers. The employees have the right to petition the National Labor Relations Board for an election, but if they do not, the employer can sign a collective bargaining agreement with the union that he or she has recognized.

[**] Robert Cooley, a Chicago lawyer closely involved with both organized crime and city politicians and judges, in the 1970s and 1980s, provides an excellent description of such an alliance. See Robert Cooley and Hillel Levin, *When Corruption Was King: How I Helped the Mob Rule Chicago, Then Brought the Outfit Down* (New York: Carroll and Graf, 2004).

0285

crime cases. Special NYS Organized Crime Prosecutor and then Manhattan District Attorney Thomas Dewey's antiracketeering investigations and prosecutions during the 1930s were the exceptions. However, before the days of legal electronic surveillance, witness immunity, witness protection programs, and methods to prevent juror intimidation, it was extremely difficult to investigate and convict organized crime figures. Moreover, individual convictions had no impact on deeply embedded systemic criminality.

HOOVER'S FEDERAL BUREAU OF INVESTIGATION (1924–1972)

Federal law enforcement had more resources and freedom than state and local law enforcement to deploy agents as it chose (rather than in response to citizen complaints), but FBI Director J. Edgar Hoover denied the existence of the Mafia and refused to devote investigative resources to organized crime.* Scholars and commentators still disagree about Hoover's motives. Some believe that he was being blackmailed by mobsters who knew about his (supposed) homosexuality.[16] Other scholars believe that Hoover did not regard organized crime as a national problem; did not believe that the FBI had jurisdiction to investigate local gangsters; feared that FBI agents would be corrupted if they became involved in investigating the vice crimes that the Mafia was engaged in (gambling, drugs, and so on); or perhaps, prior to the exposure of the organized crime conclave in Apalachin, New York, in 1957, he did not believe there was any connection or coordination among local organized crime families. Still other scholars emphasize that Hoover did not want to divert resources from investigating communists and political subversives.** Although we will probably never be able to choose

* Actually, Harry Argersinger, Director of the Federal Bureau of Narcotics and Dangerous Drugs, had much more interest in and knowledge of organized crime than Hoover, but he did not have the resources or the jurisdiction to act on this knowledge. After the McClellan Committee hearings, the FBI did engage in extensive wiretapping against organized crime, but such intercepted conversations could not be introduced in court until passage of Title III of the 1968 Omnibus Crime Control and Safe Streets Act.

** There was already precedent for cracking down on left-wing unionists but not labor racketeers when Hoover took over the FBI. The so-called Palmer Raids, carried out by

0286

definitively among these explanations, the facts are indisputable: until after Hoover's death in May 1972, the FBI did not devote resources to investigating organized crime while assigning top priority to exposing and prosecuting communists (broadly defined).[17] The Industrial Workers of the World (IWW) and other left-wing labor groups were relentlessly suppressed but organized crime labor racketeers were hardly opposed. By pursuing "radicals" rather than Mafiosi, Hoover contributed to the emergence of an American labor movement heavily infiltrated and influenced by organized crime.

Teamster history provides a telling example of how government, specifically the FBI, contributed to a racketeer-ridden labor movement while repressing a left-wing labor movement. In the 1930s, the most powerful Teamster leader in Minnesota was Farrell Dobbs, a socialist and brilliant labor organizer. He organized over-the-road freight drivers, dock workers and warehousemen throughout the Midwest. His Teamster protégé and eventual rival was Jimmy Hoffa, who recruited thugs linked to organized crime to help him battle employers. The FBI attacked Dobbs, while leaving Hoffa to prosper. In the late 1930s and early 1940s, Dobbs and more than two dozen militant socialist trade unionists were indicted under the anti-Communist Smith Act. Dobbs himself was imprisoned until the end of World War II.[*] Jimmy Hoffa became the undisputed leader of the Teamsters in Minnesota and soon in the entire Midwest. Hoffa's connections with organized crime were instrumental in vaulting him to the IBT general presidency and figured prominently in his administration of the union.[18]

U.S. Attorney General Alexander Mitchell Palmer between 1919 and 1923, amounted to a violent repression of left-wing unionism. Palmer's agents sent hundreds of radical unionists to prison and destroyed their union headquarters. The suppression of radical unionists continued for decades, and not only by the FBI. California Attorney General Earl Warren, who was destined to be Chief Justice of the most liberal Supreme Court in history, prosecuted longshoreman Harry Bridges for subversion in the 1940s. Lawrence Fleischer, *Thomas E. Dewey and Earl Warren: The Rise of the Twentieth-Century Urban Prosecutor,* 28 *Calif. W. L. Rev.* 1 (1992).

[*] After his release from prison, Dobbs served as editor of "The Militant" and, in 1953, became national secretary of the Socialist Workers Party. He ran as the SWP's presidential candidate in 1960 but received only 60,166 votes. In the 1970s, he published several books about the Teamsters, including: *Teamster Rebellion* (New York: Pathfinder Press, 1972); *Teamster Power* (New York: Monad Press, 1973); *Teamster Politics* (New York: Monad Press, 1975); and *Teamster Bureaucracy* (New York: Anchor Foundation, 1977).

0287

POST-HOOVER FBI

After Hoover's death in 1972, the FBI modernized and became an up-to-date law enforcement (rather than antisubversives) organization. It redefined organized crime as a serious problem and a top priority.[19] After Jimmy Hoffa's disappearance in July 1975, the FBI focused on labor racketeering as a key part of the organized crime problem.

The FBI defined labor racketeering first as an organized crime problem and second as a union corruption problem. Despite the employers' complicity with organized crime in exploiting their employees and corrupting their unions, investigators and prosecutors did not focus on labor racketeering as a problem of labor/management corruption.* The law enforcement agents and agencies treated corrupt employers as victims or, at worst, minor wrongdoers who could be recruited as cooperating witnesses against organized crime figures and corrupt union officials. Labor racketeers who engaged in violence, extortion, intimidation, and all sorts of crimes in addition to labor racketeering, fit law enforcement's (and the general society's) stereotype of criminals; employers did not. The labor racketeers also belonged to ethnic minority groups that, at the time, were widely believed to have a dangerous predilection for crime. Employers, on the other hand, fit law enforcement's stereotype of essentially law-abiding citizens or, at worst, minor white-collar offenders.

The post-Hoover FBI mobilized itself for a massive attack on organized crime. By the early 1980s there were three hundred FBI agents in New York City assigned to organized crime investigations. The New York City office formed separate squads for each of the city's Cosa Nostra crime families. With the urging of G. Robert Blakey and Ronald

* As Sidney Lens explained, "I'm not suggesting that corporate-racketeer collaboration was a rule in the labor movement, but neither was it an incidental aberration." Thomas E. Dewey, when he was Manhattan district attorney, denounced employers who "invite racketeers to organize their industries to increase profits at public expense." Sidney Lens, *Unrepentant Radical* (Boston: Beacon Press, 1980), 105–6.

New York Times writer A. H. Raskin detailed in a *Commentary* article "the sordid story of employer collaboration" with the Longshoremen's Association over a quarter century. He charged that they had "subverted the union . . . kept its president, Joseph P. Ryan, in automobiles and expensive clothes," and had subsidized the hooligans Ryan recruited from Sing Sing to hold the rank and file in subjection." A. H. Raskin, "Unions and the Public Interest," *Commentary* (February 1954), p. 103.

0288

Goldstock, the FBI sought to dismantle each crime family by attacking its revenue sources as well as by convicting its leaders. Unions were among organized crime's most important revenue sources and power bases.

U.S. CONGRESS

Until the late 1970s, the most important opposition to labor racketeering came from Congress via hearings, reports, and legislation. Beginning in the 1930s, but especially from the 1950s, Congress held dozens of hearings on corruption and racketeering in the labor movement, some attracted national media attention.[20] Labor officials accused Congress of holding these hearings to weaken labor rather than to fight racketeering and, to an extent, they may well have been right. It is not possible to dissect the motivations of the many senators and congressmen involved in such hearings over several decades, but undoubtedly some of their motives were antilabor or, at best, self-aggrandizing. The senators who were most aggressive in investigating and denouncing labor racketeering were southern conservatives who represented states where unions were weak and unpopular. Federal legislation that attacked labor racketeering usually was part of a larger bill that weakened organized labor. For example, the 1947 Taft-Hartley Act made it a federal crime for a union official to receive anything of value from an employer and similarly for an employer to give anything of value to a labor official. But the act also contained wide-ranging provisions designed to curb union power.*

On August 12, 1953, in response to a devastating New York State investigation of racketeering in the Port of New York and New Jersey,[21] President Dwight Eisenhower signed the Waterfront Commission Act, an interstate compact that permitted New York and New Jersey to

* Taft-Hartley (the Labor Management Relations Act) made the closed shop illegal and permitted the union shop only after a vote of a majority of the employees. It forbade jurisdictional strikes and secondary boycotts. It prohibited unions from contributing to political campaigns and required union leaders to affirm their loyalty and lack of communist ties. The act also gave the U.S. attorney general the power to obtain an 80-day injunction when a threatened or actual strike that he/she believed "imperiled the national health or safety." 29 USC Sec. 141–97. [Title 29, Chapter 7, United States Code.]

establish the Waterfront Commission of New York Harbor in order to regulate waterfront business activity and labor relations.[22] The Waterfront Commission replaced the infamous "shape up" (whereby the union bosses picked out who would work that day from the men assembled on the pier) with a hiring system that licensed longshoremen, assigned them to jobs, and guaranteed them an annual wage. It also ended the "public loading"* racket, by which the International Longshoremen's Association (ILA) required truckers to make corrupt payoffs in order to have cargo loaded or unloaded from their vehicles at the piers, even if they did not need or desire the public loaders' service. The act (and the implementing legislation passed by both the New Jersey and New York legislatures) gave the Waterfront Commission power to register workers, deny registration and employment on grounds of felony and misdemeanor convictions, and bar former convicts from holding elective ILA positions. The ILA resisted the Waterfront Commission by, among other things, challenging a provision in the law that prohibited unions that employed former felons as officers from collecting members' dues.[23] In *De Veau v. Braisted,* the U.S. Supreme Court upheld the provision, observing:

> In disqualifying all convicted felons from union office unless executive discretion is exercised in their favor . . . [this law] may well be deemed drastic legislation. But in the view of Congress and the two States involved, the situation on the New York waterfront regarding the presence and influence of ex-convicts on the waterfront was not a minor episode but constituted a principal corrupting influence.[24]

The McClellan Committee (Senate Special Select Committee on Improper Activities in the Labor or Management Field), 1957–1959, eclipses all other legislative or commission investigations into labor racketeering. Its one hundred member staff still stands as the largest congressional investigative staff in American history. The committee called 1,525 witnesses; many high-ranking union officials and mobsters refused to answer on Fifth Amendment grounds. (These were the days before the federal immunity statute, so witnesses could not

* "Public loader" referred to a worker who loaded and unloaded trucks that took cargo to and from the docks. The term was commonly used in the early twentieth century.

0290

be compelled to answer questions under an immunity grant.) The clash between the committee's chief counsel, Robert F. Kennedy, and Teamsters vice-president and then (during the course of the hearings) general president, Jimmy Hoffa, provided high drama to a national audience.

Senator John McClellan (D.-Ark.) asserted that powerful mob figures Anthony Corallo and John Dioguardi had assisted Hoffa's campaign for the IBT presidency. The committee also uncovered mob links with other unions, businesses, and industries. In his book about the McClellan Committee hearings, *The Enemy Within,* Kennedy used apocalyptic language to warn that organized crime's strategic position in the labor movement gave it the power to shake down or shut down the nation: "The point I want to make is this: If we do not on a national scale attack organized criminals with weapons and techniques as effective as their own, they will destroy us."[25]

The McClellan Committee's hearings led directly to the 1959 Labor Management Reporting and Disclosure Act,[26] known as the Landrum-Griffin Act, which, for the first time, enlisted union democracy as a key strategy in fighting labor racketeering. Senator McClellan and his colleagues argued that the best antidote to labor racketeering would be an active and informed union rank and file that would monitor its officers and throw them out if they acted contrary to the interests of the membership. Landrum-Griffin set out a federally guaranteed union members' bill of rights, including the right to speak and associate freely, run for office in free and fair elections, and have the opportunity to find out about (and, in some cases vote on) what the union's officers are doing.[27]

Congressional, usually Senate, hearings on organized crime and on labor racketeering continued through the 1960s, 1970s, and 1980s. There were several hearings on exploitation of the unions' pension and welfare funds, leading to the passage of the landmark Employee Retirement Insurance and Security Act of 1975 (ERISA). (Senator McClellan introduced the first version of the bill that eventually passed.) The Senate Permanent Subcommittee on Investigations held hearings on the four most racketeer-ridden national/international unions: Teamsters, Laborers, Longshoremen, and Hotel and Restaurant Workers. Other hearings focused on the Department of Labor's willingness and capacity to respond to evidence of labor racketeering and later on the efficacy and desirability of the RICO-spawned union trusteeships.

0291

U.S. DEPARTMENT OF JUSTICE (DOJ)

The U.S. Department of Justice is a cabinet-level department headquartered in Washington, D.C., and headed by the U.S. Attorney General. In addition to the DOJ attorneys who represent the United States in criminal and civil litigation, the FBI, Federal Bureau of Prisons, and several other agencies come under the DOJ's aegis. Importantly, however, the FBI is substantially independent of the lawyers' side of the department. The FBI director is a presidential appointee, requiring Senate confirmation, who serves a ten-year term. The DOJ criminal division's priorities are not necessarily the same as the FBI's priorities, so an organized crime control campaign required a great deal of coordination.

The DOJ's criminal division comprises twenty sections, including fraud, domestic security, asset forfeiture, money laundering, and drugs. In the mid-1950s, under the Eisenhower administration, the DOJ formed the Organized Crime and Racketeering Section (OCRS) to focus the department's anti–organized crime resources. OCRS remained a small, fairly inactive department until it was revitalized in 1961 by the new attorney general, Robert F. Kennedy. As we will see in later chapters, by the 1980s OCRS played a leadership role in organized crime control.

In addition to its central headquarters, the Department of Justice is represented by a United States attorney's office in each of the ninety-three federal judicial districts that cover the entire territory of the United States. (New York City, for example, has two judicial districts and two U.S. attorney's offices: the Southern District of New York (SDNY), which includes Manhattan, the Bronx, Westchester, and some other suburbs; and the Eastern District of New York (EDNY), which includes Brooklyn, Queens, Staten Island, and the Long Island suburbs.) The U.S. attorneys are appointed for four-year terms by the president of the United States and, like cabinet officers and certain other high governmental officials, they are subject to Senate confirmation. The budgets for the U.S. attorneys are set by central DOJ, but the U.S. attorneys have substantial autonomy and, to a large extent, choose their own investigative/prosecutorial priorities.

When Robert F. Kennedy, as U.S. attorney general (1961–1964), revitalized the Organized Crime and Racketeering Section (OCRS), he established the first federal organized crime strike force in Buffalo,

0292

New York; other strike forces soon followed.* The strike forces allowed Kennedy to circumvent both the FBI (controlled, at that time, by Hoover) and the U.S. attorneys' offices. The strike forces reported directly to the head of the OCRS, who, in turn, reported directly to Kennedy. Each strike force consisted of agents from a number of different agencies including the Internal Revenue Service, Labor Department, and FBI, although Hoover was not enthusiastic about cooperating. The strike forces undertook some important investigations and initiated some important prosecutions before Robert F. Kennedy resigned as attorney general in 1964, several months after his brother, President John F. Kennedy, was assassinated. The OCRS was not abolished, but it lost the luster and prominence that it enjoyed under Robert F. Kennedy. Not until the mid-1970s was it fully resuscitated and the number and resources of the federal organized crime strike forces increased.**

The turning point in law enforcement's attack on organized crime generally, and labor racketeering specifically, was the disappearance (immediately assumed to be a mob "hit") of James R. (Jimmy) Hoffa in the summer of 1975. Hoffa disappeared while campaigning to regain the IBT general presidency from former protégé Frank Fitzsimmons, with whom LCN had become quite comfortable.*** Organized crime had never before murdered a national figure of Hoffa's stature (unless, as some people believe, it assassinated President John F. Kennedy).[28] Almost immediately, the FBI made organized crime control its top priority. The Hoffa assassination gave the post-Hoover FBI and the OCRS a

* Kennedy's top priority was to "get Hoffa." Victor Navasky, *Kennedy Justice* (New York: Atheneum, 1971); Arthur A. Sloane, *Hoffa* (Cambridge: MIT Press, 1978); Arthur Schlesinger, Jr., *Robert Kennedy and His Times* (New York: Ballantine, 1996); David Witwer, *Corruption and Reform in the Teamsters Union* (Urbana-Champaign: University of Illinois Press, 2003). Indeed, DOJ prosecutors did bring Hoffa to trial in 1962 for extortion, but the case ended in a hung jury. In 1964, the DOJ convicted Hoffa of obstruction of justice and pension fund fraud. His appeals exhausted, he began serving his prison sentence in 1967. However, President Richard Nixon commuted the sentence in 1971, apparently a quid pro quo for the IBT's endorsement of his candidacy in the 1972 presidential election.

** Attorney General Richard Thornburgh abolished the strike forces in 1989. They had always been unpopular with the U.S. attorneys, who resented the central DOJ's taking high-publicity cases out of their hands. Individual organized crime units were subsequent established in each U.S. Attorney Office.

*** The FBI now believes that Hoffa was assassinated by Anthony Giacalone, boss of Detroit's organized crime family, and Tony Provenzano, Genovese crime family capo and head of IBT Local 560.

0293

successful rationale for launching and sustaining a campaign against the Cosa Nostra organized crime families.[29] It bears emphasizing that the FBI viewed the attack on labor racketeering as part of its strategy of crushing LCN; without this link, union corruption would not have triggered and sustained the massive federal law enforcement effort.

RACKETEER INFLUENCED AND CORRUPT ORGANIZATION ACT (RICO)

In the late 1960s, Senator John McClellan held hearings on the organized crime problem. Witnesses and the senators themselves observed that when an organized crime figure was sent to prison, the Cosa Nostra bosses assigned another to replace him. To have any chance of eliminating or substantially weakening organized crime, the government would have to do something other than prosecuting, convicting, and punishing individuals for discrete crimes.[30] The solution was RICO, a complex statute that provided DOJ and the federal law enforcement agencies with a multifaceted remedial statute whose criminal and civil provisions were aimed at convicting organized crime members and eliminating their economic base.

The 1970 RICO statute, cosponsored by Senator McClellan, created three new federal crimes, and a fourth that made criminal a conspiracy to violate any of the three. Under RICO it is a crime to invest the proceeds of racketeering activity or collection of an unlawful debt in an enterprise (any legal entity or an association in fact); it is a crime to take an interest in any enterprise through a pattern of racketeering activity or collection of an unlawful debt; and it is a crime to conduct or participate in the affairs of an enterprise through a pattern of racketeering activity or collection of an unlawful debt. In other words, it is a federal crime, punishable by up to twenty years in prison, to buy into an enterprise with "dirty money," to use muscle or fraud to acquire an interest in an enterprise, or to use an enterprise as a vehicle for carrying out racketeering activity.

In addition to its criminal provisions, RICO contains two different civil remedies. One remedy, Section 1964(a), provides a private right of action (with treble damages) for the victims of racketeering. While prominent and controversial in the commercial litigation context, this provision has never been used by victims of organized crime to sue the

Mafia for compensation. Maybe such victims doubt they would succeed in collecting any money from the mobsters; certainly fear of retaliation is a likely explanation. In any event, it is the second civil RICO provision that has proved to be an outstanding tool for attacking systemic criminality like labor racketeering. Section 1964(b) authorizes the U.S. attorney general to seek wide-ranging equitable relief to prevent continuing RICO violations. If the attorney general can persuade a federal judge (there is no right to a jury trial) of the need for extreme remedial action, the court is empowered to expel union officers, change election and hiring hall procedures, install financial controls, and appoint a trustee to monitor and enforce the remedial decree. This provides for the possibility of ongoing federal court supervision supported by continued FBI and DOJ investigations and enforcement.

In 1982, DOJ's Organized Crime Strike Force in Newark, New Jersey, brought the first civil RICO suit against a union, IBT Local 560, the largest Teamsters local in New Jersey (35,000 members). For decades, Local 560 had been the fiefdom of Tony Provenzano, a capo in the Genovese crime family and the local's top official. Union members who dared to complain or challenge "Tony Pro" were threatened, beaten, even killed; collective bargaining contracts were mocked by sweetheart deals with employers. When Tony Pro finally was imprisoned, he handed off operational control of the union to one of his brothers (who himself was later sentenced to prison) and then to another crony.[31] As would also be true in the many later civil RICO suits against unions, the government's complaint in the Local 560 case named both union officials and mobsters as defendants. After a lengthy trial, Judge Harold Ackerman found in favor of the government and ordered broad relief, including a court-appointed trustee whose assignment was to purge the mob and establish union democracy—a task, as it turned out, that consumed more than ten years.

All told, there have been twenty civil RICO suits resulting in court-appointed trustees tasked with eliminating organized crime and "restoring" union democracy. This litigation is one of the most ambitious, perhaps *the most ambitious* effort at government-sponsored and court-supervised institutional reform in American history. Government lawyers, federal judges, and court-appointed trustees have had to confront two of the most powerful institutions in American society: organized crime and organized labor. Consider that just before Rudy Giuliani, then U.S. attorney for the Southern District of New York, filed the

0295

first civil RICO suit against an international union (the International Brotherhood of Teamsters) in 1988, 264 members of Congress signed a petition to U.S. Attorney General Edwin Meese, demanding that the rumored civil RICO suit not be filed. The letter insisted that "[t]he imposition of trustees to administer an international union by the government is, on its face, inherently destructive of the ability of workers to represent and speak for themselves through their unions."[32] The suit, of course, was filed and ultimately resolved by a negotiated consent agreement that, among other things, provided for a type of trusteeship that, as of fall 2005, is still in effect.

What are the consequences of a century of labor racketeering? The American labor movement has been profoundly affected by organized crime infiltration and exploitation. For some unions, the consequences are obvious: treasuries looted, collective bargaining agreements unenforced, candidates for union office murdered, and union democracy rendered meaningless. Other unions have suffered indirectly by the erosion of organized labor's reputation in the eyes of workers, intellectuals, and young people.

There can be no doubt about the American labor movement's extraordinary decline since the 1950s.[33] The peak year (in terms of percentage) of Americans' membership in unions was 1953, when 32.5 percent of workers belonged to labor unions. In 2005, approximately 13 percent of the workforce was unionized; the percentage of public employees unionized is now higher than the percentage of private employees. Although there are a number of reasons for the decline, it seems a worthy hypothesis that labor racketeering has been an important contributing factor. Of course, there has been retrenchment and decline in many unions where there has never been a documented organized crime presence. Arguably, however, even those "clean" unions have been affected by the labor racketeering taint that tarnishes the reputation of organized labor generally. It is entirely possible that the labor movement as a whole would be much stronger if certain key unions had not been infiltrated and controlled by Cosa Nostra.

Another explanation for the decline of labor unions is that mob-dominated unions do not perform well for their members. Labor racketeers aim to maximize the wealth and power of their crime families and themselves. For them, participation in the labor movement is a racket, stealing from the unions and their benefit funds and soliciting bribes from employers. Labor racketeers are not good unionists; they

0296

exploit unions and union members. Labor racketeers are not interested in organizing workers or running unions efficiently. They appoint and promote union officials on the basis of patronage, not competence. Their unions' payrolls are loaded with relatives, friends, and organized crime associates. The history of labor racketeering is rife with examples of sweetheart contracts, double-breasted shops (allowing employers to hire nonunion as well as union employees), allowing employers to avoid required pension and welfare contributions, workers being shuttled from high-pay to low-pay locals, AFL-CIO affiliated unions taken "independent" and many other schemes that victimize rank-and-file union members in order to line the pockets of organized crime members and their corrupt union allies.[34]

What might America look like today if at least part of the American labor movement had not been hijacked by labor racketeers? Would we have a socialist or socialist-leaning labor movement along the lines envisioned by Eugene Debs, Norman Thomas, or perhaps Walter Reuther? Would labor have involved itself in politics or even become a political party as Reuther once advocated?[35] Would so-called business unionism, which defines a labor union as a business that sells labor, have been relegated to the scrap heap of history rather than to the reigning ideology of the American labor movement? We will never know, but we can be sure, given the importance of labor movements to contemporary Western democracies, that the current sociopolitical organization of the United States would be different.

We might also ask what might have been if organized crime had not been enriched and empowered by labor racketeering? Without its base in labor, the Italian-American organized crime groups would have been left to supplying illicit goods and services on the black market. Of course, LCN was, and to some extent still is, deeply involved in drugs, gambling, and loan-sharking. But these rackets do not generate the kind of access to politicians and businessmen that labor racketeering does. Fabulously wealthy drug dealers have obtained considerable political power in some South American countries but not in the United States where drug dealers remain sociopolitical outcasts. Drug dealers, at least in the United States, do not endorse and assist political candidates. They may corrupt law enforcement officials and politicians but not as systematically and extensively as LCN, and they are not nearly as able to protect themselves from arrest, prosecution, and punishment. In short, it is a fair hypothesis that if LCN had not been able to

0297

penetrate and control elements of the American labor movement, it would not have reached the pinnacles of power that it did reach in the 1970s and 1980s.

Finally, we need to ask whether the use of federal civil RICO suits, leading to court-enforced consent decrees, provides a model of organizational reform that will succeed in purging organized crime from the unions and that could be used to reform other types of corrupted organizations in the United States and other countries. There has been a long debate among political scientists and law professors about the capacity of courts to bring about sociopolitical change. This study takes that debate into a new venue and challenges us to reconsider the potential and limits of law enforcement, courts, and government to remediate deep flaws in the social fabric.

Organized Crime and Organized Labor

The meeting [of organized crime bosses in Apalachin, New York, in 1957] gave to millions of Americans their first clear knowledge that we have in this country a criminal syndicate that is obviously tightly organized into a secret brotherhood, which none of its members dare to betray, and which has insinuated itself into business and labor and public life at high levels. . . . One of the most significant results of this examination of the backgrounds of the Apalachin visitors was the revelation that twenty-three of them were directly connected with labor unions or labor-management bargaining groups. It was no coincidence that the names of these men and their cronies and associates kept cropping up during almost every investigation that was made of improper activities in labor and management. Hundreds of honest, decent union officials throughout the country, and perhaps millions of their hard-working members, are daily subjected to the manipulation of these racketeers and their henchmen.

—Senator John McClellan, *Crime without Punishment* (1962), 116

The benefits a union officer's position gave to a La Cosa Nostra member included the ability to transform an ugly criminal caterpillar into a very dangerous but beautiful butterfly. It gave instant legitimacy, an unlimited expense account, legitimate income for income tax purposes, plus all the money you could steal from union dues, an entree into the business community and an entree to those aspiring for political office. Later, the unions developed Political Action Committees or PACs to use for even more political leverage. To me, the unlimited possibilities the organized crime professional criminals involved in the American labor movement had to control the American public's capitalistic and democratic society was frightening.

—James Moody, FBI official in charge of organized crime, Testimony Before Senate Permanent Subcommittee on Investigations, July 24, 1996

0299

Labor racketeering has never been just a sideline activity for the Cosa Nostra organized crime families. The image that some scholars and observers have of organized crime moving into unions and industrial racketeering as a way of laundering funds obtained from gambling, prostitution, drugs, and other black market operations is not accurate. Labor racketeering was a defining feature of American organized crime from the first decades of the twentieth century. Ultimately, it was labor racketeering that made Cosa Nostra part of the sociopolitical power structure of twentieth-century America.

LAYING THE GROUNDWORK

During the first third of the twentieth century, it was relatively easy for organized crime groups to take over local unions, especially craft unions. In violent conflicts between workers and employers, professional criminals supplied goons to both sides.[1] Once the gangsters had a foot in a union's door, they could take over by means of violence, intimidation, and election fraud. The immigrant workers could be intimidated, coerced, and deceived, but nefarious techniques were not always necessary. Some labor racketeers were charismatic leaders whom workers admired. No doubt, some workers thought they would be better off being represented by individuals with a reputation for being tough and well-connected. According to Harold Seidman's study of early twentieth-century labor racketeering, *Labor Czars* (1938):

> Unionists continued to do their own slugging until the great strikes of 1909 necessitated a change in tactics . . . the unions engaged gangsters to protect women strikers and pickets against employer thugs. . . . The unions soon discovered that gangsters did not accept temporary work. Once hired, they remained permanently employed, whether the union liked it or not. . . .[2]

Sometimes gangsters became labor officials without any vote or other action by the workers whom they came to represent. Under the 1935 National Labor Relations Act (NLRA), an employer could voluntarily recognize a particular union as the exclusive bargaining agent for his

0300

workers.* That representation would be binding for three years and would continue unless the workers voted to be represented by a different union or not to be represented by any union. Some employers happily recognized practically nonexistent racketeer-constructed "unions" because, in effect, such unions were a scam allowing the racketeers to extract bribes and the employers to avoid having to deal with a real union. Indeed, employers could call upon these unions to establish and police an employers' cartel. To cite just one early example, John Landesco's 1929 study for the Chicago Crime Commission reported that racketeers controlled the laundry industry by dominating the union that represented the drivers.

In the 1920s, such Jewish organized crime figures as Arnold Rothstein (1882–1928), Jacob Orgen (1894–1927), Jacob Shapiro (1899–1947), and Louis Buchalter (1897–1944) infiltrated the International Ladies' Garment Workers' Union (ILGWU) and leveraged their union power into domination of New York City's garment district.[3] (Carl Sifakis, author of *The Mafia Encyclopedia,* calls Buchalter *the foremost labor racket czar in the United States.*)[4] The labor racketeers of this era were sometimes recruited by "honest" union leaders to help defeat rival unions; Sidney Hillman, head of the Amalgamated Clothing Workers Union, and a key FDR New Deal advisor, called upon Buchalter to suppress competing unions and recalcitrant employers who stood in the way of his union.[5] In the 1920s, Dutch Schultz (a.k.a. Arthur Flegenheimer (1903–1935)) forcibly took over and controlled the New York City Restaurant and Cafeteria Workers Union.

THE ORIGINS OF COSA NOSTRA LABOR RACKETEERING

The Italian American organized crime groups engaged in labor racketeering from the time they began to form in the United States. Joseph ("Socks") Lanza (1904–1968) founded the Seafood Workers Union in the late 1920s and, from this power base, dominated the Fulton Fish Market

* Under the National Labor Relations Act (Sec. 9), the employees have the right to petition the National Labor Relations Board for an election, but if they do not, the employer's choice of his or her workers' exclusive bargaining agent stands. National Labor Relations Act, 29 U.S.C. §§ 151–69.

0301

in lower Manhattan, the largest wholesale fish market in the country. All the participants in the fish market made payoffs to Lanza.[6] Likewise, Anthony Anastasio (1906–1963), president of the International Longshoremen's Association (ILA) Local 1814 and vice-president of the ILA International, dominated the Brooklyn docks on behalf of his organized crime group (later taken over by Carlo Gambino and thereafter known as the Gambino crime family) from the 1930s to the early 1960s.

In Chicago, in the 1910s and 1920s, Al Capone's (1899–1947) organized crime group (later "the Outfit") dominated dozens of Chicago locals in the building trades, hotels and restaurants, and other sectors. Sometimes the Capone gang wrested control of a union from union leaders who themselves were gangsters. Harold Seidman recounts that

> [o]ne of Chicago's most powerful labor leaders was summoned to the presence of the "Big Fellow." Capone informed the unionist that the racketeers intended to take over control of his unions and, through his unions, capture many trade associations. He was advised that he could continue in nominal and titular control if he so desired. The labor leader elected to go along with the mob.[7]

Capone's gang took control of the Chicago-based Motion Picture Operators Union (MPOU). At first, the gang just demanded a partnership, but within two years Capone ordered the union president killed.[8] The Chicago Outfit leveraged its control over the MPOU to extort the theater owners and Hollywood producers. The movie producers paid the mob $150,000 (the equivalent of about $2 million in 2003 dollars) for a seven-year no-strike contract.[9] According to investigative reporter Gus Russo, under Capone lieutenant Curly Humphreys's stewardship,

> labor racketeering was perfected, turning a modestly profitable con into a multi-million dollar operation, with the Outfit controlling as much as 70 percent of the city's unions. In 1928, the boys were seeing an estimated $10 million [$107 million in 2003 dollars] a year in profit from Curly's rackets; by 1931, the estimated revenue escalated to $50 million [$604 million in 2003 dollars]—small by bootlegging standards, but with unlimited potential, since unlike Volstead [the National Prohibition Act], labor was never going to be repealed.[10]

0302

Capone biographer, John Kobler, notes: "Toward the end of 1928 the [Chicago] state's attorney's office listed ninety-one Chicago unions and [employer] associations that had fallen under racketeer rule."[11] After National Alcohol Prohibition was repealed in 1933, labor racketeering became an even more important revenue source for organized crime.

When the International Alliance of Theatrical Stage Employees (IATSE) went on strike in 1933, the employers sought the Outfit's help. The Outfit sent thugs to keep the theaters open and thereby broke the strike.[12] Paul Ricca, Tony Accardo, and Curly Humphreys demanded that IATSE hire Outfit members and associates for positions throughout the union, ensuring organized crime's presence in the film business for decades.[13] When President Ronald Reagan appointed the President's Commission on Organized Crime in 1984, he explained that he was familiar with labor racketeering because of his experience as a leader in the Screen Actors Guild.*

Every Cosa Nostra crime family has a documented history of labor racketeering (see Table 2-1 at the end of the chapter). For decades, Al Capone's protégé and successor, Tony Accardo, longtime head of the Outfit,[14] controlled numerous Laborers' International Union of North America (LIUNA) locals in Chicago. That control enabled the Outfit to designate and control the national general presidents of the international union, Peter Fosco, later Peter's son Angelo, and then Arthur E. Coia.[15] Similarly, control over the Hotel and Restaurant Employees (HERE) enabled the Outfit to name and control General President Ed Miller and his successor, Edward Hanley.[16] The Outfit, through its associate Sidney Korshak, exercised enormous influence over the IBT Central States Pension and Welfare funds, as well as influence over the IBT itself.[17]

Angelo Bruno, LCN boss in Philadelphia, dominated the roofers' union, as well as several Hotel and Restaurant Employees (HERE) locals in Atlantic City. Kansas City's LCN boss, Nick Civella, controlled the powerful IBT Joint Council. He and several other organized crime figures, as well as corrupt union officials, treated the nation's largest pension and welfare fund (IBT Central States Funds) as a bank

* Reagan was well aware of organized crime's infiltration of the IATSE, the union that represented stage hands. He himself had served as president of the Screen Actors Guild, which represented movie actors. Available at http://www.cbsnews.com/stories/2003/09/17/earlyshow/leisure/books/main573799.shtml.

0303

for organized crime.[18] (Las Vegas was first developed by loans from this fund to organized crime figures through their front men.) Angelo Lonardo, boss of the Cleveland LCN family, was also heavily involved in labor racketeering. William "Big Bill" Presser (1907–1981), an "associate" of Cleveland's Licavoli crime family, headed IBT Joint Council 41 and served as president of the huge Ohio Teamsters Conference. From this power base, he and Lonardo, with help from Civella, were able to orchestrate (Bill's son) Jackie Presser's career in several different unions, culminating in Jackie's 1983 succession to the IBT presidency.[19] Cosa Nostra bosses had a major role in choosing IBT general presidents Jimmy Hoffa, Frank Fitzsimmons, Roy Williams, Jackie Presser, and William McCarthy.

The Licavoli crime family in Cleveland controlled a number of labor unions, including ILA Local 1317 and Teamsters Locals 41, 410, and 416.[20] Moe Dalitz (1899–1989) was the crime family's chief labor racketeer. His connections to Hoffa and the Teamsters bore fruit when, later in his career, he used Teamsters' pension fund loans to build Las Vegas casinos in partnership with LCN.[21] The Cleveland organized crime family associate "Big Bill" Presser served as president of IBT Joint Council 41. For years, Presser was one of the most powerful figures behind the Teamsters Central States Pension Fund.[22] His power reached its pinnacle when son Jackie became IBT general president in 1983.[23]

Practically every major Cosa Nostra figure in the twentieth century can be linked to labor racketeering. To take a few examples: Anthony Corallo (1913–2000), a Johnny Dioguardi protégé who worked his way up to boss of the (New York City) crime family, was closely linked and, at one time or another, held office in the Painters and Decorators Union, the Conduit Workers Union, the United Textile Workers, and IBT Local 239.[24] He was convicted in the 1987 Commission Case and sentenced to one hundred years in prison.[25] Tony Accardo (1906–1992), head of the Chicago Outfit for several decades, maintained and even extended the Outfit's extensive labor racketeering interests in Chicago. Nicholas Civella (1912–1983) boss of the Kansas City crime family, through his control of IBT leader Roy Williams, was a major force in the IBT's Central States Pension and Welfare Fund and in the IBT Central States Joint Council. Angelo Lonardo, Cleveland crime family boss (who became a cooperating government witness) explained how he teamed up with Civella to get the approvals of the Chicago and New York City mobsters to make Roy Williams IBT general president. At a 1985 organized crime

0304

trial, Williams testified that, at Civella's insistence, he approved a $62.5 million pension fund loan ($107 million in 2003 dollars) to finance a mob associate's acquisition of two casinos.[26]

In the 1970s, Nicodemo "Little Nicky" Scarfo (1929–) was in charge of Philadelphia's Bruno crime family's Atlantic City interests, most importantly HERE Local 54. Later, Scarfo himself became boss of the family. Raymond Patriarca (1908–1984), for many years boss of the New England LCN family, exerted influence over New England LIUNA and IBT locals. Toward the end of his life, he was indicted for labor racketeering but was too ill to stand trial.[27] Vincent "Chin" Gigante (1926–), boss of the New York City Genovese crime family, used the family's control over Port of New York ILA locals to extort money from shipping companies. Although he began serving a life sentence in 1997, a 2003 indictment alleged continued Genovese crime family domination and exploitation of the ILA, stevedoring companies, and the New York port.

HOW MOBSTERS GAINED CONTROL OVER UNIONS

It was not difficult for organized crime figures to take over a union local. They could use threats and actual violence to drive off competing unionists and anyone else who opposed them. They could rig elections (using intimidation and fraud) to have themselves or their stooges elected to office. They could obtain employer recognition of their union by threats of violence and sabotage, or by promises of sweetheart deals. They were usually aided by widespread union members' apathy toward union governance and administration.[28]

Let us consider some examples:

LCN creates a union. Johnny Dioguardi, one of the century's most notorious labor racketeers and an early member of Al Capone's gang, moved to New York City where he became a capo in the Lucchese crime family. He and Jimmy Hoffa worked out a deal whereby Hoffa gave him a charter to organize seven so-called paper IBT locals. Hoffa needed the votes of these seven locals to assure the election of an ally to the top position in the NYC IBT Joint Council.*[29]

* Dioguardi was indicted for hiring a small-time hoodlum to throw acid in the face of crusading labor columnist Victor Riesel in 1956. (The charges against Dioguardi were dropped when the principal defendant was murdered and other witnesses refused to testify.)

0305

New labor racketeer–dominated unions continued to be formed in the decades that followed. For example, writing in March 2005 about a labor racketeering case that has gone on for almost twenty-five years, Federal District Court Judge John Gleeson said:

> Local 530 [of the Operative Plasterers and Cement Masons' International Association] was founded in 1978 by gangsters for gangsters and the companies affiliated with them. Specifically, it was founded by Lou Moscatiello, who was then an associate of the Genovese Crime Family of La Cosa Nostra, to be an employer-friendly alternative to Local 1974 [of the Drywall Tapers and Pointers].[30]

LCN takes over a union through intimidation. In 1921, several Building Service Employees International Union (BSEIU) leaders were convicted of conspiracy. The union's officials managed to obtain pardons by appealing to the Outfit to use its political influence on their behalf. As a result, the BSEIU became indebted to organized crime. Within a short time, organized crime moved to take control of the union. They gave the union's officers an ultimatum: put mob cronies in top union positions or leave town. Given the mob's influence over Chicago's political machine, there was no one to whom the union could appeal.[31]

LCN obtains control through election intimidation and fraud. In 1938, George Scalise obtained a charter to create Local 94 of the Bowling and Billiards Academy Employees Union. Scalise called on organized crime to stuff union ballot boxes.[32] Not surprisingly, he "won" the election. The local was forced to transfer to the mob a large portion of its dues and control over certain decisions.[33] Using the same strategy of election intimidation and fraud, the mob later made Scalise the BSEIU's national president.

LCN labor organization voluntarily recognized by employer as collective bargaining agent. The mob took control of some unions simply by creating the union and "persuading" employers to recognize it as the workers' exclusive bargaining agent. A good example is New York City's parking garage workers. When garage owners were threatened with systematic vandalism to customers' cars, they "voluntarily" signed representational agreements with a mob-dominated sham union; the workers paid dues without receiving any benefits or representation.[34]

There is no historical record on when organized crime's infiltration of various unions began or when it matured into working control. There

0306

is good reason to believe, however, that Cosa Nostra's influence continued to radiate into previously untainted unions throughout the later half of the twentieth century. For example, as new LIUNA locals were chartered in the New York area, they quickly succumbed to mob control. Because of international LCN domination, sometimes the establishment of new locals was dictated by the interests of LCN. Local 1030 in New Jersey is a prime example. It was set up nominally to deal with asbestos removal, but it appears that 1030 was intended from the beginning to be a vehicle for the DeCavalcante group to get its share of the action (since the NYC locals "belonged to" the Genovese and Lucchese families).

Yet another strategy that began to be used more regularly when civil RICO trusteeships started purging mobsters from the Teamsters, Hotel and Restaurant Workers, Laborers, and Longshoremen's Association was for the labor racketeers to start so-called "independent" unions, unaffiliated with any national/international union. For example, after being permanently expelled from the IBT in 1994 for embezzlement, dual unionism, and breach of other fiduciary duties, Vincent Sombrotto, former president of IBT Local 966, and that union's former secretary treasurer, Edwin Gonzales, set up a new "independent" union, Local 116 in Secaucus, New Jersey. Sombrotto and Gonzales enrolled current IBT Local 807 members into their new union. The Federal Second Circuit Court of Appeals stymied that scheme by holding that Sombrotto and Gonzales violated the district court's consent decree, which prohibited them from having any further association with the IBT. In other cases, however, racketeers successfully decertified the old (now cleaned-up) union and reestablished mob dominance over the same workers through a new independent union.

HOW ORGANIZED CRIME CONSOLIDATES ITS UNION CONTROL

LCN achieved working control of a local union by placing one of its members or an associate in the position of top union official or by intimidating or recruiting a union leader to do its bidding. The next step was to consolidate control through a combination of sticks and carrots. Any union member who dared to challenge the mob faced loss of employment and/or violent reprisals. There are many examples of

0307

"dissidents" beaten at union meetings, their homes firebombed, and themselves murdered for criticizing the union's administration or seeking union office. (See Chapter 6, Table 6-1.)

Dissidents could be expelled from the union on some trumped-up grounds. If the dissident depended on the union for job assignments through a hiring hall, as is the case in the construction industry and in longshoring, he would find himself unemployed. In industries where employers do their own hiring, a mob figure who controlled the union could tell the employer that one of his employees had become a thorn in the union's side and that the union would like to see that employee fired. The employer would likely comply in order to avoid labor trouble. Obviously, the fired employee would not get the union's assistance in challenging the dismissal. Judge Harold Ackerman described organized crime's complete lock on IBT Local 560, pointing out that LCN capo and Local 560 president, Tony Provenzano, had created a reign of terror by, among other things, killing two "dissident" Local 560 members. The message to the membership could not have been clearer: one opposed the union's leadership at risk of life and limb.[35]

The mob figures who control a union local have many "carrots" to distribute. Friends and supporters can be appointed as business agents and shop stewards or assigned no-show or high-paying jobs or lucrative service contracts. Treating the union treasury as a trough, corrupt leader can offer supporters all sorts of perks, including high salaries, no-show jobs, cars, trips, union reimbursement of personal expenses, loans, and the like. If the union operates a hiring hall, friends and supporters can be assigned regular work and the easiest and most desirable jobs. For example, the New York City District Council of Carpenters Union used a special "pool" of workers designated by the Genovese crime family from which to choose carpenters for high-paying jobs at the Javits Exhibition Center.[36] Once the mob took hold of a union, it proved nearly impossible to overthrow.

HOW LCN USES THE UNION AS A CASH COW

Labor racketeering has proved very profitable to organized crime, especially since the 1940s, when unions began bargaining to have employers automatically deduct union dues from union members' paychecks.[37] With the "check-off" in place, unions received a monthly flow

0308

of revenue without lifting a finger. A corrupt union official and the organized crime family that controlled him could take advantage of the ever-replenishing union treasury. Dues could be increased without regard for rank-and-file opposition.

There were many legal and illegal ways for labor racketeers to pull money out of a union. First, they could draw bloated and multiple salaries, a kind of legalized graft. Some union constitutions require a membership vote on officers' salaries; however, LCN treated this rule as a formality or simply ignored it. In addition to their salaries, corrupt union officials enjoyed use of union-owned cars, planes, and boats. Frequently the union also provided overpaid jobs to family members, friends, and mistresses. They also handed out no-show jobs.

Second, mob leaders could embezzle union funds. "Their unions" either maintained no financial records or kept such sloppy records that even if financial chicanery were discovered, embezzlement was practically impossible to prove. Labor racketeering became much more lucrative in the 1940s and 1950s with the rise of multimillion- (and soon, multibillion-) dollar union pension and welfare funds.[38] It became commonplace for collective bargaining agreements to impose an obligation on the employer to make payments to such funds on behalf of the employees. According to federal law, the funds would be managed by equal numbers of union-designated and employer-designated trustees. In practice, the employer appointed trustees deferred to the union trustees because (in contrast with the union) having made the contributions, the employer had little interest in how the pension money was invested or spent. Racketeers embezzled the assets of pension and welfare funds by disguising thefts as "loans," payments for nonexistent goods and services, as inflated payments for goods and services.

Third, labor racketeers could use their union position to solicit bribes from employers who wished to obtain relief from expensive collective bargaining agreement provisions. For the right price, corrupt union officials would allow employers to operate a "double breasted shop" (one employing nonunion as well as union employees), or even to operate completely nonunion. Corrupt union officials typically sold their members' rights to overtime pay, pension and welfare contributions, and to jurisdiction over certain work.

Fourth, labor racketeers could rake in money by means of the "strike insurance racket" or labor peace extortion by threatening employers with labor problems. In many businesses, any disruption of

0309

operations is enormously expensive; prolonged disruption can mean bankruptcy.

Fifth, labor racketeers could make money by using the union to set up and police employer cartels. Once the union represented workers in all or most of the firms operating in a particular industry, the organized crime faction that controlled the union could organize an employers' association. Employers' dues were passed along to Cosa Nostra, but the employers got something important for their money: the union could effectively prevent firms that were not association members from participating in the industry. If a firm tried to challenge the cartel, it would find itself beset by labor troubles and/or sabotage.[39]

Sixth, from control of an employer cartel, it was only a small step for LCN members and associates to start up, buy, or strong-arm their way into a firm doing business in the cartelized industry. The LCN-owned firms would have a competitive advantage over other cartel members: they would not have to hire union employees or, if they did, they could pay them below union wages or fail to make required contributions to union pension and welfare funds. Another scheme was to have their employees represented by a low-wage local.

Seventh, LCN could direct employers to purchase certain goods and services from mob-owned or mob-controlled supply companies. An employer who refused might face labor troubles or worse.

THE VALUE OF LABOR RACKETEERING

There is no audit to tell us how lucrative labor racketeering has been for the mob, but there are bits of evidence here and there. For example, around the turn of the century, Robert Brindell was the highest paid union official in the country; his graft is said to have netted more than $500,000 a year ($5.2 million in 2003 dollars).[40] Thomas Dewey's 1930s investigation into corruption within the restaurant industry found that racketeers embezzled one-third of union members' dues as well as $75,000 ($1 million in 2003 dollars) from Restaurant Workers Local 6; $45,000 ($600,000 in 2003 dollars) from Local 322; and $120,000 ($1.6 million in 2003 dollars) from an employer association.[41] Additionally, the racketeers received about $150,000 ($2 million in 2003 dollars) from restaurant owners. In the 1960s, Genovese crime family capo Tony Provenzano was the nation's highest-paid union official. Additional

0310

pension and financial packages were provided for him after his murder conviction.[42] In Peter Maas's biography of Sammy "the Bull" Gravano (onetime Gambino crime family underboss), Gravano states that labor racketeering could double the profit margin on a construction contract, from 15 to 30 percent, because mob-owned contractors didn't have to pay union wages or benefits.[43] A 1986 *Fortune* magazine article listing the fifty wealthiest underworld figures in the United States identified *unions* or *construction* (always union related) as a key source of income for half of these individuals (see Table 2-2 at the end of chapter).

Labor racketeering has given Cosa Nostra its special character as an organized crime syndicate. Control over labor put LCN figures in close touch with businessmen who employed the captive unions' members. The businessmen did not have the option of refusing to meet with, deal with, and get along with union officials. Moreover, when businessmen ran into labor problems, they naturally reached out to the only individuals who could fix those problems: the local LCN bosses. Because an LCN boss had influence in a number of unions, he could solve jurisdictional disputes or rein in an obstreperous union official. Their union influence turned LCN bosses into power brokers.

Labor racketeering also put LCN bosses in touch with politicians. In most big cities, at least those in the East and Midwest, organized labor was a powerful political force for much of the twentieth century. Labor endorsements were avidly sought; in addition, a supportive labor union would provide campaign contributions and manpower to distribute campaign literature and make phone calls. Union support also provided corrupt opportunities for personal enrichment. By contrast, labor opposition would practically assure defeat. Moreover, labor problems that make city life unpleasant or inconvenient during an incumbent's term, especially near election time, could very much weaken a mayor's or other public official's appeal. For all these reasons, it was important for urban politicians to curry favor with organized crime figures who were influential in the labor movement.

CONCLUSION

Labor racketeering schemes were well established by the late nineteenth and early twentieth centuries. The early twentieth-century Italian American organized crime groups were drawn to labor racketeering

0311

just as were their Jewish and Irish counterparts. As the bridge between underworld vice rackets and upper-world businesses and politics, labor racketeering turned LCN bosses into urban, regional, and even national power brokers. Craft unions especially could easily be taken over by mobsters with the capacity and reputation for violence. The racketeering potential of labor unions was high. A regular revenue stream for organized crime could be generated by union salaries, perks, extortions, bribes, embezzlements, and frauds. By the 1940s, as Cosa Nostra emerged as the dominant American organized crime syndicate, labor racketeering was an important part of LCN crime families' operations. It also provided the route by which Cosa Nostra become part of the power elite in twentieth-century urban America. In fact, it is labor racketeering that distinguishes the Cosa Nostra organized crime families from other contemporary organized crime groups such as biker gangs, street gangs, and drug-trafficking organizations.

3

President's Commission on Organized Crime

My family [Genovese] made a lot of money from gambling and the numbers rackets. We got money from gambling, but our real power, our real strength, came from the unions. With the unions behind us, we could shut down the city, or the country for that matter, if we needed to get our way. Our brugad [crime family] controlled a number of different unions, some of which I personally dealt with, some of which I knew about from other amico nostra. In some cases, we got money from our dealings with the unions, in some cases we got favors such as jobs for friends and relatives—but, most importantly, in all cases, we got power over every businessman in New York. With the unions behind us, we could make or break the construction industry, the garment business, the docks, to name but a few.

—Vincent Cafaro, quoted from an affidavit filed with Senate Permanent Subcommittee on Investigations, April 1988, 16–17

The Commission believes that the first step in ending labor racketeering is a recognition that the problem is both persistent and pervasive throughout many areas of the United States. During the past 25 years, law enforcement agencies have often successfully used the tools available to them to prosecute individual labor racketeers. But . . . criminal prosecutions alone are insufficient. Because of its insidious and systemic nature, labor racketeering is not easily deterred by prosecutorial efforts that merely "count bodies" as a measure of success. Instead, a new strategy must be developed to bankrupt individual mobsters and to discourage union officers, employers, and public officials from accommodating organized crime.

—President's Commission on Organized Crime, *The Edge: Organized Crime, Business, and Labor Unions, Section 1: Overview and Summary of Recommendations*, President's Commission on Organized Crime (1986), 5

0316

How extensive has labor racketeering been in the United States? How extensive is it now? These are not easy questions. There are hundreds of national/international unions and thousands of local unions. New unions are established, old ones die, some combine—hence, the number of unions varies considerably over time. Moreover, the concepts of "controlled" or "influenced" by organized crime are not self-defining. In some local unions, labor racketeers (organized crime members or associates) have held high office and controlled day-to-day administration. In other unions, key officers, though not LCN members themselves, have been the pawns of organized crime members or associates. Ideally, students of labor racketeering would have an up-to-date list of all unions which, to some extent, have been controlled or influenced by organized crime. Unfortunately, there is no such list. We do not have accurate information on possible organized crime influence in even a substantial minority of unions. Moreover, even knowledge of a percentage of racketeer-ridden unions would not tell the whole story. We would surely want to know what percentage of all union members belong to mob-infected unions.

Suppose a national/international union is run by labor racketeers and allows those racketeers to dominate key regional and local affiliates, to plunder its treasury and its pension and welfare funds, and to compromise its collective bargaining and contract enforcement. For purposes of assessing the problem should we conclude that all locals of that international union, and all members of all those locals are victims of labor racketeering? For my purposes, it is not necessary to pinpoint the percentages of unions or union members who, at any time, have been dominated, controlled, or affected by Cosa Nostra labor racketeers. The purpose of this chapter and the next is to establish that the problem is widespread, deep, persistent, and significant. This chapter examines the extent of labor racketeering through the lens of the President's Commission on Organized Crime, which was appointed in 1983. The next chapter presents a snapshot of labor racketeering in New York City during approximately the same time period.

CREATION OF THE PRESIDENT'S COMMISSION ON ORGANIZED CRIME

In 1983, President Ronald Reagan charged his eighteen appointees to the newly established President's Commission on Organized Crime

0317

(PCOC) to provide "a full and complete national and region-by-region analysis of the nation's organized crime problems, including information on its participants, an evaluation of applicable law and responses to the issue, and recommendations for future action." He named Irving Kaufman, a U.S. Second Circuit Court of Appeals judge, as chairman. The other commissioners included Senator Strom Thurman (R.-S.C.), Congressman Peter Rodino (D.-N.J.), law enforcement professionals with experience. Combating organized crime, a representative of organized labor, several academics, and the senior editor of *Readers Digest.* The commission heard testimony from FBI and Department of Labor investigators, Department of Justice lawyers, and labor leaders. The research staff undertook a comprehensive review of prior congressional investigations, hearings, and reports. The PCOC produced a series of reports, including volumes on gambling, drug trafficking, and money laundering. It devoted a thick volume, *The Edge,* to organized crime's exploitation of labor unions.

Released on March 1, 1986, *The Edge* focused mainly on four international unions with the most extensively documented history of labor racketeering: the International Brotherhood of Teamsters (IBT), the Hotel and Restaurant Employees International Union (HERE), the Laborers' International Union of America (LIUNA), and the International Longshoremen's Association (ILA). It also focused attention on labor racketeering within independent unions. Widespread labor racketeering, according to the PCOC, was distorting the nation's economy and making a mockery of union members' rights and collective bargaining agreements. Organized crime's influence over labor unions provided businesses owned, dominated, or favored by organized crime an edge over competitors.

THE TEAMSTERS

The PCOC charged that "corruption and the Teamsters [are] synonymous" and that, since the 1950s, the Teamsters had been "firmly under the influence of organized crime."[1] John Dioguardi, a capo in the Lucchese crime family, and a power broker with influence in several unions (including United Automobile Workers-AFL), was one of Jimmy Hoffa's key supporters in his rise to the IBT presidency. Hoffa gave Dioguardi charters for several New York area IBT "paper locals" (that

0318

is, locals without any members, but whose officials were either made-members or associates of the Mafia) in exchange for Dioguardi's using those locals to support Hoffa's efforts to control the important New York area IBT Joint Council, the support of which he needed to become IBT general president. According to the PCOC, organized crime has continued to maintain a firm grip on the IBT long after Hoffa's reign, using intimidation and occasional acts of violence "to quell all forms of dissent, criticism, and opposition."[2]

The Edge explained that IBT presidents "[Jimmy] Hoffa and [Roy] Williams were indisputably direct instruments of organized crime," and that [Frank] Fitzsimmons held his office by "establish[ing] a measure of détente whereby he was allowed to head the union, while organized crime stole the workers' benefit funds and used the union for numerous criminal ventures."[3] At the time of the Commission's investigation, former IBT General President Roy Williams, was cooperating with the government. Having previously been convicted of attempting to bribe Senator Howard Cannon (D.-Nev.) to vote against trucking deregulation, Williams hoped to shorten his prison sentence by serving as a cooperating witness. He testified that "every big [Teamster] local union . . . had some connection with organized crime."[4] Williams himself had been controlled by Kansas City Cosa Nostra boss Nick Civella, who had quarterbacked Williams's campaign for the IBT presidency by obtaining support from organized crime bosses around the country. Williams testified that incumbent IBT president, Jackie Presser (whose father, William Presser, was a Cleveland organized crime family associate and an IBT Central States Pension Fund Trustee until he was forced to resign from the IBT in 1976), depended upon organized crime support for his election.[5] Presser had also served as an FBI informant, helping the FBI to make cases against his political rivals in the union.

The most spectacular charge in *The Edge* was that Presser was controlled by organized crime. Presser was one of the nation's most powerful labor leaders and one of the only ones to have endorsed Reagan's presidential candidacy. The PCOC criticized Reagan's close ties with Presser: "[I]n the current administration, long delays in reaching a resolution of a DOJ investigation of Presser [could raise a concern] whether Presser's support of the administration in the 1980 and 1984 election campaigns influenced the conduct of the investigation."

The PCOC traced organized crime's control over the IBT international union to its control over key IBT locals. It documented a relation-

0319

ship between Cosa Nostra families and thirty-six IBT locals, one joint council, and a conference (a regional association of joint councils).[6] LCN converted control of locals into control of whole business sectors. For example, Gambino crime family associate Bernard Adelstein's decades-long control of IBT Local 813 was the key to the mob's domination of New York City's waste-hauling industry.

Mob-controlled union locals elected mob-controlled officers who chose mob-controlled convention delegates. The mob-controlled delegates ratified the decisions and proposals of mob-controlled international presidents, vice-presidents, and general executive board (GEB) members. Because the IBT's general president and GEB members were chosen by mob-controlled convention delegates and not by the rank-and-file members, the PCOC judged it "unlikely . . . that a reform-minded Teamster president can be elected in the near future."[7]

The PCOC explained how the Cosa Nostra organized crime families' influence in the IBT provided leverage over tens of thousands of businesses dependent upon truck deliveries; the leverage could be converted into cash through extortion, solicitation of bribes, and no-show jobs. The mobsters also enriched themselves by siphoning money from union coffers, taking kickbacks for sweetheart service contracts, and arranging loans from IBT pension and benefit funds. LCN associates like Allen Dorfman and Sidney Korshack (Chicago) and Bill Presser (Cleveland) managed the IBT Central States Pension Fund (CSPF) for the benefit of organized crime. A typical pension fund invested 5 to 10 percent of its assets in real estate; the CSPF invested more than 70 percent in real estate, much of it in mob-sponsored Las Vegas casinos. Despite the 1976 settlement of the government's challenge to the fund's governance that put control over its investments in the hands of an institutional fiduciary, organized crime continued to plunder the fund. Moreover, Dorfman continued to draw substantial fees for handling the fund's insurance business.*

The Edge concluded pessimistically that "no single remedy is likely to restore even a measure of true union democracy and independent leadership to the IBT."[8] It urged the Department of Justice to purge corruption and racketeering from the IBT through criminal prosecutions,

* Dorfman was murdered while awaiting trial on charges arising out of the FBI's STRAWMAN investigation, which focused on a conspiracy to use the Central States Pension Fund to secure interests in, and skim profits from, Las Vegas casinos. (Jacobs, *Busting the Mob,* 25.)

civil actions, administrative proceedings, and civil RICO trusteeships. Even then, the PCOC foresaw only a "modest hope of success" in wresting the IBT from the grip of organized crime.[9]

HOTEL EMPLOYERS AND RESTAURANT EMPLOYEES INTERNATIONAL UNION

According to the PCOC, LCN had exerted powerful influence over HEREIU since National Prohibition (1920–1933). The murder of a union member at the union's 1936 national convention precipitated an investigation by New York City Special Prosecutor Thomas Dewey, who uncovered rampant racketeering in restaurant industry unions and employer associations. His investigation resulted in the criminal conviction of three union officials, the suspension of a union local, and the expulsion of several union officials.[10] The McClellan Committee's hearings (1957–1959) revealed organized crime's pervasive influence in Chicago's restaurant industry through control of three HEREIU locals. Thirty years later, the PCOC charged that HEREIU has "a documented relationship with the Chicago 'Outfit' of La Cosa Nostra at the international level and [is] subject to the influence of the Gambino, Colombo, and Philadelphia La Cosa Nostra families at the local level."[11]

The PCOC drew heavily on the Senate Permanent Subcommittee on Investigations 1981–1984 hearings. One of the subcommittee's reports stated:

> The Hotel and Restaurant Employees Union represents the converse of the International Brotherhood of Teamsters. In the Teamsters, the corruption and organized crime influence are a result of the massive infiltration of the local unions. The HEREIU, on the other hand, has been infiltrated from the top. This occurred as a result of the power wielded in the Chicago area locals and the joint executive board by Joey Aiuppa, the underboss of the Chicago Syndicate. Edward Hanley was elected president of [HEREIU] in 1973 because of the power and influence of Aiuppa and the Chicago mob. This is not to say that none of the locals are hoodlum controlled or that Hanley is the first corrupt president of the union. Nevertheless, Ed Hanley represents the classic example of an organized crime takeover of a major union.[12]

0321

FBI officials told the Senate Permanent Subcommittee that HEREIU was forcing its locals to put their pension and benefit plans under the international's control to facilitate their exploitation. President Hanley reportedly said that he was "going to be able to loan out that money [pension and welfare funds] just like the Teamsters do."[13] HEREIU officials called to testify before the Senate Permanent Subcommittee repeatedly refused to answer questions. When Senator William Roth (R.-Del.) asked HEREIU Local 54 President Frank Gerace (an alleged associate of the Philadelphia Bruno/Scarfo crime family) whether he subscribed to the 1950s AFL-CIO Ethical Practices Committee's prohibition on labor officials taking the Fifth Amendment to avoid congressional scrutiny, Gerace refused to answer on Fifth Amendment grounds. The hearings also established that HEREIU officials had raised bail for Nicodemo Scarfo, boss of Philadelphia's Cosa Nostra crime family. The subcommittee's final report concluded that "many of the officers of HEREIU have consistently accorded a higher priority to their own personal and financial interests than to the interests of the rank and file membership."[14]

PCOC branded HEREIU corrupt to the core. It charged that HEREIU's president Edward Hanley had been handpicked by Tony Accardo, boss of the Chicago Outfit. Under Hanley's regime, mob figures obtained union loans and jobs and feasted on the union's assets. When the subcommittee called Hanley to testify about HEREIU's ties to organized crime, he invoked his Fifth Amendment right against compelled self-incrimination.[15]

Due to HEREIU's centralized organization, Cosa Nostra's control over Hanley provided significant influence over numerous HEREIU locals. For example, since 1978, Local 54 in Atlantic City had been dominated by different factions of Philadelphia's Bruno/Scarfo crime family. Several of Local 54's officers had criminal records for murder, arson, extortion, drugs, bribes, kickbacks, and racketeering. (The struggle for control of Local 54 led to the 1980 murder of John McCullough, president of Philadelphia Roofers Union Local 30. He was shot to death at his home allegedly for competing with HEREIU Local 54 to organize Atlantic City security guards.)[16] Local 54's dental and welfare funds were controlled by organized crime. The local also corrupted businesses and the local government in Atlantic City.

In 1982, the New Jersey Casino Control Commission prohibited Local 54 from collecting dues from casino employees because the influence of organized crime made the local unfit to represent the casino

workers' interests. Ultimately, the U.S. Supreme Court upheld that decision, observing that "[t]he advent of casino gambling in New Jersey was heralded with great expectations for the economic revitalization of the Atlantic City region, but with equally great fears for the potential for the infiltration by organized crime. . . . Congress has indicated both that employees do not have an unqualified right to choose their union officials and that certain state disqualification requirements are compatible with [the National Labor Relations Act]."[17]

The PCOC found that HEREIU Locals 6 and 100 (New York City) had been chartered and governed for the convenience of the Colombo and Gambino crime families. What appeared to some observers as a jurisdictional dispute between these two unions, in fact represented the Colombo and Gambino crime families' conflict over the division of New York's restaurant workers into locals controlled by the two crime families. In an intercepted conversation, Paul Castellano, boss of the Gambino crime family, explained that the Chicago Outfit "own[ed] the international," and that the Colombo crime family controlled the other local.[18]

LABORERS' INTERNATIONAL UNION OF NORTH AMERICA (LIUNA)

The PCOC found that organized crime had a documented relationship with at least twenty-six Laborers' International Union locals, three district councils, and the international union. The mob defrauded the union's benefits funds, extracted no-show jobs from LIUNA employers, drew reimbursements for fictitious business expenses, and operated construction industry cartels in New York City and Chicago (and probably other cities as well). The commission complained that the federal government had never seriously attempted to attack this labor racketeering.[19]

According to the PCOC, "[O]rganized crime exerts its influence [in LIUNA] principally through top officers who are associates of organized crime."[20] Angelo Fosco, LIUNA's general president from 1968 to 1975 (whose father, Peter Fosco, was an Al Capone associate and Angelo's predecessor as general president) was closely associated with the Chicago Outfit. The PCOC charged that Fosco provided jobs to organized crime members and associates and generally followed organized crime's directions. In 1982, Fosco and Tony Accardo, boss of

0323

the Chicago LCN family were tried (and acquitted) for defrauding LIUNA's health and welfare funds.

The PCOC asserted that LCN also controlled LIUNA Vice-President John Serpico, an important LIUNA figure in Chicago. "Serpico admitted that he is a friend or personal acquaintance of virtually every important organized crime leader in Chicago."[21] He was also active politically. For example, he received successive gubernatorial appointments to serve as chairman of the Illinois International Port District. According to the PCOC, the Outfit used LIUNA's international officers to gain access to Chicago mayors and Illinois governors.[22]

The PCOC provided numerous examples of how labor racketeers act contrary to the interests of labor unions and members. When the commission questioned Vice-President Serpico about John Fecarotta's duties as a LIUNA business agent and organizer, Serpico could not name a single Fecarotta contribution to Local 8. Fecarotta himself could not remember having done anything for the union; did not know anything about the union's collective bargaining agreements or pension plans; did not know what information was on the union membership cards he supposedly distributed; and did not know the names of management employees or union officers with whom he supposedly worked. Clearly, Fecarotta was a "ghost employee" whose union position was a cover for his criminal career.[23]

Organized crime controlled LIUNA's Chicago Locals 1, 5, and 8. Local 1's president, Vincent Solano, territorial boss for the Outfit's north-side operations, used union headquarters as a "contact point for his criminal organization."[24] Local 5's president was also a high-ranking Cosa Nostra figure. The PCOC called Local 8, Serpico's home local, "ground zero for an organized crime-led LIUNA benefit plan scam."[25]

Organized crime members and their associates siphoned money from LIUNA's Central States Joint Health Board and Welfare Trust Fund. The dental plan was egregiously corrupt; 68 percent of its budget went to "administrative costs" rather than to services. LIUNA's treasury paid lawyers' fees on behalf of officials charged with looting the union as well as fees to private investigators for monitoring the federal government's investigation of LIUNA.[26]

According to the PCOC, the structure of LIUNA's governance facilitated organized crime's control. It was nearly impossible for an opposition candidate to be elected to a union office because LIUNA's executive board members were elected on a nationwide basis; no dissident

could mount a nationwide campaign to defeat candidates put forward by the incumbent regime. When union offices became vacant, the mob-dominated executive board appointed replacements.

The PCOC found that Cosa Nostra used threats and intimidation to deter members from running for office against the ruling clique's candidates. It alleged that General President Angelo Fosco personally threatened to kill a potential challenger. In an intercepted conversation, LIUNA's international secretary-treasurer (and later its president), Arthur E. Coia, told a colleague that LIUNA would always be controlled by the "Italians."[27] At the 1981 LIUNA convention, a candidate who tried to speak in opposition to the ruling clique was assaulted on the spot. The PCOC pessimistically concluded that there was "little chance that the LIUNA membership will be able to eliminate organized crime's influence or control over their union as long as the governance structure remains intact. The commission believes that federal law enforcement agencies should give high priority to investigations of LIUNA and its locals."[28]

THE INTERNATIONAL LONGSHOREMEN'S ASSOCIATION

Drawing on FBI investigations, prosecutions, and legislative hearings, the PCOC called the International Longshoremen's Association "virtually a synonym for organized crime in the labor movement."[29] Ships entering harbors, day or night, need to be unloaded and reloaded quickly. Delay is expensive, even ruinous. Thus, the longshoremen have enormous leverage over shippers, who are extorted for labor peace payoffs. (The containerization of seaborne cargo since the late 1950s undermined this leverage.) Labor racketeers also enlisted port employees to facilitate cargo theft, solicited illegal labor payoffs, and extorted stevedores (companies that load and unload seaborne cargo). "Throughout its history, the international has done little, if anything, to disturb La Cosa Nostra influence in its locals."[30]

Cosa Nostra became the primary power on the New York harbor waterfront in 1937, when Anthony Anastasio (a.k.a. Anastasia) took control of the six New York harbor locals. (His brother, Albert Anastasia, was head of the infamous Murder Incorporated gang and boss of the crime group that later came to be known as the Gambino crime family.) "Under Anastasio, organized pilferage, strike insurance, kickbacks, and loansharking on the piers reached unprecedented levels."[31]

[162.10.217.184] Project MUSE (2026-06-15 01:41 GMT) University of Queensland

Anastasio delegated control of the New York City locals to various organized crime members and associates.

The 1953 New York State Crime Commission report on labor racketeering in New York City's harbor led to the creation of the New York–New Jersey Waterfront Commission. In a case involving the commission, the U.S. Supreme Court observed:

> For years the New York waterfront presented a notoriously serious situation. [The New York Crime Commission] reported that the skulduggeries on the waterfront were largely due to the domination . . . of the International Longshoremen's Association. . . . Its employment practices easily led to corruption, and many of its officials particpated in dishonesties. The presence on the waterfront of convicted felons in many influential positions was an important causative factor in this appalling situation.[32]

Despite the Waterfront Commission's efforts, the situation did not improve. The PCOC charged that Cosa Nostra completely controlled Thomas (Teddy) Gleason, the ILA's president from 1963 to 1986.[33] In the New York–New Jersey port, the Gambino crime family controlled the ILA international union.* The Gambinos controlled the New York side and the Genoveses controlled the New Jersey side. After Anastasio died in 1963, control of ILA Local 1814 passed to Anthony Scotto, a son-in-law who, until he was sent to prison in 1979, flourished in the union and as a capo in the Gambino crime family. Scotto was also influential in New York City politics, where he was a major fund-raiser for Democratic Party candidates.

In 1975, the FBI launched UNIRAC, an investigation of ILA racketeering in the ports of New York City, Miami, Wilmington, Charleston, and Mobile. Using undercover agents and electronic intercepts, the FBI uncovered extensive labor racketeering up and down the East Coast and on the Gulf Coast. Ultimately, UNIRAC led to the conviction of more than one hundred persons, including twenty ILA leaders, among them Anthony Scotto and Michael Clemente, both of whom held positions in the ILA and Cosa Nostra. In 1979, Scotto was convicted of taking more than $200,000 in payoffs from employers. New York's Gover-

* The PCOC report stated that the Genovese crime family controlled the Manhattan locals and the union's international. This is likely an error. The Gambino family was known to control these locals and the international.

0326

nor Hugh Carey and two former New York City mayors, John Lindsay and Robert Wagner, testified on his behalf at the sentencing hearing. (Scotto raised $1 million for Carey's 1974 campaign and $50,000 for Mario Cuomo.) When Scotto was sent to prison, Anthony "Sonny" Ciccone succeeded him as Gambino capo and ILA vice-president.[34] The transition was seamless.

The PCOC complained that while UNIRAC was "a very successful operation demonstrating law enforcement skill and tenacity," subsequently there had been only sporadic investigations and prosecutions, leaving organized crime's influence intact all along the eastern seaboard. In February 1981, the Senate Permanent Subcommittee on Investigations held hearings on waterfront corruption. Its report stated:

> Witnesses testified that payoffs were a part of virtually every aspect of the commercial life of a port. Payoffs insured the award of work contracts and continued contracts already awarded. Payoffs were made to insure labor peace and allow management to avoid future strikes. Payoffs were made to control a racket in workmen's compensation claims. Payoffs were made to expand business activity into new ports and to enable companies to circumvent ILA work requirements.
>
> Organized crime exerted significant influence over the ILA and many shipping companies. Some companies learned how to prosper in the corrupt waterfront environment. They treat payoffs to LCN as a cost of doing business.
>
> The free enterprise system has been thrown off balance. Contracts were not awarded on the basis of merit. The low bid did not beat the competition. Profitability was not based on efficiency and hard work but rather on bribery, extortion and underworld connections. The combination of these corrupt practices was a recipe for inflationary costs and economic decline. Much of the corruption on the waterfront stemmed from organized crime's control over the ILA, a condition that has existed for at least 30 years.[35]

Pointing to the 1984 Senate Permanent Subcommittee on Investigations' findings, the PCOC concluded that, despite its successes, UNIRAC had not purged organized crime from the ports. "Corrupt practices . . . already have begun to return to the Atlantic and Gulf Coast docks. What is needed, then, is continued scrutiny of the maritime industry by government agencies."[36]

0327

INDEPENDENTS AND OTHER UNIONS

Independent unions are labor organizations that are not affiliated with a national/international union or with the AFL-CIO. Therefore, they are free to "raid" AFL-CIO member unions. The McClellan Committee found that independent unions were particularly susceptible to organized crime's influence because their unaffiliated status made them especially difficult to monitor and police. The PCOC reached a similar conclusion: "Because such unions are not part of a larger organization that might provide supervision, labor racketeers are free to create and strategically maneuver them with complete freedom."[37] The PCOC cited Daniel Cunningham's control of the Allied Union of Security Guards and Special Police (Allied) as an example of how an independent union can become a "wholly-owned subsidiary of organized crime."[38]

Allied was founded in the 1960s by well-known racketeer Benjamin Ross and Genovese crime family soldier Joseph Agone.[39] After Ross's imprisonment, Allied presidents maintained the union's close ties to the Genovese family. In 1974, Cunningham literally purchased his position as head of Allied, using $90,000 to buy out the incumbent president's term. The Genovese crime family supported him and there was no rank-and-file vote. In return, he placed the union's pension and welfare funds at organized crime's disposal.

Cunningham ignored the union's constitution and federal labor law. No elections were held during his tenure. He appointed his cronies to top positions and increased his salary threefold. His methods for exploiting the benefit funds included reimbursing his associates for fake expenses, taking kickbacks from no-show employees and from employers and benefit providers, and making payouts to fictitious employees and service providers. In 1983, Cunningham was convicted of racketeering, bribery, embezzlement, and obstruction of justice. The PCOC concluded that the unskilled and unsophisticated workers who belong to independent unions face an especially high risk of exploitation by racketeers, exacerbated by the government's failure to investigate independent unions.

The PCOC devoted significant attention to racketeering within the New York City meat, fish, and poultry industry. Organized crime families controlled local unions affiliated with the Amalgamated Meat Cutters and Butcher Workmen of North America. They used that control to

0328

set themselves up in wholesale and retail businesses where they sometimes profited from selling fraudulently dated or tainted meat. They also bribed government inspectors to falsely grade their meat products.

While the Bonanno and Lucchese families were also involved in the meat industry, the PCOC chose to focus on the Gambino family. Paul Castellano owned Dial Poultry, which distributed chickens throughout the New York City metropolitan area. His brother, Peter Castellano, operated Quarex, an even wider distributor.[40] Both of these businesses demonstrated how LCN can exploit its union power to achieve a competitive advantage for its own companies.

PCOC CRITICISMS OF THE GOVERNMENT AND THE AFL-CIO

The PCOC strongly criticized law enforcement's efforts to combat labor racketeering. It pessimistically noted that "the government's efforts to remove organized crime's influence over unions and legitimate business have been largely ineffective. This situation does not stem simply from too few laws or unavailable remedies. It arises from a lack of political will, a lack of fixed responsibility, and a lack of a national plan of attack."[41] The PCOC concluded with a long list of recommendations.

The PCOC criticized the DOL for failing to embrace law enforcement goals, being susceptible to political interference, and failing to effectively enforce the Employee Retirement Income Security Act. It criticized the DOJ for failing to utilize civil RICO against labor racketeering. In contrast, it praised some states (for example, Florida and Arizona) for aggressively using their own racketeering statutes. Finally, the PCOC criticized the National Labor Relations Board for not having a strategy to deal with corrupt institutions; the IRS for not giving significant priority to analyzing and investigating suspicious deductions and claimed expenses, and the AFL-CIO for abdicating responsibility.

THE PCOC'S RECOMMENDATIONS

The PCOC divided its recommendations into five parts: general national strategy; protection of workers' rights; the private sector; administration of justice; and state and local government.

General National Strategy

- A greater political will to attack labor racketeering, a national plan of attack, and an understanding of the need to confront entire organized cartels rather than individual criminals.
- An end to piecemeal division of resources and accountability.
- Task Forces able to carry out industry-by-industry campaigns.
- DOJ must take a more aggressive stance towards organized crime's labor racketeering.
- The DOL must play an active role in combating racketeering. It must consolidate enforcement and oversight of employee benefit plans and labor unions.

Protect Workers' Rights

- Labor Management Relations Act should be amended to make it an unfair labor practice for a union to be controlled by or to assist organized crime. The NLRB should view racketeering activity within the framework of violations which it recognizes. Because the NLRB lacks the resources for investigations, DOJ should provide investigative assistance.
- Congress should pass a statute specifically making illegal the sale of a union, union office or union members' right to work.
- Congress should give the Secretary of Labor power to act on behalf of union members when officers breach fiduciary obligations.
- Congress should make false reporting of union activities a felony.
- Congress should amend the Hobbs Act to prohibit violence regardless of whether a "legitimate union activity or objective" can be claimed.
- The DOL should computerize and more widely disperse its data.
- The Secretary of Labor should develop guidelines on unions' excessive administrative expenses.
- The Landrum-Griffin Act should be amended to permit the DOL to set aside union elections that clearly violate basic legal conduct (violence, destruction of ballots, etc.) regardless of whether (as current law requires) it can reach a finding that the violation would have changed the election's outcome.
- The IRS should reform its enforcement policies to confront labor racketeering. The IRS should step in to actively disallow excessive salaries agreed to in collective bargaining agreements for employees assigned to union business. Employee benefit reports should be processed more quickly to eliminate unreasonable delays and backlogs.

The Private Sector

- The labor movement needs to confront organized crime's influence in business and labor.
- The AFL-CIO needs to apply its code of ethical practices.
- The AFL-CIO should require that member unions file annual reports describing their measures to uphold and enforce the ethical practices codes. Reports should list all convictions and indictments of union officers and employees, fund trustees, consultants and service providers.
- AFL-CIO Ethical Practices Committee should become active and meet regularly.
- Unions not affiliated with the AFL-CIO should establish similar codes.
- Corporations should create and enforce codes of conduct that preclude doing business with organized crime.

Administration of Justice

- Tougher sentences for convicted labor racketeers.

State and Local Government

- State and local government should cooperate to protect the waterfront from labor racketeering.
- Local and state governments should not award government contracts to suspicious businesses. This is a low cost method for keeping organized crime out of the market place.

REACTION TO *THE EDGE*

The PCOC's book-length report, *The Edge,* was well received by the media, earning praise for having shone a light on organized crime, corrupted unions, and tainted businesses. The *New York Times* said:

> The report is not a how-to-do it manual. Its aim is to lift the consciousness of our citizens about what is going on around them, stealthily and adversely affecting their lives and fortunes. In the collision between society and organized crime, sunlight and the exposure that it generates are potent weapons. The Commission organized its affairs to generate as much light as possible with the resources put at its disposal.[42]

0331

The AFL-CIO strongly criticized *The Edge,* especially its recommendation that the AFL-CIO take a more active role in ridding its affiliated unions of organized crime's influence. President Lane Kirkland stated, "If the labor movement is afflicted by racketeers, that points to a grievous failure by law enforcement authorities. . . . Corruption and criminality are attributes of individuals, not organizations." Kirkland denounced the commission's recommendations as "an Orwellian collection of proposals and in my view, a virtual blueprint for a police state."[43]

CONCLUSION

This chapter and Chapter 4 provide perspectives on the magnitude of the labor racketeering problem. I believe that a fair reading of the record would persuade an open-minded reader that the problem is significant. Over the course of the twentieth century, organized crime infiltrated and exercised influence, even control, over the nation's largest private-sector labor union and several other major unions. In addition, organized crime exerted control over hundreds of union locals. For example, approximately eighty Teamster locals (out of seven hundred) have had documented or alleged connection to organized crime.* Of course, in the great majority of Teamster locals, there was no organized crime presence. However, because of organized crime's influence over the IBT at the national/international level, over its largest pension and welfare fund, and over a significant number of its locals, labor racketeering almost certainly touched the lives of practically all Teamsters. In recent decades, the Teamsters have constituted roughly 9 percent of all U.S. union members.** If one were to add the percentage of union members in LIUNA, HEREIU, and ILA, it would be reasonable to conclude that at least as of the mid-1980s, racketeering was a substantial presence and problem in the U.S. labor movement.

* This figure was published by Project RISE, an internal Teamsters anticorruption program headed by Edwin Stier. See Stier, Anderson and Malone, LLC, *The Teamsters: Perception and Reality: An Investigative Study of Organized Crime Influence in the Union,* International Brotherhood of Teamsters, 2002.

** According to "Teamsters Online," the current IBT membership is 1.4 million members. According to the U.S. Department of Labor, there were 15.8 million union members in the United States in 2003.

4

Labor Racketeering in New York City

> New York City is the home base of a large corps of sophisticated and ruthless racketeers who not only engage in traditional organized criminal activity (including loansharking, gambling, narcotics, and redistribution of stolen goods), but who also play a major role in numerous legitimate industries, including private sanitation, garment, cargo freight, and construction.
>
> —New York State Organized Crime Task Force (OCTF), *Corruption and Racketeering in the New York City Construction Industry: Final Report to Governor Mario M. Cuomo* (1990), 77

> In the building trades, the key to nonunion labor was Cosa Nostra control of union shop stewards, many of whom were made members or sons or relatives of members. On average, a subcontractor using union labor might expect a profit margin of 15 percent. With nonunion workers, even with payoffs, the profit was 30 percent or more. If all else failed, there remained the Gambinos' control of IBT Local 282, so absolute that if all of the other New York families needed Teamster assistance, they had to share the proceeds with [Gambino boss] Paul Castellano. —Salvatore (Sammy) Gravano in Peter Maas, *Underboss* (1997), 116–17

This chapter, like Chapter 3, deals with the extent of labor racketeering. Here we focus just on New York City since approximately 1980. This is not an exposé. It does not draw on any confidential information. I am identifying only unions with publicly documented histories of organized crime influence. Almost certainly, there is unrevealed LCN influence in other New York City unions.

The labor racketeering problem in New York City is not qualita-

0333

tively different than the problems in other U.S. cities with strong union traditions. It is likely that there was more labor racketeering in New York City circa 1980 than in any other U.S. city if only because New York City has the most unions (approximately 350 locals), the most union members, the most organized crime families (five), and the most organized crime members and associates. Since the mid-twentieth century, New York City has been home to the Genovese, Gambino, Lucchese, Bonanno, and Colombo Cosa Nostra crime families: Each of the five families has been heavily involved in labor racketeering.[1] In some cases, two or more families have exerted influence in a particular union. Although New York City is not typical, it is certainly not unique. Chicago's history of labor racketeering rivals New York's, and there is a documented record of labor racketeering for many other cities, including Atlantic City, Boston, Buffalo, Cleveland, Detroit, Kansas City, Miami, Philadelphia, Pittsburgh, and St. Louis.

In creating a snapshot of labor racketeering in New York City, I draw extensively on my 1990 collaboration with the New York State Organized Crime Task Force (OCTF), the *Final Report on Corruption and Racketeering in the NYC Construction Industry,* and on my 1999 study, *Gotham Unbound: How New York City Was Liberated from the Grip of Organized Crime.* The OCTF report documented and analyzed organized crime's penetration of the city's construction unions. *Gotham Unbound* illuminated Cosa Nostra's role in the political economy of the city, focusing on six commercial venues: the Garment District; the Fulton Fish Market; the Jacob Javits Convention Center; cargo operations at JFK Airport; the commercial-waste-hauling industry, and the construction industry. This chapter provides a picture of labor racketeering in those industries and several others. Because many unions are mentioned, the following preview may be useful:

The Garment District

- International Ladies Garment Workers Union (ILGWU) Local 102

Fulton Fish Market

- United Seafood Workers, Smoked Fish and Cannery Union Local 359

Air Cargo at JFK Airport

- International Brotherhood of Teamsters (IBT) Local 295
- IBT Local 851

0334

Javits Convention Center

- IBT Local 807
- NYC District Council, International Brotherhood of Carpenters and Joiners (Carpenters)
- International Alliance of Theatrical and Stage Employees, Exhibition Employees Local 829

Waste-Hauling Industry

- IBT Local 813

Construction Industry

- IBT Joint Council 16
- IBT Local 282
- IBT Local 580
- Laborers (LIUNA) Blasters and Drill Runners Local 29
- LIUNA Cement and Concrete Workers Local 6A
- LIUNA Workers Local 20
- LIUNA Local 18A
- LIUNA Local 95
- LIUNA Local 66
- LIUNA Local 13
- LIUNA Local 23
- LIUNA Local 46
- LIUNA Local 59
- NYC District Council of Carpenters
- Carpenters Local 17
- Carpenters Local 608
- International Union of Operating Engineers (IUOE), Local 14
- IUOE, Local 15
- IUOE, Waterproofers Local 66
- Painters Union, District Council 9
- Plasterers Local 530
- Plumbers Union, Steamfitters Local 638

Seaborne Cargo in the Port of New York

- International Longshoremen's Association (ILA) Local 1814
- ILA Locals 824, 1809, and 1909 (collectively known as the West Side [of Manhattan] Locals)

0335

- ILA Local 1804
- ILA Local 1588
- ILA Local 1

Other Industries

- Amalgamated Meat Cutters' Union Local 174
- Newspaper and Mail Deliverers Union of New York and Vicinity

THE GARMENT DISTRICT

Throughout most of the twentieth century, organized crime has been a major presence in the New York City Garment District (Manhattan, Seventh Avenue and mid 30s). In 1977, the garment industry's leading trade magazine, *Women's Wear Daily,* called ILGWU Local 102, which represented truck drivers carrying material and finished garments to and from the Garment District, "an active tool of labor racketeers." Sol C. Chaikin, the president of the ILGWU international union in the 1970s, admitted that "we have never been able to control [Local] 102."[2]

The Gambino crime family leveraged control over Local 102 to establish and police an employers' association, the Master Truckmen of America (MTA), which operated a cartel among truckers doing business in the Garment District. In effect, the cartel, backed by the union's power to shut down employers, determined which truckers could do business. Cosa Nostra enforced "marriages" between manufacturers and truckers; each garment maker was bound to a particular trucking company and, whether or not satisfied with the price it paid for the service it received, it could not switch. No other trucker would handle its business. Even if the manufacturer chose to do its own trucking, it still had to pay its assigned trucker as if that trucker had done the work. Failure to comply would invite labor problems.

If a trucker refused to join the association or to follow its rules, the MTA would order a Local 102 job action—for example, drivers would sit down on the job or otherwise stop or subvert the "rebel" trucking firm's operations. If that was insufficient to bring the maverick into line, its vehicles would be vandalized or stolen. Cartel members also blocked curbs or entire streets to prevent a rebel trucker from making pickups and deliveries.

0336

An incident in the mid-1970s provides an example of how Local 102 enforced the employers' cartel. As soon as a government undercover agent running a sting operation purchased a trucking company, MTA President Frank Wolf (of the employer association) threatened a Local 102 strike (by the union) unless the new owner paid 10 percent of the purchase price to the MTA (the employers' association).

The mob's control over Local 102 ensured that Cosa Nostra's (mostly the Gambino crime family's) trucking companies enjoyed labor peace. It also gave them an opportunity to make even more profit by not enforcing the collective bargaining agreement. For example, Thomas Gambino operated his trucking firm as a "double-breasted" shop, employing both unionized and low-wage nonunionized drivers. There was, of course, no objection from the union.*

FULTON FISH MARKET

The Fulton Fish Market, the largest wholesale fish market in the United States, became a Cosa Nostra power base and profit center since the early twentieth century. The Genovese crime family's influence in the fish market was rooted in its control of the United Seafood Workers, Smoked Fish and Cannery Union.** As federal prosecutors noted in a 1981 sentencing proceeding involving several convicted officers of Local 359, "[I]n the wholesale [fish] industry, where competition is fierce and time is of the essence, it is crucial for businesses to maintain the good will of the union and the men who run it. Organized crime recognizes this power and knows how to use it."[3] The union had 850 to 900 members, including wholesalers, managers, supervisors, and the four hundred "journeymen" who set up the wholesalers' seafood

* Thomas Gambino agreed to withdraw from the Garment District and pay a $12 million fine as part of a 1993 plea bargain with the Manhattan DA's office. He was also convicted in 1993 on unrelated racketeering charges in Connecticut.

** "[Joseph 'Socks'] Lanza organized a local of the Seafood Workers Union in 1922. From that power base he turned the market into his own fiefdom, controlling every aspect of the trade, essentially by himself. . . . Under Lanza's regime the fishing boat crews were not allowed to unload their own catches. They sat by while Lanza's men took off the fish, for a fee. Lanza also charged each boat another ten dollars 'for the union's benevolent fund.' If a skipper balked at the surcharge, a five-hundred-pound bucket of fish might be accidentally dumped into the harbor." (Fox, *Blood and Power,* 176.)

0337

displays, negotiated the sales, and delivered the fish to the retail purchasers' vans parked nearby.

Carmine Romano, a Genovese crime family associate, served as Local 359's secretary-treasurer (the union's de facto top position) from 1974 to 1980. In 1980, when Carmine became a trustee of the union's pension and welfare funds, his brother Peter succeeded him as the local's secretary-treasurer. Both brothers were later convicted of RICO, conspiracy to violate RICO, aiding and abetting violations of the Taft-Hartley Act, misusing union pension funds, and extortion of union members and employers.[4]

Local 359 officers coerced wholesalers into paying for various "services" that they did not desire or need, such as cardboard signs advertising their employment of union labor. The Romanos received more than $66,000 ($200,000 in 2003 dollars) from this scam. Throughout the 1970s, union officials collected "Christmas gifts" of $300 (the equivalent of $900 in 2003 dollars) from wholesalers. The money was solicited as a holiday gift "for the boys in the union," but the money went to the Genovese crime family's coffers rather than to rank-and-file members.

Wholesalers paid $1,300 ($4,380 in 2003 dollars) a week to Carmine Romano's Fulton Patrol Association to protect their fish from being stolen. Whether this was a protection service or a protection racket was unclear even to those who paid the premiums. Federal prosecutors charged that the Fulton Patrol Association functioned as a protection racket and collected more than $644,000 (the equivalent of $2,000,000 in 2003 dollars) from wholesalers from 1975 to 1979. At the Romanos' trial on RICO charges, the president of the employers' Wholesale Fish Dealers Association testified that "if the thieves knew that the union was looking out for us . . . they wouldn't bother us . . . [b]ecause the thieves would be afraid of the union."[5] Following the Romanos' convictions, the United Seafood Workers, Smoked Fish and Cannery International Union placed Local 359 under trusteeship and ousted Carmine and Peter Romano from their union positions. Their brother Vincent then became a top official in the union.[6]

AIR CARGO AT JFK AIRPORT

Cosa Nostra's influence in the airfreight industry is well documented. For several decades, the Lucchese crime family controlled IBT Local 295

0338

and IBT Local 851, which represented the drivers who brought cargo to and from JFK airport. Once again, control over labor was parlayed into an employers' association, the Metropolitan Import Truckmen's Association (MITA), which operated a cartel.

IBT Local 295 was one of the paper locals that IBT General President David Beck and Vice-President Jimmy Hoffa gave to Johnny Dioguardi in 1956.[7] In 1970, the Lucchese crime family created IBT Local 851.[8] The intent may have been to provide a safe haven for IBT Local 295 officials who were under investigating. Harry Davidoff, a Hoffa protégé, ran Local 851 and Local 295 from the same office. In 1972, his son Mark succeeded him as head of Local 851.[9] In the 1990s, the position passed to Anthony Razza, another Lucchese associate.*

Local 851 represented "lead agents" who assign jobs to truck drivers and other airport workers; some lead agents were also associates of the Lucchese crime family. They used advanced information about valuable cargo shipments to arrange give-ups and hijackings. In a give-up, a truck driver leaves the keys in the ignition of his parked truck so it can be stolen according to a prearranged plan. In a hijacking, a Lucchese crew would intercept the truck just outside the airport grounds and wrest it from the driver. Valuables could also be stolen from the warehouse. The most infamous such heist occurred in December 1978; thieves stole nearly $6 million (the equivalent of $17 million in 2003 dollars) worth of cash and securities from the Lufthansa Airlines cargo hangar. It is likely that most of the proceeds went to Lucchese capo Paul Vario.**[10]

Through its control over the IBT locals, the Lucchese family extorted labor-peace payoffs from freight forwarders by threatening strikes, picketing, work stoppages, slowdowns, and misrouting cargo. When such threats materialize, they can impose heavy costs on freight forwarders, whose business depends upon the speedy delivery of air cargo.

* In 1993, the U.S. attorney for the Eastern District of New York obtained a criminal RICO indictment against seven individuals, including Anthony Razza, secretary-treasurer of Local 851. The indictment charged them with extortion, labor racketeering, and related offenses. The defendants entered guilty pleas. Razza received a twenty-one-month prison sentence and was barred from the IBT for life. See James B. Jacobs et al. *Gotham Unbound,* 50.

** Henry Hill revealed the details of the Lufthansa heist in his autobiographical account of life in the mob (Nicholas Pileggi, *Wiseguy* 1987), which was the basis of the popular 1990 movie *Goodfellas,* starring Robert DeNiro, Joe Pesci, and Roy Liotta.

0339

JAVITS CONVENTION CENTER

From the day the Javits Convention Center opened for business in 1986, the Genovese crime family and, to a lesser extent, the Gambinos and Colombos, used their control over three labor unions that represented Javits Center workers to place members, associates, and friends in high-paying jobs. IBT Local 807 represented workers who loaded and unloaded the delivery trucks and vans with exhibitors' products and supplies. Members of Carpenters NYC District Council assembled the booths and electrical stations and, until July 1995, Exhibition Employees Union Local 829 represented general laborers.

IBT LOCAL 807

Members of IBT Local 807 (Trade Show Division) loaded and unloaded vehicles bringing merchandise into and out of the Exhibition Center. Robert Rabbitt Sr. and his two sons controlled that local. Robert Sr. was convicted of second degree manslaughter in 1985 for fatally stabbing a shop manager. Upon release from prison five years later, he returned to his union position. In 1992, a New York State grand jury indicted him for conspiracy, receiving bribes, larceny, falsifying business records, and possessing stolen property. He pleaded guilty to falsifying payroll records and served one year in prison. In 1994, the Independent Review Board (the court-imposed monitor in the IBT international case) charged Rabbitt with accepting bribes in return for allowing an employer to use nonunion truck drivers and laborers. Rabbitt avoided an IRB sanction by agreeing to a five-year suspension from the union; his son Michael took over his union office.[11] In 1995, the Independent Review Board (IRB) found that Michael had negotiated an agreement with Javits Center employers that made the job of general foreman a nonunion position, thereby allowing his father, despite his felony record, to do the same job he did before as a union official. Finding that the Rabbitts gave lucrative center jobs to people connected to organized crime, the IRB recommended that Michael be removed from his position.[12] When he did relinquish it, Michael was guaranteed $236,000 severance pay.

Although the Rabbitts' connection to organized crime has not been proved, there is strong reason to believe that Cosa Nostra called the shots with respect to IBT interests at the Javits Center. Through its hir-

0340

ing hall, Local 807 assigned lucrative Javits Center work from a pool of forty-seven privileged members. One-third of the individuals on that list had documented ties to organized crime; some had not even belonged to the IBT before landing a center job.[13]

CARPENTERS' DISTRICT COUNCIL

In the mid-1980s, the United Brotherhood of Carpenters and Joiners New York City District Council represented approximately thirty thousand workers in twenty-two local unions. (The district council makes major policy decisions for the locals and negotiates the collective bargaining contracts). From the early 1970s, the Genovese crime family controlled the district council through its capo, Vincent DiNapoli.[14] The FBI believed that Teddy Maritas, district council president from 1977 to 1981, was a Genovese crime family associate.[15] In the early 1980s, a RICO prosecution of Maritas, DiNapoli, and others ended in a mistrial. Maritas disappeared the evening before the scheduled retrial, presumably murdered.[16] DiNapoli pled guilty.

The Carpenter's International Union placed the New York City district council under a temporary trusteeship, but that did not purge the union of organized crime's influence. The trustee chose Local 608 president Paschal McGuiness, a Genovese crime family associate,[17] to be district council president.[18] McGuinness put John O'Connor in charge of the district council's daily operations. The Department of Justice charged O'Connor with 127 counts of racketeering, including bribery, extortion, and taking unlawful gifts from contractors.[19] In 1990, he pleaded guilty to five counts and was sentenced to one to three years incarceration and fined $25,000.[20] McGuinness also hired and quickly promoted Ralph Coppola to district council representative at the Javits Center; the Genovese crime family is alleged to have inducted him as a "made member" and soon promoted him to capo.[21]

The racketeers who controlled the Carpenters' district council assigned LCN members, relatives, and friends to jobs with "decorator" companies. (Show managers hire decorating companies to prepare the center for exhibits; the companies employ workers, who are Carpenters' members, to assemble and dismantle the exhibitions.) The Carpenters' job-referral rules dictated that, with limited exceptions, jobs must be assigned to members according to length of time out of work,

0341

but the Genovese crime family's interests trumped the rules. Typically, a Genovese family associate gave union officials a preferential hiring list, from which the union officials chose thirty to forty people to work with the decorator companies. Many of these preferred workers had links to the Genovese family. Some were awarded Javits Center jobs as a reward for loyalty and service to the crime family. Others needed legitimate employment as a cover for their criminal careers and to satisfy probation and parole authorities. Employers and employees treated some of these positions as "no-show jobs."

EXPOS LOCAL 829

Workers who set up trade shows at the Javits Center were represented by the Exhibition Employees Union (Expos) Local 829. The Expos chief shop steward, much like the Teamsters general foreman, supervised Expos members and enforced their collective bargaining agreements. Steven Dellacava and Paul Coscia, reputedly associates of the Genovese crime family, were the Expos' chief shop stewards at the Javits Center until mid-1995. (Coscia also served as the vice-president of Local 829.) They determined who could work, where and when.

Although Local 829 apparently did not maintain a pool list for preferential hiring at the Javits Center, it did use selective criteria. Undercover police investigations revealed that to obtain a lucrative center job—up to $100,000 annual salary—an ordinary Expos worker had to buy a membership book.* Individuals with organized crime connections purchased books at lower cost and enjoyed priority in obtaining center assignments.

Expos union officials generated revenue for the Genovese family by other illegal schemes. They padded employers' payrolls with six ghost employees for small shows and up to twenty ghosts for larger shows. Ghost employees shared their "salaries" with shop stewards and the Genovese crime family. Another money-making scheme was the filing of fraudulent workers' compensation claims against the center; injuries sustained outside of work were alleged to have been sustained at the center.[22]

* It is not uncommon or illegal for unions to charge new members a fee when they join the union. This "pays back" the union and current members for previous expenditures from which the new members benefit.

0342

WASTE-HAULING INDUSTRY

Circa 1980, commercial-waste hauling in New York City's five boroughs was carried out by approximately three hundred small firms (one to twenty trucks) that together constituted a $1.5 billion-per-year industry. The carting companies were members of borough-based trade associations. LCN controlled both the union and the trade associations. The Association of Trade Waste Removers of Greater New York dominated the industry. For more than thirty years, James Failla, a capo in the Gambino crime family, was its president. The other Cosa Nostra–linked waste-hauler trade associations were the Kings County Trade Waste Association (Genovese), the Greater New York Waste Paper Association (Genovese), and the Queens County Trade Waste Association (Gambino).[23]

Approximately four thousand carting industry truck drivers were members of IBT Local 813, run by Bernard Adelstein. His reign over the union began in 1951 when Carlo Gambino, who later became boss of the Gambino crime family, placed him in Local 813.[24] The McClellan Committee focused on the ties between Adelstein and Vincent Squillante, a high-ranking official of the New York City Cartmen's Association and a prominent organized crime figure. It branded Adelstein the "abject tool" of organized crime. According to the committee, "[F]ar from fighting Squillante . . . [Adelstein] provided vital cooperation as [Squillante] moved . . . to ruthless czardom of the garbage industry."[25]

The situation did not change in later decades. In 1989, Salvatore (Sammy) Gravano, the Gambino crime family underboss who became the most famous and productive government cooperating witness of all time, testified that Adelstein took orders from Gambino capo James Failla; Failla exercised de facto control over IBT Local 813 while simultaneously serving as president of the employers' association. A former IBT Local 813 employee testified that Adelstein and Failla worked together in "controlling and manipulating the [waste hauling] industry in the New York City metropolitan area."[26]

Rick Cowan, an undercover police officer, spent several years implementing a sting operation by posing as a carting company executive. In *Takedown: The Fall of the Last Mafia Empire,* he and Douglas Century provide a fascinating picture of the connection among the carting companies, IBT Local 813, and the mob.[27] In one instance, Failla prevented an IBT Local 813 strike by calling a meeting of waste haulers

0343

(employers, *not* union members) and ordering them to "keep the trucks rolling."[28] According to Cowan and Century, "[E]ven though this was a meeting of management, a lot of the company owners in attendance also belonged to IBT Local 813. So if they went on strike, they'd only be striking against themselves."*[29]

Under the Gambino, Genovese, and Lucchese crime families' influence, the commercial-waste-hauling firms operated a "property-rights" system that bound every commercial customer to one carter. No other carter was allowed to solicit or accept a customer's business. IBT Local 813, under Adelstein's control, served as the cartel's enforcement arm. Local 813 drivers would refuse to work for a company that had fallen out of favor with Cosa Nostra; likewise, if a carter tried to hire nonunion drivers it would be struck and/or sabotaged. In 1989, Robert Kubecka, a "rebel" waste hauler on Long Island, had his trucks' tires slashed and windshields broken. A Gambino crime family associate offered to solve his union problems for a $20,000 payoff. (Kubecka was murdered later that year for cooperating with a law enforcement investigation.) Jerry Kubecka, Robert's father, and himself the owner of a rebel carting company, charged that IBT Local 813 threatened his customers with labor problems and violence unless they submitted to being serviced by their assigned waste hauler.[30]

CONSTRUCTION

Approximately one hundred building trades unions represent New York City construction workers.[31] The mob's influence and control over many of these unions provides a constant stream of bribes in exchange for labor peace and/or relief from labor contract provisions. Once Cosa Nostra established a power base in the construction unions, it was a small step to organizing and policing employer cartels in the construction niches corresponding to each union's jurisdiction. For example, control over the union local whose members pour ready-mix concrete led to the establishment of a mob-controlled cartel in that crucial con-

* Frank Giovinco, nephew of Genovese associate Joe Giovinco, controlled LIUNA Local 958. Carting companies, whose employees were Local 958 members, made cash payments to the boss of the Genovese crime family, Vincent "Chin" Gigante, in exchange for labor peace. (Cowan and Century, *Takedown: The Fall of the Last Mafia Empire*, 94–95, 247–48.)

0344

struction niche. There were also well-established cartels among drywall, window-replacement, and painting contractors.

Labor peace extortion was commonplace. For example, Attilio Bitondo and Gene Hanley, business agents for Carpenters Local 257, were indicted in 1987 on multiple counts of extortion over a ten-year period.[32] Among other things, they threatened to sabotage contractors by assigning them only unqualified and incompetent workers.[33] In the 1970s, Carpenters Union officials received payoffs to permit two carpentry firms to hire nonunion workers, who were paid by the number of drywall sheets installed (that is, piecework) rather than by the hour, thereby avoiding paying overtime and fringe benefits.[34] In December 2001, the U.S. Attorney for the Southern District of New York indicted a new generation of Carpenters officials for the same scheme.[35] The defendants included 73 members of the Parrello crew of the Genovese crime family, who were indicted on 98 counts, including extortion, labor racketeering, loan-sharking, illegal gambling operations, selling counterfeit money, and gun trafficking. The indictment charged 9 defendants with labor racketeering involving Locals 11 and 964, which together made up the Suburban New York Regional Council of Carpenters. These defendants were alleged to have arranged for nonunion workers to complete carpentry jobs, which allowed the defendants them to embezzle more than $1 million that should have been paid into the Suburban Council of Carpenter's pension funds.[36]

The construction unions' pension and welfare funds have been persistently defrauded. One common scheme is for contractors to bribe union officials to allow the contractors to employ nonunion workers for whom pension and welfare payments do not have to be made. Union members who complained were blacklisted, threatened, or assaulted. Corrupt pension and welfare trustees could embezzle funds by withdrawing money in their own or in fictitious names, by making "loans" that would not be repaid; by paying for nonexistent goods and services; and by taking kickbacks from contractors and service providers.[37] Dissident union members who challenged the leadership of mob-dominated unions were the most vulnerable; they might be blacklisted or beaten. Uncooperative employers faced sabotage. Because of the presence of so many known organized crime figures, actual violence was rarely necessary. A threat, even implicit, sufficed.

A comprehensive audit of labor racketeering in the huge New York City construction sector is impossible, but the New York State Orga-

0345

nized Crime Task Force and subsequent investigators have identified organized crime's influence or control over the following construction unions:[38]

International Brotherhood of Teamsters

- Joint Council 16: Joseph Trerotola, president of the Joint Council, became a vice-president of the International IBT with Cosa Nostra's approval. Patsy Crapanzano, the council's vice-president, was tied to the Genovese crime family. Gerald Corallo, president of Teamster's Local 239 and son of former Lucchese crime family boss Antonio Corallo, was listed as a member of the council's advisory board.
- Local 282: John O'Rourke, president from 1931 to 1965, was closely associated with Lucchese family members Johnny Dioguardi and Anthony Corallo. John Cody, president from 1976 to 1984, was an important Gambino crime family associate.
- Local 580 (Ironworkers Union): Peter Savino, an influential member of the local, was a Genovese crime family associate.[39] In 1984, control of the union passed to Joseph Marion of the Lucchese crime family;[40] Lucchese family associate John Morrissey was also an important figure in the local.[41]

Laborers Union

- Blasters and Drill Runners Local 29: President Louis Sanzo regarded Lucchese family soldier Samuel Cavalieri as his boss. Cavalieri's son was the administrator of the local's pension fund.
- Cement and Concrete Workers Local 6A: Ralph Scopo, president of the District Council, was a soldier in the Colombo crime family. His sons, Joseph and Ralph, were affiliated with both the District Council and Local 6A, Joseph serving as president of Local 6A.
- Cement and Concrete Workers Local 20: Vice-Presidents Luigi Foceri and Frank Bellino were members of the Lucchese crime family.
- Cement and Concrete Workers Local 18A: Genovese family capo Vincent DiNapoli controlled the local.
- Housewreckers Union Local 95: Vincent Gigante, boss of the Genovese crime family, controlled the local.
- Local 66: Vice-President Peter Vario was a member of the Lucchese crime family.
- Mason Tenders Local 13: Mike Copolla, a capo in the Genovese

0346

family, controlled the union. Basil Cervone used his power over the local and the District Council on behalf of Genovese crime family.
- Mason Tenders Local 23: President Louis Giardina was a soldier in the Gambino family.
- Mason Tenders Local 46: Peter A. Vario, nephew of Paul Vario, a Lucchese crime family capo, was business manager of the local.
- Mason Tenders Local 59: Patsy D. Pagano, secretary-treasurer until 1974, was part of the Pagano faction of the Genovese family. Daniel Pagano, who later ran the local as its business manager, was a Genovese family member. His cousin, a Genovese soldier, controlled the union in the 1980s.

United Brotherhood of Carpenters

- District Council: Teddy Maritas, president from 1977 to 1981, had a close relationship with Genovese capo Vincent DiNapoli; the FBI considered Maritas as a Genovese family associate. The next president, Paschal McGuiness, was also a Genovese associate. In 2000, President Michael Forde was indicted for labor bribery. His codefendants included a number of Lucchese family members, including acting boss Steven Crea.[42] Crea pleaded guilty. Forde was convicted in 2004.[43]
- Local 17: In 1987, the Genovese family consigliere awarded Liborio Bellomo control of the local, the largest in the District Council. In 1989, Genovese associate Enrico Ruotolo was elected business manager.
- Local 608: President Paschal McGuinness (who also became president of the District Council) was a Genovese crime family associate. A later president, Michael Forde, and business agent Martin Deveraux were convicted in 2004 for accepting bribes from contractors in a case involving the Lucchese family.[44]

Other Construction Industry Unions

- Builders and Allied Craftsmen, Local 1: President Santo Lanzafame was charged with accepting bribes in exchange for allowing job stewards to file fraudulent union documents to cover up violations orchestrated by Lucchese crime family members.[45] The judge dismissed the indictment on legal-insufficiency grounds and also under the state's Organized Crime Control Act's interest-of-justice provision.

0347

- International Union of Operating Engineers, Locals 14 and 15: Locals 14 and 15 represented workers at major building sites including the Museum of Modern Art and the federal courthouse in Brooklyn.[46] In 2003, alleged Genovese soldier Louis Moscatiello; Colombo capo Vincent Ricciardo; acting Colombo boss Joel Cacace and son Joel Jr.; and alleged Colombo underboss John DeRoss and son Jamie; and dozens of union officials were indicted in both the Southern District of New York and Eastern District of New York for running no-show job schemes at construction sites across New York City. The SDNY case focuses on Genovese control over these locals; the EDNY targets the Colombos. Joel Cacace, the acting boss of the Colombo family, admitted to the murder of Assistant U.S. Attorney Bill Aronwald's father. Several top officials of Locals 14 and 15 pled guilty to racketeering and receiving unlawful labor payments.
- International Union of Operating Engineers, Waterproofers Local 66: John Morrissey, an associate of the Lucchese crime family, collected labor peace payoffs.[47]
- Painters Union, District Council 9: Martin Rarback, secretary-treasurer until 1967, was an associate of, or at least closely associated with, Cosa Nostra. The Lucchese crime family controlled Jimmy Bishop, secretary-treasurer from 1973 to 1990.[48]
- Plasterers Local 530: Genovese Family capo Vincent DiNapoli created the union, which Louis Moscatiello, a Genovese crime family associate, ran as business manager.
- Plumbers Union, Steamfitters Local 638: George Daly, the union's business agent, was an associate of Gambino family boss Paul Castellano and Gambino soldier Thomas Bilotti.

SEABORNE CARGO IN THE PORT OF NEW YORK

Through its power base in the International Longshoremen's Association, Cosa Nostra has been a presence in New York City's waterfront throughout the twentieth century. There is documented mob control of at least six ILA locals.[49] In 1990, the government filed a civil RICO suit against these six unions; their executive boards and officers; the Genovese and Gambino crime families; the Westies, an Irish organized

0348

crime group allied with the Gambino family; and five shipping companies. The Gambino crime family controlled Local 1814 in Brooklyn and Locals 824, 1809, and 1909 in Manhattan; the Genovese crime family controlled Locals 1804 and 1588 in New Jersey.[50]

The leaders of Brooklyn Local 1814, at one time the largest ILA local in the country, had decades-long ties to the Gambino crime family. Capo Anthony Anastasio, brother of the Gambino family boss Albert Anastasia (the brothers spelled their names differently), ran the union in the 1940s and 1950s. In 1963, his son-in-law Anthony Scotto succeeded him in both the union and organized crime. Scotto served as both president of Local 1814 and as a vice-president of the International. He was banned from union office after a 1980 RICO conviction, but he remained affiliated with the union through 1990.[51] Anthony Pimpinella, a Gambino soldier, and Anthony Ciccone, a Gambino family capo,[52] both held positions in the local and International in the 1980s.[53] Ciccone, who was prohibited from participating in union activities after 1991, maintained his influence into the 2000s through his connection to Local 1814's president.[54]

The Gambino family, in collaboration with the Westies, controlled ILA Locals 824, 1809, and 1909, collectively known as the West Side (of Manhattan) locals.[55] Gambino boss John Gotti was named with John Bowers (president of three locals, as well as of the International) in a 1990 federal lawsuit alleging corruption in the West Side locals (as well as in Locals 1814, 1804, and 1588).[56] The lawsuit resulted in a consent decree, in which the government sought to eradicate the influence of organized crime in local unions affiliated with the ILA on the New York/New Jersey Waterfront.[57]

Genovese family capo Michael Clemente ran dock operations in New Jersey for Cosa Nostra as early as the 1960s, when he was banned from union office for extortion. Twenty years later, he was still involved.[58] Tino Fiumara, a member of the Genovese crime family, represented Clemente in dealing with ILA Local 1804, of Bergen, New Jersey, and ILA Local 1588 of Bayonne, New Jersey.[59] Thomas Buzzanca, president of Local 1804 in the early 1980s, was also a member of the Genovese family.[60] According to federal prosecutors, as recently as 2002, at least six officials of Local 1588, including President John Timpanaro, were Genovese crime family associates.[61] Joseph Lore, another Genovese associate, stole hundreds of thousands of dollars from Local 1588

0349

during the 1990s; he held no position in the union, but his girlfriend served as its office manager, and other mob-connected officials helped him divert funds from union officers' and members' salaries.[62]

Though only the six unions noted in the preceding paragraph were named in the 1990 civil RICO suit against the New York/New Jersey ILA,[63] later evidence pointed to mob influence in other ILA locals. In 1998, the Waterfront Commission accused Louis A. Saccenti, who ran New York Local 1235, of being a Gambino crime family associate.[64] Salvatore Gravano, underboss of the Gambino family, appointed his former bodyguard to be the delegate of Local 1 of Newark, New Jersey, to the Atlantic Coast District of the ILA in the early 1990s.[65] The U.S. Department of Justice believes that Anthony Ciccone attempted to control the management of Local 1 as recently as 2001.[66]

Cosa Nostra used its influence in the ILA to exploit the locals, the shipping industry, and the longshoremen. It determined who worked on the docks and, most importantly, which ships were unloaded and when, and in what order waiting trucks were loaded. Shippers had to make payoffs to ensure that their ships were loaded and unloaded expeditiously and to avoid labor unrest. The cost of delay gave the union representing longshoremen leverage over shippers. Furthermore, Cosa Nostra orchestrated thefts from the shipping companies. Labor racketeers bribed port employees to facilitate cargo theft, solicit illegal labor payoffs, and extort stevedores (companies that load and unload seaborne cargo).[67] The labor racketeers victimized the ILA's members through embezzlement, benefit-fund fraud, and through intimidation and violence.

CONCLUSIONS

The unions discussed in this chapter are not the only New York City unions influenced by LCN. There is evidence of an organized crime presence in the moving and storage industry, linen services, restaurants and nightclubs, and other businesses and industries.[68] Daniel Castelman, chief of investigations for the Manhattan district attorney, has said that "[e]very industry I've ever seen the mob take control of started with its influence in the union."[69]

Jonathan Kwitny's book *Vicious Circles* describes Mafia involvement in the meat industry in the 1960s.[70] He writes that Local 174 of the

0350

Amalgamated Meat Cutters' Union, which represented butchers, "was merely a branch office" of the mob. Frank Kissel, the secretary-treasurer of the local, was a close friend of mobster Lorenzo Brescia[71] and also worked with the Lucchese family's Johnny Dioguardi. Money flowed to the union and the mob from the Meat Trade Institute, an employers' association.[72]

An investigation of the Newspaper and Mail Deliverers Union of New York and Vicinity led to the indictment of several union officials and an alleged member of the Bonanno crime family, James Galante, in April 1996. Members of the union distribute papers for the *New York Times, Daily News, New York Post, El Diario,* and the *Metropolitan News Company.* Union officials were accused of several illegal schemes, including placing fictitious workers on payrolls, stealing newspapers, promoting certain employees in violation of seniority procedures, and assaulting union members who complained about illegal activities.[73]

Several dozen clear cases easily support the proposition that labor racketeering in New York City has been extensive and long lived. It is likely that some unions that have been infiltrated, even controlled, by organized crime have so far not been identified. Of course, the majority of New York City unions have not been and are not influenced by organized crime.

0351

5

Organized Labor's Response to Organized Crime

> Is the government going to be here in the year 2050? The year 3000? I don't know, but I think it's something that we should be talking about because of the tremendous burden on our membership. . . . They've eliminated certain pockets of corruption in the union, and I think it's time for us to move on.
>
> —James P. Hoffa, following his election victory as general president of the International Brotherhood of Teamsters (Dec. 7, 1998)

> I have had more obloquy and more scorn from the labor movement for representing [Jock] Yablonski and [Ed] Sadlowski [reformers who ran in the 1970s against corrupt and dictatorial presidents of the United Mine Workers and United Steelworkers respectively] and helping reformers in the Laborers and other unions than I ever got from representing people under attack during the McCarthy period in the 1950s. The problems we went through in the McCarthy period were nothing compared to labor's recriminations against those who have become spokesmen for union democracy.
>
> —Joseph Rauh (famous civil rights lawyer)

Other than the brief flurry of antiracketeering activity in the 1950s, occasioned by the unification of the AFL and CIO and then by the McClellan Committee hearings, the mainstream American labor movement has mostly denied or minimized organized crime's influence over labor. While the AFL-CIO has steadfastly maintained that it is the government's responsibility to investigate and prosecute crime, it has opposed practically every government initiative aimed at fighting labor racketeering.

0352

Organized labor's refusal to ally with the government against organized criminal elements in the labor movement is incomprehensible to law enforcement officials who view themselves as labor's liberators. However, the labor movement's suspicion and distrust of local, state, and federal governments has a long history. During labor's formative years, the government, acting through law enforcement agencies, often helped employers break strikes and punish strikers. In the late nineteenth and early twentieth centuries, labor activists were often arrested and prosecuted, frequently for conspiracy. Distrust was exacerbated in the 1920s and 1930s when the government ruthlessly suppressed leftist elements in the labor movement. Labor's suspicion of government was confirmed by the Taft-Hartley Act (1947), which, among other things, prohibited jurisdictional strikes (interunion disputes over which union has jurisdiction over a particular kind of work) and secondary boycotts (boycott of one company to force another company to recognize a union); outlawed the closed shop; permitted the union shop only on a vote of a majority of the employees; and removed all protections of wildcat strikes (unauthorized work stoppage when labor agreement is still in effect). A decade later, organized labor's distrust of the government was reaffirmed with the passing of the Landrum-Griffin Act (1959), which labor leaders regarded as undermining their ability to maintain discipline in their organizations. When President Ronald Reagan fired striking air traffic controllers in 1981, many labor officials saw another manifestation of a century-long government hostility toward organized labor. Likewise, they regarded DOJ's civil RICO suits against racketeer-ridden unions as more of the same.

SAMUEL GOMPERS (1886–1924)

Samuel Gompers and others founded the American Federation of Labor in 1886.* Gompers served as president from 1886 to 1924. In the name of a strong labor movement, he turned a blind eye to labor's reliance on gangsters to battle against strike-breaking thugs recruited by

* The American labor movement, of course, began much earlier in the nineteenth century. Indeed, it has roots in the eighteenth century. See, e.g., Howard Zinn, *A People's History of the United States* (New York: Harper & Row, 1980).

0353

antilabor employers.[1] He was unwilling to criticize the gangsters' infiltration of numerous unions.[2]

Gompers was friendly with "Umbrella" Mike Boyle,[3] boss of Local 134 of the International Brotherhood of Electrical Workers in Chicago. Boyle's nickname referred to the umbrella he hung on a bar counter into which contractors seeking favors (that is, to avoid being held to the terms of their union agreements) could deposit payoffs.[4] Boyle, like many early labor leaders, was also an employer. He held a financial interest in an electrical manufacturing company, which sought to dominate the Chicago market. Gompers promised that Chicago union members would not install electrical switchboards made outside Chicago. In return, Boyle helped Gompers fight off legislation that would prohibit the "closed shop," a union-favored contract clause that commits an employer to hiring only union workers.[5] In 1917, Boyle was convicted of a federal antitrust violation, fined $5,000, and sentenced to a year's imprisonment. Gompers successfully lobbied President Woodrow Wilson to commute the sentence.[6]

In order to counter the influence of the Central Federated Union, an AFL competitor, Gompers wanted to build up an AFL-affiliated New York City Building Trades Council.[7] Toward this end, he reached out to the notorious Robert Brindell, czar of the New York building trades, and gave him an AFL charter for a Dock and Pier Carpenters Union. Brindell forced the Board of Business Agents into the AFL-affiliated Building Trades Council;[8] the business agents obediently elected him president for life and made him the highest paid labor official in the United States.[9]

In 1922, the New York State legislature appointed the Lockwood Committee to investigate graft and racketeering in the building trades. When the committee announced that it would focus on Brindell, Gompers denounced the committee as "another part of the employers' effort to discredit the labor movement and shackle the unions with government control."[10] He insisted that the labor movement itself could take care of corrupt labor officials: "I think that the Legislature should not interfere in the matter at all, regrettable and bad as the condition may be."[11] Then he famously declared, "God save Labor from the courts."[12] Ultimately, Robert Brindell was sentenced to prison for a term of five to ten years for extorting labor peace payoffs from employers.[13]

During his long reign as AFL president, Gompers did little to prevent, investigate, or punish labor racketeering.[14] He was a realist. If the

0354

AFL were to expel racketeer-ridden unions, it would lose substantial dues revenue and weaken its position vis-à-vis employers and competing labor federations.[15] In addition, Gompers may have feared that an attack on labor racketeers would fail and result in his being deposed from the AFL presidency or worse.[16]

WILLIAM GREEN (1924–1952)

When Gompers died, William Green became AFL president, immediately promising to combat corruption and racketeering. At the 1930 AFL Convention, he stated, "If there is brought to my attention the racketeer moving under the garb of trade unionism and I can place my hands on him with convincing evidence, I will drive him from this movement, *if I can* (emphasis added)."[17] That situation seems never to have arisen; Green regularly asserted that he could do no more than exhort union officials to purge racketeers from their respective unions.[18] For example, in 1932 the AFL's Executive Council forwarded to P. J. Morrin, president of the International Iron Workers' Union (IIWU), an accusation that the IIWU's New Jersey representative, Thomas Brandle, had accepted a $10,000 ($135,000 in 2003 dollars) bribe from an employer association.[19] Green asked Morrin to take action "to safeguard the integrity, the good name and standing of your own International Union, as well as the organized labor movement."[20] When Morrin did not act, Green reemphasized that "you have the power to deal with this case of Brother Brandle to which I am calling your attention, and neither the [AFL] Executive Council nor any other International Union has any authority to do so."[21] Nevertheless, Morrin actually ordered Local 45 not to oust Brandle. The AFL took no action for more than a year. Finally, Morrin did expel Brandle from the union.[22]

In 1935, when Special Prosecutor Thomas E. Dewey began his investigation of racketeering in New York City, Green appointed a committee to "assist" Dewey.[23] But the chief function of the committee as described by Green was "to explain to Mr. Dewey that these [labor racketeering] charges were actuated by spite."[24]

David Dubinsky, president of the International Ladies' Garment Workers' Union (ILGWU) (1932 to 1966), went to the 1940 AFL convention intent on strengthening the AFL's authority to deal with racketeering in its affiliated unions. Dubinsky proposed giving the AFL's Execu-

0355

tive Council summary power to order a union affiliate to expel any officer or officers convicted of an offense involving moral turpitude or of using an official position for personal gain. Moreover, the resolution called for national and international unions to adopt rules and procedures to punish corrupt officers.[25]

The AFL's Resolutions Committee opposed Dubinsky's proposal on the ground that the AFL "is a federation of self-governing national and international unions who have been guaranteed their right to self-government, which includes their election and selection of officers and control over their conduct." Green challenged the ILGWU leaders and other critics to "show any racketeering in the American Federation of Labor."[26] He declared:

> Our national and international unions are autonomous bodies, chartered by the American Federation of Labor, governed by their own laws and administered by the officers of said organizations. . . . We have never assumed and never will assume dictatorial policies toward national and international unions affiliated with the American Federation of Labor, but with all the power we possess we appeal to the membership of every International Union affiliated with the American Federation of Labor to keep the American labor movement clean, maintain it on a high plane, and if there is any attempt on the part of wrongdoers to seek to secure control of their movement, to deal with them vigorously at once.[27]

The AFL convention passed a watered-down resolution authorizing its Executive Council, when it believed that an international union was not fulfilling its responsibility, to act against corrupt officers, and to "apply all of its influence to secure such action as will correct the situation."[28]

In 1942, the Executive Council had an excellent opportunity to act. Three hundred members of Painters Local 102 complained to President Green that the International Painters Union had refused to remove a business agent who was a convicted bribe taker connected to organized crime. Green urged Painters Union President Lawrence P. Lindelhoff to take action.[29] When Lindelhoff failed to act, the Executive Council assigned AFL Vice-President Matthew Woll to investigate. Despite the guilty jury verdict, Woll reported that he was unable to determine whether the business agent was guilty. Moreover, he emphasized that the AFL did not have authority to intervene in internal union affairs:

0356

"The Federation has no compulsory or disciplinary power. The power delegated to it is that of the use of its influence." Therefore, he suggested that the aggrieved painters take their charges to the Painters' international convention. The AFL Executive Council left final consideration of the matter to Green, who took no further action.[30]

CONGRESS OF INDUSTRIAL ORGANIZATIONS (1938–1955)

In 1938, five international unions broke away from the AFL to found the Congress of Industrial Organizations (CIO), a rival labor federation dedicated to aggressively organizing unskilled workers in the mass-production industries. The CIO was led by John L. Lewis, head of the United Mine Workers of America (UMWA); Sidney Hillman, leader of the Amalgamated Clothing Workers; David Dubinsky of the International Ladies' Garment Workers' Union; and leaders of the Textile Workers and the Typographers unions. The CIO grew rapidly and had almost 2.5 million members by 1940.

Because members of CIO unions worked in factories and mines, they were less vulnerable to intimidation than the geographically scattered craft unionists, who worked in small groups. Furthermore, the companies organized by CIO unions were much larger than the characteristically small AFL employers and far more difficult to intimidate. These gigantic corporations could also control or temper competition (by explicit or implicit agreements with one another) without the need for organized crime bosses to set up and police cartels. CIO trade unionism was more ideological (left wing) than the AFL's business unionism.* Indeed, the AFL sometimes excoriated the CIO for being a tool of the Communist Party.[31] In return, the CIO branded the AFL racketeer ridden.

John L. Lewis, longtime president of the United Mine Workers, was the first president of the CIO. He had immense power and prestige, as did his successor, Walter Reuther of the United Auto Workers. Among early and midcentury labor leaders, Reuther stands out for his vigorous stand against corruption and racketeering. For example, in 1954, when

* Business unionism is the trade-union philosophy and activity that concentrates on the improvement of wages, hours, working conditions, and so on, rather than on reform of the capitalist system.

0357

the New York Insurance Board disclosed welfare fund irregularities among some local affiliates of the Retail, Wholesale and Department Store Union (RWDSU), Reuther wrote to Max Greenberg, the president of the RWDSU, that he expected those involved to be disciplined. Greenberg later reported that three locals had been placed under trusteeship, and one had been expelled.[32] At the 1954 CIO convention, Reuther announced, "The CIO does not recognize any autonomous right of crooks and racketeers to use the good name of the CIO as a cloak for their corruption."[33] The convention approved the creation of the CIO Standing Committee on Ethical Practices to investigate cases of corruption and to recommend corrective action when necessary.

GEORGE MEANY (AFL PRESIDENT 1952–1955; AFL-CIO PRESIDENT 1955–1979)

When George Meany became AFL president in 1952, he hoped for a merger with the CIO. However, the CIO's critical attitude toward organized crime's influence in AFL-affiliated unions was a serious obstacle. Meany seized upon racketeering scandals in the International Longshoremen's Association (ILA) to demonstrate that the AFL was ready to act decisively against labor racketeering.*[34] He wrote, "The Executive Council has the power now to apply all of its influence in order to correct a situation such as the press reports indicate exists in the New York waterfront." While insisting that the AFL is not a "police force," Meany affirmed the labor federation's responsibility "to see that unions protect their members and, if they do not, that the AFL ought to tell the corrupted union that it is not protecting its members and [that] we would like to have them let us know within a reasonable time what they have done about it." The Executive Council appointed three vice-presidents to study the problem. The result was a February 3, 1953, Executive Council letter to the ILA stating, "No affiliate of the American Fed-

* Under the leadership of Harry Bridges (1901–1990), the West Coast ILA had broken away from the international union in 1940 and become the International Longshoremen's and Warehousemen's Union (ILWU), a militant and progressive union affiliated with the CIO. A book-length biography of Bridges has yet to appear, but there is much information about him in encyclopedias and general labor histories. See also the Harry Bridges Center for Labor Studies at http://depts.washington.edu/pcls/complaborhist.htm.

0358

eration of Labor has any right to expect to remain an affiliate, on the grounds of organizational autonomy, if its conduct is such as to bring the entire movement into disrepute."[35] The AFL urged the ILA to remove any person with a criminal record from office; reform "shape-up" hiring (in which union officials choose the day's workers from among casual laborers who turned up at the piers); restore democratic processes within the union; and remove officers tainted by corruption.[36]

When he failed to receive a satisfactory reply, Meany advised the ILA that the Executive Council would recommend the union's suspension from the AFL. Indeed, the AFL's 1953 convention voted 79,079 to 736 to expel the ILA and chartered a competing union, the International Brotherhood of Longshoremen (IBL). However, in a blow to reformers, the longshoremen voted to continue being represented by the ILA.[37] The defeat demonstrates what has been proved time and again in efforts to clean up racketeer-ridden unions: labor racketeers have enormous staying power, and even when put to the test, usually win elections on account of intimidation, election fraud, and charisma.

THE MERGED AFL-CIO AND THE ETHICAL PRACTICES CODES

When talks about a merger between the AFL and CIO began, AFL officials complained about communist influence in CIO affiliates; CIO officials expressed concern about racketeer influence in AFL affiliates. The merger moved forward when both sets of leaders agreed that there would be no place for either communists or racketeers in the house of labor. In 1955, AFL President George Meany became the merged AFL-CIO's first president, a position he would hold until 1979.

The AFL-CIO constitution[38] authorized an Executive Council to appoint a committee to investigate charges that a union affiliate was dominated by corrupt influences and, if confirmed, to make recommendations for remediating the situation. The AFL-CIO's first convention (1955) vested a Committee on Ethical Practices "with the duty and responsibility to assist the Executive Council in carrying out the constitutional determination of the Federation to keep the Federation free from any taint of corruption . . . in accordance with the provisions of the constitution."[39] In June 1956, the Executive Council authorized the Ethical Practices Committee to conduct hearings into corrupt practices and

0359

to formulate a set of principles to keep the federation and its affiliates free from corruption and racketeering.[40] The promulgation of these ethical practice codes was the high-water mark of the American labor movement's response to corruption and racketeering.

The Ethical Practices Committee formulated six ethical practice codes. Code #1 stated, "A charter should never be issued to persons who are known to traffic in local union charters for illicit or improper purposes." Code #2 prohibited any salaried union official from receiving additional remuneration from health, welfare, or retirement funds. It also mandated regular auditing of union financial records. The union had a responsibility to remove a fund administrator who received an unethical payment. Code #3 stated, "No person should hold or retain office . . . who has been convicted of any crime involving moral turpitude offensive to trade union morality." Code #4 prohibited union officials from maintaining investments or business interest that posed a conflict of interest. Code #5 called for proper financial practices. Code #6 required democratic elections and the protection of union members' rights.[41] While remaining on the books, by the early 1960s these codes were defunct.

GEORGE MEANY AND THE MCCLELLAN COMMITTEE

The 1957–1959 McClellan Committee's hearings exposed serious corruption in five unions: the Bakery and Confectionery Workers, the Allied Trades Union, the International Union of Operating Engineers, the United Textile Workers Union, and most importantly, the International Brotherhood of Teamsters.[42] Dozens of labor officials, most notably IBT President Dave Beck, refused to answer questions.* IBT Vice-President (and soon thereafter president) Jimmy Hoffa refused to answer some questions and was evasive and combative in his answers to others. The senators insisted that the AFL-CIO had a responsibility to act.[43]

* Beck became IBT general president in 1952. Called before the McClellan Committee in March 1957, he took the Fifth Amendment sixty-five times when questioned about an interest free loan of between $300,000 and $400,000 (or, according to the committee chair, a misappropriation of more $320,000 of union funds). State and federal officials indicted Beck on corruption and tax charges. He did not seek reelection. Jimmy Hoffa succeeded Beck as general president in 1957.

0360

Early in 1957, the Executive Council proposed as a formal policy that "all officials of the AFL-CIO and its affiliates should freely and without reservation answer all relevant questions asked by proper law enforcement agencies, legislative committees and other public bodies seeking fairly and objectively to keep the labor movement free from corruption."[44] IBT President Beck criticized this statement for infringing on member unions' autonomy. Meany replied, "If the AFL-CIO follows the proposal of your organization and equivocates on this question, we will get legislation that will hurt every one of our members and hurt every one of our unions. . . . We will be under Government control."[45] The proposed statement passed with only Beck dissenting.

Meany told the McClellan Committee that only "very, very small portions of the trade union movement are burdened by corruption." Hoping to stave off federal legislation, he promised to take action.[46] "I don't think that we should be a law enforcement agency, but I think that we have a right and a duty and an obligation to our people to try to run unions just as clean as they can be run. And run them for the benefit of members and not for the benefit of George Meany or anybody else."[47] Meany put action behind his words by removing Beck from the AFL-CIO Executive Council on account of Beck's refusal to answer both the McClellan Committee's questions and the Executive Committee's questions.[48]

ENFORCEMENT OF THE ETHICAL PRACTICES CODE: UNITED TEXTILE WORKERS

Even before the McClellan Committee hearings commenced, Meany had begun an investigation of the United Textile Workers of America (UTWA). When the UTWA sought an AFL-CIO loan, Meany asked to see the union's financial records. He received what appeared to be falsified documents. In response to AFL-CIO queries, the UTWA Executive Board promptly cleared its officials of wrongdoing. Meany explained to the McClellan Committee:

> [I]t disturbed me a great deal—maybe I was naive—because I thought all that was necessary was to acquaint the ruling [International Union] body [with the fact] that money was being used in a loose fashion. . . . Apparently, I was too optimistic about that.[49]

0361

The AFL-CIO Committee on Ethical Practices held its own hearing, found that UTWA officers had altered financial reports to cover up misuse of funds, and ordered the UTWA to eliminate various abuses and to dismiss three union officers.[50]

On December 4, 1957, the AFL-CIO Executive Council suspended the UTWA from the labor federation. That action caused the UTWA Executive Board to agree to the AFL-CIO's original terms. At a special convention in March 1958, it elected a new president and passed several reforms. Still not satisfied, Meany demanded the removal of a vice-president and the continuation of the union's probationary status. The union complied and remained on AFL-CIO probation until February 16, 1960.[51]

BAKERY AND CONFECTIONERY WORKERS UNION

The AFL-CIO Ethical Practices Committee also took action against the Bakery and Confectionery Workers Union (Bakers). Treasurer Curtis Sims brought charges against President James G. Cross and Vice-President George Stuart for the misuse of union funds. After clearing the two men of charges, the Bakers' Executive Board brought charges against Sims for injuring the union's reputation and suspended Sims from office. The McClellan Committee and the AFL-CIO Ethical Practices Committee both decided to investigate.[52]

The Ethical Practices Committee, finding that the Bakers were not in compliance with the AFL-CIO's constitutional standards, ordered the union to correct the abuses and to remove the guilty parties from office. The Bakers refused to expel Cross or to reinstate Sims. On November 5, 1957, Meany announced that the AFL-CIO had suspended the Bakers from membership.[53]

A month later, the Appeals Committee of the AFL-CIO convention recommended that the Bakers be expelled unless the union fully complied with the AFL-CIO's requirements. When the union failed to comply, it was expelled and a new union chartered. In January 1961, Cross resigned in exchange for $250,000 severance pay and the union's commitment to pay his future litigation expenses. Later, Cross, Jack Olson, and four vice-presidents of the old union were convicted of embezzling union funds. With Cross out of the picture, the old and new unions negotiated a merger.[54]

0362

DISTILLERY WORKERS

In June 1956, the AFL-CIO Ethical Practices Committee turned its attention to the Distillery Workers Union (Distillery Workers). Sol Cilento, executive vice-president in charge of New York City Local 2 had been indicted on bribery and conspiracy charges related to the union's welfare fund. His codefendants were former Building Service Employees president and mob-associate George Scalise and his LCN-sponsor, Anthony Pisano, once a member of Al Capone's organization.[55] The government alleged that the three men had received kickbacks on fund loans totaling more than $300,000 (about $2 million in 2003 dollars) over a two-year period. The three were acquitted, but a fourth codefendant was sentenced to prison.[56] When the Distillery Workers refused to cooperate with the Senate Subcommittee on Welfare and Pension Funds' investigation, the Executive Council directed the union to show cause why it should not be suspended from the federation.[57] The union denied the need for reform. The Executive Council decided to suspend the union unless it accepted one year's probationary status and the appointment of a monitor to supervise its affairs. Its back against the wall, the Distillery Workers accepted probation and a monitor. In January 1961, the AFL-CIO dissolved its monitorship and terminated the probationary status.[58]

UAW-AFL JOHN DIOGUARDI

John Dioguardi, a capo in the Lucchese crime family and notorious labor racketeer, was appointed president of the United Auto Workers Union (UAW-AFL) Local 102 in New York at the 1951 convention despite never having been employed in industries whose workers were represented by that union.* A year later, the New York City Crime Commission and Manhattan District Attorney Frank Hogan accused Locals 102 and 227 of various wrongdoings. (Dioguardi was associated with both locals, though he held office in only Local 102.) In February 1953,

* The UAW-AFL should not be confused with the United Automobile Workers (of Walter and Victor Reuther), which descends from the AUW-CIO. When the AFL and CIO merged in 1957, the UAW-CIO took the name UAW; the UAW-AFL was renamed the Allied Industrial Workers (AIW).

0363

the AFL Executive Council ordered the international union to revoke Local 102's charter or face suspension. The UAW-AFL complied by dissolving Local 102.[59]

The Manhattan District Attorney's office convicted Dioguardi on state tax evasion charges, but he returned to union politics over UAW-AFL President Lester Washburn's opposition. In April 1954, Washburn expelled Dioguardi from the union and lifted the charters of six Dioguardi-dominated locals. Incredibly, the UAW-AFL's Executive Board overruled Washburn, cleared Dioguardi of wrongdoing,[60] and reinstated him. Washburn resigned in protest.

Eventually Dioguardi also resigned, but that did not end the union's troubles. In 1955, a Senate subcommittee investigated Chicago UAW-AFL Local 286, which was dominated by Angelo Incisco, a notorious organized crime figure. The UAW-AFL revoked the local's charter on February 1, 1956, but rescinded its action the following day. The board then allowed Incisco to disaffiliate the local from the union (that is, to turn the local into an "independent union"), and taking one-fifth of the entire international union's assets.[61]

On August 27, 1956, the AFL-CIO Committee on Ethical Practices declared that the Allied Industrial Workers of America ("AIW," the UAW-AFL's new name) "may be dominated, controlled, or substantially influenced in the conduct of its affairs by corrupt influences in violation of the Constitution of the AFL-CIO."[62] The Executive Council gave the AIW the choice of accepting a monitorship and eliminating "corrupt influences" within ninety days or be expelled. The union complied, tossing four New York locals out of the union. A special convention replaced the international president. In October of 1957, the Executive Council lifted the AIW's probationary status and the monitorship ended a few months later.*[63]

INTERNATIONAL BROTHERHOOD OF TEAMSTERS

David Beck's conduct at the McClellan Committee hearings prompted the AFL-CIO Executive Council to suspend Beck from the Council and to order an investigation of the IBT.[64] The AFL-CIO Ethical Practices

* In 1993, the AIW merged with the UPIU (United Paperworkers International Union).

0364

Committee reported to President Meany that Beck and Vice-Presidents Brewster and Hoffa had misused union resources and union pension funds for personal purposes; used their official positions for personal profit and advantage; engaged in improper activities relating to health and welfare funds; engaged in extortion and bribery; failed to abide by the AFL-CIO policy against refusing to cooperate with congressional committees; failed to ensure that racketeers were not granted union charters; and that Hoffa had associated with known racketeers, including Johnny Dioguardi.[65] The AFL-CIO Executive Council ordered the IBT to report on its effort to eliminate corrupt elements by October 25, 1957.[66]

The Teamsters showed no interest in complying. Facing federal and state criminal charges, Beck chose not to seek reelection at the 1957 Teamsters convention. Jimmy Hoffa, with the support of Johnny Dioguardi and other organized crime figures, became the new general president. The AFL-CIO Executive Council suspended the IBT on October 24. The Appeals Committee rejected the IBT's appeal and recommended expulsion.[67] The 1957 AFL-CIO convention voted four to one to expel the IBT. However, the Executive Council held the door open for the Teamsters readmission if someone other than Hoffa became president. Removed from the AFL-CIO, the IBT no longer had to abide by the federation's no-raiding pact; it was free to compete with AFL-CIO affiliated unions. In the next two decades, the IBT formed locals to represent teachers, security guards, police officers, and many other workers. Consequently, the IBT became by far the largest and strongest private-sector union in the United States, with approximately two million members in 1960.

THE LANDRUM-GRIFFIN ACT

The revelations of labor racketeering brought out by the McClellan Committee's hearings made some form of federal legislation a foregone conclusion. Meany told a Congressional committee that "[u]nless certain safeguards are established, both through self-policing and legislation, the inducements and opportunities for illicit gain or improper practices will persist and there will be those who will yield to them."[68] The AFL-CIO opposed a union members' bill of rights and some other

0365

proposals but eventually supported a union financial disclosure requirement as long as the U.S. Department of Labor (DOL) would be the responsible federal agency.

John L. Lewis, president of the United Mine Workers of America (UMW) opposed *any* remedial legislation: "We find ourselves opposed to the plan for Congress to enact regulatory or punitive legislation affecting welfare funds . . . there is ample legislation on the statute books."[69] He explained that the UMW opposed any governmental encroachment into the affairs of labor organizations and sharply criticized Meany: "I am completely impatient with the attitude of the present leaders of American labor who are, in effect, at the present time saying to the Federal Congress, 'Please, gentlemen of the Congress, hurry up and enact a statute that will compel leaders to be honest and stop us from thieving from our membership.'"[70]

The Senate ultimately passed the Kennedy-Ives bill, requiring registration of pension and welfare plans with the secretary of labor; detailed reporting of receipts and expenditures; and public disclosure. In addition, the bill provided criminal penalties for failure to file, false filing, and embezzlement.[71] The bill passed the Senate, but failed in the House of Representatives. The AFL-CIO announced that the "failure of Congress to pass the Kennedy-Ives bill can be laid squarely on the doorstep of those who sought not an anti-corruption bill, but an anti-labor bill."[72]

In 1958, the Democrats won majorities in both houses. There seemed at that point no possibility that Congress would pass a bill less favorable to labor than the Kennedy-Ives Bill.[73] The AFL-CIO reiterated that "[w]e are determined that there be legislation which will eliminate the opportunities for corruption and at the same time preserve the traditional and legitimate functions of trade unions. In our opinion . . . S.505 (now Kennedy-Ervin Bill) meets this test."[74] During the debate, Senator McClellan introduced a "bill of rights for union members." The AFL-CIO opposed it, arguing that it would weaken responsible unions and generate nuisance litigation. Nevertheless, Congress passed this bill of rights by a one-vote margin.[75] President Dwight D. Eisenhower signed it into law.

The Landrum-Griffin Act (formally the Labor-Management Reporting and Disclosure Act, LMRDA) required unions to file with the DOL reports on income, expenditures, and salaries; it required bonding of officers and staff members; it forbade officers from having certain

0366

conflicts of interest; and it prohibited union loans of more than $2,000 to officers or members. It empowered the secretary of labor to seek judicial relief if union members' rights were denied or their benefit funds misused. The law made embezzling union funds a federal offense.[76]

The AFL-CIO denounced passage of the Landrum-Griffin Act, which provided the legal foundation for union democracy, with the following formal statement: "This measure was designed to destroy organized labor, but we will not be destroyed. . . . Our cause is just and we continue to move forwards. . . ."[77] A year later, the AFL-CIO excoriated the law as "the worst legislative blow suffered by the labor movement since enactment of the Taft-Hartley Act in 1947."[78]

POST–LANDRUM-GRIFFIN DEVELOPMENTS

In 1959, the ILA appealed to the AFL-CIO for readmission. The AFL-CIO agreed on condition that the ILA submit to any order issued by President Meany, provide whatever reports the federation might require, and permit Meany to attend ILA Executive Council meetings. The ILA also agreed that the AFL-CIO could impose any discipline it deemed appropriate.[79]

In 1960, a New York–New Jersey Waterfront Commission report concluded that the elimination of the "criminal domination and control (on the waterfront) . . . has not been fully accomplished."[80] The commission proposed that (1) former convicts, already barred from holding union office, be made ineligible to hold any position in a union pension and welfare fund; (2) additional misdemeanors be added to the list of offenses that bar individuals from working on the docks; (3) required registration of longshoremen with the Waterfront Commission and prohibition from interfering "with the duties of licensed or registered personnel without justification in law."[81] The ILA, strongly opposing all these proposals, unsuccessfully sought an AFL-CIO resolution condemning the Waterfront Commission and urging Congress to repeal the act. However, the AFL-CIO's 1963 convention did give the ILA part of what it wanted by opposing pending federal legislation that would have *expanded* the Waterfront Commission's powers. In the end, Congress did not expand the commission's powers.[82]

Following the passage of the Landrum-Griffin Act, President Meany took no further initiatives against labor racketeering. By the

0367

early 1960s, the Ethical Practices Committee was dormant. The AFL-CIO ignored several questionable situations. For example, in 1963, Maurice Hutcheson, president of the powerful Carpenters Union, was convicted of bribing an Indiana official to obtain advance information on highway routes.[83] Although the conviction was later reversed on appeal, Hutcheson was convicted of contempt of Congress and sentenced to six months in jail for refusing to answer committee questions. President Meany called Hutcheson a "man of character . . . an able, devoted and conscientious representative of the American trade union movement."[84]

A more disturbing example of Meany's indifference to labor corruption surrounded the power struggle in the United Mine Workers in the late 1960s. In 1969, Jock Yablonski, leader of an insurgent movement, sought to unseat President Tony Boyle (1963–1972). Although there was no organized crime labor racketeering in the UMW, Boyle ruled the union like a ruthless dictator.[85] The election campaign was marked by threats and violence. When Boyle won the election, Yablonski charged election fraud and sought to have the result overturned. Shortly thereafter, he, his wife, and daughter were murdered. Yablonski's campaign manager asked Meany to allow Yablonski's followers to state their complaints about Boyle to the AFL-CIO Executive Council so that labor might "clean its own house without Senate or Administrative inference."[86] Meany rejected the request on the ground that "the AFL-CIO traditionally refrains from intervening in the internal affairs of its own affiliates, let alone outside organizations. Incredibly, Meany asserted that government or AFL-CIO initiatives to attack labor corruption or racketeering would violate a union's "democratic structure."[87] In 1974, Boyle was convicted of first degree murder for having hired Yablonski's assassins.

LANE KIRKLAND (1979–1995)

If Meany's approach to combating labor corruption was passive, that of his successor, Lane Kirkland, was virtually nonexistent. In 1979, at the height of LCN's influence in the IBT, the AFL-CIO invited the Teamsters back into the labor federation. Kirkland argued that the Landrum-Griffin Act, by assigning the job of policing the unions to the federal government and its agencies, relieved the AFL-CIO of responsibility for

0368

addressing corruption and racketeering in its member unions.[88] Said Kirkland, "All sinners belong in the church. All citizens owe fealty to their country, and all true unions belong in the AFL-CIO."[89]

In the late 1980s, the Department of Justice was rumored to be preparing an unprecedented civil RICO suit against the Teamsters general president, general executive board, and the heads of several Cosa Nostra crime families. The Teamsters wanted to rejoin the AFL-CIO. Reconciliation promised benefits for both sides. The Teamsters would increase the AFL-CIO's membership by 15 percent, thereby enhancing the federation's finances and political clout. Moreover, as an AFL-CIO affiliate, the IBT would be bound by the federation's noncompete rule, that is, not competing to decertify other AFL-CIO unions.[90] The IBT hoped that, with AFL-CIO support, it could derail the DOJ's civil RICO lawsuit, perhaps with federal legislation outlawing court-imposed RICO trusteeships.[91]

During the 1980s, the federal government again conducted hearings into labor racketeering and considered Landrum-Griffin reforms.* In 1981, Senator Sam Nunn (D.-Ga.), chairman of the Senate Permanent Subcommittee on Investigations when the Democrats controlled the Senate, introduced legislation: (1) providing for the automatic suspension of union officers found guilty of wrongdoing (instead of waiting for the resolution of a final appeal), and (2) making it a felony for an employer to pay a bribe of $1,000 or more to a union representative.[92] The AFL-CIO supported this proposed legislation except for the automatic ten-year suspension period. Kirkland explained, "Both reason and human feeling support the view that there are situations in which a 10 year disqualification is too severe."[93] Kirkland argued that corruption is an individual, not an institutional, problem and insisted that the AFL-CIO lacked power and authority to attack racketeering in its affiliated unions. "As spokesman for organized labor the AFL-CIO asks for that [federal governmental] protection, emphasizes that the trade union movement sees such protection as a benefit, and pledges its cooperation in a joint endeavor with the Federal Government to maintain the hard-earned honor of our institutions."[94]

Kirkland told the senators that the AFL-CIO's codes of ethics were

* According to Eleanor Hill, chief counsel for the Democrats on the Permanent Subcommittee on Investigations, mainstream labor was not supportive of Senator Nunn's hearings. Personal interview by author.

0369

not being actively enforced because the Landrum-Griffin Act usurped the federation's ability to act against racketeering and that conflicts would arise if two investigative/enforcement procedures (one by the AFL and one by federal agencies) operated simultaneously. Since the government had superior fact-finding tools, it should bear the responsibility for rooting out wrongdoing. Moreover, the AFL-CIO had only the drastic power of expulsion to use in corruption and racketeering cases. "It is as though you only had capital punishment as a punishment for every rank of crime."[95] Apparently, Kirkland was not aware of or rejected the probation and monitoring that the AFL-CIO had used in the mid 1950s and did not consider use of fines.

Senator Warren Rudman (R.-N.H.) expressed the frustration caused by union officers' repeated invocations of the Fifth Amendment at congressional hearings. He asked whether the AFL-CIO's policy of disciplining members who refused to answer questions put by congressional committees still applied. Kirkland called it "an intricate question," backing away from the AFL-CIO's McClellan Committee–era position. It seemed clear that the AFL-CIO would no longer punish union officials who refused to testify at congressional hearings.[96]

The AFL-CIO supported a 1984 amendment to the Landrum-Griffin Act, which required union officers to relinquish their offices immediately upon conviction rather than months or years later when appeals had been exhausted. However, the IBT opposed even that law on the ground that while it barred convicted union officials from all union offices, it did not prohibit a convicted corporate official from holding a corporate position in a unit other than labor relations.[97]

A 1985 book by labor lawyers David Elbaor and Laurence Gold denied the existence of any organized crime problem in the labor movement.

> Today's anti-labor campaign, the intent of which is to associate unions with organized crime, corruption, and unsavory practices, is the lineal descendant of earlier efforts to tar the labor movement with simplistic yet sensational identifications between union action and Bolshevism, Communism, and other "un-American" thoughts.[98]

Elbaor and Gold criticized the Department of Labor for departing from its historic mission to protect workers and for participating in criminal investigations against union officials. According to the au-

0370

thors: (1) nearly all union-related crimes are isolated offenses by individuals; (2) DOJ only prosecutes theft of such small sums when the defendant is a union officer; (3) federal prosecutors seek to establish new theories of labor crimes by criminalizing traditional union activities; and (4) the government has abandoned civil and criminal enforcement of managements' reporting and disclosure requirements.[99] They concluded that "[t]he government's campaign, by perpetuating the myth of union corruption with stepped-up and highly publicized prosecutions, maligns labor's reputation and thereby threatens its future."[100]

AFL-CIO'S OPPOSITION TO RICO TRUSTEESHIPS

In 1987, the AFL-CIO Executive Council issued a statement opposing the rumored DOJ civil RICO suit against the IBT. "If the Justice Department brings suit seeking supervision over an international union, the AFL-CIO will do whatever is useful and productive in the legal circumstances to prevent such supervision."[101] However, the Executive Council added: "We support full and vigorous law enforcement aimed at the racketeers and the sharpsters who seek to prey on our movement; the government has an obligation to trade unions and their members to provide such enforcement."[102]

In order to mobilize support against the civil RICO suit, the AFL-CIO established an organization called Americans against Government Control of Unions (AAGCU). The AAGCU launched a public relations campaign that called the rumored suit a Reagan administration conspiracy to crush organized labor. One of its promotional statements equated "the possible [DOJ] lawsuit to the suppression of free trade unions in Poland, the Soviet Union and Nazi Germany."[103] According to the AAGCU, "the Justice Department's proposal for a government takeover of any union in this country conflicts with the basic American concept of free trade unionism and violates the 1st Amendment guarantees of free speech and association."[104]

President Kirkland publicly stated that there was "no justification whatsoever" for the Justice Department to seek to have the Teamsters put under a court-ordered trusteeship "simply because the leadership is influenced by organized crime." He said, "organized crime influence is not a "problem of any significance at this time,"[105] and that a trustee-

0371

ship is not "the proper relationship between a government and a private institution in a free society."[106]

Calling court-imposed union trusteeships contrary to the spirit of free trade unionism,[107] Kirkland warned that a civil RICO suit against the Teamsters would be a "clear abuse of the government's prosecutorial power." He insisted that the Department of Justice should prosecute those who violate the law, but not seek sanctions against unions themselves. The AFL-CIO issued a statement declaring, "In a democratic society, labor unions must be controlled by their members, not by the government."[108] With AFL-CIO and IBT prodding, 246 House and Senate members delivered a letter to the DOJ urging that no civil RICO suit be brought against the IBT.[109]

The AFL-CIO criticism of and lobbying against the DOJ suit continued even after the lawsuit was filed and settled. Kirkland described Judge David Edelstein's decisions enforcing the settlement, as "the latest in a string of orders directed at maximizing the government's control over the Teamsters" and reasserted that "this kind of judicial interference with the right of union members to self-government and with the right of unions to their autonomy is excessive and unreasonable."[110]

In 1989, President Kirkland testified before the Senate Permanent Subcommittee on Investigations that the use of trusteeships violated union members' constitutional right of association: "Government control of a private association is thus fundamentally illegitimate in that the officials who exercise control are not drawn from, are not selected by, and are not responsible to the association members."[111] In Kirkland's opinion, corruption is an attribute of individuals, not organizations, and is properly dealt with by prosecuting racketeers rather than imposing expensive trusteeships that deny the membership control of its union.[112] Kirkland stated that civil RICO suits should be brought against unions only if, despite successful criminal prosecutions, there is a clear and present danger of ongoing criminality. In addition, even if RICO suits are necessary, trusteeships are not; DOL and DOJ, according to Kirkland, could deal with union members suspected of having ties to organized crime without resorting to unions trusteeships.[113] Likewise, labor lawyer Laurence Gold pointed out, there are other less intrusive equitable remedies, such as government oversight of elections, government scrutiny of expenditures, and injunctive relief against individual wrongdoers.[114]

0372

The IBT and the AFL-CIO proposed amending RICO to (1) preclude the "wholesale removal of a union's elected officers and their replacement, for an indefinite period, by a court appointed trustee"; (2) to make it clear "that such a trusteeship, in any form, not be imposed unless and until there has been a full and final evidentiary hearing and the government has demonstrated, by clear and convincing evidence, that the interests of union members cannot be protected by any less intrusive means"; and (3) "that RICO be clarified so that no union is precluded from using its resources to hire legal counsel to defend itself or its officers."[115]

The Senate Permanent Subcommittee on Investigations took the AFL-CIO's criticisms seriously. Its 1990 report recommended that RICO trusteeships in labor cases "only [be imposed] in the most extreme circumstances" and called on the Justice Department to seek alternative remedies. Noting the AFL-CIO's opposition to RICO trusteeships, the subcommittee report called on the attorney general to issue guidelines limiting the circumstances under which DOJ would seek to have RICO trusteeships imposed on labor unions. The report recommended that a liaison be established between law enforcement agencies and the AFL-CIO to enhance cooperation.[116] These proposals were not implemented, although it has become DOJ policy to allow unions an opportunity to see and comment on RICO complaints before they are filed.

In 1996, the AFL-CIO opposed the plan of the House of Representatives Subcommittee on Human Resources and Intergovernmental Relations to hold hearings on the DOL's response to labor racketeering cases. The AFL-CIO's legislative director stated, "All they've dragged up are old news reports. They will look foolish if they try to have hearings."[117] When the hearings were officially announced in July, the AFL-CIO charged the Republican leadership with using the hearings as "an organized smear campaign against union leaders" to divert attention away from the Republicans' own agenda.[118] AFL-CIO President John Sweeney (1995–) charged that the hearings were being held to retaliate for the federation's $34 million ad campaign against Republican legislative initiatives.[119]

The AFL-CIO attacked the House Judiciary Subcommittee on Crime's 1996 hearings on the 1994 consent agreement settling DOJ's civil RICO suit against LIUNA[120] as a waste of taxpayer money and an abuse of congressional power.[121] Its press release defended LIUNA

0373

president, Arthur E. Coia, calling him a leader in "cleaning up corruption wherever he could find it. Coia and the Laborers union should be applauded for their bold actions to crack down on the last vestiges of mob control in their union—not witch-hunted because of past problems and their current opposition to [House Speaker Rep. Newt] Gingrich's attacks on working families."[122] (Subsequently, the former prosecutors hired to reform LIUNA charged Coia with having ties to organized crime; Coia was forced out of office after being convicted of corruption in federal court in Rhode Island.)

AFL-CIO officials continue to reject government antilabor racketeering initiatives as a figment of the prosecutorial imagination or a sinister plot to destroy the labor movement. The AFL-CIO's general counsel, Jon Hiatt, pointed out that the government seeks to impose RICO trusteeships on labor unions, but not on corporations, despite rampant corruption in the latter.[123] Laurence Gold expressed a similar position: "I question whether comparable cases are being brought against people in other walks of life."[124] On December 6, 2001, an AFL-CIO resolution demanded termination of the Independent Review Board, established to enforce the settlement in the IBT international case.[125]

> The goals of the Teamsters consent decree have now been secured. No legitimate reason remains to justify continued government intervention in that organization. It is time for the consent decree to end and the Teamsters Union returned to the full democratic control of its members.[126]

In early 2002, the AFL-CIO criticized the proposed fiscal year 2003 DOL budget for providing a $3.9 million increase for the Office of Labor-Management Standards (OLMS), which had requested $3.4 million and forty additional staff positions for "enhanced enforcement and outreach assistance activities to ensure compliance" with the LMRDA.[127] The OMLS's ambition was to audit at least 1 percent of labor organizations each year and to increase the transparency of union finances by, among other things, requiring that LMRDA reports be made available to the public. The AFL-CIO questioned the increase in the OLMS budget for investigations into unions while cutting programs "that directly enforce workers' job-based rights and protections." It also criticized as unnecessary the proposed 9 percent budget increase and twenty-five new employees for the DOL's Office of Inspector General.[128]

0374

CONCLUSION

Over the course of the twentieth century, with a few significant exceptions, the leaders of the U.S. labor movement have accommodated rather than opposed labor racketeers. To be sure, a few labor leaders, like David Dubinsky, Walter Reuther, Harry Bridges, and George Meany, denounced organized crime's presence and influence in the labor movement as a serious problem. However, except in the 1950s, most labor leaders accepted organized crime as a fact of life and/or believed that an all-out effort to purge racketeers from the labor movement would be disastrous for labor. And some AFL-CIO positions, like denunciation of Landrum-Griffin and DOJ's civil RICO suit against the IBT, were hostile to anti–labor racketeering efforts.

In truth, there was probably not much that honest labor leaders on their own could do about organized crime. Entrenched labor racketeers backed by LCN are formidable. The AFL's failed effort in replacing the ILA with a new, honest longshoremen's union demonstrates the sagacity of Gompers's and Green's judgment that the AFL had limited options for dealing with corruption and racketeering in its constituent unions. An AFL-CIO crusade against labor racketeers might well have weakened the labor movement, certainly in the short run. But a middle position might have achieved some success. Denunciation of labor racketeers, cooperation with government enforcement agencies, and creative use of sanctions like probation and monitoring did achieve some success in the late 1950s in cases involving the Distillery Workers, the Bakery and Confectionary Workers, and perhaps one or two other unions.

0375

6

Labor Racketeering and the Rank and File

> But if the 1980s were difficult for most unions, for the Teamsters they were tragic. A combination of politicians, mafia-connected union officials, and trucking employers came to dominate the highest levels of the Teamsters. Under the control of these outsiders, during the worst years of the employers' attacks on the unions in the 1980s, the Teamsters negotiated a series of sweetheart contracts. These contracts sold out the interests of union members and weakened the labor movement as a whole.
>
> —Dan La Botz, "The Fight at UPS: The Teamsters' Victory and the Future of the New Labor Movement," Solidarity pamphlet (1997), 9

> It is beyond belief that 10,000 members would sit by and watch these things done and never utter a peep, unless a substantial number of the membership were fearful for their lives or their jobs.
>
> —U.S. Second Circuit Court of Appeals, in affirming Judge Ackerman's decision in the IBT Local 560 case, 780 F.2d at 278

Rank-and-file union members are labor racketeers' primary victims. In racketeer-ridden unions, workers suffer financially when the terms of their collective bargaining contracts are not enforced, when their pension and welfare funds are defrauded, and when their dues are used to reimburse corrupt officers' personal expenses. Their personal safety is put at risk when corrupt officers refuse to press their safety-related grievances with employers, or worse, when officers turn a blind eye to unsafe conditions in exchange for bribes. The potential effectiveness of

0376

unions in negotiating contracts, enforcing contract provisions, handling grievances, organizing, running hiring halls, and handling finances is undermined when union officials are appointed on the basis of their loyalty to organized crime. The union movement is weaker to the extent that union officials are racketeers rather than committed organizers; individual unions are weaker to the extent that union official have few administrative skills and little interest in furthering the interests of the membership. The members of racketeer-ridden unions suffer on account of the wholesale violation of their rights of free speech, participation in union elections, and fair representation in grievance proceedings.

Why does the rank and file tolerate such "leadership?" The most obvious answer is that the uncoordinated many are at the mercy of the highly organized few. In the case of nation-states, repressed populations rarely are able to overthrow totalitarian dictatorships that rely on carrots and sticks, including extreme violence, to maintain their power and privilege. So too, rank-and-file union members have almost no chance of overthrowing organized crime–backed racketeers. To be sure, some union members have testified at congressional hearings, provided information to investigative journalists, campaigned as independents for union office, lodged complaints with the Department of Labor, brought lawsuits to redress their grievances, and even begun reform organizations. Tragically, scores of such individuals have ended up losing their jobs, their physical security, and even their lives. Until the federal government cleared the way by launching a war on organized crime generally and on labor racketeers specifically, rank-and-file dissidents and reformers had little hope of liberating their unions from the grip of organized crime. Even with the government's assistance, successes have been few and hard won.

THE WEAKNESS OF THE RANK AND FILE

We have already seen (Chapter 2) that it was relatively easy for a small group of organized criminals to infiltrate and take over a union comprising hundreds and thousands of members. This should not be surprising. History is replete with examples of small, tightly knit groups specializing in violence, terrorizing, and dominating disorganized collectivities.[1] Labor racketeers only need to intimidate or otherwise neu-

0377

tralize a small number of union officials and active members, not the vast majority of the rank and file that is only weakly involved in union affairs. Not only are Cosa Nostra organized crime families closely knit groups that can draw on their expertise in intimidation and violence, they have been able to count on the cooperation of corrupt employers, the passivity of the AFL-CIO, and the cooptation of politicians.

It would be a mistake to imagine labor racketeers pitted in stark opposition to the membership. The racketeers typically enjoy some support and popularity at the early stages of their infiltration, and they attract new supporters as their hold on the union tightens. Labor racketeers are adept at establishing patronage systems. This is easiest to accomplish when the union operates a hiring hall (as in the construction industry) that can be used to reward cooperation and loyalty. Those in charge of the hiring hall can dispense the choicest (best-paid; best-conditions) work assignments to their friends, allies, and supporters. The racketeers can appoint their supporters as shop stewards and business agents. In a short time, the infiltrated union's entire administrative cadre will consist of individuals loyal to the racketeers. Contrariwise, dissidents and others who oppose the dominant clique will be frozen out of lucrative work assignments and union offices. If irritating enough, they will be blacklisted and thereby driven out of the industry and out of the union. Even where there is no hiring hall (that is, where employers do all their own hiring), the racketeers can easily make a "troublesome" union member unemployable by indicating to employers that continued employment of the individual might lead to labor problems.

The threat and actual use of violence is a massive inhibitor to anyone considering running for office against the incumbent regime. The history of many unions includes beatings and murders of dissidents who challenged the dominant clique. The collective memory of many unions' rank-and-file holds stories of dissidents murdered for challenging those in power.

Even if a union member is courageous enough to run for office against a mob-connected incumbent, it is almost impossible for him/her to win. Incumbent labor racketeers have complete control over the union's communications with the rank and file. Their newsletters provide a steady diet of proincumbent propaganda. Thus, while incumbents enjoy widespread name recognition, insurgents will likely be known only to a small circle. Incumbents cannot legally use union

0378

personnel and resources for their campaigns,[2] but in practice they can count on the active support of the union's whole administrative infrastructure. When racketeers have anticipated insurgent opposition, they have passed rules outlawing campaign donations by nonunion members, further limiting the insurgents' chances.[3] They have consistently turned to red-baiting, that is, branding critics as communists or radicals.*

The rank-and-file electorate is difficult for insurgents to reach, much less mobilize. Only a small percentage of union members are highly interested and involved in union affairs; the great majority are apathetic. Most members look to their unions to negotiate collective bargaining agreements, provide grievance representation, and pay their pensions, but they do not keep up with union politics or governance.[4] Typically, less than 5 percent of eligible members turn out at regular union meetings; less than 25 percent vote in union elections. Many union members do not know who runs their union or whether those in charge are doing a good job; many may have no idea that certain officers are organized crime members, associates, or puppets. They may chafe at mediocre contracts, favoritism, and lack of accountability to the membership, but accept this reality as inevitable.

The historian David Witwer documents an unsuccessful effort by reformers in LIUNA (NYC) Local 282 to wrest control of their five thousand–member union away from an organized crime–connected clique led from the early 1970s by labor racketeer John Cody.** In 1975, a few members formed a group called FORE (Fear of Reprisal Ends). They received nationwide attention when the TV news show *60 Minutes*

* Labor journalist Dan La Botz provides this example from a mid-1980s union insurgency in a Teamster local in Long Island City, New York: "'They did something that was very unfair, calling me, branding me as a Communist,' says [Nick] Montalvo. They went to warehouses where he wasn't known, and told workers who had never met him that Montalvo was a Communist. 'That was the only type of campaign they could put up against me—and they used it, to no avail, but they used it.'" Dan La Botz, *Rank-and-File Rebellion: Teamsters for a Democratic Union* (New York: Routledge, 1990), 138.

** David Witwer points out that although the rank-and-file members did not know about all of the ways that the incumbents were exploiting the members and looting the union, they did recognize that their collective bargaining agreements were being selectively enforced and that their grievances were being ignored. "The Landrum-Griffin Act: A Case Study in the Possibilities of and Problems in Anti-Union Corruption Law," 27 *Criminal Justice Review* 301 (2002) at 312.

[162.10.217.184] Project MUSE (2026-06-15 01:41 GMT) University of Queensland

presented a segment on them. They ran candidates against the Cody group in three elections before dissolving. Witwer explains:

> The FORE members cited several reasons for their successive defeats at the polls. . . . Members had come to doubt that rank-and-filers were competent to run the union effectively. Also a sense of apathy and defeatism pervaded the membership. As one FORE member put it, "they feel there is no way you can beat the incumbents and everybody is afraid. . . ." The incumbents also benefited from a sort of insiders' coalition within the local. Many members held appointed positions that brought more overtime and increased seniority . . . ; other members were notified about lucrative long-term job assignments. Both groups could be counted on to bring in their friends and relatives to vote for the incumbents. One FORE member estimated that through this kind of patronage network the incumbents could count on . . . the votes . . . of a quarter to a fifth of the total membership . . . in addition to these factors, there remained the key issue of intimidation. . . . Too many acts of intimidation occurred to be covered in the present article.

Not only do incumbent labor racketeers have practically insurmountable advantages over insurgents in union elections, they also control the election machinery. They decide where elections will be held and the method of voting; they count the ballots and report the results. There is a long and sordid history of fraud in union elections. Moreover, under the Landrum-Griffin Act, only the Department of Labor can go to court to challenge the results of a union election and the DOL may not initiate action until its investigation confirms that election fraud "probably made a difference" in the election's outcome.

Even if an insurgent somehow wins a union election, he may be foiled by lower-level union officials who remain loyal to the racketeers. At every juncture, the reformer will face overt and covert opposition and sabotage. Furthermore, a local union reformer can be thwarted by an organized crime–controlled district council or international union. There are many examples of international unions manufacturing charges of malfeasance against local union reformers, accusing them of violating the union's constitution or bylaws and punishing them with expulsion from office or from the union altogether. A racketeer-influenced international union can lodge trumped-up charges against and replace local or district council officers with a trustee who is loyal to the

0380

ruling faction. Under the Landrum-Griffin law, trusteeships imposed on locals by the international union are presumptively valid for eighteen months.[5] In reality, given the time it takes to launch a legal challenge against such a trusteeship along with the challenger's high burden of persuasion, it is practically impossible for a trusteed local or district council to overcome the eighteen-month presumption.

INDIVIDUAL DISSIDENTS: ACTS OF DEFIANCE

"Dissident" is an unfortunate term, conjuring an image of a curmudgeon who cannot get along with anybody. Nevertheless, it is an appellation that union reformers routinely and proudly use in referring to themselves and one that others have long used to describe union insurgents. If I were writing on a fresh canvas, I would prefer the term *union reformer or insurgent,* but I will defer to the prevailing nomenclature.

However they are labeled, people willing to fight hopeless battles against massively stronger opponents frequently seem obsessed by systemic injustice to which the society appears oblivious. After months and years of futilely seeking the support of international union officials, the Department of Labor, journalists, and prosecutors, many union dissidents appear defensive and even paranoid. They believe the world is against them; of course, to a substantial extent, this is true.

It takes enormous courage for union members openly to criticize labor racketeers. Twentieth-century history is full of examples of critics being intimidated, threatened, beaten, and killed. Consider this statement provided by LIUNA reformer Chris White for the government's 1990s civil RICO suit against the Laborers International Union:

> I have been a member of the Laborers' International Union of North America (LIUNA) for over twenty years and a member of Local 942 of LIUNA in Fairbanks Alaska for about the past eighteen years. For more than fifteen years, I have attempted to work within the union to make it more democratic and responsive to the needs of the rank and file. My efforts, and those of my fellow union members who participated with me in those efforts, were met with vicious suppression, including economic reprisals, violence, and threats of violence. My home has been vandalized, my friends have been beaten, shot at, assaulted with knives and guns. Over the years, I have observed a clear

0381

> pattern within LIUNA of chilling the rights of LIUNA members and preventing democratic participation in the union's affairs. Meaningful democracy is dead within LIUNA.*

Table 6-1 lists just some of the murders that can be attributed to labor racketeers. These murders were identified by means of a limited review of court cases, newspaper stories, articles, and books. Undoubtedly there are many (perhaps even more than those listed here) that I have failed to discover. Moreover, we should also keep in mind that for every murder there probably have been a score of beatings. Some of these, like the attack with sulphuric acid that blinded crusading *Daily Mirror* columnist Victor Riesel, were very serious indeed.** There are myriad documented incidents of dissidents being attacked at national conventions and local union meetings when they asked to be recognized in order to voice a criticism or make an unwelcome nomination.

While all of these murder victims listed in Table 6-1 were individuals who had a conflict with the incumbent union power structure, not all of these victims had unblemished records. Jimmy Hoffa, for example, had a career-long history of alliances with organized crime groups, but after Hoffa went to prison, organized crime preferred Hoffa's successor, Frank Fitzsimmons, as Teamsters general president.[6] Although Hoffa was hardly a dissident or reformer, his murder sent shock waves through the rank and file. We can imagine an ordinary Teamster thinking, "If LCN would murder Jimmy Hoffa for challenging its authority, what would happen to me if I started complaining?" A few of the notorious murders listed in Table 6-1 (e.g., Jock Yablonski) had nothing to do with Cosa Nostra. Nevertheless, I include Yablonski and a few others because, arguably, every high-visibility murder of a union dissident sends shock waves through the whole labor movement.

* The government offered Chris White's declaration as part of its draft civil RICO complaint against LIUNA, U.S. v. LIUNA (N.D. Ill.). The case was settled before the complaint was filed. Years later, White was actually elected to a minor post in the local. It appears that the government's intervention has had a significant effect on LIUNA's governance and political culture.

** Johnny Dioguardi was charged with having ordered this vicious attack. When the two key witnesses against him were murdered, all charges were dropped.

0382

Table 6-1
Murders Associated with Labor Racketeering

Victim	*Year Murdered*	*Circumstances Surrounding the Murder*
Steve Kelliher	1923	Organized crime figure and labor leader; shot dead at the behest of Tommy Maloy.
Jacob Kaufman*	1931	Popular union organizer who for years had tried to persuade the courts to kick Tommy Maloy out of the unions. Killed after filing suit against Maloy and announcing that he would run against Maloy in an open election.
Dennis Ziegler*	1933	Dissident in Operating Engineers Local 569 in Chicago. Murdered.
Harry Koenig national convention.	1936	HEREIU Local 16 (New York) official. Murdered at the HEREIU
Norman Redwood	1937	Head of Laborers Local 102 in New York City. Killed by an assassin who hid in the bushes outside his home.
Peter Panto*	1939	Leader of an insurgent group in the ILA local in Brooklyn's Red Hook district; led a revolt against the corrupt union leadership of Joseph Ryan and mob boss Albert Anastasia. Lured from his home late at night and never seen again.
William Lurye*	1949	Union organizer stabbed to death in a telephone booth on West 35th Street in New York City. Two organized crime figures were arrested, but the witnesses could not make a positive ID. One witness stated he had been approached by a racketeer union official and given $100 to forget the defendants' identification.
Ed Murta*	1950s	Leader in the Carpenter's Union on Long Island; murdered.
John Acropolis*	1950s	President of Teamsters Local 456 in Westchester County, New York; murdered.
Anthony Castellito	1961	IBT Local 560 official. Murdered by Local 560 boss and LCN capo Tony Provenzano.
Walter Glockner*	1963	Local 560 member murdered the day after an argument with one of the Provenzano brothers.
Robert "Lonnie" DeGeorge*	1964–67	Union dissident in IBT Local 107 in Philadelphia. Murdered outside the local's headquarters. Francis Sheeran was charged with the murder, but the case was eventually thrown out.
Dow Wilson*	1966	Reformer in the International Painters Union in San Francisco. Murdered after criticizing and challenging International Union officers and policies. Ben Rasnick, a West Coast Painters Union leader, was convicted of ordering the murder.
Lloyd Green*	1966	Leader of the Painters Local 1178 and close ally of Dow Wilson. Murdered two weeks after Wilson.
Jock Yablonski*	1969	Murdered, along with his wife and daughter, at the end of his unsuccessful campaign to replace Tony Boyle as president of the United Mine Workers. Boyle was eventually convicted of ordering the murder.
Joe Caleb*	1972	Popular dissident in LIUNA Local 478 in Miami. Murdered after asking questions about the administration of the multimillion-dollar LIUNA trust fund controlled by District Council President Bernard Rubin, a reputed ally of the Chicago mob.
Frank Murray*	1973	Charismatic leader of ILA Local 1247 in Jersey City. Disappeared and presumed murdered after leaving an ILA meeting in midtown Manhattan.

(continued)

0383

Table 6-1 *(continued)*

Victim	*Year Murdered*	*Circumstances Surrounding the Murder*
John Cammilleri	1974	A union member, allegedly tied to organized crime. Murdered after supporting an opposition candidate for union office in Buffalo Local 210.
Jimmy Hoffa	1975	Former IBT general president disappeared and presumed murdered by LCN because of his campaign to regain the Teamsters general presidency.
Danny Evangelista*	1976	Reformer opposed Theodore Maritas's candidacy for New York District Council of Carpenters presidency. Shot to death while sitting at his desk in Local 385 headquarters.
Al Bramlett*	1977	HEREIU officer murdered in Las Vegas after opposing the move of HEREIU Local 226 health and welfare funds to Illinois.
Danny Green	1977	Teamster official and racketeer associated with the Cleveland LCN. Murdered.
Willie Nordstrom*	1978	President of Carpenters Local 488 in the Bronx who criticized the union leadership; shot to death.
Robert Flotte*	1979	Put together a caucus of white, black, and Mexican workers in Longshoremen's Local 6 in San Francisco. Murdered outside the union hall.
John McCullough*	1980	President of the Philadelphia Roofers Local 30. Shot to death at his home by Willard Moran, reputedly due to unwillingness to accede to mob-dominated Local 54's determination to organize the bartenders in Atlantic City.
Nicholas Altieri	1981	An official in ILA Local 10. Murdered because LCN feared he might become a government cooperating witness.
Gene Viernes and Silme Domingo*	1981	Leaders of an insurgent caucus who pledged to oust racketeers in Seattle. Assassinated soon after winning ILA Local 36 election.
Ben Medina*	1982	After announcing his reform candidacy for a top job in LIUNA Local 332 in Philadelphia, five masked men broke into his home, bound and gagged his wife, and beat him to death.
Bobby Love*	1982	The business manager of LIUNA Local 194 in Baltimore intended to run for president on a reform ticket. Murdered two days after Medina.
Teddy Maritas	1983	Genovese crime family associate and District Council president of New York City Carpenters Union, 1977–1981. Murdered by the mob to prevent possible cooperation with federal prosecutors.
Danielle Forgione, Jr.	1984	Business manager of LIUNA Local 948 in Florida. Murdered while under investigation for looting the pension fund.
Harry Serio*	1989	Secretary-treasurer of IBT Local 478. Ambushed and shot to death as he entered the union offices on Route 22 in Union, New Jersey. Serio had earlier announced his intention to challenge the incumbent president and expose "sweetheart" deals with Lucchese-related air freight companies.
Robert Kubecka	1989	A waste hauler in Long Island who challenged Cosa Nostra control over IBT Local 813. Murdered for cooperating with a law enforcement investigation.
Jimmy Bishop	1990	A labor racketeer allied with LCN, Bishop was murdered as part of an intragang war over which LCN faction would control Painters District Council 9.
Anthony Cuozzo	1992	Former vice-president of IBT Local 295 in Jamaica (Queens), New York. Murdered.

* Victim was a union dissenter/reformer.

0384

FRANK SCHONFELD STORY

One of the very few examples of rank-and-file union reformers succeeding in defeating a mob-dominated union occurred in the 1960s when Frank Schonfeld, a courageous member of the twelve-thousand-member New York City Painters Union District Council 9, challenged the entrenched mob-supported regime.* The mob-controlled leaders had signed lackluster collective bargaining agreements, been convicted for rigging bids on various projects, and provoked the scorn of many New York area painters. According to Herman Benson, who was personally familiar with Painters District Council 9 at the time, "The union continued to crumble: it ceased to exist on the job sites as a protector of working conditions. The contract was not enforced. Between 1953 and 1967 there was not a single general membership meeting of DC 9 painters."[7]

In 1961, Schonfeld ran for secretary treasurer (the District Council's top office). The District Council immediately brought charges against some of his allies. Despite Landrum-Griffin's guarantee that candidates for union office be given membership lists so they can contact the electorate, Schonfeld was provided only a partial list of members. Moreover, the incumbent regime's ballot counting was highly suspicious. Schonfeld was defeated, 3,700 votes to 1,700, but won a majority in locals where he had access to accurate membership lists.

After the election, the incumbent regime brought disciplinary charges against Schonfeld and suspended him from the union, but a federal judge nullified that maneuver. According to Benson, for the next six years Schonfeld and other insurgents continued to hold meetings, run candidates, and publish a newsletter, but they faced relentless opposition: "Schonfeld and his supporters were being starved out, blacklisted, denied the right to work." In 1967, the Manhattan district attorney brought a conspiracy case against the District Council 9's top official, along with various painting contractors and city officials, charging them with operating a bid-rigging cartel on New York City painting contracts. The secretary-treasurer had to resign and the Painters International placed the District Council under a trusteeship that organized crime continued to dominate.

* In *Rank and File Rebellion,* La Botz recounts a rank and file rebellion in IBT Local 138 in Long Island City, New York, that removed an entrenched labor racketeer probably (according to La Botz) connected to the Colombo crime family.

0385

The Schonfeld group went to court to have the International Union's trusteeship dissolved. The Department of Labor weighed in (as usual) on the union's side. However, a federal judge found for the insurgents. "The history of D.C. 9 elections extending into the period of the trusteeship has been marred by fraud and other irregularities. [The International Union's officers] witnessed, with apparent indifference, the repeated silencing of the opposition's views at meetings, and blatant improprieties in local balloting."[8] Schonfeld was able to resume his campaign. The judge ordered that the election be overseen by the American Arbitration Association. In September 1967, Schonfeld won a stunning victory.

Schonfeld now held the district council's top office, but the old regime held on to most other district council offices and opposed Schonfeld at every turn. Mob-backed factions of the Carpenters and Teamsters unions now raided the district council, splitting away certain locals. At Schonfeld's instigation, the rank and file voted by referendum to revamp the makeup of the district council in order to better reflect the size of the local unions composing the district council. However, the Painters International Union vetoed the change, thereby continuing to stymie Schonfeld's reform efforts. Once again the International charged him with union disciplinary violations and removed him from office; once again, a federal judge reinstated him. However, in 1973, after just two three-year terms, Schonfeld was defeated by Jimmy Bishop, a candidate allied with the Lucchese organized crime family and supported by the International Union and the members of the clique that had controlled the district council for decades. The reform was over. (In 1990, Jimmy Bishop was murdered by another organized crime faction.)

RANK-AND-FILE REFORM MOVEMENTS

A few racketeer-ridden unions have spawned national or at least regional dissident "movements." It is difficult to calculate the size of these movements or to gauge their strength because the Internet permits a single individual to post a Web site, service email subscribers, and so on.

The best-known and most effective of the rank-and-file reformist organizations is Teamsters for a Democratic Union (TDU). TDU was

0386

founded in 1976.* In 1980, it merged, under the same name, with the Professional Drivers Council, a (Ralph) Naderite public interest organization that lobbies for improved safety conditions in the trucking industry.[9] TDU surveyed workers; organized special committees to analyze safety and other problems in the industries in which Teamsters were employed; and came up with proposed rank-and-file contract demands. During its formative years, TDU focused primarily on improving Teamster contracts, but it gradually turned its attention to reforming the union's governance. Its goal was to organize a sizeable militant Teamster minority.[10] By the mid-1980s, TDU published a regular newsletter, *Convoy Dispatch,* and claimed to have ten thousand members. A flavor of what TDU stands for can be gleaned from its Rank and File Bill of Rights, which can be found on its Web site.** Among the rights sought by TDU are a fair grievance procedure, direct election of officers, equality among Teamsters, and an end to discrimination. TDU sometimes backs candidates in union elections. It campaigned hard for Ron Carey in the 1991 trustee-supervised election and helped make Carey's victory possible. However, TDU often criticized Carey's administration.

Carey (again backed by TDU) won the 1996 election against a strong challenge by James P. Hoffa (Jimmy Hoffa's son). The election was marred by charges that the Carey campaign had used union funds on behalf of its candidate. Ultimately, the court-appointed elections officer voided the election, disqualified Carey from the rerun election, and the IRB expelled him from the union. In the 1998 rerun election, TDU supported Tom Leedham, a prominent reformer. Leedham won 39 percent of the vote, but lost to James P. Hoffa (55 percent). In 2001, Hoffa defeated him again, this time by nearly a two-to-one margin (Hoffa, 200,168; Leedham, 108,389).

There is no other dissident rank-and-file labor movement with the organizational coherence and strength of TDU. Nevertheless, there are always dissident voices, more so now with the advent of the Internet.

* A predecessor rank-and-file organization called TURF (Teamsters United Rank and File) was set up in 1971 in the aftermath of a national wildcat strike that challenged Frank Fitzsimmons's leadership of the IBT. In a few years, TURF fell apart because of internal dissension. In 1975, a group of Teamster activists formed a coalition called Teamsters for a Decent Contract and a parallel organization, UPSurge, to organize UPS workers to fight for a better UPS contract.

** TDU's Rank and File Bill of Rights can be found on the Web at http://solidarity.igc.org/teamster/tdu/htm.

0387

And these voices have been encouraged by the federal government's campaign against labor racketeering. Recently, for example, a group of mostly African-American longshoremen in Charleston, Virginia, "the Charleston Five," were jailed for peacefully picketing a shipping company. The "Workers Coalition," which consists largely of officers from the Charleston Five's local union, criticized ILA International President John Bowers for waiting over a year before making a public statement supporting them.[11] The dispute has broadened into a more general challenge to the International's leadership.

THE ASSOCIATION FOR UNION DEMOCRACY

The Association for Union Democracy (AUD),[12] founded by Herman Benson and a small number of other labor radicals and idealists, is the only independent nongovernmental organization that advocates and litigates on behalf of rank-and-file union members. AUD has always been a hand-to-mouth organization with a small office in Brooklyn, a few paid staffers, and a tiny budget. Still, AUD published a regular newsletter, "Union Democracy Review," which exposes egregious assaults on union democracy as well as the occasional legal and electoral victories of rank-and-file reformers. It also holds conferences and organizes training courses and educational programs. Dissidents from any union can contact AUD for advice, including sometimes legal assistance from a very small number of volunteer lawyers.

CONCLUSION

Rank-and-file union members fit into our story mostly as victims. Labor racketeers are in the business of stealing from rank-and-file union members and selling out their rights and interests. The lack of much rank-and-file rebellion against labor racketeers does not indicate appreciation, respect, or satisfaction. Rank-and-file union member rebellion, like other rebellions against authoritarian regimes capable and willing to use violence, is extremely difficult. The collective action problem explains a great deal. It is immensely costly for any individual union member to protest against or try to organize opposition to incumbent labor racketeers. For the most part, reformers have been tragically un-

0388

successful, the victims of blacklisting, disciplinary actions, beatings, and murder. In their struggles to win basic civil rights within their unions, "dissidents" have not been able to count on the mainstream labor movement, the government, law enforcement agencies, intellectuals or even the civil liberties community for support. It has been a very lonely struggle.

The federal government's post-1980 campaign against Cosa Nostra has opened up space for insurgents to play a more active role. Even so, reform does not just spring to life naturally, and fear of the labor racketeers' return to power is a major inhibitor. Moreover, there is no guarantee that the first wave of non–Mafia connected reformers will have the competence and integrity to establish well-functioning democratic unions. Still, it must be emphasized that no meaningful reform of historically racketeer-ridden unions can be achieved without the mobilization of rank-and-file union members.

Attacking Labor Racketeering Prior to Civil RICO (1982)

> This is a preliminary report on the organized crime influence in the labor unions today in the United States. The picture that it presents is thoroughly frightening. At least four international unions are completely dominated by men who either have strong ties to or are members of the organized crime syndicate. A majority of the locals in most major cities of the United States in the International Brotherhood of Teamsters (IBT), Hotel and Restaurant Employees Union (HERE), Laborers International Union of North America (Laborers), and International Longshoreman's Association (ILA) unions are completely dominated by organized crime. The officials of these unions are firmly entrenched; there is little hope of removing them by a free election process. Convictions for misconduct have been sparse and when one corrupt official is removed another soon takes his place. The result has been a complete domination of certain industries by hoodlums. Management personnel in the companies who must deal with these hoodlums have despaired of getting help from law enforcement authorities. They pay the price of labor peace so that they may survive. The cost is passed on to the consumer.
>
> —Peter Vaira and Douglas Roller, *Report on Organized Crime and the Labor Unions* (1978), 1

From the early 1930s until the mid-1970s, Congress was much more active than local, state, and federal law enforcement in calling attention to organized crime generally and to labor racketeering specifically. The Copeland Committee in the 1930s, the Kefauver and McClellan Committee hearings in the 1950s, and the Senate Permanent Subcommittee

0390

on Investigations in the 1970s and 1980s publicized the problem, proposed new laws and increased sentences. By contrast, the federal enforcement agencies—the Federal Bureau of Investigation (FBI), the Department of Justice (DOJ), and the Department of Labor (DOL)—for different reasons, did not make organized crime or labor racketeering a high priority. Occasionally, an LCN member was convicted, usually of a nonlabor racketeering offense like income tax evasion or murder. Local police and prosecutors mostly ignored organized crime. The federal law enforcement campaign against the Cosa Nostra has roots in the 1950s and 1960s, but came of age after FBI Director Hoover's death in 1972 and in the wake of Jimmy Hoffa's assassination in 1975. Since then, the FBI and DOJ have mounted and sustained a huge organized crime control program.

CONGRESS ADDRESSES LABOR RACKETEERING: THE HOBBS ACT

In 1933, the U.S. Senate Committee on Commerce (called the "Copeland Committee" (after its chairman, New York's Democratic senator, Roy Copeland) held hearings on "racketeering," including the role of mobsters within national and local labor organizations.[1] Witnesses from the AFL Building Trade Unions' Anti-Racketeering Subcommittee complained to the Senate Committee that "most of the unions in New York were saturated with rackets."[2] Employer-witnesses complained that labor racketeers extorted payoffs by threatening business-destroying labor problems.

The Copeland Committee's hearings led to passage of a federal extortion statute, the Anti-Racketeering Act of 1934.[3] Labor leaders opposed the draft bill on the grounds that it could be used to prosecute bona fide strikes and job actions. To alleviate that concern, the final bill exempted from the definition of extortion union conduct aimed at "the payment of wages by a bona-fide employer to a bona-fide employee." The act also included a union-friendly proviso:

> that no court of the United States shall construe or apply any of the provisions of this Act in such a manner as to impair, diminish or in any manner affect the rights of bona fide labor organizations in lawfully

> carrying out the legitimate objectives thereof, as such rights are expressed in existing statutes of the United States.

A few years after passage of the Anti-Racketeering Act, federal prosecutors used the law to prosecute several Teamsters who prevented out-of-town trucking companies from driving trucks into New York City unless the companies paid the Teamster defendants for their assistance in guiding the trucks into the city. The Supreme Court reversed the convictions, holding that the Anti-Racketeering Act exempted from prosecution bona fide union demands, even if unreasonable.[4] The decision, in effect, destroyed the act's potential to punish and deter labor racketeering; the racketeers could avoid criminal liability by disguising extortions as legal, albeit unreasonable, demands for unnecessary and undesired goods or services.

Congress quickly sought to pass a new extortion statute that would definitely cover conduct like that of the defendants in the Teamsters case. The new Hobbs Act (1946) eliminated the Anti-Racketeering Act's exemption for payment of wages by bona fide employers to bona fide employees, but its sponsors assured labor and its supporters that the law could not be used to prosecute strikers.[5] In the decades that followed, the Hobbs Act was used against individuals who hijacked trucks, against corrupt state and local politicians, and occasionally against labor racketeers. In 1956, another labor racketeering prosecution reached the U.S. Supreme Court. The defendant union officials had attempted to extort money (for their own pockets) by forcing an employer to pay for both fictitious and superfluous services; the Court upheld the conviction against a challenge that the law was unconstitutional.[6] The decision was a green light for federal prosecutors to go after labor racketeers. They convicted a number of union officials who extorted payoffs from employers.[7] However, in 1973, the Supreme Court reversed a Hobbs Act conviction against strikers who had used high-powered rifles and explosives on the grounds that the Hobbs Act could not be used to punish individuals for pursuing a lawful union goal, even via criminal means.[8]

The Hobbs Act played an extremely important role in the civil RICO litigation brought against racketeer-ridden unions in the 1980s and 1990s. Prosecutors alleged and courts upheld the applicability of the Hobbs Act to LCN members and union officials who extorted

0392

union members' Landrum-Griffin rights (that is, intangible property). These Hobbs Act violations constituted "predicate offenses" that satisfied RICO's requirement of proof of "a pattern of racketeering activity."*

THE TAFT-HARTLEY ACT

In 1947, over organized labor's strenuous opposition, Congress passed the Taft-Hartley Act, which, according to its sponsors, sought to restore "a more balanced relationship" between labor and management.[9] President Harry Truman vetoed the act, but Congress overrode the veto. Taft-Hartley gave employees the right to refrain from participating in union activities, added certain union conduct to the National Labor Relations Act's list of unfair labor practices, and banned Communists from serving as union officers. It also made it a federal crime for an employer to give or lend money or anything of value to a union, union official, or union welfare fund and for a labor official to demand or accept anything of value from an employer. These criminal provisions have frequently been used to punish labor racketeers for taking employer bribes in exchange for sweetheart deals.

In 1956, the United States Supreme Court upheld the conviction of ILA President Joseph Ryan for taking payoffs from a stevedoring company in violation of the Taft-Hartley Act.[10] The president of a stevedoring company had given Ryan $1,000 each year from 1946 to 1951 in violation of Taft-Hartley. The district court found Ryan guilty, but the court of appeals reversed, holding that the president and principal negotiator of an international union was not a "union representative" for purposes of the Hobbs Act. The Supreme Court reinstated the conviction, ruling that Ryan violated Taft-Hartley by accepting money from an employer.[11] In other cases in the years that followed, Taft Hartley proved useful in persuading employers who had bribed union officials to become cooperating witnesses.[12]

* In *Bellomo v. United States,* 297 F.Supp.2d 494 (E.D.N.Y., 2003), for the first time a federal court held that denial of union democracy rights does not violate the Hobbs Act. If that decision prevails, a key government tool in the remediation of labor racketeering would have been lost.

0393

THE DOUGLAS COMMITTEE AND RACKETEERING IN THE PENSION FUNDS

After World War II, unions began to negotiate in earnest for employer-funded pension and welfare funds. (Such benefits are attractive to both management and labor because they are not taxable to employees while being tax deductible for employers.) Essentially, employers agreed to contribute a certain amount of money on behalf of their workers to funds to be used for union members' pensions, medical and dental care, and legal services. The funds (sometimes called Taft-Hartley plans) are controlled by an equal number of labor- and management-appointed trustees and administered by a fund administrator. Soon, such funds accumulated hundreds of millions, even billions, of dollars. Not surprisingly, labor racketeers immediately saw them as attractive targets for exploitation by embezzlements, fraudulent loans, kickbacks, and other manipulations.[13]

In the mid-1950s, the Senate Committee on Labor appointed a subcommittee, with Senator Paul Douglas (D.-Ill.) as chairman, to investigate corruption in union pension and welfare funds. The subcommittee illuminated widespread corruption, fraud, and abuse, especially in the Teamsters' Central States Pension and Welfare Fund. In 1959, in response to the abuses uncovered by the Douglas Committee, Congress passed the Welfare and Pension Plan Disclosure Act (WPPDA), which required pension and welfare plans to report certain fund information to the DOL. Congress intended the disclosure requirement to provide employees with enough information to monitor their plans effectively. This proved to be wishful thinking and abuses continued. In 1962, Congress strengthened the WPPDA by adding criminal provisions to punish fund administrators and trustees who took kickbacks from vendors of goods and services; the law assigned enforcement authority to the DOL.[14]

Continuing mob exploitation of union benefit funds was one factor leading Congress to pass ERISA (Employee Retirement Income Security Act) in 1974.[15] ERISA's criminal provisions dealt with (1) theft or embezzlement from employee benefit plans; (2) false statements or concealment of facts in relation to documents required by ERISA; and (3) offers, acceptances, or solicitations to influence operations of employee benefit funds.[16] Thus, federal prosecutors were armed with criminal laws to attack labor racketeers.

0394

MCCLELLAN COMMITTEE HEARINGS (1957–1959) AND THE LANDRUM-GRIFFIN LAW (1959)

The McClellan Committee's hearings (1957–1959), including some very sharp exchanges between Robert Kennedy and Jimmy Hoffa, were widely covered by newspapers, magazines, and television. They generated inexorable momentum for Congressional action. In 1959, Congress passed the Labor-Management Reporting Act of 1959 (LMRDA), popularly known as the Landrum-Griffin Act. The law bans persons with criminal records from holding union office. It also guarantees to union members basic democratic rights (speech, candidacy, voting) within their labor organizations. It declares that union officers stand in the role of fiduciaries vis-à-vis the rank and file membership.* It also seeks to achieve accountability to their memberships by requiring unions to file various financial and organizational reports with the U.S. Department of Labor.[17] For the most part, Landrum-Griffin's enforcement tools are civil rather than criminal. Congress assigned enforcement authority to the DOL, which delegated that authority to its Office of Labor-Management Standards (OLMS). OLMS can investigate and take enforcement actions on its own. In addition, aggrieved union members can bring their complaints to OLMS or, in some cases, to the National Labor Relations Board or directly to a federal court. Unfortunately, there have never been more than a handful of public interest lawyers available to help union members vindicate their Landrum-Griffin rights. OLMS enforcement has been lackluster, at best.[18]

Landrum-Griffin contains a few criminal provisions, including a wide-ranging prohibition on the use of violence to deny or interfere

* SEC. 501 (a) The officers, agents, shop stewards, and other representatives of a labor organization occupy positions of trust in relation to such organization and its members as a group. It is, therefore, the duty of each such person, taking into account the special problems and functions of a labor organization, to hold its money and property solely for the benefit of the organization and its members and to manage, invest, and expend the same in accordance with its constitution and bylaws and any resolutions of the governing bodies adopted thereunder, to refrain from dealing with such organization as an adverse party or in behalf of an adverse party in any matter connected with his duties and from holding or acquiring any pecuniary or personal interest which conflicts with the interests of such organization, and to account to the organization for any profit received by him in whatever capacity in connection with transactions conducted by him or under his direction on behalf of the organization.

with the democratic rights the law guarantees.* Another provision makes it a federal crime to embezzle funds from a labor union.** Still other provisions prohibit unions from making loans to or paying fines for union officers and filing false reports with the DOL. Over the years, the Department of Justice has used these provisions to obtain a number of convictions. For example, in *U.S. v. Bertucci* (1964), defendants were convicted for beating union members with pipes and baseball bats when those members[19] attempted to enter the union hall to vote on a collective bargaining agreement. The court explained that "[t]he LMRDA gives to the individual union members certain rights which when interfered with by a union, its officials or its agents can be redressed civilly against them. In addition, there are criminal sanctions imposed against a person who interferes with those rights."[20]

In 1961, Attorney General Robert F. Kennedy urged Congress to pass the Interstate and Foreign Travel in Aid of Racketeering Act, popularly known as the Travel Act.[21] Its sought to make federal law enforcement assistance available to attack organized crime that crosses state borders.[22] In his submission letter to the Senate Judiciary Committee, Kennedy stated, "Over the years an ever-increasing portion of our national resources have been diverted into illicit channels. Because many rackets are conducted by highly organized syndicates whose influence extends over state and national borders, the Federal Government should come to the aid of local law enforcement authorities in an effort to stem such activity."[23] Therefore, the Travel Act provided federal law enforcement with jurisdiction over use of interstate facilities to promote a number of illegal activities typically associated with organized crime.[24] The Travel Act was an early step toward establishing a legal basis for a federal war on organized crime.

* 29 U.S.C. 530. It shall be unlawful for any person through the use of force or violence, or threat of the use of force or violence, to restrain, coerce, or intimidate, or attempt to restrain, coerce, or intimidate any member of a labor organization for the purpose of interfering with or preventing the exercise of any right to which he is entitled under the provisions of this Act. Any person who willfully violates this section shall be fined not more than $1,000 or imprisoned for not more than one year, or both.

** 29 U.S.C. 501(c). Any person who embezzles, steals, or unlawfully and willfully abstracts or converts to his own use, or the use of another, any of the moneys, funds, securities, property, or other assets of a labor organization of which he is an officer, or by which he is employed, directly or indirectly, shall be fined not more than $10,000 or imprisoned for not more than five years, or both.

0396

RICO (1970)

The 1967 report of the President's Commission on Crime and the Administration of Justice presented, among other things, a frightening (and exaggerated) picture of Cosa Nostra as a well-coordinated nationwide conspiracy.[25] Subsequent congressional hearings focused on LCN's infiltration of the legitimate economy, especially labor unions and businesses. For example, on March 11, 1969, Senator McClellan (D.-Ark.) told fellow senators:

> Closely paralleling its take-over of legitimate business, organized crime has moved into legitimate unions. Control of labor supply through control of unions can prevent the unionization of some industries or can guarantee sweetheart contracts in others. It provides the opportunity for theft from union funds, extortion through threat of economic pressure, and the profit to be gained from the manipulation of welfare and pension funds and insurance contracts. Trucking, construction and waterfront entrepreneurs have been persuaded for labor peace to countenance gambling, loan-sharking and pilferage. All of this, of course, makes a mockery of much of the promise of the social legislation of the last half-century.[26]

McClellan, Senator Roman Hruska (R.-Neb.), and others argued that the federal law enforcement agencies and courts did not have adequate powers to defeat organized crime. After hearings, Congress passed the Racketeer Influenced and Corrupt Organizations Act (RICO), which made it a federal crime to use "dirty" money (proceeds of racketeering activity or collection of an unlawful debt) to acquire an interest in, or to seize an interest in, or to conduct the affairs of an "enterprise," including labor unions, by means of a pattern of racketeering activity (defined as commission of at least two of a long list of crimes within a ten-year period).[27] RICO crime is punishable by up to a twenty-year prison sentence, plus an additional twenty years for a conspiracy to violate RICO. In addition, a defendant can also be convicted and sentenced for the predicate offenses that establish the "pattern of racketeering activity" (for example, a Hobbs Act offense, labor bribery, murder, fraud). Because it was new and complex, RICO was not used much for about a decade but by the late 1970s it had become the statute of choice in organized crime prosecutions.[28] It provided federal prosecutors the

0397

advantages of draconian punishment provisions, mandatory criminal forfeiture, liberal rules on joinder of defendants and offenses, and a means of prosecuting criminal conduct that theretofore had not been reachable under federal law.

RICO also contains two civil remedies. One empowers RICO victims to sue their victimizers for treble damages. For obvious reasons, victims have not chosen to sue LCN members. The other civil RICO remedial provision authorizes the U.S. attorney general to seek and the federal courts to grant injunctions and other equitable relief to prevent defendants from committing future RICO violations. Beginning in the early 1980s, this remedy became the preferred weapon for attacking labor racketeering because it enabled the Department of Justice to obtain injunctions and consent decrees providing for court monitoring and reform of racketeer-ridden unions.

FEDERAL ENFORCEMENT AGENCIES AND LABOR RACKETEERING

Although Congress showed strong interest in labor racketeering, investigated the problem, publicized it, and passed substantive criminal legislation that featured severe punishments, the laws were not much used until the late 1970s. For the FBI, this "hands-off" policy reflected Director J. Edgar Hoover's unwillingness to devote FBI personnel or resources to organized crime investigations. Hoover's view was that organized crime was a local phenomenon and, in any event, of far less importance than other problems, especially the threat of communist subversion.

Absent FBI investigations, federal prosecutors could do little to combat organized crime generally and labor racketeering specifically. Except for a small number of DOJ personnel at central headquarters in Washington, D.C., federal prosecutors work for the 93 U.S. attorneys (one for each federal judicial district) who, as presidential appointees, operate with a good deal of autonomy from their boss, the U.S. attorney general. In theory, the U.S. attorneys can develop their own priorities depending upon the particular crime problems in their jurisdictions; in reality, they depend on the FBI and other federal enforcement agents to bring cases to them. Even though the FBI is also a part of the U.S. De-

0398

partment of Justice, it has substantial autonomy. (J. Edgar Hoover, of course, had almost complete autonomy. After his death, Congress limited future FBI directors to a single ten-year term.) Hence, it would have been impossible for DOJ attorneys themselves to launch a successful attack on organized crime or labor racketeering without the FBI director's support.

Congress gave the Department of Labor authority to enforce the Landrum-Griffin Act and an array of pension and welfare laws. But the DOL is a cabinet-level department whose main mission is to look after the concerns of organized labor, not to punish abuses by organized labor. Over the years some Senators and Congressmen have used hearings to criticize the DOL for failing to investigate and prepare cases against labor racketeers.

Despite these structural, bureaucratic, and political obstacles to the enforcement of the anti–labor racketeering laws, there were occasional prosecutions in the 1950s. Things accelerated dramatically in 1961 when Robert F. Kennedy became U.S. attorney general. Kennedy immediately turned the office's attention to organized crime. He made prosecution of IBT President Jimmy Hoffa his top priority.[29] He expanded OCRS and sent prosecutors around the country to investigate and prosecute organized crime.[30]

President John F. Kennedy was assassinated in November 1963. His brother resigned as attorney general in early 1964. Later that year, Hoffa was convicted, first of jury tampering and then of pension fund fraud. In 1967, when his appeals were exhausted, he began serving a lengthy prison term. Reacting to the 1967 President's Crime Commission's report and to Senator McClellan's and other congressmen's lobbying, Congress provided federal law enforcement with electronic eavesdropping authority (1968), the Witness Security Program (1970), and RICO (1970).

J. Edgar Hoover died suddenly in 1972. The FBI passed into new hands. There were no interest groups pressing for a federal war on organized crime. Pressure came from DOJ prosecutors and FBI agents themselves. A modern-day law enforcement agency was affronted by the machinations of a notorious crime syndicate. The FBI found the Cosa Nostra crime families an enemy worthy of the attention of a first class law enforcement agency. Perhaps the post-Hoover FBI judged itself by the power and status of the criminals who it successfully investigated.

0399

Following up on the 1967 President's Crime Commission's understanding of the organized crime problem, FBI agents and federal prosecutors launched their campaign to control organized crime by focusing on gambling, believing it to be LCN's chief moneymaking activity. But federal judges were critical of prosecuting bookmakers and gamblers in federal courts. They were not convinced that gambling was a serious national problem, and several made it clear to U.S. attorneys that they did not think that these gambling cases belonged in federal court. When the gamblers were convicted, they often drew light sentences. The organized crime campaign floundered.

President Richard Nixon pardoned Jimmy Hoffa in December 1971[31] in order to obtain the endorsement of the Teamsters of his reelection. Hoffa remained popular with rank-and-file Teamsters, but his former protégé, Frank Fitzsimmons, then serving as IBT general president, wanted to keep the position. Thus, he persuaded the Nixon administration to condition Hoffa's pardon on Hoffa's abstention from union affairs for ten years. Hoffa agreed but immediately went to court to challenge the condition and began campaigning to reclaim the Teamsters presidency.[32]

The Cosa Nostra crime families had even more influence in the IBT under the compliant Fitzsimmons than with the feisty Hoffa. On July 30, 1975, Hoffa disappeared; a mob "hit" was immediately presumed (and is now believed to have been orchestrated by Anthony Giacalone, a leader of the Detroit Cosa Nostra family, and Tony Provenzano, president of IBT Local 560 and a capo in the Genovese crime family).[33]

A revitalized OCRS established federal organized crime strike forces in thirteen cities. The strike forces comprised personnel from DOJ, IRS, DOL, and other federal and local agencies and reported directly to OCRS in Washington rather than to the U.S. attorneys.[34]

After Hoffa's assassination, the OCRS and the FBI switched their organized crime control focus from gambling to labor racketeering. The promotion of labor racketeering as an enforcement target was motivated by the goal of eradicating LCN, not by a commitment to cleaning up unions or guaranteeing union democracy. The revitalized post-Hoover FBI launched several ambitious labor racketeering investigations, including, in the late 1970s, the massive UNIRAC (Union Involved Racketeering) investigation of the International Longshoremen's Association. UNIRAC began as a Miami Strike Force project that

expanded to New York City and then to all major east coast ports. It resulted in the conviction of 130 businessmen, union officials, and Cosa Nostra members, including Anthony Scotto, an ILA vice-president and a capo in the Gambino crime family.*[35]

Another FBI investigation, PENDORF (Penetration Dorfman), focused on Cosa Nostra control over the IBT Central States Pension Fund (CSPF) and resulted in the convictions of IBT General President Roy Williams, Joe Lombardo (member of the Chicago Outfit), and Allen Dorfman (Chicago Outfit associate who represented the mob's interest in the CSPF) for attempting to bribe U.S. Senator Howard Cannon (D.-Nev.) to oppose trucking deregulation. Cosa Nostra later assassinated Dorfman because of concern that he might become a cooperating government witness.[36]

The FBI's STRAWMAN investigation focused on a conspiracy by four Cosa Nostra families to use the CSPF to obtain interests in Las Vegas casinos and to skim profits from those casinos; it resulted in convictions of Joey Aiuppa (boss of the Chicago Outfit); Jackie Cerone (underboss of the Outfit); Angelo La Pietra and Joe Lombardo (Oufit capos); Frank Balistrieri (boss of the Milwaukee LCN family); and Thomas and Milton Rockman (associates of the Cleveland crime family).

The FBI's LILREX (Long Island Labor Racketeering and Extortion) investigation targeted racketeering in New York City and Long Island's construction industry. The investigation probed the relationship between organized crime and the industry, leading to the prosecution of Theodore Maritas, president of the New York City–area District Council of Carpenters. Prosecutors charged Maritas with taking $125,000 in payoffs in return for allowing contractors to use nonunion labor on

* *Time* magazine reported Scotto's conviction this way: "As a vice president of the International Longshoremen's Association and head of its Local 1814 in Brooklyn, Anthony Scotto, 45, has long been laden with two very different reputations. A personable and articulate man who favors $500 pinstripe suits and expensive Manhattan restaurants, Scotto has lectured at Harvard University on labor relations, serves as a trustee of the Brooklyn Academy of Music and counts some of New York's most prominent politicians among his friends. But because of his occupational affiliation with the city's notoriously corrupt waterfront and his 1957 marriage to the niece of mobster Albert Anastasia, police consider Scotto to be a criminal. In 1959, the FBI went so far as to identify him as a *capodecina,* or lieutenant, in the Mafia family of Carlo Gambino, an allegation that the union leader vehemently denied." "Scotto: Out of the Dock," *Time,* November 26, 1979, 61.

0401

Manhattan and Queens construction projects and with unsuccessfully attempting to extort $100,000 more. Maritas was murdered on the eve of the trial. His five codefendants, including Lucchese crime family capo Vincent DiNapoli, were convicted. Jack McCarthy, a labor consultant with a string of labor racketeering convictions, pleaded guilty to a conspiracy count.[37]

The LIUNA investigation focused on Cosa Nostra racketeering in the Laborers International Union of North America (LIUNA). The investigation resulted in several convictions, but notable acquittals for retired Outfit boss Tony Accardo and LIUNA president Angelo Fosco. Tampa organized crime boss Santo Trafficante avoided trial on account of poor health.[38]

A joint DOL and DOJ investigation of the CSPF began in the fall of 1975. The fund, more than 70 percent invested in real estate and casinos (mostly Las Vegas), was notorious for lending money to organized crime figures and their associates. The IRS sought to revoke the fund's tax-exempt status, leading to a settlement in which twelve of the fund's sixteen trustees resigned. The CSPF agreed to hire an independent fiduciary (Equitable Life Insurance Society) to handle investments.[39] The trustees retained authority to purchase goods and services, to administer pension benefits, and to handle money from the time it was paid into the fund each month to the time (approximately thirty days later) it was deposited with the institutional fiduciary. Corruption and racketeering continued.

In 1981, the DOL filed a lawsuit against all current and former trustees of the CSPF, alleging violations of their fiduciary obligation. The lawsuit resulted in a consent decree that prohibited the fund from employing or doing business with any person who had been convicted of a felony or misdemeanor involving a breach of fiduciary responsibility and required the appointment of an independent special counsel to monitor the fund's operations.[40] The agreement and oversight subsequently were extended until September 22, 2002, and then to September 22, 2007.

Slowly, the DOL began paying increased attention to labor racketeering. In 1978, Congress established a system of independent inspectors general, accountable to Congress, in all cabinet-level federal agencies.[41] An inspector general's mission was to combat fraud, waste, and abuse. Congress specifically charged the DOL's inspector general with responsibility for investigating labor racketeering. This job was

0402

assigned to the new Office of Labor Racketeering (OLR), which would play an important role in many future investigations. OLR's agents (many recruited from other federal law enforcement agencies) were the most law enforcement–oriented personnel in DOL history, and they participated fully in the federal organized crime strike forces.*

In 1986, the President's Commission on Organized Crime reported that the labor racketeering problem, exposed by the McClellan Committee almost thirty years earlier, had worsened. But, despite the PCOC's criticism, the government had begun an unprecedented attack on LCN. The first civil RICO suit against labor racketeers (IBT Local 560) produced a wide-ranging court decree, including a court-monitored trusteeship. More such suits, following up on criminal cases of the 1970s and 1980s, were in the works.

The DOJ's and the FBI's campaign against Cosa Nostra was most vigorous and most successful in New York City, where, of course, there were the most organized crime families, members, and associates. The FBI organized separate units to focus on each family. Eventually, based upon extensive electronic surveillance and some important LCN defectors, the federal prosecutors brought RICO criminal cases against each of the Cosa Nostra crime families, charging key members with participating in the affairs of the enterprise (the crime family itself) through a pattern of racketeering activity (any number of predicate racketeering offenses).

After the successful completion of the family RICO cases, Rudy Giuliani, then U.S. attorney for the Southern District of New York (Manhattan and the Bronx) brought the most ambitious criminal RICO case in U.S. law enforcement history. In the 1985 so-called "commission case," Giuliani's office brought together in a single trial as defendants the bosses and several other leaders of the five Cosa Nostra crime families in the city, charging them with participating in the affairs of a Cosa Nostra "commission" through a pattern of racketeering activity. According to the indictment, the commission had been established by LCN bosses in 1931 to resolve disputes and regulate relations between the families. Perhaps it originally included LCN bosses from around the country, but the commission of the 1980s consisted only of the five NYC bosses. The indictment charged the defendants both with operating the

* For information and some history of the OLR, see http://www.oig.dol.gov/public/programs/oi/main.htm.

commission through a pattern of racketeering activity and with conspiring to operate it as a racketeering enterprise. The indictment alleged that through the enterprise, the defendants engaged in or aided and abetted murders, narcotics trafficking, loansharking, and labor racketeering.[42]

Much of the prosecution's case centered on the defendants' domination of the New York City LIUNA Local 6A. The prosecution sought to prove that, using its control over this Concrete and Cement Workers Union, the commission enforced a concrete cartel, which permitted only a handful of contractors to bid on concrete contracts in excess of $2 million. In exchange for this lucrative opportunity, the cartel members agreed to kick back to the commission 2 percent of the contract prices. After six days of deliberation, the jury found the defendants guilty of seventeen racketeering acts and twenty related charges of extortion, labor payoffs, and loan sharking. Giuliani announced that "[t]he verdict reached today has resulted in dismantling the ruling council of La Cosa Nostra."[43] The commission case was the highest profile and most important organized crime prosecution in U.S. history. It demonstrated, even to the skeptics, that the federal government, when aroused to action, had the ability to defeat the nation's most powerful crime syndicate. During the 1980s, prosecutors sent the boss of every Cosa Nostra crime family, and sometimes their successors, to prison.

STATE/LOCAL EFFORTS

Most law enforcement in the United States is local. Police departments are organized at the town and city level; prosecutors, at the county level. This decentralized, small-unit law enforcement is not suited to complex organized crime investigations and prosecutions. Moreover, for much of the twentieth century, police departments in many large cities were severely compromised and/or corrupted in the investigation of organized crime.[44] Consequently, with a few notable exceptions, local law enforcement did not seriously oppose organized crime generally or labor racketeering specifically.[45]

The most notable exception was Thomas E. Dewey who served as Special New York City anti-racketeering prosecutor from 1935 to 1937 and then as Manhattan district attorney from 1937 to 1941.[46] In 1936,

using New York State law, Dewey launched an investigation and prosecution of racketeering in the city's restaurant sector, where Dutch Schultz had taken control of the labor union and the employers' association. Although Schultz was murdered (by the mob for plotting to assassinate Dewey), Dewey's team indicted fourteen defendants on embezzlement and extortion charges. The prosecution's closing argument told the jurors: "This is the first time that a full industrial racket has been presented in a single case. If there is anything that is important to the community today, it is a warning that rackets can be prosecuted and broken."[47]

When Dewey moved on to the governorship, he was succeeded as district attorney by Frank Hogan, whose thirty-two-year tenure in office earned him the nickname "Mr. District Attorney." Hogan's office convicted the occasional organized crime figure, including the labor racketeer Joseph Fay.[48] As vice-president of the International Union of Operating Engineers, Fay extorted contractors working construction sites along the eastern seaboard.* In February 1945, Hogan's office charged Fay and an associate with conspiracy to extort $703,000 from contractors on the Delaware aqueduct water-supply project. Some labor leaders sharply criticized the indictment. In a kind of response, Hogan told the jury: "Labor is not on trial here. . . . These men are business partners in crime, and the business of the partnership is extortion. . . . They are shakedown artists—ruthless, grasping thieves who have lined their pockets at the expense of the laboring man they represent."[49] Fay was convicted and sentenced to seven and a half to fifteen years in prison. Nine years later, in 1954, Hogan convicted Johnny Dioguardi for failure to pay state income taxes.

Despite Hogan's early success, labor racketeering continued to flourish. In April 1985, in the wake of media allegations of rampant corruption and racketeering in the New York City construction industry, Mayor Edward Koch urged Governor Mario Cuomo to appoint a special prosecutor. Instead, the governor requested the New York State Organized Crime Task Force (OCTF), a standing state agency,

* According to labor historian Harold Seidman, Fay "shined as a good fellow. In the depression years he had been perhaps the most conspicuous spender Atlantic City has had. In one night he is reputed to have lost as much as $50,000 in various Atlantic City gambling resorts. His luxurious ten-room house in the exclusive Forest Hills section of Newark was purchased in 1930." Harold Seidman, *Labor Czars* (New York: Liveright, 1938).

0405

undertake "an intensive and comprehensive investigation."* The OCTF initiated an unprecedented multidisciplinary investigation of the almost century-long problem. In addition to utilizing standard law enforcement techniques and investigative strategies, it engaged economists, political scientists, labor relations specialists, and construction industry experts. Its 1988 report on the problem and its recommendations for reform are a major contribution to our understanding of labor racketeering. Among other things, the report found that the city's five Cosa Nostra crime families controlled more than a dozen construction unions and several construction companies.

While the OCTF investigation was under way, Governor Cuomo established the Construction Industry Strike Force (CISF), comprising prosecutors, investigators, analysts, accountants, and support staff from OCTF and the Manhattan District Attorney's office. The CISF obtained or significantly contributed to the convictions of officials in a number of construction unions, including the laborers, carpenters, teamsters, bricklayers, and mason tenders unions. The work of the ad hoc CISF led the Manhattan DA to establish a permanent labor racketeering unit.[50]

CRIME COMMISSIONS

Systemic organized crime racketeering and the corrupt relationship between urban political regimes and organized crime led to the establishment of crime commissions in several major U.S. cities.[51] Some of the commissions were arms of the legislature; others were citizen groups (often businessmen) formed without government funds or authority. For example, the famous Chicago Crime Commission was founded in 1919 by thirty-five members of the Chicago business community. Eventually, it came to comprise more than two hundred businesses and professional leaders. Over the years it has issued many important reports on the state of organized crime in Chicago. Another prominent organization, the Pennsylvania Crime Commission, was established as an in-

* The New York State Organized Crime Task Force (OCTF) under the leadership of Ronald Goldstock launched some of the most innovative organized crime prosecutions in the country, including successfully planting a recording device in the car of Lucchese family crime boss Anthony Corallo.

vestigative agency of state government. For decades it exposed organized crime's activities, including gambling, drug trafficking, and labor racketeering.[52]

The crime commissions do not have prosecutorial authority. In fact, some have very limited investigative authority, but they provide a forum to which people can bring complaints and information. In effect, the crime commissions call attention to the problem of organized crime at the state and local levels much in the way that Congress does at the national level.

CONCLUSION

Until the late 1970s and early 1980s, neither the federal nor state and local governments had a plan or program to attack organized crime, much less labor racketeering. In part, this was due to corruption. In many cities organized crime figures were influential in labor, business, and politics. Their influence often reached into the police departments, where they were able to choose, or at least veto, commissioners, chiefs, and heads of departments. Even where such corruption did not occur, city police departments did not have the legal, financial, or technical expertise to mount a meaningful campaign against organized crime.

To be sure, there were sporadic eruptions of law enforcement activity. From time to time, federal prosecutors did convict LCN members, some of whom were labor racketeers. For example, in 1931 U.S. Treasury Department agents used income tax evasion charges to convict Al Capone (1899–1947), the most powerful Chicago organized crime figure and labor racketeer. Joseph "Socks" Lanza (1904–1968), who organized the United Seafood Workers Union and used his labor power to dominate the New York City's Fulton Fish market, the largest wholesale fish market in the country, was sent to prison in 1932 for federal antitrust crimes; in 1943, the city's prosecutors successfully prosecuted him for extortion. In 1966, federal prosecutors obtained a labor racketeering extortion conviction against Anthony Provenzano, who served as an IBT vice-president as well as president of IBT Local 560; in 1979, federal prosecutors convicted Provenzano of murdering a union dissident. In 1973, federal prosecutors obtained a stock fraud conviction against John Dioguardi (1915–1979), one of the most powerful and prolific labor

0407

racketeers in American history. Over the course of his career he wielded power in the Teamsters, Auto Workers, and several other unions. In 1979, Anthony Scotto, vice-president of ILA and a NYC Gambino crime family capo, was convicted of violating RICO. Labor racketeering was finally on federal law enforcement's radar screen, but decades of inaction had allowed the problem to become deeply entrenched.

Even when labor racketeers were successfully prosecuted and sent to prison, there was little if any impact on racketeer-ridden unions because another organized crime figure would fill the shoes of the imprisoned racketeer.[53] Thus, at a Senate hearing in 1978, then Assistant U.S. Attorney General Benjamin Civiletti testified that more than three hundred union locals remained controlled or heavily influenced by organized crime.[54] According to DOJ attorneys Peter Vaira and Douglas Roller's report, *Organized Crime and the Labor Unions* (1978), organized crime's influence in the labor unions "presents a thoroughly frightening picture. At least four international unions are completely dominated by men who either have strong ties to or are members of the organized crime syndicate."[55] In 1980, the Senate Permanent Subcommittee on Investigations' hearings on the IBT, ILA, LIUNA, and HEREIU revealed widespread looting of pension and welfare funds.[56]

Once the FBI committed itself to a war on organized crime the tide began to turn. By the mid-1980s, the agency was involved in a full-scale attack on LCN. There were several hundred agents working on organized crime cases in New York City alone. Separate squads mapped each of the five families' tables of organization and money-making activities, then designed strategies to dismantle them. Faced with a realistic prospect of being imprisoned for life, numerous Cosa Nostra members, even capos, consigliere, and bosses, began to serve as cooperating government witnesses. The family RICO cases and the commission case brought the full resources of the federal government down on organized crime. It is against that background that we can understand and assess the extraordinary post-1980 campaign to eliminate labor racketeering.

Civil RICO Suits and Trusteeships

As Monitor I had the power to investigate and audit all aspects of the HEREIU, request assistance from any agency of the United States, retain investigators and auditors, attend all meetings of the HEREIU's General Executive Board (GEB), and finally, perform all such functions necessary to fulfill my duties. In addition, I had the power to discipline officials and members, discipline ranging from a fine to permanent removal.

—Statement of Kurt W. Muellenberg, Esq., former monitor of the HEREIU at the Subcommittee on Employer-Employee Relations, Hearing on the Hotel Employees and Restaurant Employees International Union, July 21, 1999

A trusteeship has the advantage of providing an instant tangible structure that promptly functions in making changes and doing things. It also has the advantage of being separated from the court, thus giving the illusion of independence and opportunity. In a case where financial problems are the chief source of trouble in a Union, or where entrenched incompetence in leadership temporarily undermines the rights of the membership, a trusteeship may be the best choice. That is not the case here, where the court is confronted by a Union that has existed for many, many years as a criminal-dominated organization. The shortcoming of a trusteeship, however, is clearly the distasteful and unworkable act of forcing an authority figure on the existing Union leadership and membership, who they are required to be loyal to, and indeed, expected to like.

—Louis C. Bechtle, United States District Judge, *U.S. v. Local 30, United Slate, Tile and Composition Roofers, Damp and Waterproof Workers Association*, 686 F. Supp. 1139 (1988)

Note: Part of this chapter is adapted from Jacobs, Cunningham, and Friday, "The RICO Trusteeship After 20 Years: A Progress Report," 19 *Labor Lawyer* 419 (2004).

0414

It took a decade for prosecutors to grasp RICO's potential as a powerful anti–organized crime weapon.* After 1982, the year federal prosecutors filed the IBT New Jersey Local 560 case, the government's most direct attack on labor racketeering utilized the RICO civil provision (1964a and 1964b) that authorizes the U.S. attorney general or her/his desig-nee to seek injunctive and other equitable relief to restrain further violations of RICO. Section 1964(a) states:

> The district courts of the United States shall have jurisdiction to prevent and restrain violations of section 1962 of this chapter by issuing appropriate orders, including, but not limited to: ordering any person to divest himself of any interest, direct or indirect, in any enterprise; imposing reasonable restrictions on the future activities or investments of any person, including, but not limited to, prohibiting any person from engaging in the same type of endeavor as the enterprise engaged in, the activities of which affect interstate or foreign commerce; or ordering dissolution or reorganization of any enterprise, making due provision for the rights of innocent persons.

Civil RICO is well suited to systemic organizational criminality that cannot be eradicated by one-shot or even a series of criminal prosecutions. The injunctive remedy allows the government and the federal court to implement and enforce a long-term strategy of organizational reform against a racketeer-ridden union.

ELEMENTS OF A CIVIL RICO SUIT

A civil RICO labor racketeering complaint essentially requires the same proof as a criminal RICO case. The government must prove that the defendants are likely to continue violating RICO by (1) purchasing an interest in an enterprise (the union in this context) with funds obtained

* I think the best explanation is that there is a certain institutional inertia in prosecutorial organizations, as in all organizations. Federal prosecutors were accustomed to using conspiracy statutes, extortion and other substantive crimes, to prosecute organized crime cases. RICO seemed complex and strange. Professor G. Robert Blakey, who drafted the law, spent several years proselytizing for its use. A few prosecutors started experimenting with it. As word of success spread, use of the statute became more popular.

through a pattern of racketeering activity (sec. 1962a); or (2) acquiring an interest in an enterprise (the union) through a pattern of racketeering activity (sec. 1962b); or (3) conducting the affairs of an enterprise (the union) through a pattern of racketeering activity (sec. 1962c). In less technical terms, the government must prove that the civil RICO defendants used dirty money to buy their way into a union; took control of a union through extortion, fraud or some other criminal means; or conducted the affairs of a union through criminal activity, such as violence and extortion. Almost all of the civil RICO complaints have been based upon both 1962b and 1962c.

Criminal and civil RICO complaints require proof of a "pattern of racketeering activity," defined as at least two of a long list of federal felonies and their state law equivalents.* The two "predicate offenses" must be related to one another in some way to constitute a pattern; in practice, practically any two qualifying predicate offenses will satisfy the pattern requirement. If the defendants have been previously convicted of two or more RICO predicate offenses, the government lawyers need do no more than enter proof of those convictions to satisfy the "pattern of racketeering activity" requirement. Because civil RICO requires only proof by a preponderance of the evidence while criminal RICO requires proof beyond a reasonable doubt, a civil suit can succeed against certain defendants merely by entering proof of a previous criminal RICO conviction. Alternatively, the RICO predicate offenses can be

* In a number of civil RICO complaints, the DOJ lawyers have alleged that the defendants acquired an interest in the union through Hobbs Act extortion. The Hobbs Act, one of the workhorses of federal criminal law, makes extortion that affects interstate commerce a federal crime. Extortion is the taking of property by threatening future harm to person or property. In the civil RICO labor racketeering cases, the government alleged that the defendants extorted "intangible property," the union members' Landrum-Griffin rights. Until recently, the courts acquiesced in this extension of the Hobbs Act to intangible property. However, the Supreme Court's decision in *Scheidler v. National Organization for Women* 537 U.S. 393 (2003) called this theory into question. At least one federal district court has held that, in light of *Scheidler,* the Hobbs Act cannot be used to prosecute the deprivation of intangible Landrum-Griffin rights; in other words, Hobbs Act extortion of intangible union democracy rights cannot be used as a predicate offense to prove "pattern of racketeering activity" to satisfy the requirements of either criminal or civil RICO. (*Bellomo v. U.S.,* 263 F.Supp.2d 561, 575 (E.D.N.Y. 2003). But see *U.S. v. Muscarella,* 175 L.R.R.M 3280, 23–25 (S.D.N.Y. 2004). Even if the *Bellomo* view prevails, there are other RICO predicate offenses that might be proven in labor racketeering cases.

proven at the civil RICO trial itself. Then, all that remains is for the government to persuade the court that aggressive equitable relief (for example, an injunction, a trustee, and so on) is necessary to prevent the defendants from future violations of RICO.

The government's civil RICO complaints typically ask the federal district court judge to enjoin the organized crime defendants from playing any role in the union's administration or affairs. Unless the organized crime defendant is also a union official, there is no legitimate reason for the defendant (who may be in prison anyway) to play any role in the union. Therefore, an organized crime defendant will likely not spend time or money defending himself against a civil RICO labor racketeering lawsuit but instead settle the case by agreeing to have nothing to do with the union. The challenge for the government, the federal judge, and the trustee, if one is appointed, will be to ensure that the organized crime defendant does not continue to exert influence over the union surreptitiously. If the defendant does, the U.S. attorney in charge of the case can petition the judge to hold the noncomplying organized crime defendant in contempt. The judge may also remove from office and perhaps from the union any official who has continued knowingly to associate with an organized crime member.

In their civil RICO labor racketeering suits, DOJ attorneys always name union officials as defendants. Unlike the organized crime defendants, these union defendants have not previously been convicted of RICO predicate offenses; if they had been, they would not be lawfully permitted to hold union office. Thus, government attorneys need to prove that the union defendants themselves violated RICO (1962b) by aiding and abetting the organized crime defendants in their acquisition of an interest in the union or that they violated RICO (1962c) by conducting or aiding and abetting others in conducting the un-ion's affairs through a pattern of racketeering activity, including such RICO predicate offenses as extortion of employers or union members, murder, assaulting or threatening union dissidents, or defrauding the union's benefit funds. It is also possible to obtain judgment against certain (union) defendants whose passive tolerance of LCN labor racketeering might not have been sufficient to support a criminal prosecution for aiding and abetting or for conspiracy. Unlike their organized crime codefendants, the union defendants may have

0417

an incentive to defend themselves, especially if the union pays their legal fees.*

To recapitulate, in a civil RICO suit, the U.S. attorney names both union defendants and organized crime defendants, and sometimes designates the union or its benefit fund as a "nominal" defendant. Defendants are charged with having violated RICO by (1) acquiring or aiding and abetting the acquiring of an interest in the union through a pattern of racketeering activity, typically by means of violence and intimidation against union members but also by means of taking bribes from employers, election fraud, and theft from union benefit funds, and (2) conducting the union's affairs through a pattern of racketeering activity, usually extortion, theft, and fraud. As a remedy, the U.S. attorney asks the judge to remove the union defendants from their official positions, order organized crime defendants to sever all contacts with the union, enjoin defendants from knowingly associating with organized crime members and associates. The judge is also asked to appoint a trustee empowered to initiate disciplinary charges against union officers and members who violate the decree, union constitution, or bylaws; administer the union's affairs; design and implement a fair election, and monitor a new regime for conformity with the decree, the union's constitution, and federal laws.

The specifics of the civil RICO decrees in labor racketeering cases differ. However, almost always there is a provision that empowers the trustee to act as investigator/prosecutor in initiating disciplinary charges. The judge (or perhaps another trustee) decides whether the facts establish the targeted official's "guilt" and what sanction is appropriate. For example, in the IBT International case, the investigations officer functioned as prosecutor and the administrative officer functioned as trier of fact and sentencing authority. The decree usually provides that union members and officials found guilty of disciplinary violations (for example, knowingly associating with LCN figures) have a right to appeal to the district court judge; if still dissatisfied, they may appeal to the relevant federal circuit court of appeals.

* Whether the union will be permitted to pay for a union official's legal representation in defending a civil RICO suit is a thorny legal question. Under LMRDA (29 USC 501a), only expenditures for the benefit of the union are legitimate. As things stand today, the union normally pays its officials' legal fees if the official is vindicated, but if the official loses, the union is not permitted to reimburse legal expenses.

Remarkably, the DOJ lawyers have never lost a civil RICO labor racketeering case and only two of the government's 20 civil RICO suits (IBT Local 560 and Philadelphia Roofers Local 30) necessitated trials; all the rest were resolved by negotiated consent decrees that included appointment of a trustee or monitor. The decree itself usually specifies whether the trustee should have full-time and/or part-time assistants, and the amount of the trustee's compensation. See Table 8-1 below for a list of all the civil RICO suits as of February 2005.

"Winning" a civil RICO labor racketeering case by achieving a favorable decree does not necessarily ensure that the racketeer-ridden union will be successfully reformed. These cases are won or lost in the remedial phase. The prosecutors and judges know what they want to accomplish: the eradication of organized crime elements from the union and the establishment of healthy union governance capable of resisting future intrusions by criminal elements. How to achieve these goals is less clear. The first step is to seek appointment of a trustee in whom the Department of Justice and the federal judge have confidence. This requires a person who understands organized crime and who enjoys the confidence of the FBI and DOL investigators (assuming they are still at work on the case). Almost by definition, such a person has to be a former federal prosecutor.

Table 8-1
Civil RICO Suits as of February 2005

Name of Civil RICO Suit	*Date Filed, District*	*Published Opinions Discussing Various Aspects of the Case*
1. *United States v. Local 560, International Brotherhood of Teamsters*, No. 82-689	March 9, 1982, D.N.J.	*United States v. Local 560, International Brotherhood of Teamsters*, 581 F.Supp. 279, 115 L.R.R.M. (BNA) 2829 (D.N.J. 1984), *aff'd* 780 F.2d 267, 121 L.R.R.M. (BNA) 2121 (3d Cir. 1985).
2. *United States v. Local 6A, Cement and Concrete Workers*, No. 86 Civ. 4819	June 19, 1986, S.D.N.Y.	*United States v. Local 6A, Cement and Concrete Workers*, 663 F.Supp. 192, 127 L.R.R.M. (BNA) 2540 (S.D.N.Y. 1986).
3. *United States v. The Bonanno Organized Crime Family of La Cosa Nostra, Philip Rastelli, et al.*, No. 87-2974 (IBT Local 814).	August 25, 1987, E.D.N.Y.	*United States v. The Bonanno Organized Crime Family of La Cosa Nostra*, 683 F.Supp. 1411 (E.D.N.Y. 1988); 695 F.Supp. 1426 (E.D.N.Y. 1988), *aff'd* 879 F.2d 20 (2d Cir. 1989).
4. *United States v. Local 359, United Seafood Workers, et al.*, No. 87 Civ. 7351*	October 15, 1987, S.D.N.Y.	*United States v. Local 359, United Seafood Workers*, 705 F.Supp 894, 130 L.R.R.M. (BNA) 2533 (S.D.N.Y. 1989), *aff'd* 889 F.2d 1232, 132 L.R.R.M. (BNA) 2978 (2d Cir. 1989); 55 F.3d 64 (2d Cir. 1995).

(BAN) 2232 (W.D.N.Y. 2000).
20. *United States v. Hotel Employees and Restaurant Employees International Union Local 69*	April 17, 2002, N.D.N.Y.	
21. *United States v. International Longshoremen's Association et al.*, CV-05-3212	July 2005, E.D.N.Y.	[While this book was in press, the DOJ filed a civil RICO suit against the ILA and served Cosa Nostra figures.]

* This litigation involved the Fulton Fish Market, in which the union was a major player. The case was settled with the appointment of a "market administrator," not actually a union trustee.

SELECTING THE TRUSTEE

In the majority of cases, formal selection of the trustee has been left up to the presiding federal district court judge, with both the govern-

0421

ment and the union invited to make recommendations. In the HEREIU International case, both the government and the HEREIU sent the judge three names. The judge selected one of the government's nominees, Kurt Muellenberg, a former head of the DOJ's Organized Crime and Racketeering Section. In almost all cases one of the government's nominees has been chosen;* no trustee has been appointed over the government's objection.

In some cases the identity of the trustee has been included in the consent agreement itself. For example, the New York City District Council of Carpenters' consent decree named a trustee (designated as the Investigations and Review Officer (IRO)) and the members of an Independent Hearing Committee (IHC).[1] Under this trusteeship, the IRO would prepare disciplinary cases and the IHC would adjudicate disciplinary charges.

One of the most arresting facts about the government's twenty-year anti–labor racketeering campaign is that the trustees are almost all former federal prosecutors with experience investigating and prosecuting organized crime. Edwin Stier, trustee for a decade over IBT Local 560 was a former state and federal prosecutor. Thomas Puccio, trustee in the IBT Local 295 case, was previously head of the Federal Organized Crime Strike Force in Brooklyn.[2] Of the three members of the Independent Review Board in the IBT International case, William H. Webster was a former FBI director, Charles Carberry was a former assistant U.S. attorney, and Michael Holland was one of just a few labor lawyer trustees.[3] Holland's authority was limited to running the IBT's national election.[4] Table 8-2 provides background on the trustees appointed in the civil RICO labor cases.

* In the Chicago Laborers' District Council case, for example, Robert Bloch, formally nominated by LIUNA International, had the DOJ's strong support and approval. See National Legal and Policy Center, *Union Corruption Update,* September 10, 2001. Similarly, in the LIUNA Local 210 case, the international union appointed Gabriel Rosetti to be the trustee; the DOJ then consented to have Rosetti serve as RICO trustee as well. (Stephanie Mencimer, "Ex-FBI Official Pulls at Union's Infamous Roots; Laborers Fight Corruption From the Inside Out," *Washington Post,* June 7, 1998, at A1). In the Philadelphia Roofers Local 30/30B case, however, Judge Bechtle chose Robert Welsh, a former law clerk with an impressive record as a federal prosecutor. Telephone Interview with Robert Welsh, Special Master, Roofers Local 30/30B, in Philadelphia (November 25, 2003).

0422

Table 8-2
Trustees' Backgrounds

Trustee	*Union*	*Background*
Eugene R. Anderson (Trustee)	LIUNA Local 6A (New York)	Assistant U.S. attorney and partner in New York City law firm.
Robert E. Bloch (Trustee)	Chicago Laborers' District Council (CLDC)	Labor lawyer, Dowd, Bloch & Bennett.
John A. Boardman (Deputy Monitor)	HEREIU Local 69	HEREIU vice-president and temporary trustee of Local 69 (appointed by President Wilhelm when Wilhelm put the local under trusteeship in March 2002). Formerly president of a HEREIU local in Washington.
Charles Carberry (Investigations Officer)	IBT International	Assistant U.S. attorney, S.D.N.Y., 1979–1985; deputy chief, Criminal Division, 1985–1986; chief, Securities and Commodities Frauds Unit, 1986–1987.
Michael Chertoff (Investigations Officer)	Mason Tenders District Council (MTDC)	Assistant U.S. attorney, Southern District of New York, 1983–1987; first assistant U.S. attorney for District of New Jersey, 1987–1990; U.S. attorney for District of New Jersey, 1990–1994; U.S. Senate special counsel for Whitewater Committee, 1994–1996; partner, Latham & Watkins, 1994–2001; assistant attorney general, Criminal Division, 2001–2003; U.S. 3rd Circuit Court of Appeals, 2003.
Kenneth Conboy (Investigation and Review Officer)	New York District Council of Carpenters	U.S. district judge for the Southern District of New York. Former national appeals master for the Teamsters International nationwide election; New York City commissioner of investigation; counsel to commissioner of New York City Police Department.
Ronald E. DePetris (Independent Supervisor)	IBT Local 851	Chief assistant U.S. attorney, Eastern District of New York, 1982–1986. Assistant U.S. attorney, chief of Fraud Section, and chief of Criminal Division, Eastern District of New York, 1971–1977.
W. Neil Eggleston (Appellate Officer)	LIUNA International	Chief of appeals, U.S. Attorney's Office in Southern District of New York; former Clinton White House attorney.
James Flanagan III	HEREIU Local 54	Deputy director, New Jersey Division of Gaming Enforcement.
Robert Gaffey	ILA Local 1588	Assistant U.S. attorney, Southern District of New York, 1985–1988. Chief counsel to the investigations officer in the IBT International trusteeship.
James Gill	ILA Local 1804-; Local 1909	Five years as an assistant district attorney in Manhattan.
Stephen B. Goldberg (Election Officer)	LIUNA International	Professor of law at Northwestern University; expert in alternative dispute resolutions; served as an attorney for the National Labor Relations Board, 1961–1965.
W. Douglas Gow (Inspector General)	LIUNA International	FBI associate deputy director, Investigations.

0423

Table 8-2 *(continued)*

Trustee	*Union*	*Background*
Steve Hammond (LIUNA trustee)	MTDC	Started in LIUNA in 1970 as a member of Local 295, Salt Lake City; elected business manager of Local 295 in 1975; appointed assistant business manager of the Oregon/Southern Idaho/ Wyoming/Utah District Council in 1987. Came to LIUNA International Headquarters in 1989 to serve as assistant director of the Construction and Jurisdiction Department. Appointed director of the department in 1994. (After trusteeship) was assigned as special assistant to the general president (Coia) in 1997. Served as co-chairman and trustee on the New York State Laborers'-Employers' Cooperation and Education Trust (LECET) until August 2003. Was elected by the LIUNA GEB as international vice-president-at-large in August 2000.
Michael Holland (Elections Officer)	IBT International	General counsel, International Union, United Mine Workers of America, 1982–1989. Chairman and trustee, UMWA Health and Retirement Funds, 1993–. Chairman and trustee, National Organizers Alliance Retirement Pension Plan, 1997–.
Joseph Jaffe (Trustee)	ILA Local 1814	Assistant U.S. attorney, Southern District of New York
Frederick Lacey (Independent Administrator)	IBT International	U.S. attorney in New Jersey, 1969–1971; Federal District Court judge, 1971–1986; chairman, U.S. Supreme Court Advisory Committee on Criminal Rules, 1984–1986; judge, Temporary Emergency Court of Appeals, 1980–1986; judge, U.S. Foreign Intelligence Surveillance Court, 1979–1985.
Mary Shannon Little (Court Officer)	HEREIU Local 100	Assistant U.S. attorney, Southern District of New York.
Robert D. Luskin (GEB Attorney)	LIUNA International	Special counsel to the DOJ Organized Crime and Racketeering Section.
Jack McDonald	LIUNA Local 210	Former FBI agent.
Robert McGuire (Trustee)	ILA Local 1588	Commissioner, New York City Police Department, 1978–1983.
Steven A. Miller (Court-Appointed Monitor)	CLDC	Chief, Special Prosecutions Section, U.S. Attorney's Office, Northern District of Illinois, 1991–1995; chief, Bank and Financial Institution Fraud Unit, 1988–1991.
Michael Moroney (Deputy Trustee)	IBT Local 295	Former federal labor investigator.
Kurt Muellenberg (Trustee)	HEREIU International and HEREIU Local 69	Former chief of the DOJ's Organized Crime and Racketeering Section.
Howard O'Leary (Investigations Officer)	HEREIU International	Assistant U.S. attorney, Detroit; partner in the Washington office of Dykema Gossett.
Lawrence Pedowitz (Court-Appointed Monitor)	MTDC	Assistant U.S. attorney, Southern District of New York, 1974–1978; chief of appeals, 1976–1977; and chief, Criminal Division, 1982–1984.

0424

Table 8-2 *(continued)*

Trustee	*Union*	*Background*
Thomas Puccio (Trustee)	IBT Local 295	Office of the U.S. Attorney, Eastern District of New York, 1969–1976 (chief, Criminal Division, 1973–1975; executive assistant U.S. attorney, 1975–1976); chief, U.S. Department of Justice Strike Force, 1976–1982.
Barbara Quindell (Elections Officer)	IBT International	Labor lawyer.
Gabriel Rosetti, Jr. (Trustee)	LIUNA Local 210 (Buffalo)	Thirty-one-year union member.
Robert Stewart (Deputy Trustee)	ILA Local 1588	Career federal prosecutor; head of the Newark Federal Organized Crime Strike Force.
Edwin H. Stier (Trustee)	IBT Local 560	Former assistant U.S. attorney in charge of the Criminal Division, Newark. Former director of the New Jersey State Division of Criminal Justice.
Daniel F. Sullivan (Chief Investigator)	HEREIU International	Supervisor, FBI Baltimore office.
Henry Tamarin (Trustee)	HEREIU Local 100	HEREIU International vice-president; also worked on HEREIU Local 54 trusteeship.
Michael Tobin (Deputy Trustee)	IBT Local 295	Former investigator for Thomas Puccio; no labor background.
Peter F. Vaira (Hearing Officer)	LIUNA International	Executive director of President's Commission on Organized Crime; former chief of DOJ's Organized Crime Strike Force in Chicago; and former U.S. attorney for Eastern District of Pennsylvania.
Robert E. Welsh, Jr. (Special Master)	Roofers Local 30/30B	Assistant U.S. attorney, 1980–1986; and chief of Major Crimes Section, 1984–1986, Philadelphia.

THE DURATION OF THE TRUSTEESHIP

The DOJ favors RICO trusteeships of indefinite duration.[5] The advantage of a trusteeship with no fixed duration is that neither the criminal element nor the rank and file will have cause to anticipate that the trusteeship will soon end with union affairs reverting to the status quo ante. The government wants the rank and file to believe that the trusteeship will remain in place until corruption and racketeering have been thoroughly eliminated. However, a trusteeship without a fixed termination date may cause the trustee (and provide an economic incentive) to operate without hurry, thereby draining the union treasury and unduly delaying the union's return to self-governance. Furthermore, without a fixed or at least presumptive termination date, it may be difficult to bring the trusteeship to an end. The union defendant will always prefer

0425

a trusteeship of limited duration, if for no other reason than that the shorter the trusteeship, the less financial drain on the union.

In the majority of labor racketeering cases, the consent decree provided for a fixed-term trusteeship, ranging from as short as eighteen months (e.g., HEREIU International and HEREIU Local 100) to as long as six years (e.g., HEREIU Local 54) (see Table 8-3). Most of the decrees or consent agreements have included an option to extend the trusteeship's duration for a further fixed period.[6]

Table 8-3
Duration of Trusteeships

Union	*Date Trusteeship Established*	*Proposed Duration of Trusteeship*	*Terms for Extensions*	*Termination Date*
IBT Local 560	June 23, 1986	Indeterminate	Not applicable	Feb. 25, 1999
LIUNA Local 6A (Cement and Concrete Workers, New York)	March 18, 1987	Until elections held in 1990	Extend twice, each time for twelve months.	September 1993
Local 359 (Seafood Workers)	Unknown	Unknown	Several extensions.	July 1994
Philadelphia Roofers Local 30/30B	June 2, 1988	Indeterminate	Not applicable	September 28, 1999
IBT International	1989	Indeterminate	Not applicable	Ongoing
IBT Local 295	April 29, 1992	Indeterminate	As of 2002, the trustee in charge recommend that although the local was ready for court-supervised elections, his trusteeship should continue, in modified form, for at least seven more years.	July 29, 2004, but chief investigator has ongoing duties until after fall 2006 election. Court may reinstate Independent Supervisor for good cause.
United Brotherhood of Carpenters and Joiners of America, New York District Council and Constituent Locals	March 4, 1994	Thirty months	The decree provided: "The Internal Review Officer [to] apply to the Court for an extension or to reduce the length of the term by six months or less, in order to complete work in progress, upon a showing of good cause and upon reasonable notice to the government and counsel for the District Council." (1994 Consent Decree, section 9(a))	June 1999

0426

Table 8-3 *(continued)*

Union	*Date Trusteeship Established*	*Proposed Duration of Trusteeship*	*Terms for Extensions*	*Termination Date*
HEREIU Local 54	April 12, 1991	Six years	No extensions. (Interview with James Flanagan, July 2002).	March 3, 1997
HEREIU Local 100	October 23, 1992	Eighteen months	Seems that there were terms; details unknown.	Fall 1994
IBT Local 282	June 1, 1994	Four years	Yes, for four years, until May 2003; see amended consent judgment in 13 F.Supp.2d 401	Ongoing
IBT Local 851	August 1994	Unknown	A court order issued October 20, 2000, extended the trusteeship until thirty days after the second set of elections following the trusteeship.	Same as for IBT Local 295
MTDC	December 27, 1994	Four years	Not extended; however, a "Supplemental" consent decree was entered into in January 1999 that provided that the trustee, Lawrence Pedowitz, would act as a "Review Monitor" for another thirty-six months, with power to apply to the Court for restoration of his trustee powers if he concluded the union was being run corruptly.	January 1999
LIUNA International	February 15, 1995	February 11, 1998 (three years)	First one-year extension, February 1998–January 1999, did not alter the agreement. Second one-year extension was announced January 8, 1999, and weakened agreement a bit—DOJ will allow LIUNA to curtail its efforts to accommodate "budgetary constraints," and DOJ can impose consent decree only if a failure to do so would "substantially interfere" with the purposes of the agreement, instead of at its discretion. Second extension was set to expire on January 31, 2000; on January 20, 2000, a new agreement, good till 2006, was reached. This agreement removes the takeover threat. DOJ now can "veto" major changes only in LIUNA's reform effort but cannot implement the previously signed consent decree. (National Legal and Policy Center, *Union Corruption Update,* January 31, 2000)	Set to terminate in 2006

(continued)

Table 8-3 *(continued)*

Union	*Date Trusteeship Established*	*Proposed Duration of Trusteeship*	*Terms for Extensions*	*Termination Date*
HEREIU International	September 5, 1995	Eighteen months	Muellenberg requested a one-year extension in February 1997; court granted extension, with trusteeship ending March 5, 1998. After termination of trusteeship, Muellenberg continued as one member of a three-person oversight committee with limited authority. (Kurt Muellenberg, Federal Monitor's Final Report as Monitor, 2000)	March 8, 1998; consent decree was not technically lifted until December 1, 2000, when all the disciplinary proceedings ended.
Chicago Laborers' District Council	LIUNA trusteeship began February 1998; court-ordered trusteeship began August 12, 1999	At least two years	It does not appear that there were any explicit terms; there was not an extension.	August 30, 2001
LIUNA Local 210 (Buffalo)	December 1999 (prior LIUNA internal trusteeship from February 1996 to December 1999)	LIUNA appointed internal trustee for two-year term	In 1998, LIUNA extended the trustee's term indefinitely. (Stephanie Mencimer, "Ex-FBI Official Pulls at Union's Infamous Roots; Laborers Fight Corruption from the Inside Out," *Washington Post*, June 7, 1998)	August 2001
HEREIU Local 69	April 17, 2002	Four years	Not applicable	Terminates April 17, 2006, unless extended for cause shown.
ILA Local 1588	January 29, 2003	Eighteen months and possible eighteen months of postelection oversight	Not applicable	Ongoing

THE TERMS OF THE TRUSTEE'S EMPLOYMENT

At first blush, it would seem desirable to have a full-time trustee devoted to reforming a racketeer-ridden union. After all, trustees imposed by international unions on bankrupt and maladministered locals typically serve as full-time officials. However, it would be very difficult to re-

0428

cruit a full-time RICO remedial trustee from the ranks of private-sector law firm attorneys with prior federal prosecutorial or organized crime control experience. To serve full-time, the attorney would have to take an extended or indefinite leave from his or her law firm and perhaps a cut in pay; even so, the salary might be prohibitive for a local union. Furthermore, a union trusteeship is not a step along a career path. Years later, when the trusteeship is terminated, the lawyer/trustee would have to reconnect with his old firm or find a new one. There would be no business and no clients to bring to the firm. He certainly could not count on more union trusteeships because there are so few. Realistically, if the RICO suits required full-time trustees, they would have to be drawn from another pool, perhaps retired prosecutors, or more likely career union officials. Thus, the trustees mostly serve on a part-time basis, compensated at an hourly rate. Their weekly hours might vary from thirty or more at the beginning of the trusteeship to ten or fewer later on, according to the trustee's judgment of what is necessary. The disadvantage of a part-time trustee is that he or she will not take ownership of the task. While operating a law office and/or devoting time to other jobs, the part-time trustee may not have the time and energy necessary to reform, reconstitute, and reconstruct a union that has been operated as a mob fiefdom for decades. However, choosing someone who is not a former prosecutor carries serious disadvantages. It is crucial that government investigators completely trust the trustee and feel comfortable sharing sensitive investigative information with him or her. A union official would be very unlikely to enjoy this kind of trust.

Compensation is an important issue. Attorneys at big law firms bill their time at $300–$500 an hour, rates that union members find staggering. Some trustees have earned more than $100,000 a year for their part-time work.[7] The trustee in the Local 295 case was paid $250,000 a year for his part-time services, and his full-time deputy trustee received $150,000. Ironically, such compensation exceeds the remuneration of mob-connected union officials whose salaries and emoluments prosecutors condemned as bloated, unjustified, and exploitive. On occasion, the trustee's wages have drawn criticism from those who oppose the trusteeship on other grounds and, in some cases, may have undermined the trustee's legitimacy in the eyes of the union's members. For example, the IBT went to court to challenge (unsuccessfully) the $350 hourly rate billed by Frederick Lacey as "Administrator" (one of the three trustees) in the IBT case.[8]

0429

A trusteeship over an international union's central office requires more time, personnel, and resources than a trusteeship over a local union. After the 1991 election, the IBT three-person (plus staff) trusteeship was replaced by a three-person Independent Review Board (IRB). The IRB hired the original investigations officer (Carberry) and authorized a staff of two full-time lawyers and eight full-time investigators. According to Teamsters General President James P. Hoffa, the IRB costs the IBT approximately $8–9 million a year.[9] LIUNA estimates that it spends $5 million a year on the remediation effort led by former federal prosecutor Robert Luskin.[10] By contrast, the HEREIU International trusteeship was a much smaller and cheaper operation.[11]

Covering the costs of a RICO trusteeship over a previously exploited union often presents a major problem. The union's coffers have been plundered by racketeers and depleted by litigation costs. Funding the trusteeship could bankrupt the union or require dues increases that might cause the rank and file to abandon it. In a few cases, the international union, a much deeper pocket, has contributed financial assistance.[12] For example, the IBT Local 851 decree states that the local will set up a fund from which the trustee can draw and that the International IBT will supplement that fund. However, some trusteeships have floundered due to inadequate funding.

THE TRUSTEE'S POWERS

The trustee's powers emanate from the decree. Some trustees have been given all the powers and authority of the union's GEB, in effect empowering the trustee to administer the union, negotiate contracts, handle grievances, and initiate strikes.[13] Such a trusteeship resembles the type of trusteeship that an international union sometimes imposes on an affiliated local.

The RICO trustee who is charged with the responsibility for running the union has to devote a substantial portion of time and energy to day-to-day union administration rather than to organizational reform.[14] In the LIUNA Local 6A trusteeship, Trustee Eugene Anderson and his assistant claim to have been so preoccupied supervising the daily administration of the union that they were unable to interact with the rank and file. On the other hand, the trustee who runs the union is in a position to earn the rank and file's confidence by assisting the membership

0430

to achieve its goals rather than functioning solely as a policeman. If the budget permits, trustees who find themselves in this position (e.g., IBT Local 560) usually hire a seasoned union official to handle day-to-day union affairs while they themselves concentrate on investigations, discipline, elections, and communications with the rank and file.

Trustees typically have the authority to examine the union's books and records, and to compel sworn statements by officers, agents, representatives, employees, and members. In many cases (e.g., Roofers Local 30/30B) the trustees have been given authority to review collective bargaining contracts and to veto improper expenditures. Officers of the corrupt regime may have signed various contracts for goods and services with cronies before the trustee assumed his position, in effect providing golden handshakes to members of the heretofore dominant clique. The trustee must also scrutinize the payroll for no-show workers, improper reimbursements, and other fraudulent expenditures.

In some cases the power to bring suit on behalf of the union has enabled trustees to obtain reimbursement from the union's exploiters. For example, in the Mason Tenders District Council case, Monitor Lawrence Pedowitz filed lawsuits against former officers and trus-tees, recovering $12 million of $15 million lost because of their malfeasance. Ronald DePetris, trustee over IBT Local 851, filed two civil RICO claims against freight-forwarding companies and Local 851's former secretary-treasurer, ultimately recovering more than $3 million for the financially strapped union. Such successes obviously contribute to the trustee's credibility and popularity.

THE TRUSTEE'S DISCIPLINARY AUTHORITY

In most, but not all, RICO union cases, the decree prohibits union members, and certainly union officials, from knowingly associating with organized crime members or associates.* For example, the consent decree

* Courts have uniformly rejected challenges based on freedom of association grounds. See *U.S. v. Int'l Bhd of Teamsters,* 745 F. Supp. 908 (S.D.N.Y. 1990), 138 L.R.R.M. (BNA) 2219 (2d Cir. 1991). Courts have found either that the union constitution or the consent agreement provides ample authority to make no-knowing-contact-with-organized-criminals a condition of holding union office.

0431

in the IBT International case gave the independent administrator the IBT general president's disciplinary authority.[15] The independent administrator, Frederick Lacey, held that this authority was sufficient to expel union members, not just officers, for bringing "dishonor and disrepute" to the Teamsters on account of LCN ties. District Court Judge David Edelstein agreed and the Second Circuit Court of Appeals affirmed.[16] The trustees in the LIUNA Local 6A and HERE Local 54 cases had authority to bar candidates who knowingly associate with organized crime figures from union elections, but not the authority to expel such individuals from the union. Under those conditions, the taint of labor racketeering and atmosphere of intimidation continue to prevail.

The union trustees have usually had the power to hire members of the union staff, including business agents who negotiate labor contracts, administer grievances, file unfair labor charges, and make decisions regarding strikes and other job actions. To be successful, the trustee must demonstrate that a new regime has permanently displaced the old one. New leaders must be encouraged to come forward. However, there is a danger that, in making snap hiring decisions, the trustee will appoint people who are incompetent, unpopular, or otherwise not likely to be effective leaders. Moreover, the rank and file may resent having their officers chosen by "the government," failing or refusing to distinguish between the courts/trustee and "the government."

THE TRUSTEE'S ELECTION AUTHORITY

RICO trustees are almost always empowered to implement and monitor elections. Mounting a fair and competitive election is a major step in the union's rehabilitation. Typically, mobbed-up unions have not experienced a fair election in the memory of any living union member. As Judge David Edelstein explained in one of his many opinions in the IBT international case:

> [E]lection rules must not be viewed in a vacuum, but instead placed in their proper context. This Court has reiterated that the [IBT] Consent Decree is a unique attempt to cleanse this union. These election rules are the linchpin in that effort. This Court will only approve election rules that will guarantee honest, fair, and free elections completely

0432

secure from harassment, intimidation, coercion, hooliganism, threats, or any variant of these, no matter under what guise.[17]

The Trustee's Preparation

Ideally, a new trustee should have general knowledge about organized crime, labor unions, labor racketeering, and the history of previous efforts to reform mobbed-up unions. She/he should also know the specific facts of the case at hand, the history and politics of the targeted union, who the racketeers are and how they have exploited the union and its pension and welfare funds, and the local union's relationship to its international union and to the employers for whom its members work.

There is no manual on how to organize and implement a RICO-spawned trusteeship. Remarkably, there has never been a conference or meeting to debrief the trustees or to memorialize their experiences. Their reports have not been assembled in any retrievable way and are usually difficult to obtain. Indeed, in some cases the reports have been purposefully sanitized because the judge or trustee feared their being made public. There has been little contact among the trustees, sometimes as a matter of policy. For example, Judge Bechtle in the Philadelphia Roofers' Local 30/30B case instructed his trustee ("liaison officer") not to contact trustees in other cases lest their mistakes infect the Roofers' remediation.[18]

Typically the newly appointed trustee is briefed by the federal prosecutors who drafted the civil RICO complaint. However, the "briefing" may be no more than one or two informal discussions over lunch. Of course, the newly appointed trustee can read the civil RICO complaint, the settlement agreement, and other legal documents, including past indictments. However, because practically all of these RICO suits have been settled quickly, there are no trial transcripts or even depositions. At best, the new trustee will know the prosecutors' perception of the problem or, more accurately, of the problem's symptoms—e.g., mob influence, bloated salaries, ghost employees, and the sorry state of the union's treasury and benefit funds. Prosecutors cannot convey information about what they themselves do not know, such as the union's politics, culture, and organizational environment, as well as the nature of the business or industry environment in which the union's members work.

[162.10.217.184] Project MUSE (2026-06-15 01:41 GMT) University of Queensland

In the few cases where civil RICO suits against unions have gone to trial, the judge has had significant influence over the trusteeship. After a yearlong trial in the IBT Local 560 case, Judge Harold Ackerman, appalled by the union's history of corruption and racketeering (in his words "a shameful horror story"), became strongly committed to the trusteeship's success. Without a trial, the judge may not be well versed in the union's problems. Where the judge is only tangentially involved in the case, she or he may leave the structure and powers of the trusteeship to be negotiated by the parties. Judge David Edelstein is a striking exception; even without a trial, he became strongly committed to reforming the IBT and handed down one decision after another supporting the government's trustees' positions.

The trustee, for good reason, is likely to be suspicious of existing union officers. They were probably complicit with and certainly tolerant of the labor racketeers who had exploited the union for many years. The integrity of the international union's officers will also be uncertain. Years, even decades, of organized crime domination of a local or district council could not have gone on without the knowledge, acquiescence, and complicity of some international union officers. The trustee must be wary of appearing friendly to or allied with the incumbent international union officials lest the rank and file conclude that the trusteeship is just for show.

In a few cases the new union trustee has been approached by rank-and-file members, usually "dissidents," who may previously have been bold enough to criticize the ruling clique. Some dissidents provide useful information; others' allegations are distorted by a paranoid worldview, not surprising in light of years of struggle and defeats. Too close an association with these dissidents may undermine the trustee's credibility with rank-and-file union members.[19] However, there are also costs in disappointing or alienating the dissidents.

If the trustee is going to learn more about the union, the information will probably have to come from DOL and FBI investigators, who might or might not continue, after the negotiated agreement, to work on the case, thereby supporting the trusteeship. On one hand, the investigators may be strongly invested in eliminating corruption and racketeering, root and branch. On the other hand, once there is a signed settlement, there may be departmental pressures to move on to new cases.

0434

The Operation of the Trusteeships

What does a trustee in a civil RICO union case actually do to achieve the goals of the consent agreement? There is no "to do" list. Every trustee has had to invent the job, at least to the extent of identifying and prioritizing tasks and allocating time and resources among investigations, disciplinary actions, and union-democracy-building. Because no two situations are the same, it is inevitable and desirable that each trustee attempt to address the exigencies of the case at hand. Moreover, a successful trustee changes priorities and reallocates resources as weeks, months, and years pass. A RICO union trustee has to allocate time both to responding to problems ("problem solver") and to pressing forward with a reform agenda ("organizational reformer"). Some trustees initially confronted so many union administrative problems that they were never able to move into the organizational reform mode.

Trustees have presided over regularly scheduled and special union meetings where, among other things, they have sought to explain the trusteeship to the rank and file and solicited their support. Trustees have contributed regular columns to union magazines and newsletters and published open letters to the membership explaining the civil RICO case, the charges against incumbent officials, and the trustee's role. In some cases, trustees have sought to educate the rank and file about their Landrum-Griffin rights to speak freely, run for office, vote, inspect contracts, and so on. Some trustees have maintained an open door or have met on an appointment-only basis with union members who wanted to convey their concerns or assuage their anxieties. Sorting out bona fide complaints from malicious rumors and politically motivated accusations is a constant challenge.

Trustees have had to pore over books and records to identify legitimate and illegitimate expenditures. In the HERE International case, Trustee Kurt Muellenberg found a shocking lack of bureaucratic rationality in the union's organization.[20] There was no table of organization, no job descriptions, no administrative procedures. Muellenberg's main contribution was probably his recommendations for transforming the union's administration into a modern bureaucracy.

The trustees, at varying levels of intensity, have investigated wrongdoing and wrongdoers. A minority of trustees has had an inves-

0435

tigator working specially for the trusteeship.[21] The majority has had to depend on FBI and DOL agents, which means persuading them of their own reliability and integrity.

Trustees have replaced business agents and other union personnel. They have spent time setting up fair election procedures, approving individual candidates, and supervising balloting and counting ballots. Some trustees (e.g., Edwin Stier in the IBT Local 560 case) or their assistants have negotiated collective bargaining agreements, processed workplace grievances, and led job actions.

CONCLUSION

Civil RICO has proved to be a very potent weapon for DOJ lawyers seeking to eliminate LCN's power base in certain unions. The DOJ lawyers have never lost a civil RICO union case, but that hardly means that they have achieved 100 percent of their goals. It has proved easier to draft the civil RICO complaints and to obtain favorable consent decrees than to establish successful union trusteeships. It has come as a surprise and major disappointment to government litigators and reformers that many union members have not greeted the court-appointed trustee as a liberator.

The trustees appointed in civil RICO union cases have been differently empowered, financed, and tenured. Some have exercised the same powers as the union's officers; others have been restricted to a monitoring and reporting role. Some have plugged away at their mission for more than a decade; others have completed their work in just eighteen months. Some have expelled dozens of union officers; others have expelled nobody. Some trustees, as we will see in Chapters 9, 10, and 11, appear to have succeeded in purging labor racketeers and bringing forth a new leadership cadre independent of the faction that corruptly dominated the union for decades; others have failed to free the union from the labor racketeers. Even where liberation has been achieved, there has been very little success in establishing union democracy.

9

The Liberation of IBT Local 560

> It is not a pretty story . . . [it] is a harrowing tale of how evil men sponsored by and part of organized crime elements, infiltrated and ultimately captured Local 560.
>
> —Judge Harold A. Ackerman, *United States v. Local 560,* 581 F. Supp. 279, 282 (D.N.J. 1984)

> Members were intimidated from expressing their opinions and disagreements. They were intimidated, sometimes it was subtle and sometimes it was not so subtle. The Union was a burden the members suffered. It did not negotiate good contracts, good wages or good benefits. It existed for the benefit of organized crime members who controlled the union, not for the members.
>
> —Peter Brown, Local 560 president, testimony before a congressional committee in 1999

> [T]he goal [of the Trusteeship] has been to transform the culture of the Union from one in which racketeering was acceptable behavior to one in which exploitation of the membership by organized crime, or any other form of corruption, will not be tolerated. I believe we have achieved that goal.
>
> —Local 560 Trustee Edwin Stier, Report and Recommendations of the Court Appointed Trustee for Teamsters Local 560, January 1999

INTRODUCTION

In 1982, the 10,000-member IBT Local 560 was one of the largest Teamsters union locals in the country. Its members were employed by 425

Note: This chapter is a substantial revision of James B. Jacobs and David N. Santore, "The Liberation of IBT Local 560," *Criminal Law Bulletin,* March–April 2000.

0437

companies,[1] ranging from large national trucking firms to small cartage companies with as few as three or four drivers. IBT Local 560 members drove trucks, worked in warehouses, on road construction sites, and in laundries.

The Executive Board, which managed the union's daily affairs, consisted of seven elected officers, including president, vice-president, secretary-treasurer, recording secretary, and three trustees. The Executive Board appointed business agents, shop stewards, and benefit plan trustees.[2] The business agents negotiated collective bargaining agreements and handled workers' grievances.[3] Shop stewards enforced the collective bargaining agreements at work sites.[4] Benefit trustees oversaw the administration and operation of pension and welfare funds.

LABOR RACKETEERING IN IBT LOCAL 560

Anthony "Tony Pro" Provenzano, and his two brothers, Nunzio and Salvatore, dominated Local 560 for decades. Tony joined the union in the late 1940s and served as a business agent from 1948 until 1958 when he became president.[5] His rise in Local 560 paralleled his rise in the Genovese crime family, which inducted him as a "made member."[6]

In 1961, Tony enlisted Harold Konigsberg, Salvatore Briguglio, and others to kill Anthony Castellito, Local 560's secretary-treasurer.[7] Tony believed that Castellito had informed authorities about Tony's extortion of a trucking company.[8] Law enforcement authorities also suspected that Tony had ordered the 1963 murder of Walter Glockner, another Local 560 dissident. In 1966, Tony was sent to prison for extorting labor-peace payoffs from a trucking company.[9] While he was doing time, his brother Salvatore ran the union. Tony was incarcerated in the same federal prison as Jimmy Hoffa. The two had a falling out, perhaps accounting for Tony's suspected role in Hoffa's murder.[10] In 1975, federal prosecutors indicted Tony for conspiracy to violate the federal anti-kickback statute.[11] The charge related to a loan from the New York State Teamsters Conference Employee Welfare and Pension Benefit Plan.[12] Tony acted as a broker between the benefit plan's trustee and the borrowers, who had close organized crime ties. The trustee demanded a substantial kickback for putting the loan through. The borrowers balked because other parties to the transaction also de-

manded payoffs. For his role in smoothing the waters and brokering the deal, Tony was convicted in 1978 and sentenced to a four-year prison term.[13]

In 1978, Tony was sentenced to life imprisonment for his part in the murder of Local 560 dissident Anthony Castellito seventeen years earlier. The Local 560 leadership quickly voted to pay Tony a lucrative pension for the rest of his life[14] and selected his daughter, Josephine, as secretary treasurer. In 1979, at a federal trial, Tony and his henchmen Stephen Andretta, Thomas Andretta, and Gabriel Briguglio were found guilty of violating RICO based upon their labor-peace extortions of two trucking companies. Tony and Thomas Andretta were sentenced to twenty-year prison terms while Briguglio and Stephen Andretta received ten- and seven-year sentences, respectively.[15]

In 1980, Tony's two brothers, Nunzio and Salvatore, along with Michael Sciarra and Irving Cotler were indicted for a nine-year (1971–1980) extortion conspiracy to extort money from four trucking companies. Nunzio Provenzano and Cotler were sentenced to ten years and seven years, respectively; Salvatore Provenzano and Sciarra were acquitted.[16] Tony designated Sciarra to succeed him as Local 560's top official. Gabriel Briguglio himself was murdered while awaiting trial for the Castellito murder. Tony died in federal prison in 1988.[17]

THE CIVIL RICO SUIT

In March 1982, the New Jersey U.S. Attorney's Office, the Newark Federal Organized Crime Strike Force, and the Department of Justice filed a civil RICO[18] complaint against twelve individual defendants, Local 560 and its pension and welfare funds and severance pay plan. As remedies, the government sought (1) to prohibit Tony Provenzano, Nunzio Provenzano, Stephen and Thomas Andretta, and Gabriel Briguglio (the "Provenzano Group") from having contact with any officer or employee of Local 560 or any other labor organization or union employee benefit plan; (2) to remove the Executive Board, which comprised Salvatore Provenzano, Joseph Sheridan, Josephine Provenzano, J. W. Dildine, Stanley Jaronko, Thomas Reynolds, Sr. (Nunzio's brother-in-law), and Michael Sciarra; and (3) the appointment of a trustee to run and monitor Local 560 until free elections could be conducted.[19]

0439

The complaint alleged that Local 560 satisfied the definition of a RICO "enterprise" (any individual, partnership, corporations, association, or other legal entity, and any union or group of individuals associated in fact although not legal entity"). It then alleged two distinct RICO violations: (1) that the individual "Provenzano Group" defendants, associated under the leadership of Tony Provenzano and aided and abetted by past and present IBT Local 560 Executive Board members, violated RICO (1962b) by illegally acquiring and maintaining control of Local 560 through a pattern of racketeering activity; and (2) that the Provenzano Group violated RICO (1962c) by conducting Local 560's affairs through a pattern of racketeering activity.

The first RICO charge alleged that the Provenzano Group and the Executive Board had violated the Hobbs Act by using "actual and threatened force, violence and fear of physical and economic injury in order to create . . . a climate of intimidation which induced members . . . to consent to the surrender of certain valuable property in the form of their union rights."[20] The complaint cited the union defendants' extensive associations with Genovese crime family members; twenty-eight specific crimes (including the murders of Anthony Castellito and Walter Glockner); defendants' failure to take any action to reduce members' fears and perceptions. According to the government, these crimes created and sustained a climate of intimidation that deprived the union members of their Landrum-Griffin rights.[21]

The second RICO charge accused the defendants of conducting the affairs of the RICO enterprise (i.e., Local 560) through a pattern of racketeering activity consisting of at least five predicate racketeering offenses: (1) the extortion of $17,100 from Dorn Transport Company in return for labor peace; (2) the wrongful conversion of $223,785 of Local 560 funds by Anthony Provenzano, who was aided and abetted by past and present members of the Executive Board; (3) the Provenzano Group's wrongful receipt of payments from Interocean Service and Di-Jub Leasing in return for labor peace; (4) the unlawful receipt by Anthony Provenzano of Florida real estate from Thomas Romano in return for making loans available to Romano from Local 560's benefit funds; and (5) Nunzio Provenzano's wrongful receipt of labor peace payoffs from Pacific Intermountain Express Company, Mason and Dixon Lines, Inc., T.I.M.E., Inc., and Helms Express. The government also charged the Provenzano Group with conspiracy to violate RICO.[22]

0440

THE JUDGMENT

Prior to trial, the government entered into consent agreements with several of the organized crime defendants, including Tony Provenzano, Nunzio Provenzano, and Thomas Andretta, all of whom were in prison at the time. These defendants agreed that never again would they serve as union officials nor associate with any enterprise that seeks to control or influence the affairs of a labor organization.[23] The bench trial against the nonsettling defendants consumed fifty-one days spread over the period from January 25, 1983, to May 17, 1983. Some of the most persuasive testimony came from cooperating witness Salvatore Sinno, a former Provenzano Group member and accomplice in the Castellito murder. He explained Tony's role in the Genovese crime family and detailed how Tony gained and maintained control of IBT Local 560.[24] Federal District Court Judge Harold Ackerman (a former labor lawyer) wrote in his opinion: "As described by Salvatore Sinno, the Provenzano Group began its activities as a wholly illicit and criminal enterprise in which each associate accepted orders and assignments from [Tony] Provenzano and each was prepared to collaborate with other associates in carrying out particular assignments."[25]

In his lengthy opinion, Judge Ackerman reviewed the history of corruption in Local 560, emphasizing the Executive Board's failure to take any action against egregious racketeering. Ackerman found that the Provenzano Group violated the membership's Landrum-Griffin rights while the Executive Board had "done nothing to devise or implement measures reasonably calculated to prevent and detect potential 'labor peace' abuses."[26] Furthermore, Judge Ackerman found

> that a significant number of Local 560 members are in fear of the Provenzano Group, that they fear for their jobs and their physical safety, and that through this fear the members were induced by the Provenzano Group to part with their LMRDA-created union democracy rights.[27]

Judge Ackerman determined as well that Local 560 members and the local trucking industry would continue to suffer as long as Local 560 remained a "captive union" and that more criminal prosecutions would not break the Provenzano Group's hold on the union. Therefore, he

0441

enjoined imprisoned Provenzano Group members Stephen Andretta and Gabriel Briguglio from any future dealings with Local 560 and Ackerman decided to remove the Executive Board members from office because they had been indifferent to, if not complicit with, the Provenzano Group's racketeering. In justifying this drastic intrusion into the local's governance, the judge systematically reviewed the actions and inactions of each Executive Board member. For example, in commenting on Executive Board member Joseph Sheridan, Judge Ackerman stated:

> Joseph Sheridan must be removed from office for the following reasons:
> - Like J. W. Dildine, Joseph Sheridan professes to earnestly believe that Local 560's problems are the product of a government vendetta.
> - Joseph Sheridan believes that both Anthony and Nunzio Provenzano were convicted of various crimes because of their names.
> - Joseph Sheridan does not believe in the truth of the allegations which resulted in Nunzio Provenzano's conviction in the Braun case.
> - Joseph Sheridan is unable or unwilling to institute controls or safeguards to ensure that Local 560 is not victimized in the future by criminal conduct such as that which occurred in the Seatrain and City-man cases.
> - Joseph Sheridan does not consider Anthony or Nunzio Provenzano to be anything but good labor leaders.
> - If Nunzio Provenzano were eligible to serve on the Executive Board tomorrow, Joseph Sheridan, as a trustee and vice-president of Local 560, would welcome him back with "open arms."
> - Joseph Sheridan's mindset, after all that has occurred over the past thirty years, would make it impossible for him to formulate and promote policies which would be reasonably calculated to prevent or discourage further racketeering activity within Local 560 and ameliorate the current climate of intimidation. As previously noted, his loyalty has been purchased.[28]

THE TRUSTEESHIP

Judge Ackerman reasoned that only "through the imposition of a trusteeship for a curative period of sufficient length can the pattern of abuse be broken and future violations prevented." He held that the trustee-

0442

ship would last until the union conducted a democratic election. The IBT Local 560 trusteeship started its work in June 1986, after the defendants' appeals had been exhausted.* Judge Ackerman appointed Joel R. Jacobson as trustee, describing him as a "distinguished trade unionist and public official."[29] Jacobson had been an organizer for the International Ladies' Garment Workers Union, and had served as president of the New Jersey CIO and as community relations director of the United Automobile Workers.

Trustee Jacobson identified three major impediments to Local 560's operation as a proper union. Incredibly, LCN domination was not one of them. Rather, Jacobson's diagnosis of the problem focused on (1) lack of rank-and-file solidarity; (2) the disarray of pension and welfare funds and severance pay plan records; and (3) lack of training programs for union officials. Jacobson promised to reform the union by addressing these deficiencies and by impressing the membership with competent and professional administration.[30] In his one year on the job, Jacobson increased union membership by 25 percent and negotiated contracts resulting in wage increases above the national average.[31] However, he did not address the Provenzano Group's continued control over the local. Indeed, he retained most of the shop stewards who had been appointed by the Provenzano Group because he believed (1) that they were needed to carry out collective bargaining and contract administration duties; and (2) that removing elected union officials would not be consistent with the goal of restoring democracy. Jacobson did, though (albeit after considerable delay), replace the business agents

* All the defendants, except Stephen Andretta and Gabriel Briguglio, filed notices of appeal. The Third Circuit affirmed Judge Ackerman's remedy and agreed that extorting the membership's LMRDA rights violated the Hobbs Act and constituted RICO predicate acts. *United States v. Local 560, Int'l Bhd of Teamsters*, 780 F.2d 267 (3d Cir. 1985). On May 27, 1986, the Supreme Court denied certiorari. *United States v. Local 560, Int'l Bhd of Teamsters*, 476 U.S. 1140 (1986). After the district court's decision, Sciarra and Sheridan remained in office due to Judge Ackerman's stay pending appeal. On October 19, 1984, Sciarra succeeded Salvatore Provenzano (who in the meantime had been convicted of defrauding the dental benefit fund and of receiving kickbacks) as president of Local 560. He remained in office until superseded by the trustee. Sheridan remained vice-president of Local 560 until removed by the trustee. Joel Jacobson, the first trustee, permitted him to serve as a business agent until February 1987. See *United States v. Local 560, Int'l Bhd of Teamsters*, 694 F. Supp. 1185, 1160 (D.N.J. 1988), aff'd 865 F.2d 253 (3d Cir. 1988), cert. denied, 109 S. Ct. 1345 (1989).

0443

with individuals who had not held leadership positions during the Provenzanos' reign.

Unhappy about the trustee's inability or unwillingness to attack the Provenzano Group's influence, Judge Ackerman replaced Jacobson with Edwin Stier, a former federal prosecutor, New Jersey deputy attorney general, and director of the New Jersey Division of Criminal Justice. As associate trustee, Judge Ackerman chose Frank Jackiewicz, an IBT member for forty-six years who had served as shop steward, vice-president, and secretary-treasurer of IBT Local 843.* Ackerman charged Stier and Jackiewicz to "create and foster conditions under which union democracy will be restored and racketeer influence will be eliminated."[32] To achieve the court's objective, the trustee would possess the authority previously exercised by the union's Executive Board. The trustee would

- Possess the same powers accorded to the Executive Board as stipulated by the Local 560's by-laws and constitution (including participation in the affairs of all bodies related to Local 560);
- Negotiate contracts, pursue grievances, conduct organizing campaigns and participate in all lawful activities granted to a labor organization;
- Initiate, settle, and defend litigation on behalf of the local;
- Hire and fire Local 560 employees and set their wages and terms of employment;
- Appoint and remove business agents and shop stewards, subject only to the limitations established in the local's by-laws and constitution; and
- Retain or terminate any outside legal, accounting or consulting professionals.[33]

Prior to the 1998 union election, Stier was compensated $1,467 a week for essentially full-time work. Following the 1998 election, he was paid $150 per hour. Local 560, through outside counsel representing the Executive Board, argued that the postelection rate was excessive and

* Jacobson blasted his dismissal and Stier's appointment, stating, "[Judge Ackerman] wanted a whistle blower and that's what he has now. . . . [Ackerman is encouraging] union busting. I want no part of it." Rod Leith, "Ex-Teamster Trustee: Judge Sought Whistle Blower," 8, *Record*, October 1987, at A46.

beyond the union's ability to pay. Judge Ackerman disagreed, ruling that if anything "the trustee's . . . hourly rates have been seriously undervalued." He noted that Stier worked many more hours than he actually billed. Moreover, he held that Local 560 had failed to show that it could not pay the fees.[34]

When Stier and Jackiewicz took over, they found that the Provenzanos' influence was still pervasive. Tony's portrait still hung on the wall at Local 560's headquarters. Union members still regarded the Provenzano Group's handpicked successor, Michael Sciarra, as the man in charge.[35] Stier believed that to eradicate corruption and racketeering from Local 560, it would be necessary (albeit not sufficient) to transform Local 560 into a democratic union.[36] He announced that the trusteeship would operate according to the following principles:

- Union officers and business agents should understand that in performing their duties they must place the interests of the membership as a whole ahead of any other individual, group, or entity;
- Union leadership should recognize that any compromise with individuals associated with organized crime creates a risk that they will gain a foothold in the union;
- Local 560 members should be cognizant that they have the right to hold their officials accountable; and
- An atmosphere should exist at union functions and on the job site in which members are free to question their leadership's performance and voice dissenting perspectives.[37]

Stier pursued three reform strategies. First, with Jackiewicz's assistance, he sought to provide the membership effective representation. Second, he endeavored to expose past and present exploitation of the union and its pension and welfare funds. Third, he encouraged Local 560 members to participate in the union's affairs.

Stier adopted procedures and initiated programs that would demonstrate the advantages of an honest union. For example, he established contract-negotiating committees with rank-and-file members. To encourage the flow of information upward from the job sites, Stier maintained an open-door policy, urging members to bring complaints directly to him. He started a union newspaper, *The 560 Free Press,* and hired a professional journalist as editor.[38] Stier retained most of the business agents appointed by Jacobson, some of whom by then had

0445

received training at the IBT Leadership Academy. Still, after decades of racketeer control and with many members of the Provenzano clique still active in Local 560, few union members stepped forward to participate in union affairs.

After two years of union administration by the trustees, Stier scheduled an election.[39] Toward this end, he convened craft-specific meetings by dividing members into groups based on occupation. Placing members in smaller groups afforded potential candidates opportunities to meet the rank and file. He organized training sessions on the rights and obligations of union members and union officers, the IBT constitution, and Local 560's by-laws. Stier issued fair election procedures, convened a nominations meeting, and launched a voter registration drive.[40]

The Provenzano Group fought to retain its grip on Local 560.[41] It organized Teamsters for Liberty (TFL), a self-proclaimed civil liberties organization dedicated to "the termination of the Trusteeship and to the prevention of '[the] government['s] takeover of our union.'"[42] The TFL circulated petitions demanding an end to the trusteeship. It wrote to and met with government officials; invited public officials, labor leaders, and celebrities to its rallies; published its own newspaper, *We the People;* and retained attorneys to attack the trusteeship on an array of issues.[43] The TFL dominated membership meetings. It selected former Local 560 president Michael Sciarra, the Provenzanos' handpicked successor, as its candidate for president and Joseph Sheridan for vice-president.[44]

Stier and Robert Stewart, chief of the Newark federal Organized Crime Strike Force, went back to court to prevent Sciarra and Sheridan from running for Local 560 office.[45] The government charged that Sciarra was the designated representative of Matthew Iannello, a capo in the Genovese crime family.[46] It played recordings of intercepted conversations between Ianniello and various members of the pre-trusteeship Executive Board. These conversations illuminated Iannello's position within the Genovese crime family and his intention to retain control of Local 560. In one conversation, Iannello told Stanley Jaronko (a union officer whom Judge Ackerman had found to have aided and abetted the Provenzano Group) that he had to "run the shop, or do something with the shop" and then "let Mike [Sciarra] run the show."[47]

0446

Judge Ackerman requested that another federal judge, Dickinson R. Debevoise, hear the government's motion to bar Sciarra and Sheridan from the upcoming election. The federal prosecutors sought to prove that Sheridan had been responsible for negotiating a sweetheart contract between Local 560 and Walsh Trucking and Consolidating Company in 1978 and that, thereafter, Sciarra and Sheridan arranged sweetheart contracts with Walsh Trucking.* Furthermore, the government presented evidence on Sciarra's mishandling of members' grievances against New England Motor Freight (NEMF) in support of Local 560's sweetheart contract with NEMF.[48] Finally, Stewart sought to show that Sciarra and Sheridan assisted a New Jersey attorney in setting up a fraudulent prepaid legal services scheme for Local 560 members.

According to Judge Debevoise, the government would "unquestionably be irreparably injured if preliminary injunctive relief [were] not granted. . . . All [the government's work] will have been expended for no purpose if an election returns Local 560 to the Genovese family and its minions."[49] Consequently, in September 1988, Judge Debevoise issued a preliminary injunction barring Sciarra and Sheridan from running for union office.[50]

Still the Provenzano Group did not give up. It chose Daniel Sciarra, Michael Sciarra's brother, and Mark Sheridan, Joseph Sheridan's nephew, to carry the banner for the Provenzano Group.[51] In a heavy blow to the court and the trusteeship, Sciarra and Sheridan prevailed by a two-to-one margin.[52] It appeared that Local 560 members preferred to be represented by individuals backed by the old regime than by reformers supported by the government and the court-appointed trustee.**

* The government alleged that beginning in late 1977 and continuing for a decade, Iannello, acting on behalf of the Genovese crime family, conspired with Anthony Provenzano and other Local 560 officials and with New Jersey trucking magnate Francis J. Walsh, Jr., to engage in a payoff scheme that enriched the conspirators at the expense of Walsh's employees.

** Extensive interviews with rank-and-file Local 560 members conducted by Harvard Professor Linda Kaboolian following the election revealed that union members resented the government's interference with their right to run their union as they chose. While some union members blamed Provenzano for some of Local 560's problems, that blame did not carry over to Daniel Sciarra and Mark Sheridan.

0447

DISQUALIFYING MICHAEL SCIARRA

Daniel Sciarra appointed Michael Sciarra and Joseph Sheridan as Local 560 business agents.* Stewart went to court to block the appointments, but Judge Debevoise decided not to prohibit Sciarra and Sheridan from serving as business agents, reasoning that the election had severed the link with the old regime, thereby entitling the Executive Board to a presumption that it would act lawfully and in the best interest of the membership.

The naiveté of Judge Debevoise's presumption was soon apparent. Michael Sciarra exercised de facto control of the union. By the third postelection union meeting, there were no longer any dissenting voices. Sciarra's supporters, strategically positioned throughout the meeting hall, intimidated would-be critics.[53] Indeed, they loudly heckled Stier. Sciarra himself physically threatened a Department of Labor agent at the union hall.[54]

In February 1990, Robert Stewart again asked Judge Debevoise to oust Sciarra and Sheridan from their positions as business agents.[55] Sheridan agreed to resign his office. Judge Debevoise granted the motion to oust Sciarra, concluding that "[a]s long as Michael Sciarra holds any position within Local 560 he will be able through his forceful and dominating personality, through his hold on a large and vocal segment of the membership and by virtue of the inexperience and subservience of the present officers and Board members to dominate and control the Local."[56]

Two months after Judge Debevoise removed Sciarra from his business agent position, the government sought to enjoin Sciarra permanently from any participation in Local 560 affairs.[57] After a two-day trial illuminating Sciarra's relationship with the Genovese crime family, Debevoise permanently enjoined Sciarra from "holding any office or

* In January 1989, the government obtained an order that required Michael Sciarra and Joseph Sheridan to show cause why they should be permitted to serve as business agents. The court initially concluded that there was not sufficient evidence to prohibit Sciarra and Sheridan from serving as business agents. The court reasoned that the election had severed the link in the chain of criminality and that the newly elected Executive Board was entitled to a presumption that it would discharge its duties lawfully and in the best interest of the local. New predicate acts of misconduct were necessary to prohibit Sciarra and Sheridan from assuming such positions. See *United States v. Local 560, Int'l Bhd of Teamsters,* 974 F.2d at 324.

0448

position of trust within or otherwise endeavoring to influence the affairs of Local 560."[58] Nevertheless, Sciarra continued to exert influence.

In early 1991, the government sought to expand the permanent injunction against Sciarra.[59] This time Judge Debevoise permanently barred Sciarra from holding any position in Local 560, participating in any Local 560 functions, visiting the union hall, or attempting to influence the union's affairs.[60] This was the most drastic court-imposed sanction any court had ever applied to a union member who had not been convicted of a crime.

Still, Sciarra exercised de facto power. The day after Judge Debevoise barred him from participating in union affairs, Sciarra met with Executive Board members Daniel Sciarra, Robert Marra, Peter Granello, and Alfred Vallee to settle a dispute between Vallee and the others. The Executive Board still looked upon Sciarra as its leader.[61] Jobs were still awarded according to a member's loyalty to the Provenzano/Sciarra clique.[62] During a December 1990 membership meeting to nominate delegates to the IBT International convention, TFL supporters physically assaulted a Sciarra critic.[63]

In September 1991, the Local 560 Executive Board went to court seeking termination of the trusteeship.[64] Stewart counterattacked, requesting court-ordered procedures for allocating construction jobs* and enhancement of the trustee's investigative powers.[65] After a hearing,** but prior to the judge's decision, the Executive Board and the government entered into a settlement agreement, pursuant to which (1) the Executive Board would comprise six members;[66] (2) Daniel Sciarra would resign as president;[67] and (3) the local's secretary-treasurer, Robert Marra, recording secretary, Alfred Vallee, and trustee Peter Granello would retain their positions. Marra, Vallee, and Granello were to select one individual from among the remaining two trustees (James Bartolomeo and Nicholas Juliano) and the vice-president (Mark Sheridan) to serve as a trustee.[68] They selected Bartolomeo.[69] The court authorized

* Construction jobs performed by Local 560 members generally related to road and highway construction.

** The evidentiary hearing focused on the discriminatory allocation of construction jobs and an attempt to defraud the welfare fund in favor of a Sciarra relative. The evidence showed that a business agent coerced two employers to file false employment records on behalf of Daniel and Michael Sciarra's niece's husband who recently died of a drug overdose, thus enabling the widow fraudulently to receive life insurance proceeds. See *United States v. Local 560, Int'l Bhd of Teamsters*, and Mezzina and Conlon, Complaint, at 22–29.

0449

Stier to fill two empty trustee positions with any Local 560 member in good standing.[70]

The settlement sought to eliminate corruption in the construction unit by authorizing Stier to appoint a new business agent and by ordering the Executive Board to create a fair job referral plan for road construction jobs.[71] Eventually, the board designed a complex formula for ranking members' eligibility for job assignments.[72]

In September 1992, after becoming aware that Michael Sciarra was continuing to associate with Executive Board member Robert Marra and had attempted to defraud the benefit funds, Stier and Stewart obtained yet another court order, this one providing that the Local 560 Executive Board would be expanded to seven members headed by the president.[73] Robert Marra was forced to resign.[74] The board appointed Alfred Vallee as president[75] and Peter Granello as secretary-treasurer. Vallee and Granello had exhibited autonomy from the Sciarra group during their careers with Local 560. For the first time in living memory, the board was composed of a majority of officers independent of the Provenzano Group. In 1994, in an act of telling independence, the board removed three of its own members for failure to fulfill their fiduciary duties to the membership.[76] By 1995, six of the seven Executive Board members had no previous ties to the Provenzano Group.

With the Executive Board's consent, the court gave Stier new powers to investigate violations of Local 560's constitution and by-laws and authority to render binding decisions against union members.[*] Between 1995 and 1998, four Local 560 members were expelled because of contact with Michael Sciarra and/or defrauding the union; a fifth member resigned in anticipation of formal charges. All told, during Trustee Stier's tenure, eighteen individuals charged with misconduct were expelled or resigned from the union.[77]

[*] These procedures allowed Stier to investigate any member's conduct. If he uncovered actionable wrongdoing, he would serve the member with specific charges. The member could present a defense to the Executive Board and Stier. Thereafter, Stier would forward his decision and proposed remedial action to the Executive Board for consideration. After reviewing the board's comments, Stier would finalize his decision and present it to the member, who, if dissatisfied, could appeal to the district court judge. See Consent Order at 3–12 (Feb. 22, 1995), *United States v. Local 560, Int'l Bhd of Teamsters,* 581 F. Supp. 279 (D.N.J. 1984) (82–689), Report and Recommendations, at 13–14.

THE 1998 ELECTION

In 1998, three conditions convinced Stier to proceed with another election for Local 560 officers. First, union members were able to secure job referrals from the union without having to cater to Sciarra loyalists. This was most important in the construction unit, which Stier used as a barometer for the union as a whole. The job referral system now operated according to objective criteria, not loyalty to the Provenzano Group. Second, most of the organized crime–connected Local 560 members had been ousted from the union. Third, a new group of leaders now held union offices. Stier observed that membership meetings were "drastically different from those that were held during the era when the Sciarra group dominated . . ." and that "Local 560 members now viewed the Executive Board as the membership's representatives and not as an arm of the government."[78]

The incumbent Executive Board ran as one slate, led by Peter Brown, whom the board had appointed as acting president in 1997. Brown had been a member of Local 560 since 1978 and was an early supporter of the trusteeship. In 1990, Brown was fired from his trucking company job, in his view due to Michael Sciarra's influence. Brown's fortunes turned with those of the trusteeship. He was appointed as a business agent (1993) and then as a trustee (1995).[79] Brown's slate faced two competing slates. A different Daniel Sciarra, this one Michael and Daniel's nephew, led one of the slates. Alfred Laurie, a former office manager during Sciarra's administration, led the other.[80] The Sciarra and Laurie slates branded Brown and his running mates "government men."

Stier decided that mail balloting would maximize participation and minimize intimidation. He required candidates to keep detailed records on campaign donations and expenditures. Forty-six percent of the 4,400 eligible Local 560 members voted in the election.[81] Brown received 1,049 votes (55 percent) and Daniel Sciarra, 376 (20 percent).[82] The power and prestige of the Provenzano Group had finally been broken. Peter Brown was sworn in as president of Local 560 on March 19, 1999, by IBT president James P. Hoffa, whose father had been murdered by a group of LCN figures, probably including Tony Provenzano. When Brown died in 2004, he was succeeded by Thomas McGinley who has carried on in the same style of reformist leadership.

0451

TERMINATION OF THE TRUSTEESHIP

On February 25, 1999, Trustee Stier, the DOJ, and the DOL recommended that the court end its supervision of IBT Local 560.[83] The DOJ lawyers told Judge Ackerman that the union was now democratically governed. Judge Ackerman terminated Stier's monitoring and investigative roles, but required the Executive Board to name Stier as a trustee of the local's pension and welfare funds.[84] Furthermore, Ackerman approved a four-year consent decree between the Justice Department and the union that allowed Ackerman to put Local 560 back under trusteeship if systemic corruption or Cosa Nostra influence re-emerged.[85] As with the previous consent decree, union members could be expelled for knowingly associating with Cosa Nostra members or expelled union members.[86] No such problems occurred over the course of the next four years.

FACTORS THAT LED TO THE PURGING OF COSA NOSTRA FROM LOCAL 560

Although court-appointed trustees have monitored, supervised, or managed other "mobbed-up" union locals and even internationals, one scholar recently commented that "only Local 560 has seen a real transformation."[87] This is particularly impressive because no union local was more thoroughly dominated by organized crime than IBT Local 560. What accounts for the successful transformation of Local 560? Undoubtedly, there was a confluence of favorable forces, but the most important was the structure and continuity of the trusteeship, the judges' support of the trustee, and the trustee's stamina and skill.

THE FRAMING OF THE TRUSTEESHIP

The persistence into the 1980s of labor racketeering in Local 560 provides strong support for the conclusion that criminal prosecutions alone cannot eliminate entrenched labor racketeering. The Provenzano Group proved very resilient. When Tony Provenzano, his brothers and henchmen went to prison, they chose loyal subordinates to fill their va-

0452

cated positions. Civil RICO permitted a comprehensive attack on the whole corrupt regime. But the preconditions for a comprehensive remedy were the relentless persistence of the DOJ attorney, the willingness of two district court judges to act decisively, and a trustee's commitment to seeing the job through to a successful completion.

IMPORTANCE OF THE TRIAL

A lengthy trial enabled Judge Ackerman to learn firsthand the depth of the corruption and racketeering in Local 560, which he branded a "multifaceted orgy of criminal activity."[88] Over the course of the fifty-one-day bench trial, witnesses detailed organized crime's entrenchment in IBT Local 560. Ackerman heard Genovese capo (and the government's star witness) Salvatore Sinno testify about the link between the union and Genovese crime family.[89] He listened to Executive Board members express admiration for Tony Provenzano, a convicted murderer, labor racketeer, and organized crime member. Such testimony persuaded Ackerman to impose a heretofore unprecedented remedy, a court-appointed trustee empowered with all the authority of the union's Executive Board.[90] It should not be forgotten that Ackerman himself had been a union lawyer before being appointed to the bench and was thus almost uniquely qualified to understand the "situation on the ground" that needed to be changed. Furthermore, Ackerman had had considerable experience in a prior institutional reform case involving the Essex County jail.

Most all civil RICO actions against mobbed-up unions have been resolved by negotiated consent decrees. In such cases, the judge who approves the decree may not fully grasp the magnitude of the corruption and not have become personally committed to ending it. Without a trial, the government may have negotiated a settlement with Local 560 that was not as far-reaching as Judge Ackerman's order. Furthermore, because of the trial, Ackerman was in a position to deal confidently with subsequent DOJ motions. At every step of the way, Stier benefited from the strong support of the federal Organized Crime Strike Force, especially Assistant U.S. Attorney Robert Stewart, who stayed with the case from beginning to end. Judge Ackerman's and Judge Debevoise's determination were also critical.

0453

WIDE-RANGING TRUSTEESHIP

Judge Ackerman defined the trustee's goal in broad and ambitious terms. He empowered the trustee "to act as he may, in good judgment, to administer the affairs of Local 560 and to create and foster conditions under which union democracy will be restored and racketeer influence will be eliminated."[91] The remedial decree authorized the trustee to implement whatever policies he deemed necessary and in the best interest of the local. Unlike trustees in other civil RICO consent decrees, Stier was not burdened with the time-consuming process of repeatedly having to petition the court for approval prior to instituting reforms.

TRANSFORMING THE ROLE OF THE TRUSTEE FROM UNION MANAGER TO CORRUPTION FIGHTER

Although Ackerman applauded the efforts of his first trustee, Joel Jacobson, he knew that a different approach was needed to "insure that the documented egregious pattern of racketeering activity does not reemerge. . . ."[92] Jacobson had extensive experience in union governance, but not in combating organized crime. Clearly, investigative and prosecutorial expertise was needed. When Ackerman appointed Edwin Stier and Frank Jackiewicz, he wrote that the two men "bring to the task at hand unique talents which in combination are essential for this new phase of the trusteeship."[93] With Stier's appointment, Ackerman in effect redefined the trustee's primary job as purging organized crime.

Stier's prosecutorial background turned out to be critically important. He worked easily and effectively with FBI and DOL investigators and with federal prosecutors. Still, it may also have been important that Stier did not fully delegate his union administrative powers to Jackiewicz, believing it necessary to participate personally in Local 560's affairs, including collective bargaining, strikes, and picketing, in order to understand the organization and culture of the local and to establish credibility with the rank-and-file membership. It is certainly important that Stier was able to devote practically all his time to the trusteeship for several years. At the time he took the job, he operated like a full-time consultant rather than like a big-law-firm partner

0454

whose duties as a trustee may be just one of many professional responsibilities.

DEVELOPMENT OF NEW UNION LEADERS

To succeed in reforming IBT Local 560, Trustee Stier needed to recruit and develop a new cadre of union leaders. It was a major challenge because, for decades, the only members with leadership experience were either members or supporters of the Provenzano Group.

From the outset, Stier sought to create an atmosphere conducive to the emergence of new leaders. He appointed several members to the contract-negotiating committees, a role once reserved for Tony Provenzano's henchmen. As new people began to assume official responsibilities, Stier steadily delegated more administrative responsibilities. He did not offer training programs for emerging leaders because he feared that the membership would view participants as government pawns.[94] In distancing himself from the local's government, Stier helped to legitimize the board as an independent body.

Union members who had not held office before gained experience as shop stewards and Executive Board members. As time passed, these leaders gained the respect of the general membership. The 1998 election of Peter Brown illustrated this shift. Brown, who had been vilified for his protrustee stance in the 1980s, soundly defeated his opponents in the 1998 election and was easily reelected in 2001 and 2004.

PURGING ORGANIZED CRIME

Stier's dogged effort to purge organized crime's influence from Local 560 was essential to the reform project. Stier had to excise every vestige of the Provenzano/Sciarra regime. If union members thought there was any chance of organized crime regaining control of the union, they would not support the reform effort. Stier realized the paramount importance of eliminating the Genovese crime family's handpicked successor, Michael Sciarra, and his successor, Daniel Sciarra, from Local 560.

DOJ's assistance was essential for Stier's success. When Stier sought judicial intervention, he was steadfastly supported by Assistant

0455

U.S. Attorney Robert Stewart, who had drafted the RICO complaint and tried the case against the Local 560 officers. Stewart drafted virtually all of the government's motions relating to Local 560. Few government attorneys involved in union RICO cases have had Stewart's longevity. His knowledge of the multiple challenges faced by the trusteeship allowed him to respond effectively to Stier's concerns. Stewart and Stier acquired enough evidence to prove that the Genovese crime family had designated Michael Sciarra as boss of the local. Judge Debevoise enjoined Michael Sciarra and Joseph Sheridan from running for office. Later, Sciarra was expelled from the union.

Two federal judges played critical roles in eradicating organized crime from the union. Judge Harold Ackerman realized the extent of organized crime's entrenchment in the union and resisted the temptation to bow to the local's initial desire for self-regulation. He did not back off in the face of the TFL's rallies or characterization of the civil RICO as antiunion.

Judge Debevoise's decision to grant an injunction to forbid Michael Sciarra from running for Local 560 office came at a crucial moment. Although Michael Sciarra still exerted influence after his brother Daniel was elected president, had Michael been elected by the membership, the Provenzano Group's power would have been legitimated.

STIER'S LONGEVITY AND CREATIVITY

Civil RICO provided a means for achieving reforms, but successfully reforming a racketeer-ridden union like Local 560 requires significant time. By serving for *ten years,* Trustee Stier provided constant pressure for reform. No other trustee in any labor racketeering case has served that long. The trustee's longevity symbolized to the rank and file the court's determination to reform the union; it also provided the trustee with invaluable knowledge and experience. Prosecutors and judges may wish for a quick fix in such cases, but the history of the IBT Local 560 case indicates that the trustee's own determination is an important factor. As time passed, Local 560's membership changed. Through the natural process of relocation and retirement, many Local 560 members who had lived under the Provenzano Group's reign were succeeded by workers who had not experienced Cosa Nostra's domination and had never met or seen the Provenzanos.[95]

0456

REFORMING THE PENSION AND WELFARE FUNDS

Stier assigned high priority to the protection of the pension and welfare funds.* One of his first acts as trustee was to appoint himself the funds' sole trustee. He ordered a background check on all companies and individuals that provided services to the funds. Stier made Local 560's funds the first in the country to be invested solely in index funds, so that an active fund manager was not required. To further insure the integrity of the funds, Stier hired Deloitte & Touche to perform regular audits, which were made available to the membership. Stier also hired a full-time controller to serve as chief financial officer. The pension and welfare funds' performance improved markedly, producing increased member benefits. This achievement boosted Stier's credibility and popularity.[96]

CONCLUSION

Although, prior to the government's 1982 civil RICO suit, sporadic criminal prosecutions sent Tony Provenzano, his brothers, and several associates to prison, the prosecutions did not loosen the racketeers' grip on the union. Remarkably, the indictments and convictions did not break, or perhaps even weaken, the Provenzanos' control over Local 560.

The failure of past criminal prosecutions led the Newark federal Organized Crime Strike Force to initiate the first-ever civil RICO action against a labor organization. Replacing the Executive Board with a court-appointed trustee paved the way for purging LCN and ultimately returning the local to its members. Judge Ackerman and Trustee Stier

* Between early 1974 and late 1977, members of the Provenzano clique looted one of the local's benefit funds of more than half of its assets. In 1974, Thomas Romano, a real estate developer, met with then Local 560 president Salvatore Provenzano (whom Tony had installed while he himself was in prison) to discuss a loan for a condominium project in Florida. The fund trustees, including Salvatore Bruguglio and Stephen Andretta, lent Romano $4.6 million. After the loan was granted, Tony purchased a Florida home from Romano at a sharply discounted price. A year later, even though the Florida real estate market was in a downturn, Romano secured an additional $1.8 million loan for the project. In 1977, Romano sold Tony Pro another property at a below-market price. *United States v. Local 560, Int'l Bhd of Teamsters*, 780 F.2d, 294.

0457

succeeded because of a confluence of factors, some well planned and executed, others merely fortuitous. Judge Ackerman's novel decree focused not only on the need to run the union honestly but also on the need to purge LCN's influence. His wide-ranging decree paved the way for Stier to reform the local. Stier's skill in developing a new cadre of union leaders eventually led to the reconstruction of the union and to significant numbers of members recognizing that the new union was far better than the old. From an *ex ante* perspective, one could not have anticipated the determination and perseverance of Judge Ackerman, Trustee Stier, and Assistant U.S. Attorney Stewart. Yet, *ex post* it seems likely that the trusteeship would not have been successful without their sustained commitment. Ultimately, Stier succeeded because of two interrelated strategies. He and Stewart kept continuous pressure on the Provenzano Group, purging its members from the union. Stier identified, encouraged, and supported future leaders from the local's rank and file.

The successful use of civil RICO against IBT Local 560 demonstrated a new and powerful weapon against labor racketeering. After *United States v. Local 560,* the Justice Department brought similar suits against many other racketeer-ridden unions. However, victory at the trial and the imposition of a trusteeship are only necessary preconditions for success; they do not guarantee success.

The New York City District Council of Carpenters

> Most of the people whom the Carpenters union refers to jobs at the Javits Center are either members and associates of the Genovese family, or friends and relatives of Genovese family members and associates.
>
> —Testimony of former Colombo crime family capo Salvatore Miciotta as quoted in Kenneth Conboy, *Second Interim Report of the Investigations and Review Officer,* March 13, 1995

> The IRO [Investigations and Review Officer] has justified his more intrusive role by arguing the following: The District Council does not have a strong tradition of democratic leadership, and has never held an election wherein the rank-and-file membership directly elected the leadership. The complaint in the civil RICO action alleged various acts of corruption, fraud, and violence, and the IRO contends that his staff's own observations of last summer's local union elections confirmed the view that incumbents often use their positions to "manipulate the system" and that the opposition is targeted for intimidation and economic reprisal.
>
> —Judge Charles S. Haight, Jr., *U.S. v. NYC Dist. Council of Carpenters,* 880 F. Supp. 1051, 1067 (S.D.N.Y. 1995)

The New York City District Council of Carpenters, located in Manhattan, is one of the city's largest unions, representing approximately thirty

Note: This chapter is based on James B. Jacobs and Kristin Stohner, "Ten Years of Court-Supervised Reform: A Chronicle and Assessment," 6 *California Law Review* 3 (2004).

0459

thousand members.* At the time the U.S. attorney's office brought the 1990 civil RICO suit, the district council negotiated, implemented, and enforced collective bargaining agreements, and handled disputes, grievances, and arbitrations on behalf of twenty-two local Carpenters unions. The collective bargaining agreements require employers to make contributions on behalf of their employees to union pension and welfare funds. Although the funds are governed by an equal number of employer-appointed and union-appointed trustees, in reality, the union-appointed trustees control the funds.

Before the 1990 civil RICO settlement, district council officers also served as officers in their home locals and thereby drew two salaries, one from the local and one from the district council. For example, Frederick Devine, president of the district council (1991–1996), also served as Local 1456's president. John Abbatemarco, the district council's first vice-president, also served as Local 257's vice-president.[1]

In the 1970s and 1980s, the Genovese crime family controlled the district council through Vincent DiNapoli, a capo in the crime family who had also become a powerful figure in the drywall industry. According to the FBI, Teddy Maritas, district council president from 1977 to 1981, was a Genovese crime family associate.[2] Eventually, Maritas disappeared, presumed murdered because the boss of the Genovese family suspected him of cooperating with federal prosecutors. Thereafter, the mob continued its control over the district council through presidents Paschal McGuinness (1982 to 1991) and Fred Devine (1991 to 1996).

The Genovese crime family maintained its grip on the district council by intimidation and violence and by controlling access to jobs. Like most construction workers who go from project to project working for different employers, carpenters often depend upon their union for jobs. Collective bargaining agreements require contractors to call the union's

* The United Brotherhood of Carpenters (UBC) International Union, headquartered in Washington, D.C., has approximately 520,000 members in the United States and Canada. Available at http://www.carpenters.org/home.html. Its constitution requires a regional ("district") council whenever two or more locals exist in the same locality. (Constitution of the United Brotherhood of Carpenters and Joiners of America, § 26(B)). Each district council has its own by-laws, officers, treasury, and jurisdiction over contracts, grievances, and benefit funds. The affiliated local unions elect delegates to the district council in proportion to the size of their memberships. *United States v. Dist. Council*, 778 F. Supp. 738, 743 (S.D.N.Y 1991).

[162.10.217.184] Project MUSE (2026-06-15 01:41 GMT) University of Queensland

hiring hall when they have a construction contract to perform. Thus the union can blackball "troublemakers" and reward loyal supporters by withholding or assigning work.[3]

For many years, the Genovese crime family used the district council to create and maintain a drywall cartel.[4] The cartel rigged bids, allocated contracts, and fixed prices. Some Genovese crime family members, like DiNapoli, held ownership interests in drywall companies. The union could prevent drywall contractors who were not members of the cartel from performing their contracts by assigning them incompetent or purposefully destructive workers, or by disrupting the whole construction project by calling strikes and slowdowns.

In the early 1980s, a federal RICO prosecution of Maritas, DiNapoli, and others based on the drywall cartel resulted in a mistrial.[5] On the evening before the retrial in March 1982, Maritas disappeared, never to be seen or heard from again.[6] DiNapoli pleaded guilty. While DiNapoli served a five year prison term, his brother, Louis, allegedly represented the Genovese crime family's interest in the district council. Soon after DiNapoli's release from prison, he was prosecuted in the Genovese "family RICO" case, which brought to trial a number of the top figures in the Genovese family, charging them, among other things, with operating a poured-concrete cartel in the city's construction industry. DiNapoli was convicted and sentenced to another long prison term.[7]

The Carpenters International Union placed the New York City district council under trusteeship.[8] The trustee merged four locals to create Local 17, thereby purposefully or inadvertently consolidating the Genovese crime family's influence over carpenters' jobs in upper Manhattan and the Bronx.[9] The trustee also chose Local 608 president, Paschal McGuinness, a Genovese crime family associate, to be the new district council president.[10] McGuinness put John O'Connor in charge of the district council's daily operations. In 1990, O'Connor pled guilty to receiving a bribe from an employer and was sentenced to one to three years in prison, and fined $25,000. McGuinness was acquitted.[11]

Violence and corruption flourished under McGuinness's presidency. McGuinness gave preference to Genovese family associates for high-paying and desirable jobs at the Jacob Javits Exhibition Center.[12] Six of the ten violent acts cited as predicate offenses in the government's 1990 civil RICO suit against the district council occurred during McGuinness's presidency, including an assault with an iron pipe against a dissident member at a job site and the nonfatal shooting of John

O'Connor.* Further, the government alleged that McGuinness himself committed seven of the racketeering acts listed in the civil RICO complaint; all involved accepting bribes in exchange for not enforcing terms of the union's collective bargaining agreement. In a deposition, Marcello Svedese, a district council officer from 1981 to 1989 and a cooperating government witness, explained McGuinness's ties with organized crime:

> I have known Paschal McGuinness to associate with various organized crime figures in connection with the district council. I was present at a meeting between McGuinness and Louis DiNapoli, a made member of the Genovese Family, and I have discussed organized crime and the district council with McGuiness on many occasions.[13]

THE 1990 CIVIL RICO SUIT AND SETTLEMENT

In September 1990, the U.S. attorney for the SDNY filed a civil RICO complaint against the New York City District Council of Carpenters' former and current officers and six LCN figures.[14] The complaint named the district council, its constituent local unions, and its benefit funds as the RICO enterprise. It alleged two separate RICO violations: (1) that the LCN defendants, aided and abetted by past and present district council officers, violated RICO (1962b) by acquiring an interest in and control over the union through a pattern of racketeering activity, and (2) that (in violation of 1962c) the defendants conducted the district council's affairs through a pattern of racketeering activity.

The first RICO count alleged that "the defendants . . . unlawfully . . . affect[ed] commerce . . . by extortion [i.e., violated the Hobbs Act] . . . in that they obtained and attempted to obtain property" by violence and intimidation.[15] The "property" that the defendants allegedly extorted was the union members' Landrum-Griffin rights.[16] The RICO complaint alleged a pattern of racketeering activity based upon fifty-four predicate acts including murders: assaults with firebombs, iron pipes, knives, and guns; appointments to union leadership positions of inexperienced, incompetent, and corrupt individuals; union officials' associa-

* According to government investigators, John Gotti, boss of the Gambino crime family, ordered the assault on O'Connor because O'Connor (probably unwittingly) was responsible for trashing a restaurant in which Gotti held an interest. At Gotti's trial, O'Connor testified *for the defense.*

0462

tions with known organized crime members; the defendant union officers' failure to take action to rid the union of corruption; and abuse of their union office. The government also charged the defendants with conspiracy to violate RICO.[17]

The second RICO count was based upon § 1962(c) (participating in the affairs of an enterprise through a pattern of racketeering activity); it also cited fifty-four predicate racketeering acts including extortion, receipt of illegal payoffs, mail fraud, and operating a benefit fund unlawfully.[18] The government sought preliminary and permanent injunctions (1) to prohibit the organized crime defendants and those in active concert with them from having contact with the district council or any other labor organization; (2) to prohibit current, former, and future officers of the district council from committing racketeering acts and from associating with any member or associate of LCN; (3) to appoint a court liaison officer with the authority necessary to prevent racketeering activity and to ensure union democracy; (4) to enjoin union members and officers from interfering with the court liaison officer's execution of her or his duties; and (5) to grant the government further preliminary relief if necessary. The government also requested a court-supervised election of district council officers.

THE SETTLEMENT

The parties settled the case in March 1994.[19] The U.S. attorney agreed to drop the civil RICO complaint in exchange for significant district council reforms designed to purge the union of organized crime and promote union democracy. The consent decree's stated purpose was to ensure a democratic union. Toward that end, the parties agreed that there should not be any criminal element or LCN corruption in the district council and its constituent locals. All union officers agreed to be permanently enjoined from (a) committing any act of racketeering activity; (b) knowingly associating with any member or associate of any LCN crime family or other criminal group, or with any person prohibited from participating in union affairs; and (c) obstructing or otherwise improperly interfering with the court-appointed officer's efforts to enforce the consent decree.

The consent decree named former Federal District Court Judge Kenneth Conboy as the court-appointed Investigations and Review

0463

Officer (IRO). The district council would pay $65,000 each month to cover the compensation and expenses of the IRO and the Independent Hearing Committee (IHC). If the IRO's expenses exceeded $65,000, the United States Brotherhood of Carpenters and Joiners of America (UBC) International would contribute up to an additional $15,000. Any disciplinary charges brought by IRO Conboy against union officers or members would be tried before a five-person IHC.

The IRO's powers included investigating district council operations and individuals; bringing disciplinary charges against union officers and members;* exercising veto authority over union officers' decisions; recommending organizational reforms; formulating and implementing new job referral rules; and organizing and supervising the district council's 1995 elections.[20] Conboy's decision would be final unless, on appeal, the district court found it to be arbitrary and capricious. His term of office was set at thirty months, renewable for up to an additional six months upon a showing of good cause. His supervisory authority over elections would terminate after certification of the 1995 election results.

In order to "eliminate the corruption, favoritism and cronyism that existed under the old system," the consent decree provided that each local union in the NYC district council would have thirty days to implement new job referral rules, which had to include nondiscriminatory and nonexclusive job referrals ("nonexclusive" means that an employer does not have to hire employees exclusively through the hiring hall); registering members' eligibility for job referral; a procedure that refers jobs to members who have been on the waiting list the longest; effective dissemination of the job referral rules; maintenance of accurate job referral records; and access by union members to job referral information.[21]

The consent decree ended the longtime practice of union officials drawing multiple salaries. It also required that for seven years the district council would give prior written notice to the government and to the IRO of proposed changes to any rules or procedures covered by the consent decree.

* The IRO could initiate a disciplinary action against a union officer or member by serving that person with a specific written charge. Within a week after service of the charge, a panel composed of three IHC members would be selected. The IRO would choose one panel member, the charged party would choose another, and the two members would choose the third member. A hearing would be conducted within thirty to sixty days according to the rules and procedures applicable to labor arbitration hearings.

0464

District council officers had always been chosen by delegates handpicked by the local unions' leaders. The consent decree instructed the IRO to implement and supervise the first rank-and-file election in the district council's history.[22] Toward that end, IRO Conboy drafted rules for conducting a secret-ballot election, including guidelines for "nominating candidates, disseminating information about nominated candidates to the membership at union expense, and conducting a secret ballot election."[23] Additionally, the consent decree empowered the IRO to hire or designate other persons or entities to assist in carrying out the rules, to resolve all election disputes, and to certify the election results.[24]

To summarize, the consent decree empowered the IRO to

- initiate and serve disciplinary charges against any member of the district council and its constituent locals for any matter constituting an offense under any applicable law, the union's constitution or its by-laws, working rules or obligations;
- take such reasonable steps as are lawful and necessary to be fully informed as to the district council's activities;
- study and recommend reforms of the district council's and its locals' operations (including but not limited to procedures for investigating and disciplining misconduct and procedures for filling vacancies in union offices);
- supervise the adoption, implementation, and operation of the job referral rules;
- supervise all phases of a secret ballot election of the district council executive board scheduled for June 1995 and any special elections that might occur before then; and
- employ or engage the services of any personnel necessary to assist in the proper discharge of the IRO's duties.

IMPLEMENTING THE CONSENT DECREE

Recognizing the importance of obtaining rank-and-file support, IRO Conboy published an open letter to the membership in the union's newsletter, *The Carpenter,* explaining his responsibilities. He announced three basic objectives for the trusteeship: (1) to cleanse the union of corrupt individuals; (2) to reform the job referral system; and (3) to conduct a direct rank-and-file election for union officers. "I hope to have your

support and cooperation as I oversee the enactment of these important reforms over the coming months. I would also encourage any member to contact me . . . on an entirely confidential basis, with any suggestions or information that would enable me to perform my duties more effectively."[25] The district council's officers went to court to stop Conboy from publishing IRO reports in *The Carpenter.* They argued that such reports improperly cast the union's officers in a bad light. Judge Charles Haight ruled in Conboy's favor.[26]

Conboy's new job referral rules required that union members be referred to jobs according to the length of their unemployment. Five months after the rules were implemented, Conboy found that complaints about job referrals had decreased dramatically.[27] "The rules are generally being followed most of the time." However, he also reported that some locals, especially Local 17, continued to operate an "informal system" that reserved the best jobs for a pool of favored members.

THE LOCAL 17 TRUSTEESHIP

Local 17, the largest local in the district council, was created in 1981 by the merger of four local unions. Ironically, although the merger's declared purpose was to prevent corruption and racketeering, its effect was to consolidate the Genovese crime family's control over jobs and influence within the district council.[28] A jurisdictional dispute between two Genovese crime family crews resulted in the Genovese crime family consigliere's "awarding" Local 17 to Barney Bellomo's crew.[29] The June 1989 election generated a slate of candidates consisting of Genovese crime family associates. Enrico Ruotolo was elected business manager; three years later he was selected as Local 17's delegate to the district council.[30]

Conboy filed disciplinary charges against Ruotolo, alleging that he lied on a deposition, referred union members to a nonunion contractor, referred ineligible union members to jobs, and routinely associated with LCN members.[31] Moreover, Conboy's investigation of Local 17 illuminated a dire financial situation, numerous job rule violations, and links to organized crime.[32] Thus, Conboy requested that the Carpenters (UBC) International union impose a trusteeship over Local 17. In April 1995, the general president complied, appointing a trustee whom Conboy found cooperative and helpful.[33]

0466

THE JACOB JAVITS EXHIBITION CENTER INVESTIGATION

In July 1994, Conboy began investigating Cosa Nostra's control over carpenters' jobs at the Javits Center, which is owned and operated by a public corporation (New York Convention Center Operating Corporation).[34] The district council's two representatives at the Javits Center were Anthony Fiorino and Leonard Simon. Fiorino was Genovese crime family acting boss Barney Bellomo's brother-in-law, and Simon was Genovese capo[35] Ralph Coppola's brother-in-law.[36] President Fred Devine, who himself had been linked to the Colombo family,[*] appointed Fiorino and Simon to their positions.[**] Conboy found that Fiorino and Simon filled all carpenter jobs from a "pool list" of one hundred carpenters,[37] many of whom had criminal records, ties to organized crime, or both.[38]

In September 1994, Conboy attempted to implement a nondiscriminatory job referral system for coveted Javits Center jobs.[39] Fiorino and Simon, with Devine's support, opposed Conboy's plan, proposing instead that the collective bargaining agreement be amended to insulate their Javits Center pool list from the job referral rules. Devine refused Conboy's demand that Fiorino and Simon be replaced. In October 1994, Simon resigned his position as the Carpenters union's top official at the Javits Center, but he remained at the center as a highly paid shop steward. Conboy brought a disciplinary action against Simon, charging that

[*] Marcello Svedese testified to Devine's relationship with the Colombo crime family: "A number of times, Freddie Devine told me that he had connections in the Colombo Organized Crime Family. On one occasion, I saw Vincent 'Jimmy' Angellino meeting with Freddie Devine in Devine's District Council office. . . . Angellino . . . was a Capo in the Colombo Organized Crime Family." Salvatore Gravano knew of another connection: "I am aware that Fred Devine is associated with Thomas Petrizzo, a capo in the Colombo Organized Crime Family." Salvatore Gravano Decl. at 4, *United States v. Dist. Council,* 1994 WL 704811 (S.D.N.Y. Dec. 16, 1994) (No. 90 Civ. 5722 (CSH)) (Feb. 10, 1993).

[**] Devine asserted that he had removed Ralph Coppola as the Carpenters chief steward at the Javits Center because of his ties to organized crime. Letter from Frederick Devine to Ralph Coppola of Aug. 6, 1991. But Coppola continued to supervise Genovese operations at the center even though he technically no longer worked there. Alphonse D'Arco Decl. at 7, *United States v. Dist. Council,* 1994 WL 704811 (S.D.N.Y. Dec. 16, 1994) (No. 90 Civ. 5722 (CSH)) (May 24, 1994). Devine denied having known about Fiorino's association with organized crime when he appointed him to oversee job referrals at the center. Frederick Devine Dep. at 140–42, *United States v. Dist. Council,* 1994 WL 704811 (S.D.N.Y. Dec. 16, 1994) (No. 90 Civ. 5722 (CSH)) (Sept. 1, 1994).

0467

he brought discredit to the union by using a pool list, allowing non-union members to work at the center, submitting a false application to the international union, and receiving compensation from an employer in violation of the Taft-Hartley Act. These charges led Simon to resign from the union.[40]

In December 1994, Conboy filed disciplinary charges against Fiorino, alleging eight violations of the UBC's Standards of Conduct, including knowingly associating with members of organized crime; discriminating against rank-and-file members; threatening a union member with physical harm; acting on behalf of a contractor seeking to hire non-union members; participating in a labor bribery scheme; allowing men suspended from the union to continue working at the Javits Center; falsely representing his own qualifications as a carpenter when he applied for union membership; and violating the district council bylaw against invoking the Fifth Amendment before a committee of investigation. The IHC panel found most of the charges proved and expelled Fiorino from the union for life.[41] Judge Haight affirmed.[42] On the charge that Fiorino knowingly associated with organized crime members, he wrote:

> To the extent that Fiorino's contacts with Bellomo and Capolla antedate the execution of the Consent Decree in March 1994, they cannot be said to violate the decree. But a union member's knowing association with members of organized crime may be regarded as conduct "discreditable" to the union, and thus violative of the district council's by-laws and the local's constitution. . . . [T]here is clearly substantial evidence of [Fiorino's] knowing association with Bellomo; and particularly considering Bellomo's prominence in the Genovese crime family, as described by cooperating witnesses, that association is sufficient in itself to sustain Charge One against Fiorino.[43]

In light of the district council's and Devine's unwillingness to reform job referrals at the Javits Center, Conboy petitioned Judge Haight to (1) invalidate portions of the collective bargaining agreement governing district council job referrals in the trade show industry and the manner of compensating the district council's representatives at the center; (2) require the district council to refer trade show jobs in accordance with the consent decree; and (3) authorize the IRO to oversee district council activities in the trade show industry.[44] Judge Haight again ruled in Conboy's favor.

The media closely covered Fiorino's disciplinary hearing, thereby generating political momentum to eliminate organized crime's influence at the Javits Center. The Governor's Office announced a plan whereby the center would hire a permanent workforce, eliminating dependence on the union's hiring hall. In July 1995, current employees were forced to resign and reapply for their jobs if they desired. The center also accepted job applications from nonincumbents.[45] Applicants were screened for criminal records and ties to LCN. The center hired five hundred workers, half of whom had not previously worked there. The new "exhibit workers" were represented by the Carpenters union, but as state employees, they were covered by a new collective bargaining agreement.[46] A short time later, the New York State comptroller found that the Javits Center had experienced a "complete turnaround" with respect to corruption, operations, and exhibitors' satisfaction.[47]

THE 1995 DISTRICT COUNCIL ELECTION

The district council attacked the IRO's Final Election Rules (FERs), complaining that the IRO's power under the consent decree was limited to supervising the election and did not extend to running the election. Judge Haight held that Conboy had acted properly.[48]

The district council charged that Conboy had in a number of ways "exceeded his authority and abused his discretion."[49] The district council objected to the FERs because they lacked exceptions for candidates running unopposed; providing candidates with access to union membership lists, including addresses; expense of required mailings; lack of restrictions on the content of campaign literature; complexity of the rules; method of listing candidates' names on the ballots; confidentiality of nominating petitions; prohibition on local unions' endorsements of candidates; inclusion of the position of second vice-president; and in-person voting. Judge Haight ruled against each of these objections.[50] With respect to Local 608's request that the election be delayed, Judge Haight wrote,

> I think there is some urgency to holding the election as soon as possible. . . . The 1995 election will ideally not only be a fair and democratic one, but will also reveal a variety of information about the current state of the union and its practices. The sooner the election can be held

0469

> and the results studied, the better the sense the IRO will have of the proper focus of the remainder of his tenure.[51]

In order to keep corrupt candidates off the ballot, Conboy required each candidate to have been in good standing as a union member for twelve consecutive months prior to nomination; a UBC member for two consecutive years immediately prior to nomination; never convicted of a crime making him or her ineligible under federal law to hold union office.[52] Once having satisfied the eligibility requirements, a prospective candidate had to submit a nominating petition signed by at least 125 members in good standing. If the IRO certified his or her candidacy, the candidate would have the right to make speeches at membership meetings and to obtain a mailing list of eligible rank-and-file voters. Each candidate had the right, at his or her expense, to hire an observer to witness the distribution of campaign literature and to observe conduct at the polling site. The rules provided candidates equal opportunity to place campaign material in *The Carpenter.* Conboy limited campaign contributions to $250 per member and required disclosure of campaign contributions and expenditures. The rules called for in-person voting by machine ballot except that a member living seventy-five miles or more from headquarters could use a mail ballot. Each candidate could name one member in good standing to the election committee, which would monitor the balloting and count the votes. The committee's decision would be subject to review by the election officer (an assistant appointed by the IRO) or the IRO. The rules defined election misconduct (including but not limited to voting fraud, ballot tampering, and forgery) for which the IRO could bring disciplinary charges.

The IRO rejected only two of nineteen nominating petitions. Fifteen of the seventeen candidates who formally accepted nomination were affiliated with one of four slates. The Unity and Experience slate, led by incumbents Fred Devine and Robert Cavanaugh, put forward candidates for all five executive committee positions (president, first vice-president, second vice-president, secretary-treasurer, and chairman of the trustees). The Membership's Choice slate also contested all five positions. Conboy believed that its presidential nominee, Local 608 President Patrick Harvey, was the only candidate with enough support to seriously challenge Devine. But Harvey was not obviously a reform candidate having invoked the Fifth Amendment during the 1990 RICO case and being closely associated with Paschal McGuinness.[53]

0470

Conboy's most important and time-consuming election task was compiling a master list of eligible voters.[54] In 1994, the district council provided him with a list of 40,000 eligible voters. Conboy found that less than half (16,719) were eligible to vote. He hired a temporary staff to assist in the election, which was conducted primarily by means of voting machines. No individuals other than the temporary staff and two election observers from each slate were allowed into the voting room.

About 46 percent of eligible voters (7,684 union members) cast ballots. All candidates on the Unity and Experience slate, which received 58.7 percent of the total vote, were victorious, *thereby returning to office incumbents and others associated with the clique that had long dominated the union.*[55] Much the same thing had happened in the Local 560 case: Michael Sciarra and his brother Daniel dominated the first fair election in that union's history.

These election victories demonstrate just how deeply labor racketeers are entrenched in certain unions. They maintain power by manipulating both sticks and carrots. Decades of domination may have convinced rank-and-file members that opposition will be futile and dangerous. Likewise, the labor racketeers operate a pervasive patronage system that provides many benefits to loyalists, who then have a vested interest in perpetuating the regime. In addition, many labor racketeers are charismatic personalities to whom rank and filers are attracted. Finally, most union members are apathetic, paying little attention to union governance and policies.[56]

OTHER INVESTIGATIONS

Conboy's investigations continued. In 1996, his office charged five local union officers with violating district council bylaws by invoking the Fifth Amendment when questioned during the civil RICO suit. In 1997, four of them (including 1995 presidential candidate Patrick Harvey) resigned rather than go through the disciplinary hearing process.[57] (The fifth officer ultimately signed a settlement agreement barring him from union office for life.)[58]

After receiving information about a Local 257 member who was extorting payments from a contractor, Conboy and the Manhattan district attorney persuaded the contractor to cooperate. The union member was

0471

arrested in October 1996 for taking a subsequent payoff.[59] He was later convicted of a misdemeanor and settled the IRO's charges by agreeing to be barred from union office.[60] Conboy also brought charges against a former delegate and trustee of Local 348 for refusing to submit to a deposition concerning his association with a Colombo family capo.[61]

In 1997, the IRO charged the president of Local 531 with interfering with the IRO's work and with using union funds to purchase a vehicle. The official agreed to be barred from union office for life.[62] In 1998, a former Local 257 officer paid a fine to settle charges that he knowingly accepted shop steward referrals for which he was ineligible.[63] The former president of Local 257 was investigated for receiving illegal payments from contractors, violating district council rules, and for putting himself on the out-of-work list although he was employed.[64]

INTERNATIONAL UNION'S TRUSTEESHIP OVER THE DISTRICT COUNCIL

Because the victors in the 1995 election were allied with the same faction that had controlled the district council for many years, Conboy urged Carpenters International President Douglas McCarron to impose a trusteeship on the district council, thereby replacing the incumbent officers. According to Conboy, "In light of such entrenched corruption, it was clear to us that the only realistic hope of returning the district council to its membership required the intervention of the International."[65] He stressed the importance of replacing the district council's incumbent officers with "strong and independent outside leadership."[66] McCarron complied on June 25, 1996, appointing Carpenters Vice-President Douglas Banes to take over the administration of the district council.

The district council appealed McCarron's actions to the International union's general executive board. More than one hundred people testified, including Banes and Conboy.[67] Conboy testified that Fred Devine took cash payoffs, appointed Fiorino, refused to dismiss Fiorino, made corrupt job referrals, and mishandled the district council's benefit funds.[68] The hearing committee concluded that Devine and the other officers mismanaged the district council's cash reserve so that its net worth dropped from $6.45 million in 1991 to $224,060 in 1996. Devine spent $389,000 on private jets in a period of thirty months. Devine supplied the staff with luxury cars and paid twice what legiti-

0472

mate automobile dealers would charge. Devine's $25,000 car allowance did not include gas, oil, maintenance, or insurance. The union paid Devine's girlfriend $60,000 as a "consultant"; Devine's chauffeur was paid $60,000 a year out of trust fund money; and Devine used trust fund money to employ Genovese crime family associates. The hearing committee concluded that the International union's trusteeship had been properly imposed and extended its duration.[69]

The Banes trusteeship seemed to make some significant reforms aimed at remedying the financial crisis and combating corruption. A few of Devine's protégés, including his son and Bernard Cohen, the district council's general counsel, were terminated.[70] Subsequently, the Manhattan district attorney charged Cohen with stealing more than $150,000 from the district council by overbilling and by inflating the expenses of a lobbyist who worked for him. Ultimately, he pleaded guilty to falsifying records.[71] Devine was convicted on six felony grand larceny counts.[72]

Banes moved to put the district council back on sound financial footing by reducing unjustifiable salaries, cutting costs, and rationalizing operations.[73] In May 1997, the International reorganized the New York City district council into a more centralized "full service district council" whose officers would be accountable to and elected by the rank and file. Moreover, the job referral system would be run by business agents employed by and subject to removal by the district council. Some local unions would be merged.[74] In announcing the plan, President McCarron said, "Despite the [IRO's] supervision, the consent decree and federal investigations, corruption continues in many local unions throughout the district council. Only a fundamental structural change . . . can eradicate the problem and return the Union to its members' control."[75] McCarron declared that the "membership has been poorly served by the present structure," and noted that the district council had lost approximately five thousand union members in five years, depleted its $6 million treasury, and incurred upward of $5 million in debt. He predicted that centralization of authority in the district council would provide the solution.*

* Lawsuits by local unions and individual carpenters significantly delayed the restructuring plan's implementation. Ultimately, the court held that the plan did not violate the consent decree (*Local Unions v. United Bhd of Carpenters,* 1997 WL 630179 (S.D.N.Y. Oct. 9, 1997)) and that prior court approval of the restructuring plan was not required (*United States v. Dist. Council,* 972 F. Supp. 756, 759 (S.D.N.Y. 1997).

0473

TERMINATING THE IRO AND THE UBC TRUSTEESHIP

In October 1996, the court approved another six-month extension for IRO Conboy. Because of the district council's shaky financial status, Conboy consented to a reduction in compensation from $65,000 a month to $45,000 and agreed not to seek further extensions. On March 3, 1997, President McCarron voluntarily extended Conboy's tenure through March 4, 1998, and then to June 5, 1998. On June 4, 1998, the parties agreed to a final twelve-month extension.[76] One year later, Judge Haight wrote

> The district council's refusal to extend the IRO's tenure means that the IRO will not be able to discharge the last vestiges of his previously delineated responsibilities. Accordingly, this is likely the last opportunity that the Court will have to address former Judge Conboy in a formal opinion. I seize the opportunity to thank him for his tireless and invaluable service to the parties and to the Court during the course of an arduous, complex and challenging case. The Court's IRO has been the very model of a modern Court-appointed officer. Ave atque vale.[*]

In 1999, the Carpenters International Union dissolved its trusteeship over the New York district council. In January 2000, almost ten years after the civil RICO case was filed, Local 608's President Michael Forde[**] was elected president of the district council.[77] Ominously, two years before Conboy had charged Forde with violating job referral rules in assigning jobs among Local 608 members.[78] In 2000, the Manhattan district attorney charged Forde and several Cosa Nostra codefendants

[*] *United States v. Dist. Council*, 1999 U.S. Dist. LEXIS 8781, at *22 n. 4. Conboy also had his critics. For example, "[T]he IRO's tenure under the consent decree was about to expire at the time the UBC took over our council, the UBC extended his tenure at the time of the take over at the cost of sixty-five thousand a month. Ever since, the IRO has been writing shining reports to the court regarding Mr. McCarron's actions and it seems every time he writes a report he gets another extension of his tenure." *Impediments to Union Democracy Part II* app. F., 101, available at http://edworkforce.house.gov/hearings/105th/eer/ud62598/lebo.htm (statement of William S. Lebo, a member of Local 45 (June 25, 1998). Conboy's Sixth Interim Report charges that some union members who complained about the International trusteeship were Devine supporters with ties to organized crime. Sixth Interim Report, at 11–12.

[**] Forde's father, who preceded Forde as president of Local 608, had been convicted of Taft-Hartley crimes in the 1980s.

0474

with taking bribes in exchange for ignoring violations of the collective bargaining agreement.

The thirty-eight codefendants included union officers, contractors, and eleven alleged organized crime figures.[79] Steven L. Crea, the Lucchese crime family boss, was the leading organized crime figure among the defendants.[80] According to the district attorney, the Lucchese crime family took money from contractors in exchange for promising protection from labor problems. Forde thus became the fourth consecutive district council president since 1980 to be charged with labor racketeering. (See Table 10-1 below for a list of labor racketeering prosecutions related to the New York City District Council of Carpenters.) Nevertheless, he was elected in 2002 as executive secretary treasurer (the new title for the district council's top officer) with 80 percent of the vote.[81]

Table 10-1
Labor Racketeering Prosecutions Related to the NYC District Council of Carpenters

Case	*Result*
United States v. Maritas, Cr. No. 81-122 (E.D.N.Y.)	Former District Council President Theodore Maritas and Genovese capo Vincent DiNapoli were indicted for RICO violations.
United States v. Giangrande, 805 F.2d 391 (2d Cir. 1986)	District council officer Artie Giandrande, convicted after trial for conspiracy, mail fraud, and illegal labor payoffs.
People v. Bitondo, Ind. No. 7952/87 (N.Y. Sup. Ct. N.Y. Co.)	Local 257 officers Attilio Bitondo and Gene Hanley were indicted for receiving illegal payoffs and engaging in extortion.
United States v. Cervone, et al., Cr. No. 87-579 (E.D.N.Y)	Henry Walaski, an officer of Local 531 and district council delegate, was convicted for violating RICO and receiving illegal payoffs.
People v. Holden, Ind. No. 9352/87 (N.Y. Sup. Ct. N.Y. Co.)	Local 608 shop steward William Holden was convicted of criminal contempt and perjury in an investigation of the Carpenters Union.
People v. Forde, Ind. No. 7951/87 (N.Y. Sup. Ct. N.Y. Co.)	Martin Forde, an officer of Local 608, was convicted for receiving an illegal labor payoff.
People v. Zeidman, Ind. No. 7950/87 (N.Y. Sup. Ct. N.Y. Co.)	District Council First Vice-President Irving Zeidman was indicted for accepting labor payoffs.
United States v. Waller, Cr. No. 88-466 (E.D.N.Y.)	Local 531 officer Robert Waller, Jr. was convicted of extortion.
People v. Hubelbank, Crim. Complaint No. 9N072405/89 (N.Y. Crim. Ct. N.Y. Co.)	District council trustee and former Local 135 officer Israel Hubelbank was convicted of accepting illegal labor payoffs.
People v. Moscatiello, Ind. No. 8081/89 (N.Y. Sup. Ct.)	Local 17 business manager Benedetto Schepis was indicted for crimes involving Local 135.
People v. Forde, Ind. No. 5544/00 (N.Y. Su. Ct. N.Y. Co.)	District Council President Michael Forde and his business agent Michael Devereaux convicted by a Manhattan jury of accepting $100,000 in cash as part of a $50,000 promised bribe from a defunct construction company.

0475

ASSESSING SUCCESSES AND FAILURES

Successes

According to Conboy, the trusteeship was successful in purging the district council of mob-affiliated and corrupt officials, conducting a free and fair election in 1995, cleaning up the Javits Center, and revamping the job referral system. He filed disciplinary charges against a number of union officials, including Anthony Fiorino, Lenard Simon, and Enrico Ruotolo. IRO Conboy and Trustee Banes removed from union office all of the 1995 incumbents. The 1995 election gave members the right to vote directly for officials, but the election did not produce a break with the regime that had long dominated the union.*

The job referral system was substantially reformed. Conboy wrote in March 1996 that "it can safely be said, given the high volume of carpenters referred from the out-of-work lists, and diminishing number of complaints we receive concerning the referral process, that the average rank and file member has greatly benefited from the implementation of the job referral rules."[82] A year later, Conboy reported that complaints had declined to an average of two or three a month, which his office was able to resolve informally.[83]

In July 2001, however, Eugene Clarke, a member of Local 608, filed a complaint with the district council's executive committee alleging that Local 608 was appointing shop stewards in violation of the referral rules. He complained that some employees who supported Michael Forde received job assignments out of turn and that others, like him, did not receive job assignments because they opposed Forde.[84] While not admitting wrongdoing, the district council agreed to change the job referral rules to require more oversight of shop steward appointments[85] and to hire former Assistant U.S. Attorney Walter Mack as Independent Investigator, responsible for investigating allegations of job referral rule violations.**[86]

It is hard to say whether the centralization of the district council

* A dissident group, Carpenters for a Democratic Union International (CDUI), demands "one member, one vote" for all union positions, direct membership votes on contracts, and direct election of delegates. See http://www.ranknfile.net/.

** In April, 2005, over the government's opposition, the court granted the district council's motion to terminate Mack, but on the condition that a successor acceptable to the court be appointed.

0476

at the expense of the locals qualifies as a success. On the one hand, the district council can be more easily monitored and held accountable for racketeering in its constituent locals. On the other hand, a leading advocate for union democracy commented at a 1988 congressional hearing on union democracy:

> The delegate system is no substitute for direct elections. A membership of thousands armed with the right to vote, cannot be easily manipulated by the officers above. But a delegate body of 150 can be dominated by an officialdom which dispenses favors and perks to only 76 lucky delegates. Direct elections allow the member-voters to control the officers. Election by delegates allows the officers to control the delegate-voters.[87]

Failures

Although the 1995 election was conducted fairly, Fred Devine was reelected president, thereby perpetuating the old regime's control. Fraud, corrupt practices, and racketeering continued. The UBC negated the 1995 election by imposing a trusteeship on the district council, thereby removing Devine. Michael Forde's slate won the 1999 election. Just months later, the Manhattan district attorney charged Forde and several top Cosa Nostra figures with orchestrating a bribery scheme whereby contractors paid off union officials in exchange for their allowing the contractor to use nonunion labor on a hotel renovation project.[88] Even though indicted, Forde won the 2002 district council election.

The goal of the 1994 RICO suit—purging organized crime's influence from the district council—has clearly not been achieved. The alliance between labor racketeers and corrupt union officials has proved resilient. As long as rank-and-file Carpenters Union members see or perceive "business as usual," they will be cynical about prospects for reform and unwilling to stand up against the old regime. Not only have the government, the court, and the court-appointed trustee been unable to end mob influence in the district council, they have been unable to prevent LCN labor racketeers from expanding their influence to Westchester County (just north of New York City). In December 2001, the Department of Justice indicted seventy-three members of the Parrello Crew of the Genovese crime family on ninety-eight counts, including extortion, labor racketeering, loan sharking, illegal gambling

0477

operations, selling counterfeit money and gun trafficking.[89] Nine were accused of labor racketeering involving Locals 11 and 964, which together constituted the Suburban New York Regional Council of Carpenters. These defendants were alleged to have arranged for nonunion workers to complete carpentry jobs, allowing the defendants to embezzle more than $1 million that should have been paid into the Suburban Council's pension funds.[90]

Whether the IRO could have done anything more to facilitate a reform movement among the New York City carpenters is an important question. In the IBT Local 560 trusteeship, the trustee reached out to the rank and file, appointed some individuals to steward positions and other offices, and successfully encouraged other members to become involved in union governance and politics, helping eventually to bring a reform slate to power. Stimulating reform in the building trades is undoubtedly more difficult because work is seasonal and insecure; workers move from one job and contractor to another. Because the union determines whether an individual gets work, it is risky for a rank and filer to challenge the incumbent clique. Because the district council comprises some twenty locals spread out across the metropolitan area, it is difficult for an insurgent candidate to achieve the name recognition necessary to defeat an incumbent union officer.

Still, there is some reason for optimism. The relentless governmental and judicial efforts to purge LCN from the district council have clearly succeeded to a significant extent. The old labor racketeering element has been severely weakened. The membership has had a taste of free elections and fairer work assignments. The union's finances are much more transparent and accountable. The pension and welfare funds are more secure. Achieving further reform, however, will require the emergence of a new cadre of union leaders.

0478

11

The Four International Unions

The President's Commission on Organized Crime (PCOC) focused most of its resources on documenting and excoriating corruption and racketeering in the IBT, HERE, LIUNA, and ILA. The PCOC sharply criticized the federal government for not aggressively seeking to purge LCN's influence from these influential international unions. Twenty years have passed. Each of these unions has been the target of extensive civil RICO litigation and remedial efforts. There has been a great deal of progress, but it is still too soon to pronounce any of the four international unions free of labor racketeering.

THE IBT

> Roy it's a bad situation. . . . You can run, but you can't hide. My advice to you is to cooperate or get your family killed. Roy, these are bad people. And they were here a long time before you and me came. And they'll be here a long time after we're gone. They've infiltrated into every big local union, every conference and pension fund—even the AFL-CIO! I'm tied as tight as I can be.
>
> —Jimmy Hoffa to Roy Williams. Quoted in James Neff, *Mobbed Up: Jackie Presser's High Wire Life in the Teamsters, the Mafia and the FBI* (1989)

Soon after the PCOC issued *The Edge*, rumors began to circulate that the Department of Justice was considering a civil RICO complaint against the IBT's General Executive Board. To head off such a lawsuit, IBT General President Jackie Presser launched a lobbying and public relations campaign seeking support from politicians and the AFL-CIO.[1] Presser accused the Reagan administration generally and the DOJ particularly

0479

of union bashing:* "Takeovers of unions are nothing new—Communists and Fascists have been doing so for decades. However it is a sad day in the history of the United States and the American labor movement when such tactics are employed." Presser must have been pleased by the positive response from the nation's political leaders: 246 members of Congress signed a petition urging the Department of Justice not to file a civil RICO suit against the IBT.[2] According to the petition: "The exercise of such authority . . . would establish a precedent which strikes at the very foundation of our democracy." Senator Orin Hatch (R.-Ut.) said that the DOJ suit against the IBT "flies in the face of democratic principles" and "is a terrible precedent."[3] This unprecedented intervention on behalf of a potential federal racketeering defendant (without any public information about the factual basis for DOJ's rumored complaint) illustrates the enormous political power of the nation's largest private-sector union as well, perhaps, as the cynicism of the politicians in associating the racketeer-ridden IBT with democratic unionism and American democracy.** The AFL-CIO also responded positively to Presser, inviting the Teamsters to return to the house of labor after thirty years in exile.

On June 28, 1988, Rudy Giuliani, U.S. attorney for the Southern District of New York filed one of the most remarkable lawsuits in American history, a civil RICO suit against the International Teamsters Union. The complaint named as defendants the union's leaders and the leaders of the nation's dominant crime syndicate—specifically, the International Brotherhood of Teamsters, the Cosa Nostra "Commission,"*** 26 Cosa Nostra members and associates including Genovese crime family boss

* The PCOC questioned whether an investigation of Jackie Presser had been delayed because of Presser's political support for President Ronald Reagan in 1980 and 1984. (Steven Kurkjian, "Panel Says Organized Crime Corrupts Unions," *Boston Globe*, January 15, 1986.)

** The IBT was and is the largest private-sector union in North America. It had approximately 2 million members at its peak in the 1960s and has about 1.4 million members in 2005. The IBT began as a union for horse-drawn vehicles and then trucks, but with the expulsion from the AFL-CIO in the 1950s, it became a kind of conglomerate union, representing all sorts of workers, including those in freight, warehousing, manufacturing, construction, private security, and air transportation.

*** The Commission, established by LCN bosses in 1931 to resolve disputes among organized crime families, originally comprised prominent LCN bosses from around the country, but by the 1980s, it either consisted of the five New York City LCN bosses or perhaps the five families had their own NYC metropolitan-area commission.

0480

Tony Salerno (or perhaps underboss if, as seems likely, the crafty Vincent Gigante actually ruled the family), Lucchese boss Anthony Corallo, Chicago Outfit boss Joey Aiuppa, and Milwaukee crime family boss Frank Balistrieri. The other defendants were the IBT's General Executive Board (GEB), and eighteen present and former GEB members, including President Jackie Presser and General Secretary-Treasurer Weldon Mathis.[4] The complaint charged that the organized crime defendants, aided and abetted by the union defendants, violated RICO (1962b) by acquiring an interest in the IBT through a pattern of racketeering activity, including extortion, violence, fraud, and violation of the IBT members' Landrum-Griffin rights. The complaint further alleged that the defendants violated RICO (1962c) by conducting the affairs of the IBT through a pattern of racketeering activity, including extortion fraud, violence, and other criminal conduct. The complaint cited a litany of violent acts by LCN members and associates against Teamsters members who dared to criticize or question the ruling clique and against employers who refused to accede to the labor racketeers. The government alleged that despite 191 criminal convictions and 22 civil enforcement actions, neither the IBT general president nor any member of the union's GEB had conducted any investigations or disciplinary actions regarding labor racketeering.*

Giuliani asked the court to remove the GEB members and to establish a trusteeship to oversee the union's affairs and supervise a national election.[5] In preparing for trial, the government's star witnesses were former General President Roy Williams (1981–1983) and former Cleveland LCN boss Angelo Lonardo, both of whom had become cooperating government witnesses.[6]

Despite a GEB resolution prohibiting defendants from making individual settlements with the government, three vice-presidents, recognizing the personal financial and emotional costs of litigation, quickly broke ranks. For example, Robert Holmes, Sr., a Teamster for fifty-two years, agreed to resign all union positions in full settlement of the complaint against him.

On March 13, 1989, the IBT (as an entity) and the DOJ agreed to a consent decree. The union acknowledged "that there have been

* Harold Friedman, head of IBT Joint Council 41 and the IBT Ohio Conference, explained that to have inquired into a fellow IBT officer's indictment or conviction would have been "bad manners."

0481

allegations, sworn testimony and judicial findings of past problems with Cosa Nostra corruption of various elements of the IBT," and agreed that the IBT should be free of any criminal element, and should be governed democratically "for the sole benefit of its membership without unlawful outside influence."[7] The consent decree provided for a permanent injunction barring the organized crime defendants from any future involvement with the IBT; changing the IBT constitution to require democratic elections for International officers; prohibiting IBT members from knowing association with LCN members and with expelled members; and, most important, the appointment of a trusteeship made up of three court-appointed officers—independent administrator, investigations officer, and elections officer—to oversee the union's reform. Judge David Edelstein appointed former federal judge Frederick Lacey as independent administrator, former assistant U.S. attorney Charles Carberry as investigations officer, and labor lawyer Michael Holland as elections officer. If the 1991 election were to be certified as having been conducted in conformity to the new election rules, the three-person trusteeship would be replaced by a three-person Independent Review Board (IRB).

The consent decree gave the Independent Administrator (IA) authority to discipline (by means of expulsion, suspension, or fine) union members and officers, and to impose trusteeships on IBT locals controlled by LCN. It also empowered the IA to veto any IBT decision that would further the interests of labor racketeers. The IBT general president and GEB retained day-to-day administrative authority and the authority to negotiate collective bargaining agreements.

The investigations officer (IO) was charged with responsibility for investigating corruption in Teamsters local, regional, and international unions and for recommending to the IA disciplinary action against individuals found to have violated the IBT constitution. As soon as the consent decree was filed, the IO began investigating and preparing disciplinary charges against many of the civil RICO defendants and other IBT officials. Soon there began to flow a steady stream of disciplinary cases that continues to this day (February 2005).

The consent decree set out rules for future national elections, including direct secret balloting and a prohibition on candidates accepting campaign donations from employers, foundations, trusts, or similar entities. It left other election procedures to be developed by the

0482

elections officer (EO), who was empowered to oversee direct 1991 and 1996 rank-and-file secret-ballot elections for the union's international officers.

William McCarthy, with the support of the New England Patriarcha crime family, became general president following Jackie Presser's death in July 1988. After signing the consent decree, General President McCarthy had an immediate change of heart. He described the consent decree as failing to provide "the vindication and exoneration the Teamsters deserve. . . . [T]his suit should never have been filed in the first place." Numerous IBT locals filed lawsuits asserting that they were not bound by the consent decree because they were neither defendants in the civil RICO suit nor signatories to the consent agreement.[8] Judge Edelstein thwarted this strategy, first by combining all IBT/consent decree litigation in his court and then by ruling that the consent decree did bind the IBT locals.[9] He declared:

> The International IBT and all of its subordinate entities are merely structures created to represent and serve its constituent membership. Indeed, the law governing lawsuits against labor unions embodies the underlying philosophy that a union is no more than its membership. Legally, an unincorporated association is a collective substitute for its members individually. Under the IBT Constitution, all members of the Union—officials and rank and file alike—are jointly members of both their individual local and the International IBT.[10]

The IBT refused to reimburse some of the court-appointed officers' expenses and resisted the IA's efforts to inform the rank and file of actions against corrupt IBT officials. At its 1991 convention, the IBT refused to enact constitutional amendments to which the consent decree committed it. As the IBT's opposition mounted, so too did Edelstein's resolve. He ruled time and again against the IBT, persevering until he achieved compliance with his orders.

IA Lacey served as the trier of fact and sentencing authority on charges brought by IO Carberry against Teamsters officials and members. Typical charges included membership in or knowing association with members of Cosa Nostra,[11] failure to investigate corruption within the local, joint council, or international in which the individual held office, refusal to testify at a disciplinary hearing,[12] embezzle-

0483

ment,[13] and assault.[14] Sentences ranged from reprimand to expulsion from the union. On appeal, Edelstein consistently upheld IA Lacey's decisions.

IO Carberry and his staff reviewed old criminal cases and audited locals with a reputation for being influenced by organized crime.[15] The FBI provided a wealth of information. Some IBT members came forward to report wrongdoing. When Carberry found sufficient evidence, he filed disciplinary charges. IBT Vice-Presidents Harold Friedman and Anthony Hughes were his first targets. Because both officials had been convicted of racketeering (but had appeals pending in the Sixth Circuit), it seemed to follow that they should be expelled from the union. However, they argued that Carberry had no authority to charge (and Lacey to discipline) them on the basis of convictions that occurred before the consent decree was signed. Judge Edelstein disagreed:

> [T]he ultimate aim of the consent decree is to guarantee free elections and to rid the IBT of the hideous influence of organized crime . . . the election oversight may imperil unfairly-elected officers, and the prosecution scheme may ultimately suspend corrupt members.

A 2004 study found that since the signing of the consent decree in 1989, 670 charges had been brought against 583 members and officers of the Teamsters.[16] These charges involve members or officers of 128 locals, led by Local 813, with 58 members and officers charged. Eighty-five local union presidents have been charged. The most frequent offense is embezzlement. Many of those charged entered "plea bargains" with the IRB, agreeing to suspension, resignation, fine, restitution, and other sanctions. The most frequent sanction, meted out to 201 Teamsters, was permanent expulsion.[17] Pursuant to IRB investigations and recommendations, the IBT International Union placed thirty-five locals and one joint council under trusteeship.

Elections officer Holland created a three-step process for the election of the IBT general president, general secretary, and GEB members. First, the IBT locals would hold secret-ballot elections for delegates to the IBT convention. Second, the delegates would nominate candidates for national office. Third, all rank-and-file members would vote in a secret-ballot election supervised by independent monitors. The IBT opposed these proposed reforms, arguing that the consent decree empowered Holland only to *monitor* the electoral process for fraud, not to

0484

establish new election rules. Judge Edelstein ruled that Holland had not exceeded his authority.[18]

At the 1991 IBT convention, the delegates rejected the constitutional amendments to which the consent decree committed the union. The DOJ lawyers, anticipating the revolt, had asked Edelstein to impose the constitutional changes by court order; the judge issued an injunction to that effect. At the convention itself, the delegates railed against Edelstein, the government, and the consent decree.

The first direct election of international IBT officers took place in 1991. There were three candidates: R. V. Durham, a member of the GEB; Walter Shea, a career Teamster administrator who had essentially run the union during much of the Fitzsimmons administration; and Ron Carey, a self-styled reformer who headed a large New York City IBT local. Judge Lacey ruled ineligible a fourth candidate, James P. Hoffa, a lawyer and son of Jimmy Hoffa, because he had never been a Teamster. Carey enjoyed the support of the Teamsters for a Democratic Union (TDU), the best-developed rank-and-file reform group in the American labor movement.[19] He promised to eradicate mob influence in the Teamsters. To many observers, his election, with 48.5 percent of the vote, was a huge victory for reformers and proof of the trusteeship's success (although only one-third of eligible Teamsters voted).* Nevertheless, Carey kept an arm's-length distance from the court-appointed officers, calling the trusteeship improper, unnecessary, and undemocratic. Carey eliminated the practice of top officials drawing multiple salaries, trimmed the IBT budget, sold some of the union's airplanes and other extravagant possessions, created an Ethical Practices Committee, and imposed trusteeships on a number of mob-controlled locals. He led the Teamsters strike against United Parcel Service, the union's largest employer, and achieved a favorable contract.

After certification of the 1991 election, a three-member Independent Review Board (IRB) replaced the three-person court-appointed trusteeship. The U.S. attorney general's appointee to the IRB was Frederick Lacey. The IBT appointed Carey's campaign manager, E. Harold Burke. When Lacey and Burke were unable to agree on the third member, Judge Edelstein appointed former FBI director William Webster.

* An early 1990s survey found that half of the IBT members surveyed could not name the IBT International general president. See Robert Bruno, *Reforming the Chicago Teamsters: The Story of Local 705* (De Kalb: Northern Illinois University Press, 2003).

The IRB immediately hired Charles Carberry to serve as investigations officer. (Burke was later replaced by Grant Crandall, a distinguished labor lawyer and general counsel of the United Mine Workers Union.)

The 1996 election was vigorously contested. Carey's opponent was James P. Hoffa who, by signing on as an assistant to an IBT local president in Chicago, became eligible to run in the 1996 election. Carey won by a slim majority (52 percent), but the elections officer (Barbara Quindell, who had replaced Michael Holland) refused to certify the result because of campaign finance violations. She found that Carey's campaign illegally funneled $885,000 of IBT funds to political action groups (associated with the national Democratic Party), which arranged donations of the same amount to Carey's campaign.[20] In other words, she found that the Carey campaign had, by means of a crude money laundering scheme, illegally utilized almost $1 million of IBT funds on behalf of Carey's campaign. She ordered that the election be rerun.

In November 1997, yet another elections officer (Kenneth Conboy, the same man who served as trustee (IRO) in the District Council of Carpenters case) barred Carey from the rerun election because of the money laundering scheme; the IRB affirmed and subsequently expelled Carey from the union.* James P. Hoffa won the 1998 rerun (of the 1996) election by a wide margin, and, in 2001, his Hoffa Unity Slate of candidates for the General Executive Board overwhelmingly won a five-year term. That same year, a former U.S. attorney for the District of Columbia, Joseph Di Genova, replaced Grant Crandall as the IBT's representative on the IRB, and former U.S. attorney general Benjamin Civiletti replaced Judge Lacey as the government's representative; William Webster continued to serve.**

Hoffa campaigned on the promise of doing everything possible to terminate the IRB. After the election, he announced that he was hiring Edwin Stier to head an internal anticorruption unit that would eventually demonstrate to the government and the court that the IBT could police itself. Stier brought enormous credibility to the internal reform effort, called Project RISE (Respect, Integrity, Strength, Ethics) because he had served so successfully as trustee in the IBT Local 560 case.***

* Carey was subsequently prosecuted and acquitted (October 12, 2001).

** Judge David Edelstein died in August 2000. The IBT case was then assigned to Judge Loretta A. Preska.

*** Stier also appointed a ten-member Board of Advisors to monitor Project RISE's progress and to make suggestions where appropriate. I served as a member of that board.

Project RISE had three components: a rank-and-file initiative to draft an ethical practices code and enforcement machinery; a professional investigative initiative to assess the state of corruption and racketeering throughout the union; and an initiative to write an internal history of labor racketeering in the Teamsters. Stier hired a former justice of the New Mexico Supreme Court to chair the ethical practices code committee composed of twenty rank-and-file members from across the United States and Canada. The group met over a period of eighteen months and produced an impressive set of ethical rules, disciplinary procedures, and enforcement machinery. However, the Hoffa administration took the position that it would not implement the code until the IRB's enforcement authority was phased out. As of summer 2005, there is no sign of such a prospect.

The second Project RISE component was an investigation of continued organized crime influence in the IBT. For this job, Stier chose James Kossler, the former organized crime coordinator in the New York City FBI office. Kossler, in turn, hired a number of former FBI agents and DOL investigators from around the country. The Kossler team conducted at least a cursory investigation of every IBT local that had ever been alleged to have been infiltrated or influenced by organized crime. It found no indication of organized crime influence in the vast majority of these previously tainted locals. In several locals where questionable influences still existed, IRB investigations and disciplinary proceedings were under way. Kossler's team also continued to investigate.

Project RISE's third component was a comprehensive history of the connection between organized crime and the IBT. The principal author was Howard Anderson, one of Stier's law partners and a former congressional staffer. The history (*The Teamsters: Perception and Reality*), published by the IBT,[21] seems primarily addressed to the U.S. attorney for the Southern District of New York and to Judge Preska, who presides over the consent decree. Its basic theses are (1) that mob infiltration of the Teamsters was the consequence of a strong organized crime syndicate, a weak governmental organized crime control effort, and an unwillingness of the IBT leadership to confront LCN; and (2) that currently a strong federal organized crime control effort, plus a strong IBT antiracketeering commitment, plus a much-weakened LCN add up to a healthy, independent, and honest Teamsters union.

Unfortunately, Project RISE disintegrated in spring 2004. Stier and Kossler resigned, charging that the Hoffa administration was blocking

[162.10.217.184] Project MUSE (2026-06-15 01:41 GMT) University of Queensland

their investigation of LCN influence in their Chicago-area IBT locals and their joint council. Stier and Kossler had come to believe that they had been overly optimistic in their initial assessment of the state of many IBT locals and that organized crime continues to exercise influence, especially in Chicago. The Teamsters leadership took the position that Project RISE was too expensive and that Stier had overstepped his mandate; Hoffa appointed Edward McDonald, former head of DOJ's Brooklyn Organized Crime Strike Force to investigate Stier's charges. A public version of McDonald's report, released in July 2005, concluded that Stier's and Kossler's accusations of organized crime involvement in the Chicago-area IBT were baseless.

IBT CONCLUSION

In 1986, the PCOC considered reforming the IBT nearly impossibile. However, the FBI and DOJ campaign against organized crime greatly weakened the crime syndicate. The federal civil RICO suit against the IBT international and the court-imposed trusteeship that it produced, backed by Judge Edelstein's steadfast determination to enforce the letter and spirit of the consent decree, triggered major changes in the IBT. None of the defendants in the 1989 DOJ civil RICO suit remain in office. The Independent Administrator and its successor, the Independent Review Board, have expelled hundreds of organized crime figures and associates from the union, placed or been responsible for placing dozens of corrupted locals under international union trusteeships, thereby allowing, in some cases, reformers to take control of their locals,* and produced three fair and competitive international elections.

Separate court-appointed trusteeships over a few of the most corrupt locals (e.g., IBT Local 560) have also shown impressive results. Until 2004, the James P. Hoffa administration, under the auspices of Project RISE, seemed committed to rooting out vestiges of organized crime

* Professor Robert Bruno's in-depth case study of IBT Local 705 in Chicago (*Reforming the Chicago Teamsters,* 2003) shows how the consent decree led to the IBT's imposition of a trusteeship over Local 705, opening the door for reformers to compete for union office. He concludes that although the International's trustee did a good job, he was unable to change the rank and file's positive attitude toward the old regime. He attributes real reform to the strenuous efforts of reformist elements in the local.

in order to persuade the government and the court to retire the consent decree and dissolve the Independent Review Board. Where they were once vilified, former FBI agents and federal prosecutors had access to IBT headquarters, President Hoffa, and his top staff. Unfortunately, events in the first half of 2004 cast a dark shadow over the credibility of the IBT's commitment to reform. The collapse of Project RISE means that the IBT's internal reform effort has been, at best, partially successful. Labor racketeers quite possibly remain a force to be reckoned with, especially in certain Chicago-area locals. Moreover, the Chicago Outfit has not been as vigorously prosecuted or as significantly weakened as LCN families in other cities.* Of course, the IRB remains in place for the foreseeable future, thereby assuring ongoing investigation and disciplinary action.

HEREIU

> Numerous allegations of possible association with organized crime groups were known over the years, yet no investigations were ever conducted by the HEREIU to ascertain the facts. Mr. [General President Edward] Hanley rewarded family and friends, especially from the Chicago, IL area with positions with the International Union without evaluating the needs of the union. All these appointments were approved by the General Executive Board without questions or challenges.
>
> —Kurt Muellenberg, Court-Appointed Monitor of HEREIU, August 26, 1988.

In 1958, the McClellan Committee found that LCN Chicago Outfit boss Tony Accardo controlled three Chicago-area Hotel and Restaurant Workers locals. Joey Aiuppa, Accardo's lieutenant and later his successor, was secretly the boss of one of these locals. *The Edge* concluded that the Chicago Outfit controlled HEREIU and that General President Ed Hanley, who had been promoted from one of the Chicago-area locals to

* In April 2005, the Chicago U.S. attorney's office announced a massive indictment against at least fourteen organized crime figures who were charged with numerous counts of murder, loan sharking, illegal gambling, and tax fraud. *U.S. v. Calabrese et al.*, no. 02 CR 1050 (N.D. Ill. April 25, 2005).

the general presidency, was the Outfit's tool. A 1984 Senate Permanent Subcommittee on Investigations report noted that Hanley had used mergers of locals, international trusteeship of locals, and personnel transfers to solidify the international union's control over local union officers and treasuries. It accused him of hiring a number of LCN members and associates as international union organizers and for other union positions. In addition, according to the Senate Subcommittee, LCN controlled several HEREIU locals in Chicago and other cities.

HEREIU LOCAL 54

The government's effort to reform HEREIU began with HEREIU Local 54 in Atlantic City.* In 1979, the local's longtime president, Ralph Natale, an associate of Philadelphia's Bruno LCN crime family, was sentenced to thirty years' imprisonment for a variety of offenses. To take his place, President Hanley appointed Frank Gerace, an associate of Nicodemo Scarfo, the Philadelphia LCN crime family capo in charge of the family's Atlantic City interests.[22] The U.S. Senate Subcommittee identified Local 54 President Gerace and Local 54's vice-president as pawns of Scarfo and the imprisoned Natale.[23]

In 1981, the New Jersey Casino Control Commission and the Division of Gaming Enforcement, established to prevent organized crime from penetrating Atlantic City casinos, found that LCN, through Gerace, controlled Local 54. It ordered Local 54 to remove Gerace and two others from union office. The commission warned that if the union failed to comply, it would be prohibited (under New Jersey law) from collecting dues from casino employees, which would cause the union's demise. After a protracted battle in the courts, the U.S. Supreme Court affirmed New Jersey's power to impose more stringent antiracketeering regulations than those imposed by federal law.[24] Gerace resigned his union presidency, but Local 54 continued to employ him as a "consultant."[25]

In 1984, the Senate Permanent Subcommittee on Investigations, after a three-year investigation of the Hotel and Restaurant Workers, concluded that the Philadelphia LCN controlled Local 54 and exerted

* The local had experienced extraordinary growth when casino gambling in Atlantic City was legalized in 1978. Local 54's membership swelled to 22,000.

0490

"substantial influence" over the HERE International Union. At subcommittee hearings, thirty-four witnesses, including both HEREIU officials and reputed mobsters, refused to answer questions, asserting the Fifth Amendment right against compelled self-incrimination. The subcommittee's report found that the Atlantic City and Las Vegas locals' dental plans served as slush funds for LCN figures.[26] In the wake of the report, federal prosecutors brought criminal ERISA charges against several union officials and filed a civil suit against Local 54's dental plan and the plan's administrators and service providers. The union and certain providers settled these lawsuits in 1988, agreeing to pay the benefit plan $3.85 million.

In December 1990, the U.S. attorney for the Northern District of New Jersey filed a civil RICO suit against Local 54, General President Edward Hanley, nine former and current Local 54 officers, and ten LCN members and associates, alleging a twenty-year pattern of racketeering. Those named in the suit included Nicodemo Scarfo (Bruno's successor as boss of the Philadelphia LCN family); Philip Leonetti (former Philadelphia LCN underboss); Anthony Piccolo (acting boss of the Philadelphia LCN family); and, nominally, Local 54's affiliated benefit plans and severance fund.[27] The suit charged that Ralph Natale and other organized crime figures had prevented democratic elections within Local 54 by threatening to kill union members who opposed or ran against mob-backed candidates. The consent decree removed eight Local 54 officers and employees from their union positions and permanently enjoined Frank Gerace from participating in HEREIU affairs.[28] Two defendants were enjoined from holding office in Local 54 for ten years, and two others for seven years. The LCN defendants were permanently enjoined from participating in Local 54's affairs. President Hanley agreed not to interfere with the remedial effort or to make any changes in Local 54's organization without a court-appointed monitor's approval.

U.S. District Court Judge Garrett E. Brown appointed the U.S. attorney's nominee, James F. Flanagan (former deputy director of the New Jersey Division of Gaming Enforcement), as "monitor" of Local 54's affairs. Flanagan's authority extended to investigating, auditing, and reviewing all aspects of Local 54's and its affiliated benefit plans' operations. The court also empowered Flanagan to serve as trustee of HERE International Welfare and Pension Funds. Monitor Flanagan would exercise full powers of a trustee, but with respect to union affairs, he would have only the authority to petition the court to protect Local

0491

54 members' rights. The consent decree postponed Local 54's 1991 election until Flanagan could implement democratic election procedures.[29] The judge provided that the "monitorship" would last at least two full election cycles.

When Flanagan assumed his duties, he found the local's finances and operations in shambles. There was no representation available for members who wished to file grievances against their employers. Pursuant to the consent agreement, the union's officers (including business agents) were fired or resigned. Flanagan held quarterly membership meetings, provided education and training to union members, and revitalized grievance handling.[30] He severed questionable contracts with service providers linked to organized crime. President Hanley, with Flanagan's agreement, assigned two experienced HEREIU officials to assist him. Flanagan also hired Michael Holland (the first elections officer in the IBT case) to consult on elections and an accounting firm to conduct annual audits.

Holding a democratic election was the top priority. Flanagan used the local's newsletter to encourage members to vote. He formulated new election procedures, including a grievance procedure to resolve election disputes. Candidates had to pass both FBI and DOL background checks.

In the first election, held in 1993, three of four candidate slates were controlled or influenced by LCN. These slates put forward candidates backed by competing organized crime groups, one headed by the imprisoned Natale and the other by John Stanfa, who, with Genovese crime family support, had attempted to take over the Bruno/Scarfo family after Scarfo was convicted on RICO charges in 1990.[31] Using tapes of Natale's intercepted phone conversations from prison, DOL agents exposed Natale's plan and Flanagan disqualified Natale's candidates.[32] All told, Flanagan disqualified eight candidates because of their organized crime associations. Judge Brown upheld these disqualifications.

Only 22 percent of eligible voters cast ballots in the 1993 secret ballot elections for Local 54 officers. The victors were all individuals who had never held union office before and had no connection with the old regime. In the August 1996 election, more than ninety candidates competed for union office, including four candidates for president. There were no allegations of organized crime involvement. Thirty-three percent of the union membership voted.[33] All the incumbent officers were ousted. Local 54, one of the most racketeer-ridden union locals in the

0492

country, had been liberated and even transformed into a union with truly competitive politics. The monitorship was proclaimed a success by all parties and dissolved in February 1997.[34]

HEREIU LOCAL 100

In 1992, the U.S. attorney for the Southern District of New York filed a civil RICO suit against HERE Local 100.[35] The complaint charged that President Anthony Amodeo and Vice-Presidents Anthony Amodeo Jr. and Jack DeRoss were running Local 100 on behalf of the Gambino and Colombo LCN crime families. It also charged that the defendant union officers employed organized crime members and associates in union jobs and committed or tolerated bribery, extortion, and violence. The case was settled by a consent decree that barred the Amodeos from the union and installed former Assistant U.S. Attorney Mary Shannon Little as trustee. The trusteeship lasted eighteen months and ended with the election of new union leadership.

CIVIL RICO SUIT AGAINST HEREIU

In September 1995, DOJ filed a civil RICO complaint against the 250,000-member Hotel and Restaurant Employees International Union (HEREIU), alleging that since the 1970s its General Executive Board (GEB) members had conspired with organized crime figures to obtain illegal payments from employers, embezzle union assets, and violate union members' Landrum-Griffin rights. Simultaneously, HEREIU and DOJ filed a consent decree[36] whose stated purpose was to free "HEREIU and all its locals from the direct or indirect influence of organized crime, now and in the future."[37] The defendants agreed not to commit crimes; associate with organized crime members and associates; allow barred individuals from exercising control or influence over HEREIU's affairs; and not to obstruct implementation of the consent decree. The consent decree also required that HEREIU, at its next national convention, adopt an ethical practices code and establish a public review board to implement and enforce it.

Federal District Court Judge Garrett E. Brown (who had presided over the HERE Local 54 case) appointed Kurt Muellenberg, a retired

0493

career federal prosecutor, who had served as head of DOJ's Organized Crime and Racketeering Section, as monitor for a term of eighteen months. The consent decree empowered Muellenberg to remove HEREIU local, regional, and international officials for violating any provision of the settlement, committing any crime involving the union or its employee benefit plans, or furthering the influence of any organized crime group. Muellenberg had authority to appoint and discharge union employees and candidates for union office and to disapprove collective bargaining agreements. The court ordered that at its 1996 convention HEREIU adopt an ethical practices code that would define prohibited conflicts of interest by union officers. Muellenberg appointed former FBI agent Daniel F. Sullivan as chief investigator and former Assistant U.S. Attorney Howard E. O'Leary as investigations officer. The consent decree provided for an eighteen-month monitorship with the possibility of an extension. When the term expired, the monitorship was extended for an additional twelve months.

Muellenberg found that many HEREIU locals had a history of organized crime infiltration; did not follow their bylaws; gave inadequate notice of membership meetings; failed to document expenses; failed to submit officers' bonuses and raises to the membership for approval; failed to train officers, business agents, and organizers; and failed to promulgate or maintain standards for personnel, pay scales, job descriptions, and performance.[38] The international union reimbursed business expenses without submission of receipts or explanations. According to Muellenberg, it "suffered from a management deficit and did not subscribe to generally accepted business practices."[39] He described the international union as an agglomeration of employees and officers without any clear rules or procedures. "There is no budget, no organizational chart, no job descriptions for employees, and no manual."[40] He charged that President Hanley hired friends and family members to union positions and as consultants, remunerated them generously, and ran the union like a personal fiefdom.

Muellenberg dissolved eleven improper trusteeships, which the international had imposed to provide jobs to cronies, including organized crime figures and associates. He placed five other locals under trusteeship because federal prosecutors had charged officers of those locals with embezzlement and/or filing false reports to the Department of Labor.[41] In addition, he permanently barred twenty-three individuals from participating in union affairs because of organized crime associa-

0494

tions or failure to cooperate with the monitor. He barred two individuals from participation in union affairs for thirteen years, and two others from holding a position of trust in the union for three years.[42]

Muellenberg devoted much time to investigating President Hanley, who, according to the PCOC, had been put in power and kept there by the Chicago Outfit. Ultimately, Muellenberg charged Hanley with using union automobiles and the union airplane for personal purposes, receiving unearned salary and pension contributions, associating with organized crime members, and setting up a paper local near his Wisconsin vacation home so an individual whom Hanley appointed as that local's president could serve as factotum for Hanley and his friends. On February 19, 1998, Hanley agreed to retire and pay HEREIU $13,944 relating to his purchase of HEREIU-leased automobiles. He also assumed payment of the premiums on a life insurance policy that the union had purchased for him.[43] In return, Muellenberg agreed to cease investigating Hanley's actions during his tenure as general president. Hanley's retirement package included a $350,000 annual salary for life. Hanley's son, Thomas W., agreed to resign for one year and to reimburse HEREIU $25,000 in order to end an investigation into his abuse of union expense accounts.[44]

Muellenberg loaded his August 25, 1998, final report with recommendations for rationalizing the union's administration. On September 1, 1998, HEREIU's GEB voted to implement all of Muellenberg's recommendations on structure, governance, and operations of the international and locals.[45] Just before the monitorship was terminated in 1999, Muellenberg expelled John Agathos and John Agathos Jr. from their positions as Local 69 (Secaucus, N.J.) president and health and pension fund administrator, respectively, because of their links to organized crime.

The monitorship was superseded by a three-person (later expanded to five) Public Review Board (PRB); Muellenberg, Archbishop James P. Keleher of Kansas City, and former Illinois governor James R. Thompson were appointed to the board, which is responsible for overseeing implementation of the ethical practices code. It has authority to review member complaints and to conduct hearings to insure ethical standards in the union's operations, and power to suspend or expel members found to have violated the code. Hanley was replaced as general president by John W. Wilhelm, a well-respected HEREIU official who had never been accused of associating with nor influenced by

organized crime. But neither has Wilhelm repudiated Hanley and the old regime. He has publicly said that he does not believe that LCN ever exerted significant influence in his union and that the monitorship would be useful because it would be "an independent, expert, well-resourced investigation that [would show] that the national leadership of this International Union is not corrupted, controlled, or influenced by organized crime."[46] In 1999, Wilhelm named the HERE International headquarters building in Washington, D.C., for Edward Hanley.

HEREIU CONCLUSION

In striking contrast to the huge fifteen-plus-year ongoing trusteeship in the IBT case, Muellenberg, with only a small staff to assist him, served as monitor for just thirty-six months. The weight of his efforts was directed at improving the union's administration and accounting. The new administration adopted the monitor's recommendations for improving the union's management. The union added a progressive ethical practices code to its constitution and a public review board to enforce it. Hanley's successor enjoys a progressive reputation and bears no organized crime taint, but he has not repudiated Hanley or acknowledged the union's long history of ties to LCN.

Although some of HEREIU's most notorious members were expelled and Hanley was forced to resign,* Muellenberg's investigations and disciplinary actions were not nearly as extensive as those of the independent administrator and IRB in the IBT case. Muellenberg focused surprisingly little attention on identifying or purging organized crime's influence from the union. He also did not make it a top priority to investigate and remedy racketeering in HEREIU locals. No change was made in HEREIU's election procedures.

* Although some commentators criticized the deal with Hanley as letting a labor racketeer off too easily, it is easier to suspect organizational criminality than to prove it. Corruption by high-level officials is difficult to prove because such individuals have the resources and capacity to cover their tracks and give apparent legitimacy to their exploitative conduct. Furthermore, prosecuting Hanley might have taken years. A further obstacle to punishing wrongdoing is posed by ERISA, which prevents pension forfeiture, even against an official who has stolen money from his union. James B. Jacobs, Coleen Friel, and Edward O'Callaghan, "Pension Forfeiture: A Problematic Sanction for Public Corruption," *American Criminal Law Review* 35: 57–92 (1997).

0496

Whether HEREIU has been purged of LCN influence is an open question.* In April 2002, the New Jersey U.S. Attorney's Office brought a civil RICO suit against HERE Local 69, a local over which Muellenberg had imposed a trusteeship three years before. Dave Freeback, the trustee whom Muellenberg had appointed to reform the local, was himself forced out of office in 2001 after charges of financial mismanagement and dishonesty. The 2002 civil RICO lawsuit charged that, for fifteen years, Genovese crime family members and associates had used extortion and intimidation to influence Local 69's affairs and that the local's officers had failed to investigate or take any action whatsoever to remedy the situation. Indeed, according to the complaint, Local 69's officers colluded with LCN labor racketeers in exploiting the local and its members. The federal prosecutors alleged that the local, among other things, had made $524,000 in "severance payments" to the Agathoses, father and son. The district court appointed Muellenberg to serve as monitor over the local and empowered him to investigate the union, approve and disapprove union expenditures, review and take action on collective bargaining agreements, and otherwise supervise the union's affairs. In 2005, Freeback pled guilty to federal charges of embezzling money from both the union and its benefit fund. Muellenberg's monitorship continues as this book goes to press, but Local 69 is slated to be merged out of existence in 2006.

LIUNA

> In summation, Mr. Chairman, we are extremely proud of everything we have accomplished to date to ensure all Laborers the corruption-free, fully-democratic union they deserve. We also recognize that there is much work still to be done and our commitment to democracy and reform remains as deep and unyielding as ever.
>
> —LIUNA General Counsel Michael S. Bearse, Testimony at the Laborers International Union of North America, House Subcommittee on Employer/Employee Relations, May 4, 1998

* On July 8, 2004, HERE merged with UNITE (formerly the Union of Needle Trades, Industrial and Textile Employees), forming UNITE HERE.

0497

> The so-called LIUNA "internal reform effort" is a failure and a sham. . . . This latest extension is extremely inadequate. It's an outrage. . . . From Connecticut to California, NLPC [National Legal and Policy Center] continues to get reports from dissidents of the widespread corruption that still exists in many LIUNA locals.
>
> —National Legal and Policy Center President Peter Flaherty, January 7, 1999

Historically, LIUNA, at the international and local levels, especially in Chicago and New York City, was, like HEREIU, closely tied to Cosa Nostra crime families. Outfit boss Tony Accardo exercised a great deal of influence in the union for many years.[47] He and his successors controlled LIUNA's general presidents (Peter Fosco and his son Angelo)* and the officers of many locals.

In late 1994, the DOJ presented LIUNA officials with a 212-page civil RICO complaint, alleging that LCN crime families dominated the 800,000-member union,[48] and alleging 100 predicate racketeering acts. The complaint named 39 defendants, including General President Arthur A. Coia, General Secretary-Treasurer Rollin P. "Bud" Vinall, all 10 LIUNA vice-presidents and the union's general counsel. The complaint alleged that the defendants violated the rights of LIUNA members through intimidation, violence, and economic coercion, and that the union defendants violated their (Landrum-Griffin-imposed) fiduciary duty to the membership by failing to investigate, prevent, or remedy corruption.

As a remedy, the government sought the expulsion of Coia and the other union leaders, and requested that one or more "court liaison officers" be appointed to carry out the duties of the general president and the General Executive Board (GEB) and to prevent any GEB action that would violate union members' rights or perpetuate criminal influence in the union. The draft complaint requested that the union's constitution be amended to prohibit discriminatory hiring hall practices, and to provide for direct rank-and-file election of officers. The DOJ lawyers also included a request for a court-appointed elections officer.

Following its usual procedure in such cases, before filing the com-

* Angelo named his son Peter. And this Peter, like father and grandfather, was also active in LIUNA. Robert Luskin and the civil RICO–spawned reform team removed Peter from office.

0498

plaint, DOJ offered the union an opportunity to respond to the allegations. DOJ offered to meet with LIUNA's representatives, albeit not with LIUNA's longtime general counsel, who was a defendant in the suit. At that point, General President Arthur Coia hired Robert Luskin, a former federal organized crime prosecutor, to represent the union in negotiations with DOJ.

Luskin sought to persuade Coia that it would be a waste of millions of dollars to contest the government's overwhelming case and that, if the case went to trial, the court would almost certainly impose an external monitor like the IRB in the IBT case. Simultaneously, Luskin sought to persuade the DOJ that an *internal union reform effort* could produce more reliable long-term reform then a court-imposed trusteeship, which, based upon IBT Local 560 and the HEREIU experiences, seemed to alienate the rank and file and solidify support for the entrenched regime.

After three months of negotiations, LIUNA and the DOJ announced a unique settlement. The DOJ agreed to forgo filing its civil RICO complaint if LIUNA installed an internal reform team and reform program acceptable to DOJ. According to the settlement, LIUNA would sign a consent decree agreeing to an external court-appointed monitor, but the DOJ would refrain from filing the signed consent decree for ninety days; after that time, the DOJ could file the consent decree at its sole discretion if it was dissatisfied with LIUNA's reform effort. Subsequently, the agreement was extended to 2001 and then, with certain modifications, to 2006.* The signed consent decree has never been filed. Instead, reform has proceeded under the auspices of a LIUNA reform team.

In order to satisfy the DOJ, LIUNA adopted an ethical practices code (drafted by Luskin) and established four new positions: (1) GEB attorney, filled by Robert Luskin, to investigate and prosecute violations of the ethical practices code; (2) inspector general, filled by Douglas Gow, retired high-level FBI official, to investigate violations of the ethical practices code; (3) independent hearing officer, filled by

* Although some critics contend that the settlement let LIUNA off too easily, I do not agree. The settlement put DOJ in a "heads I win, tails you lose" position. The DOJ obtained a signed consent agreement that included everything it asked for in the civil RICO complaint. The DOJ could make this remedy effective, at its sole discretion, any time after ninety days had passed from the date of the settlement. Moreover, the DOJ itself, rather than a judge or court-appointed trustee, would monitor and judge LIUNA's remedial efforts. It is hard to see how the government could have obtained a better resolution.

0499

Peter Vaira, former chief of the DOJ's Chicago Organized Crime Strike Force and former U.S. attorney in Philadelphia, to serve as judge and arbitrator in disciplinary cases; and (4) appellate officer, filled by Neil Eggleston, a former federal prosecutor assigned to replace John Serpico, a Chicago labor racketeer, who had been in charge of hearing disciplinary appeals from throughout the union. Luskin hired two dozen former FBI agents, two full-time law firm associates, and one full-time person to work on job referral reform. Inspector General Gow hired three full-time staff members. The reform unit also had authority to place corrupted LIUNA locals into trusteeship.

The newly appointed LIUNA officers established a confidential toll-free telephone number and a confidential post office box to solicit complaints from the LIUNA membership. By mid-1996, the reform officers had charged Serpico and Vice-President Robert Cavone with knowingly maintaining organized crime ties and had begun more than 345 investigations; expelled from the union 25 officers and members for violating the ethical practices code; removed all of the officers of LIUNA Local 210 (Buffalo, N.Y.); placed Chicago LIUNA Local 8 under emergency trusteeship; and sent Steve Hammond to work with Trustee Michael Chertoff (former federal prosecutor and later Secretary of Homeland Security) to clean up the racketeer-ridden New York City Mason Tenders District Council.* The reform team also initiated an investigation of General President Coia.[49]

At its convention, LIUNA amended its constitution to require direct rank-and-file secret-ballot election of the general president and general secretary-treasurer. It also expanded its GEB from ten to thirteen members, requiring that nine members be elected regionally so that the board would be more accountable to the membership. As well,

* The following illustrates the kind of legal energy required to remove just one union actor from the scene. (There have been scores of similar cases.) The draft civil RICO complaint named Sam Caviano, a vice-president and regional manager for the New York City area (including the Mason Tenders), as a defendant. The government alleged that Caviano was a tool of the Genovese crime family. Luskin charged Caviano with a disciplinary violation, and Vaira suspended him from the union. Caviano then filed suit in federal district court challenging the disciplinary procedure. The judge ruled for the government on summary judgment. Then the government and Caviano signed a settlement agreement, agreeing that he would resign voluntarily. During the interim, he also attempted to continue running the union's benefit funds, changing the trust agreements to perpetuate his power as trustee. Luskin sued in federal court and obtained a preliminary injunction removing Caviano from the benefit funds.

0500

it changed its procedures for selecting convention delegates and eliminated several locals whose primary purpose seemed to be to provide convention votes to organized crime. LIUNA also hired an independent elections officer (Northwestern University Law School Professor Stephen B. Goldberg) and two deputy election officers, jointly selected by the government and union, to monitor union elections at the local, regional, and international levels. The union adopted uniform job referral rules to prevent discriminatory hiring-hall practices. Luskin hired an independent accounting firm to audit LIUNA's finances.[50] Still, in the 1996 international election for general president, the only candidate to challenge Coia was Bruno Caruso who charged that Coia was *too cooperative with the government.* Coia was reelected, once again demonstrating the unwillingness or inability of racketeer-ridden unions to vote labor racketeers out of office.

In November 1997, Luskin filed disciplinary charges alleging that Coia knowingly associated with organized crime members, permitted organized crime to influence union affairs from 1986 to 1993, and accepted illegal payoffs from a LIUNA service provider. The hearing, which lasted from April 14, 1998, until June 23, 1998, included more than five hundred exhibits. Testimony filled thousands of transcript pages. Independent Hearing Officer Vaira "acquitted" Coia of the allegations of organized crime association and influence but found him "guilty" of accepting illegal benefits from a LIUNA service provider. He fined Coia $100,000 but did not remove him from office.[51] The U.S. Attorney's Office in Rhode Island immediately brought criminal tax evasion charges against Coia, based upon benefits Coia had received from the service provider. Before the criminal trial, the parties entered into a plea agreement whereby Coia agreed to relinquish the general presidency and become *general president emeritus for life* at an annual salary of $335,516.[52] The GEB appointed Terrence O'Sullivan, Coia's chief of staff, as his successor.

When Luskin brought disciplinary charges against a mobbed-up local, there was a hearing before Hearing Officer Vaira. If Vaira sustained the charges, the local and its officers could appeal to the federal district court judge presiding over the suit, but Luskin and Vaira were consistently upheld. When the officers of the local union were removed, Luskin appointed replacements. By 2002, 226 officers and members had been expelled from the union, 127 of these because of ties to organized crime. As of early 2004, nearly three dozen LIUNA locals and district

0501

councils had been placed under trusteeships or monitoring because of mismanagement, connections to organized crime, or corruption.

In 2001, the DOJ and LIUNA amended and extended their agreement. The government recognized and publicly acknowledged the success of the Luskin-led reform effort and relinquished the so-called contingent consent decree, i.e., the DOJ gave up the option of filing the signed consent decree imposing an external IRB-type monitor. The parties agreed that LIUNA's future obligation would be to maintain the existing reform program. If LIUNA fails to do that, the DOJ could secure an injunction restoring the reform program. This agreement will be in force until the conclusion of LIUNA's 2006 general election. Luskin does not anticipate the completion of his work in the foreseeable future.

LIUNA CONCLUSION

In 1994, the DOJ prepared the first major attack on LIUNA labor racketeering at the national level. The civil RICO complaint led to a creative settlement between the government and the union. LIUNA hired four former federal law enforcement figures to enforce its new code of ethics. This internal reform project has scored many important successes. Hundreds of corrupt and/or organized crime–connected officers and members have been purged. Dozens of locals have been put under trusteeships. The international union suspended John Serpico, labor racketeer and political power broker, from his union positions in 1995.* Many other officers and members were also expelled or suspended.

Nevertheless, there is no sign of union democracy. There is no insurgent rank-and-file movement and very few contested elections. The reformers are regarded as "government men" or "policemen"; a culture of reform has not yet taken hold. New election procedures were not implemented. There remains a great deal of labor racketeering in the locals and in certain regional unions, like the New York City Mason Tenders District Council. Indeed, from 1999 to 2002, corrupt union officials were prosecuted for defrauding LIUNA locals in Chicago (Local 5), Des

* Serpico then signed on as a "consultant" for a Chicago local of the International Union of Allied Novelty and Production Workers. He also served for a time as president emeritus of the Central States Joint Board, which provides administrative services to Chicago-area unions. In the summer of 2001, Serpico and two associates were convicted of taking kickbacks in exchange for steering union business to certain companies.

0502

Moines (Local 177), and Niagara Falls (Local 91), and others.[53] In January 2005, the LIUNA General Executive Board imposed a trusteeship over Local 29 (New York City) in order to "eliminate organized crime corruption within the local."[54] Also in January 2005, the LIUNA reform unit charged that there was rampant organized crime–connected corruption in LIUNA Local 734 which operates in southern New Jersey and Pennsylvania.

ILA

> [W]orkers of the Port of New York are being exploited in every possible way and . . . they are not receiving the protection which they have every right to expect as trade unionists. . . .
>
> —Letter, Executive Council, AFL, to officers and members of the ILA, February 3, 1952; quoted in Vernon H. Jensen, *Strife on the Waterfront: The Port of New York since 1945* (Ithaca: Cornell University Press, 1974), 105

> When we began this case three years ago, we were shocked at the extent to which the ILA was controlled by organized crime.
>
> —The FBI's top official in New York, according to *New York Times* reporter Frank Swoboda, *New York Times,* February 15, 1990

Of the four most racketeer-ridden international unions named by the President's Commission on Organized Crime, only the ILA has not (at least as of winter 2005) been subject to a civil RICO suit, although such a suit has been rumored for almost a decade to be in the works. Perhaps the government has refrained from bringing such a suit in order to see whether its omnibus 1990 civil RICO suit against ILA locals in the New York City/New Jersey area produces the necessary reforms.

On February 14, 1990, the U.S. Department of Justice filed a civil RICO suit[55] against six ILA locals representing dock workers in the New York/New Jersey port as well as their executive boards and officers; the Genovese and Gambino crime families; the Westies, an Irish organized crime group allied with the Gambino family; and five waterfront employers.[56] The complaint charged that the waterfront had "been the setting for corruption, violence, and abuse of waterfront labor and

0503

business by New York La Cosa Nostra Families" for more than fifty years. It alleged that the Genovese and Gambino organized crime families control and exploit the ILA locals and their members and the shipping industry. According to the government, despite the many criminal convictions that resulted from the FBI's massive UNIRAC (Union Racketeering)* investigation in the late 1970s, the Genovese and Gambino crime families, by means of their influence in the ILA, continued to exert influence in many eastern seaboard ports. The government cited dozens of instances of embezzlement, solicitation and receipt of bribes, benefit fund fraud, extortion of employers, and violation of the rank and file's Landrum-Griffin rights as RICO predicate acts.

To remedy these alleged RICO violations, the Department of Justice asked the court to enjoin the organized crime defendants from participating in ILA affairs, having any dealings with union officers and employees, and committing racketeering acts. The DOJ requested the court to require the defendants to disgorge the proceeds of their RICO violations and to enjoin the defendant union officials from knowingly associating with Cosa Nostra members or associates. The complaint also asked the court to appoint "liaison officers" for each of the ILA locals to "discharge those duties of the Executive Board[s]"; "review the proposed actions of the Executive Board[s]"; implement fair elections; and oversee union reform.

ILA LOCAL 1804-1 (BERGEN, N.J.)

On March 25, 1991, ILA Local 1804-1 and its Executive Board and officers entered into a consent judgment with the DOJ. Local 1804-1's current and future Executive Board and its officers agreed to be enjoined from racketeering activity and from knowingly associating with members or associates of organized crime.[57] The consent judgment provided for a monitor to oversee Local 1804-1's operations until the 1997 election. The monitor would have full access to all union documents and

* "Perhaps the modern era in the government's anti–organized crime war dates to the FBI's massive UNIRAC investigation of the International Longshoreman's Association in the late 1970s. The labor racketeering investigation, the subject of special Senate hearings in 1981, resulted in the conviction of 130 businessmen, union officials, and Cosa Nostra members, including Anthony Scotto." (Jacobs et al., *Busting the Mob,* 6.)

0504

information; authority to discipline union officers, agents, employees, and members; power to investigate corruption or abuse of union funds; and supervisory authority over the union's 1994 and 1997 elections. In addition, the monitor had authority to review and veto union expenditures, union contracts, personnel decisions, and proposed changes to the union's constitution and bylaws.

Local 1804-1 agreed to pay the monitor's salary and operating expenses and not to oppose or interfere with the monitor's execution of his duties. The consent judgment provided that Local 1804-1's constitution be amended to include salary caps for officers, election of shop stewards, and a prohibition on union loans to union officers and members. It permitted Local 1804-1's Executive Board to remain in office but required several board members to pay $100,000 to Local 1804-1's treasury. Ten years after the settlement, other than the expulsion of several officers, very little had changed.

ILA LOCAL 824, ILA LOCAL 1809, AND ILA LOCAL 1909 (MANHATTAN WEST SIDE LOCALS)

On March 26, 1991, Locals 824, 1809, and 1909—collectively known as the (Manhattan) West Side Locals—and their Executive Boards and officers signed a consent judgment with the DOJ. Without admitting wrongdoing, the defendant union officials agreed to be enjoined from knowingly associating with any member or associate of organized crime.[58] Executive Board members John Potter and Thomas Ryan resigned, agreeing to be enjoined from holding ILA office in the future. ILA International President John Bowers (also president of the three West Side Locals) and Executive Board member Robert Gleason agreed to resign their memberships in an employer association, the NYSA (New York Shipping Association)-ILA Contract Board. The consent judgment also provided that the Department of Labor would supervise the West Side Locals' 1991 and 1994 elections and that the DOL would have access to union records necessary to carry out this responsibility.

Local 1909 agreed to implement fair job referral rules and procedures; discontinue no-show jobs; discipline those who violate hiring or employment procedures; and accept the court appointment of an employment practices officer whose term would run until certification of the 1994 union election. He or she would be paid by the union, have

full access to union records and report to the court at least every six months. The West Side Locals agreed not to obstruct, oppose, or otherwise interfere with the work of the DOL or the employment practices officer. Incredibly, President John Bowers proclaimed the consent judgment "a complete victory," asserting that nothing exceptional had been granted to the government in exchange for the settlement.

The remaining civil RICO defendants went to trial in spring 1991, but only four defendants persisted to judgment; the rest settled. On June 1, 1991, Anthony Scotto, one of the most powerful labor racketeers in U.S. history in light of his high rank in both Cosa Nostra (capo) and in the ILA (international vice-president), agreed to pay $50,000 and to be banned permanently from union office and association with the union, and with employers with whom the union had collective bargaining agreements. When, subsequently, Scotto was sentenced to prison in a separate criminal case, Anthony Ciccone succeeded him in both the Cosa Nostra and union roles.

ILA LOCAL 1814 CONSENT DECREE (BROOKLYN)

ILA Local 1814, its Executive Board and officers entered into a consent decree with the DOJ in December 1991. The individual defendants and officers, without admitting wrongdoing, acknowledged past allegations, testimony, public findings, and criminal prosecutions. They agreed to be enjoined from knowingly associating with organized crime members or associates.[59]

The consent decree provided for a court-appointed monitor to have full access to the union's books, records, and other information; disciplinary authority; and supervisory authority over the 1993 and 1996 elections. The monitor, paid by the union, would hold veto power over union expenditures, contracts, appointments, and proposed constitutional and bylaws amendments. The monitor, Joseph Jaffe (a former assistant U.S. attorney in SDNY), was authorized to hire legal counsel, accountants, consultants, investigators, and any other personnel necessary to assist him in carrying out his duties.

The consent decree required amending Local 1814's constitution to provide for secret-ballot, rank-and-file elections of shop stewards and limitations on officers' compensation. Moreover, two Executive Board

members had to resign their Local 1814 positions and agree not to be employed by the ILA in the future. Ciccone had to resign his office but was permitted to remain a union member and receive union benefits.[60] The other members of the Executive Board were also permitted to keep their positions. The "monitorship," which expired after the 1996 election, did not accomplish much change in Local 1814. Although the union is far less influential than it once was because there are few functioning cargo operations left on Brooklyn's docks, the Gambino crime family's influence remains strong, as demonstrated by the June 2002 indictment of Gambino crime family members and union officials for operating ILA Local 1814 as a racketeering enterprise.[61]

The federal indictment alleged, among other things, that the Genovese and Gambino crime families conspired to control selection of ILA officials. Moreover, the government charged that, despite the 1991 consent decree that prohibited Anthony Ciccone from participating in ILA and waterfront affairs, he continued to be in charge of the Gambino family's interests in the ILA (including Local 1814 and Local 1). Among its specific allegations, the government charged that the mob defendants accepted a $400,000 payoff from two brothers who wanted the contract to provide prescription drugs to the ILA's health and welfare program. A jury found all defendants guilty.[62]

The ILA international union reacted to these indictments by placing Local 1814 in trusteeship. ILA International Executive Board member Robert Gleason was named trustee. Eventually Gleason was replaced by an ILA official from outside the New York/New Jersey area. Hoping to prevent a civil RICO suit, the ILA International hired former federal Brooklyn Strike Force head, Andrew Maloney (the same individual later hired by James P. Hoffa as special counsel when Ed Stier and Jim Kossler resigned), to monitor MILA.

LOCAL 1588 (BAYONNE, N.J.)

On January 3, 1992, the last of the six locals named in the 1990 civil RICO suit, Local 1588 and its Executive Board, entered into a consent agreement. ILA Local 1588's secretary-treasurer, Donald Carson, was convicted in 1988 of RICO conspiracy and extortion involving Local 1588.[63] In 1990, Local 1588's president and secretary-treasurer declined

0507

to run for re-election. The consent order acknowledged that "the new executive board already has taken steps to return Local 1588 to fiscal soundness and to remove the taint of organized crime corruption."

The consent decree established an "ombudsman," who would function until the 1993 election or longer at the option of the union's Executive Board or membership.[64] The ombudsman's office was to be staffed by two individuals, one appointed by the court and one by the union. The court appointed Robert Gaffey, formerly an assistant U.S. attorney and later chief counsel to the investigations officer in the IBT International case. The ombudsman was charged with enforcing the union's constitution and bylaws. Although the ombudsman had power to file disciplinary charges after consulting with the union's Executive Board, it had few other powers and a paltry budget. The consent agreement provided for election of stewards and constitutional changes to disciplinary procedures, Department of Labor supervision of the local's 1993 election, and an injunction preventing two named individuals from serving as shop stewards or in any other ILA office or position.

Ombudsman Gaffey's main achievement was to generate a slate of reform candidates to oppose Donald Carson's Genovese-controlled slate. The "reform" slate won the 1993 election; the office of ombudsman expired. Unfortunately, the new head of Local 1588 was convicted of stealing union funds and removed from office. The brief trusteeship must be regarded as a complete failure.

In 2003, the government brought a civil contempt proceeding against Local 1588, asserting that the local had violated the 1992 consent judgment. Arguing that an outside trustee was unnecessary, the ILA put Local 1588 in trusteeship. Nevertheless, the judge ruled for the government and appointed former New York City Police Commissioner Robert McGuire as trustee and gave him sweeping powers over all aspects of union operations. MaGuire hired Robert Stewart, formerly chief government counsel in the IBT Local 560 case, as his deputy trustee. In an effort to strengthen the foundations of a democratic union, McGuire and Stewart hired Carl Biers, the former executive director of the Association for Union Democracy. This is a very important experiment that ought to tell us much about the potential of a union democracy specialist to transform a thoroughly corrupted and exploited union into a democratic union.

0508

ILA CONCLUSION

The remedial litigation to reform the ILA achieved, at best, very limited success. In January 2002, the U.S. attorney's office (Brooklyn) announced an indictment against eight leaders and members of the Genovese crime family, including its boss Vincent Gigante, alleging extortion from waterfront employers and businesses in the New York City metropolitan area, northern New Jersey, and Miami.[65] The indictment accused the mob defendants of conspiring to violate the rights of ILA members by defrauding the union's pension and welfare fund. It also charged them with extorting firms that repair cargo containers.

Six months later, in June 2002, a federal grand jury returned a second series of indictments against seventeen members and associates of the Gambino crime family, including the boss (Peter Gotti); two captains (one of whom was Local 1814 boss and LCN capo Sonny Ciccone); four soldiers; and ten associates, including the ILA Local 1814's president and vice-president. Both the January and June 2002 indictments alleged the same type of labor racketeering that has been repeatedly exposed since the 1950s. Despite prosecutions, investigative commissions, civil RICO suits, and trusteeships, LCN continues to exert powerful influence over the ILA locals throughout the New York/New Jersey port. In 2004, the government announced yet another major ILA indictment, this one naming as defendants the incumbent presidents of ILA Local 1804-1, ILA Local 1235 in New Jersey, and seven Miami locals (1922; 1922-1; 2062). The indictment alleged that the three officials functioned as Genovese crime family associates. According to the indictment, the Genovese family created the three locals in the 1960s that would represent workers who repair and service cargo containers and serve the interests of the crime family.[66]

CONCLUSION

It is difficult to appreciate the amount of legal energy that has been poured into the effort to reform the IBT, LIUNA, HERE, and ILA. In terms of number of motions, decisions, orders, opinions, and reports by judges and their trustees, these cases may be unparalleled in the history of American law. One colleague tells me that she counted two

hundred signed opinions/orders by Judge David Edelstein in the IBT international case; that does not, of course, include orders of his successor, Judge Preska. The written opinions by the General Executive Board and the appellate officer in the LIUNA case fill more than a dozen volumes. The total number of hours that assistant U.S. attorneys, judges, and trustees have devoted to these cases is staggering. Half a dozen ambitious scholars would be consumed for years by the task of documenting and assessing the impacts of this legal intervention. So far, however, evaluation has attracted little governmental or scholarly interest.

It is striking how different the reform efforts directed against the four racketeer-ridden international unions has been. The ILA has not yet been subject to a civil RICO suit against its central headquarters and General Executive Board. Such a suit has been rumored for several years. The possibility, indeed the threat, of such a suit has itself had consequences. The ILA has hired an outside lawyer to recommend and implement reforms that might prevent a civil RICO suit. Quite possibly the international union operates differently because of the civil RICO threat. Of course, the operation of the several New York/New Jersey locals has been substantially affected, although it does not appear that any of those trusteeships can be called a substantial success. Indeed, Local 1588 is now in a second-round trusteeship and major organized crime prosecutions have exposed extensive LCN involvement in several of the other locals.

The trusteeship in the HEREIU case is by far the least intensive and comprehensive of those imposed on the four international unions. Compared to the others, that trusteeship was brief in duration, scantily staffed, and minimally intrusive. If the kind of massive remedial effort that took place in the IBT and LIUNA cases was necessary, it is hard to believe that the relatively minimalist effort in the HEREIU case could have been sufficient (assuming, of course, some rough parity in the extent of the racketeering). Nevertheless, there are several important achievements. Ed Hanley was removed from office. A small number of mob-associated officers were expelled from the union. A few locals were placed under trusteeships. The new president has better credentials than the presidents of the other three international unions, but even he has not repudiated the old regime. Investigations of labor racketeering in the HEREIU, to my knowledge, have more or less ceased. Although the union is clearly less mob influenced than it was, we do not

0510

know whether HEREIU has been substantially liberated. If so, it is crucial to determine how this could have been accomplished with such a comparatively inexpensive and short-term effort.

LIUNA was never placed under a formal trusteeship, but the reform effort that the union agreed to implement is the functional equivalent of a RICO trusteeship, albeit without judicial involvement. The people whom the union hired to carry out the reforms necessary to forestall the civil RICO suit's being filed were drawn from the same pool of former prosecutors and retired law enforcement personnel who served in practically all the civil RICO union cases. One of the rationales for preferring this approach was that the rank and file would be less alienated by an internal effort than an external one, but this is not obviously borne out by events. The reform unit hired by LIUNA and led by Robert Luskin is, in every sense of the term, an "outside" group. These are not home grown union officials working within the system to clean things up. These are former prosecutors and FBI agents carrying out criminal-type investigations and bringing aggressive disciplinary actions to expel mob-tainted union officials and to place mob-tainted locals under trusteeship. While, in theory, the LIUNA reform unit is not as secure as a trusteeship that owes its existence to a judicially enforceable consent decree, in fact it is absolutely secure. LIUNA officials know that if they were to disband the reform unit, a DOJ civil RICO suit would swiftly ensue.

The IBT remedial effort is the most formal, the most resource intensive, and has the longest duration. In striking contrast to the LIUNA remediation, the IRB operates at arm's length from the union, much like a prosecutor's office. The IBT takes no ownership of the IRB and, in fact, is critical and hostile toward it. This encourages the rank and file to see the remediation effort as unreasonably imposed by the government on their "misunderstood and mistreated" union. That being said, there can be no denying or minimizing the enormous impact that the IRB has had on the organization, personnel, and operation of the IBT. With hundreds of officials expelled and dozens of locals in trusteeship, the IBT has been and continues to be subjected to a thorough organizational cleansing. There is much reform to applaud, but it would be a mistake to declare the mission accomplished.

One interesting and important observation is that none of the four unions has been taken over by a reformist regime that condemns and repudiates that union's past association with organized crime and em-

0511

braces the government as liberators. Even Ron Carey, the most reform oriented of the new wave of officials in these unions, did not go that far. He may have condemned the organized crime element in the IBT, but he did not embrace the government as a liberator. In part, this speaks to the unhappy history of government suppression of unions in the late nineteenth and early twentieth centuries. In part, it may speak to the strength of organized crime's influence in these unions.

POSTSCRIPT

In July 2005, the U.S. Attorney for the Eastern District of New York (Brooklyn) filed the long-awaited and long-rumored civil RICO suit against all 31 members of the International ILA's Executive Council as well as several leaders and members of Cosa Nostra. This suit follows up and builds upon the recent criminal prosecutions of Gambino and Genovese Crime Family members for labor racketeering in Brooklyn and Staten Island(Gambino) and New Jersey and Miami (Genovese).

The RICO complaint charged the defendants with conspiring to dominate the ports by placing organized crime members and associates into high-ranking ILA positions and rigging union elections. The complaint called long-time ILA President John Bowers "a Genovese Crime Family associate" and charged the defendants with conspiring to eventually replace the 80 year old Bowers with General Organizer Harold Daggett whom the complaint also refers to as a "Genovese Family associate." Furthermore, the U.S. Attorney alleged that the Gambino Family agreed to support Daggett as Bowers' successor in exchange for several Gambino members and associates being appointed to top union and benefit fund positions.

One of the most salient racketeering episodes charged in the complaint is that the defendants defrauded the ILA membership by arranging to award a major health fund contract to a company connected to Cosa Nostra.

In terms of relief, the U.S. attorney is asking the federal court to bar Bowers, Daggett, several other top ILA officials as well as alleged mobsters Peter Gotti, Jerome Brancato, and Anthony Ciccone from employment by the union or by any company doing business in the Port of New York. In addition, the government seeks a court-appointed trustee to run and reform the ILA and its associated pension and welfare funds

0512

and to hold a fair election for Executive Council positions. Finally, the U.S. attorney is asking the court to order the defendants to disgorge the proceeds of their labor racketeering activity. See *U.S. v. ILA et al.,* case 1:05-cv-03212-ILG-WP (E.D.N.Y., filed July 6, 2005).

The ILA defendants have vowed to fight the suit.

12

Evaluating Civil RICO

> Furthermore, it can be argued that the long-term effect of this type of RICO suit may be to decrease the overall level of democracy in the labor movement. A proliferation of RICO trusteeships could foster a siege mentality among members of organized labor...This siege mentality phenomenon underscores the importance of the judiciary clearly articulating the reasons and standards for imposing a trustee. Only by making clear to union members that corruption and not organized labor is the target of the RICO litigation can the government and the courts avoid exacerbating the very problem they seek to correct.
>
> —Professor Clyde Summers, University of Pennsylvania Law School, at http://www.ipsn.org/court_cases/union_receiverships_under_rico.htm

> Where you can identify individual criminal conduct, it should be investigated and punished severely. But where it has gone on for so many years and it has become so much a part of the fabric of the organization that you are dealing with, civil RICO represents a drastic, but nonetheless often necessary solution.
>
> —Benito Romano, U.S. Attorney, SDNY, Hearings before the Senate Permanent Subcommittee on Investigations of the Committee on Governmental Affairs, 101st Cong., 1st sess., April 4, 1989

Evaluating the success of RICO union trusteeships is essential, but extremely complex. It is incredible that more than twenty years of civil RICO litigation against racketeer-ridden unions has been conducted without any evaluation whatsoever. Not a single conference or workshop has ever been convened. Successes and failures have never been

[162.10.217.184] Project MUSE (2026-06-15 01:41 GMT) University of Queensland

0514

identified, much less documented or analyzed. All U.S. attorneys considering civil RICO union suits have had to begin from scratch or with only vague ideas as to what kind of relief to ask for. They have no record to guide them in anticipating or addressing posttrial or postsettlement problems of organizational reform.

Evaluation questions abound. At what point in the remedial process is an evaluation appropriate? If the life of the trusteeship has been extended, should evaluation similarly be delayed? In the event that the trusteeship was established for an indefinite term, should evaluation await the trusteeship's termination, no matter how long that takes?* Ideally, a trusteeship should be evaluated at several points in time. We would like to know, for example, what progress has been made after the first two years, and then after five years, if the trusteeship lasts that long. (Indeed, this is essential so that midtrusteeship corrections can be made.) We should also like to know what the situation looks like several years after the trusteeship's termination. Did the union revert to its pretrusteeship condition? Is it now a democratic union accountable to the membership?

The conceptual problems are matched by the problems involved in obtaining accurate empirical evidence on which to make an informed judgment about successes and failures. How can an evaluator assess the status of organized crime's influence on union affairs? Dissidents may believe that new union officers are corrupt. They can hardly be blamed for being suspicious, but they may be incorrect. Developing reliable informants is a major challenge for investigators and takes a great deal of time, energy, and resources. If FBI and DOL agents have remained on the case, they may have informants who can provide accurate information about the current relationship between organized crime and the union. Unfortunately, the FBI and DOL agents may have moved on to

* Another concern is that it may not be obvious when a trusteeship has ended. In a number of cases, when the original trusteeship ended, the judge maintained the court's jurisdiction and continued monitoring through a new arrangement. For example, in the Mason Tenders District Council case, after the expiration of the trusteeship, a "supplemental" consent decree was entered into in January 1999 that provided that the trustee, Lawrence Pedowitz, would act as a "Review Monitor" for an additional thirty-six months, with power to apply to the Court for restoration of his trustee powers if he concluded the union was being run corruptly. *United States v. Mason Tenders District Council of Greater New York*, 1994 WL 742637 (S.D.N.Y. 1994); interview with Lawrence Pedowitz (Nov. 2002).

0515

other cases or, if still involved, lack accurate information about new officials. Even if the investigators have or think they have accurate information, they are likely to be holding it for future prosecutions and therefore be unwilling to divulge it to university-based researchers or to other evaluators. They may not even be willing to share their information with the trustee (which is an argument in favor of drawing trustees from the ranks of former law enforcement officials).

The very meaning of "success" is debatable. Do we mean whether the trustee achieved the goals defined by the federal prosecutor in charge of the case? But what if those goals were under- or overly ambitious? What if the goals were only partially achieved? The anti–labor racketeering initiatives were launched to purge Cosa Nostra from the unions; union democracy was a means, not an end. Nevertheless, it now seems clear that without establishing some modicum of union democracy, at least fair elections, a trusteeship cannot be successful. Certainly, from the rank and file's perspective, nothing positive will have been achieved if one set of racketeers is replaced by another set, even if the new racketeers are affiliated with another organized crime group or are unaffiliated with any organized crime group.

It is essential to recognize that we are talking about an *evaluative process.* We can begin by identifying three basic criteria of success: (1) the purging of organized crime figures and their allies from the union; (2) competitive elections; and (3) a complete break with the racketeer-dominated regime that controlled the union before the civil RICO suit was filed. Ideally, evaluators would have enough information, including court documents, media accounts, and interviews to assess whether each trusteeship has met these criteria.

The Department of Justice's Organized Crime and Racketeering Section[1] and its National Institute of Justice are logical candidates to evaluate civil RICO union trusteeships.[2] We desperately need an ongoing "Program for the Evaluation of Civil RICO Union Litigation" that would carry out or contract for case studies, conferences, and workshops; store and index key documents; and encourage empirical research. Such a unit could draw on the vast experience of trustees in other institutional-reform cases involving schools, prisons and jails, and mental hospitals.[3] It might also prove useful to examine the experiences of democratic reform initiatives in eastern European countries.

0516

THE POTENTIAL AND LIMITS OF CIVIL RICO

Civil RICO appears to be the best available weapon for combating labor racketeering. Without any new investigation, federal prosecutors can bring a civil RICO action following up on previous criminal prosecutions against union officials and organized crime figures who have dominated and exploited a particular union. Indeed, the very preparation of a civil RICO labor racketeering complaint can be an important step toward conceptualizing the problem. Properly drafted, the complaint will identify the roles of and relationship between organized crime figures and union officers in exploiting the union. The litany of past crimes will reveal patterns of intimidation, fraud, extortion, and all manner of corruption.

A comprehensive, fully documented civil RICO complaint is important because, in the absence of a trial, it will serve as the historical and sociological record of labor racketeering in the union. (Unfortunately, these complaints have not been stored in a database nor can they be obtained without considerable effort.) There has been only one full-fledged trial (IBT Local 560) among the twenty civil RICO union cases and one preliminary injunction hearing in which significant testimony was presented (Roofer's Local 30/30B). The rest of the cases were settled. The U.S. attorneys have been extraordinarily successful in obtaining the relief that they asked for, but, in most cases, this relief has not been adequate to remedy the racketeering problem. (My own impressionistic conclusions about the success of all twenty-one civil RICO union trusteeships are presented in Table 12-1.)

For at least two reasons, the settlements in the civil RICO union cases have not been carefully enough thought through. The first reason is that it is a formidable undertaking to analyze thoroughly the labor racketeering problem in a union local, much less a district council or a huge national/international union. Ideally, the U.S. attorney, the judge, and the trustee would want to know a great deal about the industry's economics and labor relations; the history of the racketeer-ridden union; the history of organized crime in the geographic area in which the union operates; the demographics of the union members; the nature of the union members' employment; and the union members' relationships with and attitudes toward their union and employers. In other words, in an ideal world, a U.S. attorney would have a complete case study of the targeted union *before filing the civil RICO suit.*

0517

Table 12-1
Evaluation of Civil RICO Union Trusteeships

Union	*Organized Crime Associates Expelled*	*Elections*	*Conclusion and Sources*
IBT Local 560	The entire Provenzano clique was expunged. The consent decree terminating the trusteeship continued to make knowing association with organized crime members, or with individuals previously expelled from the union, a union-expelled offense.	In December 1998, the Sciarra slate, associated with the Provenzanos, received only 20% of the vote, while a reform slate led by Pete Brown garnered 55%.	Success. Stier, Anderson & Malone, LLC, *The Teamsters Perception and Reality*, 380–83 (2002). Jacobs and Santore, "The Liberation of IBT Local 560," (2001).
LIUNA Local 6A	After the consent decree was signed, 16 of the 25 officers of Local 6A and the District Council resigned their positions, but remained in the union. Nine defendants were allowed to keep their positions.	Neither the 1987 nor 1990 election produced any challengers to the clique that controlled the union.	Failure. The trustee himself did not believe that much was accomplished. Ieromino, "Note, RICO: Is It a Panacea or a Bitter Pill for Labor Unions, Union Democracy and Collective Bargaining?" (1994).
Philadelphia Roofers' Local 30/30B	13 officers removed as a result of a criminal case preceding the civil RICO lawsuit.	Formally fair elections were held, but there was no break with the previous regime. The same clique retained power.	Failure. On March 28, 2003, the Roofers International petitioned the court for a preliminary injunction and imposed its own trustee over the local. *United Union of Roofers v. Composition Roofers Union*, Local 30, 2003 WL 21250627 (E.D. Pa. March 28, 2003). Jacobs, Cunningham, and Friday, "The RICO Trusteeships after 20 Years" (2004).
IBT International	Independent Administrator Lacey, and after the 1991 election the Independent Review Board, acted as trier of fact and sentencing authority on almost 500 charges brought by Carberry. There was a massive purge of organized-crime-associated union officers.	The IBT held competitive elections in 1991, 1996, 1998 (re-run) and 2001. None of the old mob-connected clique remains on the GEB.	Provisional success. It is very difficult, however, to assess the situation that exists throughout a million-plus-member union. Jacobs, Panarella and Worthington, *Busting the Mob*, 175–76 (1994). Stier, Anderson & Malone, LLC, *The Teamsters: Perception and Reality* 339–41 (2002).
IBT Local 295	All executive board members except one were expelled from the union. A handpicked successor was also expelled (and subsequently murdered).	No elections.	Probable failure. Still in progress. A 2002 study by the Teamsters International suggests that there is still organized crime influence in the local. Stier, Anderson & Malone, LLC, *The Teamsters: Perception and Reality* 417 (2002).

New York District Council of Carpenters	Several union officials with ties to organized crime were purged from the union.	The 1995 elections resulted in election of members of the clique that had dominated the union for decades. A 1997 international trusteeship removed the District Council's officers. In 1999, Michael Forde was elected president. Subsequently, he was convicted of taking bribes.	Failure. Michael Forde and other officials convicted of taking payoffs from contractors. Jacobs and Stohner, "Ten Years of Court Supervised Reform" (2004).
HEREIU Local 54	Monitor forced eight officers from office, but they remained in the union.	1993 and 1996 elections resulted in a clear break with the old regime.	Success. Jacobs, Cunningham, and Friday, "The RICO Trusteeships after Twenty Years" (2004).
HEREIU Local 100	President and business manager and vice president were enjoined from participating in the affairs of the local. Consent Decree, *United States v. Anthony R. Amodeo, Sr., et al.* 92 Civ. 7744 (S.D.N.Y. 1992).	The appointed trustee was elected to lead the local, and then re-elected.	Substantially successful. The trustee's last report to the court said that there was no longer "even a hint of organized crime influence." Interview with Mary Shannon Little (Nov. 2002).
IBT Local 282	Three Local 282 stewards removed for committing acts of corruption and for associating with Gambino LCN family members.	Unknown	Unclear. Department of Labor, Office of Inspector General, 1996 Report, *available at* www.oig.dol.gov/public/reports/sar/sar0996/olr2.htm.
IBT Local 851	As of 2002, 32 members had been disciplined; nine had resigned or been expelled.	Competitive elections held April 2001	Possible success. "Given the deep entrenchment organized crime had for decades in . . . Local 851 . . . the combined actions of law enforcement, . . . Local 851's monitorship and the Teamsters themselves must be viewed as an overall success." Stier, Anderson & Malone, LLC, *The Teamsters: Perception and Reality* 416 (2002).
Mason Tenders' NYC District Council	More than a score of officials ousted, including several who were alleged soldiers in the Genovese crime family.	The election officer drafted election rules for the 1997 election, recommending that 16 of the approximately 70 candidates for union office be disqualified; the Monitor disqualified 15. *United States v. MTDC*, 1997 WL 340993 (S.D.N.Y. 1997).	Failure. In September, 2004, the District Council and Local 79 entered into voluntary supervision by LIUNA International. Five top officers resigned; two are facing criminal charges. *Hearing on "Impediments to Union Democracy," Before the Subcomm. on Employer-Employee Relations of the House Comm. on Educ. and the Workforce*, 105th Cong. (May 4, 1998) (statement of Michael S. Bearse, General Counsel LIUNA).

(continued)

Table 12-1 *(continued)*

Union	*Organized Crime Associates Expelled*	*Elections*	*Conclusion and Sources*
LIUNA International	More than 300 officials and members have been expelled or forced to resign due to disciplinary changes. LIUNA has imposed more than 40 trusteeships and "supervisions" of various locals and subordinate entities for ties to OC, financial mismanagement or lack of democratic processes. These trusteeships and supervisions have resulted in the removal of approximately 200 officers and the implementation of better financial management and greater democracy.	Election procedures have been reformed. Monitor considered 1996 general elections a limited success. But there has been no decisive change in leadership.	Substantially successful. Very difficult, though, to assess whole International Union. *See, e.g.*, Stephanie Mencimer, "Ex-FBI Official Pulls at Union's Infamous Roots," *Washington Post*, June 7, 1998.
HEREIU International	Muellenberg permanently barred 23 individuals from participating in union affairs because of organized crime associations or failure to cooperate with the monitor. Two individuals were barred for 13 years, and two individuals for three years.	Muellenberg reviewed more than 1064 candidates for election to local union office, approved 64 elections, and postponed or invalidated 3 elections. No decisive change in the International Union's leadership, but current president enjoys an outstanding reputation as a progressive union leader.	Substantially successful. However, it is very difficult to assess whole International Union. National Legal and Policy Center, *Letter to Muellenberg, HERE Public Review Board Member*, Aug. 30, 1999, *at* www.nlpc.org/olap/HERE/990830KM.htm.
Chicago Laborers' District Council	Bloch removed all former CLDC officers, instituted reform policies, and negotiated a new 3-year labor contract for the locals that provided for higher wages, better benefits, and, for the first time, a grievance procedure. The Monitor filed charges against two CLDC officials who are the sons of Chicago LCN figures. Charges were settled so that these two individuals agreed to give up their membership after two more years of union employment.	There was a contested election in 2004. The victorious business manager, president, and secretary treasurer are all unconnected to the old regime.	Unclear. There are still rumors of organized crime influence in some of the locals that comprise the District Council. National Legal and Policy Center, *Union Corruption Update*, September 10, 2001.
LIUNA Local 210 (Buffalo)	30 union members and officials expelled.	One round of competitive elections held. Appears to be a break with several decades of domination by Buffalo organized crime family. Elections did not bring a reform regime to power. Judge re-imposed trusteeship almost a decade after first trusteeship ended.	Unclear. Still in progress.
HEREIU Local 69	No elections have been held. 2002 trusteeship imposed.		Unclear. Still in progress. Administrator appointed by trustee convicted of embezzlement. Local 69 to be merged out of existence.

ILA Local 1588			Failure. The trusteeship imposed in 1991 has to be judged a failure. A second-round trusteeship, imposed in 2003, is on-going. John Timpanaro was installed as ILA Local 1588 president in January 2002. In May 2002 he was indicted on charges of racketeering and extortion. Larry McShane, "On the Waterfront, in the Courtroom; Storied New Jersey Union Local Faces Another Racketeering Trial This Spring," *Washington Post*, Jan. 4, 2004. On January 29, 2003, Federal Judge John S. Martin, Jr. appointed former New York City Police Commissioner Robert McGuire as trustee. McGuire chose Robert Stewart as his deputy. National Legal and Policy Center, *Union Corruption Update*, February 3, 2003.
ILA Local 1814	Several officers had to resign.		Failure. On June 3, 2002, 17 members and associates of the Gambino crime family or officials of ILA Local 1814, including Local 1814 President Frank Scollo, were arrested and indicted for racketeering. The indictment included charges of placing organized crime members in top union jobs and carrying out day-to-day extortion and loan sharking. James Jacobs and Ellen Peters, *Labor Racketeering: The Mafia and the Unions*, 30 Crime and Justice 229, 270 (2003).
ILA Local 1804-1	Some union officers expelled.	Elections did not achieve clear break with past.	Failure.
ILA Locals 824, 1809, 1909 (Manhattan West Side locals)	As part of the consent decree, several officials agreed to resign. Anthony Scotto banned for life. But the locals remained in the hands of the same clique that had dominated for decades.	Elections did not achieve clear break with past.	Failure. A new wave of indictments in 2003 allege the same types of racketeering as in previous decades.

The second reason that settlements have not been adequately thought through is that neither federal enforcement agencies nor federal prosecutorial offices have expertise in carrying out such analyses. Law enforcement agencies and prosecutors are experts in investigations, case preparation, and trial practice. A different set of skills is necessary for succeessful organizational reform. Unfortunately, this expertise has not been incorporated into central DOJ or into the U.S. attorney's offices. Perhaps it is still not too late for the DOJ to establish a unit devoted to union reform or to organizational reform generally. A second-best approach would be for the DOJ to identify a core of consultants (including those FBI and DOL investigators, prosecutors, trustees, and union officials who have performed best in previous cases) to whom U.S. attorneys could turn for assistance as need arises.

To add complications, unless the DOJ can specify the organization and operation of the trusteeship and the identity of the trustee, there is no guarantee that the judge will choose the right trustee and provide the necessary support for the trusteeship. During the remedial phase of civil RICO litigation, the court and court-appointed trustee, not the DOJ, are the chief actors. Frequently, the judge knows very little about the extent of the problem (hence, another reason that the civil RICO complaints should be rich in detail).

In designing trusteeships and choosing trustees, much can be learned from the history of prison and jail litigation and the rich academic literature that it has spawned.[4] The prison and jail litigation has produced a corps of experienced trustees who have developed expertise as, in effect, "turn-around specialists." These individuals go from one case to another; sometimes they supervise several cases in different states at the same time. Federal district court judges presiding over jail and prison conditions of confinement litigation seem amenable to choosing a trustee with a proven track record. So far, this has not been true of the civil RICO union cases.

There is no script for sucessfully performing as a trustee. However, the likelihood that the government, court, and trustee will get it right would be greatly increased if there were a reservoir of information about previous trusteeships. It is incomprehensible, with stakes this high, that the government has not made an effort to evaluate the union trusteeships or even to document the basic facts. We need answers to many questions: Did the DOJ lawyers name the correct defendants? Which consent decree provisions are most important? Did government

0522

lawyers seek and obtain key union officers' resignations? What trusteeship powers are most important? How much money is necessary to support an effective trusteeship? How should the trusteeship be organized? What is the most valuable background for a trustee? How should trustees be compensated? How many hours per week should the trustee devote to the job? Is it essential for the trustee to maintain a presence at union headquarters? When, how often, and under what circumstances should the trustee meet with union members? What kind of investigative and union administrative support services does the trustee require? What should be the trusteeship's duration? What remedial strategies work best? What criteria can the trustee and the court use to determine whether the trusteeship has achieved its goal(s)? When and how should the trusteeship be terminated? To date, these questions remain unanswered and mostly unasked.

Civil RICO complaints seeking to liberate racketeer-ridden labor unions need to produce settlements with provisions that make knowing association with LCN members (or any expelled union members) a union expellable offense. However, a provision by itself is of little value. There must be investigators to ferret out relationships between union officials and organized crime members and associates. There must be disciplinary actions to prove such connections and to press for the imposition of effective penalties. Such ongoing investigative and disciplinary work may alienate union members who are suspicious of government officials and/or easily persuaded by charges leveled against the government reform effort (e.g., represents right-wing Republican agenda; will bankrupt the union). Therefore, "winning hearts and minds" of rank-and-file members should not be ignored. Here again, there may be much to learn from the experiences of court-appointed trustees who have sought to reform schools, jails, prisons and mental hospitals.

Finally, we need to recognize that reforming a union is even harder and more complicated than purging organized crime from a union. We can hardly celebrate the success of a civil RICO lawsuit and trusteeship if Cosa Nostra's influence is replaced by the influence of another group of labor racketeers. Throughout U.S. labor history there have been corrupt union strongmen, independent of organized crime families, who have exploited their unions. One example is Tony Boyle of the United Mine Workers. He was ultimately convicted of ordering the murder of insurgent Jock Yablonski and his family.[5] It is not difficult to find con-

0523

temporary examples. Recently, for example, the Manhattan District Attorney's Office proved extensive corruption in New York City's District Council 37 of the American Federation of State, County, and Municipal Employees (AFSCME),[6] a union representing 105,000 city employees in 56 locals. Since 1998, there have been more than 30 indictments and more than 20 guilty pleas. According to Manhattan District Attorney Robert Morgenthau, "This is not an anti-labor prosecution. It's a pro-labor prosecution. The victims were the union members."[7]

Admittedly, "independent labor racketeers" can more easily be thrown out by rank-and-file reformers or by government prosecutors than Cosa Nostra labor racketeers. Nevertheless, "independents" can do great harm. Such individuals need to be identified and removed from union affairs before they become so formidable that neither ordinary elections nor ordinary crime control techniques are capable of dislodging them and their cohorts. This threat highlights the need for some kind of institutionalized union corruption and racketeering watchdog, the equivalent of the Security and Exchange Commission (SEC), which, since the 1930s, has monitored, investigated, and brought civil actions against and prosecuted corporate corruption. Enough time has passed to demonstrate clearly that the Department of Labor cannot play this role. It is, and likely must be, too closely associated with labor union officialdom. Perhaps the labor racketeering unit in the main DOJ can fulfill this function, but because administrations change and priorities wax and wane in Washington, D.C., it would be better to institutionalize such a watchdog in a new governmental agency patterned after the SEC.

FAIR ELECTIONS

Elections are a basic and essential method for principals to hold their agents accountable. They provide an opportunity for the electorate to "throw the rascals out" and replace them with agents who represent their interests. But there are real barriers to the union members playing this monitoring role. First, there is a collective action problem. The vast majority of union members are unwilling to invest much time and energy into monitoring their unions. Second, it is difficult to monitor a union, especially a racketeer-ridden union that operates without trans-

0524

parency. The racketeers control practically all information about how the union is being run; they control the union magazine or newsletter and use it as a proincumbent propaganda sheet. A union member who asks to see documents or who publicly questions the officials may cease getting job assignments, lose his or her job, or face physical intimidation and violence. In other words, for rank-and-file union members monitoring costs are extremely high.

Because of the incumbent regime's control over information, union members often do not understand how they are being exploited. They might not realize that their collective bargaining agreements are mediocre or worse. They might be impressed by good paper agreements that, in practice, are not enforced by union officials who take bribes. They may think their pension benefits are excellent only to find when they retire that they face all sorts of hurdles in qualifying for any benefits or that the fund itself has been inexplicably depleted. They might be so used to union business as usual that they cannot conceive of an honestly run union.

Even if union members realize that they have been exploited, they may be unable to vote the incumbents out of office. Many unions have *never* had a competitive election. A competitive election cannot occur without a mobilized opposition, but it is very difficult for opposition to form in the face of intimidation; it is especially difficult when union members are scattered over numerous small work sites throughout a large geographical area. The logistical difficulties of preparing and implementing a fair election should not be minimized. There are experienced organizations capable of providing expert assistance, but it cannot be done "on the cheap."

Federal prosecutors who prepare civil RICO complaints should demand fair elections and the resources, expertise, and monitoring services that can make fair elections possible. The trustee needs to draft election rules carefully, giving attention to nominating procedures, access to membership lists and the union magazine, secret balloting, and honest counting.

One of the toughest and most important decisions for a trustee is when to schedule a new election. On the one hand, the supervising judge and the union members may be impatient to return the union to its membership. On the other hand, an electoral victory for the LCN-backed regime is a major setback to the reform effort. It is essential that

0525

the trustee have the authority to screen candidates and eliminate individ-uals with ties to the old regime. Nevertheless, experience shows that labor racketeers do not cede power easily; they have many ingenuous strategies for maintaining their control through front men and proxies. What happens if the LCN-backed faction wins the election? If the trus-tee accepts the results, the rank and file may conclude that the trusteeship is a sham. If the trustee rejects the results, the trusteeship's opponents will condemn the judge and the trustee for being antidemocratic and antilabor. Thus, it is crucial that the trustee prevent such a result from occurring by delaying the election until new union leadership has emerged. It is also essential that the trustee be empowered to monitor more than one election cycle because the labor racketeers can easily rebound after a single election defeat.

THE IMPORTANCE OF UNION DEMOCRACY

Ever since the McClellan Committee turned a spotlight on labor racketeering, would-be union reformers have recommended union democracy as medicine. They argue that a union that has significant member involvement, contested elections, and respect for members' right to be politically active within the union will be resistant to racketeer takeovers. But these are difficult preconditions to achieve. Practically no unions have stable "parties" or regularly contested elections. Practically all unions are controlled and governed by cliques that retain power indefinitely. Contested elections, which occur very rarely, are almost always the result of a schism within the ruling clique. Perhaps this is a confirmation of Robert Michels's axiom that all organizations evolve in the direction of oligarchy.[8] Perhaps it reflects the fact that America's mainstream labor movement has opposed union democracy? Perhaps it reflects the fact that because union officials have no career paths beyond their union positions? Whatever the reasons, the lack of democracy (at least competitive elections) is a long-standing reality that civil RICO union litigation is unlikely to change.

Making union democracy a reality would require a major commitment from the government or perhaps from one of the large private philanthropic foundations. New legal and other initiatives could build on the dedicated, but weak, union democracy movement comprising rank-and-file union activists, intellectuals, and a few not-for-profit or-

0526

ganizations.*[9] Its idealistic proponents champion union democracy not as a means to defeat labor racketeering but as the basis of a healthy labor movement. They believe that only democratic unions fulfill the aspirations of the labor movement and that union democracy will nurture and strengthen democratic values in the larger society. In addition, they argue that democratic unions will have a stronger claim on union members' loyalties, thereby strengthening the union's position in contract negotiations and job actions. The union democracy proponents also believe that union members will find satisfaction and self-actualization through participation in democratic unions.

Union democracy proponents and lawyers have worked tirelessly, and with some limited success, to make union democracy a civil liberties issue. They provide an ear to union members who complain they have been mistreated by corrupt union officials. They file suits with the Department of Labor and with the federal courts, but they are immensely outgunned by the unions that they challenge.[10] The torch has been courageously carried for decades by the minuscule Association for Union Democracy, which operates on a shoestring budget with a handful of staff. The country would be very well served by a governmental or, better yet, a private foundation's serious funding of AUD or some new "Center for Union Democracy."

REGIME CHANGE

A racketeer-ridden union needs an entirely new leadership cadre both to break ties with the past and to shatter the perception that the union is in league with the devil. This is a formidable challenge for federal prosecutors, federal judges, and trustees. Where will new union leadership come from? If for decades the incumbents controlled the union's administration and all its officers, there may be no members who have administrative and governing experience. How will new union leaders be trained? If they are chosen by the government, court, or trustees, the rank and file may regard them as stooges. Ideally, a group of union

* Two prominent union democracy NGOs are the Association for Union Democracy (see http://www.uniondemocracy.com) and Labor Notes (see http://www.labornotes.org/index.html). Teamsters for a Democratic Union (TDU) is the most prominent rank-and-file union reform organization (see http://www.tdu.org/TDU_Info/tdu_info.html).

0527

reformers with expertise could move from union to union in trusteeship situations, helping to stimulate regime change. Additionally, their jobs would be easier and more likely to result in success if they could offer members of the liberated union an opportunity to attend a union leadership training program run by organized labor itself. Perhaps the highly regarded labor institutes run by some of the large industrial-type unions could be induced to train a certain number of rank-and-file union members from racketeer-ridden unions currently in trusteeship. Perhaps there is a role for some of the university-based labor programs to provide training. Perhaps wholly new program providers are needed. However it is done, it is clear that identifying, training, and nurturing new union leadership is absolutely essential.

CONCLUSION

The civil RICO union trusteeships have been the best weapon yet devised for attacking labor racketeering. A few have clearly been successful; most have achieved no more than limited successes; many have utterly failed. There is good reason to believe that the civil RICO trusteeship methodology has not yet come close to reaching its full potential. We need a systematic program for collecting data on and evaluating trusteeships. If any doubt remains, it is now time to recognize that reforming racketeer-ridden unions is extremely difficult. There is no magic wand. Naming a former federal prosecutor, now serving as a partner in a prestigious law firm, as trustee and exhorting him to reform the union will not suffice. Effective trusteeships need immense preplanning; comprehensive analysis of the specific labor racketeering problem; careful attention to the civil RICO complaint and settlement; proper empowerment and financing of the trusteeship; shrewd choice of a trustee; a well-thought-through program of reform; an evaluation strategy and patience. We have enough experience to know that success is very hard to achieve.

A successful campaign against labor racketeering requires a sustained attack on organized crime. Both the general anti–organized crime campaign and the more specific anti–labor racketeering initiatives must be supported by adequate resources and conducted with skill and determination. Whether this kind of law enforcement pressure can be maintained in the future is an open question. Al Qaeda's Sep-

tember 11, 2001, attacks on New York City and Washington D.C. led to the reorganization and redeployment of FBI resources. The FBI's top priority now is antiterrorism.[11] For the foreseeable future, the FBI will be judged on how well it carries out its antiterrorism mission. This fact casts a long shadow over future anti–labor racketeering initiatives, especially in the absence of a substantial non-law-enforcement constituency for the anti–organized crime and anti–labor racketeering efforts.

0529

13

Concluding Reflections

I know from experience that some readers will disagree with my assertion that this is a prolabor book, but I do insist upon it. There is nothing anti-American about exposing the horror of U.S. slavery. There is nothing antifamily about exposing the tragedy of family violence. There is nothing antibusiness or anti–capitalist system in analyzing corporate accounting frauds. Indeed, these are all necessary in order to make progress in race relations, family policy and women's rights, and corporate accountability. Likewise, there is nothing antilabor about exposing and explaining organized crime's infiltration and exploitation of the labor movement. Indeed, the heroes of this book are those labor leaders and rank and filers who opposed and struggled against labor racketeering, sometimes at the cost of their lives.

We can learn much about various institutions and organizations by examining how they react to and seek to prevent corruption. This book does not compare labor unions with other institutions and organizations. There is no suggestion that labor unions are more corrupt than, for example, corporations, government, or the legal profession. Indeed, as I complete this book, the United States is experiencing the greatest wave of corporate frauds in our history. Those frauds and corruption in other institutions, organizations, and professions demand their own analyses. To be sure, there will be commonalities, but there will also be significant differences. The most distinctive feature of corruption in the labor movement is the prominent role of the Cosa Nostra organized crime families. This entanglement makes the problem exceptionally difficult to solve.

IS THERE SOMETHING ABOUT UNIONS?

One might well ask whether there is something unique about labor unions that accounts for their attraction and vulnerability to organized

0530

crime. In support of that thesis one might call on Robert Michels's "iron law of oligarchy": Organizations evolve toward concentration of power at the top. But Michels meant to posit a rule that would hold true for all organizations, not just or primarily unions. More important, labor racketeering is not just or primarily a story of authoritarian union governance; it is a story of Cosa Nostra infiltration and exploitation.

Unions may well have a distinctive susceptibility to organized crime racketeering. They are attractive targets because they receive a constant flow of dues and pension and welfare contributions that employers automatically deduct from workers' pay. Cosa Nostra has no compunctions about using violence and election fraud; it has expertise in both these methods of seizing organizational control. Once in power, labor racketeers can reinforce control through the many carrots and sticks at their disposal. They also benefit from the absence of competition from other organizations; once a union is recognized as a bargaining unit's exclusive representative, AFL-CIO rules prohibit other unions from challenging that representation.

Perhaps unions are exceptionally difficult for insiders or outsiders to monitor. Very few union members take a strong interest in union governance and, as we have seen, labor racketeers can make the costs of monitoring very high by means of violence, intimidation, and control over information. By contrast, public corporations are more easily monitored by boards of directors, stockholders, the business press, investing institutions, and the Securities and Exchange Commission (SEC). The SEC enjoys an excellent reputation as a well-resourced, independent, competent, and vigorous enforcement agency. Of course, neither it nor the other corporate monitors prevented Enron and the other corporate frauds that looted billions of dollars from corporations, stockholders, and creditors. Nevertheless, these corporate scandals have not been blamed on the SEC or undermined confidence in its regulatory role. If there had been an SEC-like agency responsible for monitoring union violations of Landrum-Griffin, ERISA, and other labor laws, it would certainly have been more difficult for labor racketeers to have taken over and exploited unions. We have seen, however, that with the exception of sporadic congressional investigations and quixotic individual union member protests, labor racketeering was practically unopposed for most of the twentieth century. By the time the FBI and the Department of Justice began to focus on labor racketeering, racketeers were deeply and powerfully entrenched.

0531

A structural explanation may be most useful for explaining why some unions were taken over by organized crime while others were not. For the most part, the racketeering susceptibility of the old CIO industrial unions was low. There was strength in numbers. Union leaders who work alongside hundreds or thousands of other workers in a factory or mine were much harder to intimidate or otherwise displace than union leaders who work for a hotel, trucking company, or construction contractor with a relatively small and/or dispersed workforce marked by high turnover. Likewise, it is much easier for opposition leaders to become known and develop a following when they work in a large site like a factory or a mine. In those industries, employees may work for the same company for many years, even for life. On the other hand, many workers in construction, trucking, hotels and restaurants, and stevedoring work sporadically and for different employers.

There is little or nothing new in labor racketeering. The same organized crime families have engaged in the same type of exploitation for much of the twentieth century. Union officers in racketeer-ridden unions often "inherit" their positions from fathers and grandfathers. The forms of domination that appeared in the 1920s and 1930s still prevail. The cartels, bribes for sweetheart deals, extortion of employers, embezzlements from union treasuries, and frauds on pension and welfare funds all have their roots in the first half of the century.

CONTINGENCIES OF AMERICAN HISTORY

The persistence of labor racketeering is dependent on certain contingencies of American history. Obviously, there would have been no organized crime penetration without the existence of a powerful organized crime syndicate with the expertise and motivation to exploit labor unions, businesses, and industries. Cosa Nostra did not always have to fight its way in the door; it was often invited inside. The bitter opposition of employers to labor unions, including the recruitment of strike breakers and gangsters, created labor's need for a counterforce. Not surprisingly, some organized crime figures who helped to defend labor unions earned the rank and file's gratitude. It was also fortuitous for the labor racketeers that in many nascent unions there was a congenial ethnic base.

It would be naive and factually incorrect to think that labor racket-

0532

eering developed "under the radar." To the contrary, labor racketeering was consciously permitted, even chosen. Employers would have preferred no unions but, in many cases, they found Cosa Nostra labor racketeers preferable to leftist militant unionists who were ideologically opposed to the capitalist system. We should not forget or discount the willingness of employers to reach out to organized crime figures to obtain sweetheart collective bargaining contracts and the nonenforcement of expensive contractual provisions. Perhaps even more valuable to employers was the role that organized crime figures could play in creating and policing business cartels that fixed prices and limited competition. Such cartels have been commonplace in industries like construction and trucking. Organized crime bosses also functioned as power brokers who could quickly solve jurisdictional disputes between unions and could broker deals with businessmen and politicians.

Throughout most of the twentieth century, especially the first half, the government did not combat organized crime labor racketeers. In the big eastern and midwestern cities where unions and organized crime were strongest, local politicians closely cooperated with the organized crime bosses; frequently there was a symbiotic relationship between the Democratic Party political machines and the organized crime families. The urban political machines could make or break local, state, and national political candidates. Local police and prosecutors, highly politicized in those days, were often influenced, bribed, or intimidated by organized crime groups, or at least unwilling to oppose them. Even if law enforcement was not compromised, it lacked the resources to oppose them. The organized crime bosses were not nearly as influential at the state and federal levels as they were at the local levels, but their influence extended to the highest levels of American politics and government.

For reasons specific to American federalism, there was no federal national police force until the first decade of the twentieth century; even then, the FBI evolved very slowly. Under J. Edgar Hoover's half century of leadership, the FBI was far more concerned with communists, socialists, and other perceived subversives than with city-based organized crime families. Indeed, the FBI, on occasion was willing to form alliances with Cosa Nostra to assure, for example, the security of the ports during World War II and the assassination of Cuban President Fidel Castro in the early 1960s. Remarkably, the FBI posed no significant opposition to organized crime until after Hoover's death in 1972.

Fear and abhorrence of communism and socialism was another

0533

contingency of twentieth-century American history that facilitated labor racketeering. Governments at all levels, but especially the federal and state levels, viewed leftist labor leaders with antipathy and anxiety. They were often willing to use governmental resources to suppress such leaders and their unions even if it meant allying with organized crime figures. American politicians in the first half of the twentieth century were also more comfortable dealing with organized crime bosses than with communists and socialists. New York City mayors William O'Dwyer (1946–1950) and Vincent Impellitteri (1950–1953), for example, were said to have had close relationships with Frank Costello, so-called "prime minister of the underworld" and the top New York City Cosa Nostra figure of his day.

The first alarms about labor racketeering were sounded by social reformers concerned about the plight of oppressed longshoremen. Then investigative journalists found labor racketeering to be a compelling story. *On the Waterfront* contributed greatly to making labor racketeering a public issue. Perhaps the publicity generated by the movie forced the government to respond? But, one need not be a cynic to recognize that it was not the plight of the workers and their lack of rights vis-à-vis their unions that first got Congress involved. Clearly, Senator McClellan and other (especially southern) senators were as much, probably more worried about unions growing too strong than they were about the plight of rank-and-file union members. In the McClellan Committee hearings, concern about the dangers of "big labor" combined with concern about the dangers of "the Mafia," perceived at the time as a foreign-based ethnic threat to the American way of life.

There was never an interest group pressing for the protection of union members' rights against corrupt union leaders. The FBI's post-Hoover initiatives against labor racketeering were the result of the larger war against organized crime. By the mid-1970s, the Department of Justice and the FBI were affronted by the flagrant activities of the Cosa Nostra crime families in the major cities. The war on organized crime began with a campaign against Cosa Nostra's gambling interests, but that strategy encountered serious resistance among federal judges. It was the assassination of Jimmy Hoffa in 1975 that turned federal law enforcement's attention to organized crime's position in the labor unions. From that point on, the anti–labor racketeering campaign was an important part of the war against organized crime.

Congress passed RICO in 1970 to combat organized crime, espe-

0534

cially its perceived infiltration of the legitimate economy. Organized crime's threat to unions, as well as legitimate business, was frequently mentioned at the hearings leading up to the bill's passage. However, it was not until 1982 that civil RICO was pressed into service as an anti–labor racketeering tool. The New Jersey federal prosecutors convincingly demonstrated that civil RICO was well suited for use against Cosa Nostra's domination of one of the nation's most racketeer-ridden union locals. Even then, the first lawsuits encountered substantial opposition from the labor movement, many politicians, and members of the public suspicious of the motives of the Reagan-era Department of Justice. By then, however, the Department of Justice and FBI were sufficiently independent that even if political interference had been attempted, it could not have halted the attack on labor racketeering. The FBI and DOJ campaign had taken on unstoppable momentum.

Without civil RICO there could not have been a focused anti–labor racketeering campaign. There is no other nearly as effective way to attack the kind of systemic entrenched organizational criminality in local, regional, and national labor unions. Nevertheless, civil RICO was not initially embraced by FBI agents and federal prosecutors who were much more comfortable with criminal prosecutions. Indeed, the reward system in the FBI was based upon convictions. The use of civil RICO was given a powerful shot in the arm when the FBI leadership decided to count civil RICO cases as equivalent to major convictions.

Although civil RICO has been the most important law enforcement strategy in attacking labor racketeering, it has fallen seriously short of its full potential. The majority of trusteeships have not produced regime change. Many have not produced a single fair, much less competitive, election. The majority have probably not completely purged organized crime's influence from the union. Indeed, the absence of any governmental attempt to evaluate the civil RICO union lawsuits demonstrates the lack of systematic thought about how to utilize civil RICO most effectively.

SIGNIFICANCE OF LABOR RACKETEERING FOR ORGANIZED LABOR AND SOCIETY

Asking the counterfactual question can be an interesting thought experiment that sheds light on the importance and significance of key

0535

historical events. What if Japan had not attacked Pearl Harbor? What if the Supreme Court had not declared school segregation unconstitutional in *Brown v. Board of Education?* What if organized crime labor racketeers had not infiltrated and exploited the American labor movement?

If there had been no organized crime and therefore no organized crime penetration of the labor movement, the nascent labor unions would have had more difficulty achieving early victories and ultimate recognition. It is possible that a combination of reactionary employers, politicians, and law enforcement personnel would have crushed unions completely or shaped a completely employer-dominated union movement. It is also possible that corrupt labor czars would have seized power in the very unions that organized crime racketeers eventually controlled.

In light of the fact that labor unions have achieved legitimacy in all Western countries, I think it is more likely that the Wagner Act would have eventually passed and that labor unions would have achieved legitimacy in the United States. The socialists and communists would have been a stronger force in the union movement. With unions in the hands of militant unionists, not labor racketeers, the U.S. labor movement would have been more aggressive in organizing, more appealing to youth and intellectuals and stronger.*

A more powerful, socialist-leaning labor movement might have had a significant impact on American politics. The United States is unusual among Western democracies for lack of a labor party. Perhaps, without labor racketeers, the U.S. labor movement would have organized a political party. Alternatively, it might have become an influential "progressive" wing of the Democratic Party, thereby having made the party's long accommodation with southern segregationists less likely. If the United States had had a twentieth-century labor party or a more leftist Democratic Party, our politics might have been completely different.

Even though the foregoing is wild speculation, it does give pause to think seriously about the importance of labor racketeering to the labor movement, U.S. politics, and U.S. society generally. The history of or-

* The leftist elements in the labor movement were by no means united or comfortable with one another. To the contrary, there were bitter ideological differences among them and these may ultimately have split and weakened the labor movement.

0536

ganized crime and organized labor has been long neglected, even affirmatively denied. I hope this book will stimulate the kind of attention that the topic clearly warrants. One can easily imagine a dozen Ph.D. dissertations documenting how various racketeer-ridden unions actually functioned, how their members fared in comparison to the members of honest unions as well as to nonunionized workers doing the same kind of work. Perhaps, ultimately, we might identify different "types' of labor racketeers, e.g., those who pressed the interests of the workers they represented while skimming money from the union and those who essentially treated the union as an organization to be exploited to the fullest.

WHAT OF THE FUTURE?

This book is not just about days past. Labor racketeering is still occurring. Cosa Nostra still controls local and regional unions and wields influence in several important international unions. Only three of the hard-fought civil RICO union trusteeships can be judged to have been completely successful; for many of the others, it is still too early to say. Some of the trusteeships must be considered complete failures. The Cosa Nostra crime families are much weaker than they were at the height of their power (perhaps in the 1960s or 1970s), but they continue to be a presence in most of the cities where they have existed since the early twentieth century. If, as seems likely, FBI pressure on them wanes, it is possible that they will make a combat.

The effort to reform the American unions controlled by organized crime could be analyzed as an experiment in democratization "from above."[1] As with the American incursion into Iraq, those who are waging the campaign against labor racketeering believe that they can bring democracy to organizations and peoples long dominated by corrupt and autocratic leaders. The law enforcement personnel, DOJ lawyers, federal judges, and court-appointed trustees have had much more time to achieve victory over organized crime in American unions than U.S. military forces have had to achieve victory in Iraq. Nevertheless, as in Iraq, establishing democracy in previously captive labor unions is much more difficult than the "liberators" expected.

DOJ lawyers initially (and with hindsight, naively) believed that their investigators and court-appointed trustees would be welcomed

0537

by the rank and file with open arms. Two decades of experience have proved otherwise. There is far more rank-and-file suspicion of the government, the courts, and the trustees than public officials had anticipated or want to admit. The regimes backed by Cosa Nostra continue to exercise influence (even prevail) over many unions that the government and the courts have sought to reform; the Cosa Nostra–backed candidates have won more elections than they have lost.

As in the war to bring democracy to Iraq, the government has much credibility at stake in its anti–labor racketeering campaign. If it loses interest, withdraws, and allows Cosa Nostra to reconsolidate its control, it will be harder in the future to persuade criminals and would-be criminals that U.S. law enforcement has staying power. Likewise, it will be harder to persuade affected citizens to throw in their lot with the government. They will rightly fear that law enforcement will withdraw with the job only half completed.

The American labor movement has much at stake in this twenty-five-year campaign against Cosa Nostra labor racketeering. A victory over Cosa Nostra and labor racketeering could release a great deal of energy within the labor movement if previously cynical union members change their minds about the possibility of reform. It could also release a great deal of pro-union sentiment in the larger society if the labor movement could once again attract the interest and support of idealists and intellectuals. The civil RICO trusteeships should be seen as a positive opportunity for a brighter future rather than as some kind of contemporary version of early-twentieth-century government union busting.

4. James B. Jacobs and Ellen Peters, "Labor Racketeering: The Mafia and the Unions," 30 *Crime and Justice: A Review of the Research* 229 (2003), 245, 247.

5. See, e.g., *United States v. Local 30 United Slate, Tile and Composition Roofers, Damp and Waterproof Workers Association,* 686 F. Supp. 1139 (1988); *United States v. Laborers' International Union of North America* (Consent Decree, February 15, 1995); see also National Legal and Policy Center, *Union Corruption Update,* January 31, 2000.

6. The Philadelphia Roofers Local 30/30B decree established a "decreeship" with an indefinite term. Judge Bechtle believed that success could be achieved only by convincing the rank and file and the racketeers that court supervision would last as long as necessary to solve the problem. *United States v. Local 30 United Slate, Tile and Composition Roofers, Damp and Waterproof Workers Association,* 686 F. Supp. 1139 (1988).

7. Carl Biers, "Monitor Airs Hotel Union's Dirty Linen," *Union Democracy Review,* no. 121. Robert Luskin, the General Executive Board attorney of LIUNA International and his law firm, received at least $4 million in compensation from November 1994 to June 1998. National Legal and Policy Center, Organized Labor Accountability Project, *Failure of LIUNA "Internal Reform Effort,"* (Jan., 1999).

8. *United States v. International Brotherhood of Teamsters,* 1992 WL 297489 (S.D.N.Y. October 6, 1992).

9. Steven Greenhouse, "Teamsters Push to End Decade of Supervision,"

0559

New York Times, August 14, 1999, at A1 (stating that the trusteeship had cost the IBT $82 million, or about $8–9 million per year).

10. The internal reform process had cost about $35 million by September 1999. Mark Murray, "Labor on Patrol," *National Journal,* Sept. 4, 1999, at 2489.

11. Kurt Muellenberg retired from the Department of Justice and did not plan a full-time second career in the private sector; he agreed to a $190 hourly rate. Interview with Kurt Muellenberg, Nov. 7, 2002.

12. *United States v. Int'l Bhd Of Teamsters Local 851* (consent decree reached before filed) (Sept. 12, 1995).

13. For example, Trustee Robert Bloch in the Chicago Laborers District Council trusteeship negotiated a new three-year labor contract that provided for higher wages, better benefits, and, for the first time, a grievance procedure. Press release, "United States Department of Justice, Consent Decree Allows Federal Court to Supervise Purge of Organized Crime from 19,000 Member Chicago Laborers' Council," August 12, 1999.

14. Eugene Kiely, "Local 560: Proof is in the Vote; Election Is Test of U.S. Efforts to Clean Up Teamsters," *Record,* Nov. 27, 1988, at A2.

15. *United States v. Local 1804-1 et al.*, consent judgment for Local 1804-1, 4–5.

16. *United States v. Int'l Bhd of Teamsters,* 745 F. Supp. 908, 135 L.R.R.M. (BNA) 3079 (S.D.N.Y. 1990), *aff'd,* 941 F.2d 1292, 138 L.R.R.M. (BNA) 2219 (2d Cir. 1991).

17. *United States v. International Brotherhood of Teamsters,* 742 F. Supp. 94, 97 (S.D.N.Y. 1990).

18. Telephone Interview with Robert Welsh, Special Master, Roofers Local 30/30B, in Philadelphia (Nov. 25, 2003).

19. Herman Benson's *Rebels, Reformers and Racketeers: How Insurgents Transformed the Labor Movement* (Bloomington, Ind.: AuthorHouse, 2004) is a compelling account of the frustrations and dangers experienced by dissidents.

20. Interview with Kurt Muellenberg (Nov. 7, 2002).

21. The MTDC had its own Investigations Officer, Michael Chertoff. Consent Decree, *United States v. Mason Tenders District Council of Greater New York,* 94 Civ. 6487 (S.D.N.Y. 1994). The LIUNA International union agreed to "voluntarily" adopt a major reform effort in order to avoid a court-ordered trusteeship. Robert Luskin serves as counsel, prosecuting disciplinary cases; W. Douglas Gow serves as "Inspector General," investigating allegations of member impropriety or fraud; Peter Vaira serves as "Hearing Officer," deciding a member's guilt or innocence on the basis of evidence gathered by the inspector general (as well as hearing the member's defense); and W. Neil Eggleston serves as "Appellate Officer," hearing appeals from rulings by the hearing officer. National Legal and Policy Center, Organized Labor Accountability Project, *Failure of LIUNA "Internal Reform Effort"* (Jan. 1999), 3–4.

0560

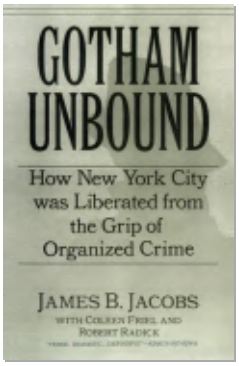
About the Author



JAMES B. JACOBS is Warren E. Burger Professor of Law and Director, Center for Research in Crime and Justice, New York University School of Law. A lawyer/sociologist, Jacobs writes widely on criminal justice topics including prisons, corruption, hate crime, and organized crime. This book is the fourth volume in a long-term research project to document and analyze the status of organized crime and organized crime control in the last quarter of the twentieth century and the first decade of the twenty-first century. Each volume stands on its own, offering a particular perspective on different facets of Cosa Nostra's political and economic power and the government's post-1970s criminal and civil remedial efforts.

Acknowledgments

The seeds for this book were planted in the late 1980s when I was collaborating with the New York State Organized Crime Task Force on its investigation and analysis of corruption and racketeering in the New York City construction industry. It was obvious at that time that Cosa Nostra's entrenchment in the construction industry had analogs in a number of other businesses, industries and economic sectors. I thought then and continue to think now that a single volume laying out Cosa Nostra's role in the New York City economy would provide an important perspective on Cosa Nostra, New York City, and the urban history of the United States. In any event, I owe my friends and former colleagues at OCTF a great debt of gratitude for enlightening me about organized crime and industrial racketeering. Thus, my thanks once again to Joe DeLuca, Ron Goldstock, Wilda Hess, Marty Marcus, Robbie Mass, Toby Thacher, and all the other members of the OCTF team. Ron Goldstock deserves a special expression of gratitude. He has encouraged, stimulated, informed, criticized, and assisted every step of the way—he's an extraordinary friend and colleague.

This book is a product of the Center for Research in Crime and Justice at New York University School of Law. For continuous, generous, and enthusiastic support, I am grateful beyond words to Dean John Sexton. Likewise, I want to express my appreciation for the sustenance I receive on a daily basis from my colleagues, especially David Garland, Ron Noble, and Jerry Skolnick.

A book like this could not be written by a single individual working alone, at least not by me. Fortunately, I have been blessed with wonderful students throughout my seventeen years at New York University. Many of them have made important contributions to this book. During the summer of 1994, Derek Brummer and Robert Tretter undertook the first spadework on some of the industries. Coleen Friel and Robert Radick served as research assistants during the summer of 1995.

0607

They continued with the research, as Leslie Glass Criminal Justice Center Research Fellows, throughout the 1995–1996 and 1996–1997 academic years, right up to the day they graduated. In effect, they functioned as my junior colleagues. They are not only outstanding researchers but also a delight to work with.

I was very ably assisted during the summer of 1997 by Alex Hortis. Finally, throughout the 1998 summer and fall I received terrific research assistance from Lara Bazelon, Raphael Lee and David Santore; I could not have finished this project without them. Other New York University law students who also deserve my thanks for their contributions to this project are Amy Amster, Lauryn Gouldin, Courtney Groves, Spring Hollis, and Mark Tamoshunas.

John Gleeson, Ron Goldstock, Jim Kossler, Marty Marcus, and Brian Taylor read and commented on the entire manuscript, thereby saving me from numerous errors as well as adding important suggestions.

Many busy people took time out from their schedules to be interviewed for this project. I hesitate to name some for fear of leaving out others. But to all of you—a thousand thanks. I hope I can repay your generosity in part by getting this story right.

My secretary, Virginia Singeltary, competently assisted me in moving this project forward all along the way. Sarah and Eliot Marcus's computer skills saved the manuscript at a crucial point in its life. Niko Pfund, editor in chief of the New York University Press, and his whole staff have been a pleasure to work with. My wife, Jan Sweeney, as always, has been a constant and loving source of support and encouragement.

An Introduction to the Place and the Players

COSA NOSTRA IS the largest, most sophisticated, most powerful, and most remarkable crime syndicate in the history of the United States. For reasons that this book makes clear, it is unlikely that any other crime syndicate, at least in the foreseeable future, will play anything like the role that Cosa Nostra has played in our nation's social, economic, and political life. Yet, for reasons this book also makes clear, Cosa Nostra's survival into the next millennium, in anything like its twentieth-century form, can be seriously doubted.

This book deals with Cosa Nostra's entrenchment in New York City's economy and with federal, state, and local governments' omnibus and unprecedented efforts to liberate New York City from Cosa Nostra in the last two decades of the twentieth century. Part I spotlights six major businesses or industries in New York City that have been "mobbed-up" for decades, in some cases for most of the century. Part II examines the federal, state, and local organized-crime control strategies that have achieved significant success in purging Cosa Nostra from the city's social, economic, and political life. The List of Names at the back of the book provides the reader a quick and easy way to identify all the criminals and crime controllers mentioned throughout the book.

With respect to organized crime, New York City is not unique. While the names of the Cosa Nostra families and other details differ from city to city, the main themes of the story we tell for New York City could also be told for Boston, Buffalo, Chicago, Cleveland, Jersey City, Kansas City, Las Vegas, Los Angeles, Miami, New Orleans, Newark, Philadelphia, and many other large and small U.S. cities. In every one of these cities Italian organized-crime groups have a long history of extensive industrial and labor racketeering and of having functioned as important players in urban politics and in the urban power structure.

0609

Therefore, we believe that this book casts light on the urban history of the United States, not just on New York City.

Any study of twentieth-century U.S. urban economics or politics ought to include major chapters on Cosa Nostra, yet, in the past, many of them have not, perhaps because there is a brick wall between criminology and political science. We need to tear down the wall and build a bridge. We hope that this book will make it more difficult for urban scholars, whatever their discipline, to ignore the importance of organized crime in the twentieth-century lives of American cities.

NEW YORK CITY

New York City hardly needs introduction.[1] It is and has been, since the early nineteenth century, the nation's largest city in terms of population and urban economy. It consists of five boroughs: Manhattan, Bronx, Queens, Brooklyn, and Staten Island. The organized-crime racketeering recounted in this book took place in all five boroughs. There have always been neighborhoods in each of the boroughs where organized-crime figures live, socialize, and conduct business. Each of the five New York City–based Mafia families operates in all five boroughs.

New York City has a huge and diverse economy. (Its 1997 "gross city product" amounted to a staggering $330 billion.) For most of the twentieth century, it was an industrial giant and waves of new immigrants were absorbed by its factories. By the 1980s, the city's industrial base had substantially declined, and its economy had become postindustrial, dominated by the banking and finance and securities industries. Not only is New York City the nation's financial and legal center, it is also the center for fashion and the arts. It has a huge multibillion-dollar construction sector. Until the 1950s, it had the busiest seaport in the United States. Even today more cargo is shipped through John F. Kennedy Airport than through any other airport in the nation. The wholesale food markets attract retailers from all over the metropolitan area, and even the region. Its service industries, like waste hauling, are also large, lucrative, and complex. Its convention center, while no longer the largest in size, is still one of the country's most important and prestigious.

Politically, New York City is solidly Democratic; Democrats outnumber Republicans by more than six to one. Almost all the city's

0610

elected officials (with the significant exception, since 1994, of Mayor Rudolph Giuliani) are Democrats. For most of the twentieth century the local Democratic Party was dominated by Tammany Hall, a powerful political club that thrived on patronage and corruption. In the 1940s and 1950s, Cosa Nostra boss Frank Costello was a major powerbroker in Tammany Hall and in New York City's political scene. Since the demise of Tammany Hall in the 1960s, the Democratic Party has been far less cohesive. Politics is no longer dominated by political clubs and party bosses. As is true of American politics generally, parties are much less important than they once were; that means that interest groups are more so. In New York City, unions are among the leading interest groups. Throughout the twentieth century, New York City has been a union town and there is a very strong link between the unions and the Democratic Party. Labor unions consistently endorse Democratic candidates and contribute money and personnel to their campaigns.

Organized crime has long been a blight on the labor movement in the city. Many union locals and district councils have been dominated or strongly influenced by organized crime for decades. While there is little, if any, evidence that the organized-crime families directly received corrupt favors from politicians in exchange for financial and other support, we suggest that city politicians' and the city government's indifference to the growth and entrenchment of Cosa Nostra in the local economy at least intimates a comfortable modus vivendi. No mayoral administration (with the possible exception of Fiorello LaGuardia's) until the Giuliani administration made organized-crime control an important priority.

New York City, with approximately 310,000 full-time employees, has more employees per capita than any other U.S. city and spends more money per capita than any other. The city's operating budget for FY 1998 is $34 billion, larger than the budgets of all states except California and New York. This city provides more extensive services and engages in more extensive regulation than any other U.S. city. Nevertheless, until the Giuliani administration, the regulatory apparatus never focused on opposing, much less purging, organized crime.

New York City has one mayor, a unicameral city council, and a single police department. Each borough has its own independent district attorneys. Most of the organized-crime prosecutions and civil suits discussed in Part II were brought by federal prosecutors, but of

0611

those brought by the district attorneys, the Manhattan district attorney was by far the most active.

THE LAW ENFORCEMENT FRAMEWORK

New York City is home to a number of federal, state, and local law enforcement agencies. The U.S. Department of Justice has a U.S. attorney's office in every federal judicial district in the United States. There are two federal judicial districts in the city and therefore two U.S. attorney's offices: one in the Southern District of New York (S.D.N.Y.), in Manhattan; one in the Eastern District of New York (E.D.N.Y.), in Brooklyn. Each office is run by a U.S. attorney appointed by the president with the advice and consent of the U.S. Senate. The offices are staffed with dozens of assistant U.S. attorneys appointed by the two U.S. attorneys.

For most of the 1970s and 1980s, the Department of Justice also operated a number of organized-crime strike forces around the country; the federal Brooklyn Organized Crime Strike Force is referred to throughout this book. Early on the federal organized strike force in Manhattan was merged into the U.S. Attorney's Office, which thereafter handled organized-crime investigations and prosecutions along with its other responsibilities.

At the national level, the Federal Bureau of Investigation (FBI) is situated within the U.S. Department of Justice but operates more or less independently of the central department and the ninety-three U.S. attorneys. In other words, the FBI is responsible for criminal investigations and the U.S. attorneys are responsible for prosecuting cases; FBI agents do not take orders from U.S. attorneys and their assistants. For an organized-crime control program to operate effectively, both the FBI and the two U.S. Attorney's Offices had to be willing to make it a top priority and to cooperate with one another. In the 1980s, many joint ad hoc strike forces were formed between the FBI, the two U.S. Attorney's Offices, and—sometimes—other federal agencies as well as the New York City Police Department.[2] There are three FBI offices in the New York City area: Manhattan, Queens, and New Rochelle (a northern suburb). Until the late 1970s these offices operated quite independently, but as the organized-crime control program of the 1980s got into full swing,

0612

the offices' organized-crime investigations were coordinated under a single authority.

The FBI is a proactive law enforcement agency. It does not primarily respond to victims' complaints. It investigates crimes and crime problems that come to light in diverse ways, that violate federal law, and that are serious, high visibility, beyond the capacity of local law enforcement agencies, or simply outside any other agency's jurisdiction. The FBI has the capabilities to investigate these problems through the use of high-tech forensics, sting operations, undercover agents, informers, electronic surveillance, and financial-data analysis.

The FBI has a great deal of discretion as to which crimes or criminals it wishes to investigate. Unlike a city police department, it is in a position to prioritize, and must by necessity do so. Because it has great discretion in prioritizing, it can concentrate tremendous resources on particular crime problems. For decades, organized-crime control was not a high priority for the FBI. By the mid-1980s, it had become the top priority.

The FBI investigates and the U.S. attorneys prosecute conduct that violates federal law. At the beginning of the twentieth century, there were comparatively few federal crimes and only a small role for federal law enforcement.[3] Federal criminal law has since proliferated so dramatically that the FBI could find a legal basis for investigating a large percentage of crimes. RICO, the 1970 federal racketeering law, provided the FBI jurisdiction to investigate practically all suspected crimes committed by suspected organized-crime members and their associates.

The U.S. attorneys and assistant U.S. attorneys who work in New York City bring their cases to federal courts in either the Southern (Manhattan) or Eastern (Brooklyn) Districts of New York. The district court judges who preside over the courtrooms are appointed by the president with the advice and consent of the U.S. Senate; they have life tenure. Appeals from these federal courts are heard by the Second Circuit Court of Appeals. The only appeal beyond that is to the U.S. Supreme Court.

New York City's five district attorneys, nominated by their political parties, are elected to four-year terms by the citizens of their boroughs. They are independent of the mayor and of the New York State attorney general. In fact, they do not take orders from any higher authority, federal or state, and they are under no compulsion to cooperate with one another. To our knowledge, the five district attorneys, or even any two,

0613

have never joined in a coordinated organized-crime control program. Cooperation occurs strictly on a case-by-case basis.

The New York City district attorneys bring their cases to state courts. The supreme court is the highest level trial court; its judges are called justices. The justices are supposedly elected. But appointed "acting justices" outnumber their elected colleagues. Appeals are heard by an intermediate appellate court, the appellate division. Final appeal can be taken to the New York State Court of Appeals.

The New York City Police Department, with forty thousand officers, is by far the nation's largest. Like all front-line police departments, it is mostly reactive rather than proactive. Unlike the FBI, the NYPD must respond to all citizen reports of crime and to many service calls as well. Its top priority is street crime and order maintenance, not white-collar or organized crime, both of which are extremely labor-intensive and expensive to investigate. Nevertheless, the NYPD has more capacity for proactive and complex investigations than any other city police department in the United States. Its Organized Crime Bureau is long-standing and is staffed by some very experienced detectives. During the 1980s, there was unprecedented cooperation between the bureau and the FBI. In addition, it worked on some creative proactive investigations with the Manhattan District Attorney's Office.

In 1970, New York State created its own Organized Crime Task Force (OCTF). Although it had some limited successes during its early years, by the end of its first decade it was essentially moribund. In 1981, it was reorganized with headquarters in White Plains (a northern suburb) and field offices in Buffalo and Albany. Unlike the U.S. Attorney's Offices and the New York City District Attorney's Offices, after its restructuring the OCTF became a hybrid investigative and prosecutorial agency. During the 1980s and early 1990s, the heyday of the OCTF, the agency employed roughly twenty attorneys and fifty investigators, analysts, and accountants, as well as other professional staff, all working directly for the OCTF director.

The OCTF has statewide jurisdiction; it can carry out investigations and, with the consent of the local district attorney, bring state-court prosecutions anywhere in the state, including New York City. Until recently OCTF was independent of other federal, state, and local law enforcement agencies. Nevertheless, many of the organized-crime investigations referred to in Part II involved significant cooperation between the OCTF and federal and local investigative and prosecutorial offices.

0614

OCTF often handed its investigations over to federal or city prosecutors. On occasion, OCTF lawyers prosecuted cases themselves or were "cross-designated" as assistant U.S. attorneys or as assistant district attorneys.

COSA NOSTRA

There is a lively debate among scholars as to whether American Italian organized crime was transplanted from Italy or is an essentially American phenomenon.[4] Those who favor the transplant theory point to the strong Mafia tradition in Sicily and to the role of Sicilian immigrants in developing organized-crime groups in the United States in the first decades of the twentieth century. Those who favor a nativism theory point to the ways in which the Italian American organized-crime groups connect to American society and its economy. There is no reason to treat these as rival theories. It is entirely plausible to hold that Italian American organized crime has its roots in Italian and especially Sicilian society and culture and, over the years, has adapted to American society and taken on an a distinctly American cast.

It should be emphasized that the American Cosa Nostra and the Italian Mafia are not now and never have been a single organization or even two branches of a single organization. During the twentieth century, they operated as separate and distinct organizations, although they have cooperated in certain criminal ventures, principally drug trafficking, as in the famous "pizza connection" case.[5]

It is now common to trace the emergence of the modern-day Cosa Nostra to the early 1930s. Much of this history was revealed in 1963 by Joseph Valachi, the first Cosa Nostra member to go public and the first to explain that the Italian organized-crime groups referred to themselves as "Cosa Nostra."[6] In this book we use the terms *Cosa Nostra, Mafia, mob,* and *Italian organized-crime families* interchangeably.

According to Valachi, in early 1930, Joseph Masseria and his associates decreed a death sentence for any underworld figure who originated from the locality of Castellammare de Golfo, Sicily. The warfare that followed was known as the "Castellammarese War." One faction was led by Masseria and the other by Salvatore Maranzano. Other gangs and underworld leaders linked themselves to one of the two factions. Vito Genovese, Lucky Luciano, Dutch Schultz, and Al Capone

0615

supported Masseria. In 1931, Masseria was assassinated on Luciano's orders, just before he could carry out his plan to kill Maranzano. Masseria's death concluded the "Castellammarese War." Maranzano called a meeting of almost four hundred gangsters in order to create a structure and forge rules for the organized-crime groups. The jurisdiction of various organized-crime "families" throughout the United States was recognized. Maranzano himself was assassinated only months after this historic meeting.

In the 1920s and 1930s there were a number of ethnically based (e.g., Jewish, Irish, German) organized-crime syndicates in the United States. Underworld figures like Arnold Rothstein and Dutch Schultz were among the most powerful organized-crime overlords. With the important exception of Meyer Lansky and a number of other Jewish gangsters and a few Irish American syndicates (e.g., the Hill Mob in Boston and the Westies in New York City), the non-Italian organized-crime groups did not make the transition into the post-Prohibition world.

The Italian American organized-crime groups had been infiltrating legitimate business since the 1930s, perhaps earlier. They were active on both sides of the labor struggles of the 1930s and emerged with strong footholds in many important labor unions.[7] By the 1950s, Cosa Nostra had achieved virtual hegemony in the underworld of organized crime. Italian American organized-crime "families" were entrenched in twenty-four large American cities and, to a greater or lesser extent shook down and "licensed" other criminals and supplied illicit goods and services, like drugs, prostitution, usurious loans, and pornography. Perhaps even more importantly, in the large urban areas they infiltrated labor unions, businesses, and industries. In addition, they participated in (usually Democratic Party) politics; the history of the Cosa Nostra is intertwined with the history of the urban political machines.

It is a major thesis of this book that the Italian American organized-crime families have been involved in industrial racketeering since the early twentieth century and that it is this racketeering, and the economic power and social and political status associated with it, that makes these organized-crime groups different from other organized-crime groups in the United States.

In the mid-1980s, twenty-four Italian organized-crime families were identified as active in the United States. Of these, no city had more than one family except New York, which had five: Genovese, Gambino,

0616

Lucchese, Bonanno, and Colombo. FBI Director William Webster testified before the President's Commission on Organized crime (PCOC) in 1983 that there were approximately seventeen hundred "made members" of Cosa Nostra and perhaps ten times that number of associates. (Other estimates are as low as four associates for every made member.)

The 1967 Task Force on Organized Crime asserted that Cosa Nostra was a nationwide syndicate governed by a ruling "commission" comprising the bosses of the nation's most powerful families. In his 1983 biography, Joseph Bonanno also spoke about a nationwide commission.[8] However, other than a mysterious and bungled 1956 conference in Appalachin, New York, which was attended by Cosa Nostra figures from all over the country, we do not think there is empirical evidence to support its existence. It is best to think of Cosa Nostra as a melange of locally based crime families, each of which has exclusive jurisdiction in its territory.

This does not mean that there is no cooperation among the Cosa Nostra crime families. Indeed, electronic surveillance in the early 1980s revealed that the five New York City–based Italian American organized-crime families, or at least four of them, utilized a council or commission from time to time. But that commission's jurisdiction and authority are unclear. It functioned intermittently, like a court called upon to solve occasional disputes. Furthermore, from time to time crime bosses from outside New York City came to the city to consult with Tony Salerno, the apparent boss of the Genovese crime family,* about obtaining the New York City commission's assistance.

Each of the Cosa Nostra crime families is headed by a "boss" who exercises unchallenged authority (within the family) and whose position entitles him to a generous cut of all the members' revenues. The boss provides resources, sometimes including defense lawyers, for members and their families when needed. He also takes care of payoffs to politicians, police, and other officials necessary for keeping the family's operations running smoothly. In addition, he can approve or veto the proposal of one of his family's crews or individuals to embark upon a new criminal venture. Of course, the boss also represents the family at all interfamily "sit-downs" and negotiations.

*Until the end of the 1980s, law enforcement agencies believed that Salerno was the Genovese family boss. In the 1990s, it became apparent that Vincent "the Chin" Gigante had actually been the boss, but preferred to remain behind the scenes.

0617

The second in command, acting as a deputy for the boss, is the "underboss." The third position in the family's ruling triumvirate is a senior advisor known as "consiglieri" or counselor. The boss chooses a limited number of "capos" (caporegimes), each with authority over a "crew" comprising soldiers ("made members" of Cosa Nostra, sometimes referred to as "good fellows" or "wise guys") and associates. All members of Cosa Nostra are of Italian descent and all are male. Associates, often as crew members, work with and for Cosa Nostra members, but they do not enjoy the rights and prerogatives of membership.

In effect (as Ron Goldstock has pointed out), the Cosa Nostra families provide their members a license to engage in various criminal schemes; the boss and the family ensure that other criminals will not interfere. The family provides a dispute resolution mechanism in the event that a member or associate finds himself in conflict with another organized-crime figure. And the family provides force and the threat of force to enforce the members' "legitimate" interests. Finally, the family also provides a limited system of welfare support.

Cosa Nostra is a secret organization that swears its members to omerta, a code of silence. Cosa Nostra does not hold open meetings or issue earnings statements. It does not maintain corporate headquarters or offices; it does not keep meticulous books and records. Thus, until Joseph Valachi defected from the mob and went public in 1963, no Cosa Nostra member had ever admitted to the organization's existence, much less described its history, structure, rules, and activities. With the exception of Ianni and Reuss-Ianni,[9] sociologists and criminologists have not been able to carry out case studies of Cosa Nostra; nor does the subject lend itself to quantitative analysis.

Cosa Nostra's longevity can be attributed to the ability of each family to seek out, develop, and exploit a range of criminal opportunities, including but not limited to the corruption and control of national and local labor unions, the creation and enforcement of cartels (through bribery and extortion), the supplying of illicit goods and services, and the carrying out of thefts, frauds, and hijackings. Cosa Nostra's foothold in both the criminal underworld and the upperworld of legitimate business, unions, and politics distinguishes it from other United States organized-crime groups that may participate successfully in illicit markets but have been uninterested or unable to entrench themselves in labor, business, and politics.

0618

PART I

THE "MOBBING-UP" OF NEW YORK CITY

Part 1 consists of seven chapters. Chapters 2 through 7 each explain how Cosa Nostra infiltrated, wielded power in, and profited from a particular industry. Chapter 8 generalizes from the chapters that precede it and draws conclusions about Cosa Nostra's industrial racketeering.

We do not mean to leave the impression that the six industries are the only industries in New York City that have been infected with mob-orchestrated racketeering. Over the course of the twentieth century, Cosa Nostra has extended its tentacles into dozens of New York City–area industries. A 1930s investigation of organized crime in New York found a pervasive mob presence in the following industries: bead, cinder, cloth shrinking, clothing, construction, flower shops, Fulton Fish Market, funeral parlors, fur dressing, hod carriers, ice, kosher butchers, laundry, leather, live poultry, master barbers, milk, millinery, musical, night patrol, neckwear, newsstands, operating engineers, overall, paper box, paper hangers, shirtmakers, taxicabs, waterfront workers, and window cleaners.[1] Many of these industries no longer exist, and some that do still exist may no longer be influenced by the mob. It is clear, however, that organized crime's involvement in legitimate industry sweeps broadly and stretches over nearly a century.

0619

The absence of a chapter on Cosa Nostra's notorious role in the International Longshoremen's Association (ILA) and the loading and unloading of seaborne cargo on New York City docks requires a word of explanation. The six industries examined in this book provide a portrait of New York City's organized-crime families in the city's economy as of the 1980s. In short, we chose to shine a light on racketeering in New York City at a single point in time rather than provide the reader with a pastiche of racketeering at different times throughout the century. Chapters 2 through 7 might be thought of as a series of case studies of industrial racketeering. But the chapters ought to be read holistically: taken together, they aim to portray the status and activities of New York City's five organized crime-families circa 1980–1985.

Still, Cosa Nostra's notorious role in New York City's waterfront is worthy of mention. In the 1940s and 1950s, the Port of New York handled more tonnage by far than any port in the United States. The pinnacle of the mob's domination of the docks was the 1930s–1950s. The story was immortalized in the famous film *On the Waterfront* (1954; produced by Sam Spiegel and starring Marlon Brando). In addition, the mob's control of the docks was brilliantly analyzed by Harvard sociologist Daniel Bell in his classic essay "The Racketeer-Ridden Longshoremen."[2]

Cosa Nostra's waterfront power base was the ILA. In the 1940s and 1950s, Brooklyn Local 1814, the largest ILA local in the country, was headed by Cosa Nostra capo Anthony "Tough Tony" Anastasio, brother of Albert Anastasia,[3] boss of the Gambino crime family and the "key waterfront crime boss in Brooklyn."[4] When Anastasio died in 1963, control of Local 1814 passed to Anthony Scotto, a son-in-law, who flourished in the union, in organized crime as a capo in the Gambino crime family, and in New York City political circles. Cosa Nostra used its influence in the ILA to determine who worked on the docks and, most important, which boats were unloaded and when, and which of the waiting trucks were loaded and when. Shippers had to pay off the mob to ensure that their ships were loaded and unloaded and to avoid labor unrest. Furthermore, Cosa Nostra orchestrated extensive and systematic thefts from the shipping.

In the mid-1950s, the New York and New Jersey Waterfront Commission was established to purge the Mafia from the waterfront and to clean up other abuses.[5] The commission was not successful; FBI investigations in the 1970s found that organized crime dominated the ILA lo-

0620

cals up and down the East Coast. Today, in part because of Cosa Nostra's racketeering, very little shipping business remains in New York City.

Cosa Nostra exercised power in many other sectors of the economy. Historian John H. Davis, who has written extensively about organized crime, concludes that by 1965 Carlo Gambino, boss of the Gambino crime family, had amassed a conglomerate of interests in the legitimate business world:

> Gambino gained a lucrative foothold in Castro convertible furniture (exclusive control of mattresses used in Castro beds, and the trucking of Castro furniture from factory to showroom to retail outlets), Pride Meat supermarkets (run by his cousin and brother-in-law Paul Castellano), fuel oil trucking, pizza parlor equipment concerns, meat-packing companies—the list was endless.[6]

In 1979, *Wall Street Journal* reporter Jonathan Kwitny published *Vicious Circles,*[7] detailing Cosa Nostra racketeering in legitimate industries, including meatpacking, cheese importation, lunch carts, trucking, securities, alcohol, waterfront, cargo operations, and clothing manufacture in the metropolitan area. Kwitny described the intricate system of physical intimidation and economic coercion and cooperation that enabled the Cosa Nostra organized-crime families to establish themselves as integral players in the core industries of the city.

Even in the 1980s, the six industries covered in chapters 2 through 7 were not the only New York City industries or business sectors with an organized-crime presence. Had we unlimited space and the reader's unlimited patience, we could have included chapters on the moving and storage industry, linen service, restaurants, and nightclubs. Recently, Cosa Nostra has been active in street fairs and even in the securities industry.

The Feast of San Gennaro has taken place in Little Italy since 1916. It is New York City's largest and best-known street festival.[8] In 1996, following a joint investigation by the New York Police Department (NYPD) and the Federal Bureau of Investigation (FBI), a federal grand jury indicted nineteen members of the Genovese crime family for participating in the affairs of an enterprise (i.e., the family) through a pattern of criminal activity. The predicate offenses included fraud and extortion related to the annual San Gennaro festival. The indictment

0621

charged that the defendants skimmed money from the rent paid by vendors to the organizers of the street fair and defrauded the city on taxes.[9] While the indictment was pending, the Giuliani administration forced the San Gennaro Society, the festival's sole sponsor, to submit to review by a city-appointed monitor, John C. Sabetta. In his official report to the mayor, Sabetta charged that the society was not a genuine not-for-profit organization, that it violated the city's permit provisions, and otherwise failed to comport with its charter as a charitable organization.[10] In August 1996, the mayor replaced the society with a new sponsor and requested that the Roman Catholic Archdiocese oversee San Gennaro's finances to ensure that profits were donated to schools and parishes in lower Manhattan. Ultimately, James "Little Jimmy" Ida, the Genovese consigliere, and Nicholas Frustraci, a Genovese soldier, were convicted and sentenced to long prison terms.

In the 1990s, some Cosa Nostra members set their sights on Wall Street. High-ranking members of the Bonanno and Genovese crime families shook down the employees of a small brokerage firm to obtain large stock holdings at basement-level prices from a company called HealthTech. Allegedly, with the cooperation and support of HealthTech's CEO, Cosa Nostra members proceeded to inflate the trading price of the security and resell the shares to unsuspecting customers to whom the brokers had recommended the stock.[11] The scheme, called a "pump and dump," resulted in a $3 million loss to investors in seven states when the stock price fell precipitously. In 1997, the United States attorney for the Southern District of New York indicted seventeen individuals in a ninety-seven page, twenty-five count indictment for securities fraud, bank fraud, and extortionate activity.[12]

Having said that chapters 2 through 7 do not exhaust Cosa Nostra's activity in New York City's economy, we emphasize that Part 1 deals with the most important examples of Cosa Nostra's industrial racketeering. We aim to explain and document how Cosa Nostra relates to the unions and businesses in each of these industries, how it pulls money out, and how its operations flourished for so many decades without significant interference.

A Cosa Nostra Outfit

Seven Decades of Mob Rule in the Garment District

> The maintenance of right conditions in New York's great garment industry has required eternal vigilance—not only of public officials but of labor organizations. . . . Despite the efforts of these agencies, some segments of the garment trade have become the spawning grounds for racketeers intent to make an illicit living off this enterprise. These elements sometimes gain a strong foothold in certain sections. . . . At times, violence and intimidation have donned the honorable cloak of unionism for the purpose of betraying it.[1]
>
> —Justice Samuel H. Hofstadter's opinion in *Barton Trucking Corp. v. O'Connell* (1958)

CHRONOLOGY

1920 Organized-crime boss Arnold Rothstein emerges as a major force in the Garment District. Clothing designers pay him to fight against labor unions, and labor unions pay him to derail company strikebreakers. When Rothstein is murdered in 1928, Louis "Lepke" Buchalter and Jacob "Gurrah" Shapiro take over his rackets and expand their power base to include ownership of design companies and control of trade associations and truckers' unions.

1950s The U.S. Justice Department investigates and prosecutes several trucking companies on antitrust charges. *United States v. Cloak and Suit Trucking Ass'n., Inc*. results in a consent decree, but enforcement is negligible and results unimpressive.

0623

1957 Midlevel city employee in the Office of the New York City Commissioner of Licenses denies license renewal to mob-dominated trucking firm. The city wins the ensuing court battle, but the agency does not follow up this regulatory initiative.

1972 The New York City Police Department wages an aggressive parking-ticket campaign against the trucking cartel. Gambino sues New York City for violating his Fourteenth Amendment due process rights. The ticket campaign is dropped as part of the settlement.

1973 Federal and local law enforcement agencies launch Project Cleveland, a sting operation that reveals the role of the International Ladies Garment Workers Union (ILGWU) Local 120 and the Master Truckmen of America in maintaining Cosa Nostra's trucking cartel in the garment industry. New Jersey mobster Anthony "Tony Pro" Provenzano is convicted, but other cases fail.

1982 New York state senator Franz Leichter issues a report detailing Cosa Nostra's control over New York City's garment industry. He charges that Joey Gallo, the Gambino crime family consigliere, controls the Greater Blouse, Skirt and Undergarment Association.

1987 Joey Gallo is convicted of bribery and given long prison sentence.

1988 The Manhattan District Attorney's Office launches a sting operation by establishing a Garment District trucking company and a Chinatown contracting company. Investigators record incriminating conversations between the Gambino brothers.

1992 In mid-trial, Joseph and Thomas Gambino plead guilty to a single antitrust count. They agree to pay $12 million in fines, leave the industry permanently, and allow a "Special Master" to monitor the sale of their companies and to monitor the industry. Former New York City police commissioner Robert McGuire is appointed special master for a five-year term. He and Michael Slattery institute major reforms, set up a victim's compensation fund, and closely monitor garment industry operations.

0624

1993 Thomas Gambino is convicted of racketeering, loan-sharking, and running illegal gambling operations in Connecticut and sentenced to five years in prison.

1997 Robert McGuire's five-year term as special master ends. He cites significant drops in trucking costs in the garment industry.

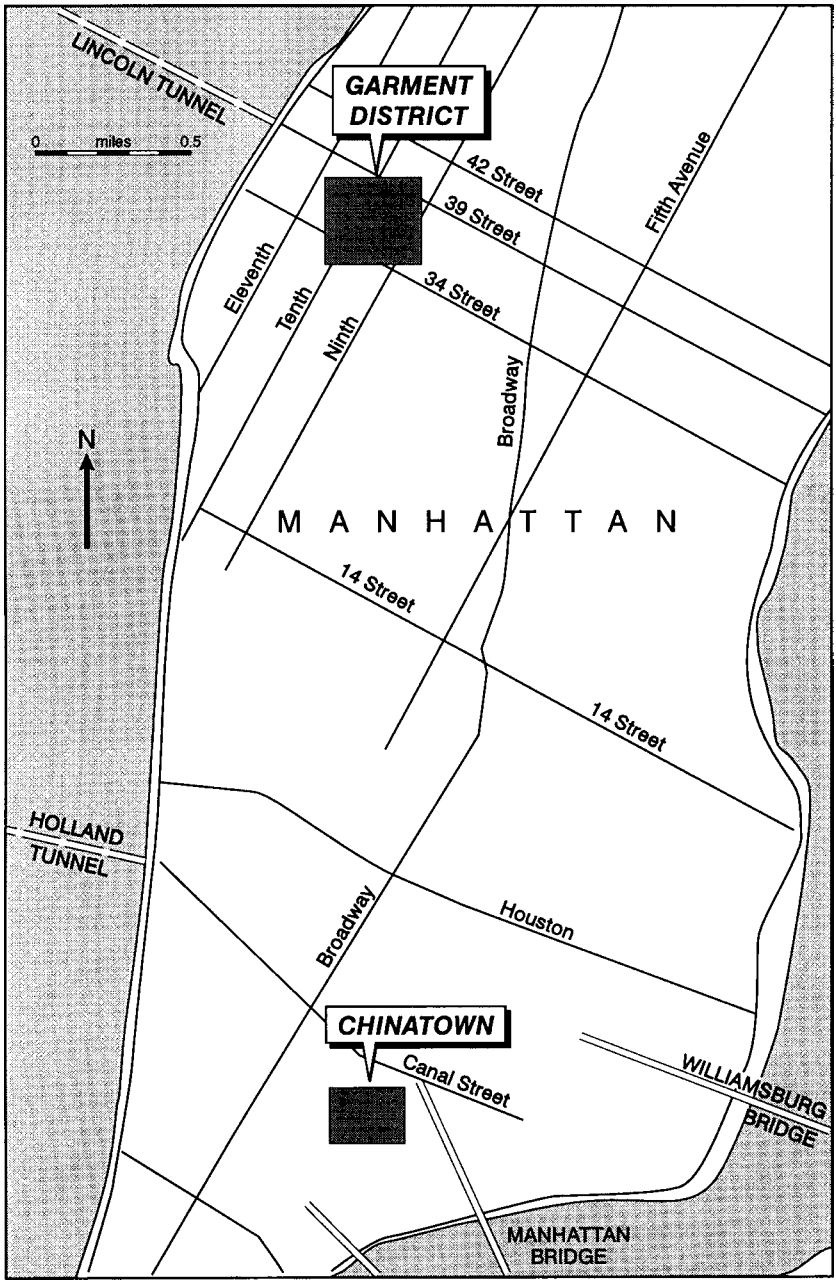
1998 The U.S. Attorney's Office for the Southern District of New York brings two separate indictments, both alleging the continuation of mob-run labor racketeering in the Garment District. One indictment charges the acting boss of the Lucchese crime family, Joseph "Little Joe" DeFede, and six other defendants, including New York attorney Irwin Schlacter, with imposing an annual "mob tax" of nearly half a million dollars on contractors and designers in exchange for labor peace. The second indictment charges five defendants, including a capo from the Genovese family and a capo from the Gambino family with extorting payoffs from a garment factory and its affiliates from 1991 through 1994.

Since the second half of the nineteenth century, the garment industry has been an important component of New York City's economy. The "needle trades" played a crucial role in absorbing millions of immigrants over the past century and a half. While tens of thousands of immigrants labored in sweatshops for minimal pay, many of them viewed employment in the Garment District as an opportunity to settle into American society and pursue entrepreneurial ambitions. Over time, the ethnic makeup of the workforce changed: in the 1840s, Irish and German workers dominated the garment trade; by the mid-nineteenth century, Jewish immigrants from Germany and Austria-Hungary were entering the industry in ever-increasing numbers. Russian and Polish Jews succeeded them, followed by Italians, African Americans, Puerto Ricans, Dominicans, and Chinese.[2]

In 1890, New York City's Garment District employed 83,000 people, and capital investments in the industry amounted to $630 million; in 1914, New York City employed 62 percent of the women's-apparel workers in the country.[3] The Garment District saw its heyday in the middle of the century, when it employed more than 300,000 people. While an expanding market for low-priced imported clothing eroded

0625

the city's dominant role in the decades that followed, the industry still employed 86,000 people in 1993.[4]



From the early twentieth century to the present day, the garment industry has proved fertile soil for organized crime. Arnold Rothstein, the first dominant organized-crime figure of the twentieth century, became involved in the industry when designer companies invited his thugs to crush emerging unions.[5] Rothstein ultimately played both sides of the fence by providing muscle to the unions. Following his murder in 1928, Louis "Lepke" Buchalter and Jacob "Gurrah" Shapiro took over his labor rackets and eventually gained full control over trade associations, truckers' unions, and designer firms.

Buchalter's and Shapiro's power was brought to the attention of the public by Thomas E. Dewey, who served as special prosecutor of the State of New York from 1935 to 1937, and as the Manhattan district attorney from 1938 to 1942. One of Dewey's biggest cases was the prosecution of Buchalter and Shapiro for extorting tens of millions of dollars from businesses.[6] Shapiro was convicted of extortion in the baking industry, another mob-dominated sector of the local economy. Federal prosecutors first tried and convicted Buchalter for racketeering in the fur industry; later, Dewey successfully prosecuted him for racketeering in the baking industry.[7] Ultimately, Brooklyn District Attorney William O'Dwyer convicted Buchalter of murdering Joseph Rosen, a truck driver in the garment industry who had cooperated with Dewey's investigations. Buchalter was executed in 1944.[8]

After the demise of Buchalter and Shapiro, Italian American organized-crime figures rose to power in the New York City garment industry. Among them, the seven most important were Thomas Lucchese, James Plumeri, Dominick Didato, Natale Evola, John "Johnny Dio" Dioguardi, and Thomas and Joseph Gambino.[9] Although Dewey prosecuted and convicted Plumeri and Dioguardi for extorting money from truckers working in the Garment District, the two served only brief jail sentences. Dewey referred to Dioguardi as a "young gorilla"[10] and "a racketeer on a long way up to 'success' in organized crime."[11]

Cosa Nostra maintained its power over the Garment District by operating a trucking cartel, which it enforced through control over a trucking trade association, the drivers' union, and a contractors' association. Profits derived from extortion and from ownership interests in trucking companies and designer firms. In the 1980s, capo Thomas Gambino and his brother Joseph were the most important Cosa Nostra figures in the

Garment District. Ultimately (as we shall see in chapter 9), they were brought down in an elaborate sting operation executed by the New York County District Attorney's Office.

HOW THE GARMENT INDUSTRY WORKS

New York City's Garment District consists of three major components: designers ("manufacturers") in midtown Manhattan (the "Garment District"), contractors in lower Manhattan's Chinatown, and trucking companies. All three of these businesses have been controlled or influenced by organized crime since the early decades of the twentieth century.

"Manufacturers" are businesses that design women's and men's fashions, contract for their production, and sell the finished goods to retailers. The term *manufacturer* is misleading, since most of these companies design but do not actually manufacture clothing. They include such household names as Liz Claiborne, Calvin Klein, and Donna Karan,[12] and numerous smaller and lesser-known companies.

Designers first assess the fashion trends and develop designs for the clothing they will sell for that season. Second, they purchase large rolls or bolts of fabric known as "piece goods" from suppliers from all over the country, which are delivered by the colorful "pushboys" who are a Garment District institution. Third, designers employ cutters,[13] who use electric knives or heavy shears, to cut the fabric into individual pieces of a dress or blouse that, when sewn together, result in the final product. Fourth, designers send this cut-work to contractors, who might be thought of as manufacturers. They sew the cut-work together into a finished product and affix the designers' labels. Finally, the designers place their apparel with retail outlets. Throughout this process, timeliness is essential because the clothes have a narrow window of marketability; today's trend-setting garments are tomorrow's castoffs. If apparel is not delivered on schedule, a season's business may be lost, or stores may fill up their racks with other items. Thus, designers are highly vulnerable to threats of delay.

Contractors essentially are sewing factories, which receive raw materials from the designers and make them into finished garments. In recent decades, the majority of contractors are located in Chinatown

0628

"sweatshops," where Chinese women, some of them illegal immigrants, use sewing machines to stitch cut-work.[14]

Trucking companies transport the cut-work from midtown designers to Chinatown contractors. They also take finished apparel back to the Garment District for inspection or transport it directly to retailers. Over the years, the Gambino crime family expanded its garment interests to New Jersey, where additional sweatshops, trucking companies, and warehouse outlets are located.

COSA NOSTRA AS BANKER

Cosa Nostra served as a bank for many garment industry participants. All five New York City Cosa Nostra crime families engage in loansharking.[15] Many designers and contractors are undercapitalized. If costs escalate sharply, orders dry up, or fashions change, firms find themselves short of cash.[16] Given the precarious nature of the business, and the sudden vulnerability of the companies when cash needs arise, banks are not often a viable option. Moreover, many firms, especially Chinatown contractors, are not considered good risks.

Organized crime kept a steady supply of cash flowing in the garment industry, in effect serving as its covert financier and banker. Capos distributed cash to soldiers charging interest of perhaps 0.5 percent a week. The soldiers then distributed the money to street-level loansharks, who lent it out at rates of approximately 3 to 5 percent a week. At such high rates, the interest ("vigorish," or "vig") added up rapidly so that the borrower paid interest as high as 222 percent a year.[17] Companies that could not meet their payments were sometimes forced to place a few "no-show" workers on the payroll, or share or cede ownership of their firms to organized-crime figures.

Financial services often provided Cosa Nostra's first contact with new design firms and contractors; other services followed. The design firms needed sewing services, the contractor shops needed raw materials, and both needed trucking services. Cosa Nostra's trucking companies often provided the only means by which contractors could obtain orders from designers. A new contractor would ask a trucker to help the contractor secure sewing work from the midtown designers; the trucker would oblige and transport a shipment of cut-work from midtown to

0629

Chinatown. Having once accepted the assistance, that sewing factory was "married" for life to that trucker, who would provide all future shipping services.

Manufacturers had the same experience. For example, when Aaron Freed opened his sportswear firm, the Gambino brothers helped him find contractors to do his sewing work. When he had trouble paying bills, the Gambinos let his credit run for months. Even when he used a "gypsy" trucker, as he did occasionally, he still had to pay his assigned trucker as if the latter had performed the work.[18]

COSA NOSTRA'S TRUCKING CARTEL AND THE "PROPERTY-RIGHTS" SYSTEM

The mob's power in the Garment District stemmed from its control of the trucking companies and influence over their drivers. Members of the trucking cartel provided essential services to the midtown designers and Chinatown contractors. The coercive marriage of contractors and designers to truckers constituted an elaborate "property-rights" system enforced by the trucking cartel. In reality, the truckers themselves decided which trucking company would service each Chinatown contractor and Garment District manufacturer. Cosa Nostra–controlled trucking companies treated their customers as property.[19] The property-rights system became so institutionalized that trucking companies, through front organizations described below, signed *written* agreements allocating territories and customers.[20] Fixed prices were maintained and competitive behavior was suppressed through financial penalties and violence.

The sanctity of "marriage" was enforced through economic coercion and, occasionally, through intimidation and violence. For example, if a contractor sought to terminate its relationship with its trucking partner, the truckers' cartel would ensure that the firm received no work from midtown designers—in effect, an economic death sentence. The unhappy contractor would have no choice but to return to its former partner. On occasion, a contractor was so anxious to break free of its trucker that it shut down in one area and reopened elsewhere. If this ruse was discovered, the contractor would be forced back into the arms of its original marriage partner. If a designer tried to divorce its contractor, no contractors or truckers would come courting; the only op-

0630

tions were to reconcile with the original trucker, close the company, or appeal to Cosa Nostra bosses to work out a solution.

In addition to price fixing, truckers had two other lucrative schemes. The first involved the billing system. The designers had to pay up front, not after services were provided. Thus, when a Chinatown contractor received an order from a designer, the designer subtracted its trucking cost from its payment to the contractor.[21] Contractors, frozen out of the pricing process, never knew exactly what it cost to have cut-work shipped to and from Chinatown.

"Round-trip pricing" also enriched the truckers. Cut-work had to be transported from the contractor's shop back to the Garment District or directly to retailers. The designers had to pay for the round-trip, regardless of whether the trucker actually moved the finished apparel. A contractor who needed to rush finished goods uptown might not be able to wait for its assigned trucker.[22] If the contractor delivered the goods personally, or employed another person to do so, the assigned trucker still had to be paid. In fact, by billing designers rather than contractors, truckers ensured that the latter would not have an opportunity to object until after such payments had been made.

THE MASTER TRUCKMEN OF AMERICA (MTA) AS CARTEL ENFORCER

Cosa Nostra relied on a trade association to enforce the cartel. The Master Truckmen of America (MTA), controlled by the Colombo family, policed and managed Cosa Nostra's trucking cartel. Any "alien" truckers who tried to break into the industry faced an array of anticompetitive practices. The MTA would inform would-be entrants to the Garment District that they could not do business there; some lucky or connected firms were allowed to join the cartel, but unless they had bought out a cartel member, they would have no customers. If a trucking company refused to join the MTA, or failed to pay its dues, the drivers—who were all members of the International Ladies Garment Workers Union (ILGWU) local—would strike. If that was insufficient to bring the rebel trucker into line, trucks would be vandalized or stolen. Cartel truckers also engaged in "monopolistic parking practices,"[23] blocking curbs or entire streets so that an "unconnected" firm could not deliver its shipments. Thus, the trucking cartel ensured that the marriage system

0631

would not be subverted and that Cosa Nostra's domination of garment trucking remained absolute.

COSA NOSTRA'S POWER OVER THE TRUCK DRIVERS: ILGWU LOCAL 102

ILGWU Local 102, which represented the truck drivers, was another base of Cosa Nostra's control in the garment industry. While the ILGWU as a whole had remained mostly free of racketeering throughout its history, the garment industry's leading trade magazine, *Women's Wear Daily*, called Local 102 "an active tool of labor racketeers." Sol C. Chaikin, the president of the ILGWU in the 1970s, admitted that "we have never been able to control 102."[24]

Local 102 served the mob in three critical ways: it helped the MTA preserve Cosa Nostra's trucking cartel; it ensured that Cosa Nostra trucking companies avoided labor disputes with other ILGWU locals; and it prevented any other union from entering the industry.[25] If a trucker refused to join the MTA or to succumb to its anticompetitive demands, the MTA would arrange for a Local 102 job action. Noncompliant truckers were soon brought to heel; there was zero tolerance for attempts to undercut Cosa Nostra's inflated rates in cut-work trucking. This perverse alliance between the employers' trade association and the employees' trade union guaranteed Cosa Nostra's control over the industry. An incident that occurred during the Project Cleveland investigation reveals how Local 102 served the interests of the MTA. As soon as a government undercover agent purchased a trucking company, MTA President Frank Wolf threatened a Local 102 strike unless the new owner paid 10 percent of the purchase price to the MTA.[26]

Cosa Nostra's control over Local 102 ensured that Cosa Nostra trucking companies enjoyed labor peace. If an ILGWU local struck a mob-controlled company, replacement drivers managed to get through the picket lines. Some of the drivers were actually members of Local 102, or it would turn out that union officials had ordered strikers to stay off the picket lines just when the replacement drivers arrived. In either event, the union would lose the strike.

Significantly, not all of the drivers employed by mob-owned trucking companies belonged to a union. Sometimes high-ranking organized crime members like Thomas Gambino ran "double-breasted" shops,

0632

employing a mixture of unionized and nonunionized drivers. These mobsters used their favored status as garment industry power players to avoid paying union-scale wages.

Cosa Nostra also used Local 102 to prevent any other union from representing garment truck drivers. In one reported case, Matthew Eason, a union organizer and president of a local affiliate of the United Warehouse Industrial and Affiliated Trades Employees Union, filed a petition with the National Labor Relations Board (NLRB), seeking to have his union represent the employees of two employment agencies. However, Eason ran into complications because the employment agencies were supplying workers to Interstate Dress Carriers, a New Jersey–based trucking company with ties to the Lucchese Family.[27] Eason was soon approached by representatives of Interstate Dress and the union. They offered him bribes to withdraw his labor petition and threatened him with physical harm if he refused.[28]

CONTROLLING THE CONTRACTORS: THE GREATER BLOUSE, SKIRT, AND UNDERGARMENT ASSOCIATION

Cosa Nostra used the Greater Blouse, Skirt, and Undergarment [Employer] Association (Greater Blouse), which represented the interests of approximately one hundred unionized contracting companies, to control the Chinatown contractors.[29] Greater Blouse brokered collective bargaining agreements between the contractors, and the ILGWU and sought generally to resolve labor problems.[30] In addition, Greater Blouse entered into agreements with other trade associations, including trucking companies and Seventh Avenue designers.

In his 1982 report investigating the mob's role in the Garment District, New York State Senator Franz Leichter charged that the Gambino family used Greater Blouse to solidify its domination of labor and expand its infiltration. Joseph N. Gallo, the business representative and de facto head of the association, was also the Gambino crime family's longtime consigliere.[31] Since Cosa Nostra firmly controlled the association and, by extension, labor contracts in the industry, contractors either paid a hefty fee to join Greater Blouse or found another line of work.

A May 1983 intercepted telephone conversation between Gambino crime-family boss Paul Castellano and Thomas F. Gambino[32] indicated that their family shared control of the association with two other New

0633

York crime families. Gambino told Castellano, "You got a third in it [Greater Blouse], the West Side has a third in it and Jerry has a third in it." According to prosecutors, the "West Side" referred to the Genovese family, and "Jerry" was the Colombo family's acting boss Gennero "Jerry" Langella.[33]

In 1976, the Chinese Garment Makers Association (CGMA) brought a lawsuit in state supreme court charging that Greater Blouse's officers had entered into an agreement with a major designer trade association aimed at diverting contractors' profits into mob bank accounts.[34] The agreement required the designers to deduct more than 7 percent of the money owed to the contractors and send it directly to Greater Blouse, which ostensibly used the sum to cover "administrative expenses" before forwarding the remaining amount, if any, to the sewing factories. According to the CGMA, the "administrative expenses" were mob payoffs. The CGMA claimed the scam was even worse than it appeared because Greater Blouse inflated the deducted amount by basing it on the contractors' gross proceeds—the contract price *plus* overhead, transportation costs, and profits. This practice, according to contractors, allowed the association to siphon off as much as $30 million annually from the contractors' shops.

The CGMA also charged that Greater Blouse denied members access to the association's rules, procedures, and financial statements and that contractors were denied their rights and were unable to protect their interests. But the judge ruled against them, stating that the "challenged method of electing the directors did not violate state law."[35]

Cosa Nostra also used its control over Greater Blouse to obtain no-show jobs from member firms. Such "jobs" provided valuable patronage and legitimate cover for racketeers.[36] Cosa Nostra further used Greater Blouse as a cash cow by diverting contractors' membership dues into its own coffers. At $50 a month for each of the seven hundred members, these dues amounted to $35,000 each month, or $420,000 a year.

COSA NOSTRA'S PROFITS: INTERESTS IN TRUCKING AND DESIGNER FIRMS

The Cosa Nostra crime families profited from ownership of trucking companies. Thomas Lucchese, a Cosa Nostra crime-family boss from 1953 until his death in 1967, controlled Champion Trucking and passed

0634

it on to his heirs in the Lucchese family. Another major Lucchese figure, James Plumeri, owned Ell-Gee Carriers Corporation and Barton Trucking Company. Natole Evola, a powerful member of the Bonanno crime family, owned Amity Garment Delivery Company and had interests in Trinity Trucking, Belmont Garment, ECCO Trucking, and Milton Feinberg Trucking.[37]

Thomas F. Gambino, widely regarded as the most powerful organized-crime figure in the Garment District, held ownership interests in a number of trucking and design companies. At various times he controlled no fewer than eight garment trucking firms: Astro Carriers, Major Dependable Delivery, Dynamic Delivery, JHT Leasing, Clothing Carrier's Corporation, Greenberg's Express, GRG Delivery, and Consolidated Carriers, the largest hauler of garments in New York City.[38] In 1974, *Women's Wear Daily* charged that all five New York Cosa Nostra families held interests in garment trucking.[39]

Some Cosa Nostra figures also held ownership interests in design firms. As early as the 1930s, Thomas Lucchese was infiltrating design firms through threats and violence. Together with his son-in-law Thomas Gambino, he held significant interests in both Sherwood Fashions and Budget Dress Corporation; when testifying before the McClellan Committee, Lucchese admitted his interests in garment design companies.[40] After Lucchese's death in 1967, his garment-industry companies passed to the new Lucchese family boss, Vittorio Amuso, who allowed high-ranking Lucchese figure Michael Pappadio to monitor and control the family's garment-industry interests until 1989.[41] Other prominent organized-crime figures who have held interests in the garment industry include Carlo Gambino (Arlene Dress Company),[42] and Paul Castellano (G & I Dress Company).[43]

These garment-industry interests were lucrative for Cosa Nostra. For example, in a 1994 racketeering, conspiracy, and murder case against Lucchese figure Anthony Casso, two witnesses testified that from 1987 onward, Casso and Amuso received millions of dollars in cash from the Lucchese family's garment-industry businesses.[44] When, in 1993, Thomas Gambino was sentenced to a five-year prison term for racketeering, loan-sharking and illegal gambling, he was worth an estimated $100 million;[45] much of this fortune derived from his garment-industry interests.

If, however, Cosa Nostra determined that a particular design firm was not worth keeping in operation, a "bust out" (bankruptcy fraud)

0635

stripped the company of all its assets and left creditors in the cold. In his 1982 report, New York State Senator Franz Leichter reconstructed the details of a bust out orchestrated by Michael Pappadio. Together with two associates and legitimate garment-industry designers, Pappadio incorporated a firm called Fashion Page. In 1975, when the firm's business began to decline, Pappadio's friends and associates supposedly lent the company $275,000. Soon thereafter, two fires destroyed Fashion Page. The first, in May of 1975, led to an insurance recovery of $300,000, the majority of which went to repaying the Pappadio loans rather than Fashion Page's numerous creditors. Seven months later, another fire destroyed all the company's books and records. Two weeks after that, the business closed for good.[46]

THE U.S. DEPARTMENT OF JUSTICE'S ANTITRUST SUITS

On April 30, 1951, the Antitrust Division of the U.S. Department of Justice (DOJ) filed two separate civil antitrust suits against the garment industry's truckers.[47] One suit attacked the marriage system that dominated the trucking of men's coats and suits; the other targeted the trucking of women's garments.[48] The litigation languished for more than four years until, in October 1955, the parties signed consent decrees that prohibited a range of anticompetitive practices. The garment truckers agreed to open to DOJ attorneys all books, ledgers, accounts, correspondence, memoranda, and other records and documents. The trade associations agreed to submit written reports to the government regarding their compliance with the terms of the settlement. The federal court retained jurisdiction so that if the defendants engaged in the same illegal practices, the government would not have to file a new lawsuit. Instead, the Antitrust Division could merely "apply to the Court at any time for such further orders or directions as may be necessary or appropriate for the . . . carrying out" of the judgment.[49]

The consent decrees raised expectations that were not realized. Rather than driving organized crime out of the Garment District, the decrees merely encouraged the mob to become more surreptitious; written documents that formerly had spelled out flagrant illegal practices were replaced by unwritten rules of cooperation.[50] The marriage system did not change. Nearly thirty years later, garment truckers were continuing to fix prices, allocate customers, prevent designers and con-

0636

tractors from selecting shippers, and to harass and to bar competitors from the industry.

NEW YORK CITY'S REGULATORY FAILURE

Operation of a common-carrier trucking firm in New York City historically required a license issued by the commissioner of licenses.[51] In 1957, for reasons that are unclear, the commissioner briefly used his licensing authority to oppose organized crime. Barton Trucking Corporation, a firm that operated five trucks in the Garment District, filed a routine application for a public cart license.[52] For decades, the commissioner had always granted such licenses upon request. The statute made citizenship the only qualification for a public cartman's license and did not appear to give the commissioner discretion.[53] However, Barton Trucking was controlled by James Plumeri, a former associate of Buchalter and Shapiro and a well-known racketeer in the garment industry. Commissioner Bernard J. O'Connell pointed to Plumeri's prior conviction for extortion and other racketeering-related crimes in the Garment District, found Plumeri to be unfit as a public cartman, and denied Barton Trucking a license.

The decision set off a round of litigation. Plumeri's lawsuit charged that the commissioner's denial deprived Barton Trucking of a valuable property right without due process of law; that the commissioner had acted arbitrarily and beyond his powers; and that public carriers in the garment trucking industry were exempt from licensing requirements.[54]

The trial court rejected all of the plaintiff's claims and affirmed the license denial. Judge Samuel H. Hofstader's opinion decried organized crime's infiltration of legitimate industries: "some segments of the garment trade have become the spawning grounds for racketeers intent to make an illicit living off this enterprise." The judge noted that "the license commissioner, like other public officials, [was] aware that the hoodlum empire extends into many territories."[55] In upholding the denial of Plumeri's license, the court held that the commissioner had the power to consider an applicant's character (or lack of it) when exercising his licensing authority.

Plumeri dominated the next round. In December 1958, the appellate division reversed the lower court's ruling, finding that the commissioner had exceeded his authority under the public cart–licensing

0637

statutes.[56] Although the appellate court noted that Plumeri's criminal background might render him unfit to operate in the garment-trucking business, the court found that the licensing commissioner had arrogated power that was not his to wield.[57] However, a year later, the Court of Appeals, New York's highest court, reversed the appellate division and reinstated Hofstader's ruling, thereby leaving Plumeri and Barton Trucking without an operating license. The Court of Appeals held that although the commissioner did not have explicit power to consider an applicant's character, "power to grant a license necessarily implies power to withhold it for good cause."[58] Thus, the commissioner was "not only empowered, but indeed . . . duty bound" to inquire into the personal character of proposed licensees,[59] and Plumeri's criminal record provided a wholly adequate reason to deny Barton Trucking's application.[60]

Unfortunately, city officials did not use this important affirmation of their licensing authority to advance the attack on organized crime. It was not until the Giuliani administration came into office in 1994, that regulatory power was again aimed at purging organized-crime figures from legitimate industries.

THE PROJECT CLEVELAND TRUCKING INVESTIGATION

In March 1973, with the cooperation of William Aronwald, head of DOJ's Joint Strike Force Against Organized Crime in Manhattan, the New York City Police Department purchased a garment-trucking firm known as Gerro Trucking in order to obtain evidence of organized crime's involvement in the garment industry.[61] Law enforcement officials established Herman Goldfarb, an ex-convict, as the president and owner of Gerro Trucking, wired him and his offices with recording devices, and waited to see who might fall into the trap.[62]

Through the duration of Project Cleveland—from March 1973 to approximately August 1974—law enforcement agents taped thousands of hours of conversations, which included incriminating evidence against a number of trucking industry figures. By October 1975, a federal grand jury had indicted eight people on charges of conspiracy and extortion. In one indictment, the federal government charged MTA Director Frank Wolf with extorting a $5,000 payment from Gerro Trucking. A union official was also indicted for allegedly cooperating with

0638

Wolf in threatening to stage a strike against Gerro Trucking if an extortionate payment was not made. Matthew "Matty the Horse" Ianniello, a captain in the Genovese crime family and Frank Wolf's assistant, as well as a business agent for ILGWU Local 102, was also named in the indictment. Project Cleveland eventually led to a labor-racketeering conviction of New Jersey Teamster official and Cosa Nostra capo Anthony "Tony Pro" Provenzano.[63] In its scope, degree of local and federal cooperation, and inventiveness, this sting operation was a promising remedial effort.

But Project Cleveland failed to make a serious inroad against Cosa Nostra's garment-industry interests. Most of the high-ranking organized-crime figures in the garment industry remained untouched. To be sure, Provenzano's conviction was an important victory for federal prosecutors. Yet that case had little relation to mob influence in the Garment District. Among the Project Cleveland defendants directly involved in the Garment District, four men—including Frank Wolf and Matthew Ianiello—were acquitted in November of 1976. This was a major blow to law enforcement efforts because the MTA played a key role in Cosa Nostra's garment-industry operations, and because Wolf was the most important defendant in the case.

Trying to put a positive spin on the government's effort, Aronwald emphasized that Project Cleveland had led to the imprisonment of individual mobsters and spawned similar sting operations that produced additional convictions.[64] While it is true that Project Cleveland disrupted organized crime's operations in the Garment District slightly, major Cosa Nostra figures—the Gambino brothers in particular—remained untouched and the mob's domination of the Garment District remained rock solid.

CONCLUSION

Perhaps no other industry is more bound up with the history and peoples of New York City than the garment industry. Perhaps in no other industry did organized-crime figures operate so openly. This was due to the fact the Gambino brothers and other organized-crime figures owned their own companies and because the garment industry's legitimate institutions were so interwoven with the mob-sponsored truckers' cartel. The MTA, the ILGWU Local 102, and Greater Blouse all

0639

collaborated with the mob; each reinforced and strengthened the trucking cartel, and each funneled money into the coffers of organized crime. The marriages of trucking companies to manufacturers and contractors produced a property-rights system enforced by Cosa Nostra through the trucking cartel. While Thomas Dewey's prosecutions in the 1930s and 1940s and the Project Cleveland prosecutions in the 1970s put some organized-crime figures behind bars, the government's best shots were not nearly enough to weaken Cosa Nostra.

The *Barton Trucking* case might have provided New York City with a tremendously important tool to use against organized crime. The New York State Court of Appeals had held that the city could base denial of trucking licenses solely on applicant character. Trucking companies owned or operated by known mobsters could be purged from the industry. No arrests, prosecutions, or long trials were needed; a mob-controlled business could be crippled by an administrative decision. Having established its authority over licensing garment truckers, New York City officials did not attempt to drive Cosa Nostra–owned truckers out of the garment trade. In fact, organized crime only became more entrenched in garment trucking in the ensuing decades. Why then did the city not use its regulatory and licensing power against organized crime? Unfortunately, we can confidently offer no answer to that question. However, we believe that an answer should be sought in the symbiotic relationship between city politicians and Cosa Nostra.

Fishy Business

The Mafia and the Fulton Fish Market

> [Operating] in a frontier atmosphere . . . the Fulton Fish Market is a sovereign entity where the laws of economic power and physical force, not the laws of New York City, prevail.[1]
>
> —Frank Wohl, court-appointed monitor of the Fulton Fish Market, 1990

CHRONOLOGY

1883 The Fulton Fish Market opens in lower Manhattan.

1923 Joseph "Socks" Lanza establishes himself as the de facto boss at the Fulton Fish Market by controlling Local 359 of the United Seafood Workers, Smoked Fish and Cannery Union.

1933 The U.S. attorney for the Southern District of New York charges Local 359, twenty-four companies, three trade associations, and fifty-four individuals operating at the market with extortion and running a cartel in violation of the Sherman Act. Among the defendants is Joseph "Socks" Lanza, a capo in the Genovese family, Local 359's business agent, and "czar" of the Market. Many defendants enter guilty pleas, including Lanza, who serves two years in prison.

1938 Lanza is convicted on federal racketeering charges; five years later he is found guilty of extortion and remains in prison until 1950. He is returned to prison for violating parole by associating with organized-crime figures.

0641

1968 Lanza, still on the union payroll, dies. He has been the undisputed ruler of the Fulton Fish Market for forty years.

1974 Carmine Romano, Lanza's successor as the Genovese crime family's manager of the Fulton Fish Market, becomes secretary-treasurer of Local 359.

1975 Carmine Romano establishes the Fulton Patrol Association, ostensibly to prevent thefts of seafood. For this "protection," wholesalers pay $1300 weekly to the thieves who regularly stole from them.

Local 359 officials extract payoffs, characterized as Christmas presents, from wholesalers. The money, supposedly earmarked for local members, goes directly to the Genovese crime family.

1979 At the direction of the U.S. attorney for the Southern District of New York, the New York City Police Department, the U.S. Internal Revenue Service, and the U.S. Department of Labor undertake a joint investigation of organized crime at the Fulton Fish Market. The investigation results in the conviction of forty-four defendants and fines totaling $331,000.

1980 Carmine Romano relinquishes his position as secretary-treasurer of Local 359 to his brother Peter. Carmine becomes trustee of Local 359's welfare and pension funds.

1981 Carmine and Peter Romano, as well as Local 359 as an entity, are targeted by federal law enforcement officials in *United States v. Romano,* the most significant case arising out of the 1979 investigation of Genovese operations in the Fulton Fish Market. Both brothers are convicted. Carmine receives a twelve-year prison sentence; Peter, eighteen months.

1982 United Seafood Workers, Smoked Fish and Cannery Union places Local 359 under trusteeship and strips Carmine and Peter Romano of their union positions, but the election of their brother Vincent to the Local 359 presidency perpetuates the influence of the Genovese crime family.

Mayor Edward I. Koch transfers the responsibility for collecting rent payments from wholesalers at the Fulton Fish Market

0642

to the South Street Seaport Corporation, but rents are frozen for ten years.

1987 With evidence generated by Operation Sea Probe, a joint FBI and NYPD investigation, U.S. Attorney Rudolph Giuliani files a civil RICO suit against twenty-nine defendants, Local 359, its officers, and the Genovese crime family. One year later, most of the defendants enter into a consent judgment; a default judgment is entered against the rest. The court appoints Frank Wohl to act as the market administrator.

1990 Wohl's report cites continuing rampant racketeering at the market. He imposes fines on companies and individuals for violating the consent decree and calls for comprehensive city regulation.

Eight loading companies earn $5 million annually by charging retailers exorbitant rates to park in city-owned lots around the market.

1995 New York City Council passes Local Law 50, Mayor Giuliani's reform bill, empowering the city to regulate, investigate, license, register, and expel businesses and individuals from the Fulton Fish Market. Despite retaliatory labor strikes, court challenges, and picketing, many reforms are implemented. The city removes six unloading companies from the market because of their connection to organized crime and replaces them with a city-approved company.

The New York City Department of Business Services becomes the landlord of the market; New York Economic Development Corporation serves as agent. A new lease agreement raises wholesalers' rents substantially. The city gains $1.3 million in revenue. Two of the mob-affiliated loading companies are removed from the market.

1996 Six of the eight remaining loading companies are removed from the market. The two remaining loading companies, licensed by the city, agree to reduce their charges by approximately 70 percent.

0643

1997 Local Law 28 is passed to extend Local Law 50's reforms to the city's other wholesale food markets and to expand the city's power to regulate the Fulton Fish Market.

HOW THE FISH MARKET WORKS

The Fulton Fish Market is the oldest and largest wholesale fish market in the United States. It was organized in 1833 to serve fishing fleets on the East River near Fulton Street. However, as early as 1924, some suppliers were trucking seafood to the market. Today, no seafood is delivered directly by ship; rather, refrigerated trucks bring seafood from around the world to the market in boxes of one hundred pounds or less, some of which is flown in from abroad. The market runs from 10:00 P.M. to 10:00 A.M., Sunday through Friday. It consists of approximately seventy "stalls"—storefronts with stand space out front where most of the actual selling occurs. By morning, the stands are emptied and the buildings closed; only a few scattered fish and wooden wholesaler signs remain to hint at the overnight bustle. More than five hundred people work at the market. Approximately two hundred million pounds of seafood are delivered to the market annually. Estimates of the dollar amount of seafood sold annually vary from $200 million to $2 billion.[2]

The fish market occupies two blocks of South Street in lower Manhattan, stretching from Fulton Street north to Peck Slip, underneath the FDR Drive overpass (see map, p. 147). Approximately half the wholesalers' stalls are housed at street level in two rundown, sheet-metal warehouses owned by New York City: the 1907 Tin Building or "Old Market Building," and the 1939 "New Market Building." Across South Street, opposite the two main warehouses, fifteen wholesalers lease separate garage-like stalls in newer, city-owned buildings, and others operate from their own buildings.[3] At the end of 1998 there were approximately sixty wholesalers operating at the Fulton Fish Market.

Wholesale seafood vendors at the Fulton Fish Market, like firms in the garment industry, are extremely vulnerable to threats of delay. Time is of the essence in selling fish. First, fishermen sell their catch to suppliers. The suppliers pack fish in boxes and use freight-hauling companies to transport it to the Fulton Fish Market. Fish from the West Coast and abroad is trucked in from area airports. Beginning at 10:00 P.M., truckers deliver frozen and fresh seafood in vehicles ranging from huge

0644

forty-foot refrigerated trailer trucks to small vans.[4] Each week, approximately four hundred vehicles belonging to dozens of trucking companies and suppliers transport seafood to the market. They line up along South Street north of the market and wait to be unloaded.[5]

Prior to the city's 1990s reforms, the unloaders had tremendous leverage over truckers and suppliers.[6] It is tiring, expensive, and frustrating for truckers to sit for hours waiting for a service that they could easily provide themselves. The time at which a truck is unloaded directly affects the day's profit because fish displayed at the wholesalers' stalls by 3:00 A.M. commands a higher price than fish displayed at 6:00 A.M.. Thus, truckers were willing to pay to be accorded priority.

After the seafood is unloaded, it is delivered to wholesalers' stalls. The wholesalers employ approximately eight hundred workers, called "journeymen," who prepare the seafood for display, sell it, and deliver it to their customers' vehicles. Many of these workers are members of Local 359 of the United Seafood Workers, Smoked Fish and Cannery Union.[7]

By 3:00 A.M., the deliveries are displayed and hundreds of "retailers" from restaurants and retail seafood stores begin arriving at the market. Until the recent reforms, eleven loading companies, which were distinct entities from the unloading companies, assigned each retailer to a particular parking area in one of the eleven designated parking zones, located on public property. The retailers had no say in where they would be permitted to park and often were unable to change zones. The retailers leave their vehicles unlocked and walk from stall to stall, selecting seafood from the various wholesaler displays. The wholesalers' journeymen use hand trucks and "hi-los" to take the fish to the retailers' parked vehicles. There the journeymen load the fish into the vehicles. Retailers paid fees ranging from $5 to $50 per night to the loaders to keep their vehicles and fish secure from vandalism or theft.

Suppliers are also somewhat dependent on the goodwill of the wholesalers, who sell their catch primarily for cash, at prices reached in on-the-spot negotiations with retailers and restaurant owners. Prices vary according to quality, quantity, and demand. The wholesalers, who—in effect—operate on consignment or commission, take a fee from each retailer's or restaurateur's payment and remit the remainder to the supplier.[8] Thus, the supplier does not know in advance the price his fish will command and must rely on the wholesaler's negotiating

0645

skills and honesty. Although the situation is changing, most of the market's sales involve cash.

HOW COSA NOSTRA CONTROLLED THE FULTON FISH MARKET

The Fulton Fish Market has been a revenue source and a power base for Cosa Nostra since the early twentieth century. The Genovese crime family has influenced every facet of the market's operations since the 1920s. This influence flowed from control of Local 359 of the United Seafood Workers, Smoked Fish and Cannery Union, which represents the four hundred journeymen and twenty wholesalers, managers, and supervisors. However, not all journeymen are union members, and the former loading and unloading crews were not unionized. The Genovese crime family created loading and unloading cartels, maintained interests in some wholesaling companies, operated "security services," and organized and charged for parking.[9] The Bonanno crime family played a lesser role in the market, through ownership of certain unloading companies and by conducting loan-sharking, gambling, drug sales, and protection services on premises.

As with the other mobbed-up industries examined in this book, Cosa Nostra functioned as a kind of legislature, court, and police force for the market. The rules covered competition, prices, labor relations, payoffs, and respect. Businesses and individuals faced threats of violence, property damage, and expulsion from the market for violating the rules.[10]

The Genovese crime family governed through two wholesaler associations, which represented many wholesalers at the market. The wholesalers located in the Old Market Building warehouse were represented by the Fulton Fishmongers Association, and those located in the New Market Building warehouse were represented by the New York Wholesale Fish Dealers Association. These organizations cooperated in market governance and defended market operations to the outside world. For example, the president of the Fulton Fishmongers explained that the low rent paid by the wholesalers was justified by the run-down accommodations in the Old Market Building.[11]

When problems such as theft of fish arose, the associations knew whom to contact. In 1975, the president of the Wholesale Fish Dealers

0646

Association asked Carmine Romano, an associate of the Genovese crime family and the secretary-treasurer of Local 359, for help in preventing thefts. Cosa Nostra established a watchmen's association to patrol the market area; whether this was a protection service or a protection racket was unclear, even to those who paid the premiums. Years later, at Romano's trial on federal racketeering charges the president testified that "if the thieves knew that the union was looking out for us . . . they wouldn't bother us . . . [b]ecause the thieves would be afraid of the union."[12]

COSA NOSTRA'S DOMINATION OF LOCAL 359

Given the perishability of seafood, the market required a reliable labor force. As federal prosecutors noted in a 1981 sentencing proceeding involving several convicted Local 359 officials, "[I]n the wholesale [fish] industry, where competition is fierce and time is of the essence, it is crucial for businesses to maintain the good will of the union and the men who run it. Organized crime recognizes this power and knows how to use it."[13]

Cosa Nostra's influence in the Fulton Fish Market was rooted in its control of Local 359. That union had only 850 to 900 members including the four hundred journeymen at the market who set up the wholesalers' seafood displays and sold and delivered the fish.[14] The Genovese crime family controlled Local 359 since the 1920s; for decades, Joseph "Socks" Lanza, a capo in the Genovese family, used his position as business agent of Local 359 as a power base. Known as the "czar of Fulton Market," Lanza determined who could transact business of any kind anywhere on market premises from the 1920s to the 1960s.[15] Lanza ran Local 359 for the benefit of the Genovese crime family. He accepted payoffs in exchange for the nonenforcement of certain contract terms and for not seeking increased wages and benefits for union members.[16] The result was labor peace and a smooth-running market.

Lanza found many ways to turn power into cash at the market. In the early 1930s, the Manhattan District Attorney's Office revealed that fishing-boat captains were forced to pay tribute in order to have their catch unloaded without problems. To obtain the ice needed to preserve their fish, boat crewmen were forced to hand over bags of scallops to the unloading crews.[17]

0647

In 1933, the Manhattan U.S. Attorney's Office brought a sweeping indictment against Local 359, twenty-four companies, fifty-four individuals (including "Socks" Lanza), and three trade associations operating in the market.[18] The indictment alleged that the wholesalers were running a cartel in violation of the Sherman Anti-Trust Act. The government also charged the defendants with extorting "tribute" from boat captains for the privilege of doing business at the market. Lanza and others entered guilty pleas, and Lanza served a two-year prison term. In 1938, after several failed attempts, the federal government finally convicted Lanza. In 1943, he was convicted again, this time for extorting money from the president of a Teamsters union local.[19]

Paroled in 1950, Lanza was arrested again in 1957, for gambling and consorting with organized-crime figures. After the parole violation was resolved in Lanza's favor, there was a public scandal and two official investigations. The parole decision was overturned and Lanza returned to prison.[20] Nevertheless, Lanza remained on the union payroll and continued to rule the market until his death in 1968.

Over the years, "Socks" Lanza was assisted by Nunzio "Harry" Lanza, a brother, who served as a Local 359 official throughout the 1960s. He too was a capo in the Genovese crime family. In the 1970s, a brother-in-law of the Lanza brothers served as president of the local, and a Lanza son-in-law served as union attorney.[21] From 1974 to 1980, Carmine Romano, whom federal investigators considered to be Lanza's successor as the Genovese crime family's Fulton Fish Market "manager," served as secretary-treasurer, the de facto top position of Local 359. His brother Peter Romano took over as business agent. Carmine Romano served as Local 359's secretary-treasurer until Peter succeeded to that position in May 1980; Carmine then became trustee of the union's welfare and pension funds.

In 1979, the U.S. attorney for the Southern District of New York led a joint investigation into organized-crime operations at the Fulton Fish Market. The investigation produced more than forty convictions. The most important prosecution, *United States v. Romano*,[22] targeted a variety of extortion schemes. The government alleged that the defendants had established the Fulton Patrol Service, which, functioning as a protective racket, collected more than $644,000 (the equivalent of upwards of $1,700,000 in 1996 dollars)[23] from wholesalers from 1975 to 1979. The defendants were charged with extorting Christmas payments from the wholesalers and with forcing them to pay $25 a month to rent useless

0648

union placards. Some businesses continued to pay the sign rental fee for years after they had ceased displaying the signs.[24]

The Romanos were convicted of RICO, conspiracy to violate RICO, aiding and abetting violations of the Taft-Hartley Act, and misusing union pension funds.[25] In addition, Carmine was convicted of misusing union funds, and Peter of obstructing justice and perjury. Carmine Romano received a twelve-year prison sentence and a $20,000 fine; Peter got eighteen months. Both Romanos had to forfeit their union positions.[26]

Vincent Romano assumed control of market operations after his brothers were ousted from their union positions in 1981.[27] The Genovese crime family thus maintained the tradition of adapting to criminal prosecutions by handpicking the successors of those who had been convicted. The family continued to extract revenue from the market by receiving bribes in exchange for not enforcing collective bargaining terms. Incredibly, the family also continued its extortionate practices—the protection rackets, the union-shop signs, and the Christmas presents.

THE WATCHMAN'S ASSOCIATION PROTECTION RACKET

As early as the 1920s, Lanza instructed his underlings to steal seafood from wholesalers, and then persuaded the victims to purchase theft insurance from him.[28] In 1931, Manhattan District Attorney Thomas C. T. Crain estimated that gangsters were shaking down fish merchants to the tune of $25,000 a year.[29] One wholesaler testified that he had paid $5,000 to Lanza's watchman's association for "protection." By 1981, the Fulton Patrol Association was collecting $700,000 ($1,180,000 in 1996 dollars) from businesses in the Fulton Fish Market.[30]

The wholesalers did not complain publicly about Lanza or market operations. They maintained that paying Lanza was cheaper and more efficient than other means of preventing thievery. The president of the Fulton Fishmongers Association (the trade association representing the Old Market Building wholesalers) explained that "in almost every instance when someone has missed a barrel or a box of fish it has been returned within a few hours after we reported it" to the protection association.[31] Wholesalers declared that they were not victims of extortion but beneficiaries of theft insurance.

0649

The Genovese crime family continued this racket through the years. For example, in 1975, Carmine Romano established the Fulton Patrol Association to protect the New Market Building wholesalers from thefts of seafood. For this "insurance" the New Market Building wholesalers paid $1,300 ($3,720 in 1996 dollars) a week. Although the association employed only two watchmen, the number of thefts dropped significantly.[32] Perhaps the association instilled fear in would-be thieves; more likely, the wholesalers were paying off the very people who had been stealing from them. Tired of high theft rates, the Old Market Building wholesalers eventually purchased the association's services as well. The most lucrative scam was the association's special service of guarding unsold fish stored overnight for $2,800 weekly per wholesaler.[33]

Loading companies provided their own protection services to retailers. For a fee, the loading crews watched over the restaurateurs' and fish store–owners' unlocked vehicles while they shopped. According to the loading companies, it was not a protection scam. "We help to stack the fish, we make sure it's not stolen, and we allow the retailers to go to all the wholesale stands without worrying about thousands of dollars of fish waiting in their vans." Nevertheless, in a tax-evasion case one loader admitted that he encouraged retailers' payoffs with threats of violence; those who did not pay found their vehicles damaged and their fish stolen. In other words, the loaders were not typical security guards. For example, in 1995, one of the loaders was a Genovese family associate; two others were awaiting trial on federal armed bank robbery and explosives charges.

The prosecution of the racketeers was impeded by witnesses' concerns that testifying would provoke violent retaliation against themselves and their families. Three wholesalers chose to serve six-month prison terms rather than testify against Romano and his associates.[34] Others committed perjury.[35] Local 359's longtime accountant admitted that he lied to a grand jury about Carmine Romano's participation in the Fulton Patrol Service scheme because he feared the Genovese crime family's retaliation.[36] Immediately following the trial, one witness was shot several times in front of union headquarters. No one ever was arrested. At the trial of Carmine Romano, the defense presented 350 letters from wholesalers, union members, and other market participants attesting to his integrity and good reputation.[37]

0650

COERCED RENTAL OF UNION SIGNS

Until the 1980s, Local 359 officials forced wholesalers to "rent" cardboard signs stating that they employed union labor. The Romanos received more than $66,000 ($112,000 in 1996 dollars) in rent from this scam.[38] These sign rentals violated the Local 359 constitution.[39] In 1981, a federal court struck down the practice as violating the Taft-Hartley Act. Soon thereafter, the United Seafood Workers, Smoked Fish and Cannery Union placed Local 359 under trusteeship and ousted Carmine and Peter Romano from their union positions.[40] But the Genovese crime family retained its influence over Local 359 through Carmine and Peter's successor, their brother Vincent Romano.

EXTORTING CHRISTMAS PAYMENTS

Fulton Fish Market wholesalers routinely gave Christmas presents to Local 359 officials. To insulate themselves from Taft-Hartley Act liabilities, union officers used middlemen to collect the funds; occasionally, however, they solicited directly. Throughout the 1970s, wholesalers were encouraged to make a holiday contribution "to the boys in the union." The union members never saw the money, which went directly into the coffers of the Genovese crime family.

Before 1975, this Christmas "gift giving" was informal and irregular. After 1975, it became a systematic extortion scheme.[41] In *United States v. Romano,* the government alleged that from 1975 to 1979, union officials collected $300 per wholesaler each Christmas.[42] In 1979, the Fulton Fishmongers Association gave a lump sum donation of $2,400 ($5,000 in 1996 dollars) to the union, in lieu of individual contributions. The wholesalers apparently decided to overlook the illegality of such payments.

DEFRAUDING SUPPLIERS

Wholesalers received fish from suppliers on consignment, sold it to retailers, deducted a "commission," and remitted the remainder to the supplier.[43] At the time the fish was delivered to the wholesaler, the

0651

supplier could not know what its ultimate payment would be because fish prices fluctuate daily. Thus, the suppliers risked being cheated.

The consignment system also made suppliers vulnerable to phantom wholesalers. Such corrupt wholesalers would order increasing amounts of seafood, eventually accepting large quantities with no intention of paying the supplier. The owner of the phantom company would then, often at the same location, establish a new wholesale business under another name and repeat the fraud. Although New York City had the authority to refuse licenses to unreliable wholesalers, it did not choose to exercise it.[44]

In the late 1980s, officials estimated that suppliers lost $6 million as a result of fraud. Most out-of-state suppliers feared pursuing legal remedies because of the market's reputation for being mobbed up. Moreover, phantom wholesalers were hard to locate. Given the difficulty of proving criminal fraud and finding corrupt wholesalers, criminal prosecutions were also rare.

THE UNLOADING CARTEL

For decades, the Genovese crime family operated a lucrative unloading cartel at the market. Genovese soldiers ensured that no companies unaffiliated with the cartel worked at the market. In return, cartel members kicked back a portion of their revenues to the organized crime family. Throughout the 1970s, for example, the unloading companies made cash payments to Carmine Romano every Friday in the back room of a nearby Genovese social club.

The job of the unloading companies was to remove boxes of fish from the trucks and place them on the ground. This simple task required only basic equipment and unskilled labor. In the late 1980s and early 1990s approximately six unloading companies operated at the market; each one employed one "unloading crew" or "gang," ranging in size from two to thirteen employees, to take the fish from the suppliers' trucks to the wholesalers' stalls. In 1992, the unloading companies had estimated combined gross revenues of more than $2 million ($2.24 million in 1996 dollars).[45]

The cartel assigned wholesalers, suppliers, and truckers to particular unloaders. As in the case of the property-rights system that bound Garment District manufacturers to truckers, Fulton Fish Market truck-

0652

ers had no de facto ability to choose an unloading company. Similarly, the wholesalers who paid the unloaders' fees had no say in the assignment of the crews.[46] Truckers, suppliers, and wholesalers all understood that they could not unload their own trucks or choose a particular unloading crew. Indeed, truckers had to wait for the services of their assigned unloading crew, whether or not other crews were available. No unloading crew would solicit customers who "belonged" to other unloading crews.

There was no price competition among the unloading crews; to the contrary, there was a to-the-penny uniformity in the prices they charged the wholesalers: usually $1.35 per one-hundred-pound box and $0.65 per sixty-pound carton.[47] The power of the unloaders allowed them to extract supplemental charges ranging from $10 to $60 per truck. "Jump-up" or "man-on-truck" charges had to be paid in cash when an unloader entered the truck to unload cargo, and, often, even if the unloaders didn't enter the truck. Unloaders in other cities performed this service for the basic unloading fee.

STEALING SEAFOOD

Unloading crews and their associates had many opportunities to steal fish. Unloaders did not sign receipts for the products they handled. Moreover, there was no time to weigh shipments as they passed through the market. Stolen fish were easily diverted to mob-connected wholesalers.[48] Cosa Nostra "skimmed" or "tapped" money by taking a cut of seafood stolen by the unloaders. One undercover agent estimated that, as a group, wholesalers who were not mob controlled lost between two thousand and three thousand pounds of fish a night because of skimming; retailers had to purchase a 115-pound box of seafood to be sure of obtaining 90-pounds.[49] Wholesalers' annual losses added up to an estimated $1.5 million.[50]

THE LOADING COMPANIES' PARKING RACKET

Through the loading companies, Cosa Nostra controlled parking at the market.[51] The parking areas varied in size, each operated by a different loading company. Some companies or their affiliates leased premises

0653

from the city for a nominal fee. Others simply appropriated the public streets for their private business without making any payments. The loading companies reaped lucrative profits. Circa 1990, the loading companies charged $20 a night or more for parking, depending on a variety of factors including the size of the retailer's vehicle and often the retailers' ethnicity. The loading companies reaped an estimated $5 million a year ($5.9 million in 1996 dollars) in fees from parking alone.[52] The Genovese crime family received a significant portion of this amount.

NEW YORK CITY'S FAILURE TO REGULATE

Until 1982, the city's Department of Ports and Terminals collected rents at the market. In 1982, Mayor Edward I. Koch's administration transferred responsibility for rent collection to the South Street Seaport Corporation as part of a deal to develop the waterfront area and historic landmark district adjoining the Fulton Fish Market. The South Street Seaport Corporation inherited two main leases in 1982, one with the New York Wholesale Fish Dealers Association (representing New Market Building wholesalers) and the other with the Fulton Market Fishmongers Association (representing Old Market Building wholesalers).

It was anticipated that the transfer of responsibility to the corporation would increase revenues for the South Street Seaport Museum. However, this goal was thwarted because both the Koch and Dinkins administrations prohibited the South Street Seaport Corporation from raising rents while the market's operations were being investigated. In 1992, a government consultant reported that New York City received approximately $268,000 ($300,000 in 1996 dollars) annually in rent from the wholesalers in city-owned buildings, but that the annual market value of the leases was close to $3 million.[53] Politicians remained passive about this loss of potential revenue.

CONCLUSION

From the early twentieth century, the Fulton Fish Market served the Genovese crime family as a base of power and revenue. Businesses and individuals faced threats of violence and property damage if they did

[162.10.217.184] Project MUSE (2026-06-15 01:41 GMT) University of Queensland

not follow the mob's dictates. The Genovese family used its influence over Local 359 to extort money through the collection of Christmas payments and union placards. Cosa Nostra established cartels of loading and unloading companies, controlled parking, and forced wholesalers to pay "insurance" to prevent theft.

City regulation was practically nonexistent. In the 1930s, businesses at the market were required to obtain permits from the Department of Markets.[54] It was alleged that only the approval of "Socks" Lanza, who maintained close friendships with many Tammany Hall politicians, was needed to obtain such permits.[55] Manhattan District Attorney Thomas C. T. Crain, facing removal from office in 1931, testified that he could not explain why he had been lax in investigating and prosecuting organized crime in the market.[56]

The relationship between top-ranking organized-crime figures and prominent politicians continued for decades, and no doubt had important implications for the lackluster efforts of law enforcement to crack down on mob domination of legitimate industries. While a few important mob figures were prosecuted and convicted of racketeering in the 1980s and court-appointed officials were put in place to root out corruption in the market, the overall results were unimpressive. Inaction by city officials and the inability of law enforcement agencies to weaken the Genovese crime family's lock on the market permitted racketeering to flourish. Suppliers, wholesalers, and retailers had no choice but to consider the payoffs as the cost of doing business, which they passed on to consumers through higher seafood prices. For decades, mob rule was an intractable fact of life at the Fulton Fish Market.

Participants in the Fulton Fish Market did not complain. Some observers attributed participants' silence to the fact that the costs of doing business with Cosa Nostra were passed on to consumers.[57] Mob rule had certain advantages. Cosa Nostra prevented competition in the provision of unloading, loading, and parking services. The lack of competition allowed cartel members to set prices higher than any fish market in the country, even controlling for the higher cost of living in New York City. With organized crime firmly in control of the union, labor relations remained peaceful. Other than a strike in 1987, there was no serious disruption of operations or a crisis in getting fish to restaurants and retail stores. It was not until the mid-1990s, under the Giuliani administration's organized-crime control campaign, that the city used its regulatory authority to attack organized-crime racketeering at the market.

0655

The Taking of John F. Kennedy Airport

> The goods that come into the various airports around New York City . . . truckers have to pick [the goods] up, and take the goods where they are destined. . . . So the truckers have an important and integral part, a key position in the New York area through the fact that they have control over . . . the airport. If it gets into the wrong hands, of course, there can be a stranglehold over New York City.[1]
>
> —Robert F. Kennedy, chief counsel, McClellan Committee Hearings, U.S. Senate, 1957

> I don't think he knows in his heart that we rule the airport.[2]
>
> —Frank Manzo, the Lucchese crime family's overseer at JFK Airport, in an intercepted conversation reported by the *New York Times* in 1985, discussing an airfreight executive's refusal to make payoffs in exchange for labor peace.

CHRONOLOGY

1948 Idlewild Airport opens in Queens; in 1963, it is renamed John F. Kennedy Airport. From its inception, the airport is plagued by mob-orchestrated cargo theft.

1956 Teamsters Local 295 is established to represent the clerical employees, dispatchers, truck drivers, and warehouse workers employed by freight-forwarding and trucking companies that service the airport. The Lucchese crime family controls the local.

1958 John "Johnny Dio" Dioguardi, a capo in the Lucchese family, and John McNamara, president of Local 295, are convicted of conspiracy and extortion.

0656

McClellan Committee Report finds that Jimmy Hoffa created Local 295 and several other paper locals to pay off the Lucchese crime family which supported Hoffa's candidacy for the International Brotherhood of Teamsters presidency.

1968 The New York State Investigation Commission (SIC) conducts investigations and public hearings into racketeering at the airport.

1969 Future Gambino crime-family boss John Gotti pleads guilty to charges of truck hijacking at the JFK Airport and serves three years in prison.

1970 The Lucchese crime family supports the establishment of Teamsters Local 851, which represents over two thousand truck drivers and warehouse workers and fourteen hundred clerical employees and dispatchers who were former members of Local 295.

1971 U.S. Attorney General John Mitchell announces two criminal antitrust indictments against thirteen trucking companies, six individuals, and the National Association of Air Freight (NAFA). Most of the defendants plead no contest and enter into a consent decree that dissolves NAFA and prohibits the fixing of airfreight prices.

1978 Robbers take $5.8 million in cash and securities from a Lufthansa Airlines cargo hangar; it is the largest robbery in U.S. history at the time. A mere $100,000 is recovered and only one individual ever convicted; evidence implicates the Lucchese crime family.

1983 The federal Brooklyn Organized Crime Strike Force launches the Kenrac (Kennedy Rackets) investigation, which collects evidence of bribery, theft, and labor racketeering, leading to the convictions of mob-connected officers of Locals 295 and 851.

1985 The Kenrac investigation results in the indictments of eleven people for bribery and labor racketeering; in a separate prosecution, seven people are charged with extortion and conspiracy. Harry Davidoff, vice-president of Local 851, receives a

0657

twelve-year prison sentence and $125,000 fine. The other defendants enter guilty pleas, including Frank Manzo, the Lucchese crime family's airport overseer; Local 295 President Frank Calise; and Lucchese capo Paul Vario. They receive twelve-, nine-, and six-year prison sentences, respectively.

1989 Pursuant to a settlement reached in *United States v. International Brotherhood of Teamsters,* Judge Frederick B. Lacey is appointed independent administrator. Lacey initiates the permanent removal of Teamsters Local 295 president Anthony Calagna and the suspension of five other officers.

1990 The U.S. attorney for the Eastern District of New York brings a civil RICO suit against Locals 295 and 851. The complaint targets fourteen individuals, including several members of the Lucchese and Gambino families. In 1992, a federal district court judge imposes a temporary trusteeship on Local 295.

1991 The Kenrac II investigation, launched in 1987, ends with indictments for bribery and labor racketeering against seven individuals, among them Anthony Calagna and Gambino capo Anthony Guerrieri. All are found guilty; Calagna receives a prison sentence and is banned from all union activity for thirteen years.

1992 Local 295 is placed under trusteeship. Judge Nickerson appoints Thomas Puccio, a former assistant U.S. attorney and former chief of the Brooklyn Organized Crime Strike Force, as trustee.

1993 In September, the U.S. attorney for the Eastern District of New York obtains a criminal RICO indictment against seven individuals, including Anthony Razza, secretary-treasurer of Local 851, and Anthony Calagna, the former president of Local 295. The indictment charges them with extortion, labor racketeering, and related offenses. The defendants enter guilty pleas. Razza receives a twenty-one-month prison sentence and is barred from the IBT for life.

In June, Trustee Puccio files a motion with Judge Nickerson seeking to extend his trusteeship to Local 851.

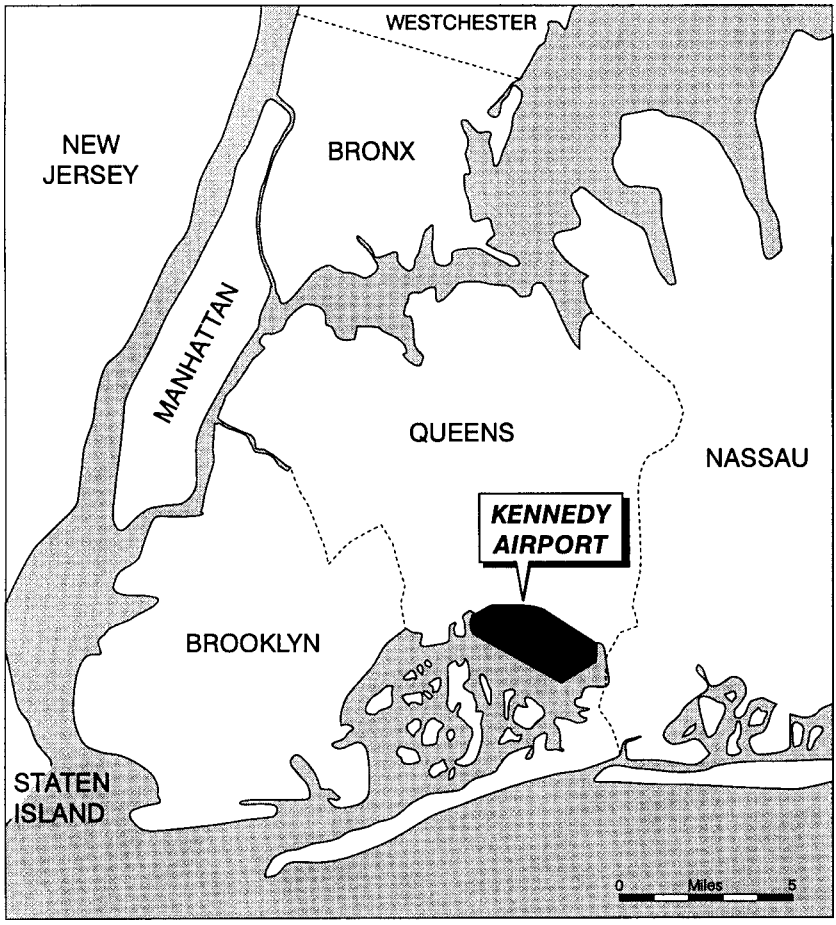
0658

Following Razza's indictment, IBT President Ron Carey ousts the leadership of Local 851, and appoints Curt Ostrander as temporary trustee.

1994 The U.S. Attorney's Office for the Eastern District of New York, Local 851, and the IBT sign a consent decree establishing a bifurcated monitorship over Local 851. Former federal prosecutor Ron DePetris is appointed independent supervisor of Local 851, and Curt Ostrander is appointed to continue as union trustee.

1995 DePetris, on behalf of Local 851, files civil RICO suits against two freight-forwarding companies.

1997 Indictment of eighty-three defendants for participating in an air cargo theft ring.



1998 Both defendant freight forwarding companies settle with Local 851.

Puccio and DePetris remain in place as the union trustee of Local 295 and independent supervisor of Local 851, respectively. The terms of both men are due to expire sixty days after the locals hold free elections and the court certifies the results.

In December, fifty-six individuals and eight corporations are indicted as a result of Operation Rain Forest. The defendants are charged with stealing, fencing, and distributing air cargo from John F. Kennedy Airport.

John F. Kennedy International Airport (JFK Airport), which opened as Idlewild Airport in 1948,[3] is located in southeastern Queens on the shores of Jamaica Bay, fifteen miles from the center of Manhattan. In 1993, it accounted for roughly 30 percent of the total value and tonnage of air cargo imported into the United States and for roughly 24–31 percent of the total value and tonnage of exported cargo.[4] "A city unto itself,"[5] JFK Airport's five thousand acres contain runways, terminal buildings, hangars, warehouses, high-security storage vaults, container stations, and truck depots. The Airport employs more than forty thousand people. The Port Authority of New York and New Jersey operates the airport and derives revenue from the airlines, freight forwarders,

0659

and customs brokers. The land is owned by New York City and leased to the Port Authority.

In the 1950s as freight business moved from ships to airplanes, the Lucchese crime family expanded its operations from the New York City waterfront to JFK Airport.[6] Its primary power base at JFK consisted of two Teamsters union locals, Local 295 and Local 851, which represent employees of freight-forwarding and trucking companies. The Luccheses also exercised control over trucking services at the airport through the Metropolitan Importer Truckmen's Associa-

0660

tion (MITA) and by maintaining ownership interests in several trucking companies.

The volume and value of the cargo made theft at JFK Airport a highly attractive enterprise for organized crime. Through its entrenched position there, the Lucchese crime family profited from the theft of air cargo and from payoffs by freight-forwarding companies. The union locals also provided jobs for Cosa Nostra members and associates; union officers handpicked by the Lucchese family steered work to mob-controlled trucking companies. Cosa Nostra transformed control of trucking services into revenue through payoffs from members of the trucking cartel and by profits from ownership interests in trucking companies.

HOW THE AIR-CARGO INDUSTRY OPERATES

Importers, manufacturers, and wholesalers located throughout the United States rely on the air-cargo industry to transport goods through JFK Airport to the New York City metropolitan area and beyond. The industry involves shippers, airlines, freight-forwarding companies, and IBT Local 295 and IBT Local 851. Local 295, with over two thousand members, represents truck drivers, helpers, switchers, platform men, motor-lift operators, mechanics, garage employees, and fuellers employed by freight-forwarding companies. Local 851 represents office clerical workers and dispatchers employed by freight-forwarding companies, and has an estimated fourteen hundred members.

The freight-forwarding companies coordinate, arrange, and manage the operations necessary to the movement of cargo. Typically, the freight forwarder, who is employed by a manufacturer or other shipper, secures insurance, warehouses the merchandise, and when necessary, arranges for repacking, marking, and weighing.[7] Approximately three hundred forwarding companies operate at JFK Airport; the majority use their own trucks and drivers. Most are large, national corporations that maintain offices and warehouses at the airport. If the freight forwarder does not provide its own ground transportation, it contracts with a trucking company to drive cargo to and from the airport. The trucking companies operating at the airport range in size from "mom-and-pop" companies to organizations with several hundred employees.

0661

The following example illustrates how an air-cargo transaction operates. The manufacturer hires a freight-forwarding company to ship shoes from a factory in a Miami suburb to a department store in Jersey City, New Jersey. The forwarder hires a Florida trucking company to pick up several hundred boxes of shoes at the shipper's factory and take them to the forwarder's warehouse at Miami Airport. The forwarder packs the shoes into containers that also hold cargo the forwarder has received from other shippers, allowing the forwarder to take advantage of the airline's lower bulk rates. Truck drivers, employed by the forwarder, take the containers to the cargo terminal, where airline employees load them onto the aircraft. At JFK Airport, airline employees unload the containers. The truck drivers take the containers to the forwarder's warehouse, where they are disassembled. Trucking companies, or the freight-forwarder's trucks, take the shoes to Jersey City.

COSA NOSTRA'S CONTROL OF TEAMSTERS LOCALS 295 AND 851

Cosa Nostra's influence in the airfreight industry is well documented.[8] For several decades, the Lucchese crime family played a role in key facets of air-cargo operations through its domination of IBT Locals 295 and 851. The locals' memberships comprised the men and women responsible for the clerical work, trucking, and loading and unloading of air cargo. Control over these unions gave the Mafia control over the shipping operations at JFK Airport.

Hoffa and the Creation of Paper Locals

From its inception in 1956, Local 295 was awash in corruption. Jimmy Hoffa, who attained stature within the Teamsters union as the central regional leader of the major Midwest locals, obtained authorization to charter Local 295 and six other International Brotherhood of Teamsters (IBT) locals in New York City in order to expand his power base into the Northeast.[9] Robert Kennedy, who investigated Hoffa and the Teamsters as chief counsel to the U.S. Senate's Select Committee on Improper Activities in the Labor or Management Field (the McClellan

0662

Committee) scornfully referred to the seven new union affiliates as "paper locals."[10]

At the hearings, the McClellan Committee played intercepted telephone conversations that Hoffa had conducted with John "Johnny Dio" Dioguardi, a soldier in the Lucchese crime family and a notorious labor racketeer.[11] The recorded conversations revealed a conspiracy between Hoffa and Dioguardi to use Local 295 and the six other bogus locals to ensure the election of their handpicked candidate, John J. O'Rourke, to the presidency of the IBT Joint Council, an umbrella organization representing the interests of more than 125,000 rank-and-file Teamsters in the New York City metropolitan area.[12] Senator John L. McClellan, the chairman of the committee, commented that "[t]he fact that one of the nation's most powerful labor leaders, James R. Hoffa . . . used [John] Dioguardi and [Anthony] Corallo[13] in his efforts to capture control of [the Teamsters] in New York City only serves to underline the importance of gangster infiltration in the labor movement."[14]

The power-grabbing scheme of Hoffa and Dioguardi was a resounding success. In 1957, with the support of regional Teamsters organizations in the South, Midwest, and, critically, the Northeast, Hoffa was elected the International President of the Teamsters union. John O'Rourke was elected vice-president.[15] Cosa Nostra's influence now reached to the very top of the Teamsters. In New York City, Cosa Nostra used its power in the Teamsters to infiltrate the air-cargo industry; Local 295 functioned as the Lucchese crime family's puppet until the early 1990s, when it was placed under trusteeship.[16]

In 1970, the Lucchese crime family expanded its power base by forming IBT Local 851, which served as a haven for Local 295 officials under investigation for soliciting and taking bribes from freight forwarders and for various labor-racketeering schemes.

CORRUPT UNION OFFICERS

Once elected IBT president in 1956, Hoffa repaid his debt to the Lucchese crime family for supporting his successful bid for the IBT presidency by appointing Harry Davidoff, a close Lucchese associate, to head Local 295. Davidoff dominated Local 295 for forty years. Two

0663

decades into Davidoff's rule, the Senate's Permanent Subcommittee of Investigations characterized him as "a ruthless New York thug, a gangster who gravitated to the labor movement for no other reason than to steal from it."[17] When Harry stepped down, his son Mark and Frank Calise ran the two IBT locals. In 1985, when Calise was convicted of labor racketeering and sentenced to a nine-year prison term, Lucchese member Anthony Calagna and various relatives assumed control of the unions.

LEAD AGENTS AND TRUCK HIJACKING

The lead agent position was a key role in the freight forwarding business. They allocated the job assignments for truck drivers, warehouse workers, clerical workers, and dispatchers. Many of the lead agents at the airport were members of Local 851. Some were associates and friends of the Lucchese crime family. Despite the fact that lead agents played an important managerial function, the freight forwarders had no role in choosing them.

Lead agents were in a position to arrange truck "give-ups" and hijackings, the two most common forms of cargo theft at JFK Airport.[18] In a give-up, the truck driver who is transporting goods to or from JFK Airport parks the truck with the keys in the ignition, then leaves the vehicle for "a minute" to get a cup of coffee or use a bathroom. In his absence, the truck is stolen according to a prearranged plan. Hijackings require a lead agent to tip off Lucchese representatives at the airport about a valuable cargo shipment and its scheduled route. A Lucchese truck-hijacking crew intercepts the truck just outside the airport grounds and wrests it from the driver, using violence or the threat of violence.[19]

Many high-ranking organized-crime figures cut their teeth carrying out truck hijackings and give-ups at JFK Airport. For example, in 1969, future Gambino crime family boss John Gotti was sent to prison for hijacking trucks transporting clothing from JFK Airport.[20] Henry Hill, protagonist of the book *Wiseguy* and of the movie *Goodfellas*, spent much of his criminal career carrying out airport-related cargo thefts. Hill often assisted Jimmy Burke, a notoriously ruthless associate of the Lucchese crime family, who was reputed to be the "best" airfreight hijacker oper-

0664

ating out of the airport. Burke and his crew were responsible for the theft of millions of dollars of valuable cargo, which ranged from jewelry, weapons, and securities bonds, to household appliances, meat, shoes, and toys.[21] According to Hill, the secret to Burke's success was his cadre of informants: insider tips flowed in from all sectors of the airport as cargo handlers, truck drivers, and airline employees assisted the thievery in exchange for a fraction of the take. To safeguard his operations, Burke bribed corrupt policemen to alert him to government informants and potential witnesses. Hill remarked that when it came to linking Burke to a hijacking, "[t]here was never one driver who made it into court to testify against him. There were quite a few dead ones who tried."[22]

The Lufthansa Heist

The December 1978 robbery of cash and securities from the Lufthansa Airlines cargo hangar at JFK Airport was, at that time, the most lucrative robbery in the nation's history. The tabloids called it "the crime of the century," and it has inspired several books and films. Armed with detailed information about the complex security system from one of the cargo's supervisors, a Lufthansa employee named Louis Werner, a gang of seven masked gunmen broke into a high-security Lufthansa Airlines building. The robbers rounded up the guards and forced them to open the vault where the shipment was kept. In a little more then an hour, they had stolen an estimated $5 million of unmarked money and $875,000 worth of jewelry.

The robbers' familiarity with the layout of the building and the fact that they addressed several Lufthansa employees by name caused the FBI to suspect an inside job. According to the FBI agent who directed the investigation, the four robbers and mastermind of the theft retained a small portion of the proceeds and passed the rest to Lucchese capo Paul Vario.[23] According to Henry Hill, the mastermind of the theft was Jimmy Burke. But the only individual ever prosecuted in connection with the robbery was Louis Werner, the Lufthansa cargo supervisor who had first tipped off the mob to the existence of the shipment. In 1979, Werner was convicted and sentenced to fifteen years in prison.[24] Of the nearly $6 million stolen, only $100,000 was ever recovered.[25]

0665

THE SALE OF LABOR PEACE

The Lucchese crime family's influence with Locals 295 and 851 secured advantages above and beyond opportunities for lucrative heists. One advantage was the ability to sell labor peace to freight fowarders. Picketing, work stoppages, slowdowns, and misroutings could impose staggering costs on freight forwarders, whose businesses depended upon the speedy delivery of air cargo. For example, when members of Locals 295 and 851 conducted a five-month strike at the JFK Airport against Emery Worldwide in 1989, the company lost $20 million in revenue and eventually went bankrupt.[26] In 1984, the Brooklyn Organized Crime Strike Force estimated that Cosa Nostra received millions of dollars every year in labor-peace payoffs from freight forwarders.[27]

Freight-forwarding companies and trucking companies operating at JFK Airport also made payments to Cosa Nostra to avoid enforcement of expensive contract terms, especially featherbedding requirements. For example, between 1992 and 1993, Kuehne & Nagel Air Freight paid upwards of $100,000 in bribes to Anthony Razza, the secretary-treasurer of Local 851 and an associate of the Lucchese crime family, in exchange for a favorable collective bargaining agreement. Among the advantageous terms in the new contract was a yearlong freeze in pension contributions by Kuehne & Nagel Air Freight for its Local 851 employees.[28] Payoffs purchased additional benefits. For example, union officials assisted forwarding companies in recruiting customers from competitors and granted them immunity from cargo thefts.

For decades, freight forwarders made payoffs to officers of Locals 295 and 851; these were passed along to high-level Lucchese members. When federal investigators intensified their investigations of organized crime in the JFK air-cargo industry, freight forwarders began using intermediaries, usually corrupt union officials who would funnel the money directly to the Lucchese family. Forwarding-company executives would disguise the bribes as payments to labor-consulting companies (run by Lucchese family associates) for services rendered.[29]

The Lucchese crime family used Teamsters Locals 295 and 851 to reward friends and associates with jobs as truck drivers, warehouse workers, dispatchers, and clerical employees. Some union members had to pay off union officers to retain their employment. Union officers,

0666

in the usual manner, passed these payments to high-ranking members of the Lucchese crime family.

COSA NOSTRA'S OWNERSHIP INTERESTS IN TRUCKING

Cosa Nostra members and associates held ownership interests in trucking companies in the JFK Airport air-cargo industry. Local 295's contracts with freight-forwarding companies contained a provision prohibiting the use of a trucking company at the airport without the union's written permission. In this way, the union steered freight forwarders to mob-controlled trucking companies, which enjoyed immense advantages over competitors. Cosa Nostra members owned, operated, or received payments from at least twelve trucking companies. For example, Cosa Nostra associate Frank Manzo, overseer of the Lucchese crime family's interests at the airport, owned two trucking companies: LVF Air Cargo, Inc., and LVF Airport Service Inc.[30]

THE ROLE OF MITA

For two decades, the Lucchese crime family controlled the Metropolitan Import Truckmen's Association (MITA), a trade association comprising a dozen trucking companies operated by Cosa Nostra associates from their positions as trucking consultants and troubleshooters. (These positions were less conspicuous than high-profile, upper-echelon MITA positions.) By 1965, according to law enforcement officials, practically every top MITA officer answered to the mob.[31] Through its decades-long domination of this trade association, the Lucchese crime family, with the support of Local 295, enforced a trucking cartel at JFK Airport.

Members of the trucking cartel paid hefty fees to the trade association, which were passed along to the Lucchese crime family. The airlines initially asserted that they should be free to negotiate for trucking services with any trucking company, regardless of whether it was a member of MITA, but they eventually acquiesced to the trade association's membership requirement. Coercion was an obvious factor: unaffiliated trucking companies attempting to operate without cartel approval found that the cargo they were scheduled to pick up at JFK arrived badly damaged or did not arrive at all.

0667

GOVERNMENT RESPONSES

Port Authority

The Port Authority of New York and New Jersey, the government agency responsible for overseeing operations at JFK Airport, took some remedial action to augment airport security forces but was not effective in combating Cosa Nostra activity. In 1987, the head of the Port Authority police force acknowledged that stealing and extortionate activity at the airport, which had resulted in a $3 million loss the previous year, was "getting worse."[32] Five years later, reacting to a 1991 report of the amount of cargo stolen from the airport, Port Authority officials insisted that labor racketeering and theft were not significant problems because the reported $5.4 million loss represented only a fraction of the estimated $80 billion worth of goods transported annually.[33]

In 1994, freight-forwarding companies reported 218 cargo thefts, resulting in losses of nearly $5 million.[34] That same year, twenty-two robbers belonging to crews headed by low-level associates of the Gambino crime family were arrested following a two-year investigation launched by the Queens County District Attorney's Office. Although none of the individual robberies carried out by the crews was large enough to attract the attention of investigators, it is believed that the aggregate impact of the crews' activities resulted in financial losses greater than those incurred from the infamous Lufthansa heist.[35] In the mid-1990s, Port Authority officials tightened security at JFK Airport. In response, the thieves, under Cosa Nostra's direction, began targeting warehouses used by freight-forwarding companies located off airport premises.

DOJ Initiatives

In the late 1960s, the National Association for Air-Freight, Inc. (NAFA), a national organization of trucking companies, absorbed MITA. Subsequently, the federal government attempted to break up Cosa Nostra's trucking cartel in the JFK air-cargo industry. Three antitrust cases were filed, two criminal and one civil, which named as defendants NAFA, several trucking companies, and their officers. In 1974, twelve trucking companies, three individuals, and NAFA entered a consent decree that, among other things, ordered the dissolution of NAFA

0668

and enjoined the fixing of prices for ground transportation of imported air freight at JFK.[36] However, the consent decree merely forced mobsters to exercise control over trucking services at the airport through alternative means. The Lucchese crime family continued to dominate the trucking business through Local 295 and Local 851, and through direct or indirect control over several trucking firms. Cosa Nostra's control of airport cargo operations remained firm well into the 1980s.

Operation Kenrac

In 1983, the Federal Organized Crime Strike Force, based in Brooklyn, launched an investigation code-named Kenrac—"Kennedy Rackets." The investigation, which lasted five years and resulted in several important convictions, painted a disturbing picture of the depth and scope of the mob's infiltration of the air-freight industry. By 1985, the FBI had amassed enough incriminating evidence, which included five hundred reels of taped conversations from bugs placed in Lucchese crime family associate and airport overseer Frank Manzo's home and telephone, to arrest Manzo as well as Local 295 President Frank Calise and Local 851 Vice-President Harry Davidoff.

Based on the Kenrac findings, the U.S. Attorney's Office for the Eastern District of New York obtained a twenty-three count indictment charging Manzo, Davidoff, Calise, and eight others with participating in a conspiracy to commit extortion through a pattern of racketeering activity that included shaking down shipping and trucking companies at JFK Airport.[37] Faced with overwhelming evidence against them, Manzo and Calise both entered guilty pleas and received prison terms of twelve and nine years, respectively. Harry Davidoff went to trial in federal district court on a five-count indictment.[38] He was found guilty but obtained a reversal several years later in the Second Circuit Court of Appeals. However, Davidoff was ultimately retried, convicted, and sentenced to ten years in prison.[39]

While the government's victories against top Cosa Nostra–affiliated power brokers at JFK Airport seem impressive, the Kenrac prosecutions failed to make significant inroads into the mob's dominion over the airport. The prosecutions of Davidoff, Calise, and Manzo effectively derailed the criminal careers of those individuals without addressing the partnership between the upperworld and underworld that enabled Cosa Nostra to continue operations after the convictions.[40]

0669

CONSEQUENCES OF COSA NOSTRA'S CONTROL OF JFK AIRPORT

Mob control of the air-cargo industry at JFK has had significant and long-lasting consequences on the economy of New York City. The share of air freight entering the United States through JFK Airport fell from 41 percent in 1977 to 33 percent in 1987.[41] Some commentators attributed the decline, at least in part, to the reluctance of companies to open or expand air cargo operations at the airport because of the presence of organized crime.[42] At least one large freight-forwarding company refused to handle high-value cargo, such as furs and watches, if the shipment had to pass through JFK Airport.[43] In the 1980s, several shippers, including IBM, began to divert cargo to other airports. While labor racketeering and cargo theft were not unique to JFK Airport, these problems were perceived to be most serious there.[44]

Surprisingly, airlines carrying cargo through JFK Airport did not often complain about organized crime; some refused to acknowledge that a problem even existed. The most likely explanation for this silence is fear of adverse publicity. Airlines have a strong interest in maintaining a public image of tight security to attract and retain the allegiance of travelers.

For decades, officials who investigated mob-operated shakedowns of freight-forwarding companies at JFK Airport reported that the businessmen targeted by Cosa Nostra were similarly silent. The victims' reluctance to come forward was often attributed to concerns for physical safety.[45] Another factor was the mob's role in stabilizing the industry by "curbing competition, setting prices [and] allocating markets."[46] In fact, many freight-forwarding companies would not have remained in business if they had to pay union wages and benefits. By contrast, companies that cooperated with Cosa Nostra thrived. The money that freight forwarders saved in labor costs by avoiding strict enforcement of contract provisions—sometimes unionization itself—far exceeded the costs of the payments required to obtain such preferential treatment. Companies paid off top-echelon union representatives to be allowed to use nonunion labor, which is much cheaper. It is unlikely that the freight forwarders passed on any savings to their customers and indirectly to the public. However, schemes like this call into question the existence of a "mob tax."[47]

0670

Union members were the true victims of organized crime at the airport. Their leaders usually failed to aggressively police employers to ensure that proper benefit contributions were paid, and sometimes took (and solicited) bribes to look the other way. In addition, the union officers themselves sometimes embezzled and misused funds.

Yet, members of Locals 295 and 851 did not complain about Cosa Nostra's control of their unions. Many members gained entrance into the union through relatives or friends, often through connections to the Lucchese crime family. Members with ties to organized crime recruited others to perpetuate the connection. Few dared to complain about illegal practices at the airport or within the union. It was in their best interest to remain silent because those who caused trouble were threatened with loss of employment and physical harm. Those who cooperated with union officials received favorable treatment, such as overtime schedules and desirable work assignments.[48]

It seems that the Kenrac investigation, which dislodged from the industry three of the most entrenched and powerful Cosa Nostra figures, would have significantly reduced mob-orchestrated thievery and extortion at the airport. But it did not. Davidoff, Manzo, and Calise were soon replaced by other organized-crime associates. In addition, the Gambino crime family took advantage of the brief period of upheaval following their convictions to take over part of the Lucchese crime family's turf. Five years after the Kenrac defendants were convicted and sentenced, federal government officials sought to have Local 295 placed under trusteeship. In granting the government's request, Federal District Court Judge Eugene H. Nickerson stated, "[The] contention that Local 295 is now free of the influence of organized crime rings hollow. . . . [T]he evidence exhibits [that] Local 295's officers closed ranks against the government's investigation."[49]

CONCLUSION

Cosa Nostra members and associates, journalists, and others familiar with the air-freight industry have long referred to JFK Airport as the mob's "candy store."[50] *Wiseguy* protagonist Henry Hill explains, and a slough of prosecutions and investigations confirm, that the airport's air-cargo operations were thoroughly dominated by Cosa Nostra from the opening of the airport in 1948 until at least the late 1980s.

0671

The mob's power base was Teamsters Locals 295 and 851. The former (along with several other paper locals) was created by Jimmy Hoffa in the 1950s, with the help of the Lucchese crime family, to further his IBT presidential ambitions; the latter was created in 1971 as a haven for 295 officials under government investigation. Through domination of these Teamsters locals, the Lucchese crime family established and policed a trucking cartel. Cartel members made regular payoffs in exchange for labor peace. Cosa Nostra expanded its revenues from the airport by handpicking union officials with the power to exploit their detailed knowledge of valuable cargo shipments to set up truck give-ups and hijackings.

Mob rule came at the expense of rank-and-file union members, unaffiliated trucking companies, businesses that depended upon receiving cargo shipments, and the general public, which was forced to pay a mob tax reflecting the cost of mob payoffs on goods shipped through the airport. Although high-profile investigations since the 1950s have repeatedly exposed the presence of organized crime in the air-cargo industry at JFK Airport, law enforcement officials were unsuccessful in purging or even disrupting organized crime's cartel until the mid-1990s.

Exhibiting Corruption

The Javits Convention Center

> [Y]ou're buying a pass in and out of here. You can't do that. You know, if we're hitting everybody else, which we are, you know making them do certain things . . . how do you get a pass[?] How could that possibly be? You know what I'm talking about? You understanding what I'm saying?[1]
>
> —Wire-tapped conversation between Robert Rabbitt Sr., the general foreman at the Javits Center, and freight-company president Ronald Muller

CHRONOLOGY

1986 The Jacob Javits Convention Center opens.

Anthony Salerno, ostensible boss of the Genovese crime family, is convicted on federal charges of rigging Javits Center concrete bids and of inflating the center's construction costs by approximately $12 million. The Julius Nasso Concrete Company and the S & A Concrete Company are also implicated in the illegal concrete cartel.

1987 The U.S. attorney files a civil RICO action against Teamsters Local 814, alleging that the Bonanno crime family controls the local and its officers. Pursuant to a consent decree a court-appointed trustee is directed to purge the local of organized crime.

1988 The U.S. attorney files a civil RICO suit against the International Brotherhood of Teamsters and the Teamsters General

0673

Executive Board. The consent decree creates an Independent Review Board (IRB) composed of three court-appointed officers to oversee disciplinary and electoral processes. The IRB begins purging mobsters from corrupted locals, including Local 807, which had become a haven for ousted officials from Local 814. Local 807 members load and unload vehicles.

1990 The U.S. attorney for the Southern District of New York files a RICO suit against the District Council of Carpenters and its chief officials.

1991 Ralph Coppola, chief steward of the Javits Center, is identified as an agent of the Genovese crime family and removed from his position.

1992 Twenty-seven members of the Carpenters union, the Teamsters union, and the Exhibition Employees Union who work at the Javits Center are indicted on charges of theft, extortion, and violence. Twenty-four plead guilty; three are acquitted.

Robert Rabbitt Sr., general foreman of Local 807, is indicted for receiving bribes, larceny, possessing stolen property, conspiracy, and falsifying business records. He pleads guilty to the last charge and serves one year in prison. The same charges are brought against his son Michael, but are dropped pursuant to Robert's plea agreement and Michael's promise to perform one year of community service.

1994 The case against the Carpenters union and its chief officials ends in a consent decree, permanently enjoining the defendants from racketeering or knowingly associating with any organized-crime figures. The court appoints Kenneth Conboy to monitor compliance with the terms of the decree.

Robert Rabbitt Sr. resigns from Local 807 for five years as part of a settlement with the IRB. His son Michael takes his place.

Carpenters union District Council President Frederick Devine appoints mob associates Anthony Fiorino and Leonard Simon District Council representatives at the Javits Center.

0674

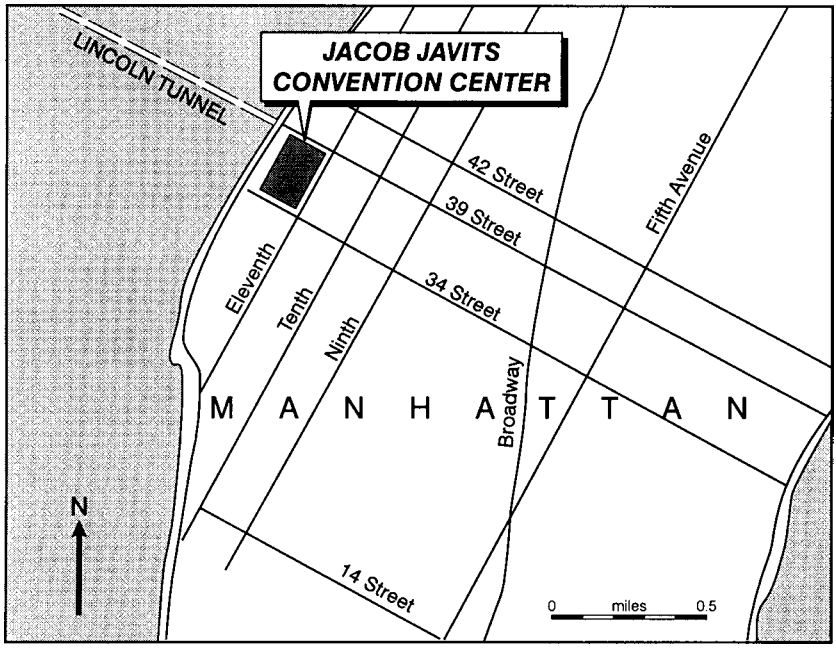
1995 New York State Comptroller H. Carl McCall issues an audit report charging Javits officials with mismanagement and toleration of corruption.

The New York State Senate holds hearings on racketeering at the Javits Center.

IBT President Ron Carey, acting on the basis of an IRB report, removes the leadership of Local 807 and places the local under trusteeship.

Governor George S. Pataki nominates Robert Boyle as president and CEO of the Javits Center and Gerald McQueen as inspector general.

Anthony Fiorino faces the first disciplinary hearing conducted under the Carpenters union consent decree. Following testimony by federal investigators concerning his close connection to the acting boss of the Gambino crime family, Fiorino is expelled from the union.



1996 Manhattan District Attorney Robert Morgenthau obtains indictments against several members of Exhibition Employees Union Local 829 for misusing union benefits while employed at the Javits Center.

1997 Gerald McQueen becomes president and CEO of the Javits Center.

In 1969, New York Mayor John Lindsay proposed a new exhibition and convention center to replace the New York Coliseum. The mayor and other proponents promised that a new center would compete more successfully for national trade shows and would stimulate New York City's economy by creating employment and business opportunities. Another benefit would be revitalization of the rundown site consisting of twenty-six acres stretching between 11th and 12th Avenues and from 34th and 39th Streets on Manhattan's west side.

Plans for the 1.8-million-square-foot Convention Center, which was later named for the popular former Republican U.S. Senator, won legislative approval and a $375 million initial construction budget in 1979.[2] Responsibility for construction and development was assigned to the

0675

New York Convention Center Development Corporation (CCDC). The groundbreaking ceremony for the convention center, the nation's largest at that time, took place in late 1980. The center opened for business in April 1986.

Since the first concrete was poured for construction, the Javits Center was mired in organized-crime corruption and racketeering. Cosa Nostra bosses and members owned the concrete companies and dominated the union that poured the concrete. The CCDC awarded a major Javits Center construction contract to Julius Nasso Concrete Company and S & A Concrete Company, allotting $30 million for the concrete superstructure of the facility.[3] Both companies were later tied to the concrete cartel run by the Cosa Nostra "commission."[4] Anthony "Fat Tony" Salerno, ostensible boss of the Genovese organized-crime family, was convicted of rigging Javits Center concrete bids and of inflating the center's construction costs by approximately $12 million.[5] Few contractors were willing to complain; retaliation could be swift and brutal. For ex-

0676

ample, Irwin Schiff, owner of an electrical contracting company doing work during construction of the center, was murdered in a Manhattan restaurant soon after complaining to the FBI about corruption and theft at the center.[6]

By establishing a power base in the Teamsters, Carpenters, and Exhibition Employees Unions, Cosa Nostra crime families infiltrated the center, controlled its operations and extracted millions of dollars annually.[7]

OPERATION OF THE CONVENTION CENTER

Legal and Administrative Framework

The Javits Center is a state-owned facility operated as a corporation by the New York Convention Center Operating Corporation (CCOC), a public benefit corporation.[8] The CCOC is responsible for marketing the center to prospective exhibitors and, since 1991, for its management. The CCOC is run by the thirteen-member Board of Directors, of whom the governor appoints seven and state legislative leaders appoint six.[9] Appointees serve staggered three-year terms without pay; major responsibilities include setting Javits Center policy and appointing key administrative personnel. The governor recommends the chairman of the Board of Directors; the board has always approved the governor's recommendations.

Governor Mario Cuomo played a high-profile role in promoting the center in the early 1980s for its revitalization effects on Manhattan's west side. However, during the mid-1980s his administration referred complaints of exorbitant costs and corruption elsewhere.

Several members of the Board of Directors were large campaign contributors and friends of state politicians.[10] For example, Governor Cuomo appointed one board member who reportedly contributed $24,000 to his reelection campaign.[11] For strategic reasons, as well as because the board positions were unpaid and low profile, there was little incentive for board members to involve themselves in the center's management. William Stern, head of the Urban Development Corporation under Governor Cuomo, observed that the "Board is there to make sure everyone's political interests are met."[12]

0677

Arranging a Show

Trade shows and conventions are scheduled and advertised often several years in advance. Until the 1995 reforms at the center, a representative of a trade organization contacted a show manager to arrange a show date.[13] The show manager arranged the dates for the show, rented space from the center, sold it to exhibitors, and hired decorating companies to prepare the center for exhibits. The decorating companies would use the unions' job referral system to employ workers to assemble and dismantle the exhibitions.* Workers lay carpet, load and unload trucks, install electrical fixtures, and perform other types of manual labor.**

The center operates most efficiently and profitably when shows are scheduled one immediately after another. Thus, Javits management has a strong interest in breaking down and packing up the shows as soon as they finish so that the next show can be set up; as a result, most of the setting up and breaking down of shows occurs at night, under time pressure. Before an exhibition opens, the mainly unskilled or semiskilled workers may work around the clock loading and unloading trucks and vans, moving merchandise into and out of the convention hall, and assembling and dismantling display stands, tables, and seats.

Collective Bargaining Framework

Several unions represent the men and women who work at the center. The Teamsters (Local 807) represent workers who load and unload the delivery trucks and vans with exhibitors' products and supplies. Members of several Carpenters union locals assemble the booths and electrical stations, and, until July 1995, the Exhibition Employees Union (Local 829) represented the general laborers.

*Before 1995, the Javits Center directly employed approximately three hundred people who carried out routine day-to-day operations like event management (including booking shows, marketing, and operating the facility), administration, maintenance, and security. After 1995, the center put on its payroll workers who used to be employed by decorating companies, this swelled the payroll to two thousand employees.

**The center bills the show manager for rent, cleaning, and electrical services. The decorating company bills the show manager exhibitors. The trade association pays the center, and the center's management pays the decorators who worked on that show. The labor expenses are billed separately; each exhibitor is responsible for the labor expended on its exhibits. The trade association also bills each exhibitor according to the floor space used.

0678

Until the mid-1990s, each union negotiated a collective bargaining agreement with the decorator companies. These agreements provided that 50 percent of the labor force for a particular show would be chosen by the decorator and 50 percent by the union through its hiring hall. Throughout the 1980s, the contracts also specified how many workers were required for various tasks, often many more than necessary. This featherbedding in part accounts for convention costs that were two and a half times those in Chicago and four times those in Atlanta.[14]

Featherbedding

Collective bargaining agreements covering work at the Javits Center mandated featherbedding and exorbitant labor costs. Union work rules required that a licensed electrician be paid close to $80 to plug in a lamp.[15] Unloading a forklift required nine workers; the same job required only three workers in Chicago. Exhibitors paid $70.50 an hour for a general laborer at Javits, and coughed up an hourly rate of $127.50 for weekend work and overtime. The comparable rates in Atlanta and Chicago were $33 and $48 an hour, respectively.

Agreements with decorator companies also gouged exhibitors. During the 1994 New York Auto Show, exhibitors paid $10 for a quart of orange juice, $27 for a gallon of coffee and $12 for a pot, and $10 for a sixteen-ounce bag of potato chips. Javits Center contracting rules foisted these outrageous prices upon the trade shows by forbidding trade associations and exhibitors from providing any goods and services themselves. The New York Auto Show organizers claimed that the cost of a New York show was 60 percent higher than a show in Detroit, Chicago, or Los Angeles.[16]

Cosa Nostra's Influence at the Center

Cosa Nostra exerted control over and extracted money from the Javits Center through control of businesses and labor unions. Members and associates of the Genovese, Gambino, and Colombo crime families held important positions within the union locals. They profited by allowing exhibitors to buy their way out of burdensome contractual requirements, and by placing members, associates, and friends in highly paid positions at the center.

0679

THE CARPENTERS UNION AND THE JAVITS CENTER

Before the late 1990s, there were approximately twenty locals of the International Brotherhood of Carpenters and Joiners in the New York City area, organized under the umbrella of the District Council, which makes major policy decisions for the locals and negotiates the collective bargaining contracts. From the 1960s, the Genovese crime family influenced operations at the Javits Center through its control over the Carpenters union. Vincent "the Fish" Cafaro, a Genovese family member turned government informer, explained that the Genovese family "controlled the hiring of Carpenters union members, first at the [New York City] Coliseum, and then at the Javits Center."[17] Although other Cosa Nostra families exerted influence at the center, the Genovese family was the dominant force.[18]

The Carpenters union job-referral rules dictated that, with limited exceptions, work had to be distributed to members according to their placement on an out-of-work list. Contractors might specifically request a particular union member, but the request had to conform to certain requirements.[19] If a contractor needed a person with a special technical skill, the union was supposed to assign the first out-of-work person on the list with that qualification. In theory, unemployed union members registered at their local union office, which placed them on a chronological list and distributed job assignments accordingly.

In reality, the Genovese crime family ignored the rules and substituted its own criteria for filling carpenter positions at the Javits Center. Typically, a Genovese family associate gave union officials a preferential hiring list, from which between thirty and forty people were selected to work for decorator companies with business at the center. For several years, Cafaro himself had final say over hiring decisions.

Investigations into hiring at the Javits Center, which followed the settlement of a civil RICO suit against the Carpenters union, revealed a preferred "pool list" of approximately one hundred workers who received job referrals before other union members.[20] Many individuals on the pool list had known links to organized crime, mostly to the Genovese family. Sixty pool-list members had criminal records, including convictions for arson and murder. Almost all the listed individuals were Italian Americans; there were no women or minorities. In 1994, approximately half of these men earned more than $40,000, one-third more than $50,000, and six more than $100,000.[21]

0680

During an FBI raid on a Genovese-family social club, agents found a list of fourteen individuals, all but one of whom had worked (or was working) as a carpenter at the Javits Center, and eight of whom appeared on the union's pool list.[22] A former Colombo family capo testified that "most of the people whom the Carpenters union refers to jobs at the Javits Center are either members and associates of the Genovese family, or friends and relatives of Genovese family members and associates."[23] The Genovese family maintained such tight control over who was employed at the center that members of other Cosa Nostra families were at times unable to get jobs there.[24]

The District Council's Ties to Cosa Nostra

The Carpenters District Council's representatives at the Javits Center invariably had close ties to organized crime, especially to the Genovese crime family. Representatives used their power to assign Cosa Nostra members, relatives, and friends to positions with decorator companies. Some jobs were awarded as payment for favors, others to provide legitimate employment for paroled family members. Many positions were treated as "no-show jobs," in which employees who never came to work were carried on the work roster and paid.

Ralph Coppola, an important Genovese associate, began working at the Javits Center in 1987, after his release from prison, where he had served time for arson.[25] He was assigned to the center by then-District Council president Paschal McGuinness, an alleged Cosa Nostra associate. Coppola was quickly promoted to District Council representative and allegedly inducted as a member of the Genovese family.[26] According to Salvatore "Sammy the Bull" Gravano, the underboss of the Gambino crime family who became a cooperating witness, Coppola ran the center on behalf of the Genovese family.[27]

In August 1991, Coppola was replaced at the center after a news article identified him as a Genovese agent.[28] In removing Coppola, Carpenters District Council president Frederick Devine cited Coppola's ties to organized crime.[29] However, Devine himself allegedly had ties to Cosa Nostra. Gravano told investigators that Devine was a puppet of the Colombo family, and another government informant stated that he had seen Devine meeting with members of the Colombo crime family in the District Council office.[30] Federal investigators charged that Devine worked with the DeCavalcante crime family of New Jersey and

0681

with the Genovese crime family. (In 1998, federal prosecutors succeeded in convicting Devine on six counts of grand larceny for which he received a fifteen-month prison term.)[31]

In April 1994, Devine appointed Anthony Fiorino and Leonard Simon to be the District Council's representatives at the center.[32] That year, they earned more than $106,000 and $144,000, respectively. The 1995 New York State Senate hearings on operations at the Javits Center uncovered important background information on Fiorino and Simon that demonstrates organized crime's entrenchment at the center.

Fiorino became a member of Local 257 in 1982 at the urging of a Genovese associate.[33] In 1988, the District Council appointed him to the supervisory position of "timekeeper" at the center. Three years later, he was promoted to chief of carpenters at the center, and in 1994, he succeeded Coppola as District Council representative. Law enforcement agencies believed that Fiorino's rapid advancement is explained by his ties to organized crime, especially to his brother-in-law Liborio "Barney" Bellomo, a capo and reputedly, for a time, acting boss of the Genovese crime family.

Leonard Simon had no carpentry skills prior to being employed at the Javits Center. He was an out-of-work taxi driver when he submitted a fraudulent application to the union, swearing that he had five years' experience in the trade. However, Simon had a key connection: his brother-in-law Ralph Coppola.[34] With Coppola's recommendation, he obtained a permanent job at the center.[35] Later, Simon advanced to District Council representative.

There is a dispute over the circumstances surrounding the appointments of Fiorino and Simon. Devine testified at a New York State Senate hearing that he barely knew the two men, and had chosen them on the recommendation of Fabian Palomino, the center's president and CEO.[36] Testifying at the same hearing, Palomino disclaimed knowing Fiorino and Simon, and stated that Devine had appointed both men without his recommendation.

Other Cosa Nostra Families

While the Genovese family has been the dominant Cosa Nostra presence at the Javits Center, other organized-crime families have also played a role. Alphonse "Little Al" D'Arco, former acting boss of the Lucchese crime family, explained the Lucchese family's role in control-

[162.10.217.184] Project MUSE (2026-06-15 01:41 GMT) University of Queensland

ling officials of the Carpenters union as "shaking down businesses that employed union members, ghost-payrolling family members, and stealing from employee pension and welfare funds."[37] Salvatore Miciotta, a former capo in the Colombo crime family, claimed to have paid $60,000 a year to the Lucchese, Colombo, and Genovese families so that his exposition company could do business at the Javits Center.

THE TEAMSTERS AND THE JAVITS CENTER

The International Brotherhood of Teamsters (IBT) Local 807 (Trade Show Division) is critical to Javits Center operations. Members of Local 807 primarily load and unload vehicles in preparation for trade shows.

Teamsters Hiring at the Center

Teamsters positions at the Javits Center paid between $21 and $43 an hour, plus generous benefits.[38] The October 1994 contract provided that Saturday and Sunday work would be paid at double the hourly rate; holiday work, triple. Decorators also paid Christmas bonuses of up to $5,000 to Teamsters members employed at the center.

The Teamsters Trade Show Division, through its hiring hall, assigned Javits Center work to *preferred* union members only. The jobs were distributed according to a seniority list consisting of forty-seven privileged members. If the seniority list was exhausted, jobs were assigned to members on the "shape" list of thirty members.[39] "Shape" refers to the process by which union members assemble at either the local office or the place of employment to be selected for work. Union members are usually called by their local and told to go shape at a job site. The general foreman selects members from the shape and assigns them work.

Teamsters who were not on the seniority or shape lists could not work at the center. Many of those on the seniority list were friends and relatives of Teamsters officials and Cosa Nostra members;[40] some had not even belonged to the Teamsters before working at the center. At least eleven members of the seniority pool were relatives or friends of the general foreman; at least fifteen members were relatives or friends of other Local 807 members.[41] One-third of the individuals on Local 807's seniority list had known ties to organized crime.[42]

0683

The Rabbitts and Teamsters Local 807

For almost three decades, the Teamsters Trade Show Division was led by Robert Rabbitt Sr. and his sons Michael and Robert Jr. The Rabbitts created the Teamsters seniority lists, which enabled them to dictate Teamsters hiring at the center.[43]

The elder Robert Rabbitt became a member of Teamsters Local 807 when he was seventeen years old.[44] He was appointed shop steward in 1967, became an officer of Local 807 in 1970, and was subsequently promoted to business agent, responsible for representing the Trade Show Division of Local 807 at the Coliseum.[45] Before the Javits Center opened, collective bargaining negotiations conducted between decorators and the IBT created the position of general foreman explicitly for Rabbitt Sr.[46] As general foreman, Rabbitt oversaw all Teamsters members at the center and served as a liaison between the decorator companies and center management.

In 1985, Robert Rabbitt Sr. was convicted of second degree manslaughter for fatally stabbing a garment shop manager, and sentenced to prison. The court banned him from the union for five years.[47] However, the general foreman's post was held open for him until his release.[48] In February 1992, a New York State grand jury indicted him for conspiracy, receiving bribes, committing larceny, falsifying business records, and possessing stolen property.[49] Rabbitt pleaded guilty to falsifying payroll records so workers could illegally receive workers' compensation benefits and served one year in prison.[50] Afterward, he resumed general foreman duties at the Javits Center. In 1994, IBT investigators threatened to charge Rabbitt with accepting bribes in return for overlooking an employer's use of nonunion trucks and laborers at the center. In the face of these looming charges as well as possible charges for failing to cooperate with union investigations, Rabbitt agreed to a five-year suspension from the union.[51] His job responsibilities were transferred to his son Michael.[52]

The Teamsters collective bargaining agreement with the decorators expired in September 1994, while Rabbitt Sr. was in prison. Michael Rabbitt led the negotiating team bargaining with the decorator companies.[53] As part of the new agreement, the position of Teamsters general foreman at the center was changed to a management, nonunion assignment; thereafter, a criminal record would not be a disqualification. Because the general foreman was no longer a union position, Teamsters re-

0684

formers were powerless to suspend any corrupt person who held it. The general foreman still managed the Teamsters but was no longer accountable to the membership. The general foreman's contract provided for a $150,000 salary and a $236,000 severance in the event of dismissal without just cause.

After his father went to prison, Michael Rabbitt left the union and took the position of general foreman. Although the Rabbitt family is allegedly mob-connected, the details of the relationship remain unclear. Stories hinting at the power of the father and sons are intriguing but fail to supply hard facts. For example, shortly after his release from prison in 1988, Rabbitt Sr. had a fistfight with a Teamsters member alleged to be a member of the Bonanno family. Such assaults usually trigger serious consequences for anyone who lacks strong ties to organized crime. There was no retaliation against Rabbitt. Further, as general shop steward, Michael Rabbitt selected Armando Rea as assistant general shop steward; the father's involvement in the decision was suspected. A civil RICO suit against IBT Local 814 later exposed Rea as a Bonanno soldier and banned him from Teamsters membership. Michael Rabbitt denied knowledge of Rea's organized-crime connections.[54]

THE EXHIBITION EMPLOYEES AND THE JAVITS CENTER

Local 829 of the Exhibition Employees Union (Expos) is affiliated with the International Alliance of Theatrical and State Employees of the AFL-CIO. A probe by the Manhattan District Attorney's Office found that more than 60 percent of Expos Local 829 workers employed at the Javits Center had felony records.[55] Although the Expos apparently did not maintain a pool list for preferential hiring at the Javits Center, it did use selective criteria. Undercover police investigations revealed that to get one of the handsomely paid jobs at the center—up to $100,000 a year—an ordinary Expos worker had to buy a membership book from union officials for $13,000 to $22,000. Individuals with organized crime connections purchased books at lower cost and enjoyed priority for center assignments.[56]

Exhibition officials also allegedly padded payroll rosters with six ghost employees for small shows and up to twenty ghosts for larger shows. Typically, some of the ghost employees were parolees who used proof of employment at the center to stay out of prison. Ghost

0685

employees shared their "salary" with the shop stewards and the Genovese crime family. This scam cost hundreds of thousands of dollars each year.

The Expos chief shop steward, much like the Teamsters general foreman, supervised Expos members at the center. Steven "Beansy" Dellacava and Paul Coscia were chief shop stewards for the Expos at the Javits Center until mid-1995; together, they determined who could work where and when. Coscia was also the vice-president of Local 829; Dellacava began working at Javits in 1990 after his release from prison, where he had served time for selling heroin. Both men were reputedly associates of the Genovese crime family.

Expos officials apparently orchestrated fraudulent legal claims against the center. Injuries sustained in nonwork accidents were presented as workplace on-the-job casualties, which enabled the injuree to file a workers' compensation claim against the center. The worker paid off Paul Coscia, who directed others to stage the accident and serve as witnesses. The settlement was divided among the injured worker, the shop stewards, and mob bosses.

CONCLUSION

From the day construction began, Cosa Nostra was a key player in the life of the Javits Center. The mob, particularly the Genovese crime family, had a stranglehold on three labor unions that represented center workers, and used its power to direct high-paying jobs to members, associates, and friends.

Teamsters Local 807, dominated through Robert Rabbitt Sr. and his two sons, may also have been controlled by Cosa Nostra. While the details of the Rabbitts' connections to organized crime have never been proved, there seems little doubt that Cosa Nostra called the shots with respect to Teamsters interests in the Javits Center. Jobs were given out by the general foreman—Robert Rabbitt Sr. or Michael Rabbitt—based on a preferred list comprised of many individuals with ties to organized crime.

Although the Expos workers did not have pool lists like those of the Teamsters and the Carpenters, they too allocated center jobs selectively. Workers had to buy union membership books for up to $22,000 in order to obtain lucrative center jobs. The Expos union at the center was per-

0686

vaded by ghost employees, personal-injury fraud, and abuse of security privileges.

Although Cosa Nostra's influence was well known to everyone who transacted business at the center and was reported extensively by journalists, for years politicians and law enforcement officials made little if any effort to attack the status quo. Until the mid-1990s, the mob's power at the Jacob Javits Center seemed impregnable.

Carting Away a Fortune

Cosa Nostra and the Waste-Hauling Industry

> [W]e find that garbage collection industry men banded together in associations which eventually . . . invoked monopoly and restraint of trade arrangements with a system of punishments for nonconforming members. . . . In Vincent Squillante we have presented the picture of a man who traded on his association with key underworld characters and his ability to "handle" Local 813, International Brotherhood of Teamsters, to parlay himself into a position where he was the absolute czar of the private sanitation industry in Greater New York.
>
> —McClellan Committee Hearings, 1957

CHRONOLOGY

General History

1947 New York City officials dissolve employer trade-waste associations; associations soon reemerge under different names.

1958 McClellan Committee exposes IBT Local 813 boss Bernard Adelstein's ties to organized crime.

1986 State Assemblyman Hinchey issues report on New York waste-hauling cartel.

1992 Bernard Adelstein, longtime head of IBT Local 813, purged from Teamsters by trustee.

1994 James "Jimmy Brown" Failla, head of trade associations, pleads guilty to conspiring to murder.

0688

New York City Cartel

1974 Brooklyn District Attorney Eugene Gold indicts fifty-five carting firms and nine officials, including Cosa Nostra members; several convictions, but no structural reforms.

1977 Joseph Gambino and Carlo Conti convicted of racketeering and sentenced to prison.

1985 U.S. Attorney Rudolph Giuliani indicts Matthew "Matty the Horse" Ianniello for carting racketeering; he is later acquitted.

1987 Mayor Edward Koch announces support for a plan to create a firm to compete with the carting cartel; the plan is never implemented. The public advocate, Mark Green, later proposes a new version of the plan; it too goes unimplemented.

1989 U.S. Attorney Otto Obermaier convicts Gambino crime-family member Angelo Paccione; he is sentenced to twelve years and $22 million in fines.

1990 Mark Green and Richard Schrader become commissioner and deputy commissioner of Department of Consumer Affairs, and begin using the agency to oppose organized crime and the cartel.

1993 After unsuccessful efforts to break into the New York City waste-hauling market, Browning Ferris Industries (BFI) agrees to assist New York County District Attorney Robert Morgenthau's investigation.

1995 Morgenthau announces state racketeering indictments against twenty-three carting firms and associations.

By 1997, all defendants have been found or have pled guilty.

1996 Local Law 42 passes; Trade Waste Commission created, issues comprehensive rules, including a reduction in the maximum carting rates.

1998 Fear of corporate monopolistic control over the New York City's waste-hauling industry is addressed, as the merger of Waste Management and USA Waste becomes contingent upon

0689

the companies' divestiture of three transfer stations in the New York City area.

Long Island Cartel

1984 OCTF Director Ron Goldstock indicts sixteen Long Island carting firms, individuals, and public officials on antitrust charges. Several defendants are convicted, but given light sentences.

1986 Lucchese family capo Salvatore Avellino pleads guilty to state charges of coercion.

1989 Robert Kubecka and brother-in-law murdered by Cosa Nostra for cooperating with law enforcement officials.

U.S. Attorney Andrew J. Maloney files civil RICO suit against Long Island carting cartel; 112 defendants, including 64 Gambino family and Lucchese family members and associates, 44 carting firms, carters' trade association, and IBT Local 813. Leads to federal monitorship.

1994 U.S. Attorney Zachary Carter achieves federal monitorship over entire Long Island waste-hauling industry.

Former prosecutor Michael Cherkasky appointed industry monitor.

New York City residences and businesses produce thirteen thousand tons of trash every day, not including the debris generated by construction projects.[1] Once generated, trash undergoes a two-step process: collection and disposal. Collection is generally a separate industry from disposal; disposal involves providing a final resting place for trash, such as a landfill or incinerator.[2] In New York City, the Department of Sanitation collects residential waste. Commercial-waste hauling—that is, collection—the focus of this chapter, is carried out by approximately three hundred small firms (one to twenty trucks) that together constitute a $1.5 billion per year industry.[3] The drivers and trash collectors are represented by Teamsters Local 813. Most of the firms are members of one of four trade associations.

Although the cartel's precise origins are unclear, New York City officials received complaints as early as 1947 that illegal activities were restricting free competition in the waste-hauling industry.[4] At that time,

0690

the cartel controlled only the collection of commercial paper products (the New York City Department of Sanitation picked up most other commercial waste and all residential waste). The city's decision in 1956 to privatize commercial-waste hauling provided a lucrative opportunity for racketeering; suddenly, private carters had approximately fifty-two thousand new customers, a 70 percent expansion of their client base.[5] Restaurants, stores, office buildings, and light industry made up the bulk of the new client base.

Similar cartels operated on Long Island and in Westchester County, just north of New York City. On Long Island, the cartel was established and policed by the Lucchese crime family. The Westchester County carting cartel was run by associates of the Genovese crime family.*

A few very large companies dominated the industry. In New York City, several companies associated with Barretti Carting and several associated with V. Ponte & Sons serviced a large portion of the city. Likewise, on Long Island Salvatore Avellino's SSC Corporation and Emedio Fazzini's Jamaica Ash dominated the industry. But the majority of New York City and Long Island carting companies operated with fewer than five trucks and fewer than ten employees, either as close corporations

*In 1996, following a ten-year federal investigation, RICO and other federal charges (sixty-one counts in all) were brought against seven individuals and fourteen businesses. Prosecutors alleged the defendants maintained a property-rights system and shared profits, which were concealed through sham transactions and false tax statements. On September 30, 1997, five individuals and thirteen waste-hauling companies pled guilty to multiple charges. Among those pleading guilty were Mario Gigante, a brother of former, suspected Genovese boss Vincent "the Chin" Gigante, and Thomas Milo, the sole owner of Suburban Carting Corporation, the country's largest privately held waste-hauling company. Gigante and Milo were sentenced to prison terms of forty-two months and thirty-three months, respectively. As part of their plea agreements, the defendant companies consented to be monitored by former assistant U.S. attorney Walter Mack. Ultimately, all the defendants pled guilty and collectively were fined roughly $17 million. Westchester County has since required all carting businesses placing bids on county contracts to undergo a thorough background investigation. See *United States v. Gigante et al.*, 948 F. Supp. 279 (S.D.N.Y. 1996) (provides some information regarding the indictment); Benjamin Weiser, "Haulers Plead Guilty to Controlling Garbage Routes with Violence," *New York Times,* October 1, 1997, B5; "Waste Hauler Sentenced to 33 Months for Fraud," *New York Times,* February 24, 1998, B2; "Gigante Sentenced in IRS Fraud," *U.P.I.,* April 9, 1998; Alex Philippidis, "Mamaroneck Carter May File Suit Against Former Partner," *Westchester County Business Journal,* 36, no. 41 (October 13, 1997): 5; Donna Greene, "County Includes Integrity as Part of Carting Contract," *New York Times,* May 10, 1998, Westchester sec., 9.

0691

or partnerships passed down from father to son;[6] traditionally, the majority of owners have been Italian Americans.[7] In his in-depth study of racketeering in the carting industry in New York City and Long Island, Peter Reuter hypothesizes that the "ethnic homogeneity" that characterized the carting companies facilitated the Mafia's infiltration of the industry and the creation of a cartel system.

Under the Gambino and Lucchese crime families' influence, the commercial-waste hauling firms, like the trucking firms in the Garment Center, operated a "property-rights" system that bound every commercial customer to one carter for life. The industry was also characterized by bid rigging, inflated pricing mechanisms, and threats of violence.[8]

THE PROPERTY-RIGHTS SYSTEM

Under the property-rights or customer-allocation system, developed and enforced by the Gambino, Genovese, and Lucchese crime families, each customer (or, to be precise, each "stop") belonged to a particular cartel member; no other carter was allowed to solicit or accept the customer's business.[9] The carter owned his stops in perpetuity. When a business changed hands or disappeared, a successor business at the same location remained the property of whichever carter had serviced that stop. Stops taken together were called a "route";[10] stops could be sold to other firms in the cartel but could not otherwise change hands.[11] When disputes regarding ownership of a particular stop arose, they were settled by the trade association. Customers who tried to switch to another carting company quickly discovered that they were unable to get any service. Eventually, disgruntled customers were forced back to their assigned carter, often with penalty charges to drive home the message. (In some cases, the cartel would permit a switch, if the successor carter compensated its predecessor.)

POLICING THE CARTELS: COSA NOSTRA AND THE TRADE ASSOCIATIONS

Through the New York City and Long Island trade associations, Cosa Nostra policed the carting cartels. Outside companies could not partic-

0692

ipate in the industry and cartel members could not compete with one another. National waste-hauling companies did not seek business in either the New York or Long Island markets. The absence of such companies from these lucrative markets was, according to Reuter, the result of the "effectiveness of the racketeer reputation of the industry . . . and of customer allocation agreements."[12]

The trade associations came under scrutiny as early as 1947, when the New York City Commissioner of Investigation found that "[i]n addition to restricting competition by dividing territory and fixing noncompetitive prices, the associations policed the industry in order to maintain their monopoly."[13] To combat the associations' stranglehold over the industry, the commissioner ordered the dissolution of the Greater New York Trade Waste Association, Inc., the Brooklyn Trade Waste Removers' Association, Inc., and the Queens Trade Waste Removal Association. This effort was not successful, for the associations soon reappeared under new names.

The Association of Trade Waste Removers of Greater New York dominated the industry during the period of organized crime's greatest power. Its president for more than thirty years was James "Jimmy Brown" Failla, a capo in the Gambino crime family. Failla held weekly meetings in the association's offices or at a Brooklyn club to assign routes, resolve disputes, and conduct routine business.[14] Other Cosa Nostra–linked trade associations included the Kings County Trade Waste Association (Genovese), the Greater New York Waste Paper Association (Genovese), and the Queens County Trade Waste Association (Gambino). The Long Island carting industry was governed by the Private Sanitation Industry Association of Nassau/Suffolk, which for years was controlled by Salvatore Avellino, a member of the Lucchese crime family.[15]

By maintaining the property-rights system and the cartel, organized crime provided a valuable service to the small firms in the industry. Cartel members charged exorbitant prices and engaged in unconscionable business practices like inflating the amount of waste collected in order to justify higher charges. They did not have to compete for business, and could charge high prices to their customers, who ultimately passed them on to all New York City and Long Island residents. The carters flourished despite inefficiencies that would have been fatal to firms in a competitive industry.

0693

Ownership Interests

A number of Cosa Nostra members held ownership interests in the carting industry. To name just a few examples: Joseph Gambino, son of the onetime Gambino family's crime boss Carlo Gambino, owned several Bronx waste-hauling firms, including the P & S Sanitation Company;[16] Salvatore Avellino, a soldier in the Lucchese crime family and a close associate of crime boss Antonio "Tony Ducks" Corallo, controlled the Salem Sanitary Carting Corporation;[17] Gambino associate Angelo Paccione owned the National Carting Company of Brooklyn;[18] and Matthew "Matty the Horse" Ianniello, an underboss in the Genovese family, ran Consolidated Carting, among other firms.[19]

ENFORCING THE CARTEL

The mob's enforcement mechanisms prevented cheating by cartel members and competition from nonmembers. Monitoring required little effort because the customer-allocation system made prohibited competition easy to spot. Organized-crime figures and cartel members used economic pressure, subtle forms of coercion, and outright violence to punish those who sought to take more than their presliced piece of the pie.

The most common punishments were economic sanctions. If one carter took a customer away from a fellow cartel member, then Cosa Nostra, acting as an instrument of the trade association, would order the wrongdoer to compensate the victim by handing over a customer of equal or greater value.[20] Sometimes, the rebel had to pay a penalty to the wronged carter, as much as sixty-five times the monthly revenue received from the stolen customer. In effect, the trade association functioned like a court with special power to enforce its decrees. Carters who refused to accept the jurisdiction of the trade association found themselves the target of a strike or other job actions by Teamsters Local 813, the only union representing the drivers.[21]

The cartel was so tightly managed and cheating so unlikely to be successful that violence was seldom necessary. However, from time to

0694

time the actions of rebel carters sparked violent reactions. Their drivers were beaten, their trucks destroyed, and they themselves threatened and assaulted.[22] The owners of at least one rebel carting company paid with their lives.

In 1982, Robert Kubecka, a rebel waste hauler on Long Island, began cooperating with law enforcement officials. Kubecka had refused to abide by the cartel's property-rights system and recorded conversations with cartel members that aided a number of major investigations. In 1989, Kubecka and his brother-in-law Donald Barstow were murdered. In 1993, Salvatore Avellino pled guilty to conspiracy to commit these murders and was sentenced to an indeterminate sentence of three-and-a-half to ten-and-a-half years. Two years later, Carmine Avellino (Salvatore's brother), Anthony Baratta, Frank Federico, and Rocco Vitulli were indicted in connection with the Kubecka and Barstow murders. All the defendants, except Federico, whose whereabouts is unknown, pled guilty to lesser offenses. In 1998, former Lucchese family underboss Anthony Casso was sentenced to life in prison for conspiracy to commit murders and other crimes, including the murders of Kubecka and Barstow.[23]

ENFORCING THE PROPERTY-RIGHTS SYSTEM

When necessary, Cosa Nostra kept customers in line. Every business, from the smallest bodega to the largest department store, was married to one of the carting companies. Divorce was difficult, if not impossible; businesses that attempted to break away from their partners faced threats and vandalism.[24] When one businessman canceled his waste-hauling contract and started hauling away his own waste, garbage was dumped on his doorstep with a note threatening to bomb his business unless he continued to pay his carter.[25]

Most customers, however displeased with their carter, did not need to be warned twice. When a national hauling firm attempted to break into the New York City market with an offer to cut current carting rates in half, practically no businesses showed interest.[26] One bank executive explained that he refused an opportunity to save 50 percent on waste disposal because he feared the bank's automated teller machines would be vandalized.

0695

COSA NOSTRA'S CONTROL OVER IBT LOCAL 813

Cosa Nostra's influence in the waste-hauling industry was reinforced by its control over Teamsters Local 813, which represented the drivers employed by the carters.[27] For decades, the local was run by Bernard Adelstein, a man whom the McClellan Committee in 1958 branded the "abject tool"[28] of organized crime. Adelstein's reign at Local 813 lasted until he was banned from the IBT in 1992.[29] The McClellan Committee paid special attention to the ties between Adelstein and Vincent "Jimmy" Squillante, a high-ranking official of the New York City Cartmen's Association, and a known mobster. According to the committee, Local 813 was the personal fiefdom of Adelstein, and "far from fighting Squillante . . . [Adelstein] provided vital cooperation as [Squillante] moved . . . to ruthless czardom of the garbage industry."[30*]

Under Adelstein's stewardship, Local 813 served the interests of the organized crime–sponsored cartel. If a carter fell out of favor with Cosa Nostra, members of the local would refuse to work for that company. In 1989, Robert Kubecka had reported that the tires on his trucks were slashed and the windshields broken; a Gambino crime family associate offered to solve his union problems for a $20,000 fee.[31] Jerry Kubecka, father of the murdered Robert, and himself the owner of a rebel carting company, charged that Local 813 threatened his customers with labor problems and violence unless they agreed to be serviced by a firm designated by the cartel.

Years later, in 1989, at a hearing looking into Adelstein's underworld ties, a Gambino-crime-family-underboss-turned-government-witness, Salvatore "Sammy the Bull" Gravano, testified that Gambino capo James "Jimmy Brown" Failla exercised de facto control over Local 813, and that Adelstein "answer[ed] directly"[32] to Failla. A former employee of Local 813 testified that Adelstein and Failla met at least once every two weeks, and worked together in "controlling and manipulating the private sanitation industry in the New York City metropolitan area."[33]

*Following the McClellan Committee hearings, both Adelstein and Squillante were indicted on extortion charges. Adelstein was found guilty, but his conviction was subsequently overturned. Squillante disappeared before trial and is presumed dead. Robert E. Kessler and Phil Mintz, "Feds vs. LI Carters," *Newsday,* June 8, 1989, 3.

0696

Government Responses to Racketeering in Carting

The initial response of law enforcement agencies to the McClellan Committee's reports of mob activity in the garbage industry was ambitious, but in the end little was accomplished. New York State's attorney general sought injunctions against Local 813, three trade associations, and approximately four hundred individuals and corporations involved in the waste-hauling business.[34] He sought to prohibit the defendants from joining the trade associations and from engaging in anticompetitive practices. In 1959, after a protracted court battle, injunctions were granted against the various defendants. It proved to be a Pyrrhic victory, however because state officials left the injunctions largely unenforced.[35]

Information uncovered by the McClellan Committee also led to criminal charges against Squillante, Adelstein, and others. Adelstein was convicted of extortion, but the conviction was overturned on appeal.[36] Squillante disappeared, presumed murdered.[37] In the final analysis, although government hearings succeeded in exposing and bringing a degree of notoriety to a multimillion-dollar racketeering scheme operating in the New York waste-hauling industry, law enforcement efforts were largely ineffective in defeating Cosa Nostra's corruption and racketeering.

MORIBUND REGULATOR: NEW YORK CITY'S DEPARTMENT OF CONSUMER AFFAIRS

The New York City agency responsible for regulating the carting industry was the Department of Consumer Affairs (DCA), created by Mayor Robert Wagner in 1956 to bolster the city government's role in monitoring waste disposal.[38] The DCA was empowered to set licensing requirements, issue carting licenses, and set maximum rates for hauling trash. However, rather than using its licensing authority to keep corrupt individuals and firms out of the industry or to encourage fair economic competition, the DCA simply issued permits on request. The DCA was so promiscuous in granting licenses that in a 1980 interview, one longtime employee could not recall a single license denial in the agency's history.[39] Moreover, the DCA set maximum carting rates that were extremely high—well above the prevailing rates in any other U.S. city—

0697

and cartel members treated the maximum rate as the only rate. Customers, who were not in a position to protest, were told that the exorbitant bills were due to the city-*imposed* rate. Thus, the DCA regulations actually helped to maintain the Cosa Nostra–sponsored cartel.[40] (In the early 1990s, the DCA did reduce the maximum rate, but a lawsuit resulted in the maximum rate's being reset at $14.75 per cubic yard.)

To say that, up until 1990, the DCA failed to exercise its regulatory power effectively would be a gross understatement. For example, in setting maximum carting rates, the DCA's consideration of the waste haulers' costs mocked its role as an independent regulator. To calculate costs, the agency had to factor in the amounts charged by landfills for waste disposal. However, while disposal companies based their prices on the volume of *compacted* waste, carters billed their customers according to cubic yards of *uncompacted* waste.[41] Price monitoring was difficult because of uncertainty about how tightly the carting firms' different equipment could pack waste. If a carter collected 3.5 cubic yards of loose garbage from a customer and could compact that amount into a single cubic yard before taking it to the landfill, then the carter should be able to pass along only the cost of disposing of that single cubic yard. Alternatively, if the carter could compact 3.5 cubic yards into half a cubic yard, then the disposal cost to the customer should have been halved. But carters routinely collected 3.5 cubic yards of loose garbage, compacted it into cubic half yards, and charged their customers for the full cubic yards, thereby passing on two times their landfill costs.

Waste haulers also routinely overcharged their captive customers by billing them for more loose garbage than they actually collected. Because customers rarely measure their waste, it was easy for the carters to exaggerate the amount hauled away.[42] As a result, charges for waste haulage bore little relation to the cost of its collection and transportation to the landfill.

Unhappy customers had two options: (1) confront the carting company; or (2) complain to the DCA. The first option required the complainant to hire a trash auditor, of which there were few, and then confront a company known to be mob-connected—hardly an attractive prospect. DCA did have a complaint procedure and a small number of investigators. And in some cases, customers did obtain restitution. But for the most part, DCA simply would not or could not challenge the systemic corruption and racketeering.[43]

0698

A small New York City business, such as a corner grocery or delicatessen, paid about $15,000 annually for trash removal. Restaurants coughed up $50,000, and large office buildings were charged as much as $1 million per year.[44] While Los Angeles and Boston businesses were paying $9 and $5.30 respectively for every cubic yard of waste hauled away, their New York City counterparts were paying $14.70.[45]

Bid rigging among carters occurred frequently on Long Island, where municipalities would solicit bids for hauling an entire community's waste.[46] However, New York City was hardly immune. When a large customer solicited competitive bids, the waste-hauling firms would collusively decide the low bid and low bidder. For example, in November 1996, state prosecutors indicted several carting companies for fixing bids in connection with the waste collection at fourteen federal buildings, including offices, courthouses, and the FAA control tower at JFK International Airport.

In 1990, Mark Green became commissioner of DCA. He and Deputy Commissioner Richard Schrader (who succeeded Green in 1993 when Green was elected public advocate) tried to mobilize DCA in opposition to the cartel. They moved to revoke Paccione's license, charging price gouging, fraudulent contracts, and intimidation of customers and competitors. When Paccione's company was put into receivership, DCA worked with the trustee, Barrington Parker. Next, DCA launched an expensive and expansive law enforcement effort aimed at voiding illegal waste-hauling contracts. Thousands of citations were issued, and annual reporting requirements were significantly increased. Finally, Green put forward a proposal to create a new licensing authority that would put out bids for companies to service a large area of the city. Each company would have to employ an IPSIG (Independent Private Sector Inspector General) to monitor its operations and report to the government.

SPORADIC LAW ENFORCEMENT

From 1973 to 1974, Brooklyn District Attorney Eugene Gold ran a sixteen month–long undercover investigation of the private carting industry in his jurisdiction.[47] His office set up a carting firm on Coney Island staffed by undercover officers. Although the government carting firm undercut the prices of its competitors by 30 percent, and actively solicited two thousand businesses, it attracted only nineteen customers.[48]

0699

Ultimately, Gold obtained indictments for criminal restraint of trade against fifty-five Brooklyn carting firms and nine carting industry officials, including members of the Gambino, Genovese, and Colombo crime families. The defendants pled guilty in exchange for light sentences.[49] Not one defendant served any jail time; most received insubstantial fines. The DCA imposed its own paltry penalty: $500 per truck.

Meanwhile, New York State Attorney General Louis J. Lefkowitz obtained a court-ordered dissolution of the Brooklyn Trade Waste Association. A Brooklyn grand jury recommended that New York City take over the collection of the waste from commercial businesses located in residential buildings.[50] While considering this proposal, the DCA temporarily stopped issuing new licenses to carting firms with pending indictments, but this show of regulatory muscle was short-lived. Ultimately, every request for a licensing renewal was granted.[51]

The DCA episode illustrated the prevailing view among city officials that the licensing-on-demand policy promoted stability in the carting industry. Leo Pollock, head of the DCA's Trade Waste Division, explained that "we didn't want price wars and chaos in the industry. We didn't think that would protect the public."[52] Although one sanitation commissioner supported a proposal that would have transferred control of fifty thousand stops from privately owned companies to the Sanitation Department, his successor vetoed the idea, and other city officials were equally disinclined to alter the status quo.[53] According to one high-ranking city official, Mayor Abraham Beame "wished the situation would just blow over."[54] Thus, District Attorney Gold's efforts failed to achieve systemic change. If anything, the fizzling of his ambitious prosecutorial effort demonstrated the extent to which political and administrative inertia hindered efforts to destroy the waste-hauling cartel.

Investigation of the Long Island Cartel and Antitrust Suits

In the late 1970s, rebel carter Robert Kubecka, who had long refused to join the Long Island cartel and who had complained to various law enforcement agencies for years, agreed to assist the New York State Organized Task Force (OCTF) in an effort to break the mob's stranglehold on the carting industry. The OCTF, assisted by Kubecka, launched an eighteen-month investigation. In 1982, the OCTF obtained court authorization to bug the automobile of Antonio "Tony Ducks" Corallo,

0700

then the head of the Lucchese crime family. The "car bug" turned out to be one of the most productive electronic surveillances of the 1980s.*

Many prominent mobsters and industry figures were caught up in the government's net, including Corallo; his underboss Salvatore "Tom Mix" Santoro; Salvatore Avellino; and James Corrigan, the director of the Private Sanitation Industry Association. Based upon information obtained through the intercepted conversations, New York State Organized Crime Task Force Director Ronald Goldstock indicted twenty-one individuals, including Corallo, and sixteen waste-hauling firms[55] on charges of conspiring to dominate private-garbage collection on Long Island[56] by dividing up territory and stifling competition through threats and agreements, and of conspiring to rig bids on commercial carting contracts.[57] According to the OCTF, this racketeering resulted in overcharges of more than $10 million a year in Suffolk County alone.

The defendants were charged with many offenses, chief among them maintaining a customer-allocation system and conspiring to injure Kubecka. Goldstock claimed that Salvatore Avellino ran the cartel through the Private Sanitation Industry Association of Nassau/Suffolk, which diverted more than $400,000 to the Lucchese crime family.[58] While several defendants pled guilty in 1987 to state charges[59] and juries convicted the remaining defendants in 1988,[60] the impact of the convictions ultimately was undermined by light sentences.[61] Justice John Vaughn ordered the defendants to spend six months in jail or to provide 840 hours of community service by collecting waste for Long Island towns. The guilty carters were fined between $6,000 and $10,000 each. Perhaps in response to complaints over such mild sentences, in 1988 Justice Vaughn imposed $1 million fines on two carting companies found guilty after trials.

OCTF Director Ronald Goldstock, while dismayed by the light sentences, stated that he did not believe that traditional prosecutions could rid the carting industry of the mafia. On January 22, 1985, Attorney General Robert Abrams brought a federal antitrust suit seeking to alter permanently the way carting companies did business on Long Island.[62] The suit alleged that twenty-four Long Island carting companies and twenty-five of their chief executives had violated the Clayton Act,

*Evidence obtained from the Corallo car bug contributed to the conviction of thirty-eight organized crime figures, public officials, and carting companies and to the commission case, the most important organized crime case in U.S. history.

0701

which prohibits unfair trade practices.[63] The suit sought treble damages for the victims of the conspiracy—the municipalities, school districts, and individual customers—all of whom had paid inflated waste-hauling charges for decades, and argued that the defendants should pay a multimillion-dollar fine.[64]

Goldstock called for far-reaching changes in the private carting industry. He sought an injunction requiring that defendants bill customers on a standard unit of measurement—such as a standard container—so customers could compare the rates of different carters. He also asked the court to order carters to publish their rates and the names of their institutional customers, and to provide customers with a written statement that they could cancel their carting contract on ten days' notice. The goal was "to open up the competitive forces in the market place to allow free and open competition."[65]

In 1989, the New York State Attorney General's office settled this antitrust suit for just $3 million in cash and services. None of the proposed structural changes was achieved. However, by targeting the cartels as criminal enterprises, urging structural reforms to a corrupted industry, and focusing on restraint of trade violations, Goldstock provided a model for law enforcement agencies to follow in future attacks on the Cosa Nostra–run waste-hauling cartel on Long Island.

In August 1989, Robert Kubecka and his partner, Donald Barstow, were murdered in the office of their carting company. In 1994, Salvatore Avellino, head of the Lucchese family's waste-hauling operations on Long Island and the de facto head of the carters' trade association, pled guilty to conspiracy to commit those murders.[66]

CONCLUSION

Since the mid-1950s, the New York City area carting industry was dominated by cartels and a customer-allocation system. Two cartels, one in New York City and one on Long Island, were managed and policed by trade associations and IBT Local 813. Local 813 head Bernard Adelstein and Vincent Squillante, an officer of the New York Cartmen's Association and a mobster, forged a relationship that furthered Cosa Nostra's interests in the carting business. The trade association and the union were pawns of the Lucchese and Gambino crime families. The cartels were so strong for so long that any challenges by rebel customers or

0702

carters were easily defeated by economic sanctions. Personal violence was rarely necessary.

For many years, the New York City Department of Consumer Affairs seemed to exercise its regulatory powers in a manner that was wholly consistent with the interests of the cartel members and the organized-crime figures for whom they fronted. The DCA essentially gave out licenses to anyone who asked, set high maximum rates, and gave tacit sanction to the property-rights system. In 1988, Commissioner Angelo Aponte, approved an enormous—38 percent—increase in waste-hauling rates. He noted that anyone who believed that free enterprise was a term that reasonably characterized the trade waste-removal industry was operating under an illusion. For the business community, the waste-hauling cartels and the mobsters who sponsored them were simply a fact of life in New York City.

Building a Cosa Nostra Fiefdom

The Construction Industry

> But we gotta have the strength so that when a fucker comes along and bids [on a contract which is supposed to be limited to members of a Cosa Nostra family–sponsored cartel] tomorrow he's got four gold tooths [organized crime members] in front of him saying "now that [you've got the contract] where are all the workers?" That's the power.
>
> Now, as the Association, we control the [employers.] When we control the men we control the [employers] even better because they're even more fuckin' afraid.
>
> Do you understand me? When you got a [employer] who steps out of line, you got the whip. You got the fuckin' whip. This is what he [one of the crime bosses] tells me all the time. A strong union makes money for everybody, including the wise guys. The wise guys make even more money with a strong union.[1]
>
> —Salvatore Avellino, soldier in the Lucchese Crime Family

CHRONOLOGY

1970s FBI conducts the Long Island Labor Racketeering and Extortion (LILREX) investigation, which results in prosecutions against drywall racketeer and Genovese family capo Vincent DiNapoli.

1981 Brooklyn Organized Crime Strike Force brings charges against DiNapoli, Carpenters union President Teddy Maritas, and others for running a drywall cartel. One year later, after a trial end-

0704

ing in a hung jury, Maritas "disappears" and the others all plead guilty.

1985 Governor Mario Cuomo requests that the New York State Organized Crime Task Force undertake a comprehensive investigation into corruption and racketeering in the New York City Construction Industry.

1986 President's Commission on Organized Crime gives its report on nationwide labor racketeering, calling for greater use of civil RICO.

Federal prosecutors win one-hundred-year sentences against bosses of four of New York City's five Cosa Nostra crime families for running a Cosa Nostra "commission" as a racketeering enterprise.

Federal prosecutors convict leading members of the Colombo family in the Colombo family RICO case, largely for their role in the concrete cartel.

New York City establishes a city-subsidized concrete batching plant.

1987 Governor Mario Cuomo creates the Construction Industry Task Force, comprising prosecutors, investigators, accountants, and support staff from both the OCTF and the Manhattan District Attorney's Office.

Local 6A and the District Council of Cement and Concrete Workers enter a consent decree. The court appoints Eugene R. Anderson as trustee. His trusteeship extends to 1993. Anderson believed the trusteeship did not have any significant effects due to limited powers, funding, and support.

1988 Federal prosecutors convict leading members of the Genovese family in the Genovese family RICO case, seizing its interests in the concrete companies involved in the concrete cartel.

1989 School Construction Authority is created, partially in response to the corruption associated with New York City Board of Education's construction operations. Thomas Thacher is its first inspector general. It institutes a prequalification procedure to

0705

prevent construction companies with mob ties from obtaining school construction contracts.

1990 New York City starts the VENDEX system, a computer database of government contractors.

Federal prosecutors bring charges against the organizers of the window-replacement cartel. The trial, mired with murders, jury tampering, and fugitives, produces only three convictions. But others are later convicted.

Manhattan District Attorney's Office successfully brings charges against the twelve-year-old painters' cartel run by the Lucchese crime family.

OCTF issues its final report on corruption in New York City's construction industry. Its recommendations go largely unheeded.

1993 A four-year Manhattan District Attorney's Office investigation culminates in a series of prosecutions against systemic bribery and payoffs in the plumbing industry. Attempts to place the union under a government monitor are denied by the court when the national headquarters imposes a trusteeship of its own. The trusteeship fails to loosen the Lucchese family's grip over the union.

1994 Kenneth Conboy is appointed as trustee over the Carpenters District Council as part of an agreement settling a civil RICO suit. His efforts lead the international union to oust Frederick Devine, president of the District Council.

Lawrence Pedowitz and Michael Chertoff are appointed as monitor and investigations officer, respectively, over the Mason Tenders District Council as part of an agreement settling civil RICO and ERISA charges brought by federal prosecutors. By 1998, general counsel for the international organization lauds the success of the trusteeship in cleansing the district council of corruption.

1995 IBT Local 282 consents to the presence of a court-appointed "corruption officer" who will work alongside a court-approved trustee from the international organization.

0706

1998 Mayor Giuliani proposes a regulatory licensing system for general contractors.

The New York City construction industry is an entire sector of the urban economy, comprising numerous subindustries such as demolition, concrete, rebar, plumbing, drywall, and masonry. It is much greater in scale than the other industries we are examining. Moreover, unlike the other industries, it is not geographically fixed but rather does business everywhere in the city. There are thousands of construction projects at any point in time, ranging from small renovations to massive public works and skyscrapers. For most of the twentieth century, Cosa Nostra has been entrenched in this multibillion-dollar industry.

The New York City construction industry is a huge, decentralized, fragmented agglomeration of thousands of construction companies and materials suppliers, hundreds of general contractors, dozens of major developers, and many onetime or infrequent builders ranging from large corporations to small entrepreneurs. The city is a union town: nearly one hundred trade unions represent the approximately hundred thousand skilled and unskilled workers in the city's construction industry. Architects, engineers, bankers, insurance brokers, lawyers, accountants, public administrators, and contracting personnel also play significant roles.

Major construction projects require extraordinary coordination. Sites must be acquired and capital (construction loans) secured. Lawyers and consultants have to obtain zoning and building permits. Architects and engineers must develop plans. Once construction begins, time is always of the essence. Delays can add huge costs to a project and can bankrupt contractors and developers.

In most major construction projects, the prearranged coordination of contractors and workers from several different trade unions contributes to the industry's susceptibility to disruption and delay. Consider a typical high-rise construction project. After the initial financial and legal hurdles are cleared, existing buildings on the chosen site must be demolished before it can be cleared and excavated. Next, foundations of poured concrete are laid. The superstructure is then built, using steel, reinforced concrete, brick, or some combination of these materials. Then the interior elevators, stairs, plumbing, electrical systems, drywall, and heating and cooling systems are installed. Finally, carpentry,

0707

painting, and the installation of doors, windows, and fixtures complete the project.[2]

There is potential for labor and supply problems at every stage, and any individual or organization that can stop the process has the potential to extract payoffs. For more than fifty years, Cosa Nostra's domination of construction unions enabled it to exploit that potential.

THE LABOR RELATIONS FRAMEWORK

Unions and contractors are connected in a complex web of collective bargaining. A single contractor may be a member of several employer associations that negotiate in his behalf with a single union. Conversely, a single union may bargain with a dozen contractor associations. Furthermore, union locals often dispute about jurisdiction over tasks on a construction site.

Many labor contracts impose featherbedding (more workers than are necessary to carry out particular jobs). Sometimes they contain provisions forbidding efficient technologies (e.g., no spray painting). Some contracts require employers to employ workers whose job is not to work for the employer but to enforce the union's rules and interests (e.g., the working Teamsters foreman who makes sure that every trucker who enters the site is a union member).

Construction firms maintain only a small full-time workforce of managers and foremen. When they obtain a contract, they contact the union hiring hall to get the necessary workers. If a union is unhappy with a particular employer, it can assign that employer incompetent workers. Additionally, each union has the de facto power to shut down a site by striking and picketing as well as by sabotage. Essentially, the construction unions determine which companies can do business and which cannot.

In response to the many craft unions' power to set unfavorable terms and to engage in extortion, contractors and builders have reached out to actors with power to control unions, ensure labor peace, and provide relief from onerous collective bargaining provisions. For half a century, Cosa Nostra has had that power.

As we have seen in previous chapters, racketeers can use union power to create and enforce employer cartels. If the union controls which contractors work in a particular construction niche, it can estab-

0708

lish and enforce cartels that permit only certain companies to do business. For most of the twentieth century the New York City construction industry has been characterized by employer cartels enforced by Cosa Nostra–influenced or –dominated unions.

COSA NOSTRA AND THE NEW YORK CITY CONSTRUCTION UNIONS

Cosa Nostra's primary power base in the New York City construction industry has been the construction trade unions. The 1986 Report of the President's Commission on Organized Crime (PCOC) found that more than a dozen construction-union locals "have a documented relationship with one or more of the New York City [Cosa Nostra crime] families, often through the holding of union office."[3] The New York State Organized Crime Task Force's comprehensive investigation of corruption and racketeering in the New York City construction industry, conducted in the mid-1980s, found even more extensive labor racketeering in the industry, including the following examples:[4]

DELIVERY

- Teamsters Joint Council 16, the largest IBT joint council, has had several officers tied to the Genovese and Lucchese crime families. For example, Joseph Trerotola, a mob associate, was both president of Joint Council 16 and a vice-president of the international union. In 1991, Trerotola left the union when charged with mob toleration.[5] Joint Council 16's vice-president for several years was Patsy Crapazano, a convicted extortionist tied to the Genovese crime family.[6]
- Officials of IBT Local 282, which represents the drivers of concrete trucks, has been closely associated with or controlled by members of Cosa Nostra for decades. As early as 1954, Manhattan District Attorney Frank Hogan reported that gangsters were threatening concrete suppliers with labor problems. John O'Rourke, president of Local 282 from 1931 to 1965, was closely associated with Lucchese family members Johnny Dio Dioguardi and Antonio "Tony Ducks" Corallo. From 1976 to 1984, Local 282's president was John Cody, one of the most powerful labor figures in New York City and a close associate of the Gam-

0709

bino crime family. An investigation revealed that Cody paid $200,000 a year to the family boss, Carlo Gambino. In 1982, Cody was convicted of operating Local 282 as a racketeering enterprise through extortion, kickbacks, and bribery.[7] Robert Sasso, the president following Cody, pled guilty to racketeering in 1994 as did Local 282 president Mike Boorgal.[8]

SITE PREPARATION

- Blasters and Drill Runners Local 29 of the Laborers Union was long controlled or influenced by a number of Lucchese crime family members. Secretary-treasurer Amadio Petito was convicted of perjury and contempt for refusing to testify before a grand jury investigating whether President Louis Sanzo had received illegal payoffs and whether Lucchese soldier Salvatore Cavalieri, who was not a union member, actually controlled Local 29 and shared payoffs with Sanzo. The government produced evidence that Sanzo considered Cavalieri to be his boss and that Cavalieri's son was administrator of Local 29's pension and welfare fund. Sanzo was convicted of tax evasion and conspiracy to defraud, based on payments he received as part of a money-laundering scheme involving mob-related construction companies.[9]
- Housewreckers Union Local 95 of the Laborers Union was controlled by Vincent "the Chin" Gigante, boss of the Genovese crime family. In 1984, Local 95 President Joseph Sherman, business manager Stephen McNair, and Secretary-Treasurer John "Pegleg" Roshetski were convicted of labor racketeering.[10]

CONCRETE

- There is a long history of Cosa Nostra involvement with Cement and Concrete Workers Local 6A of the Laborers Union. Until the late 1980s, Cosa Nostra controlled this local, as well as the District Council, through Ralph Scopo, a soldier in the Colombo crime family. Scopo resigned as president of the District Council in 1985 after he was indicted on federal racketeering charges (of which he was later convicted).[11] Scopo's sons Joseph and Ralph continued to be affiliated with both the District Council and Local 6A, with Joseph serving as president of Local 6A, until they resigned in 1987.[12] A court-appointed monitor was placed in charge of Local 6A and the District Council from 1987 to 1992.[13]

[162.10.217.184] Project MUSE (2026-06-15 01:41 GMT) University of Queensland

- For years, Laborers Local 66 was controlled by Peter "Jocko" Vario (nephew of Lucchese family capo Paul Vario), formerly a vice-president of the local, and a member of the Lucchese crime family. In December 1988, Peter Vario, Michael LaBarbara Jr., the business manager, and James Abbatiello, an assistant business manager, were charged with operating Local 66 as a criminal enterprise and sharing the proceeds of their racketeering with the boss and underboss of the Lucchese crime family. They were eventually convicted and resigned from their union positions.[14]

MASONRY

- Mason Tenders Local 23 of the Laborers Union was controlled, until his 1986 conviction for labor racketeering, by Louis Giardina, a former president of Local 23 and a member of the Gambino crime family.[15]
- Mason Tenders Local 59 of the Laborers Union was controlled by the Pagano faction of the Genovese crime family for many years. In an intercepted telephone conversation, the late Joseph Pagano (a Genovese family member), claimed that Local 59 had "belonged to his family for fifty years."[16]
- Peter A. Vario (cousin of Peter Vario, above),[17] a member of the Lucchese crime family and business manager of Mason Tenders Local 46 of the Laborers Union, was convicted in 1988 of labor racketeering and of taking labor-peace payoffs from contractors.[18] The same prosecution also led to the conviction of Basil Cervone, business manager of Mason Tenders Local 13 as well as an officer and union trustee of the trust funds.
- In 1994, the Mason Tenders District Council (MTDC) and several of its officers were charged in a civil RICO suit alleging that the MTDC was a corrupt enterprise that was closely associated with the Genovese, Lucchese, and Gambino crime families. For more than twenty years the MTDC allegedly had extorted payoffs, embezzled trust funds, engaged in kickback schemes with companies, and allowed constituent locals to do the same.[19] Its former president, Frank Lupo, admitted that Cosa Nostra used its control over hiring halls to handpick him for the "elected" presidential position that his father, a member of the Genovese crime family, and his grandfather had held before him. As president, Lupo's role included using union funds to buy real estate at

0711

highly inflated prices, presumably to profit Cosa Nostra.[20] In 1995, the parties entered into a consent decree to purge the union of Cosa Nostra and corrupt influences.[21]

CARPENTRY

- The New York City and Vicinity District Council of Carpenters has long been used by Cosa Nostra to control the city's drywall industry. Genovese family capo Vincent DiNapoli played a major role in orchestrating the District Council's racketeering schemes. Three recent presidents of the District Council, whose combined tenures span three decades, were charged with criminal activity in association with Cosa Nostra.[22] Government officials believe that members of the Genovese family have had direct control over the District Council's presidents. Theodore Maritas, president from 1977 to 1981, was presumed murdered after a labor-racketeering trial against him and other Cosa Nostra members ended in a hung jury. Paschal McGuinness, president from 1984 to 1991, was acquitted of criminal activity related to Cosa Nostra.[23] Frederick Devine, president from 1991 to 1996, was ousted by the international union for alleged mob ties, convicted in 1998 for stealing union funds, and sentenced to fifteen months in prison.[24]
- Many officials in Carpenters Locals 17, 135, 257, 531, 902, and 608 have been convicted for Cosa Nostra–related criminal activity.[25]
- Vincent DiNapoli, a multiply convicted Genovese family capo, along with several contractors, was responsible for creating Plasterers Local 530 as an alternative labor supply to the drywall-taping union.[26] Local 530 for years was run by Louis Moscatiello, a Genovese family associate. In 1989, Moscatiello was indicted for receiving bribes, enterprise corruption, and other offenses. In 1991, Moscatiello was convicted of receiving bribes and other offenses, though the enterprise-corruption charge was dismissed.[27]

PLUMBING

- Steam Fitters Local 638 of the Plumbers Union was, for years, represented by its business agent, George Daly, an associate of Gambino family boss Paul Castellano and soldier Thomas Bilotti. Daly served as Local 638's business agent until his 1987 conviction for soliciting payoffs to insure labor peace.[28]

0712

- Officials of Plumbers Local 2, the largest plumbing local in the nation, were charged with enterprise corruption and related crimes in 1993.[29] A former president and four former business agents pled guilty. Paul Martello was elected as business agent, despite the pending charges.[30]

PAINTING

- In 1990, present and former officials of the International Brotherhood of Painters and Allied Trades District Council 9 and its constituent locals were charged with enterprise corruption of the Painters Union from 1978 to 1990.[31] Several officials, including Paul Kamen, head of the District Council at the time, pled guilty. Kamen admitted that he was under the direct control of the Lucchese crime family.[32] Kamen's predecessor, Jimmy Bishop, who was president from 1973 to 1989, was allegedly handpicked by the Lucchese family as well. He was shot to death in 1990.[33]

WINDOWS

- In 1994, Thomas McGowan, an official in Local 580 of the Architectural and Ornamental Ironworkers Union, which was responsible for supplying window-replacement workers in the metropolitan area, was convicted for participating in labor payoffs.[34] Local 580 was also implicated as the engine behind a highly publicized bid-rigging scheme for window-replacement projects.[35]

Until the court-appointed trusteeships of the 1990s, once racketeers infiltrated and gained control of a union, it proved impossible to expel them. Corrupt officials of construction unions controlled election procedures, had the power to expel members for "improper conduct," and determined who worked at what jobs.* Additionally, union officials who served as trustees of various benefit funds could use these funds

*Because construction workers are usually hired by employers on short-term bases, the hiring hall was developed as a work-referral system to match unemployed union members with job vacancies. While theoretically efficient, the potential for abuse inherent in such official control is obvious; a member who wants to work must go along to get along. New York State Organized Crime Task Force, *Corruption and Racketeering in the New York City Construction Industry* (New York: New York University Press, 1990), 52 (citing and quoting Robert M. Bastress, "Application of a Constitutionally-Based Duty of Fair Representation to Union Hiring Halls," *West Virginia Law Review* 82 (fall 1987): 31, 36).

0713

to enhance their power as well as their lifestyles. Finally, the presence of so many known organized-crime figures in the industry made the explicit threat of violence credible and implicit threats usually sufficient.[36]

The national and international unions that charter the locals in the New York City construction industry either have been disinclined or unable to dislodge the racketeers. The U.S. Department of Labor has not aggressively dealt with complaints of corruption and racketeering. Likewise, the Landrum-Griffin Act, which was meant to ensure union democracy, has been narrowly interpreted and weakly enforced. Thus, for most of the twentieth century, the Mafia's influence in the New York City construction unions has been secure as well as pervasive.

TRADITIONAL CRIMES AND RACKETS

For many years, Cosa Nostra was so thoroughly entrenched in the New York City construction industry that, not surprisingly, its members engaged in all sorts of criminality and rackets related to the industry. For example, construction sites provide restricted areas obscured from public view, and Cosa Nostra members, with ready access through the unions, have regularly benefited from gambling and loan-sharking on such sites.[37] There has also been systematic theft and fraud of union benefit funds. Union officials often handpick the trustees of benefit funds that control hundreds of millions of dollars. Corrupt officials and trustees defraud the funds by accepting payoffs from employers who wish to avoid making mandatory benefit payments. They also steer contracts for benefit-plan services (for example, medical, dental and legal services) to companies controlled by fellow racketeers or to legitimate companies willing to pay kickbacks to obtain these lucrative contracts.[38] For example, Frederick Devine, the former president of the New York Carpenters District Council, dipped into his organization's assets (estimated at over $1 billion)[39] to pay for personal services such as chartered jets, limousines, and entertainment.[40] He also steered dental contracts to a New Jersey dentist in return for extensive personal dental services.[41]

Perhaps most important, Cosa Nostra's union control facilitated extortion and solicitation of bribes from contractors. With the credibility to threaten labor unrest and sabotage, racketeers extort payments from

0714

contractors for whom delay means disaster. In turn, contractors pass these extra costs on to consumers. While some contractors are victims of Cosa Nostra's threats, others are willing partners of a crime syndicate that assures smooth performance.[42] Similarly, with the power to choose not to enforce costly collective bargaining provisions (e.g., overtime pay, benefit-fund contributions, on-site union stewards), racketeers solicit bribes from unscrupulous contractors.

Domination of New York City's construction trade unions not only profited Cosa Nostra, it gave Cosa Nostra members and associates the political and economic influence that made this organized-crime syndicate unique. Union positions and positions with contracting firms provided tax covers and legitimate business fronts. For example, John Gotti was a plumbing salesman with ARC Plumbing Company, and Sammy "the Bull" Gravano was the president of JJS Construction Company.[43] "The ability to take a Cosa Nostra member and make him a union officer . . . gave a criminal caterpillar, you might say, the ability to become a very beautiful but dangerous butterfly. It gave him instant legitimacy, an unlimited expense account, legitimate income for income tax purposes, plus all the money he could steal from union dues, an entree into the business community and an entree to those aspiring for political office."[44] It is difficult to overstate the construction industry's importance to Cosa Nostra, both for power and profit.

COSA NOSTRA AND EMPLOYER CARTELS

Once Cosa Nostra established a power base in one of the construction unions, it was a small step to organizing and policing an employer cartel in the construction niche corresponding to that local union's jurisdiction. For example, control over the local whose members pour ready-mix concrete led to the establishment of a cartel of ready-mix concrete producers. Likewise, control over the local whose members put up dry wall in interior construction led to the establishment of a cartel of drywall contractors.

While cartels were reinforced by Cosa Nostra's control of employers through control of employer associations, and by mobsters who owned some of the cartel-affiliated companies, it was Cosa Nostra's union power that established and maintained these cartels.

0715

The Concrete Cartel

Concrete is the basic building block of the physical environment. Among other uses, it is required for the foundations and superstructure of high-rise buildings.* Concrete can account for as much as 25 percent of the cost of a high-rise building. In the late 1980s, between $300 to $500 million was spent annually on concrete in New York City construction.[45] Cosa Nostra dominated this entire subindustry for several years.

According to evidence presented at the "Genovese family" and "commission" trials,[46] Cosa Nostra controlled ready-mix concrete suppliers and contractors through its domination of Local 6A and the District Council of Cement and Concrete Workers, and of IBT Local 282.[47] The Colombo crime family dominated both Local 6A and the District Council. In 1977, Ralph Scopo, a prominent Colombo member, became president of the District Council. Teamsters Local 282 represented the drivers of cement-mixing trucks.[48] John O'Rourke, an associate of the Gambino family, was president of Local 282 from 1931 to 1965. From 1976 to 1984, the Gambino family controlled Local 282 through its associate John Cody. Some observers called Cody, during the years of his reign, the most powerful labor leader in New York City.[49]

Cosa Nostra monopolized the city's suppliers of ready-mix concrete through Genovese associate Edward "Biff" Halloran.[50] By 1981, Cosa Nostra families had helped Halloran obtain ownership and control, in whole or in significant part, of the three largest producers of ready-mix concrete in the metropolitan area, and the only companies with batching plants in Manhattan: Certified Concrete Company,

*Concrete is a mixture of sand, gravel, crushed stone, and other aggregates held together by cement, which bonds the aggregates when combined with water. Concrete hardens as a result of a chemical reaction between water and cement. There are two ways to use concrete. The first is ready-mix concrete. Ready-mix companies are suppliers and transporters of concrete. They purchase the aggregates and cement from local suppliers of those materials. When called upon by a concrete contractor, they combine the aggregates with the cement and water in ready-mix or "batching" plants, and then ship them out in their concrete-mixer trucks whose spinning drums retard setting. Local batching plants are a must, since the concrete will set in ninety minutes, even in the mixer trucks. The second type of concrete is precast concrete, which is precast by the supplier. See John Sedgwick, "Strong But Sensitive; Concrete Construction," *Atlantic,* April 1991, 70.

0716

Transit Mix Concrete Corp., and the Big Apple Concrete Company (which merged with Transit Mix). Cosa Nostra, through Halloran, controlled the entire New York City supply of ready-mix concrete. In return for the monopoly over concrete production, Halloran kicked back to Cosa Nostra's "commission" $3 per cubic yard of poured concrete.[51]

With power over both the product and labor, it was a simple step to control the contractors who poured concrete.* On all concrete-pouring contracts up to $2 million, the Colombo family exacted a 1 percent kickback. Contracts from $2 to $5 million could be performed only by members of a club of contractors selected by Cosa Nostra's Commission. These favored contractors were required to kick back 2 percent of the contract price to the "commission." Contracts worth more than $5 million were the exclusive province of S & A Concrete Company, in which Anthony "Fat Tony" Salerno (boss of the Genovese crime family) and Paul Castellano (boss of the Gambino family) allegedly held hidden interests.[52] Therefore, Cosa Nostra profited from the cartel both through kickbacks and ownership interests. Throughout the 1980s, concrete prices in New York City were 70 percent higher than in other major U.S. cities.[53]

Cosa Nostra figures, using Laborers Local 66 as a power base, organized a second concrete cartel on Long Island. This cartel paid off union officials to permit the contractors to operate double-breasted (i.e., partially nonunion) shops, avoid employment of union shop stewards, pay union workers below scale, and forgo employer contributions to the union benefit and welfare funds.[54] The cartel, organized by the Lucchese crime family through Local 66 vice-president Peter "Jocko" Vario, rigged bids and allocated contracts. In return for the benefits of membership, the cartel contractors paid 1 percent of the price of certain contracts to Vario.[55]

*Although Cosa Nostra did not have similar control over the supply of precast concrete, its use was limited in the metropolitan area. According to one builder, Sam LeFrak, the precast suppliers had some sort of arrangement with John Cody of Teamsters Local 282. In the $250 million Gateway Plaza apartment complex, LeFrak upset Cody and his associates by using precast concrete. Using Cosa Nostra's muscle in other construction areas, Cody convinced LeFrak to use ready-mix concrete. See Roy Rowan, "The Mafia's Bite of the Big Apple," *Fortune,* June 6, 1988, 128; Selwyn Raab, "Irregularities in Concrete Industry Inflate Building Costs, Experts Say," *New York Times,* April 26, 1981, A1.

0717

The Drywall Cartel

In the late 1970s, the FBI's Long Island Labor Racketeering and Extortion (LILREX) investigation uncovered a club of drywall contractors controlled by Vincent DiNapoli, a Genovese capo.[56] Drywall is used in numerous construction projects as a cheap replacement for plaster. In 1993, this subindustry accounted for more than $100 million in New York City construction contracts, most of which were awarded to club members.[57]

Unlike the concrete cartel, the drywall cartel apparently did not control the drywall manufacturers. However, Cosa Nostra controlled the Carpenters union, owned or controlled the majority of the city's drywall contractors, and ran the Metropolitan New York Dry Wall Contractors Association, the industry's major employers' association.

The club consisted of the twenty companies that were members of the Metropolitan New York Dry Wall Contractors Association. In the late '70s and early '80s, they obtained most of the public and private drywall contracts; only a handful of contractors controlled all the city's drywall contracts over $350,000.[58] In an intercepted conversation, Louis Moscatiello, a Genovese associate, explained that the Metropolitan New York Dry Wall Contractors Association had belonged to the Genovese family for forty-five years.[59] The LILREX investigation also discovered that DiNapoli and his associates profited not only from payoffs but also from ownership interests in Inner City Drywall Corporation and Cambridge Drywall and Carpentry Corporation, two of the largest drywall contractors at that time.[60]

The cartel was enforced by the New York City Carpenters union locals and their District Council. (Made up of an executive board and delegates from its constituent locals, the District Council negotiates, supervises, and delegates enforcement of collective bargaining agreements; it also authorizes picketing). The Genovese crime family had dominated the District Council since at least the 1970s, when Vincent DiNapoli and Peter Defeo, two Genovese family capos, exerted strong influence over Theodore Maritas, the District Council's president.[61] The Genovese family's control over the District Council was reinforced by its direct control over several union locals.[62]

DiNapoli used his labor power to form a club of dues-paying drywall contractors who allocated the majority of New York City's drywall

0718

jobs through bid-rigging schemes. Club members paid up to 2 percent of the contract price (which was often inflated to cover that cost) for each job that they were awarded through rigged bids. Contractors in which DiNapoli did not hold interests were charged an additional $1,000 per week in return for labor peace. For additional bribes, contractors could avoid certain provisions of the collective bargaining agreements.[63]

In March 1981, the Brooklyn Organized Crime Strike Force obtained a RICO indictment against Vincent DiNapoli, Theodore Maritas, and several others.[64] Shortly after the trial ended in a hung jury, Maritas "disappeared," presumed murdered to prevent him from cooperating with the government.[65] In April 1982, the other defendants, including DiNapoli, were convicted on guilty pleas.[66] While DiNapoli was serving his five-year prison term, other members of the Genovese family took over his labor racketeering and cartel management responsibilities.[67]

The two succeeding District Council presidents, Paschal McGuinness and Frederick Devine, were both charged with criminal activity associated with Cosa Nostra.[68] In 1996, the national union ousted Devine from office because of alleged mob ties, and in 1998 he was convicted of stealing from the union's benefit funds.[69]

The Window-Replacement Cartel

In 1991, the highly publicized "windows" case exposed another major cartel in the New York City construction industry. A federal prosecution revealed that senior members of four of the city's five Cosa Nostra families (the Bonanno family was not represented) formed a club of window-replacement companies that dominated the public sector of the industry from 1978 to 1990.[70] Over those twelve years, the New York City Housing Authority (NYCHA) alone granted $191 million in window-replacement contracts. The club rigged approximately $150 million of those contracts.[71]

The Lucchese crime family controlled Local 580 of the Architectural and Ornamental Ironworkers Union (Local 580), which was responsible for supplying window-replacement workers in the metropolitan area,[72] through two of the local's business agents.[73] Cosa Nostra used its influence and Local 580's power to extort payoffs, solicit bribes, and police the cartel.

0719

Federal prosecutors charged that Cosa Nostra had imposed a $1 to $2 per window charge on most public and some private window-replacement contracts in New York City. These proceeds lined the pockets of corrupt union officials, housing authority officials, and Cosa Nostra bosses. The window-installation companies rigged bids, enjoyed labor peace, and used nonunion labor.[74] Prosecutors in the windows case asserted that members of the club willingly cooperated because the cartel allowed them to pass along inflated prices to the NYCHA and private consumers.[75] Those who challenged the cartel encountered threats or acts of violence and labor problems.[76]

Peter Savino, a mobster-turned-informant, surreptitiously recorded hours of conversations about the cartel's operation.[77] At the trial he testified about the union's methods of policing the cartel. Competitors would be forced to employ union members at the highest rate, while club members were allowed to use nonunion members whom they paid low wages.[78] Moreover, the union (through its hiring hall) would assign the overcharged competitors low-quality workers.[79] Savino explained in court, "Thirty company workers could do 300 windows a day. If union men were used, thirty men could do only 50 windows a day. That would put a guy out of business."[80]

Cosa Nostra members also held ownership interests in some of the companies in the club, thereby benefiting from company profits, as well as payoffs and kickbacks. Savino testified that the Lucchese family provided him $500,000 to start Arista Windows, and that Local 580 then helped his company obtain contracts.[81]

Control, either by ownership or influence, of installation companies further hindered competition by creating additional entry barriers to the market. For example, when Graham Architectural Products, Inc. (Graham), a manufacturer and supplier of windows, tried to expand into the installation business, its customers threatened to seek other suppliers. Moreover, when Graham sought to escape Cosa Nostra's influence by seeking business from other installation companies, it found that they too were controlled by organized crime.[82]

For twelve years, Cosa Nostra reaped profits from its windows racket while consumers and taxpayers paid roughly a 10 percent Mafia tax on window-replacement contracts.

0720

Painting Cartel

In 1990, a joint investigation by the U.S. Department of Labor, the Manhattan District Attorney's Office, and the New York Police Department lead to state racketeering (OCCA) charges against Lucchese underboss Anthony "Gaspipe" Casso, Lucchese capo Peter "Big Pete" Chiodo, senior officials of Painters District Council 9 and several of its constituent locals, and two painting-company executives for rigging bids on all major painting contracts from 1978 to 1990.[83] Members of a club of painting contractors kicked back up to 10 percent of revenue from mob-allocated contracts in return for labor peace, and for sweetheart deals allowing them to violate collective bargaining agreements.[84]

Corrupt Painters Union officials enforced the Luccheses' domination of the subindustry. The Mafia's control over the union was illustrated by Jimmy Bishop's District Council 9 presidency and murder. In 1973, Bishop was elected council president with Cosa Nostra's backing. Sixteen years later he was forced to resign when the Luccheses' boss began to serve his hundred-year prison term. The faction that took over the Lucchese family wanted its own men running the union, and replaced Bishop with Paul Kamen.[85] Bishop was later shot to death, reportedly after agreeing to cooperate with the government.[86]

In 1991, Paul Kamen, president of the Painters District Council 9, along with eight other union officials, pled guilty to state enterprise corruption (OCCA) charges, confirming law enforcement charges that the union's executive leadership had been handpicked by the Lucchese crime family. In an intercepted conversation, Kamen described the mob tax:

> You shake somebody's hand, that's it by me. . . . You first got to get 5 to 10 percent, a little higher, then you got it made. That's all you have to do. I'm compassionate, 10 percent. It's not hard.[87]

For twelve years 10 percent of all major painting contracts, especially subway and steel painting contracts,[88] lined the pockets of corrupt officials and the Lucchese crime family.

0721

Racketeering in the Plumbing Industry

Ending in 1993, a four-year investigation by the Manhattan District Attorney's Office uncovered a widespread system of payoffs and bribes throughout the city's plumbing industry. Cosa Nostra, corrupt officials of Plumbers Local No. 2 (Local 2), plumbing inspectors, and more than twenty plumbing contractors were involved in a coordinated system of corrupt payoffs from 1983 to 1993.[89] Local 2's plumbers were involved in every major Manhattan and Bronx construction job over this period; their pervasive presence led to bid-rigging schemes, extortion, and bribery totaling more than $1 million, as well as millions in withheld benefit payments.[90] Louis Moscatiello Sr., a Genovese associate, was suspected of having organized this scheme. Louis Moscatiello Jr. (having taken over after his father's 1991 conviction for labor racketeering in the drywall subindustry), was indicted as a coordinator of the plumbing rackets.[91] Prosecutors alleged that the Moscatiellos and union officials created a "Local 2 Control Group" that used mob muscle and union power to run the plumbing rackets.[92]

For payoffs of up to thousands of dollars by each contractor, the mob-associated union officials offered labor peace and the opportunity to violate provisions of collective bargaining agreements. Contractors hired nonunion plumbers (for whom corrupt officials often provided false union-membership cards), avoided pension and welfare contributions, and evaded taxes.[93] Additionally, Cosa Nostra members held ownership interests in several of the plumbing companies. One major plumbing company, De-Con Mechanical, was so closely connected to the Mafia that it did not need to make payoffs to avoid burdensome collective bargaining contract provisions. At the same time, Local 2 officials hindered new companies' efforts to enter the market by selectively enforcing collective bargaining agreements against them.[94]

CONCLUSION

The Mafia has been active and influential in New York City's construction industry for fifty years. The organized-crime families controlled key union locals and district councils in many crafts and trades, such as the laborers, teamsters, carpenters, and mason tenders. Union power enabled them to set up employer cartels, like those in poured concrete,

0722

drywall, and window replacement. Cosa Nostra members, including bosses like Paul Castellano (Gambino), Sammy "The Bull" Gravano (Gambino), and Vincent DiNapoli (Genovese) also held ownership interests in contracting companies. The mob was able to place its members, associates, relatives, and friends in lucrative jobs or no-show positions. Union workers were controlled with threats and regularly cheated out of jobs, contractual benefits, and wages. Cosa Nostra members obtained social and political status as labor leaders, businessmen, and power brokers. Contractors adapted to and often benefited from the mob's presence. New York City taxpayers and citizens paid a hefty mob construction tax.

Conclusion to Part I

> Whether by violence or by effective mutual understanding, the stability of the market is highly desired in established businesses. . . . The gangster undertakes to effect by illegitimate means what is a normal tendency in legitimate business.[1]
>
> —Joseph Landesco, *Organized Crime in Chicago* (Chicago: University of Chicago Press, 1968; originally published in 1929)

> But the Mafioso, however he dresses and whatever he rides around in, is a gunbearing grisly who probably has [killed] and will kill on orders, and almost certainly is engaged in robbing innocent people of their money through force and fraud.
>
> —Johathan Kwitny, *Vicious Circles: The Mafia in the Marketplace* (New York: Norton, 1979)

THIS CHAPTER DRAWS some general observations from the case studies in chapters 2 through 7. We deal first with the light those chapters shed on the nature of Cosa Nostra as a crime syndicate, then on lessons that can be drawn concerning Cosa Nostra's industrial racketeering, and finally on implications for our understanding of the twentieth-century urban political economy.

CONFLICT AND COOPERATION

The image of Cosa Nostra as racked by interfamily conflict over territory and control of rackets does not conform with reality.[2] While there was significant gangland warfare in the 1930s and 1940s, after World War II the relationship among the five New York City Cosa Nostra fam-

0724

ilies was generally peaceful. In fact, our research has identified only a handful of incidents of interfamily violence. Moreover, no single sector of the economy was under the exclusive domain of one particular organized crime family; at least two crime families played a role in each of the industries we have examined.

Contrary to popular myth, the five New York Cosa Nostra families have an impressive record of cooperation with one another in industrial racketeering. How this was accomplished remains a question for future research. Perhaps industrial racketeering simply requires a great deal of cooperating, and crime syndicates heavily involved in industrial racketeering are first and foremost concerned with keeping business running smoothly. While there may or may not have been a functioning nationwide commission of Cosa Nostra families that developed in the aftermath of World War II,[3] there is no question that the Gambino, Genovese, Lucchese, and Colombo crime families participated in an interfamily council based in New York City. The Bonannos, at least for a time in the 1980s, were excluded from participation on the "commission," reputedly because of their extensive drug dealing and perhaps also because they had allowed their organization to be infiltrated by undercover FBI agent Joe Pistone (alias Donnie Brasco).[4] The four bosses held meetings to resolve disputes and coordinate racketeering activities. The concrete cartel, with its complex formula for sharing the spoils, is the best example of an interfamily cooperative enterprise.

ACCOUNTING FOR COSA NOSTRA'S SUCCESS

How were the Italian American organized-crime families able to attain so much power in the business world and what explains their extraordinary success, even more remarkable considering that Cosa Nostra bosses lack formal education in economics, accounting, law, labor relations, and other disciplines relevant to functioning successfully in business? Furthermore, to avoid detection, Cosa Nostra members had to run their operations without extensive bookkeeping and records and, starting in the late 1970s, increasingly without using the telephone. Moreover, seeking redress through the court system was not an option.

Part of the explanation for the mob's effectiveness in the business world lies in the advantages it reaped from its reputation for violence.[5] Although we have uncovered relatively few incidents of serious bodily

0725

harm exacted against legitimate businessmen, nonetheless, the threat of violence was omnipresent. The organized-crime families' reputation for ruthless violence guaranteed that individuals and firms would yield to their demands.

One striking example of Cosa Nostra's power to intimidate is provided by Peter Reuter's study of the New York City waste-hauling cartel. Reuter explains that in the two decades during which a Mafia member sat on the grievance committee of the New York Trade Waste Association, no carter ever refused to accept the committee's resolution of a dispute over "ownership" of a customer. According to Reuter, "The implied threat of force provide[d] the ultimate incentive to accept the committee's rulings."[6] Likewise, threats of violence deterred unhappy union members from contesting the mob's control of their unions and deterred would-be competitors from attempting to challenge the monopoly established by a club of mobbed-up companies. In effect, Cosa Nostra's capacity to enforce its will through violence is analogous to the government's power to call upon the police, courts, and prisons to enforce its edicts.

A second important Cosa Nostra asset was reliability, at least in comparison to other gangs and gangsters. Cosa Nostra protected its business partners against extortion and harassment by other less stable and less reliable criminals and opportunists. In Italy, Mafia members called themselves, and were known as, "men of honor." The self-image and reputation carried over to the United States. Businessmen knew or at least had reason to hope that with Cosa Nostra, a deal was a deal, notwithstanding the fact that there are many examples of cheating and double-crossing.

A third Cosa Nostra asset might be called "general business acumen." The Italian American organized-crime families held an entrepreneurial worldview and an aptitude for business. They operated according to the view that what is good for business generally is good for Cosa Nostra. Rather than *taking over* legitimate businesses, Cosa Nostra typically preferred to take a cut and provided a desirable service in return. To adopt an expression that is widely heard in studies of the Sicilian Mafia, Cosa Nostra's business strategy was "to wet its beak" (to take a cut) in as many different enterprises as possible. In general, the mob took a slice, not the whole pie.

The adjectives that best describe Cosa Nostra are *entrepreneurial, opportunistic,* and *adaptable*. Cosa Nostra bosses and members have a

0726

knack for finding ways to exploit market vulnerabilities and to satisfy business's desire for stability and predictability. The career of Gambino underboss Sammy "The Bull" Gravano provides an excellent example of the energy, imagination, and entrepreneurship that characterize the Italian American organized-crime families.

Sammy Gravano, a man with only a grade-school education, made millions of dollars in legitimate businesses. He was a consummate mobster-entrepreneur: energetic, imaginative, and resourceful. He advanced from small-time hustler to owner of nightclubs and plumbing, drywall, carpeting, and painting companies.[7] Ultimately, Gravano acquired interests in several parts of the construction industry: concrete pouring, asbestos, floor-inlay, and steel-erection companies.[8] His status in the mob enabled him to carry out contracts and guarantee labor peace to cooperative subcontractors, who repaid the favor with kickbacks ranging from $15,000 to $20,000 per contract. In 1989, he handed over close to $1.2 million in profits from rigged construction bids to Gambino family crime boss John Gotti.[9] Gravano, like many of the Cosa Nostra figures, kept seeking opportunities to make money in one business scheme and racket after another. He capitalized on his reputation as a Cosa Nostra member and on the network of connections that Cosa Nostra membership provided him. In addition, and like many of his underworld colleagues, his outgoing, even charismatic, personality was an asset in dealing with business people who apparently concluded that Gravano was no mobster, but an "underworld" figure who shared their passion for business.

COSA NOSTRA'S RESTRAINED AMBITIONS

After reading chapters 2 through 8, the reader may wonder why Cosa Nostra did not completely take over the garment, construction, and waste-hauling industries, the Fulton Fish Market, JFK Airport, and the Javits Convention Center. Since it had the power to determine which firms could participate in these industries, why did it not purge them of all non–Cosa Nostra participants? Had they so desired, the five organized-crime families could have owned all the waste-hauling firms in the carting industry, all the freight-forwarding firms at JFK Airport, and all the fish wholesalers at the Fulton Fish market. They could have used that control to take over supply companies and

0727

they could have continued growing and expanding like many national and multinational conglomerates.

With substantial discretion over prices, it is surprising that Cosa Nostra never priced products or services beyond what the market would bear. There are no examples of the mob's overreaching itself: prices were high but not so exorbitant that large numbers of customers refused to pay and sought alternative markets. Why, for example, did Cosa Nostra charge $12 a day to park at the Fulton Fish Market rather than two or three times that amount? Although poured concrete and commercial waste–hauling prices were the highest in the nation, they were stable and sustainable. In other words, Cosa Nostra did not appear to be searching for the highest price the market would bear or to be focused on maximizing profits. Higher concrete cartel prices would hardly have shut down high-rise construction, and higher carting rates almost certainly would not have triggered a revolt by businesses. Peter Reuter believes, based upon a sophisticated economic analysis, that the Mafia failed to take full advantage of its monopoly power in the New York City carting industry, a conclusion that appears equally true of other mobbed-up industries. It seems fair to say that Cosa Nostra has repeatedly refrained from fully exploiting its economic power.

The Italian organized-crime families did not have a plan or strategy for "taking over" entire industries. Unlike many "legitimate" companies, Cosa Nostra's goal was not to get larger and larger. Indeed, Cosa Nostra had no corporate or collective goal at all. Cosa Nostra should be thought of as a loose confederation of individual entrepreneurs and entrepreneurial cliques franchised and protected by the bosses at the top. Certainly, the mob was not aggressive about expanding its membership: those interested in joining the organization had to apprentice to become "made" members. Very few new members were initiated annually; sometimes the organization was closed to new membership for years. Furthermore, the recruitment pool remained closed to non–Italian Americans. All this leads to the conclusion that Cosa Nostra crime families did not function like a corporation.

While remaining a close-knit and in-bred organization may have maximized the chances of maintaining loyalty and secrecy, it also served as a check on expansion.[10] Cosa Nostra stayed with what it knew best: labor racketeering, labor-peace extortion, theft, and fraud. And, of course, the families also devoted substantial time and resources to illegal rackets and traditional crimes, thereby expending energy that might

0728

otherwise have gone into building up their power bases in legitimate industries.

Admittedly, there are counterexamples such as Thomas Gambino. A capo in the Gambino crime family, he devoted most of his time and energy to operating his four trucking companies, from which he amassed an estimated $100 million fortune.[11] And certainly, Cosa Nostra's absolute dominion over the concrete industry through a mob-owned and -operated cartel illustrates an extremely aggressive move to monopolize an entire sector of the economy. But these are the exceptions; the overwhelming majority of Cosa Nostra leaders seemed content to share "their" industries with legitimate businessmen.

INDUSTRIAL RACKETEERING

Part 1 documents the remarkable record of industrial racketeering accumulated by New York City's five Italian American organized-crime families during the twentieth century. While many readers may be surprised, even shocked, by the extent of mob involvement in New York City's core economy, this book is no exposé. Industry participants with eyes and ears open were well aware of the Mafia's importance on and behind the scenes. Public hearings and reports, magazine and newspaper accounts, and indictments made such information available to the general public. Among savvy New Yorkers and interested outsiders, it was common knowledge that, for example, the waterfront, Garment Center, and fish market were all under mob control. Our contribution is the big picture of Cosa Nostra's half century of industrial racketeering in New York City.

For much of the twentieth century, the Italian American organized-crime families were a powerful force in, and strongly influenced, indeed dominated, many of the key industries of the nation's largest city. By "influenced" and "dominated," we mean that Cosa Nostra wielded significant power in the unions and companies that constituted these industries by handpicking staff and exacting tribute through numerous rackets and schemes. Mobsters served as union officials or had substantive input into the appointment of such officials and greatly affected their decisions. Union business agents, shop stewards, and trustees of the pension and welfare funds generally owed their jobs to the mob. Cosa Nostra's influence made itself felt from top to bottom, so

0729

that many rank-and-file employees felt obligated to organized-crime figures for their jobs and other favors. Mafia members and associates determined who worked, who got paid to stay home, who got promoted, and who was blacklisted.

Chapters 2 through 7 each have a labor-racketeering component. Cosa Nostra has a long history of involvement in labor unions, a history that began during the 1920s and 1930s when management hired streetwise mobsters to break strikes.[12] Soon the unions were hiring Cosa Nostra members and associates to fight back against management goons. Once the mobsters got into the New York City area unions, they never left. They muscled or manipulated their way into leadership positions and solidified control through threats and favors. Union offices and good jobs were filled with Cosa Nostra members, relatives, associates, and friends. Friends and friends of friends got union cards; those who played along got preference for the best and easiest jobs and for appointments as business agents and shop stewards. Thus, it is not surprising that over time, the mob-sponsored officials came to dominate their unions. Until the civil RICO lawsuits of the late 1980s and early 1990s produced court-appointed monitors to purge organized crime from various unions, we know of no case in which a union that had been taken over by the Mafia was ever liberated.[13] Organized crime's control over a union local or district council provided the springboard for infiltrating legitimate businesses and establishing cartels. Holding office in union locals, district councils, and the parent international unions themselves provided Cosa Nostra members and associates with power and status. These individuals had ready access to politicians and a stock of jobs that could be allocated to members, associates, and friends.

Interestingly, certain mob-connected union officials seemed popular with union members. In fact, some court-appointed monitors found that the rank and file did not seem interested in democratic reform and even supported Cosa Nostra–designated candidates when given a chance to vote in free elections.[14] Some rank-and-file members were obliged to the mob through a patronage system. Others, no doubt, were captivated by the charisma of some organized-crime figures. The magnetic personalities of some mobsters with high-ranking union positions had a powerful effect on what Gambino family crime boss John Gotti called "our public."[15] Often men like Gotti were given the attention and

0730

deference normally reserved for movie stars and sports heroes, not simply in their own neighborhoods but also in the national media.[16]

Not everyone benefited from mob involvement. Among the losers were firms prevented from competing and consumers who paid higher prices for goods and services. The rank-and-file members of mobbed-up unions were also victims. Cosa Nostra deprived union members of their right to a democratic union and diverted the best jobs to Cosa Nostra members and their associates. Mob-affiliated union bigwigs sold out their underlings by signing sweetheart labor contracts with mob-friendly companies or, in exchange for bribes, by allowing those same companies to operate as nonunion shops or as double-breasted shops. For officials in mobbed-up unions, Cosa Nostra was the relevant constituency, not the membership. Corrupt union officials took bribes from employers and allowed them to escape their contractual obligation to make required payments to their workers' benefit and retirement funds. Like the proverbial fox in the henhouse, Cosa Nostra members and their associates sometimes sat on the board of benefit and welfare funds.

If a company refused to conform to Cosa Nostra's will and disobeyed its rules, it quickly found itself confounded by labor problems, bereft of reliable workers, or debilitated by sabotage. Inevitably, a rebellious company came to heel. A telling indicator of Cosa Nostra's power is the absence of violence in its dealing with legitimate industries. A constant need to resort to force would have indicated weakness, not strength.

Cosa Nostra as a Rationalizing Force

The mob's powers of intimidation, while impressive, were not the sole reason for the compliance of its upperworld business partners, who were hardly innocent victims. Rather, as sociologist Joseph Landesco insightfully pointed out in 1929, "[T]he racketeer does not always impose himself upon an industry or an association. He is often invited in because his services are welcome."[17] Indeed, something more than fear inspired legitimate businessmen to cooperate with the mob. Membership in Cosa Nostra–sponsored employer cartels had many attractive benefits. Provided that they kicked back a percentage of their profits to the mob, cartel members received protection against competitors

0731

and a de facto license to fix prices, allocate contracts, and treat their customers like property.

In its comprehensive study, the New York State Organized Crime Task Force concluded that Cosa Nostra played a "rationalizing role" in New York City's construction industry. The phrase accurately captures reality. In the industries examined in Part 1, the mob functioned like a quasi government by providing protection against competition, conflict resolution, policing, and escape hatches from onerous contractual obligations. Moreover, Cosa Nostra bosses functioned as "fixers" in bringing together disparate actors, brokering partnerships and deals, and guaranteeing that the parties would live up to their promises.

IS THERE SOMETHING UNIQUE ABOUT THESE INDUSTRIES?

Was Cosa Nostra's success in industrial racketeering facilitated by the organization and structure of the particular New York City industries it chose to infiltrate? In addressing this question, one has to be wary of the *post hoc ergo propter hoc* fallacy. That is, *first* selecting only industries known to be mobbed up, and *then* seeking out common traits among those industries to explain why they are mobbed up. A properly conducted study would rank various characteristics of a whole range of industries, some ruled by Cosa Nostra and others not, to see whether the two groups differ significantly on any of these selected characteristics. Even then, inferring causation would still be a problem because mob infiltration might cause certain industries to acquire certain common traits, rather than those common traits' being the cause of infiltration.

Still, on the surface, particular commonalities between mobbed-up industries are striking. Notably, timeliness is of critical importance in all the industries we have examined: garments must be delivered on time or there is no market for them; fish spoils; construction delays can bankrupt a developer. Thus, an actor with the power to impose a delay can extort money in exchange for refraining from exercising that power. But the significance of timeliness is open to question because almost every industry has some "time-is-of-the-essence" feature. Practically all manufacturers, for example, have to ship out their products on time or face the wrath or desertion of their buyers.

Furthermore, while timeliness is important, there is no reason to focus on it as the only variable that provides an opportunity for threat-

0732

ening a firm with costs or injury. There is potential power in being able to impose costs by whatever means—strikes, labor unrest, sabotage.

The New York State Organized Crime Task Force argued that mobbed-up industries are highly "susceptible" to racketeering, meaning that such industries possess a structure and organization that encourages industry participants to engage in racketeering, or that provides opportunities for industry outsiders to control or influence critical industry components. The OCTF also concluded that mobbed-up industries had a high degree of "racketeering potential." That is, large amounts of money could be readily siphoned out of these businesses by exploiting their susceptibility. Although this explanation seems to capture a certain truth, it is also tautological. Undoubtedly, the industries that organized crime successfully infiltrated had characteristics that made them vulnerable to infiltration. But although the OCTF did provide a compelling explanation of, for example, the construction industry's vulnerability to disruptions and delays throughout the building process, it failed to apply this rough conceptualization to a whole range of industries *before* determining whether all of those industries had experienced mob infiltration. Couldn't we construct a similar story to explain, after the fact, why any industry was vulnerable to being exploited by organized crime?

A second problem that arises in trying to explain why certain industries have fallen prey to organized-crime syndicates and other industries have not is a disquieting lack of certainty about which industries the mob does have a foothold in. We cannot be completely secure in an assertion that organized crime is not and has never been involved in a particular industry. As we have seen, organized crime has been present in a great number of New York City industries over the course of the twentieth century.

URBAN POLITICS AND ECONOMICS

Organized crime should not be an exclusively criminological topic but should be of great interest to economists, political scientists, and urbanologists. However, with some notable exceptions, urbanologists have not studied Cosa Nostra's role in shaping the economic, political, and physical environment of America's cities. The oversight is hard to understand. Mafia bosses were unquestionably part of the

0733

power elite in Buffalo, Chicago, New Orleans, Boston, Cleveland, Kansas City, Philadelphia, Las Vegas, Providence, and many other cities. Throughout the twentieth century, Mafia dons have mingled in business, labor, and political circles as the friends, advisers, and financial supporters of business executives, union leaders, and political party bosses. Their personal and professional connections to New York City's political and economic power brokers needs to be thoroughly documented.*

The link between organized crime and local politics was strongest in the 1940s and 1950s. For example, New York City organized-crime boss Frank Costello had close ties to Tammany Hall and functioned as a kind of political patron. New York City mayor William O'Dwyer was forced to resign from office in 1950, amidst allegations of personal ties to organized crime. His successor, Vincent Impellitteri, was also accused of having mob connections. However, according to New York City historian Robert Snyder, by "the middle of the 1960s the long-standing ties between organized crime and the city's political machine had been broken."[18] *Weakened* might be more accurate. Although, since the 1960s, there have been no allegations linking New York City mayors to organized crime, that hardly proves that the Mafia crime bosses have failed to exert influence over other city politicians and officials.

One striking example of the symbiotic relationship that existed between mobsters and politicians involved high-ranking Mafia figures Antonio Corallo and Daniel Motto and city official James Marcus, all of whom were indicted in 1967 for multiple criminal offenses arising out of the awarding of a million-dollar city contract.[19] Marcus had been appointed commissioner of the Water Department by Mayor John Lindsay in September 1966.[20] As commissioner, Marcus was responsible for allocating contracts related to the construction of water conduits or the rehabilitation of the water supply for the five boroughs.

*For example, any discussion of New York City's great public works projects of the mid-twentieth century is incomplete without extensive analysis of the role played by five crime families. Because Cosa Nostra controlled the construction unions, it is inconceivable that these massive building projects could have been completed without first obtaining, through financial inducement, the approval and cooperation of the mob bosses. Yet in Robert Caro's masterful Pulitzer Prize–winning biography of Robert Moses, who reigned supreme for decades as New York City's premier city planner, there is no mention of Cosa Nostra or organized crime. See Robert Caro, *The Powerbroker* (New York: Knopf, 1974).

0734

Deeply in debt because of poor stock investments and badly in need of cash, Marcus accepted bribes from Motto and Corallo; in exchange, he arranged for the million-dollar contract to clean up the Jerome Park Reservoir in the Bronx to be awarded to a mobbed-up construction company called S. T. Grand. Marcus awarded the contract in November 1966, just two months after his appointment as commissioner, in exchange for thousands of dollars in personal loans from Motto and a percentage of the contract price as a kickback.[21] Confronted with inculpatory conversations intercepted by electronic surveillances, Marcus resigned as commissioner.[22] Ultimately, he pled guilty to a lesser offense and served as a principal witness in the trial of Corallo, Motto, and Fried, all of whom were convicted of conspiracy to violate New York State bribery laws.[23]

The Marcus story is one of many examples of Mafia involvement in city politics. However, the connection between Cosa Nostra and New York City's political elite has never been thoroughly examined. In many U.S. cities, the Mafia has been active in politics by rallying neighborhood residents behind selected candidates and by funneling significant amounts of money and grassroots organizing into political campaigns. It is impossible to believe that the five families operated so openly for so long without at least an understanding with the city's political elite. The lack of any serious initiatives by city officials to attack organized crime, (other than sporadic and largely unsuccessful prosecutions by law enforcement), supports the hypothesis that for many politicians, Cosa Nostra was at least an acceptable fact of life. For some politicians, organized crime was more than that; it was a crucial ally.[24]

CONCLUSION

At least as applied to Cosa Nostra, the model of criminal syndicates as essentially suppliers of illegal goods and services, and investors or launderers of profits in legitimate business is inaccurate. Since the 1930s (after the repeal of National Prohibition), organized-crime groups in New York City have been heavily involved in industrial racketeering not as a sideline but as a core activity. Industrial racketeering must be seen as the defining characteristic of Cosa Nostra, what makes it unique among contemporary U.S. organized-crime groups. There are other criminal organizations that traffic in drugs, pornography, prostitution,

0735

and gambling and that engage in systematic thefts, but, since the 1950s no other criminal organization has controlled labor unions, organized employer cartels, operated as a rationalizing force in major industries, and functioned as a bridge between the upperworld and underworld.[25] To find an accurate parallel, one must look outside the United States to Mafia organizations in Italy, the Yakuza in Japan, and perhaps the so-called Russian Mafia in Russia.

In the 1920s and 1930s, there were very strong Jewish, Irish, and German organized-crime groups. There have been African American organized-crime groups throughout the twentieth century active in "numbers," prostitution, and other rackets, mainly in urban neighborhoods. As the twentieth century draws to a close, we see the emergence of a Russian Mafia, Chinese triads or "tongs," Colombian drug traffickers, and Jamaican posses, to name a few. Crime groups like these clearly have the capacity to mount sophisticated criminal operations and to utilize deadly violence when necessary to further their goals. Yet, Cosa Nostra stands apart. No other organized-crime group has shown anything resembling the business sophistication and acumen of the Italian American organized-crime families. No other group has demonstrated the ability to control labor unions, much less play the roles of peacekeeper, cartel enforcer, and "fixer" for entire industries. None has become a political force by underwriting campaigns and taking control of grassroots party organizations. Cosa Nostra is distinctive, even unique, because it has successfully penetrated labor unions to seize control of legitimate industries. The resulting economic power produced high social status and engendered respect, deference, and fear among businessmen and politicians, thereby ensuring that the Cosa Nostra families would wield significant influence in both the upper- and underworlds. The diverse and successful enterprises of Cosa Nostra, and its resulting power and prestige, justify treating this organized-crime syndicate as a criminological topic in its own right.

0736

PART II

THE LIBERATION OF NEW YORK CITY

Part 2 documents federal, state, and local law enforcement's and New York City government's extraordinary attack on Cosa Nostra's industrial racketeering that, by the end of the twentieth century, has ended or seriously threatened Cosa Nostra's influence and control in the industries we examined in Part 1. We tell the story as a tale of industry-by-industry liberation, thereby keeping the focus on New York City's economy. But the story could be told differently, for example, as the last (or perhaps penultimate) chapter in the history of Cosa Nostra or as a chapter in the history of federal, state, and local organized-crime control.

The battle to purge the Italian American organized-crime families from each industry occurred in the context of a campaign by the FBI and the U.S. Department of Justice, complemented and assisted by the efforts of state and local law enforcement agencies, to decimate the Italian American organized-crime families all around the United States. Up until approximately 1980, federal, state, and local organized-crime control initiatives had been sporadic and ineffective. Of course, there had been successes, like Thomas Dewey's prosecutions of Lepke Buchalter (murder), the only organized-crime figure ever to be executed, and

0737

Lucky Luciano (compulsory prostitution),[1] and the federal government's success in jailing Al Capone (income tax evasion).[2] Moreover, we have seen that powerful mobsters like Socks Lanza (fish market)[3] and Johnny Dioguardi (Teamsters and JFK Airport trucking)[4] were convicted and sentenced to long prison terms. Nevertheless, even these major prosecutions failed to disrupt Cosa Nostra's operations and power bases.

Organized crime flourished in the absence of serious opposition. Local police departments and prosecutors lacked the resources and tools to mount sustained investigations and prosecutions of powerful organized-crime figures and, in any event, individual prosecutions, or even series of individual prosecutions, did not disrupt the crime syndicate's operations.[5] Moreover, a symbiotic relationship between organized crime and the urban political machines insulated Cosa Nostra from sustained law enforcement investigations. That, at least, was the conclusion of the U.S. Senate's 1950–1951 Kefauver Committee, whose hearings revealed friendly relationships between organized-crime bosses and mayors, police chiefs, and politicians in many cities.[6] Perhaps just as important as outright political corruption was the view of honest law enforcement officials that organized-crime control was too expensive, too complex, and even too exotic to be given top priority.

Despite the Kefauver, McClellan (1957–1960),[7] and other congressional committees, FBI Director J. Edgar Hoover would not devote significant resources to organized-crime investigations; indeed, until well into the 1960s, he refused even to recognize the Mafia's existence. This egregious intransigence has never been satisfactorily explained: whether it was due to his desire not to divert the FBI's attention from what he considered "more important" targets, like the Communist Party, to prevent the FBI from being tainted by corruption, or perhaps to Cosa Nostra's compromising him in some way (as some have alleged), has never been established.[8]

The federal organized-crime control program evolved slowly from the early 1960s to full maturity in the mid-1980s. There were many important steps along the way. U.S. attorney general Robert Kennedy (1961–1964) revitalized the Organized Crime and Racketeering Section (OCRS) of the U.S. Department of Justice.[9] The Task Force on Organized Crime of the President's Commission on Crime and the Administration of Justice (1967) produced a frightening (indeed, exaggerated) report on the power and organization of organized crime.[10] In 1967, Congress es-

[162.10.217.184] Project MUSE (2026-06-15 01:41 GMT) University of Queensland

0738

tablished, independent of the U.S. attorneys, organized-crime strike forces that reported directly to the OCRS; ultimately, there was a federal organized-crime strike force in each of the cities where there was a major organized-crime presence.[11] The federal strike force in Brooklyn handled many of the cases highlighted in Part II of this book. The strike force in the Southern District of New York (Manhattan, Bronx, Westchester) was merged into the U.S. Attorney's Office in 1972. In 1989, all the organized-crime strike forces were disbanded and merged with the U.S. Attorney's Office in their jurisdictions.[12] The Brooklyn Organized Crime Strike Force became a unit within the U.S. Attorney's Office for the Eastern District of New York (Brooklyn, Queens, Long Island).

Although the FBI engaged in electronic eavesdropping on organized crime after the Appalachin Conference came to light in 1957, the legal status of such activity was ambiguous. The 1968 Omnibus Crime Control and Safe Streets Act[13] provided a standard and a procedure for legal electronic surveillance that, by the 1980s, enabled the FBI to spin a thick web of wiretaps and electronic bugs around the organized-crime families. The inculpatory conversations intercepted by this surveillance provided further leads and ultimately the most effective trial evidence.

In 1970, Congress passed the most important substantive anti–organized-crime statute in history, the Racketeer Influenced and Corrupt Organizations Act (RICO),[14] which, among other things, makes it a crime to acquire an interest in, to participate in the affairs of, or to invest the profits acquired from an enterprise through a pattern of racketeering activity. *A pattern of racketeering activity* is defined as any two federal or state crimes listed in the act that are committed within ten years of one another. *An enterprise* is defined as any individual, organization, or group of individuals legally constituted or associated in fact.[15]

RICO made it possible to bring to a single trial whole criminal groups and families—all those defendants who participated in the affairs of the same enterprise (e.g., a crime family or union local) through a pattern of criminal activity and ushered in an era of organized-crime "megatrials." RICO's penalties are draconian. In addition to twenty-year maxima for violation of both the substantive and conspiracy provisions, RICO also provides for huge fines and for mandatory forfeiture of the defendant's property that is traceable to the proceeds of racketeering activity.[16] Although it took a decade, and the persistent prodding of Professor G. Robert Blakey, the law's principal draftsperson, once the FBI and federal prosecutors began using RICO, and the U.S. Supreme

0739

Court had given a green light to use the law against wholly criminal enterprises, practically every significant organized-crime prosecution was brought under the statute. Rudolph Giuliani, the U.S. attorney for the Southern District of New York in the mid-1980s, brought a RICO suit against the bosses of all the families, alleging that they had participated in the affairs of an organized-crime commission through a pattern of racketeering activity (the "commission case,"[17] probably the most famous and important organized-crime prosecution in U.S. history). The two U.S. attorneys in New York City brought separate RICO prosecutions against the leaders of each of the New York crime families (the so-called family RICO prosecutions).[18]

RICO also contains two civil remedial provisions. The one that gives private victims the right to sue racketeers for triple damages[19] has not been used against organized-crime families or members. However, the provision authorizing the government to sue racketeers for injunctions, restraining orders, and other equitable remedies to prevent further racketeering[20] has been used a great deal, providing the government a powerful tool for purging organized crime from labor unions and industries.

In 1970, Congress also created the Witness Security Program,[21] (popularly known as the Witness Protection Program) which gave prosecutors the opportunity to offer cooperating witnesses a new identity and a new life; for the first time, it became possible for one to testify against organized-crime colleagues and survive. J. Edgar Hoover died in 1972, thereby removing an insurmountable obstacle to an all-out assault on organized crime. The way was clear for new leadership to reorganize and reorient the FBI.

The first half of the 1970s did not see major progress against Cosa Nostra. Following the view of the 1967 Task Force on Organized Crime, the FBI's main organized-crime focus was gambling. But the antigambling program was diffuse and unsystematic; it landed many small-time criminals and many defendants unconnected to the Cosa Nostra families. Consequently, it failed to make a persuasive case for the importance of attacking organized crime. Some U.S. attorneys, juries, and federal judges bridled at the prosecution of defendants who appeared to be nondangerous gamblers.[22]

In the late 1970s, after the disappearance and presumed murder of former Teamsters leader Jimmy Hoffa, the FBI shifted its focus to organized crime's labor racketeering. The labor-racketeering investigations of the Teamsters and Longshoremen's unions led to much greater

0740

and more sophisticated intelligence about the operations of the Cosa Nostra crime families. And mounting exposes of Cosa Nostra's control of major unions and industries touched a responsive chord in the media and in Congress.

The FBI offices, especially the New York office, made organized-crime control a top priority and reorganized so that separate squads were assigned to each organized-crime family; each squad's mission was to identify the family's membership, table of organization, and rackets and then to come up with a plan for bringing down the entire family. By the early 1980s, there were some three hundred FBI agents, assisted by one hundred New York City Police Department detectives and officers, working on the organized-crime investigations in New York City alone. The chief investigative tool was electronic surveillance. The FBI became adept at establishing the probable cause necessary for obtaining judicial warrants to conduct electronic surveillance by means of telephone wiretaps and tiny microphones ("bugs"). Extremely productive bugs were placed in the homes, social clubs, and cars of many of Cosa Nostra's top leaders. These bugs allowed the agents to listen to and record details of labor racketeering, loan-sharking, cartel enforcement, crime-family politics, and diverse criminal schemes. In subsequent trials the mobsters could be inculpated by their own words.[23]

The federal organized-crime control program was supplemented and often assisted by state and local law enforcement agencies. The New York State Organized Crime Task Force (OCTF), under the leadership of Ronald Goldstock, made an enormous contribution by reconceptualizing organized-crime investigation along the lines suggested by Blakey. OCTF personnel were responsible for the famous "car bug" that for months allowed agents to listen in on the incriminating conversations of Tony "Ducks" Corallo, the Lucchese crime family boss and for the bug on John Gotti's social club.[24] The Manhattan District Attorney's Office played the lead role in several of the major investigations and prosecutions detailed in Part 2.

Cosa Nostra's much-vaunted omerta (code of silence) melted down under the government's relentless campaign. Until Joseph Valachi went public in 1963,[25] there had never been a Cosa Nostra defector willing to testify about the organization. In the late 1980s and 1990s many high-ranking organized-crime figures were cooperating with federal, state, and local prosecutors in exchange for leniency and placement in the Witness Security Program.[26]

0741

The final piece of this contemporary organized-crime control effort was put into place by Rudolph Giuliani's mayoral administration. As mayor, Giuliani continued his attack on the Cosa Nostra crime families, now utilizing the city's regulatory authority over businesses and industries. The administration's goal was to require firms in mob-tainted industries to obtain business licenses and to deny such licenses to Cosa Nostra members, associates, and friends.

0742

9

Liberating the Garment District

> You can't manufacture anything in New York without using trucks. If you control the trucks you control the industry, and [the Gambino brothers] control the trucks. And their partner is organized crime. They control what factories in the garment industry use what trucks, which destroys competition and destroys freedom to choose. . . . [The defendants] levy a tax that flows through the pockets of Thomas Gambino and Joseph Gambino [who are] known in the industry as members of the Gambino crime family.[1]
>
> —Assistant District Attorney Elliot Spitzer,*
> opening statement in *People v. Gambino,* 1992.

COSA NOSTRA WAS entrenched in the New York City garment industry since the 1920s. The mob was able to establish and police a trucking cartel by controlling the Master Truckmen of America, the International Ladies Garment Workers Union Local 102, and the Greater Blouse, Skirt, and Undergarment Association. The cartel consisted of trucking companies owned or controlled by members of Cosa Nostra families. Through the property-rights system and fixed prices, cartel members derived enormous profits. Prior to the 1990s, government efforts to purge the mob from the garment industry had failed to make much of an impression.

The Department of Justice's 1951 antitrust suit resulted in a favorable consent decree but not in any change in business as usual.[2] In the late 1950s, the New York City commissioner of licenses' successful debarment of Barton Trucking from the industry could have led the way to a major attack on the Cosa Nostra cartel, but no subsequent action was

*Spitzer was elected New York State attorney general in 1998.

0743

taken.[3] Project Cleveland, the joint federal-city investigation during the mid-1970s produced several convictions, but again there was no significant impact on the property rights, the cartel, or Cosa Nostra's influence.[4]

The breakthrough came in the 1990s. The Manhattan District Attorney's Office brought a major criminal case against Thomas and Joseph Gambino, by far the most important Cosa Nostra figures in the garment industry. The trial ended in a remarkable plea bargain that went a long way towards removing the Gambino brothers from the industry and established a court-appointed special master whose efforts to eliminate the trucking cartel appear to have been successful.

THE CHRYSTIE STREET FASHIONS AND LOK-KEY STING

In the late 1980s, Thomas Gambino, a capo in the Gambino crime family, and his brother Joseph were at the height of their power in New York City's garment trade.[5] They owned several garment-trucking firms, including Consolidated Carriers and Greenberg's Express, and held many other interests in the industry. Thomas Gambino's personal wealth was approximately $100 million.[6]

In August 1988, the Manhattan District Attorney's Office initiated two undercover sting operations.[7] The goal was to build a criminal case against the Gambinos and purge the garment industry of racketeering.[8] The DA's office set up a sewing shop in Chinatown. To all appearances, its Chrystie Street Fashions was not different from many other Chinatown contractors.[9] Approximately twenty-five women worked at sewing machines throughout the day, making skirts and blue jeans; they had no idea that their supervisor, Ron Rivera, was a New York State Police officer (no New York City detectives were used for fear that they might be recognized).[10] During Chrystie Street Fashions' one-year existence,[11] law enforcement officials secretly recorded numerous conversations between Rivera and Consolidated Carriers "salesmen" who advised Rivera that Chrystie was a Consolidated shop and that Rivera could therefore not hire any other trucking firm.[12]

The second sting operation involved Lok-Key Transportation, a small trucking company ostensibly headed by David Chan, who was really New York State Police detective Kim Lee. While police videotaped the scene, Lee visited Chrystie Street Fashions when Consolidated salesmen were present and offered his own trucking services to

0744

Rivera; this was a direct challenge to the cartel. Consolidated's salesmen informed Lee that Chrystie was a "Consolidated shop" that Lok-Key could not service.[13]

In addition to these operations, police officers obtained court authorization to install listening devices at Consolidated Carriers' headquarters, including the offices of Joseph and Thomas Gambino.[14] On January 30, 1990, after the bugs revealed enough information to support a search warrant, law enforcement agents seized financial records from ten Garment District trucking firms.[15]

INDICTMENTS OF THE GAMBINO BROTHERS

In October 1990, a fifty-five-count indictment charged the Gambino brothers, two of their employees, and four of their trucking companies with racketeering, under New York's Organized Crime Control Act (OCCA). The OCCA charge alleged that the four men and four companies constituted a wide-ranging conspiratorial scheme that, through at least twenty acts of extortion, prevented garment firms from choosing their own truckers.[16] The indictment also alleged that the defendants violated New York State's antitrust law (the Donnelly Act) by allocating customers and territory.[17] A second indictment charged three Gambino associates and six trucking companies with conspiring to restrain trade by forging an illegal combination with the Gambinos.[18] In announcing these indictments, New York City District Attorney Robert Morgenthau asserted that the defendants had imposed a mob tax on every garment shipped in New York City, reaping tens of millions of dollars in illicit profits, ultimately funded by consumers. Prosecutors contended that the ten trucking companies named in the two indictments handled about 90 percent of the garment industry's trucking routes.[19] Thus, the DA's office hoped that by convicting the defendants and seizing their businesses, it could break up the cartel and the marriage system, eliminate Cosa Nostra's presence in garment trucking, and stimulate competition among trucking companies.

In April 1991, the seven individual defendants and ten trucking companies in *People v. Gambino* sought dismissal of the state-racketeering charge on the ground that the terms "criminal enterprise" and "pattern of racketeering activity" were unconstitutionally vague. Justice Herbert Altman upheld the OCCA, finding that the statute provided

0745

fair notice to the defendants that their alleged conduct was prohibited.[20] The defendants also argued that the grand larceny and extortion counts of the OCCA charges could not stand because the right to choose a trucker was not "*property*" protected under New York State law. Justice Altman rejected that argument as well, holding that when an "advantageous business relationship [i]s denied as the result of extortionate acts," the right to create and maintain that relationship constitutes legally protected property.[21] After Justice Altman cleared away these and other arguments, the district attorney was free to proceed to trial.

THE TRIAL OF THOMAS AND JOSEPH GAMBINO

The Gambino brothers' state court trial began on February 4, 1992; John DiSalvo and Raymond Buccafusco were tried as codefendants. From the outset, both the prosecution and defense clashed over whether there was sufficient evidence to establish extortion. In his opening statement, Assistant District Attorney Elliot Spitzer told the jury that "[e]verbody in the Garment district" knew who the Gambinos were and that the defendants "used their reputations as the Gambino crime family as a tool of fear—and they took it to the bank." Spitzer explained that when the Gambino name was not enough, "and when somebody stepped out of line, the velvet gloves came off, somebody was sent to the hospital for six months." In his opening statement, Thomas Gambino's lawyer ridiculed the allegation that his client had ever used threats in operating his garment-trucking businesses. "You will not find any baseball bats. You won't find any broken bodies. This is simply a business case, no matter the names and nasty things [the prosecutors] call Tommy Gambino."[22]

The first prosecution witness was the manager of a dress company who testified that when he was in the shop of a contractor who did not want to use Gambino trucks, several imposing men in trench coats suddenly appeared, silently intimidating the contractor. According to the witness, the message the Gambinos conveyed was that "you don't mess around with Consolidated," and that "you have to accept their control —you have to play the game."[23] At most this incident proved an *implied threat,* and only an indirect link to the Gambinos themselves.

To prove the nature and scope of the marriage system, prosecutors called officer Ron Rivera, who recounted how a Consolidated salesman told Lok-Key's Kim Lee that Chrystie Street Fashions was "a Consoli-

0746

dated shop" and that Lee should look for work in Long Island City. A videotaped recording showed another Consolidated salesman telling Lee that "if I find [another trucker] here I try to get them out." When Lee asked if the contractor had the right to choose its own trucker, the salesman replied, "No they don't. It's like a franchised shop." Rivera explained how Consolidated helped steer him work from designers. However, when he tried to obtain the services of another trucker, he was told that he could not obtain its services; he had no choice but to stay with Consolidated.[24]

The defense lawyers hammered away at any suggestion that the Gambinos used violence or extortion. Defense lawyer Gerald Shargel forced a former Consolidated salesman testifying for the prosecution to admit that he had never physically threatened contractors, and that if a contractor were to ship with a non-Gambino company, the salesman would threaten only to stop finding business for that contractor.[25]

In sixty thousand recorded conversations, there were few actual threats of physical violence, which were essential to the extortion charges. The closest the prosecution came was a statement by a Consolidated employee discussing the activities of Lok-Key trucker Kim Lee. The employee stated: "I don't want to say he's gonna get his ass kicked, but he will, sooner or later. One of the fucking truckers will take him apart. He'll be spending the next six months in the fucking hospital."[26] After three weeks of testimony, no direct threats had been linked directly to the Gambinos. The *New York Times* reported that "there has been no mention of any mob murders. In fact, the evidence shows that Thomas and Joseph Gambino . . . were ever so polite in making sure they did not encroach on truckers controlled by rival organized-crime families."[27]

THE PLEA BARGAIN

On February 26, 1992, Thomas and Joseph Gambino along with their two codefendants joined three other defendants in the second indictment in agreeing to a novel plea bargain. The Gambinos pled guilty to a single felony antitrust count;[28] in exchange the prosecutors dropped the remaining fifty-four charges.[29]

The Gambinos agreed to stop enforcing the marriage system immediately, to quit the trucking business by selling their major trucking

0747

concerns under court supervision, to grant the court and a "special master" jurisdiction over their trucking companies, and to have no contact with their soon-to-be former companies.[30] Further, the Gambinos agreed to pay a $12 million fine to the state, which would be earmarked for victims of Gambino-trucking overcharges, the cost of the court-appointed special master, and the costs of the government's investigation and prosecution.[31]

The prosecutors thought the agreement made sense in light of uncertainties in their case. As prosecutor Michael Cherkasky explained: "We knew we had them *legally* cold on the antitrust counts . . . [but] our extortion case was *very, very* weak to begin with, and was only getting worse at trial." Cherkasky feared that a "runaway jury" might not convict the defendants on the antitrust charge if it decided to acquit on the more serious extortion charges.

The prosecutors decided to trade off the possibility of impressive prison sentences against the Gambinos* for the opportunity to conduct industry-wide remediation through a special master. District Attorney Morgenthau argued that although his office had given up on a jail term for the Gambinos, it had accomplished what prosecutors all the way back to Thomas Dewey had not. Referring to Cosa Nostra's role in the in the Garment District, Morgenthau stated, "[T]his takes them out in one fell swoop." According to Ronald Goldstock, director of New York State's Organized Crime Task Force, "It's a terrific settlement. . . . Certainly the public is better off with the garment industry taken from the hands of racketeers than with a person sent to prison."[32]

THE SPECIAL MASTER'S REMEDIAL EFFORT

In April 1992, Justice Thomas Galligan appointed former New York City Police Commissioner Robert McGuire, CEO of Kroll Associates, to serve as the special master called for in the plea agreement. The special master's role was to oversee the Gambinos' sale of their trucking inter-

*Thomas Gambino was unable to avoid prison time as a result of his 1993 convictions on various racketeering, gambling, and loan-sharking charges in connection with running Gambino crime family operations in Connecticut. He was sentenced to five years. See *United States v. Gambino,* 835 F. Supp. 74, (E.D.N.Y. 1993)(motion for new trial); Pete Bowles, "Goodfella Did Good; Still Gets Slammer," *Newsday,* October 30, 1993.

0748

ests and their withdrawal from the industry.* McGuire was authorized to "issue such orders and rules as he deems reasonable and appropriate to eliminate anti-competitive practices and encourage competition" in cut-work trucking.[33] He hired a team of lawyers, accountants, and former law enforcement officers to assist in carrying out the remedial effort.

Under the terms of the plea bargain, the special master was to oversee the sale of Gambino-owned trucking companies, shipping contracts, account lists, and routes.[34] While the Gambinos' attorneys had the authority to negotiate terms of the sales and financing with prospective buyers, these were subject to McGuire's final approval. McGuire made it clear that the Gambinos would not be allowed to sell their interests to family members, friends, or to any company with ties to Cosa Nostra. His team subjected prospective buyers to a twenty-page questionnaire and reserved the right to have forensic accountants look at their financial records.[35]

The defendants' trucking interests were eventually sold to four different trucking companies in the summer of 1993,[36] after the deadline had been extended to conduct final background investigations of the buyers.[37] The special master's office then monitored the operations and ownership of each of these successor companies, as well as the remaining trucking companies named in the original indictment. By conducting quarterly audits, McGuire's staff sought to ensure that organized crime did not reenter the industry and that the successor firms did not employ the same anticompetitive tactics as the Gambinos.[38]

The special master also established a compensation fund for victims of the trucking cartel. From the Gambinos' $12 million fine, $3 million was set aside to compensate those who had been overcharged by the defendant trucking companies. McGuire placed advertisements in the trade magazine, *Women's Wear Daily,* and in three Chinese-language newspapers,[39] aimed at designers and contractors who had been victimized by the marriage system. Despite the longevity of the cartel, there were few claimants. Only $800,000 was paid out. The remaining $2.2 million reverted to the state of New York.[40] Perhaps contractors

*The Gambinos were divested of their interests only in companies that had violated antitrust laws. They still maintained ownership of Dynamic Trucking, an interstate trucking company that accounted for $57.6 million of revenue and $4.2 million profit. See Gay Jervey, "Waltzing with the Wise Guys," *American Lawyer,* May 1992, 90.

0749

who had overpaid for garment trucking were no longer in business, or did not notice the advertisements,[41] did not have the necessary records to verify their claims, or were reluctant to get involved.

McGuire sought to stimulate competition in the garment-trucking industry.[42] New rules for the trucking of cut-work between designers and contractors prohibited trucking companies from (1) entering into agreements with other firms to fix rates or terms; (2) trading customer lists or the rights to customers, except in the sale of an entire trucking firm; and (3) establishing an exclusive relationship whereby a contractor or designer agrees to deal with only one trucking firm. The rules further required that trucking invoices include a written notice stating the rate, and that the relationship between the trucker and the designer or contractor not be exclusive. Finally, in an attempt to end loan-sharking, McGuire required that loans by trucking companies in excess of $250 had to be approved by his office. Justice Thomas Galligan approved these rules, along with other monitoring and enforcement provisions.[43]

The special master's office established a monitoring program for both Seventh Avenue designers and Chinatown contractors; the primary focus was on the latter. Meetings were held in Chinatown, and more than five hundred contractors and manufacturers were interviewed on a continuing basis. The manager or owner was given the "Know Your Trucking Rights" flyer (in English and Chinese) describing the special master's rules, emphasizing the fair-trade practices that now governed garment trucking, and providing a toll-free number to report violations.[44] A former FBI agent and six full-time field investigators monitored compliance on a daily basis. The investigators met with the owners of each shop and asked whether they had encountered trucking company problems. They discovered a number of violations by truckers and apparent attempts to evade the new rules. When violations were discovered, Special Master McGuire imposed the costs of the investigation on the violators. At the same time, McGuire persuaded other trucking companies to submit voluntarily to the special master's jurisdiction.[45]

When his special master's term ended in February 1997, Robert McGuire was optimistic about the future of the industry. He stated that "once the chains [of Cosa Nostra control] are unraveled as they have been, I doubt they will become entwined again."[46]

0750

RECENT ALLEGATIONS OF COSA NOSTRA INFLUENCE IN THE GARMENT TRADE

While driving the Gambinos out of the garment industry was a significant step in eradicating organized crime from the industry, other mobsters continued to engage in illegal activity in the Garment District. McGuire and his chief investigator reported to the U.S. Attorney's Office and the FBI information they had uncovered while serving in their court-appointed positions but had been unable to pursue due to jurisdictional limitations.[47] A joint investigation involving the U.S Attorney's Office for the Southern District of New York, the Division of Labor Racketeering of the U.S. Labor Department's Office of the Inspector General, the FBI, and the New York City Police Department was then launched.[48] On April 28, 1998, the U.S. Attorney's Office obtained two indictments against twelve individuals for extorting garment companies. Seven men, including Joseph "Little Joe" DeFede, the acting boss of the Lucchese crime family, were indicted on nine racketeering and seven extortion counts stemming from a scheme that extorted upwards of $480,000 annually from garment businesses.[49] This indictment alleged that the defendants had established extortionate control over various Garment District businesses by

- identifying members of said enterprise as associates and members of Cosa Nostra or the Mafia;
- threatening labor unrest;
- threatening and causing economic harm;
- using and threatening physical violence; and
- obstructing law enforcement investigations by tampering with potential witnesses.[50]

The first indictment named attorney Irwin Schlacter as an associate of the Lucchese family and alleged that he collected extortion payments from Garment District companies on behalf of the Luccheses.[51] In a wiretapped conversation, Schlacter told a trucker that he would suffer the same fate as Mike Pappadio, a former Lucchese associate who was murdered for skimming extortion payments.[52] Although the indictment alleged the enterprise's ability to "disrupt labor peace and . . . control . . . labor unions,"[53] no specific union was implicated.

0751

However, it is possible that UNITE* Local 102 played a role since it is the primary union operating in New York City's garment industry.[54]

Michael Vuolo was also named as a defendant in the racketeering and extortion indictment. He had pled guilty to criminal solicitation as part of the Gambinos' 1992 plea bargain but had been allowed to retain his garment-trucking company. Vuolo's interest in AAA Garment Delivery and its assets are subject to RICO's forfeiture provisions.[55] All told, the government sought $2.5 million from the defendants, allegedly the proceeds obtained through illegal racketeering activity.[56]

The second indictment charged five members and associates of the Gambino and Lucchese families, including Gambino capo Joseph ("the Kid") Gallo** and Joseph Gatto, a Genovese capo, with extorting Hudson Piece Dye and its affiliate companies.[57]

WILL THE GARMENT DISTRICT EVER BE FREED?

As this book goes to press in early 1999, the trucking cartel seems to be broken. The Gambinos' plea bargain and the special-master's work, freeing designers and contractors from the marriage system and stimulating competition among new independent truckers, constitute extremely significant steps toward purging Cosa Nostra from the Garment District. New truckers are competing for work. More than seventy-five independent trucking firms have entered the garment industry.[58] Prices have declined. By the mid-1990s, the special-master's office estimated that trucking costs had dropped approximately 20 percent. The cost of shipping a pair of jeans had dropped from 40 to 45 cents to 15 to 20 cents. According to Special Master McGuire, "For the first time in decades, customers are shopping for truckers and willing to move if they don't get the right price or good service."[59] *Women's*

*UNITE (Union of Needletrades, Industrial and Textile Employees) was formed in 1995 when the International Ladies Garment Workers Union (ILGWU) merged with the Amalgamated Clothing and Textile Workers Union (ACTWU). See Arthur Friedman, "UNITE Ratified Unanimously," *Women's Wear Daily*, June 29, 1995, 9.

**Gallo's father, Joe N. Gallo, a former Gambino family consigliere, was cited in New York State Senator Franz Leichter's 1982 report as the de facto head of the Greater Blouse, Skirt, and Undergarment Association, through which Cosa Nostra diverted huge amounts of money. Franz Leichter, "Sweatshops to Shakedowns: Organized Crime in New York's Garment Industry" (unpublished, March 1982), pt. 3 38–40.

0752

Wear Daily reported that garment contractors and designers feel a distinct change in the industry, and are no longer married to any trucker or subject to billing for trips that were never made.[60]

Still the battle against Cosa Nostra continues. Although no Cosa Nostra figures have arisen to take the place of Thomas and Joseph Gambino, organized crime still is a presence in the garment industry. Following the latest indictments, New York City Police Commissioner Howard Safir commented, "I don't think anybody . . . is declaring victory."[61] The latest round of indictments show that Cosa Nostra still has enough influence to force businesses to pay extortionate demands, but it also shows law enforcement's perseverance. Robert McGuire urges "vigorous investigation of organized crime's tie to the industry into the indefinite future."[62] If his advice is followed, there is an excellent prospect that the garment industry eventually will be fully liberated.

Freeing the Fulton Fish Market

> The [New York City] Council hereby finds that the Fulton Fish Market, the center of New York's wholesale seafood industry located in lower Manhattan, has for decades been corruptly influenced by organized crime. . . . The council further finds that despite the repeated efforts of law enforcement to prosecute crimes there and the presence of a court-appointed administrator for the Market, the problem of organized crime corruption in the Market has persisted. . . . The council therefore finds that . . . it is necessary for the commissioner of business services to have expanded authority to license and/or register businesses in the Market area and to regulate the conduct of such businesses.[1]
>
> —Legislative findings to Local Law 50, 1995.

COSA NOSTRA HAS been entrenched at the Fulton Fish Market since the 1920s. Through its control of Local 359 of the United Seafood Workers, Smoked Fish and Cannery Union, the Genovese family ran a protection racket and forced wholesalers to rent union signs and contribute to a Christmas fund. Some members of the Genovese and Bonanno crime families owned unloading and loading companies that operated as cartels that limited competition and fixed prices. Although the market is located on city property, loading companies paid nominal rent, if any, and profited from parking fees. The Department of Ports and Trade which had regulatory responsibility for the market, made no serious effort to attack the mob's interests. The incarceration of mob czars Joseph "Socks" Lanza and his successor, Carmine Romano, had no impact on organized crime's domination.

In the late 1980s, the U.S. Attorney's Office for the Southern District of New York filed a pathbreaking civil racketeering suit that resulted in the entire market's being subjected to the supervision of a court-appointed market administrator. The administrator had only limited suc-

0754

cess in purging organized crime, but upon the completion of the administrator's term, the city established a comprehensive and aggressive regulatory regime that has achieved impressive results.

OPERATION SEA PROBE AND *UNITED STATES V. LOCAL 359*

In late 1984, a joint task force, made up of twelve FBI agents and twelve NYPD officers, launched Operation Sea Probe,[2] an investigation of the Fulton Fish Market that involved hundreds of hours of undercover operations and extensive electronic surveillance.[3] The investigators followed market racketeers to Brooklyn, Queens, and Staten Island to map their connections to other organized-crime members.[4]

Recognizing that past criminal prosecutions had failed to wrest control of the market from Cosa Nostra, U.S. Attorney Rudolph Giuliani filed a civil RICO suit in October 1987. Unlike earlier civil RICO suits, this case was brought without the benefit of a prior criminal case.[5]

0755

Giuliani analogized this use of civil RICO to the use of the Sherman Anti-Trust Act to break up monopolies in the early twentieth century and to the use of federal court trusteeships to desegregate school districts.[6] The lawsuit sought to place the entire market under court supervision and to appoint a trustee for Local 359.[7]

The civil RICO complaint, assigned to Judge Thomas P. Griesa, named twenty-nine defendants, including Local 359 and its officers, and the Genovese crime family as an entity.[8] It alleged that Carmine Romano, as secretary-treasurer of Local 359, and later Vincent Romano, as de facto head of the local, on behalf of the Genovese crime family had engaged in diverse criminal activity, including extortion, gambling, theft, and loan-sharking, at the Fulton Fish Market. The government charged that the Genovese family used Local 359 to extort payoffs from wholesalers by threatening labor problems. In December 1987, the government moved for a preliminary injunction that would entail appointment of an "administrator" to oversee market operations and to prevent organized-crime activity, and appointment of a trustee to replace Local 359's executive officers.[9]

THE CONSENT DECREE

In April 1988, twenty-five of the twenty-nine defendants, including Vincent and Carmine Romano, entered into a consent judgment. A default judgment was entered against the remaining defendants, including the Genovese crime family. The consenting defendants, most of whom had an interest in the unloading and/or parking enterprises at the market,[10] agreed to injunctions prohibiting racketeering practices and to the appointment of a market administrator. The consent judgment permanently enjoined Carmine and Vincent Romano from having any interest in Fulton Fish Market operations and any contact with Local 359.[11] The consent judgment required six other defendants to notify the market administrator of any market-related interests they possessed and prohibited contact with Local 359.[12] All defendants and all persons in active concert or participation with them were prohibited from participating in any illegal activities, including extortion, theft, and gambling, as well as colluding, conspiring, or agreeing with any other individual to participate in such acts. The default judgment barred the Genovese family from participating in any Fulton Fish Mar-

0756

ket or Local 359 activities.[13] Judge Griesa retained jurisdiction to try any contempt proceedings arising out of alleged violations.

After the settlement, the U.S. attorney filed an amended complaint, naming Local 359 and its president, Anthony Cirillo, and secretary-treasurer, Dennis Faicco, as defendants. Charging that Local 359 and the two union officers were puppets of the Genovese crime family, the U.S. attorney asked the court to remove Cirillo and Faicco, and appoint a trustee to run the local until a free and fair election could be held. The government listed as RICO predicates wire fraud, extortion, and violations of the Taft-Hartley Act (which prohibits union officials from receiving payments from employers).[14]

In denying the government's request for a trusteeship over Local 359, Judge Griesa acknowledged that the Genovese crime family had ruled the union in the past but expressed hope that the consent and default judgments would be sufficient remedies. He noted that the United Food and Commercial Workers International had placed Local 359 in trusteeship from 1981 to 1983, following the convictions of Carmine and Peter Romano, and that new elections had produced the two current defendant officers. Judge Griesa wrote that "[t]he proof offered by the Government has not been sufficient to support its essential claim—i.e., that the Genovese family currently controls, and in recent years has controlled, Local 359 and its principal officers. . . . [However,] [t]his is not to say that there is no evidence of the presence of organized crime, particularly Genovese family operatives, in the Fulton Fish Market."[15*]

THE COURT-APPOINTED MARKET ADMINISTRATOR

The consent judgment directed the parties jointly to name at least one but no more than three proposed candidates for the position of market administrator. From this list, Judge Griesa appointed Frank H. Wohl, a former assistant U.S. attorney then in private practice, to a renewable four-year term.[16]

*The Second Circuit Court of Appeals affirmed the dismissal of the RICO extortion and wire-fraud charges but remanded for reconsideration of the RICO Taft-Hartley violations. *United States v. Local 359,* 889 F.2d 1232 (2d Cir. 1989). The U.S. attorney has taken no subsequent action against the union regarding the Taft-Hartley allegations.

0757

The consent and default judgments empowered the administrator to take sworn testimony from persons with knowledge about racketeering at the market and to inspect the books and records of individuals, businesses, and other entities operating there. With the court's approval, the administrator could implement rules and regulations necessary to ensure compliance with the injunction. The administrator had authority to impose sanctions on the defendants "or any person in active concert or participation with them," for violating provisions of the consent judgments. Possible sanctions included, but were not limited to, public posting of the violations, fines, suspension, and debarment from operating at the Fulton Fish Market. Permanent debarment or a suspension from the market in excess of one year required court approval.

Judge Griesa retained jurisdiction to "supervise the activities of the Administrator and to entertain any future applications by the Administrator or the parties." The administrator could apply to the court for any assistance or relief that he deemed necessary and appropriate. The consent judgment required the administrator every four months to file with the court a written report of his activities.[17]

The Market Administrator's Struggles

Market Administrator Wohl opened an office near the market. He hired Brian Carroll, a retired New York City Police detective, as his deputy administrator. Wohl carried out the duties of market administrator on a part-time basis; Carroll worked full-time. In addition, the office employed three full-time investigators.[18]

Wohl submitted fourteen reports to the court, plus an extensive 1990 midterm report. In his reports, Wohl stated that his staff conducted *confidential investigations,*[19] but no details were provided. All reports documented the resistance Wohl encountered from market businesses when he attempted to procure sworn testimony, records, and books. According to Deputy Administrator Brian Carroll:

> It is important for us to have these records and ultimately the testimony . . . if we are to effectively monitor them and be in the position to draft meaningful regulations governing market operations. Those from whom we have sought testimony or books and records have generally resisted our demands, and the Administrator has had to seek re-

0758

> course from the Court. . . . [T]he process has consumed valuable time. Moreover, once we have successfully compelled an individual to give testimony, the testifier often invokes his constitutional privilege against self-incrimination and refuses to answer key questions.[20]

The court consistently upheld the administrator's requests for defendants' sworn testimony, records, and books.[21] However, the administrator had no power to grant immunity; thus a claim of Fifth Amendment privilege effectively blocked many lines of investigation.

In his midterm report, filed two years into his term, Wohl observed that racketeering remained rampant.[22] Yet, the market administrator's staff claimed that the existence of the administrator's office had resulted in a marked reduction of "skimming," the systematic theft of fish from each box as it is unloaded.

Wohl continually urged city politicians to play a more aggressive role in supervising market operations.[23] In November 1988, the New York City Department of Ports, Trade, and Commerce appointed a market manager to exercise the city's administrative power at the market. The market manager's task was not to purge organized crime from the market but to improve the market's facilities.[24] The Dinkins administration eliminated the market-manager position in 1991 for budgetary reasons, despite the administrator's claims that additional staff was needed.

Wohl's midterm report criticized city officials for failing to regulate and police the market. Wohl claimed that he had delayed issuing the midterm report in the hope that city officials would be stirred from their lethargy,[25] and charged that despite promises to the contrary, the Koch and Dinkins administrations had not taken sufficient action. Wohl stated that city officials had told him that they feared for the safety of city employees, worried about the corruption of police officers, and blamed the fiscal crisis for failing to act.[26] A spokeswoman for the New York City Office of Business Development responded that Wohl's report of racketeering activities was "old news" and reflected his "inability to correct the problem" despite an annual $1 million budget and a large staff.[27]

It is difficult to evaluate the success of Wohl's $3.5 million monitorship.[28] The administrator's powers were probably inadequate to accomplish the court's objectives. The court had granted Wohl power to impose sanctions on the defendants named in *United States v. Local 359*

0759

but not on other market participants, such as the wholesalers. Moreover, identifying and communicating with businesses in the market proved difficult. The city did not even have a list of market participants, and compiling basic information was further complicated by language barriers.[29]

It is unclear why Wohl's office devoted so much time and resources to obtaining business records and books. Perhaps Wohl believed that they would reveal violations of the consent judgment or racketeering schemes themselves, but it seems unlikely that market participants would have formally recorded such incriminating information.

Sanctioning Noncomplying Unloading Companies

In 1990, Wohl's office received information that defendant Dominick Lategano had retaliated against a seafood company for complaining about the unloading cartel. The seafood company experienced protracted delays in the unloading of its merchandise and its employees received death threats.[30] Wohl's office and the New York City Department of Investigation (DOI) started a sting operation that lasted from September 1990 through April 1991, the first time the DOI had played a major role in an organized-crime investigation at the Fulton Fish Market.

The DOI sting operation set up a trucking company, Stingray Express, to determine whether any of the consenting defendants were still operating an unloading cartel.[31] Stingray Express posed as a supplier that trucked small quantities of its own fish to the market. At first, an unloading company headed by Gerard Albanese, an alleged Genovese associate, unloaded the Stingray trucks without incident. When, two months later, Stingray expanded its business by delivering eighty boxes of fish that bore the label of another Long Island supplier, Albanese told Stingray's owners to say that the boxes did not come from the Long Island supplier whose name appeared on the label but from other sources. John Gillio, the head of another unloading company, soon approached the Stingray employees and asked the origin of Stingray's cargo. The undercover agents showed Gillio documents indicating that the eighty boxes were those of a Long Island supplier. Gillio advised the agents that his company handled all trucks from Long Island and told them he would speak to some "people," who would talk to Albanese. When the undercover agents asked Gillio who allocated work among

0760

the unloading crews, Gillio replied that there were "people" who made those decisions. Gillio also told the agents that he would need to be paid for the unloading of the cargo, even if Albanese performed the service.[32]

In June 1992, Wohl imposed sanctions on five unloading companies that were defendants in the civil RICO suit on the ground that they had conspired to reestablish an unloading cartel,[33] and that the manner of the conspiracy indicated organized-crime involvement.[34] The fines, varying in amounts, totaled $200,000. Wohl ordered that notice of the companies' violations be posted at the Fulton Fish Market and distributed to all parties doing business there. Wohl also suspended the bosses of each of the three unloading crews from working at the market. These sanctions, which came in the fourth year of Wohl's term, were the only penalties Wohl imposed during his administratorship.

Judge Griesa sustained the findings, concluding that "the influence of organized crime in the market still exists to some extent." However, Judge Griesa overturned the suspensions because they "could impair the functioning of the Market." He expressed hope that the fines alone would serve as a "severe warning" and reserved the right to renew the suspensions "if it becomes necessary in the future."[35] In essence, Judge Griesa was acknowledging the three suspended defendants' and Cosa Nostra's power to disrupt or even paralyze the market.

At Mayor David Dinkins's urging, Wohl petitioned the court to extend his term beyond May 1992, until the city could take over the task of supervising the market. Judge Griesa approved Wohl's request. Wohl also asked that the court order the U.S. Department of Justice to fund the extended term. U.S. Attorney Otto G. Obermaier objected to further payments, claiming that the city was responsible for regulating the market.[36] Eventually, after Mayor Dinkins wrote a letter to U.S. Attorney General William Barr, the necessary funds were allocated.[37] Wohl's administratorship ended later that year.

NEW YORK CITY REGULATORY ACTION: LOCAL LAW 50

Shortly after the release of Wohl's 1990 midterm report, representatives of the New York City Department of Ports, Trade, and Commerce announced a plan for "comprehensive reform" at the Fulton Fish Market.[38] Six months later, no plan had been unveiled; city officials claimed that budget cuts and legal complications were responsible for the delay.

0761

Ports and Trade's 1991 budget was cut $1 million; thirty-five of its two hundred employees were laid off, including five of the nine employees assigned to the Fulton Fish Market. City officials postponed issuing regulations for licensing loaders and unloaders until they could conclude negotiations with the South Street Seaport Corporation (SSSC) to return leases to the city.[39] (The city had previously transferred authority to administer leases and collect rent from wholesalers at the market to the SSSC, an arm of the South Street Museum. Pursuant to the contract, the SSSC kept 10 percent of the rent revenue it collected.)[40]

In 1992, the New York City Council opened hearings into whether the market required city supervision.[41] At a May 1992 council hearing on the "City's failure to regulate the Fulton Fish Market," Wohl testified that the absence of an effective regulatory presence created an environment in which racketeering thrived. Several witnesses testified that a lawless environment at the market prevented merchants from doing business honestly. In fear of the consequences of testifying against Cosa Nostra, several witnesses wore black hoods. One witness, identified as a Brooklyn restaurateur, testified that he was beaten by a gang of men for parking in the wrong spot at the market. A Florida truck driver told the committee that he had been dismissed from his job and blacklisted at the market for complaining about workers who refused to unload his cargo. A North Carolina seafood supplier reported that he stopped doing business at the market after wholesalers had stolen $40,000 and that on a different occasion a wholesaler had pulled a gun on him while he was collecting a bill.[42] Another supplier testified that he had quit doing business at the market because wholesalers did not pay their bills and then disappeared.

Officials testified that the city's failure to collect permit and license fees from unloaders, loaders, and wholesalers, and its failure to negotiate reasonable rent increases with the two wholesaler associations over a ten-year period, cost the city nearly $2 million in revenue each year.[43] A DOI official described the results of the "Stingray" investigation, which had uncovered weapons trading, drugs, and racketeering at the market.[44] An attorney representing unloading and loading firms stated that the allegations of corruption were false and that there was no system of unlawfully assigning trucks to specific unloading crews.

At the City Council's next hearings (March/April 1995), Mayor Giuliani unveiled his plan to regulate the market. The City's Economic Development Corporation would take over rent collection from the

0762

SSSC and increase rents. The Department of Investigation would conduct background investigations of companies and workers. The Department of Business Services (as successor to Ports, Trade, and Commerce) would issue licenses and registrations only to businesses it deemed commercially suitable and of good character, honesty, and integrity.

Several council members questioned the need for background investigations of individuals and businesses, especially the use of fingerprinting.[45] Others questioned whether the Department of Business Services could handle the responsibility of managing the market. The president of the Committee to Preserve the Fulton Fish Market, a group representing businesses at the market, argued that the proposed bill would drive business to New Jersey and other sites. Several business owners argued that there was no need for the city to take action.[46]

Two days after the March 1995 City Council hearing, fire swept through the Old Market Building. The fire commissioner determined that the blaze had been set purposely.[47] Some officials speculated that the fire might have destroyed financial records crucial to the city's inquiry into market operations.[48] The crime has never been solved.

Wholesalers threatened to move out of Manhattan if the city raised rents and implemented licensing; they met with the mayors of Yonkers and other cities to discuss possible relocation.[49] In the ensuing war of words, Giuliani threatened to replace the wholesalers. Chief of staff Randy Mastro sent out several hundred letters soliciting businesses to move their operations to the market to replace any departing businesses.[50]

On June 14, 1995, the New York City Council overwhelmingly passed Local Law 50, the city's comprehensive regulatory plan. In its legislative findings, the council said criminal prosecutions and a court-appointed administrator had failed to purge the market of organized crime. The council pointed to loading and unloading cartels, violence and threats of violence, and the practices of "phantom" wholesalers.[51]

Establishing a Market Manager

Local Law 50 authorizes the commissioner of the Department of Business Services to designate a market manager to provide day-to-day on-sight supervision.[52] The market manager is authorized to promulgate rules and regulations; require licensees and registrants to maintain

0763

certain records and periodically to examine those records; make referrals to appropriate law enforcement agencies; and perform other duties that the commissioner deems necessary.

Licensing and Regulating the Unloading and Loading Businesses

Pursuant to Local Law 50, every unloading and loading business must obtain a license from the Department of Business Services. The license specifies the maximum rates to be charged for services. The commissioner is authorized to suspend or revoke any business license, or pursue other remedies for Local Law 50 violations. The commissioner may also promulgate rules to ensure orderly unloading, including a queueing procedure for unloading trucks. The commissioner may designate loading areas, and require loading companies to obtain a city lease or occupancy permit. The commissioner was directed to determine whether a city agency should take over loading and unloading services.

Registering and Regulating Wholesalers and Delivery Drivers

Local Law 50 requires wholesalers to register with the city and to obtain a registration number from the commissioner. The registration scheme is aimed at eliminating "phantom" wholesalers.[53] Wholesalers are prohibited from assigning or subleasing their premises to other wholesalers, unless the assignee or sublessee is also registered with the city. Additionally, wholesalers are required to notify the commissioner of any change in ownership subsequent to registration. Each wholesaler must obtain a stand permit, at a rate to be determined by the commissioner, before placing any seafood on the street. The commissioner must maintain and make available a list of all wholesalers who are registered and have permits.

Identification Cards and Penalties

Local Law 50 requires all principals, employees, and agents of licensed and registered businesses to obtain official photo identification

0764

cards issued by the market manager. Applicants for "class A" photo identification cards (issued to all owners, employees, and agents of unloading and loading businesses) must be fingerprinted by a person designated by the commissioner and pay the Division of Criminal Justice Services to conduct a criminal-history search.[54] The market manager may also require any person applying for a "class B" photo identification card (issued to all principals, employees, and agents of wholesale companies) to be fingerprinted where there is ample cause to believe that the applicant lacks "good character, honesty and integrity."[55]

Each applicant for photo identification must provide the Department of Business Services with certain information, including any criminal or civil investigation the applicant has been subject to over the preceding five years. The department may refuse to issue a photo identification card if it deems the person lacking in good character, honesty, and integrity. In making this determination, the department must take into account any criminal conviction, any pending criminal or civil proceedings against the applicant, involvement in racketeering activity, and the applicant's "knowing association" with any person who has been convicted of racketeering activity. The commissioner may require the forfeiture of any vehicle, equipment, or property used in violation of the licensing provisions. The law authorizes the Department of Business Services to investigate any matters that fall under the auspices of the regulatory regime.

Any business required to have a license, permit, or registration is liable for violations committed by its principals, employees, or agents. Violations of Local Law 50 or rules promulgated pursuant to it, are punishable by up to $10,000 for each violation. Operation of a loading or unloading business without a license constitutes a misdemeanor punishable by criminal fines, imprisonment, and additional civil penalties.

Local Law 50 requires the commissioner of business services to submit to the City Council regular reports of its market-related investigations. The reports must provide the number of criminal acts and violations reported, referrals to law enforcement agencies, lists of unloading and loading companies and wholesalers, and other information on applications denied and on revenue collected or outstanding.

The Committee to Save the Fulton Fish Market brought a suit in the U.S. District Court for the Southern District of New York challenging Local Law 50 as unconstitutional and contrary to state law. Judge Griesa dismissed the complaint as "entirely without merit."[56]

0765

THE CITY'S REGULATORY ATTACK

Raising the Rents

In 1994, the South Street Seaport Corporation asked the city for permission to resign as the market's landlord. SSSC officers were frustrated by financial losses. The corporation spent an average of $120,000 annually managing the market and received about $27,000 as its 10 percent share of rent revenues.[57] The New York City Economic Development Corporation, as agent for the Department of Business Services, reached a new lease agreement with the Fulton Fishmongers Association, the lessee of the fire-damaged Old Market Building. Wholesalers, who had been paying $72,000 a year to rent city property, agreed to pay $450,000 in the first year of the new ten-year lease; $550,000 in the second year; and $650,000 for each of the remaining eight years.[58] Shortly thereafter, the other major wholesalers' association, the New York Wholesale Fish Dealers Association, agreed to an increase in annual rent from $90,000 to $675,000.[59] The South Street Sidewalk Association, a smaller group of wholesalers, also consented to a rental increase, from $80,000 annually to $650,000 a year, effective June 1, 1998.[60] The city benefited by almost a million dollars the first year.

Evicting Wholesalers

In July 1995, acting under its authority as landlord, the city removed from the market five wholesalers. Two of these companies were owned by relatives of alleged Cosa Nostra figures. Alphonse Malangone Jr., son of a suspected Genovese capo, and Thomas Gangi, son of the alleged Genovese family boss at the market, Rosario Ross Gangi, were each denied leases.[61] In 1996, another wholesaler with suspected ties to Gangi was denied a license on the grounds of falsified records and refusal to discuss relationships with organized-crime figures.[62]

Eliminating the Unloading Cartel

In October 1995, Mayor Giuliani announced his intention to replace the six unloading companies at the market with a single company chosen by the city.[63] Commissioner of Business Services Rudy Washington claimed that five of the six existing companies had engaged in serious

[162.10.217.184] Project MUSE (2026-06-15 01:41 GMT) University of Queensland

misconduct, and that the sixth was linked to an unloader who had refused to testify in a federal investigation.[64] The city rejected the license applications of all six companies. In one blow, a cartel that operated for more than half a century was gone. The city solicited bids from companies desiring to carry out all the unloading operations at the market. Laro Maintenance Corporation submitted the lowest bid and passed the DOI background check. The city's contract with Laro called for unloading fees 20 percent below those previously charged. Laro agreed to unload trucks on a first-come, first-serve basis.

Laro's debut was disastrous. Four hundred journeymen, members of Local 359, refused to move the seafood from wholesalers' stalls to the buyers' vehicles. The Market was brought to a virtual standstill. The protesters claimed that their action was meant to show solidarity with the forty employees who lost their jobs when the six unloading companies were evicted. Ironically, Laro's workers were unionized, unlike the cartel employees they were replacing.[65]

The wholesalers also protested. They told journalists that Giuliani's ousting of the six unloading companies would produce market chaos and higher seafood prices. The Committee to Save the Fulton Fish Market distributed flyers charging that the new regulations "will destroy your Fulton Fish Market."[66] The committee also sought a court order reinstating the dismissed unloading companies,[67] arguing that the city's denial of licenses was an improper exercise of power and a violation of due process. Judge Griesa denied the petition.[68] Giuliani threatened to shut the market if there were further delays or disruptions.[69]

Two months after Laro took over the unloading function, the DOI discovered that Laro had provided incomplete information on its license application.[70] The company had not disclosed that it had been investigated by the National Labor Relations Board for allegedly refusing to hire thirteen janitors at another location because they belonged to a union that Laro did not recognize. Despite this stain on Laro's character, the DOI concluded that overall Laro has enjoyed a good business reputation and Laro's contract was upheld.[71]

Targeting Mobbed-Up Waste Haulers

The new ten-year leases that the three wholesaler associations signed with the city prohibited them from associating or doing business with organized-crime figures. Nonetheless, in October 1995, the

0767

associations contracted with Barretti Carting, a waste-hauling company that had been named in a racketeering indictment filed by the Manhattan District Attorney's Office several months earlier. Prosecutors charged that Barretti Carting was a member of a mob-run waste hauling cartel. The wholesaler associations argued that Barretti had been the main waste hauler at the market for years, and that the associations were contractually bound to Barretti.[72] The mayor gave the wholesaler associations an ultimatum: break the contract with Barretti or face eviction from the market. The associations fired the waste-hauling company. Within days, the wholesaler associations signed contracts with a new carter[73] that charged 40 percent less than Barretti.[74]

Driving Out Corrupt Loaders

In August 1995, Department of Business Services Commissioner Rudy Washington notified loaders that they would have to obtain a license to continue operating at the Fulton Fish Market. Eleven loading companies brought a state-court suit challenging the constitutionality of Local Law 50. They argued that they had previously signed a valid fifty-year lease with the (then-landlord) South Street Seaport Corporation. The court found that no valid lease existed and upheld the constitutionality of Local Law 50.[75]

In December, 1995, the city used Local Law 50 to oust two longtime loading businesses at the market; the owners of both had pled guilty to charges that they were part of a thirteen-member Cosa Nostra conspiracy that robbed four banks and an armored-truck depot.[76] Giuliani then sent in city officials to begin running two of the market's loading zones. Hoping that its presence would deter vandalism and violence, the city provided free loading services. This action set off a work slowdown similar to the one on Laro's first day.[77] It was resolved by reassigning those zones to existing loading companies.

In May 1996, the city ousted another loading company on the ground that its owner had been convicted of tax evasion.[78] In July, the Department of Business Services denied a loading license and a photo identification card to Joseph "Chief" Macario, because Macario's company did not have adequate insurance and because of Macario's knowing "associations with the Genovese organized crime family."[79] Anticipating that the license denial would trigger violence, police reinforcements were assigned to the market immediately following the

0768

announcement. Furthermore, Macario challenged the Department of Business Services in state court. The court held that the first ground was insufficient but upheld the denial of the business license and identification card on the ground that Macario had "knowing associations" with recognized organized crime figures.[80]

In January 1997, the Department of Business Services awarded licenses to only two of the six remaining loading companies. Even though these two companies had previously engaged in questionable practices, city officials asserted that they had cooperated with the city's reform efforts. Moreover, no outside loading companies had submitted bids for the loading contracts. The two-year contracts set the maximum rates that these companies could charge for loading, parking, and security services.[81] Parking fees dropped from as high as $20 to a maximum of $4 a night for cars, vans, and most trucks, and $6 for the largest trucks. It was estimated that restaurateurs and retailers would save $2.5 million annually.[82]

EXPANDING THE REGULATORY INITIATIVE TO OTHER NEW YORK CITY MARKETS

In October 1996, Mayor Giuliani proposed a bill that would give the city new powers to remove corrupt union officials from the city's seven major wholesale food markets: New York City Terminal Market, the Bronx Terminal Market, the Brooklyn Terminal Market, the Gansevoort Meat Market, the Brooklyn Wholesale Meat Market, the Hunts Point Produce Market, and the Fulton Fish Market.[83] Deputy Mayor Randy Mastro declared, "Every one of these markets in the past decade has involved not one but several mob families."[84] Mastro stated the bill's immediate targets included officials in three unions linked to Cosa Nostra, including Local 359.[85]

At the City Council's Economic Development Committee's hearings in November 1996, Assemblyman Brian McLaughlin (D-Queens), president of the New York City Central Labor Council, denounced the bill as overly broad and intrusive. However, the following spring, a compromise was reached when it was agreed that an arbitrator would have authority to hear appeals of any union-official removals. The City Council passed Local Law 28,[86] and Mayor Giuliani signed it into law on May 16, 1997.

0769

Local Law 28 is similar in many respects to Local Law 50 in that it requires all food purveyors to obtain licenses and to submit to background checks, thus allowing the city to oust any companies with ties to organized crime. Yet, Local Law 28 is more expansive than Local Law 50 because it gives the city authority to investigate and suspend union officials for misconduct or for knowingly associating with organized crime figures.[87] It also applies to other market businesses, such as suppliers of ice. The effectiveness of Local Law 28, however, remains to be seen.

A LIBERATED FISH MARKET

The freeing of the Fulton Fish Market from Cosa Nostra influence is attributable to the civil RICO suit filed by then U.S. Attorney Rudolph Giuliani and to the comprehensive city regulations that were put into place after Giuliani became mayor. The liberation of the Fulton Fish Market ought to be credited to Giuliani's determination.

The civil RICO suit, *United States v. Local 359,* may not have been sufficient to purge the mob from the market, but it was a good start. It forced several prominent racketeers to leave the market. It also placed an administrator into the market's day-to-day operations. Although the administrator's accomplishments were modest, at least the mob was not able to remobilize as long as the administrator and his staff were on the job. Indeed, their presence signaled that change might be possible. Furthermore, the administrator pressed the city to exercise its regulatory power more aggressively.

Local Law 50 was the decisive breakthrough. The licensing system led to the expulsion of the entire coterie of unloading companies and all but two of the loaders. Practically overnight, the unloading cartel that had lasted half a century was replaced by a company chosen by the city. Laro's fees were 20 percent below the cartel's rate. Jump up fees were eliminated. In January 1997, the Department of Business Services granted licenses to only two loading companies, both of which had cooperated with the city. These regulatory reforms show real promise.

One year after Local Law 50 was enacted, a report credited Giuliani's campaign to remove Cosa Nostra from the Fulton Fish Market with having brought about slightly lower seafood prices (a 2 percent decrease, compared with a 13 percent increase nationwide) and a greater supply of fish.[88] In 1998, city officials claimed that the overall

0770

cost of fish has declined 13 percent, and the amount of fish transported to the market has increased 14 percent.[89] Incredibly, the head of the Committee to Save the Fulton Fish Market testified before the City Council in 1997 that the reforms were working and that the Department of Business Services were "vital agencies whose presence provides a safe and comfortable environment in which to do business." Based on the success of this initiative at the Fulton Fish Market, Local Law 50 has provided the model for legislation to oust Cosa Nostra from New York City's other major wholesale food markets and from the waste-hauling industry.

Purging the Mob from John F. Kennedy Airport

> This court is satisfied that it is faced with an extraordinary situation. . . . Contrary to the argument of Local 295, vestiges of its old regime are not gone. The record established . . . a consistent and extended pattern of racketeering and extortion. . . . Many of the guilty do not appreciate the gravity of their crimes. None of their associates has displayed any interest in reforming the union. The record shows a smug, almost contemptuous, indifference to the presence of organized crime in union affairs by a number of former union officials and an active effort by many in Local 295 to thwart reform. . . . This court concludes that there is a likelihood of continued corruption and that the court should appoint a trustee.[1]
>
> —Justice Eugene H. Nickerson, *United States v. Local 295,* 1992

ALMOST FROM THE date of its opening, JFK Airport's cargo operations served, in the words of Henry Hill, as a "candy store" for the mob. The Luccheses were the dominant organized-crime family at the airport; their power base was the two International Brotherhood of Teamsters (IBT) locals whose histories are inextricably linked to organized crime, IBT Local 295 and IBT Local 851. The mob used these unions to extract payoffs from freight-forwarding companies seeking labor peace and avoidance of burdensome contract provisions. Lead agents, handpicked by Cosa Nostra, facilitated profitable truck give-ups and hijackings. Cosa Nostra also policed a trucking cartel. Cartel members' trade association dues flowed directly to the Lucchese crime family; the association fixed prices and prohibited noncartel-member trucking firms from entering the JFK cargo market.

0772

Ever since the 1958 McClellan Committee Hearings exposed organized-crime racketeering in the air cargo industry at JFK Airport, federal, state, and local law enforcement agencies have launched periodic attacks, including antitrust suits in the 1970s, criminal prosecutions in the 1970s and 1980s, and civil RICO suits in the late 1980s and early 1990s. Only the civil RICO suits have seriously challenged Cosa Nostra's domination of the airport's cargo industry.

REFORMING THE INTERNATIONAL BROTHERHOOD OF TEAMSTERS FROM THE TOP DOWN

Purging Cosa Nostra from the two IBT locals at JFK Airport took place in the context of the larger remedial effort to eradicate mob influence from the national Teamsters union, at the time the nation's largest union.[2] In 1988, U.S. Attorney Rudolph Giuliani filed a civil RICO suit that charged the Teamsters' national General Executive Board with running the IBT as a racketeering enterprise in collaboration with Cosa Nostra.[3] Pursuant to a 1989 consent decree, a three-person trusteeship was established over the IBT: former federal Judge Frederick B. Lacey was appointed independent administrator; former federal prosecutor Charles Carberry was selected as investigations officer; and labor lawyer Michael Holland was appointed elections officer.* The consent decree empowered the investigations officer to seek the dismissal of corrupt officials from the union and to establish trusteeships for corrupt locals. In the course of three years, the trusteeship removed nearly two hundred union officials from Teamsters locals across the country.[4]

In June 1991, Investigations Officer Carberry charged the officers of Local 295 with breaching their fiduciary duty to the local's membership by failing to investigate rampant corruption and by embezzling Local 295 funds. As a result, six of the seven Local 295 officers were removed

*Pursuant to the 1989 consent decree, an independent review board (IRB) replaced the court-appointed trusteeship in October 1992. The IRB's directive was to investigate and eliminate corruption in the IBT. The three-member board consisted of IBT Independent Administrator Frederick Lacey, former CIA and FBI Director William Webster, and Harold Burke, the former head of the United Mine Workers union. (Grant Crandall, UMW's general counsel replaced Burke in June 1993.)

0773

from their posts. Anthony Cuozzo, the only remaining officer, was soon forced to resign because of "knowing association" with Anthony Calagna, a member of the Lucchese crime family and former president of Local 295. Cuozzo was later murdered.[5] Independent Administrator Lacey permanently suspended Local 295 president Anthony Calagna from the IBT and ordered him to repay $50,000 to the local.[6] The federal district court affirmed these actions and approved the order removing the officers.[7] The ousted officials of Local 295 then attempted to arrange that a special election be held to select their successors.[8] In response, Lacey obtained a court order placing Local 295 under a temporary trusteeship and appointed William Ferchak, a longtime officer of IBT Local 732, temporary trustee of Local 295.[9]

In March 1992, Ron Carey,* the newly elected reform president of the IBT, without prior notice to the IBT independent administrator, announced his intention to replace Ferchak with William F. Genoese, another officer of IBT Local 732. The independent administrator vetoed that appointment, finding that Genoese had a "sad record of inaction in the face of a long history of corruption at [JFK] Airport"[10] and was closely tied to the Lucchese crime family. Carey later stripped Genoese of his Local 732 position, citing a "pattern of malfeasance" in the use of membership dues, and installed a temporary trustee to run Local 732.[11]

The IBT trusteeship also launched a comprehensive investigation of Local 851. In 1990, as the investigation moved forward, Mark Davidoff resigned as secretary-treasurer (the top position in Local 851) and was replaced by Anthony Razza.[12] The 1993 indictment of Razza prompted IBT President Ron Carey to appoint Curt Ostrander, an IBT Local 559 official, as temporary trustee and Brian Kelly, a member of New York City's Mollen Commission (investigating police corruption), as investigator.[13]

*Carey won the IBT's first election under the consent decree with the motto "No Corruption, No Excuses, No Exceptions." His appointment of Genoese stirred controversy. The Department of Justice launched an investigation into Carey's ties to organized crime. Carey claimed that his nomination of Genoese was an "honest mistake." The Genoese appointment haunted Carey's reelection campaign. The opposing candidate, Jimmy Hoffa Jr., claimed that Carey was a puppet of Cosa Nostra. Carey won the election by a close margin. The election was overturned by elections monitor Barbara Zack Quindel because of fund-raising improprieties. In November 1997, Carey was prohibited from seeking reelection, and in July 1998, the IRB banned Carey from the Teamsters for life.

0774

ATTACKING THE TWO IBT LOCALS

The FBI and U.S. Department of Justice were not impressed with the Teamsters' progress in reforming Locals 295 and 851. In March 1990, U.S. Attorney for the Eastern District of New York Andrew J. Maloney filed the most ambitious legal attack ever launched against organized crime in the JFK cargo industry. In addition to Locals 295 and 851, the government named as defendants fourteen individuals, most of whom were identified as members or associates of the Lucchese and Gambino crime families, or as officers and former officers of IBT Locals 295 and 851, including Harry and Mark Davidoff, Frank Calise, and Anthony Calagna.

The complaint alleged that the Lucchese crime family had used its control of Teamsters Locals 295 and 851 to extract revenue from the cargo industry at JFK Airport and charged numerous acts of extortion and labor racketeering. For example:

- Between September 1980 and September 1982 defendants Harry and Mark Davidoff, Frank Calise, and Frank Manzo prevented Union Air Transport from using a specific warehouse and transportation service unless the company paid the defendants money.
- In 1983 and 1984, Harry Davidoff, Frank Manzo, and Frank Calise threatened to organize the nonunionized workforce of Pandair unless Pandair paid the defendants money.
- Between August 1983 and December 1984, Frank Manzo and Frank Calise "threatened a strike, boycott, or other collective labor group action" injurious to Kamino Air Transport, unless the company paid off the defendants.
- Defendants Frank Manzo and Frank Calise threatened to increase Schenkers International Forwarders' labor costs unless payments were made.
- Harry Davidoff, Mark Davidoff, Frank Calise, and Anthony Guerrieri extorted Stair Cargo Services by threatening to force the company to hire workers affiliated with Teamsters Local 295.
- Frank Manzo, Frank Calise, and Richard Schroeder threatened to enforce a collective bargaining contract's provisions requiring pension and welfare contributions to Teamsters Local 851 unless the company made payoffs to the defendants.[14]

0775

In March 1991, U.S. District Judge Eugene Nickerson granted partial summary judgment against Harry Davidoff and Frank Calise, finding that their prior racketeering conspiracy and extortion convictions[15] established the predicate acts needed to satisfy the government's civil RICO case.[16] The court enjoined the two men from participating in the affairs of Locals 295 and 851, their executive boards, or any other labor organization or employee benefit plan. Davidoff and Calise were also enjoined from associating with officers, auditors, and employees of Locals 295 and 851.[17] Furthermore, the court ordered the defendants to repay $961,400* that they had obtained in payoffs from freight forwarding companies.[18] Nevertheless, the court declined to impose a permanent trusteeship over the locals, finding insufficient evidence of "continuing corruption."[19]

Court Approves Local 295 Trusteeship

In 1992, after further motions by Independent Administrator Lacey, Judge Nickerson determined that the IBT-installed temporary trustee was unable to rid Local 295 of corruption.[20] Judge Nickerson cited the local's continuing $2,000 a month payments to Harry Davidoff, despite his criminal convictions and civil sanctions, and the use of union funds to pay attorneys' fees for former Local 295 President Anthony Calagna's defense on charges of extortion and labor racketeering. Pointing to Local 295's history of Cosa Nostra domination and the recent convictions of several of its officers as justifications for close scrutiny, Judge Nickerson imposed a permanent trusteeship.[21] He acknowledged that "Congress considered the appointment of a trustee to run the affairs of a union local as an extraordinary measure," but concluded that the court was indeed faced with an extraordinary situation.[22] Moreover, Judge Nickerson noted that "[t]he implementation of trusteeships under civil RICO is no longer a novel, one-time experiment. It is quickly being recognized as an extremely valuable part of effective law enforcement."[23] The court set no time limit for the trusteeship; it would last until "honest and uncoerced" elections for new officers could be held.[24]

In April 1992, Judge Nickerson appointed Thomas Puccio, a former assistant U.S. attorney and former head of the Brooklyn Organized

*The judge later vacated the amount and ordered further hearings to determine just how much the defendant owed.

0776

Crime Strike Force, as trustee of Local 295. The court granted Puccio broad authority to administer the daily affairs of the local, to investigate corruption, and to oversee the election of union officials. Puccio vowed to use all investigative strategies, including undercover agents and sting operations, to root out corruption.[25] He hired Mike Moroney, a former member of the U.S. Department of Labor's Office of Labor Racketeering and former assistant to IBT's Investigations Officer Charles Carberry, to serve as deputy trustee.[26]

Puccio faced a number of obstacles. His position was part-time, and although he had extensive experience investigating corruption, he had no experience negotiating and enforcing collective bargaining agreements or overseeing routine union matters. Moreover, IBT President Ron Carey was not supportive. He maintained that the fifteen-member ethical-practices board he had created in 1992 was sufficient to deal with Local 295's problems and that further government intervention in Teamsters affairs was unjustified.[27] The Lucchese crime family's continued influence over Local 851, Local 295's sister local, also impeded Puccio's efforts. Puccio claimed that Local 851 encouraged at least thirty Local 295 truck drivers to transfer their memberships to Local 851, in order to elude investigation, notwithstanding the fact that Local 851 represented clerical employees and dispatchers. Forces within Local 295 itself also hindered Puccio's initiatives. A group calling itself the "United Workers Council" distributed newsletters smearing Puccio and his staff.[28]

To foster a democratic atmosphere, Puccio conducted an educational program for Local 295's general membership regarding grievance procedures and union democracy. The trustee's staff distributed copies of collective bargaining agreements to Local 295 members. The deputy trustee published a monthly newsletter describing the trustee's efforts to rid the local of organized crime and discussing other union matters.[29] An advisory committee composed of union members provided the membership with a direct line of communication to the trustee. Puccio also rewrote the local's bylaws to protect union members from corruption. For example, the new bylaws restricted the salaries and pensions of Local 295 officers; required the local's officers to take specific actions against corruption; and provided that shop stewards would be elected, not appointed.[30] Puccio filed a $558,000 insurance claim to recover Local 295 funds embezzled by former union officers. He also sought, on behalf of Local 851 and Local 295 pension and welfare funds, to recover severance and benefit monies paid to

0777

former Local 295 officers, including $305,000 paid to Harry Davidoff's daughter, Sharon Moskowitz, a former administrator* of the Local 851 benefit fund.[31] Puccio also warned corporate executives to avoid doing business with a dozen freight-forwarding companies he had identified as controlled by Cosa Nostra.[32]

Puccio's initiatives, however, came at a high price. He exceeded his budget, and spent far more than Local 295's annual income, nearly bankrupting the local.[33] Puccio paid hundreds of thousands of dollars to lawyers and accountants who billed at hourly rates of up to $375. Puccio's salary was $250,000 per year for his part-time services as trustee; his deputy trustee received $150,000 as full-time compensation.[34]

Independent Supervisor for Local 851

In 1992, the U.S. Attorney's Office for the Eastern District of New York sought a court-appointed trusteeship for Local 851. Opposing the motion, Local 851 argued that the election of Anthony Razza as secretary-treasurer had ended corruption. Razza submitted an affidavit claiming that he was committed to a corruption-free union, and that he had succeeded in ridding Local 851 of organized crime. The court again declined to appoint a trustee in the absence of evidence of recent corruption. In September 1993, Razza was indicted on extortion, racketeering, and tax-fraud charges.[35] In April 1994, he pled guilty to receiving unlawful payoffs from Kuehne & Nagel Air Freight and to engaging in a tax-fraud conspiracy with Amerford International;[36] he was sentenced to twenty-one months in prison.[37]

In June 1993, Thomas Puccio filed a motion with Judge Nickerson to extend his Local 295 trusteeship to include Local 851. Puccio asserted that the Lucchese crime family was using Local 851 to frustrate his reform of Local 295. Puccio also alleged that Local 851's president and vice-president had ties to the Lucchese crime family and that local officials had received hundreds of thousands of dollars in bribes from freight-forwarding companies.[38] He later argued that Razza's indictment provided sufficient evidence of current corruption. Local 851 contended that no trustee was needed and that Puccio's expenditures and

*Ultimately, Ms. Moskowitz prevailed, but the pension and welfare fund did recoup some money by means of an indemnification from an insurance carrier.

0778

extensive delegation of duties demonstrated "his unfitness" to serve as a union trustee.[39]

In October 1994, with Puccio's motion pending, the U.S. Attorney's Office, Local 851, and the International Brotherhood of Teamsters signed a consent decree placing Local 851 under a court-appointed independent supervisor.[40] According to the decree, anyone currently serving as a court-appointed trustee or deputy trustee was excluded from serving as Local 851's independent supervisor, thereby preventing the appointment of Puccio or Moroney, whom union officials accused of looting Local 295. Judge Nickerson appointed former federal prosecutor Ron DePetris to the position. DePetris hired David Krasula, a former long-time investigator with the U.S. Postal Inspection Service and the U.S. Department of Labor, as his chief investigator.

Instead of providing for the usual one-person trusteeship, the consent decree created a bifurcated monitorship; DePetris would be responsible for ferreting out corruption; Curt Ostrander, the temporary union trustee appointed by the IBT, would continue to oversee Local 851's daily affairs.[41] The court authorized the independent supervisor to review the union trustee's expenditures, contracts, leases, and appointments. The independent supervisor could veto expenditures, contracts, or appointments that furthered racketeering or knowing associations with members of organized crime.*

The union trustee and the independent supervisor jointly must decide when free and fair elections are feasible. The independent supervisor is responsible for administering the elections. The terms of the union trustee and the independent supervisor terminate sixty days after the independent supervisor certifies the results of the elections to the court. As of June 1, 1999, the local-wide election of officers had not yet taken place.

The consent decree enjoined members and officers of Local 851 from engaging in racketeering, knowing association with any member, associate, or other individuals involved with any organized-crime group, and obstructing the work of the independent supervisor.[42] The consent decree authorized the independent supervisor to investigate

*The consent decree also required a hearing officer, who had to be "acceptable to both [the U.S. Attorney's Office and Local 851] and who has . . . experience in labor-management relations," to review the independent supervisor's vetoes. *United States v. Local 295,* 90 Civ. 1012 (E.D.N.Y. 1992) Consent Decree, 15.

0779

any such acts and, where appropriate, to conduct disciplinary hearings. However, the independent supervisor was authorized to discipline only officers of Local 851 and the other persons named in the consent decree.[43] He could remove officers from their positions and expel them from the union. But he could not discipline members qua members.

When Ron DePetris became independent supervisor, there were no officers to investigate because the IBT had replaced them with temporary trustee Curt Ostrander. As a result, DePetris focused his investigations on Local 851's two business agents and approximately fifty shop stewards, and on lead agents. He later obtained court approval to extend his investigations and disciplinary proceedings to union members who obstructed the work of the independent supervisor.[44] DePetris removed six of the fifty shop stewards from their positions, and he disciplined sixteen lead agents, who were charged with obstructing the work of the independent supervisor.

The independent supervisor's budget was set at $300,000 a year, including salaries, to ensure that Local 851's finances would not suffer the same fate as Local 295's.[45] Under the consent decree the national Teamsters union agreed to support the Local 851 independent supervisor and union-trustee positions, if necessary. Because of the financial straits in which Local 851 found itself at the time of DePetris's appointment, the IBT provided the funding.[46]

DePetris's Effort to Recover Damages for Past Corruption

In an effort to restore the local's financial health, DePetris sought to recover Local 851 assets that had been dissipated or misappropriated. A year into his term, DePetris filed two civil RICO suits against freight-forwarding companies and Anthony Razza.[47] These suits were the first ever initiated by a court-appointed monitor to recover civil damages on behalf of a labor union for past corruption.[48]

Following an extensive investigation by the New York State OCTF, in the first suit, filed in 1995 against Amerford International (now known as Thyssen Haniel Logistics), its parent company, and Razza, DePetris charged the defendants with violating RICO and a New York State labor law[49] by participating in a labor-payoff scheme. In 1990, Amerford was seeking to drastically reduce its labor costs at JFK airport by eliminating many Local 851 positions. However, such terminations were prohibited under the collective bargaining agreement. With the

0780

assistance of Razza and others, including Patrick Dello Russo, a shop steward of Local 295 and an unofficial representative of Local 851, Amerford was able to reduce its labor force at JFK by more than twenty employees and maintain labor peace. Dello Russo had previously been given an eighteen-month no-show position as a warehouseman with Amerford that paid him $128,622.

As part of the scheme, the company entered into a consulting agreement with KAT Management Services, whereby KAT received roughly 25 percent of the money Amerford saved because of its reduced labor force. KAT was a front for the Lucchese family; money withdrawn from the KAT account was subsequently distributed in cash to Lucchese members, including Anthony Calagna, then president of Local 295. In all, payments in excess of $500,000 were made to KAT. To conceal the scheme, Amerford disguised the terminations as transfers by offering the terminated Local 851 employees similar positions in Hartford, Connecticut. Razza and Dello Russo told the employees that Teamsters Local 851 supported Amerford's actions and would not be able to assist the workers in fighting the transfers. None of the employees accepted the disingenuous transfer option.[50]

In 1993, Razza, Dello Russo, Calagna, and Andrew Titley, Amerford's chief financial officer, were charged with, among other crimes, participating in an illegal labor-payoff scheme and tax-fraud conspiracy.[51] Harold Niehenke, president and chief executive officer of Amerford, pled guilty to state charges alleging that he had agreed to pay KAT "so that the terms of the collective bargaining agreement . . . would not be enforced . . . and consequently, Amerford . . . terminated . . . over 20 union members, and thereby wrongfully obtained their . . . contractual rights to employment."[52] In April 1994, Titley pled guilty to making unlawful payoffs to Dello Russo in connection with Dello Russo's no-show position. Calagna admitted to (1) conspiring to participate in a RICO enterprise (the Lucchese crime family), which included as predicate acts unlawful labor payoff demands from Amerford, and (2) conspiracy to commit tax fraud. Dello Russo pled guilty to (1) conspiring to participate in a RICO enterprise (the Lucchese crime family), which included as predicate acts unlawful labor payoff demands from Amerford and another JFK freight-fowarding company (K&N), including payment for a no-show position, and (2) conspiracy to commit tax fraud. Razza pled guilty to unlawfully receiving labor payoffs from another company and conspiracy to commit tax fraud.[53]

0781

DePetris, on behalf of Local 851, entered into a settlement with the defendants in June 1998. Amerford agreed to pay Local 851 $1.2 million to resolve the RICO action and $2 million to settle the state labor law claim.[54] The state claim was supposed to be satisfied by funds previously paid by Amerford to the New York State Organized Task Force in 1994, but the OCTF resisted turning over the money.[55]

The second action, initiated in 1997, sought to recover treble damages from Kuehne & Nagel Air Freight (K&N) and Anthony Razza. As the 1988 collective bargaining agreement between K&N and Local 851 was about to expire in January 1992, K&N's vice-president, Chester Calamari, was engaged in negotiations with Razza. Razza advised Calamari to contact Anthony Dello Russo. Dello Russo offered to settle K&N's collective bargaining difficulties for $50,000 in cash and arranged for Calamari to make the payments, disguised as consulting fees, to Group East, headed by attorney Anthony Figoni.

In April 1992, K&N and Local 851 entered into a new two-year collective bargaining agreement. Razza made many concessions, including freezing K&N's pension contributions for up to a year. In return, Calamari paid more than $100,000 to Group East. Figoni then withdrew the monies, and after retaining some to cover taxes, gave most of it to Dello Russo, who in turn paid Razza and the Lucchese family. In a criminal case involving this scheme, Razza pled guilty to receiving labor payoffs from K&N, and to tax-fraud conspiracy.[56]

In March 1998, U.S. District Judge Nickerson denied Kuehne & Nagel's motion to dismiss. He ruled there were sufficient allegations that the freight-forwarding company had been part of a scheme that enriched the Lucchese crime family.[57] Damages, if awarded, would be used to reimburse the International and the Local for some of the costs of the independent supervisor's office.[58]

CONCLUSION

Cosa Nostra's entrenchment in the JFK Airport's freight industry dates back to at least the early 1950s. Although the Kenrac investigations and prosecutions sent many mobsters to prison, Cosa Nostra's influence at the airport was undiminished into the 1980s. Recognizing that additional investigations and prosecutions would not have the desired impact, the U.S. Attorney's Office for the Eastern District of New York brought a suc-

0782

cessful civil RICO suit against Teamsters Locals 295 and 851. That suit coincided with the sweeping reform effort taking place within the International Brotherhood of Teamsters as a whole under the aegis of the three-person trusteeship led by Independent Administrator Frederick Lacey.

Under the 1989 consent decree between the IBT General Executive Board and the federal government, the Teamsters union launched its own efforts to rid Locals 295 and 851 of organized crime. The IBT removed the officers of Locals 295 and 851 and appointed temporary trustees to run the locals. Seeking to make these trusteeships permanent, the U.S. Attorney's Office filed a civil RICO suit against both locals in 1990. After some reluctance, the district court established a permanent trusteeship over Local 295 in 1992, naming Thomas Puccio trustee. Two and a half years later the court established a bifurcated monitorship over Local 851, consisting of an independent supervisor, Ronald DePetris, authorized to root out corruption, and a union trustee, responsible for managing the daily affairs of the union. DePetris has succeeded in recovering funds for Local 851 and in severing many of the union's ties with Cosa Nostra.

While Cosa Nostra's presence at JFK Airport is diminished, it is not expunged. In May 1997, U.S. Attorney Zachary Carter announced that eighty-three people had been arrested as a result of an FBI sting operation called Kat-Net. The agents had established a fencing operation that attracted gangs of thieves operating at JFK Airport. The agents purchased $13 million worth of goods from the thieves for $700,000. Interestingly, only a few of the thieves had organized-crime (Gambino) ties, demonstrating perhaps that the mob's dominance over thievery at the airport has ended.

In mid-December 1998, Queens District Attorney Richard Brown, head of the New York City FBI office Lewis Schiliro, NYPD Commissioner Howard Safir, and Port Authority Police Superintendent Fred Morrone announced the indictment of fifty-six individuals and eight corporations for theft, fencing, and distribution of property stolen from warehouses in and around JFK Airport. According to Commissioner Safir, Operation Rain Forest led to the recovery of more than $5 million worth of stolen goods. While two of the defendants are IBT union stewards, once again it appears that this organized theft cannot be attributed to Cosa Nostra. It is another indication that the underworld and the upperworld at the airport are changing. It reminds us as well that crime can, does, and will continue even without the Cosa Nostra crime families.

Ridding the Javits Convention Center of Organized Crime

> I will put the power of this Governorship behind the prosecutions to sweep out organized crime from the Javits Center. . . . Criminals were given a virtual monopoly on the jobs at the Javits Center. That is wrong, and it must end.[1]
>
> —Governor George Pataki, addressing the New York State Senate Standing Committee on Finance, 1995

FROM THE MOMENT construction began, the Javits Convention Center served as a profit center for the mob. Cosa Nostra's influence was rooted in its control over the unions that represented center workers. The Genovese family's control over the Carpenters union allowed the mob to manipulate the job referral system and place friends and associates in high-paying or no-show jobs. IBT Local 807, led by Robert Rabbitt Sr. and his sons Michael and Robert Jr., also placed many known Cosa Nostra associates in high-paying center positions. Officials of Local 829 of the Exhibition Employees Union padded employers' payrolls with ghost employees, including Cosa Nostra members and associates, and operated a fraudulent workers' compensation racket. The center's Board of Directors and management showed little inclination to challenge organized crime. Efforts to purge Cosa Nostra did not begin until the 1990s. The most important law enforcement initiatives were civil RICO suits brought against the Carpenters union and the Teamsters, and Governor George Pataki's shake-up of the center's management. The law enforcement and administrative reforms show strong signs of success.

0784

ATTACKING LABOR RACKETEERING

The Consent Decree in the Carpenters Union Case

In September 1990, the U.S. Attorney's Office for the Southern District of New York, with cross-designated attorneys from the New York State OCTF, filed a civil RICO suit against the District Council of the Carpenters union and its chief officials, charging that the union had been infiltrated by organized crime and was being operated in a corrupt manner.[2] Predicate offenses included extortion and illegal receipt of payments and benefits. The suit, settled one month into the trial, resulted in a consent decree[3] declaring that "there should be no criminal element or La Cosa Nostra corruption in any part of the . . . union" and that the union should be operated without unlawful outside influence.[4] All members and officers of the union were permanently enjoined from racketeering activity and from any knowing association with organized-crime figures.

The consent decree provided for the Investigations and Review Officer (IRO) to implement and supervise the settlement. The parties agreed on former federal judge and former New York City Commissioner of Investigation Kenneth Conboy as IRO. Conboy's mandate was to review the practices and policies of the union; initiate and conduct investigations into allegations of misconduct; bring disciplinary actions against union members; and if necessary, present evidence of wrongdoing to the Independent Hearing Panel (IHP).[5*] The IRO's decisions could be appealed to Federal District Judge Charles Haight, who retained jurisdiction over all related matters.[6]

In March 1995, Anthony Fiorino, who held various high-ranking positions in the Carpenters union at the Javits Center, became the first union member to face disciplinary charges.[7] The hearing lasted ten days and produced more than two thousand pages of testimony.[8]

Conboy argued before the IHP that Fiorino was the Genovese crime family's agent at the Javits Center. According to Conboy, Fiorino had assigned inactive union members and nonmembers to carpenter

*The IHP is composed of three members of the Independent Hearing Committee (IHC), which consists of the five individuals appointed by the consent decree. The IHP is selected in the usual manner for arbitration panels: the IRO chooses a member, the charged party selects another, and the IRO and the charged party collectively choose the third participant. *United States v. District Council,* 90 Civ. 5722, Consent Decree (1994), 4–5.

0785

positions at the center, ran a corrupt hiring list, and maintained active contact with Cosa Nostra figures.[9] Fiorino countered that his only contact with his brother-in-law Liborio "Barney" Bellomo, acting boss of the Genovese family, was at family gatherings or in accidental meetings on the street.[10] He claimed that the two men never discussed union business or the center and that he did not even know his brother-in-law's occupation.

Fiorino was also charged with threatening a union member who complained about contract violations on a job site in 1984.[11] Gerald Kelty of Carpenters Local 257 claimed that he was set on fire by someone wielding a welding torch and that bundles of ten-foot-long metal studs had twice been dropped on him. (He escaped uninjured.)[12]

The IHP found that Fiorino had knowingly associated with members of the Genovese crime family and had enforced a corrupt employment-referral system that gave preference for center jobs to individuals connected to the Genovese crime family.[13] Fiorino was expelled from the union for life.[14] Judge Haight affirmed the decision, concluding that "beginning in or about April 1994 and continuing thereafter, Fiorino knowingly discriminated against union members by referring for work a small group of favored individuals."[15]

In June 1996, Conboy's investigations culminated in the dismissal of New York City's District Council of Carpenters president Frederick Devine by international union president Douglas McCarron.[16] In a subsequent criminal case, federal prosecutors presented evidence to prove that Devine received payoffs from contractors and that he was controlled by Thomas Petrizzo, a capo in the Colombo crime family.[17] Devine was convicted on six grand-larceny charges stemming from a scheme in which he siphoned money from the union's coffers to pay for lavish winter excursions for friends and family and for personal travel expenses.[18] He was sentenced to fifteen months in prison.[19]

THE CONSENT DECREE IN THE TEAMSTERS CASE

The historic civil RICO complaint against the IBT's General Executive Board (GEB) resulted in a 1989 consent decree providing for an investigations officer, an independent administrator, and an elections officer.[20] In January 1992, the three positions were superceded by an Independent Review Board (IRB), which was authorized to investigate corrup-

0786

tion, issue written reports, and hold adjudicatory hearings. The IRB typically investigated, then reported its findings to the Teamsters' General Executive Board, which had the opportunity to initiate corrective measures before the IRB took disciplinary action.

The IRB issued a series of reports recommending the expulsion of certain IBT Local 807 members who were employed at the Javits Center. The IRB charged that Local 807 had become a haven for corrupt IBT Local 814 officials. Pursuant to a civil RICO suit alleging that the Bonanno crime family controlled the officers of Local 814.[21] Arthur Eisenberg, a former regional director of the National Labor Relations Board in New Jersey,[22] was appointed trustee by the court in 1987.[23]

The IRB operated according to the view that "in the absence of direct evidence of knowledge of the organized crime ties of an associate . . . such knowledge may be inferred from the duration and quality of the association."[24] The IRB found that certain Local 807 members had violated the conditions of union membership by bringing reproach upon the union by associating with organized crime figures. Consequently:

- March 23, 1994—The IRB recommended John C. Zanocchio be charged with violating the IBT oath by knowingly associating with members of organized crime. Zanocchio was found to be a member of the Bonanno crime family and permanently barred from the IBT.[25]
- March 24, 1994—The IRB recommended Robert Rabbitt Sr. be charged with bringing reproach upon the union by taking money from an exhibitor at the Javits Center. Settlement on May 31, 1994. Rabbitt Sr. resigned from the union for five years and took a management position as general foreman at the Javits Center.
- May 12, 1994—The IRB recommended charges against Armando Rea, who was appointed assistant shop steward by Michael Rabbitt in 1993.[26] The IRB found Rea to be a member of the Bonanno crime family and permanently barred him from the union.
- January 30, 1995—The IRB recommended charges against Michael Porta Jr. for knowingly associating with members of organized-crime families. FBI agents testified that Porta was a member of the Gambino crime family and that previously he served organized crime's interests as a member of Local 1814 of

0787

the International Longshoreman's Association (ILA). The IRB permanently barred Porta from union-related activities. The federal court affirmed.[27]

- June 9, 1995—The IRB recommended charges against Costabile Lauro for knowingly associating with members of organized crime.[28] The IRB found that Lauro had sustained and purposeful associations with members of the Gambino crime family. Lauro had previously been a member of ILA Local 1814. Lauro was banned from the union.[29]
- February 14, 1996—The IRB recommended charges against Dominic Froncillo for knowingly associating with a member of organized crime. Froncillo testified that for approximately fifteen years he had been friends with Alphonse Malangone, reputed Genovese family capo. Froncillo was permanently barred from the union.[30]

The IRB's March 1995 report documented Robert Rabbitt Sr.'s extensive nepotism and corruption and recommended that IBT Local 807 be placed under trusteeship.[31] Upon review of Local 807's collective bargaining agreements, the IRB concluded that the Javits contract provided union workers with higher wages and benefits than any other Local 807 agreement.[32] It attributed this generous compensation to organized-crime influence and featherbedding. The report also pointed to the criminal records and organized-crime ties of eleven IBT members working at the convention center.

The IRB recommended that union charges be filed against Michael Rabbitt and the other members of the union bargaining team for acting without regard for the union's interest in negotiating the deal that removed the general foreman position from the union. According to the IRB, the transfer of the general foreman position deprived the union of significant influence over how Teamster jobs were carried out.[33] The IRB's March 1995 report spurred IBT President Ron Carey to remove the leaders of Local 807 and to place the local under trusteeship.[34] Johnnie Brown, the newly appointed trustee, was ordered to implement the IRB's recommendations.[35]

State prosecutors brought criminal charges against individual IBT members for various Javits Center rackets, including extorting money from businesses and falsifying bills and general business records. On February 5, 1992, Robert Rabbitt Sr. was indicted along with twenty-six

0788

other persons for theft, extortion, and violence related to the Javits Center,[36] and was specifically charged with conspiracy to extort money (by threatening economic harm) from the president of a company doing business at the center.[37] Robert Sr. and Michael Rabbitt were also indicted for receiving bribes, grand larceny through extortion, and criminal possession of stolen property.[38] Other charges against the Rabbitts and other Javits workers included the falsification of business records, making false entries in business records, and concealing the entries[39] with the intent to defraud.[40]

Robert Rabbitt Sr. pled guilty to the falsification of business records on November 9, 1992.[41] Under the plea agreement, all other charges against him were dismissed. His sentence was one-and-a-half to four-and-a-half years. Charges against Michael Rabbitt were dismissed.[42] Another Teamster, Michael Potts, was charged with scheming to obtain unemployment compensation and falsifying business records.[43] He pled guilty to attempted falsification of business records.[44] One other defendant was charged with two counts of grand larceny through extortion, pled guilty to promoting gambling, and was forced to pay a $500 fine. The most important impact of the criminal cases was not the modest sentences but the use of the convictions by the union trustees to remove the defendants from the unions and thus from the Javits Center.

Charges against the Exhibition Employees Union Local 829

The Exhibition Employees Union Local 829, like the locals of Teamsters and the Carpenters, was extensively investigated by local and federal law enforcement agencies. A joint investigation conducted by the Manhattan District Attorney's Office, the New York City Police Department, the U.S. Department of Labor, and the Javits Center's Inspector General[45] resulted in indictments against two Local 829 officers and seven rank-and-file members.[46] Local 829 President John McNamee and Vice-President and Javits Center shop steward Paul Coscia were accused of fraudulently acquiring union health benefits for Genovese family associate John Sullivan, who was not a union member.[47] Several Local 829 members were charged with felonies relating to misuse of union benefits while employed at the Javits Center.[48] There were also charges of loan-sharking,[49] bookmaking,[50] fraudulently collecting unemployment[51] and disability[52] compensation, and conspiring to bribe officials of Teamsters Local 807 in

0789

order to get on the hiring list.[53] Most of the charges were disposed of through guilty pleas.[54]

Manhattan District Attorney Robert Morgenthau also investigated a scheme by which Javits Center workers, in collaboration with a dishonest lawyer, filed phony workers' compensation claims on behalf of center employees. From 1992 to 1995, an attorney who was a cousin of an Exhibition Employees Union official admitted filing over a dozen such lawsuits for more than $20 million. This racket no doubt was a factor in the 25 percent increase in the center's 1995 insurance premium.[55]

ADMINISTRATIVE AND POLITICAL INVESTIGATIONS

The Role of the Inspector General

New York State's 1987 Internal Control Act required all public authorities, including the Javits Center, to appoint an internal control monitor.[56] Pursuant to the act, the Javits Center delegated that duty to an inspector general, who also was made responsible for providing the Board of Directors with information necessary to formulate effective policy. In 1991, Javits Center CEO Fabian Palomino selected as the center's first inspector general Henry Flinter, a former assistant inspector general for the Metropolitan Transportation Authority and a former investigator for the New York State Organized Crime Task Force.[57] Subsequently, the position has always been filled by a person with substantial investigative or organized-crime control experience.

In November 1994, Sebastian Pipitone (formerly a New York City police officer),[58] the next inspector general under Palomino, made a significant advance in crime control when he changed the method of distributing paychecks.[59] Previously, union representatives at the center distributed paychecks to center workers. The new rules required workers to come to the center, present identification, and be photographed, in order to pick up their paychecks.[60] Use of this strategy led to the removal of more than two dozen ghost workers from the payroll.[61] When the unions protested and threatened a work slowdown, Pipitone threatened to revoke parking privileges, thereby forcing workers with vehicles to pay $20 a day to park. The unions backed down.[62]

In 1994, Pipitone conducted a surprise search of the center and uncovered three stolen motorboat engines and stolen nautical equipment

0790

worth more than $100,000.[63] The equipment had been stolen from the Boat Show and hidden in air-conditioning ducts.[64] According to the Javits administration, surprise searches decreased theft at the center by 77 percent during Pipitone's tenure.[65]

The State Comptroller's Devastating 1995 Audit

State Comptroller H. Carl McCall issued a scathing report on the Javits Center in spring 1995.[66] The audit, covering the period January 1992 through November 1994, charged center officials with tolerating corruption and mismanagement.[67] McCall charged CEO Fabian Palomino with ignoring established management policies and procedures, failing to provide the Board of Directors with sufficient information, and violating employment and purchasing requirements.[68] The center's Board of Directors was accused of rubber-stamping Palomino's decisions and failing to take an active role in the center's governance.[69]

McCall charged Palomino with violating hiring and promotion rules and making personnel decisions without required documentation. Review of personnel files revealed that many jobs lacked a description of employee qualifications and had been filled without a job announcement, in violation of internal control procedures.[70] Most files only contained a letter from Palomino stating that the employee had been hired at a prescribed salary and title. There were also many instances of salary increases and decreases without corresponding performance reviews or explanations.[71]

McCall found that a great deal of security equipment, such as doorknobs, locks, two-way radios, and security cameras, had been purchased but never installed.[72] He also accused Palomino of improperly providing free parking to Governor Cuomo's son.[73]

Palomino was criticized for making purchases and negotiating contracts without board approval. The audit found that 60 percent of procurement contracts, worth $6.7 million, had not been awarded according to the required competitive bidding process.[74] Early in his tenure, Palomino broke a waste-hauling contract with Allied Sanitation, threatening to have Allied employees arrested if they returned to the center. Palomino then awarded the contract to another company, circumventing the bidding process under the guise of an emergency. McCall's auditors observed that Palomino's "unchecked control over most Corporation matters" had permitted inappropriate

0791

hiring and vendor favoritism.[75] The audit stated that by consolidating managerial power, Palomino reduced the oversight necessary to prevent corruption.[76]

Despite the extensive authority bestowed upon the inspector general, with a few exceptions, McCall found that the position had been underutilized and ineffective. The state comptroller's audit stated that the inspector general's powers were compromised by lack of autonomy because the inspector general reported directly to the CEO.[77] After the audit, the inspector general was made to report directly to the Board of Directors.

The State Legislature's Hearing Regarding the Javits Center

The state audit of the Javits Center and the reports of the court-appointed trustees in the labor-racketeering cases prompted the state Senate to convene a hearing in March 1995. New York City Mayor Rudolph Giuliani testified that the Convention Center had been losing business, costing the city $500 million in lost revenue and five thousand jobs. He urged that a civil RICO suit be brought against the center and the unions in order to produce a court-appointed trustee with the resources and ability to curtail corruption, and he recommended privatization of the center's management, following the successful model of convention centers in other cities.

Frederick Devine, president of the District Council of the Carpenters, testified that he was willing to renegotiate the union's contract but challenged the charge that the Carpenters union was to blame for high costs at the center. Fabian Palomino, who had resigned as CEO two months previously, testified that he had been aware of organized-crime infiltration but felt that it was law enforcement's job to combat it; he had been responsible for managing the center.

Governor George Pataki also testified at the hearing. He asked the members of the Board of Directors of the center to resign and threatened to close the center if they refused. Pataki insisted that "it is critical that we have a new team in place that is accountable to the public and dedicated to sweeping out corruption and mismanagement."[78] According to the center's incorporation documents, the governor could forcibly remove board members only for just cause.[79] Pataki nominated Robert Boyle for the center's chief executive and Gerald McQueen for its inspector general.[80] McQueen was approved unanimously.

0792

Boyle had served as Pataki's gubernatorial campaign treasurer, was a successful executive in the construction industry, and had been the chairman of the Hudson Valley Hospital Center in Westchester County.[81] The Cuomo board members (who did not resign immediately as requested) objected to Boyle's nomination on the ground he lacked experience, but the nominee was eventually confirmed. Other strong law enforcement figures, like Ronald Goldstock, the former director of the New York State Organized Crime Task Force, and antitrust expert Lloyd Constantine, a former assistant attorney general, were appointed to the board.[82]

BOYLE'S ADMINISTRATIVE INITIATIVES

Robert Boyle, who became the Javits Center's president and CEO in 1995, moved aggressively against organized crime. With Governor Pataki's strong encouragement and support, he implemented a new hiring system and negotiated contracts with the unions. The New York Convention Center Operation Corporation (NYCCOC) articles of incorporation reserved to the corporation the power to "do all things necessary or convenient to carry out the purposes" of the convention center.[83] Boyle eliminated the decorator companies' role in hiring center labor. Henceforth, the Javits Center would negotiate directly with the unions.

In June 1995, Boyle negotiated collective bargaining agreements with each of the labor unions. The new contracts provided that Javits Center management would hire laborers for exhibition and trade shows, allowing the center to control the number of employees on a particular job and thereby eliminating unnecessary and no-show workers. The unions were no longer allowed to pick which members would be assigned center jobs. At the same time the workers became state employees, subject to the Taylor Law that forbids government employees from striking.[84]

On June 29, 1995, Boyle announced that all center employees would have to apply for their jobs the following day. All New York newspapers carried advertisements announcing job openings. On July 1, 1995, between two thousand and five thousand nonunion job applicants assembled at the center, joining more than one thousand union members who had applied for their jobs the previous day.[85]

0793

Based upon the results of a three-page job application (which asked if the applicant had ever been convicted, whom he or she knew and associated with both within the Javits Center and outside it, and the applicant's previous work history) and an interview by a member of Boyle's thirty-person staff, five hundred applicants were hired for permanent staff positions. Only half of the new hires had previously worked at the center.[86] Carpenters union officials Anthony Fiorino and Leonard Simon were not hired.[87]

Boyle organized the new workforce into two divisions: the freight and the erector units. The Teamsters and the Carpenters, the two unions that met the new representational criteria,[88] were recognized as bargaining agents for the freight unit and the erection unit, respectively.[89*]

The Counterattack of the Carpenters Union

In late 1995, the District Council of Carpenters and union member Dominic Claps filed an action in state court seeking an injunction to prohibit center management from discriminating against union carpenters and shop stewards, and monetary and punitive damages. Claps had been designated the general job steward at Javits by the District Council in November 1995. Thereafter, he was only called into work intermittently. The union, on Clap's behalf, claimed that the center was illegally discriminating against union members based on their activity outside the work and union environment. The center cited its right to refuse to employ any individual as long as the decision is made in good faith and complies with the collective bargaining agreements. On February 27, 1996, the court ruled that the Carpenters union must abide by the grievance procedures established by the collective bargaining agreement before petitioning the court and that the union as an entity could not initiate the suit because under New York State law such an ac-

*Unions had to certify that they represented at least 50 percent of the union card–carrying workforce in a particular unit. The District Council of Carpenters had presented bargaining authorization cards from 296 of 390 employees in the erection division, and the Teamsters Local 807 obtained authorization from 91 of 145 workers in the freight unit. However, Exhibition Employees Union Local 829 did not meet the criteria and thus was not recognized as a bargaining agent. "Two Unions Reinstated at the Javits Center," *New York Times,* July 19, 1995, B6.

0794

tion may be brought only by "an aggrieved individual."[90] Subsequently, an arbitrator ruled in favor of the center.

On November 20, 1995, District Council President Frederick Devine announced plans to use the union's $1.5 billion pension and benefit fund to purchase the New York Coliseum in order to provide employment for carpenters ousted from the Javits Center.[91] (The city-owned Coliseum had been largely unused since the construction of the Javits Center and had been for sale for several years.) Mayor Giuliani rejected the idea that same day, citing the District Council's involvement in corruption and racketeering at the Javits Center.[92] Because the city retains final veto power on all matters relating to the Coliseum, the mayor's opposition, in effect, killed the proposal.

LEGISLATIVE INACTION

Governor Pataki and Robert Boyle requested the New York State Senate to consider a law similar to New York City's Local Law 50, which directs the manager of the Fulton Fish Market to require market participants to be fingerprinted and to apply for business licenses. Boyle's proposal would have permitted Javits Center management to fingerprint employees and to require a special license for all businesses operating at the center. These procedures would allow further background checks on all individuals, with the purpose of rooting out Cosa Nostra members and associates. Licenses would be denied to workers with criminal histories or ties to organized crime.

The State Assembly rejected the bill on June 29, 1995, just as Boyle's new hiring plan was being implemented. Both Boyle and Pataki accused the Speaker of the Assembly of being an ally of former Carpenters union President Frederick Devine and of attempting to undermine the Javits Center reform program.[93] The bill, reintroduced in the Assembly the following year, provided for the appointment of a temporary receiver for the center in the event that there was evidence of management corruption, and authorized this receiver to implement licensing requirements and to investigate center contractors and employees.[94] The license application would include the applicant's fingerprints, photograph, and a criminal background check.[95] In passing a watered-down version of the bill, the Assembly noted that the center's history of suspect hiring and employment practices

0795

had hurt legitimate employees and workers as well as the economy of the state and New York City.[96] Boyle opposed the bill on the ground that it was too weak and administratively cumbersome. It restored the Carpenters union's power to assign jobs.[97] The bill was ultimately blocked in the Senate. In any event, by this time the changes at the center were so dramatic that the reason for the bill arguably no longer applied.

Mayor Giuliani's recommendation that ownership of the Javits Center be transfered from New York State to New York City attracted attention but little support, especially in light of the center's impressive recovery.[98]

A LIBERATED CONVENTION CENTER?

Concurrent law enforcement and administrative remedial efforts have largely eliminated the organized-crime racketeering that plagued the Javits Center from its inception till the mid-1990s. The Carpenters union and the Teamsters union have each experienced a makeover. The consent decrees in the Carpenters and the Teamsters cases resulted in court-appointed trusteeships. Kenneth Conboy has overseen the purge of the mob from the Carpenters union.

The Independent Review Board, authorized to investigate corruption throughout the IBT, removed many Cosa Nostra members and associates from Local 807. In March 1995, IBT President Ron Carey placed the local under trusteeship. The Exhibition Employees Union avoided a court-imposed trusteeship but was not certified as a collective bargaining agent in 1995 when the Javits Center was thoroughly reorganized.

The revitalization of the Javits Center's management clearly has had an impact. The hiring process, implemented by Robert Boyle,* opened center employment to a large pool of job seekers while simultaneously purging employees with ties to organized crime. A recent report by the Office of the State Comptroller praises the Javits Center for

*In early 1997 Boyle was named executive director of the Port Authority of New York and New Jersey. Inspector General Gerald McQueen then became president and chief executive officer of the Javits Center. Boyle was appointed chairman of the Javits Center Board.

0796

"complete turnaround." The center now has inventory-control procedures, working security locks on all doors, and new guidelines for the approval of contracts.[99] According to Comptroller McCall, "Corporation officials have made major changes, and have fully implemented the recommendations from our prior audit reports."[100]

As the result of law enforcement, political, and administrative efforts, the Javits Center is fully booked for the next two years and is already booking shows for the year 2006. During the fiscal year ending in March 1998, the center earned profits in excess of $400,000, a major improvement from its $1.6 million deficit in 1995.[101] Administrative and personnel costs have decreased considerably, resulting in 10 percent to 40 percent lower exhibition rates.[102] The vice-president of the American Society of Association Executives described the center as an emerging "hot" destination for conventions.[103] The success of the center has even led to talk of its expansion. Governor Pataki and other state officials have discussed doubling its current exhibition space to 1.5 million square feet, an unthinkable idea just a few years ago.[104]

Defeating Cosa Nostra in the Waste-Hauling Industry

> Those carters who misused the legitimate business opportunities of this industry besmirched and submerged the interests and welfare of the legitimate carters. The surgery performed by Local Law 42 clearly was essential, overdue and carefully tailored to protect the public interest with measured consideration of the interests and welfare of those who strive only for fair business conditions. . . . The public interest required drastic corrections.[1]
>
> —Justice Milton Pollack, *Sanitation and Recycling Industry, Inc. v. City of New York*, 1996

THE NEW YORK CITY metropolitan area waste-hauling industry was, into the 1990s, dominated by two powerful Cosa Nostra–led cartels, one on Long Island and one in New York City. The cartels enforced a property-rights system through economic coercion, and threats to property and person. The cartels were policed by the Lucchese and Gambino crime families, which controlled the trade associations and unions. Lucchese capo Salvatore Avellino controlled the Long Island cartel through the Private Sanitation Industry Association of Nassau/Suffolk. The Association of Trade Waste Removers of Greater New York, the largest carting employers association in New York City, led by Gambino capo James Failla, limited entry into the industry, fixed prices, and allocated customers. For decades, IBT Local 813, representing the employees of all New York City metropolitan area carters, was run by Bernard Adelstein, a longtime associate of the Gambino crime family. If a carter violated a cartel rule, Local 813 would mount a job action and perhaps threaten the company's customers with violence. In addition, many Cosa Nostra members and associates owned carting businesses.

0798

Prior to the 1990s, attempts to rid the carting industry of mob influence had been unsuccessful. Up until the 1990s the New York City Department of Consumer Affairs, which had the power to establish licensing requirements and set maximum rates, was completely ineffective. Licenses were issued upon request and maximum rates were set to the liking of the cartel, that is, much higher than rates in any other cities. Law enforcement agencies had been unable to bring about any systemic change in the industry. The DCA, under Commissioner Mark Green, began to focus on corruption and racketeering and undertook some important initiatives.

In the 1990s, the combination of criminal prosecutions, civil racketeering suits, a court-appointed monitorship, and a major city regulatory initiative, combined with the willingness of a few large national waste-hauling companies to enter the New York market, has resulted in the apparent elimination of Cosa Nostra from both the Long Island and New York City waste-hauling industries.

ATTACKING THE LONG ISLAND CARTEL: THE CIVIL RICO SUIT

On June 7, 1989, the U.S. attorney for the Eastern District of New York, Andrew J. Maloney, brought a civil RICO suit against the Long Island carting cartel. Maloney charged 112 defendants—including 64 Gambino and Lucchese family members and associates, 44 carting companies, the carters' trade organization, and Teamsters Local 813—with 486 separate acts of racketeering conducted through 46 separate enterprises.[2] The complaint alleged that

- For several decades, the solid waste disposal industry in Nassau and Suffolk counties has been infiltrated, controlled, influenced, corrupted and run by organized crime.
- The Lucchese and Gambino families have been the principal source of such Mafia influence.
- Mafia control of the industry has eliminated competition and . . . cost the residents and businesses [of Long Island] millions of dollars.
- Mafia influence has been accomplished through the use of threats and violence, through the infiltration and control of labor unions,

0799

and through the bribery and corruption of local government officials and employees.

- Finally, [m]embers and associates of organized crime families were and are directors, officers, employees, and . . . shareholders of various carting companies.[3]

According to Maloney, "[T]he relief we're seeking here is to put these people forever and a day out of the carting business." He asked the court to divest the managers of the forty-four indicted waste-hauling firms of their ownership interests, appoint a trustee to oversee the Private Sanitation Industry Association of Nassau/Suffolk, and remove Bernard Adelstein from his position as secretary-treasurer of International Brotherhood of Teamsters Local 813.[4] Maloney also sought to establish a $3 million fund for victims of the Long Island waste-hauling cartel. Shortly after the lawsuit was filed, two of the nation's largest waste-hauling firms, Browning Ferris Industries of Houston and Waste Management, Inc., of Oak Brook, Illinois, announced that they were considering entering the Long Island market.[5]

U.S. District Court Judge I. Leo Glasser dealt Maloney two early setbacks. First, he criticized the suit as "a transparent endeavor to lay claim to the largest civil RICO case ever, with government lawyers multiplying defendants, enterprises, and predicate acts as though numbers were ends in themselves."[6] Second, although allowing the case to go forward, Judge Glasser dismissed the claim for monetary relief on the ground that the RICO statute does not give the government standing to sue for damages.[7]

Wounded but not defeated, the U.S. Attorney's Office, now headed by Acting U.S. Attorney Mary Jo White, moved for partial summary judgment against Salvatore Avellino, head of the Private Sanitation Industry Association of Nassau/Suffolk.[8] Judge Glasser held that Avellino's guilty pleas in the OCTF cases "conclusively establish that he committed at least two predicate acts necessary for RICO liability."[9] Accordingly, he issued an injunction permanently barring Avellino from the waste-hauling industry, and forfeited Avellino's waste-hauling interests as well as the proceeds derived from his illegal actions.[10*] The

*Salvatore Avellino was sentenced to a three and a half– to ten and a half–year prison term for conspiring to murder two carters who cooperated with an Organized Crime Task Force investigation. He was also sued by the estate of murdered carter Jerry Kubecka. See *Jerry Kubecka v. Avellino,* 898 F. Supp. 963 (E.D.N.Y. 1995).

0800

government sought and received similar relief against Nicholas Ferrante, a Lucchese family associate.[11]

The Appointment of an Industry Monitor

In 1994, the parties reached a negotiated settlement. The defendants agreed not to associate with Cosa Nostra members and not to allocate customers by means of a "property rights" system. Avellino's SSC Corporation, now run by his wife and son-in law, and Emedio Fazzini's Jamaica Ash Corporation agreed to be monitored.[12] Waste haulers that were not parties to the consent decree still faced prosecutions.[13] Some of these firms voluntarily signed the consent decree. By January 1998, more than two-thirds of the original defendants had either come under the monitorship or divested themselves of their Long Island waste-hauling businesses.[14] Firms in the former category agreed to be monitored for five years[15] and to pay the costs of the monitoring effort.[16] A method had been found to shift the costs of law enforcement investigation to the suspects themselves.

The compliance officer was to be nominated by the U.S. Justice Department, subject to Judge Glasser's approval. The officer was given broad power to investigate the defendants to ensure that they did not associate with organized-crime figures or violate antitrust and other criminal laws. In the event that the monitor found evidence of racketeering, bid rigging, or customer-allocation schemes, he was to present his findings to either a hearing officer jointly selected by the carters and the Justice Department or to a federal magistrate. Michael Cherkasky, a former prosecutor (a member of the Manhattan DA's team in the Garment Center case against the Gambinos) and managing director of a private investigations firm, was selected to be the industry's compliance officer. His staff includes a former federal prosecutor, two accountants specializing in fraud, and two former law enforcement investigators. The hearing officer, former New York State Supreme Court Judge Leon Lazar could impose fines up to $75,000. The magistrate, by contrast, would be bound by the federal rules of evidence but would have the power to bar people from the waste-hauling industry and to order the forfeiture of illegal profits, no matter how large. The government or a carter could appeal the hearing officer's decisions to Judge Glasser.[17]

Cherkasky set up a twenty-four-hour, toll-free phone number for reporting corruption, racketeering, and anticompetitive practices.[18]

0801

He enforced the settlement against defendant firms and individuals by bringing, or by threatening to bring, charges before the magistrate.[19]

The monitor's most important achievement was opening up the industry to competition. Decades of anticompetitive practices had allowed many inefficient firms to profit because the cartel and property-rights system guaranteed them a customer base. Prior to 1994, no national waste-hauling corporation did business on Long Island.[20] After the settlement, several national waste-hauling corporations bought out defendant carting firms and entered the Long Island market. In April 1997, SSC was sold to Arizona-based Allied Waste Industries.[21] The world's largest waste-carting company, Waste Management, purchased South Side Carting.[22] USA Waste Services, Inc., purchased the assets of Vigliotti Brothers Carting.[23] Jamaica Ash remains the last major carting firm on Long Island not tied to a national corporation. Cherkasky speculates that by 2000, the entire Long Island market will be serviced by national companies.[24] The old cartel has disappeared.

Competition among the new carting companies on Long Island has resulted in lower prices. One large customer's annual bill fell from $360,000 to $170,000.[25] The winning bid for residential waste hauling decreased roughly 50 percent.[26]

BREAKING UP THE NEW YORK CITY CARTEL

The Chambers Paper Fibers' and BFI's Undercover Operations

New York City officials recognized that introducing competition would lead to the break-up of the carting cartel. But Cosa Nostra's decades-long stranglehold on the city's waste-hauling industry was a strong deterrent to outside firms. As late as 1993, New York City was the only major U.S. city in which no national waste-hauling firm operated. Browning Ferris Industries (BFI), a Houston-based company and the nation's second-largest carting firm, with more than $4.3 billion in revenues[27] and business in at least forty-four states,[28] did not service a single stop in New York City. WMX Technologies, Inc., posted upwards of $9 billion in revenues during 1993[29] but stayed out of the city.[30]

0802

To encourage national firms to enter the New York City market, the U.S. Justice Department offered to sell to outside firms the routes it seized from private haulers that had illegally dumped toxic materials. The department scheduled a February 1991 meeting with national waste haulers to encourage and facilitate the sales. As an added incentive, New York City Consumer Affairs Commissioner Mark Green promised that the city would buy back the routes if the new purchasers were driven out by organized crime.[31]

Although none of the major companies accepted the government's offer, BFI eventually decided to test the $1.5 billion New York City waste-hauling market. In late 1991, BFI obtained the contract to collect refuse at Columbia-Presbyterian Medical Center in Manhattan.[32] A BFI spokesperson said, "We're sending a message to Cosa Nostra . . . we're not being run out of town."[33] Cosa Nostra sent back its answer; the severed head of a German shepherd with a note in its mouth: "Welcome to New York."[34] The Council of Trade Waste Associations sued BFI for wrongfully interfering with preexisting carting contracts and for engaging in anticompetitive practices. Judge Diane Lebedeff quickly ruled against the council, upholding BFI's right to compete with local carters.[35] The council then initiated an anti-BFI advertising campaign; it called BFI a predatory pricer and an environmental polluter.[36] One television advertisement mocked BFI's lack of familiarity with New York City by portraying a Texan in a garbage truck staring at a map, trying to find Third Avenue and 75th Street.[37]

The Manhattan DA's office and the New York City Police Department's Organized Crime Investigation Division launched a major investigation of the cartel in 1990. In 1992, an undercover sting was initiated. Detective Richard Cowan posed as a manager of Chambers Paper Fibers Corporation, a Brooklyn-based carting company. During Cowan's three-year undercover operation, he paid more than $790,000 to other carters for the right to service specific stops.[38]

The Chambers Paper Fibers Corporation provided reliable evidence of Cosa Nostra's threats and violence. When Chambers Paper took away customers from members of the cartel, the cartel demanded that Chambers Paper give up its newly signed stops. Chambers Paper's drivers were threatened and beaten (one suffered a severe skull fracture), and a truck was burned. Leaders of the Council of Trade Waste Associations explained that if Chambers Paper paid its dues and stopped stealing customers, the violence would cease.[39]

0803

A year after its entrance into the New York City market, BFI still found local businesses unwilling to change carters, even though BFI's rates were as much as 40 percent lower than those of cartel members. BFI purchased several companies seized by federal authorities[40] but was unable to attract new customers. By 1993, BFI realized that its ability to compete in New York City depended upon the DA's success in purging organized crime from the industry. BFI then committed itself to active cooperation with the Manhattan District Attorney's office, allowing an undercover police officer to pose as one of its employees. For two years as the BFI/District Attorney's Office investigation gathered evidence, BFI's trucks were followed and stolen, its drivers threatened, and its executives subject to intimidating phone calls and letters.[41]

The 1995 Indictments and Plea Bargains

On June 22, 1995, District Attorney Morgenthau called a press conference to report sweeping indictments in New York City's waste-hauling industry.[42*] Charging that organized crime dominated the industry through extortion, coercion, conspiracy, and anticompetitive practices, Morgenthau announced a 114-count indictment against 17 people, 23 carting companies, and 4 trade associations.[43]

The indictment's first count charged that the defendants violated OCCA, New York State's version of the federal RICO statute,[44] by "having knowledge of the existence of a criminal enterprise (called herein the cartel) [and] intentionally conducting and participating in the affairs of the cartel by participating in a pattern of criminal activity."[45] The indictment then listed 113 predicate racketeering acts, including antitrust violations, arson, extortion, coercion, attempted murder, and the falsification of business records.[46] The indictment contended:

*The District Attorney's Office obtained an additional indictment of seventy-four counts on June 18, 1996, against thirteen individuals and eight companies, most of whom had been named in the previous indictment. The new indictment charged the defendants with violating OCCA. The primary racketeering act involved six individuals and five companies controlled by Phillip Barretti Sr. and his sons. Among those newly charged were Joseph and Frank Vitarelli, owners of All City Paper Fibers, and Adriane Paccione, owner of Yankee Continental Carting. David Voreacos, "Trash Industry Crackdown Widens: Bribery Bid-Rigging Charged," *Record,* June 20, 1996, A8.

0804

> The defendants and others banded together as the cartel in order to restrain competition in the private carting industry throughout the City of New York, and to keep carters' price and profits artificially high. The cartel's basic rule was that no carter be permitted to compete for the business of a customer serviced by another carter. The cartel enforced this rule by acts of violence, including attempted murder, assault and arson, and threats of violence, and concerted economic pressure.[47]

The Manhattan District Attorney's Office secured an emergency court order temporarily freezing $268 million of the indicted companies' and individuals' assets, and sought the appointment of receivers to monitor the defendant companies during the pendency of the criminal trial.[48] In December 1995, New York State Supreme Court Justice Walter M. Schackman selected nine receivers to ensure that the defendant carters did not hide or dissipate their assets before a judgment was rendered.[49] The receivers were given broad investigative powers to examine the records and activities of the firms.[50]

As the trial neared, it was revealed to the defendants that more than four hundred of their conversations had been taped by undercover detective Richard Cowan during his three years at Chambers Paper Fibers.[51] Faced with overwhelming inculpatory evidence, ten defendants entered guilty pleas. The most significant plea was that of Angelo Ponte, the longtime owner of one the largest waste-hauling firms in New York City and allegedly a business partner of the Genovese crime family.[52] Ponte pled guilty to attempted enterprise corruption and was fined $7.5 million, sentenced to a prison term of two to six years, and permanently barred from the waste-hauling industry. Ponte sold his waste-hauling assets to USA Waste Services, Inc., now prepared to test the waters of the New York City market.[53] Ponte's son, Vincent, pled guilty to paying a $10,000 bribe to obtain a waste-hauling contract. He was sentenced to five years' probation.[54]

The day before the jury was selected, five more defendants pled guilty to a single felony count of attempted enterprise corruption, and another defendant pled guilty to violating the Donnelly Act, New York State's antitrust law. Only six defendants remained:[55] Joseph Francolino, a Gambino family soldier and business agent of the Association of Trade Waste Removers of Greater New York; Frank Giovinco, the business agent of the Greater New York Waste Paper

0805

Association and alleged Genovese associate; Alphonse Malangone, formerly business agent of the Kings County Trade Waste Association and Genovese capo; Phillip Barretti Sr., owner of the third-largest waste-hauling company in New York City; and Louis Mongelli and his son Paul, owners of a Bronx-based carting company and alleged associates of the Genovese family.[56]

As the trial, which began in late May 1997, was about to enter its third month, and following Detective Cowan's eighteen days of testimony, four more defendants entered into plea agreements. Phillip Barretti Sr. received the most severe sentence: a prison term of four and a half to thirteen years and a $6 million fine. Frank Giovinco was sentenced to three and a half to ten and a half years in prison; Paul Mongelli, four to twelve years; and Louis Mongelli, three to nine years.[57] In October, after twelve days of jury deliberations, the two remaining individual defendants, Joseph Francolino and Alphonse Malangone, were convicted on all counts.[58] Francolino was sentenced to ten to thirty years in prison and fined $900,000.[59] Malangone, five to fifteen years and $200,000.[60] Thus, all seventeen individuals, four trade associations, and twenty-three companies in the original indictment were convicted.

Dismantling the Trade Association

In 1993 and 1994, while the Manhattan District Attorney's Office and the New York City Police Department were gathering evidence on the New York City waste-hauling cartel, federal prosecutors continued their relentless assault by targeting two vital components of the New York City metropolitan area carting cartels: the Association of Trade Waste Removers of Greater New York and IBT Local 813.

In April 1993, federal prosecutors obtained RICO indictments against James "Jimmy Brown" Failla, a capo in the Gambino crime family, who had run the association since 1957,[61] and five other Gambino family members and associates.[62] Failla was charged with four predicate acts: conspiracy to murder and the actual murder of Thomas Spinelli, a grand jury witness who had testified against John Gotti; tampering with a witness; and conspiring to extort money from carting companies.[63] On April 4, 1994, Failla and four of his codefendants pled guilty to murder conspiracy. In return, prosecutors agreed

0806

to drop the other charges and to recommend a seven-year prison sentence. Judge Charles Sifton criticized the plea agreement as too lenient. The prosecution responded that the defendants' age and health complications (Failla suffered from high blood pressure and heart problems) justified the plea bargain. Ultimately, Judge Sifton accepted the agreement, thereby removing Failla from the waste-hauling industry.[64]

Purging the Mob from IBT Local 813

In 1992, Charles Carberry, the investigations officer in the national IBT case, began investigating Bernard Adelstein, secretary-treasurer (the top position) of IBT Local 813, which represented employees of New York City and Long Island carting companies. Adelstein's ties to organized crime had first been brought to public attention twenty-five years earlier by Robert F. Kennedy during the McClellan Committee hearings. Throughout his lengthy career, Adelstein had served the interests of organized crime and the waste-hauling cartel. If a carter tried to take over another firm's customer or route, Adelstein would threaten a Teamsters strike against the rebel company.[65]

Carberry sought union discipline against Adelstein on grounds of his close association with James Failla. In permanently barring Adelstein from the Teamsters, Independent Administrator Frederick B. Lacey stated, "Adelstein's associations with the underworld are repugnant. . . . Only by cleansing the [Teamsters] of the likes of Adelstein can the Union ever hope to function as a corruption-free, democratic organization."[66] Adelstein appealed the administrator's decision to the district court, and to the Second Circuit Court of Appeals, but both courts affirmed Lacey's decision.[67] The Teamsters' president, Ron Carey, removed most of Local 813's other officials and appointed a trustee to run the local.[68]

A second stream of reformist pressure on IBT Local 813 resulted from the federal civil RICO suit against the Long Island carting industry. In the 1994 settlement, Local 813 agreed to a court-appointed monitor to root out racketeers and to monitor the reform effort.[69] Judge Glasser appointed Joseph Foy monitor and enjoined union members from engaging in racketeering activities or associating with organized crime figures.[70]

0807

REGULATION WITH TEETH: THE NEW YORK CITY TRADE WASTE COMMISSION

The most novel effort to break the fifty-year-long cartel among New York City carters was the regulatory initiative launched by the Giuliani administration. In furtherance of his determination to liberate the city from the influence of organized crime, Giuliani established a new agency that spun a regulatory web around the carting industry. Giuliani's plan built upon the "exclusive-licensing" model that Consumer Affairs Commissioner Mark Green had proposed in the early 1990s[71] (that model, in turn, built on the licensing program of the New Jersey Gambling Commission and Waterfront Commission) and the licensing system in place at the Fulton Fish Market.[72] The mayor's plan included licensing industry participants, reducing carting rates, and increasing competition.

On November 30, 1995, Mayor Giuliani made a joint appearance with now Public Advocate Mark Green, City Council Speaker Peter Vallone, and District Attorney Robert Morgenthau to announce the proposal that would ultimately become Local Law 42.[73] The law embodies several different strategies of organized-crime control: (1) licensing to bar mob-connected carters from the industry; (2) maximum rates to prevent the cartel from extracting exorbitant profits; and (3) prohibiting contractual terms that facilitated the carters' hold on their customers.[74] The preamble declared that "the carting industry has been corruptly influenced by organized crime . . . [and] fostered and sustained a cartel" and that Local Law 42 intended to "enhance the city's ability to address organized crime corruption, to protect businesses who utilize private carting services, and to increase competition in the carting industry." A Trade Waste Commission (TWC) would take over the regulatory responsibilities of the Department of Consumer Affairs with respect to the carting industry. The TWC was authorized to

- Establish standards for the issuance and revocation of waste-hauling licenses;
- Make individual determinations regarding the issuance, suspension, and revocation of such licenses;
- Investigate the background and fitness of a licensee's employees;
- Appoint independent auditors and monitors;

0808

- Establish maximum and minimum rates for waste-collection and disposal;
- Investigate any matter within the TWC's jurisdiction, including the power to compel testimony and the production of documents;
- Establish service standards for all licensees, including standards for contracts, billing, and compliance with safety and health measures;
- Establish special trade waste–removal districts; and
- Establish fees and rules that the TWC deems necessary for effecting the purposes of Local Law 42.*

The TWC consists of the commissioners of the departments of investigation, business services, consumer affairs, and sanitation. It is headed by an executive director appointed by the mayor. The entire agency is staffed with individuals who have experience investigating or prosecuting organized crime. Edward Ferguson, the first director, had previously served as a federal prosecutor under Giuliani. Thirty New York City police detectives, working out of the Police Department's Organized Crime Control Bureau, are assigned to the TWC to conduct background checks on carting firms and to investigate complaints. The TWC also employs eight auditors and seven inspectors.[75]

The waste-hauling cartel, fighting for survival, launched a legal counterattack. A few days after Mayor Giuliani signed the new law and appointed Deputy Mayor Randy Mastro to serve as acting chair of the TWC, the carters filed a federal suit challenging the law's constitutionality.[76] The plaintiffs argued that the provisions regulating waste-hauling contracts violated the Contract, Takings, and Due Process Clauses of the U.S. Constitution, and that the provisions regarding licensing violated the waste-haulers' constitutional rights to

*Such a regulatory scheme would not be feasible on Long Island because each town has separate licensing procedures and requirements. Long Island waste-hauling Compliance Officer Michael Cherkasky has proposed the creation of an ad hoc committee that would include representatives from the various towns on Long Island, law enforcement agencies, the New York State Department of Environmental Control, the FBI, and the U.S. Attorney's Office for the Eastern District of New York, to address waste-hauling issues. *United States v. Private Sanitation Indus. Assoc.*, CV-89-1848 (E.D.N.Y. 1989), Report VII From the Compliance Officer, January 26, 1998, 7–8.

0809

privacy and association.[77] Mastro responded that "Local Law 42 is an appropriate exercise of the City's police power and authority to regulate local industry to remove organized crime's 40-year stranglehold over the City's private carting industry."[78] In a June 26, 1996, written order, U.S. District Judge Milton Pollack upheld the constitutionality of Local Law 42, stating, "The surgery performed by Local Law 42 clearly was essential, overdue and carefully tailored to protect the public interest."[79]

The carters also failed to persuade the Court of Appeals.[80] Writing for a unanimous panel, Judge Richard Cardamone traced the history of corruption, intimidation, and racketeering in the waste-hauling industry, labeled the waste-hauling cartel a "'black hole' in New York City's economic life," and rejected every one of the carters' constitutional arguments.[81]

Undaunted, the carters next brought suit in state court presenting many of the same constitutional arguments.[82] The state court judge granted the TWC's motion to remove the case to federal court, where Judge Pollack again rejected the legal arguments he had heard only four months before.[83]

The TWC vigorously publicized the new law and regulations. A flyer bearing a large seal of the city of New York and the bold words "Notice From Mayor Rudolph W. Giuliani and the New York City Trade Waste Commission" announced to all waste-hauling customers: "THIS MAY BE YOUR INDEPENDENCE DAY." Local Law 42 declared all carting contracts terminable-at-will by the customer on thirty days' notice. The flyer also explained that the customer was free to void its contract and to negotiate with a carter of its choice. The flyer explained that carting contracts could not extend beyond two years, and that if a customer's contract with one carter was assigned to another firm, the customer would have the right to reject the assignment and select a new carting company. "You will now have freedom of choice and the right to a fair and honest price," the notice stated, exhorting customers to "EXERCISE YOUR RIGHTS."

A waste hauler could seek a waiver from the provision voiding its contracts if it could show that its contracts were fair and that it did not engage in illegal business practices. In determining whether to grant a waiver, the law instructed the TWC to consider "information concerning the business and its principals and the full circumstances surrounding the negotiation or administration of such contracts."[84] In the sum-

0810

mer of 1996, when the commission denied the waiver applications of fourteen major carting firms, it gave 10,000 New York City businesses the right to cancel their waste-hauling contracts immediately, freeing them to deal with any waste-hauling firm.[85] Of the 335 carting firms operating in New York City, 212 applied for waivers. The TWC granted only forty.[86]

On September 30, 1996, the TWC issued comprehensive rules. Among them: (1) a carter may not associate with a person whom the carter knows or should know is a member of organized crime; (2) carters may not use trade associations to resolve their disputes over customers, nor to make payments for acquiring former customers of other carters; (3) carters must file their proposed rates with the TWC, to ensure that they are not higher than the maximum allowed by the city; and (4) carters must offer a written contract to each customer; any oral contract can be terminated at will by the customer. Trash haulers convicted of violating the TWC's rules could be fined up to $10,000 and, for operating without a license, sent to jail for up to six months.[87]

On March 26, 1997, the TWC reduced the maximum rate that could be charged for commercial carting to $12.20 per cubic yard of uncompacted waste (down from $14.70 previously set by the Department of Consumer Affairs), and $30.19 per cubic yard of compacted waste (down from $46.70).[88] Giuliani called the reductions the largest tax cut of his administration. Indeed, the reductions were striking. The World Trade Center's annual carting bill dropped 80 percent (from $3 million to $600,000); Columbia Presbyterian Hospital's, 60 percent (from $1.2 million to $480,000); and the bill at 26 Federal Plaza's, 65 percent (from $369,000 to $130,000).[89]

A NEW THREAT TO COMPETITION IN THE CITY'S WASTE-HAULING INDUSTRY

The elimination of the cartel and of organized crime does not mean that competition will reign forever. The Trade Waste Commission has been harshly criticized by smaller carting companies and local businesses that blame it for delays in processing their license applications, thereby ceding the industry to a new cartel of major corporations. In early 1998, a proposed merger involving Waste Management, Inc., the nation's largest carting company, and USA Waste Services, the third-largest,

0811

threatened to consolidate 40 percent of the New York City market[90] and 72 percent of the city's transfer-station capacity.[91] By controlling the transfer stations, the new company would be able to increase transfer costs, thereby effectively driving smaller firms out of business and thus nullifying the City's efforts to bring bona fide competition to the industry. At a July 1998 meeting of the City Council's Committee on Consumer Affairs it was reported that roughly 9,500 shopkeepers have experienced a 30 percent increase in their carting costs.[92] Brooklyn Borough President Howard Golden stated in a letter to U.S. Attorney General Janet Reno that New York City was "exchanging organized crime control [over the waste hauling industry] for monolithic corporate control."

By mid-July 1998 a settlement was reached between Waste Management and USA Waste Services officials, and the U.S. Justice Department and thirteen state attorneys general. The settlement allowed for the merger to occur contingent upon the companies' divestiture of three New York City area waste transfer stations.[93]

A WASTE-HAULING INDUSTRY FREE OF THE COSA NOSTRA?

After almost fifty years of dominating waste hauling in New York City and Long Island, organized crime has been routed. The multifaceted remedial efforts of the 1990s, including the creation of the Trade Waste Commission, the Manhattan district attorney's prosecutions, and the Long Island monitorship, appear to have liberated the carting industry and its customers.

As recently as the early 1990s, BFI had no more than 200 clients among the approximately 250,000 commercial enterprises in New York City,[94] and other national carting firms were not willing to compete in the New York City market.[95] By 1997, BFI had more than 500 customers,[96] but it is overshadowed by both USA Waste, which purchased Barretti Carting and began servicing Barretti's nearly 5,000 customers,[97] and WMX, which purchased Resource NE and serves 6,000 businesses citywide.[98] Even more impressive than the entrance and expansion of national firms into New York City's market is the emergence of bona fide competition. Waste-hauling costs for large office buildings have dropped between 30 and 40 percent, and for

0812

smaller businesses by as much as 25 percent.[99] According to industry experts, these reductions indicate that there is real competition in the city's waste-hauling industry.[100]
